Holden VE Commodore

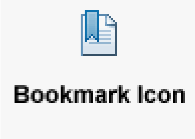
BERLINA/CALAIS/OMEGA/SV6/SS/SSV/LUMINA/SPORTWAGON

2007-2009 Service/Repair Manual

This Service Manual has been prepared with the latest service information available at the time of publication. It is subdivided into various group categories and each section contains diagnostic, disassembly, repair and installation procedures along with complete specifications and tightening references. Please read this manual carefully before proceeding, as incorrect service procedures may result in injury or death to service personnel or to the operator's of the vehicle.

How to use this manual

Use the bookmarks on the Adobe Reader by clicking onto the bookmark symbol on the left hand side like this one



This will bring up all the relevant sections of this manual.
If you click on each section, it will expand to subsections.

E.g. If you wanted to replace the Electronic Brake Control Module, you would click **Brakes** which will expand to show different sections, you would click **Antilock Brake System**, then click **Repair Instructions** which will show **Electronic Brake Control Module Replacement**.

Another way to search for the replacement of **Electronic Brake Control Module** is to use the Adobe Reader's search function located at the top right hand side of the tool bar.

It has a square box with the word "**Find**"**.** Just type in the word or phrase that you are searching for, click the menu (small triangular symbol like this on the side of the box ▼ and select **Open Full Acrobat Search and include bookmarks.**

In this example, it would be **Electronic Brake Control Module Replacement**. The search window will come up to show all the different but relevant sections. Then just click each of the search results which are relevant for you.

Diagnostic Trouble Code (DTC) List - Vehicle

This master DTC list includes all applicable DTCs in alphanumeric order with descriptors.

DTC	DTC Descriptor	Module That Sets the DTC	Diagnostic Procedure
B0012	Driver Frontal Deployment Loop Stage 1	SDM	DTC B0012 or B0013
B0013	Driver Frontal Deployment Loop Stage 2	SDM	DTC B0012 or B0013
B0014	Driver Side Deployment Loop	SDM	DTC B0014
B0015	Driver Pretensioner Deployment Stage 1 Loop	SDM	DTC B0015
B0016	Driver Curtain Deployment Loop Initiator	SDM	DTC B0016
B0019	Passenger Frontal Deployment Loop Stage 1	SDM	DTC B0019 or B0020
B0020	Passenger Frontal Deployment Loop Stage 2	SDM	DTC B0019 or B0020
B0021	Passenger Side Deployment Loop Stage 1	SDM	DTC B0021
B0022	Passenger Pretensioner Deployment Stage 1 Loop	SDM	DTC B0022
B0023	Passenger Curtain Deployment Loop Initiator	SDM	DTC B0023
B0052	Deployment Commanded	SDM	DTC B0052 or B0053
B0053	Deployment Commanded with Loop DTCs Present	SDM	DTC B0052 or B0053
B0055	Side Airbag Deployment Commanded	SDM	DTC B0055
B0072	Driver Seat Belt Sensor Circuit	SDM	DTC B0072
B0079	Driver Seat Position Sensor Circuit	SDM	DTC B0079
B0083	Front End Sensor 1	SDM	DTC B0083 or B0084
B0084	Front End Sensor 2	SDM	DTC B0083 or B0084
B0085	Left Front Side Impact Circuit	SDM	DTC B0085 or B0086
B0086	Right Front Side Impact Sensor Circuit	SDM	DTC B0085 or B0086
	Coil Compressor Stroke Control		

B013B	Circuit	HVAC	DTC B013B
B0158	Outside Air Temperature Sensor Circuit	HVAC	DTC B0158 or B0168
B0168	Passenger Compartment Temperature Sensor Circuit	HVAC	DTC B0158 or B0168
B0183	Left Solar Load Sensor 1 Circuit	HVAC	DTC B0183 or B0188
B0188	Right Solar Load Sensor 2 Circuit	HVAC	DTC B0183 or B0188
B0193	Blower Motor Feedback Circuit	HVAC	DTC B0193
B0198	Blower Motor Feedback Circuit	HVAC	DTC B0198 2
B0228	Air Intake Flow Actuator Fault (LHD) or Recirculation Door Motor Circuit (RHD)	HVAC	DTC B0228, B0238, B0253, B0408, B0418, B0428, or B3531
B0238	Demist Actuator Fault (LHD) or Defogger Door Motor Circuit (RHD)	HVAC	DTC B0228, B0238, B0253, B0408, B0418, B0428, or B3531
B0253	Face/Floor Actuator Fault (LHD) or Vent/Floor Door Motor Circuit (RHD)	HVAC	DTC B0228, B0238, B0253, B0408, B0418, B0428, or B3531
B0283	Electric Rear Defrost Circuit	HVAC	DTC B0283
B0408	Drivers Side Air Mix Actuator (LHD) or Drivers Air Mix Door Motor Circuit (RHD)	HVAC	DTC B0228, B0238, B0253, B0408, B0418, B0428, or B3531
B0418	Passenger Side Air Mix Actuator (LHD) or Passengers Air Mix Door Motor Circuit (RHD)	HVAC	DTC B0228, B0238, B0253, B0408, B0418, B0428, or B3531
B0428	Rear Air Mix Door Motor Circuit	HVAC	DTC B0228, B0238, B0253, B0408, B0418, B0428, or B3531

B0946	Suspension Control Selection Indicator Circuit	ESCM	DTC B0946
B094A	Service Suspension Control Indicator Circuit	ESCM	DTC B094A
B0954	Park Assist Sensor Front Left Outer Circuit	UPA	DTC B0954, B0955, B0956, or B0957
B0955	Park Assist Sensor Front Left Middle Circuit	UPA	DTC B0954, B0955, B0956, or B0957
B0956	Park Assist Sensor Front Right Middle Circuit	UPA	DTC B0954, B0955, B0956, or B0957
B0957	Park Assist Sensor Front Right Outer Circuit	UPA	DTC B0954, B0955, B0956, or B0957
B0958	Park Assist Sensor Rear Left Outer Circuit	UPA	DTC B0958, B0959, B0960, or B0961
B0959	Park Assist Sensor Rear Left Middle Circuit	UPA	DTC B0958, B0959, B0960, or B0961
B0960	Park Assist Sensor Rear Right Middle Circuit	UPA	DTC B0958, B0959, B0960, or B0961
B0961	Park Assist Sensor Rear Right Outer Circuit	UPA	DTC B0958, B0959, B0960, or B0961
B0967	Park Assist Switch Circuit	UPA	DTC B0967
B0968	Park Assist Indicator Circuit Malfunction	UPA	DTC B0968
B0970	Hazard Warning Switch Stuck	BCM	DTC B0970
B0983	Security System Indicator 2 Circuit	BCM	DTC B0983
B0996	Vehicle Identification Number Mismatch	Radio, RSE	DTC B0996, 1016, or B1271
B0997	Auxiliary Electronic Control Unit (ECU) 2 Performance	Radio	DTC B0997
	Memory Seat and Mirror Module Checksum Error	MSM	DTC B0997
B0998	Screen 1 EEPROM Failure	RSE	DTC B0998 or B0999
B0999	Screen 2 EEPROM Failure	RSE	DTC B0998 or B0999
B1000	Electronic Control Unit (ECU) Performance	BCM, IPC, MSM, RFA, SDM, TDM, Telematics, UPA	DTC B1000
B1001	Option Configuration Error	BCM, IPC	DTC B1001
		SDM	DTC B1001
B1008	Calibration Data Not Programmed	Telematics	DTC B1008
		UPA	DTC B1008
B1009	EEPROM Failure	RSE	DTC B1009
B1010	System Sensor Data Mismatch Invalid Odometer Signal	NIM	DTC B1010

B1011	System Disabled Over Temperature	NIM	DTC B1011
B1015	Vehicle Identification Number (VIN) Information Error	Telematics	DTC B1015 or DTC B1016
B1016	Vehicle Identification Number (VIN) Not Programmed	BCM	DTC B1016
		Radio	DTC B0996, 1016, or B1271
		SDM	DTC B1016
		Telematics	DTC B1015 or DTC B1016
B1019	System Configuration Error	Radio	DTC B1019
B101D	ECU Hardware Performance	NIM, Radio, RSE,	DTC B101D
B101E	ECU Software Performance	Radio	DTC B101E
B1020	Auxiliary Electronic Unit (ECU) Performance	NIM	DTC B1020
B1021	SIM Mismatch	Telematics	DTC B1021
B1023	Integral Switch Performance	Radio	DTC B1023
B1024	Printed Circuit Board (PCB) Temperature Sensor Fault	IPC	DTC B1024
B1025	Audio Output 1 Left Front Circuit	Radio	DTC B1025, B1035, B1045, or B1055
B1035	Audio Output 2 Right Front Circuit	Radio	DTC B1025, B1035, B1045, or B1055
B1045	Audio Output 3 Left Rear Circuit	Radio	DTC B1025, B1035, B1045, or B1055
B1055	Audio Output 4 Right Rear Circuit	Radio	DTC B1025, B1035, B1045, or B1055
B1240	CD-Player Malfunction	Radio	DTC B1240 or B1245
B1243	CD-Player Load or Eject Malfunction	Radio	DTC B1243 or B1248
		RSE	DTC B1243
B1244	CD-Player, Disc Upside Down	Radio	DTC B1244 or B1249
B1245	CD-Changer Malfunction	Radio	DTC B1240 or B1245
B1248	CD Changer Load/Unload Performance	Radio	DTC B1243 or B1248
B1249	CD-Changer, Disc Upside Down	Radio	DTC B1244 or B1249
B1271	Theft Locked	Radio	DTC B0996, 1016, or B1271
B1277	Microphone Circuit	Telematics	DTC B1277
B1287	Radio Mute Circuit	Telematics	DTC B1287
B1325	Device Power Circuit	HVAC	DTC B1325
		RSE	DTC B1325, B1330, or B1423
	System Voltage	SDM	DTC B1325
B1330	RSE Control Panel Supplied Power	RSE	DTC B1325, B1330, or B1423
B1335	Screen 1 Power Supply Voltage Circuit	RSE	DTC B1335 or B1340

B1340	Screen 2 Power Supply Voltage Circui	RSE	DTC B1335 or B1340
B1370	Device Ignition 1 Circuit	BCM	DTC B1370-B1379, B1380-B1389, or B1440-B1443
		SDM	DTC B1370
	Wake Up Circuit	MSM	DTC B1370
B1380	Device Ignition ACCESSORY Circuit	BCM	DTC B1370-B1379, B1380-B1389, or B1440-B1443
B138A	Device Voltage Reference Group 1 Outputs	UPA	DTC B138A
B1390	Button 1 Circuit Short to Battery	MSM	DTC B1390, B1400, B1410, or B2765
B1400	Button 2 Circuit Short to Battery	MSM	DTC B1390, B1400, B1410, or B2765
B1410	Button 3 Circuit Short to Battery	MSM	DTC B1390, B1400, B1410, or B2765
B1423	Supply Voltage Circuit	RSE	DTC B1325, B1330, or B1423
B1428	Ignition Switched Power Relay 1 Circuit	BCM	DTC B1428
B1433	Ignition Switched Power Relay 2 Circuit	BCM	DTC B1433
B1440	Power Mode Master Input Circuit Malfunction	BCM	DTC B1370-B1379, B1380-B1389, or B1440-B1443
B1441	Device Ignition OFF, RUN, and CRANK Circuit	BCM	DTC B1370-B1379, B1380-B1389, or B1440-B1443
B1446	Backup Battery Timer Expired	Telematics	DTC B1446
B1447	Backup Battery Circuit	Telematics	DTC B1447
B1475	Retained Accessory Power Circuit	BCM	DTC B1475
B1516	Battery Current Sensor Performance	BCM	DTC B1516
B1517	Battery Voltage	BCM	DTC B1517
		Telematics	DTC B1517
B1527	High Parasitic Load Detected	BCM	DTC B1527
B1529	Control Module Voltage Reference Output 5 Circuit	BCM	DTC B1529
B1565	Mirror DIP Button Stuck	MSM	DTC B1565, B2755, B2760, or B3599
B1735	Front Vertical Up Switch Stuck	MSM	DTC B1735, B1740, B1745, B1750, B1755, B1760, B1815, or B1820
B1740	Front Vertical Down Switch Stuck	MSM	DTC B1735, B1740, B1745, B1750, B1755, B1760, B1815, or B1820
B1745	Rear Vertical Up Switch Stuck	MSM	DTC B1735, B1740, B1745, B1750, B1755, B1760, B1815, or B1820
B1750	Rear Vertical Down Switch Stuck	MSM	DTC B1735, B1740, B1745, B1750, B1755, B1760, B1815, or B1820

B1755	Horizontal Forward Switch Stuck	MSM	DTC B1735, B1740, B1745, B1750, B1755, B1760, B1815, or B1820
B1760	Horizontal Back Switch Stuck	MSM	DTC B1735, B1740, B1745, B1750, B1755, B1760, B1815, or B1820
B1815	Recline Up Switch Stuck	MSM	DTC B1735, B1740, B1745, B1750, B1755, B1760, B1815, or B1820
B1820	Recline Down Switch Stuck	MSM	DTC B1735, B1740, B1745, B1750, B1755, B1760, B1815, or B1820
B1825	Recline Position Sensor Fault	MSM	DTC B1825, B2355, B2365, or B2375
B1831	Lumbar Forward Switch Stuck	MSM	DTC B1831 or B1836
B1836	Lumbar Rearward Switch Stuck	MSM	DTC B1831 or B1836
B1851	Lumbar Position Sensor Fault	MSM	DTC B1851
B2355	Front Vertical Position Sensor Fault	MSM	DTC B1825, B2355, B2365, or B2375
B2365	Rear Vertical Position Sensor Fault	MSM	DTC B1825, B2355, B2365, or B2375
B2375	Horizontal Position Sensor Fault	MSM	DTC B1825, B2355, B2365, or B2375
B245A	Telematics Indicator 1 Circuit	Telematics	DTC B245A
B245B	Telematics Indicator 2 Circuit	Telematics	DTC B245B
B2461	Navigation Electronic Control Unit (ECU) Synchronous Signal Error	NIM	DTC B2461
B2462	Global Positioning System (GPS) Antenna Circuit	NIM, Telematics	DTC B2462
B2464	Navigation Player Decoding Error	Radio	DTC B2464
B2469	SIM Card Invalid	Telematics	DTC B2469
B2471	Telephone Number Error	Telematics	DTC B2471
B2476	Keypad Circuit	Telematics	DTC B2476
B2484	Global Positioning System Sensor Open Circuit	NIM	DTC B2484
B2530	Front Foglamps Control Circuit	BCM	DTC B2530
B2545	Backup Lamps Circuit	BCM	DTC B2545
B2555	Passenger Compartment Lamp Control Circuit	BCM	DTC B2555
B2575	Headlamp Low Beam Control Circuit	BCM	DTC B2575
B257A	Headlamp Switch Input Signals Mismatch	BCM	DTC B257A
B2580	Headlamp High Beam Control Circuit	BCM	DTC B2580
B2585	Parklamp Control Circuit	BCM	DTC B2585
B2610	Passenger Compartment	BCM	DTC B2610

	Dimming 1 Circuit		
B2615	Passenger Compartment Dimming 2 Circuit	BCM	DTC B2615
B2625	Display Dimming Pulse Width Modulation (PWM) Output Circuit	BCM	DTC B2625
B2645	Ambient Light Sensor Circuit	BCM	DTC B2645
B2652	Passenger Compartment Dimming 3 Circuit	BCM	DTC B2652
B2705	Gearshift Unlock Circuit	BCM	DTC B2705
B2730	Interior Trunk/Liftglass/Hatch Release Switch Circuit	BCM	DTC B2730
B2745	Traction Control Switch Circuit	BCM	DTC B2745
B2750	Horn Relay Coil Circuit	BCM	DTC B2750
B2755	Memory Button 1 Stuck	MSM	DTC B1565, B2755, B2760, or B3599
B2760	Memory Button 2 Stuck	MSM	DTC B1565, B2755, B2760, or B3599
B2765	Button M Circuit Short to Battery	MSM	DTC B1390, B1400, B1410, or B2765
B2795	Suspension Control Select Switch Circuit	ESCM	DTC B2795
B2815	Steering Wheel Switch Circuit	IPC	DTC B2815
B2976	Driver Door Ajar Circuit	BCM	DTC B2976
B2991	Passenger Door Ajar Circuit	BCM	DTC B2991
B3006	Hood Ajar Circuit Plausability Failure	BCM	DTC B3006
B3055	No Transponder Modulation or No Transponder	TDM	DTC B3055
B3060	Unprogrammed Transponder Key Identification Code Received	TDM	DTC B3060
B3105	Keyless Entry System Key Not Programmed	RFA	DTC B3105
B3109	Keyless Entry Transmitter 1 Battery Low Voltage	RFA	DTC B3109
B3110	Keyless Entry Transmitter 2 Battery Low Voltage	RFA	DTC B3110
B3111	Keyless Entry Transmitter 3 Battery Low Voltage	RFA	DTC B3111
B3112	Keyless Entry Transmitter 4 Battery Low Voltage	RFA	DTC B3112
B3125	Left Front/Driver Door Only Unlock Circuit	BCM	DTC B3125, B3130, or B3135
B3130	All Door Unlock Circuit	BCM	DTC B3125, B3130, or B3135
B3135	All Door Lock Circuit	BCM	DTC B3125, B3130, or B3135

B3140	Driver Unlock Switch Circuit	BCM	DTC B3140 or B3150
B3150	Driver Lock Switch Circuit	BCM	DTC B3140 or B3150
B3265	Trunk/Hatch/Liftglass Release Output Circuit	BCM	DTC B3265
B3410	AHLD Front Axle Sensor Signal Circuit	Headlamp Control Module	DTC B3410 or B3420
B3415	AHLD Front Axle Sensor Supply Circuit	Headlamp Control Module	DTC B3415
B3420	AHLD Rear Axle Sensor Signal Circuit	Headlamp Control Module	DTC B3410 or B3420
B3435	AHLD Left Servo Driver Circuit	Headlamp Control Module	DTC B3435 or B3440
B3440	AHLD Right Servo Driver Circuit	Headlamp Control Module	DTC B3435 or B3440
B3445	Stop Lamp Circuit	BCM	DTC B3445
B3531	Rear Air Mode Door Motor Circuit	HVAC	DTC B0228, B0238, B0253, B0408, B0418, B0428, or B3531
B3599	Memory Button 3 Stuck	MSM	DTC B1565, B2755, B2760, or B3599
B370C	Rain Sensor Intensity Signal Circuit	BCM	DTC B370C or B370D
B370D	Rain Sensor Mode Control Circuit	BCM	DTC B370C or B370D
B3715	Front Wiper Relay Drive Circuit	BCM	DTC B3715
B3794	Cruise Control Function Request Circuit	BCM	DTC B3794
B3873	Front Washer Relay Circuit	BCM	DTC B3873
B3875	Wiper High Speed Relay Circuit	BCM	DTC B3875
B3907	Button Assembly Short to Battery	MSM	DTC B3907
B3922	Front Wiper Function Select Circuit	BCM	DTC B3922
B3924	DVD Player Theft Locked	RSE	DTC B3924
B3926	Screen 1 Theft Locked	RSE	DTC B3926 or B3927
B3927	Screen 2 Theft Locked	RSE	DTC B3926 or B3927
B3933	Evaporator Temperature Sensor Circuit	HVAC	DTC B3933
B3935	Transponder Key Identification Error	TDM	DTC B3935
B3976	Unconfigured Transponder Key	TDM	DTC B3976
	Front Left Wheel Speed Sensor		

C0035	Circuit	EBCM	DTC C0035-C0050
C0040	Front Right Wheel Speed Sensor Circuit	EBCM	DTC C0035-C0050
C0045	Rear Left Wheel Speed Sensor Circuit	EBCM	DTC C0035-C0050
C0050	Rear Right Wheel Speed Sensor Circuit	EBCM	DTC C0035-C0050
C0060	Left Front Antilock Braking System Solenoid Valve Circuit	EBCM	DTC C0060-C0095, C0100, C0105, C0121, C0141, C0146, C0151, or C0156
C0065	Left Front Antilock Brake System Solenoid 2 Circuit	EBCM	DTC C0060-C0095, C0100, C0105, C0121, C0141, C0146, C0151, or C0156
C0070	Right Front Antilock Braking System Solenoid Valve Circuit	EBCM	DTC C0060-C0095, C0100, C0105, C0121, C0141, C0146, C0151, or C0156
C0075	Right Front Antilock Brake System Solenoid 2 Circuit	EBCM	DTC C0060-C0095, C0100, C0105, C0121, C0141, C0146, C0151, or C0156
C0080	Left Rear Antilock Brake System Solenoid Valve Circuit	EBCM	DTC C0060-C0095, C0100, C0105, C0121, C0141, C0146, C0151, or C0156
C0085	Left Rear Antilock Brake System Solenoid 2 Circuit	EBCM	DTC C0060-C0095, C0100, C0105, C0121, C0141, C0146, C0151, or C0156
C0090	Right Rear Antilock Braking System Solenoid Valve Circuit	EBCM	DTC C0060-C0095, C0100, C0105, C0121, C0141, C0146, C0151, or C0156
C0095	Right Rear Antilock Braking System Solenoid 2 Circuit	EBCM	DTC C0060-C0095, C0100, C0105, C0121, C0141, C0146, C0151, or C0156
C0100	Rear Antilock Brake System Solenoid Circuit	EBCM	DTC C0060-C0095, C0100, C0105, C0121, C0141, C0146, C0151, or C0156
C0105	Rear Antilock Brake System Solenoid 2 Circuit	EBCM	DTC C0060-C0095, C0100, C0105, C0121, C0141, C0146, C0151, or C0156
C0110	Return Pump Circuit Malfunction	EBCM	DTC C0110
C0121	Valve Relay Circuit Malfunction	EBCM	DTC C0060-C0095, C0100, C0105, C0121, C0141, C0146, C0151, or C0156
C0126	Low Brake Fluid Indicated	EBCM	DTC C0126
C0131	Antilock Brake System Pressure Circuit	EBCM	DTC C0131
C0141	Front Left/Front Right TC/ESP Priming Valve Circuit Malfunction	EBCM	DTC C0060-C0095, C0100, C0105, C0121, C0141, C0146, C0151, or C0156

C0146	Front Left/Front Right TC/ESP Switch Over Valve Circuit Malfunction	EBCM	DTC C0060-C0095, C0100, C0105, C0121, C0141, C0146, C0151, or C0156
C0151	Rear Left/Rear Right TC/ESP Priming Valve Circuit Malfunction	EBCM	DTC C0060-C0095, C0100, C0105, C0121, C0141, C0146, C0151, or C0156
C0156	Rear Left/Rear Right TC/ESP Switch Over Valve Circuit Malfunction	EBCM	DTC C0060-C0095, C0100, C0105, C0121, C0141, C0146, C0151, or C0156
C0161	Brake Switch Circuit	EBCM	DTC C0161
C0186	Lateral Acceleration Sensor	EBCM	DTC C0186 or C0196
C0196	Yaw Rate Sensor	EBCM	DTC C0186 or C0196
C0245	Wheel Speed Sensor Frequency	EBCM	DTC C0245
C0252	Implausible Control	EBCM	DTC C0252
C0277	Brake Pedal Position Sensor Circuit	BCM	DTC C0277 or C0890
C0297	Brake Applied Output Circuit	BCM	DTC C0297
C0460	Steering Angle Sensor Circuit	EBCM	DTC C0460
C0550	Electronic Control Unit (ECU) Performance	EBCM	DTC C0550
C0558	Calibration Data Not Programmed	ESCM	DTC C0558
C0561	CAN-Bus Invalid Data	EBCM	DTC C0561
C0565	Vehicle Identification Number (VIN) Not Programmed/Mismatch	EBCM	DTC C0565
C0569	System Configuration Error	EBCM	DTC C0569
		RFA	DTC C0569
C0575	Left Front Solenoid/Motor/Actuator Circuit	ESCM	DTC C0575, C0580, C0585, or C0590
C0580	Right Front Solenoid/Motor/Actuator Circuit	ESCM	DTC C0575, C0580, C0585, or C0590
C0585	Left Rear Solenoid/Motor/Actuator Circuit	ESCM	DTC C0575, C0580, C0585, or C0590
C0590	Right Rear Solenoid/Motor/Actuator Circuit	ESCM	DTC C0575, C0580, C0585, or C0590
C0615	Left Front Position Sensor Circuit	ESCM	DTC C0615, C0620, C0625, or C0630
C0620	Right Front Position Sensor Circuit	ESCM	DTC C0615, C0620, C0625, or C0630
C0625	Left Rear Position Sensor Circuit	ESCM	DTC C0615, C0620, C0625, or C0630

C0630	Right Rear Position Sensor Circuit	ESCM	DTC C0615, C0620, C0625, or C0630
C0696	Position Sensor Overcurrent 5-Volt Supply	ESCM	DTC C0696
C0750	Left Front Tire Pressure Sensor	RCDLR	DTC C0750, C0755, C0760, or C0765
C0755	Right Front Tire Pressure Sensor	RCDLR	DTC C0750, C0755, C0760, or C0765
C0760	Left Rear Tire Pressure Sensor	RCDLR	DTC C0750, C0755, C0760, or C0765
C0765	Right Rear Tire Pressure Sensor	RCDLR	DTC C0750, C0755, C0760, or C0765
C0890	Device Voltage Reference Output 3 Circuit	BCM	DTC C0277 or C0890
C0899	Power Supply Circuit Low Voltage	EBCM	DTC C0899
C0900	Power Supply Circuit High Voltage	EBCM	DTC C0900
C1209	Left Rear Wheel Speed Sensor Circuit High	EBCM, ECM	DTC C1209, C1223, C1227, or C1234
C1210	Right Rear Wheel Speed Sensor Circuit High	EBCM, ECM	DTC C1210, C1224, C1228, or C1235
C1223	Left Rear Wheel Speed Sensor Circuit	EBCM, ECM	DTC C1209, C1223, C1227, or C1234
C1224	Right Rear Wheel Speed Sensor Circuit	EBCM, ECM	DTC C1210, C1224, C1228, or C1235
C1227	Left Rear Wheel Speed Sensor Circuit Range/Performance	EBCM, ECM	DTC C1209, C1223, C1227, or C1234
C1228	Right Rear Wheel Speed Sensor Circuit Range/Performance	EBCM, ECM	DTC C1210, C1224, C1228, or C1235
C1234	Left Rear Wheel Speed Sensor Circuit Low	EBCM, ECM	DTC C1209, C1223, C1227, or C1234
C1235	Right Rear Wheel Speed Sensor Circuit Low	EBCM, ECM	DTC C1210, C1224, C1228, or C1235
P0008	Engine Position System Performance Bank 1	ECM	DTC P0008 or P0009
P0009	Engine Position System Performance Bank 2	ECM	DTC P0008 or P0009
P0010	Intake Camshaft Position Control Solenoid Circuit Malfunction Bank 1	ECM	DTC P0010, P0013, P0020, P0023, P2088, P2089, P2090, P2091, P2092, P2093, P2094, or P2095
P0011	Intake Camshaft Position Range/Performance Bank 1	ECM	DTC P0011, P0014, P0021, or P0024
P0013	Exhaust Camshaft Position Control Solenoid Circuit Malfunction Bank 1	ECM	DTC P0010, P0013, P0020, P0023, P2088, P2089, P2090, P2091, P2092, P2093, P2094, or P2095

P0014	Exhaust Camshaft Position Range/Performance Bank 1	ECM	DTC P0011, P0014, P0021, or P0024
P0016	Crankshaft/Intake Camshaft Position not Plausible Bank 1	ECM	DTC P0016, P0017, P0018, or P0019 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	Crankshaft Position (CKP) Camshaft Position (CMP) Correlation		DTC P0016 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0017	Crankshaft/Exhaust Camshaft Position not Plausible Bank 1	ECM	DTC P0016, P0017, P0018, or P0019
P0018	Crankshaft/Intake Camshaft Position not Plausible Bank 2	ECM	DTC P0016, P0017, P0018, or P0019
P0019	Crankshaft/Exhaust Camshaft Position not Plausible Bank 2	ECM	DTC P0016, P0017, P0018, or P0019
P0020	Intake Camshaft Position Control Solenoid Circuit Malfunction Bank 2	ECM	DTC P0010, P0013, P0020, P0023, P2088, P2089, P2090, P2091, P2092, P2093, P2094, or P2095
P0021	Intake Camshaft Position Range/Performance Bank 2	ECM	DTC P0011, P0014, P0021, or P0024
P0023	Exhaust Camshaft Position Control Solenoid Circuit Malfunction Bank 2	ECM	DTC P0010, P0013, P0020, P0023, P2088, P2089, P2090, P2091, P2092, P2093, P2094, or P2095
P0024	Exhaust Camshaft Position Range/Performance Bank 2	ECM	DTC P0011, P0014, P0021, or P0024
P0030	O2 Sensor Heater Circuit Malfunction Bank 1 Sensor 1	ECM	DTC P0030, P0031, P0032, P0036, P0037, P0038, P0050, P0051, P0052, P0056, P0057, or P0058 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	HO2S Heater Control Circuit Bank 1 Sensor 1		DTC P0030, P0036, P0053, P0054, P0135, or P0141 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0031	O2 Sensor Heater Circuit Low Voltage Bank 1 Sensor 1	ECM	DTC P0030, P0031, P0032, P0036, P0037, P0038, P0050, P0051, P0052, P0056, P0057, or P0058
P0032	O2 Sensor Heater Circuit High Voltage Bank 1 Sensor 1	ECM	DTC P0030, P0031, P0032, P0036, P0037, P0038, P0050, P0051, P0052, P0056, P0057, or P0058
P0036	O2 Sensor Heater Circuit Malfunction Bank 1 Sensor 2	ECM	DTC P0030, P0031, P0032, P0036, P0037, P0038, P0050, P0051, P0052, P0056, P0057, or P0058 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	HO2S Heater Control Circuit Bank 2		DTC P0030, P0036, P0053, P0054, P0135, or P0141 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0037	O2 Sensor Heater Circuit Low Voltage Bank 1 Sensor 2	ECM	DTC P0030, P0031, P0032, P0036, P0037, P0038, P0050, P0051, P0052, P0056, P0057, or P0058
P0038	O2 Sensor Heater Circuit High	ECM	DTC P0030, P0031, P0032, P0036, P0037, P0038, P0050, P0051,

	Voltage Bank 1 Sensor 2		P0052, P0056, P0057, or P0058
P0040	O2 Sensor Signals not Plausible Bank 1 Sensor 1 & Bank 2 Sensor 1	ECM	DTC P0040 or P0041
P0041	O2 Sensor Signals not Plausible Bank 1 Sensor 2 & Bank 2 Sensor 2	ECM	DTC P0040 or P0041
P0050	O2 Sensor Heater Circuit Malfunction Bank 2 Sensor 1	ECM	DTC P0030, P0031, P0032, P0036, P0037, P0038, P0050, P0051, P0052, P0056, P0057, or P0058 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	HO2S Heater Control Bank 2 Sensor 1		DTC P0050, P0056, P0059, P0060, P0155, or P0161 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0051	O2 Sensor Heater Circuit Low Voltage Bank 2 Sensor 1	ECM	DTC P0030, P0031, P0032, P0036, P0037, P0038, P0050, P0051, P0052, P0056, P0057, or P0058
P0052	O2 Sensor Heater Circuit High Voltage Bank 2 Sensor 1	ECM	DTC P0030, P0031, P0032, P0036, P0037, P0038, P0050, P0051, P0052, P0056, P0057, or P0058
P0053	O2 Sensor Heater Resistance Range/Performance Bank 1 Sensor 1	ECM	DTC P0053 or P0059 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	HO2S Heater Resistance Circuit Bank 1 Sensor 1		DTC P0030, P0036, P0053, P0054, P0135, or P0141 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0054	HO2S Heater Resistance Circuit Bank 1 Sensor 2	ECM	DTC P0030, P0036, P0053, P0054, P0135, or P0141
P0056	O2 Sensor Heater Circuit Malfunction Bank 2 Sensor 2	ECM	DTC P0030, P0031, P0032, P0036, P0037, P0038, P0050, P0051, P0052, P0056, P0057, or P0058 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	HO2S Heater Control Bank 2 Sensor 2		DTC P0050, P0056, P0059, P0060, P0155, or P0161 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0057	O2 Sensor Heater Circuit Low Voltage Bank 2 Sensor 2	ECM	DTC P0030, P0031, P0032, P0036, P0037, P0038, P0050, P0051, P0052, P0056, P0057, or P0058
P0058	O2 Sensor Heater Circuit High Voltage Bank 2 Sensor 2	ECM	DTC P0030, P0031, P0032, P0036, P0037, P0038, P0050, P0051, P0052, P0056, P0057, or P0058
P0059	O2 Sensor Heater Resistance Range/Performance Bank 2 Sensor 1	ECM	DTC P0053 or P0059 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	HO2S Heater Resistance Bank 2 Sensor 1		DTC P0050, P0056, P0059, P0060, P0155, or P0161 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0060	HO2S Heater Resistance Bank 2 Sensor 2	ECM	DTC P0050, P0056, P0059, P0060, P0155, or P0161

P0068	Throttle Body Airflow Performance	ECM	DTC P0068 or P0121
P0100	Mass Air Flow Sensor Circuit Malfunction	ECM	DTC P0100, P0102, or P0103
P0101	Mass Air Flow Sensor Circuit Range/Performance	ECM	DTC P0101 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	Mass Air Flow (MAF) Sensor Performance	ECM	DTC P0101 or P1101 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0102	Mass Air Flow Sensor Voltage Low	ECM	DTC P0100, P0102, or P0103 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	Mass Air Flow (MAF) Sensor Circuit Low Frequency	ECM	DTC P0102 or P0103 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0103	Mass Air Flow Sensor Voltage High	ECM	DTC P0100, P0102, or P0103 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	Mass Air Flow (MAF) Sensor Circuit High Frequency	ECM	DTC P0102 or P0103 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0106	Manifold Absolute Pressure (MAP) Sensor Performance	ECM	DTC P0106
P0107	Manifold Absolute Pressure (MAP) Sensor Circuit Low Voltage	ECM	DTC P0107 or P0108
P0108	Manifold Absolute Pressure (MAP) Sensor Circuit High Voltage	ECM	DTC P0107 or P0108
P0111	Intake Air Temperature Sensor Circuit Range/Performance	ECM	DTC P0111-P0113
P0112	Intake Air Temperature Sensor Circuit Low Voltage	ECM	DTC P0111-P0113 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
			DTC P0112 or P0113 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0113	Intake Air Temperature Sensor Circuit High Voltage	ECM	DTC P0111-P0113 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
			DTC P0112 or P0113 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0115	Engine Coolant Temperature (ECT) Sensor Circuit	TCM	DTC P0115
P0116	Engine Coolant Temperature (ECT) Sensor Performance	ECM	DTC P0116 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0116 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0117	Engine Coolant Temperature (ECT) Sensor Circuit Low Voltage	ECM	DTC P0117 or P0118 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or

			DTC P0117 or P0118 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0118	Engine Coolant Temperature (ECT) Sensor Circuit High Voltage	ECM	DTC P0117 or P0118 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0117 or P0118 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0119	Engine Coolant Temperature Sensor Circuit Intermittent	ECM	DTC P0119
P0120	Throttle Position Sensor 1 Circuit	ECM	DTC P0120, P0122, P0123, P0220, P0222, P0223, or P2135 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
	Throttle Position (TP) Sensor Circuit	TCM	DTC P0120
P0121	Throttle Position Sensor 1 Circuit Range/Performance	ECM	DTC P0121, P0122, P0123, P0221, P0222, or P0223 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	Throttle Position (TP) Sensor 1 Performance	ECM	DTC P0068 or P0121 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0122	Throttle Position Sensor 1 Circuit Low Voltage	ECM	DTC P0121, P0122, P0123, P0221, P0222, or P0223 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0120, P0122, P0123, P0220, P0222, P0223, or P2135 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0123	Throttle Position Sensor 1 Circuit High Voltage	ECM	DTC P0121, P0122, P0123, P0221, P0222, or P0223 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0120, P0122, P0123, P0220, P0222, P0223, or P2135 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0128	Engine Coolant Temperature Below Thermostat Regulating Temperature	ECM	DTC P0128 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0128 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0130	O2 Sensor Circuit Malfunction	ECM	DTC P0130 or P0150

	Bank 1 Sensor 1		
P0131	O2 Sensor Circuit Low Voltage Bank 1 Sensor 1	ECM	DTC P0131 or P0151 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	HO2S Circuit Low Voltage Bank 1 Sensor 1		DTC P0131, P0132, P0137, or P0138 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0132	O2 Sensor Circuit High Voltage Bank 1 Sensor 1	ECM	DTC P0132 or P0152 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	HO2S Circuit High Voltage Bank 1 Sensor 1		DTC P0131, P0132, P0137, or P0138 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0133	O2 Sensor Circuit Slow Response Bank 1 Sensor 1	ECM	DTC P0133 or P0153 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	HO2S Slow Response Bank 1 Sensor 1		DTC P0133, P0134, P0140, P1133, P2270, or P2271 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0134	HO2S Circuit Insufficient Activity Bank 1 Sensor 1	ECM	DTC P0134 or P0154 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0133, P0134, P0140, P1133, P2270, or P2271 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0135	O2 Sensor Heater Circuit Range/Performance Bank 1 Sensor 1	ECM	DTC P0135, P0141, P0155, or P0161 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	HO2S Heater Performance Bank 1 Sensor 1		DTC P0030, P0036, P0053, P0054, P0135, or P0141 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0137	O2 Sensor Circuit Low Voltage Bank 1 Sensor 2	ECM	DTC P0137, P0138, P0140, P0157, P0158, or P0160 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	HO2S Circuit Low Voltage Bank 1 Sensor 2		DTC P0131, P0132, P0137, or P0138 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0138	O2 Sensor Circuit High Voltage Bank 1 Sensor 2	ECM	DTC P0137, P0138, P0140, P0157, P0158, or P0160 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	HO2S Circuit High Voltage Bank 1 Sensor 2	ECM	DTC P0131, P0132, P0137, or P0138 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P013A	HO2S Slow Response Rich to Lean Bank 1 Sensor 2	ECM	DTC P013A, P013C, P013E, or P014A
P013C	HO2S Slow Response Rich to Lean Bank 2 Sensor 2	ECM	DTC P013A, P013C, P013E, or P014A
P013E	HO2S Delayed Response Rich to Lean Bank 1 Sensor 2	ECM	DTC P013A, P013C, P013E, or P014A
			DTC P0137, P0138, P0140, P0157,

P0140	O2 Sensor Circuit No Activity Detected Bank 1 Sensor 2	ECM	P0158, or P0160 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	HO2S Circuit Insufficient Activity Bank 1 Sensor 2	ECM	DTC P0133, P0134, P0140, P1133, P2270, or P2271 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0141	O2 Sensor Heater Circuit Range/Performance Bank 1 Sensor 2	ECM	DTC P0135, P0141, P0155, or P0161 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	HO2S Heater Performance Bank 1 Sensor 2	ECM	DTC P0030, P0036, P0053, P0054, P0135, or P0141 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P014A	HO2S Delayed Response Rich to Lean Bank 2 Sensor 2	ECM	DTC P013A, P013C, P013E, or P014A
P0150	O2 Sensor Circuit Malfunction Bank 2 Sensor 1	ECM	DTC P0130 or P0150
P0151	O2 Sensor Circuit Low Voltage Bank 2 Sensor 1	ECM	DTC P0131 or P0151 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	HO2S Circuit Low Voltage Bank 2 Sensor 1		DTC P0151, P0152, P0157, or P0158 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0152	O2 Sensor Circuit High Voltage Bank 2 Sensor 1	ECM	DTC P0132 or P0152 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	HO2S Circuit High Voltage Bank 2 Sensor 1		DTC P0151, P0152, P0157, or P0158 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0153	O2 Sensor Circuit Slow Response Bank 2 Sensor 1	ECM	DTC P0133 or P0153 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	HO2S Slow Response Bank 2 Sensor 1		DTC P0153, P0154, P0160, P1153, P2272, or P2273 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0154	HO2S Circuit Insufficient Activity Bank 2 Sensor 1	ECM	DTC P0134 or P0154 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
			DTC P0153, P0154, P0160, P1153, P2272, or P2273 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0155	O2 Sensor Heater Circuit Range/Performance Bank 2 Sensor 1	ECM	DTC P0135, P0141, P0155, or P0161 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	HO2S Heater Performance Bank 2 Sensor 1		DTC P0050, P0056, P0059, P0060, P0155, or P0161 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0157	O2 Sensor Circuit Low Voltage Bank 2 Sensor 2	ECM	DTC P0137, P0138, P0140, P0157, P0158, or P0160 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	HO2S Circuit Low Voltage Bank 2 Sensor 2		DTC P0151, P0152, P0157, or P0158 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
	O2 Sensor Circuit High Voltage		DTC P0137, P0138, P0140, P0157,

P0158	Bank 2 Sensor 2	ECM	P0158, or P0160 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	HO2S Circuit High Voltage Bank 2 Sensor 2		DTC P0151, P0152, P0157, or P0158 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0160	O2 Sensor Circuit No Activity Detected Bank 2 Sensor 2	ECM	DTC P0137, P0138, P0140, P0157, P0158, or P0160 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	HO2S Circuit Insufficient Activity Bank 2 Sensor 2		DTC P0153, P0154, P0160, P1153, P2272, or P2273 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0161	O2 Sensor Heater Circuit Range/Performance Bank 2 Sensor 2	ECM	DTC P0135, P0141, P0155, or P0161 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	HO2S Heater Performance Bank 2 Sensor 2	ECM	DTC P0050, P0056, P0059, P0060, P0155, or P0161 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0171	Fuel Trim System Lean Bank 1	ECM	DTC P0171, P0172, P0174, or P0175
P0172	Fuel Trim System Rich Bank 1	ECM	DTC P0171, P0172, P0174, or P0175
P0174	Fuel Trim System Lean Bank 2	ECM	DTC P0171, P0172, P0174, or P0175
P0175	Fuel Trim System Rich Bank 2	ECM	DTC P0171, P0172, P0174, or P0175
P0196	Engine Oil Temperature Sensor Range/Performance	ECM	DTC P0196, P0197, or P0198 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	Engine Oil Temperature Sensor Circuit Range/Performance	ECM	DTC P0196, P0197, or P0198 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0197	Engine Oil Temperature Voltage Low	ECM	DTC P0196, P0197, or P0198 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	Engine Oil Temperature Sensor Circuit Low Input	ECM	DTC P0196, P0197, or P0198 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0198	Engine Oil Temperature Voltage High	ECM	DTC P0196, P0197, or P0198 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	Engine Oil Temperature Sensor Circuit High Input	ECM	DTC P0196, P0197, or P0198 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0201	Injector 1 Control Circuit	ECM	DTC P0201, P0202, P0203, P0204, P0205, P0206, P0261, P0262, P0264, P0265, P0267, P0268, P0270, P0271, P0273, P0274, P0276, or P0277 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0201, P0202, P0203, P0204, P0205, P0206, P0207, or P0208 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine

P0202	Injector 2 Control Circuit	ECM	DTC P0201, P0202, P0203, P0204, P0205, P0206, P0261, P0262, P0264, P0265, P0267, P0268, P0270, P0271, P0273, P0274, P0276, or P0277 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0201, P0202, P0203, P0204, P0205, P0206, P0207, or P0208 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0203	Injector 3 Control Circuit	ECM	DTC P0201, P0202, P0203, P0204, P0205, P0206, P0261, P0262, P0264, P0265, P0267, P0268, P0270, P0271, P0273, P0274, P0276, or P0277 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0201, P0202, P0203, P0204, P0205, P0206, P0207, or P0208 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0204	Injector 4 Control Circuit	ECM	DTC P0201, P0202, P0203, P0204, P0205, P0206, P0261, P0262, P0264, P0265, P0267, P0268, P0270, P0271, P0273, P0274, P0276, or P0277 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0201, P0202, P0203, P0204, P0205, P0206, P0207, or P0208 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0205	Injector 5 Control Circuit	ECM	DTC P0201, P0202, P0203, P0204, P0205, P0206, P0261, P0262, P0264, P0265, P0267, P0268, P0270, P0271, P0273, P0274, P0276, or P0277 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0201, P0202, P0203, P0204, P0205, P0206, P0207, or P0208 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine

P0206	Injector 6 Control Circuit	ECM	DTC P0201, P0202, P0203, P0204, P0205, P0206, P0261, P0262, P0264, P0265, P0267, P0268, P0270, P0271, P0273, P0274, P0276, or P0277 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0201, P0202, P0203, P0204, P0205, P0206, P0207, or P0208 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0207	Injector 7 Control Circuit	ECM	DTC P0201, P0202, P0203, P0204, P0205, P0206, P0207, or P0208
P0208	Injector 8 Control Circuit	ECM	DTC P0201, P0202, P0203, P0204, P0205, P0206, P0207, or P0208
P0218	Transmission Fluid Overtemperature	TCM	• DTC P0218 for the 4L60-E/4L65-E/4L70-E transmission • DTC P0218 for the 5L40-E/5L50-E transmission • DTC P0218 for the 6L50/6L80/6L90 transmission
P0219	Engine Overspeed Condition	ECM	DTC P0219
P0220	Throttle Position Sensor 2 Circuit	ECM	DTC P0120, P0122, P0123, P0220, P0222, P0223, or P2135
P0221	Throttle Position Sensor 2 Circuit Range/Performance	ECM	DTC P0121, P0122, P0123, P0221, P0222, or P0223
P0222	Throttle Position Sensor 2 Circuit Low Voltage	ECM	DTC P0121, P0122, P0123, P0221, P0222, or P0223 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0120, P0122, P0123, P0220, P0222, P0223, or P2135 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0223	Throttle Position Sensor 2 Circuit High Voltage	ECM	DTC P0121, P0122, P0123, P0221, P0222, or P0223 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0120, P0122, P0123, P0220, P0222, P0223, or P2135 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0230	Fuel Pump Relay Control Circuit	ECM	DTC P0230

P0261	Injector 1 Control Circuit Low Voltage	ECM	DTC P0201, P0202, P0203, P0204, P0205, P0206, P0261, P0262, P0264, P0265, P0267, P0268, P0270, P0271, P0273, P0274, P0276, or P0277
P0262	Injector 1 Control Circuit High Voltage	ECM	DTC P0201, P0202, P0203, P0204, P0205, P0206, P0261, P0262, P0264, P0265, P0267, P0268, P0270, P0271, P0273, P0274, P0276, or P0277
P0264	Injector 2 Control Circuit Low Voltage	ECM	DTC P0201, P0202, P0203, P0204, P0205, P0206, P0261, P0262, P0264, P0265, P0267, P0268, P0270, P0271, P0273, P0274, P0276, or P0277
P0265	Injector 2 Control Circuit High Voltage	ECM	DTC P0201, P0202, P0203, P0204, P0205, P0206, P0261, P0262, P0264, P0265, P0267, P0268, P0270, P0271, P0273, P0274, P0276, or P0277
P0267	Injector 3 Control Circuit Low Voltage	ECM	DTC P0201, P0202, P0203, P0204, P0205, P0206, P0261, P0262, P0264, P0265, P0267, P0268, P0270, P0271, P0273, P0274, P0276, or P0277
P0268	Injector 3 Control Circuit High Voltage	ECM	DTC P0201, P0202, P0203, P0204, P0205, P0206, P0261, P0262, P0264, P0265, P0267, P0268, P0270, P0271, P0273, P0274, P0276, or P0277
P0270	Injector 4 Control Circuit Low Voltage	ECM	DTC P0201, P0202, P0203, P0204, P0205, P0206, P0261, P0262, P0264, P0265, P0267, P0268, P0270, P0271, P0273, P0274, P0276, or P0277
P0271	Injector 4 Control Circuit High Voltage	ECM	DTC P0201, P0202, P0203, P0204, P0205, P0206, P0261, P0262, P0264, P0265, P0267, P0268, P0270, P0271, P0273, P0274, P0276, or P0277
P0273	Injector 5 Control Circuit Low Voltage	ECM	DTC P0201, P0202, P0203, P0204, P0205, P0206, P0261, P0262, P0264, P0265, P0267, P0268, P0270, P0271, P0273, P0274, P0276, or P0277
P0274	Injector 5 Control Circuit High Voltage	ECM	DTC P0201, P0202, P0203, P0204, P0205, P0206, P0261, P0262, P0264, P0265, P0267, P0268, P0270, P0271, P0273, P0274, P0276, or P0277
			DTC P0201, P0202, P0203, P0204,

P0276	Injector 6 Control Circuit Low Voltage	ECM	P0205, P0206, P0261, P0262, P0264, P0265, P0267, P0268, P0270, P0271, P0273, P0274, P0276, or P0277
P0277	Injector 6 Control Circuit High Voltage	ECM	DTC P0201, P0202, P0203, P0204, P0205, P0206, P0261, P0262, P0264, P0265, P0267, P0268, P0270, P0271, P0273, P0274, P0276, or P0277
P0300	Engine Misfire Detected	ECM	DTC P0300-P0306 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0300-P0308 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0301	Cylinder 1 Misfire Detected	ECM	DTC P0300-P0306 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0300-P0308 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0302	Cylinder 2 Misfire Detected	ECM	DTC P0300-P0306 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0300-P0308 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0303	Cylinder 3 Misfire Detected	ECM	DTC P0300-P0306 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0300-P0308 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0304	Cylinder 4 Misfire Detected	ECM	DTC P0300-P0306 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0300-P0308 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0305	Cylinder 5 Misfire Detected	ECM	DTC P0300-P0306 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0300-P0308 for the 4.8L,

			5.3L, 6.0L, 6.2L, or 7.0L engine
P0306	Cylinder 6 Misfire Detected	ECM	DTC P0300-P0306 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0300-P0308 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0307	Cylinder 7 Misfire Detected	ECM	DTC P0300-P0308
P0308	Cylinder 8 Misfire Detected	ECM	DTC P0300-P0308
P0315	Crankshaft Position System Variation Not Learned	ECM	DTC P0315
P0324	Knock Sensor Module Performance	ECM	DTC P0324 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0324, P0325, P0326, P0327, P0328, P0330, P0332, or P0333 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0325	Knock Sensor (KS) Circuit Bank 1	ECM	DTC P0324, P0325, P0326, P0327, P0328, P0330, P0332, or P0333
P0326	Knock Sensor (KS) Performance Bank 1	ECM	DTC P0326, P0327, P0328, P0331, P0332, or P0333 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	Knock Sensor (KS) Performance	ECM	DTC P0324, P0325, P0326, P0327, P0328, P0330, P0332, or P0333 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0327	Knock Sensor (KS) Circuit Low Voltage Bank 1	ECM	DTC P0326, P0327, P0328, P0331, P0332, or P0333 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0324, P0325, P0326, P0327, P0328, P0330, P0332, or P0333 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0328	Knock Sensor (KS) Circuit High Voltage Bank 1	ECM	DTC P0326, P0327, P0328, P0331, P0332, or P0333 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0324, P0325, P0326, P0327, P0328, P0330, P0332, or P0333 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine

P0330	Knock Sensor (KS) Circuit Bank 2	ECM	DTC P0324, P0325, P0326, P0327, P0328, P0330, P0332, or P0333
P0331	Knock Sensor (KS) System Performance Bank 2	ECM	DTC P0326, P0327, P0328, P0331, P0332, or P0333
P0332	Knock Sensor (KS) Circuit Low Voltage Bank 2	ECM	DTC P0326, P0327, P0328, P0331, P0332, or P0333 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0324, P0325, P0326, P0327, P0328, P0330, P0332, or P0333 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0333	Knock Sensor (KS) Circuit High Voltage Bank 2	ECM	DTC P0326, P0327, P0328, P0331, P0332, or P0333 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0324, P0325, P0326, P0327, P0328, P0330, P0332, or P0333 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0335	Crankshaft Position Sensor Circuit Malfunction	ECM	DTC P0335, P0336, or P0338 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	Crankshaft Position (CKP) Sensor Circuit		DTC P0335 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0336	Crankshaft Position Sensor Signal Range/Performance	ECM	DTC P0335, P0336, or P0338 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	Crankshaft Position (CKP) Sensor Performance		DTC P0336 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0338	Crankshaft Position Sensor Circuit High Duty Cycle	ECM	DTC P0335, P0336, or P0338 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
P0340	Camshaft Position (CMP) Sensor Circuit	ECM	DTC P0340
P0341	Intake Camshaft Position Sensor Range/Performance Bank 1	ECM	DTC P0341, P0342, P0343, P0346, P0347, P0348, P0366, P0367, P0368, P0391, P0392, or P0393 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	Camshaft Position (CMP) Sensor Performance	ECM	DTC P0341 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0342	Intake Camshaft Position Sensor Low Voltage Bank 1	ECM	DTC P0341, P0342, P0343, P0346, P0347, P0348, P0366, P0367, P0368, P0391, P0392, or P0393
P0343	Intake Camshaft Position Sensor High Voltage Bank 1	ECM	DTC P0341, P0342, P0343, P0346, P0347, P0348, P0366, P0367, P0368, P0391, P0392, or P0393
	Intake Camshaft Position		DTC P0341, P0342, P0343, P0346,

P0346	Sensor Range/Performance Bank 2	ECM	P0347, P0348, P0366, P0367, P0368, P0391, P0392, or P0393
P0347	Intake Camshaft Position Sensor Low Voltage Bank 2	ECM	DTC P0341, P0342, P0343, P0346, P0347, P0348, P0366, P0367, P0368, P0391, P0392, or P0393
P0348	Intake Camshaft Position Sensor High Voltage Bank 2	ECM	DTC P0341, P0342, P0343, P0346, P0347, P0348, P0366, P0367, P0368, P0391, P0392, or P0393
P0351	Ignition Coil Cylinder 1 Control Circuit	ECM	DTC P0351-P0356, P2300, P2301, P2303, P2304, P2306, P2307, P2309, P2310, P2312, P2313, P2315, or P2316 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0351-P0358 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0352	Ignition Coil Cylinder 2 Control Circuit	ECM	DTC P0351-P0356, P2300, P2301, P2303, P2304, P2306, P2307, P2309, P2310, P2312, P2313, P2315, or P2316 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0351-P0358 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0353	Ignition Coil Cylinder 3 Control Circuit	ECM	DTC P0351-P0356, P2300, P2301, P2303, P2304, P2306, P2307, P2309, P2310, P2312, P2313, P2315, or P2316 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0351-P0358 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0354	Ignition Coil Cylinder 4 Control Circuit	ECM	DTC P0351-P0356, P2300, P2301, P2303, P2304, P2306, P2307, P2309, P2310, P2312, P2313, P2315, or P2316 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0351-P0358 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
			DTC P0351-P0356, P2300, P2301, P2303, P2304, P2306, P2307, P2309, P2310, P2312, P2313,

P0355	Ignition Coil Cylinder 5 Control Circuit	ECM	P2315, or P2316 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0351-P0358 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0356	Ignition Coil Cylinder 6 Control Circuit	ECM	DTC P0351-P0356, P2300, P2301, P2303, P2304, P2306, P2307, P2309, P2310, P2312, P2313, P2315, or P2316 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0351-P0358 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0357	Ignition Coil Cylinder 7 Control Circuit	ECM	DTC P0351-P0358
P0358	Ignition Coil Cylinder 8 Control Circuit	ECM	DTC P0351-P0358
P0366	Exhaust Camshaft Position Sensor Range/Performance Bank 1	ECM	DTC P0341, P0342, P0343, P0346, P0347, P0348, P0366, P0367, P0368, P0391, P0392, or P0393
P0367	Exhaust Camshaft Position Sensor Low Voltage Bank 1	ECM	DTC P0341, P0342, P0343, P0346, P0347, P0348, P0366, P0367, P0368, P0391, P0392, or P0393
P0368	Exhaust Camshaft Position Sensor High Voltage Bank 1	ECM	DTC P0341, P0342, P0343, P0346, P0347, P0348, P0366, P0367, P0368, P0391, P0392, or P0393
P0391	Exhaust Camshaft Position Sensor Range/Performance Bank 2	ECM	DTC P0341, P0342, P0343, P0346, P0347, P0348, P0366, P0367, P0368, P0391, P0392, or P0393
P0392	Exhaust Camshaft Position Sensor Low Voltage Bank 2	ECM	DTC P0341, P0342, P0343, P0346, P0347, P0348, P0366, P0367, P0368, P0391, P0392, or P0393
P0393	Exhaust Camshaft Position Sensor High Voltage Bank 2	ECM	DTC P0341, P0342, P0343, P0346, P0347, P0348, P0366, P0367, P0368, P0391, P0392, or P0393
P0420	Catalyst System Low EfficiencyBank 1	ECM	DTC P0420 or P0430 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0420 or P0430 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0430	Catalyst System Low Efficiency	ECM	DTC P0420 or P0430 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or

	Bank 2		DTC P0420 or P0430 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0443	Evaporative Emission Control System Purge Solenoid Circuit Malfunction	ECM	DTC P0443, P0458, or P0459 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0443 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0458	Evaporative Emission Control System Purge Solenoid Circuit Low Voltage	ECM	DTC P0443, P0458, or P0459
P0459	Evaporative Emission Control System Purge Solenoid Circuit High Voltage	ECM	DTC P0443, P0458, or P0459
P0461	Fuel Level Sensor 1 Performance	ECM	DTC P0461
P0462	Fuel Level Sensor 1 Circuit Low Voltage	ECM	DTC P0462
P0463	Fuel Level Sensor 1 Circuit HighVoltage	ECM	DTC P0463
P0480	Cooling Fan Relay 1 Control Circuit	ECM	DTC P0480, P0481, P0691, P0692, P0693, or P0694 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0480 or P0481 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0481	Cooling Fan Relay 2 Control Circuit	ECM	DTC P0480, P0481, P0691, P0692, P0693, or P0694 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0480 or P0481 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0500	Vehicle Speed Sensor Circuit Malfunction	ECM	DTC P0500
P0501	Vehicle Speed Sensor (VSS) Performance	ECM	DTC P0501 or P0502
P0502	Vehicle Speed Sensor (VSS) Circuit Low Voltage	ECM	DTC P0501 or P0502 for the Aisin AY6 transmission or DTC P0502 or P0503 for the Tremec 6-Speed transmission
	Vehicle Speed Sensor (VSS)		

P0503	Circuit Intermittent	ECM	DTC P0502 or P0503
P0506	Idle Speed Low	ECM	DTC P0506, P0507, or P050A for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0506 or P0507 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0507	Idle Speed High	ECM	DTC P0506, P0507, or P050A for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0506 or P0507 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P050A	Cold Start Idle Air Control (IAC) System Performance	ECM	DTC P0506, P0507, or P050A
P0521	Engine Oil Pressure (EOP) Sensor Performance	ECM	DTC P0521, P0522, or P0523
P0522	Engine Oil Pressure (EOP) Sensor Circuit Low Voltage	ECM	DTC P0521, P0522, or P0523
P0523	Engine Oil Pressure (EOP) Sensor Circuit High Voltage	ECM	DTC P0521, P0522, or P0523
P0532	Air Conditioning (A/C) Refrigerant Pressure Sensor Circuit	ECM	DTC P0532 or P0533
P0533	Air Conditioning (A/C) Refrigerant Pressure Sensor Circuit Low Voltage	ECM	DTC P0532 or P0533
P0560	System Voltage Malfunction	ECM	DTC P0560
P0562	System Voltage Low	ECM	DTC P0562
		TCM	• DTC P0562 for the 4L60-E/4L65-E/4L70-E transmission • DTC P0562 for the 5L40-E/5L50-E transmission • DTC P0562 or P0563 for the 6L50/6L80/6L90 transmission
P0563	System Voltage High	ECM	DTC P0563
		TCM	• DTC P0563 for the 4L60-E/4L65-E/4L70-E transmission • DTC P0563 for the 5L40-E/5L50-E transmission • DTC P0562 or P0563 for the 6L50/6L80/6L90 transmission
P0571	Cruise Control Brake Switch Circuit	ECM	DTC P0571
	Brake Switch Circuit 1 Low		

P0572	Voltage	ECM	DTC P0572
P0573	Brake Switch Circuit 1 High Voltage	ECM	DTC P0573
P0575	Cruise Control Enable Circuit Malfunction	ECM	DTC P0575
P0601	Control Module Read Only Memory (ROM) Error	ECM	DTC P0601-P0604, P0606, P0607, P062B, P0167D, P2107, or P2610 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0601, P0602, P0603, P0604, P0606, P0607, P060D, P062F, or P2610 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
	Transmission Control Module (TCM) Read Only Memory (ROM)	TCM	• DTC P0601-P0604 or P062F for the 4L60-E/4L65-E/4L70-E transmission • DTC P0601 for the 5L40-E/5L50-E transmission • DTC P0601-P0604 or P062F for the 6L50/6L80/6L90 transmission
P0602	Control Module Not Programmed	ECM	DTC P0601-P0604, P0606, P0607, P062B, P0167D, P2107, or P2610 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0601, P0602, P0603, P0604, P0606, P0607, P060D, P062F, or P2610 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
	Transmission Control Module (TCM) Not Programmed	TCM	• DTC P0601-P0604 or P062F for the 4L60-E/4L65-E/4L70-E transmission • DTC P0602 for the 5L40-E/5L50-E transmission • DTC P0601-P0604 or P062F for the 6L50/6L80/6L90 transmission
	Control Module Long Term Memory Reset	ECM	DTC P0601-P0604, P0606, P0607, P062B, P0167D, P2107, or P2610 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0601, P0602, P0603, P0604, P0606, P0607, P060D, P062F, or

			P2610 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0603	Transmission Control Module (TCM) Long Term Memory Reset	TCM	• DTC P0601-P0604 or P062F for the 4L60-E/4L65-E/4L70-E transmission • DTC P0603 for the 5L40-E/5L50-E transmission • DTC P0601-P0604 or P062F for the 6L50/6L80/6L90 transmission
P0604	Control Module Random Access Memory (RAM)	ECM	DTC P0601-P0604, P0606, P0607, P062B, P0167D, P2107, or P2610 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0601, P0602, P0603, P0604, P0606, P0607, P060D, P062F, or P2610 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
	Transmission Control Module (TCM) Random Access Memory (RAM)	TCM	• DTC P0601-P0604 or P062F for the 4L60-E/4L65-E/4L70-E transmission • DTC P0604 for the 5L40-E/5L50-E transmission • DTC P0601-P0604 or P062F for the 6L50/6L80/6L90 transmission
P0606	Control Module Internal Performance	ECM	DTC P0601-P0604, P0606, P0607, P062B, P0167D, P2107, or P2610 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0601, P0602, P0603, P0604, P0606, P0607, P060D, P062F, or P2610 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0607	Control Module Performance	ECM	DTC P0601, P0602, P0603, P0604, P0606, P0607, P060D, P062F, or P2610
P060D	Control Module Accelerator Pedal Position (APP) System Performance	ECM	DTC P0601, P0602, P0603, P0604, P0606, P0607, P060D, P062F, or P2610
P0615	Starter Relay Circuit Malfunction	ECM	DTC P0615
P0616	Starter Relay Control Circuit Low Voltage	ECM	DTC P0616 or P0617
	Starter Relay Control Circuit		

P0617	High Voltage	ECM	DTC P0616 or P0617
P0621	Alternator L-Terminal Circuit Malfunction	ECM	DTC P0621
P0622	Generator F-Terminal Circuit	ECM	DTC P0622
P0625	Generator F-Terminal Low Voltage	ECM	DTC P0625 or P0626
P0626	Generator F-Terminal High Voltage	ECM	DTC P0625 or P0626
P0627	Fuel Pump Relay Control Circuit	ECM	DTC P0627, P0628, or P0629
P0628	Fuel Pump Relay Control Circuit Low Voltage	ECM	DTC P0627, P0628, or P0629
P0629	Fuel Pump Relay Control Circuit High Voltage	ECM	DTC P0627, P0628, or P0629
P062F	Control Module Long Term Memory Performance	ECM	DTC P0601, P0602, P0603, P0604, P0606, P0607, P060D, P062F, or P2610 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
	Transmission Control Module (TCM) Long Term Memory Performance	TCM	• DTC P0601-P0604 or P062F for the 4L60-E/4L65-E/4L70-E transmission • DTC P062F for the 5L40-E/5L50-E transmission • DTC P0601-P0604 or P062F for the 6L50/6L80/6L90 transmission
P0633	Theft Deterrent Key Not Programmed	ECM	DTC P0633
P0634	Transmission Control Module (TCM) Overtemperature	TCM	DTC P0634
P0638	Commanded versus Actual Throttle Position Correlation	ECM	DTC P0638, P2100, P2101, or P2119
P0641	5-Volt Reference 1 Circuit	ECM	DTC P0641-P0643, P0651-P0653, or P0697-P0699 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	5V Reference Circuit 1 Malfunction		DTC P0641 or P0651 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0642	5-Volt Reference 1 Circuit Low Voltage	ECM	DTC P0641-P0643, P0651-P0653, or P0697-P0699
P0643	5-Volt Reference 1 Circuit High Voltage	ECM	DTC P0641-P0643, P0651-P0653, or P0697-P0699
P0650	Malfunction Indicator (MI) Circuit Malfunction	ECM	DTC P0650 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0650 for the 4.8L, 5.3L, 6.0L,

			6.2L, or 7.0L engine
P0651	5-Volt Reference 2 Circuit	ECM	DTC P0641-P0643, P0651-P0653, or P0697-P0699 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	5V Reference Circuit 2 Malfunction	ECM	DTC P0641 or P0651 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0652	5-Volt Reference 2 Circuit Low Voltage	ECM	DTC P0641-P0643, P0651-P0653, or P0697-P0699
P0653	5-Volt Reference 2 Circuit High Voltage	ECM	DTC P0641-P0643, P0651-P0653, or P0697-P0699
P0658	Solenoid High Control Circuit Group 1 Low Voltage	TCM	DTC P0658 or P0659 for the 5L40-E/5L50-E transmission or DTC P0658 or P0659 for the 6L50/6L80/6L90 transmission
P0659	Solenoid High Control Circuit Group 1 High Voltage	TCM	DTC P0658 or P0659 for the 5L40-E/5L50-E transmission or DTC P0658 or P0659 for the 6L50/6L80/6L90 transmission
P0660	Intake Manifold Tuning (IMT) Valve Solenoid Control Circuit	ECM	DTC P0660, P0661, or P0662
P0661	Intake Manifold Tuning (IMT) Solenoid Control Circuit Low Voltage	ECM	DTC P0660, P0661, or P0662
P0662	Intake Manifold Tuning (IMT) Solenoid Control Circuit High Voltage	ECM	DTC P0660, P0661, or P0662
P0667	Transmission Control Module (TCM) Temperature Sensor Performance	TCM	DTC P0667, P0668, or P0669
P0668	Transmission Control Module (TCM) Temperature Sensor Circuit Low Voltage	TCM	DTC P0667, P0668, or P0669
P0669	Transmission Control Module (TCM) Temperature Sensor Circuit High Voltage	TCM	DTC P0667, P0668, or P0669
P0685	Engine Control Ignition Relay Circuit Malfunction	ECM	DTC P0685, P0686, P0687, P0689, or P0690 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	Engine Controls Ignition Relay Control Circuit	ECM	DTC P0685, P0689, or P0690 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0686	Engine Control Ignition Relay Circuit Low Voltage	ECM	DTC P0685, P0686, P0687, P0689, or P0690

P0687	Engine Control Ignition Relay Circuit High Voltage	ECM	DTC P0685, P0686, P0687, P0689, or P0690
P0689	Engine Control Ignition Relay Feedback Circuit Low Voltage	ECM	DTC P0685, P0686, P0687, P0689, or P0690 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	Engine Controls Relay Feedback Circuit Low Voltage		DTC P0685, P0689, or P0690 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0690	Engine Control Ignition Relay Feedback Circuit High Voltage	ECM	DTC P0685, P0686, P0687, P0689, or P0690 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	Engine Controls Relay Feedback Circuit High Voltage		DTC P0685, P0689, or P0690 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0691	Cooling Fan Relay 1 Control Circuit Low Voltage	ECM	DTC P0480, P0481, P0691, P0692, P0693, or P0694
P0692	Cooling Fan Relay 2 Control Circuit High Voltage	ECM	DTC P0480, P0481, P0691, P0692, P0693, or P0694
P0693	Cooling Fan Relay 2 Control Circuit Low Voltage	ECM	DTC P0480, P0481, P0691, P0692, P0693, or P0694
P0694	Cooling Fan Relay 1 Control Circuit High Voltage	ECM	DTC P0480, P0481, P0691, P0692, P0693, or P0694
P0697	5-Volt Reference 3 Circuit	ECM	DTC P0641-P0643, P0651-P0653, or P0697-P0699
P0698	5-Volt Reference 3 Circuit Low Voltage	ECM	DTC P0641-P0643, P0651-P0653, or P0697-P0699
P0699	5-Volt Reference 3 Circuit High Voltage	ECM	DTC P0641-P0643, P0651-P0653, or P0697-P0699
P06AC	Transmission Control Module (TCM) Power Up Temperature Sensor Performance	TCM	DTC P06AC, P06AD, or P06AE
P06AD	Transmission Control Module (TCM) Power Up Temperature Sensor Circuit Low Voltage	TCM	DTC P06AC, P06AD, or P06AE
P06AE	Transmission Control Module (TCM) Power Up Temperature Sensor Circuit High Voltage	TCM	DTC P06AC, P06AD, or P06AE
P0700	Transmission Control Module (TCM) Requested MIL Illumination	ECM	DTC P0700 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0700 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P0703	Torque Converter / Brake Switch Circuit Malfunction	ECM	DTC P0703
P0704	Clutch Switch Circuit	ECM	DTC P0704
			• DTC P0711 for the 4L60-

P0711	Transmission Fluid Temperature (TFT) Sensor Performance	TCM	E/4L65-E/4L70-E transmission • DTC P0711 for the 5L40-E/5L50-E transmission • DTC P0711, P0712, or P0713 for the 6L50/6L80/6L90 transmission
P0712	Transmission Fluid Temperature (TFT) Sensor Circuit Low Voltage	ECM	DTC P0712 or P0713 for the Tremec 6-Speed transmission
		TCM	• DTC P0712 for the 4L60-E/4L65-E/4L70-E transmission • DTC P0712 for the 5L40-E/5L50-E transmission • DTC P0711, P0712, or P0713 for the 6L50/6L80/6L90 transmission
P0713	Transmission Fluid Temperature (TFT) Sensor Circuit High Voltage	ECM	DTC P0712 or P0713 for the Tremec 6-Speed transmission
		TCM	• DTC P0713 for the 4L60-E/4L65-E/4L70-E transmission • DTC P0713 for the 5L40-E/5L50-E transmission • DTC P0711, P0712, or P0713 for the 6L50/6L80/6L90 transmission
P0716	Input Speed Sensor Performance	TCM	• DTC P0716 for the 4L60-E/4L65-E/4L70-E transmission • DTC P0716 for the 5L40-E/5L50-E transmission • DTC P0716 or P0717 for the 6L50/6L80/6L90 transmission
P0717	Input Speed Sensor Circuit Low Voltage	TCM	• DTC P0717 for the 4L60-E/4L65-E/4L70-E transmission • DTC P0717 for the 5L40-E/5L50-E transmission • DTC P0716 or P0717 for the 6L50/6L80/6L90 transmission
P0719	Brake Switch Circuit Low Voltage	TCM	DTC P0719
P0722	Output Speed Sensor Circuit Low Voltage	TCM	• DTC P0722 for the 4L60-E/4L65-E/4L70-E transmission • DTC P0722 for the 5L40-E/5L50-E transmission • DTC P0722 or P0723 for the 6L50/6L80/6L90 transmission
			• DTC P0723 for the 4L60-

P0723	Output Speed Sensor Circuit Intermittent	TCM	E/4L65-E/4L70-E transmission • DTC P0723 for the 5L40-E/5L50-E transmission • DTC P0722 or P0723 for the 6L50/6L80/6L90 transmission
P0724	Brake Switch Circuit High Voltage	TCM	DTC P0724
P0727	Engine Speed No Signal	TCM	DTC P0727
P0741	Torque Converter Clutch (TCC) System - Stuck Off	TCM	• DTC P0741 for the 4L60-E/4L65-E/4L70-E transmission • DTC P0741 for the 5L40-E/5L50-E transmission • DTC P0741 or P0742 for the 6L50/6L80/6L90 transmission
P0742	Torque Converter Clutch (TCC) System - Stuck On	TCM	• DTC P0742 for the 4L60-E/4L65-E/4L70-E transmission • DTC P0742 for the 5L40-E/5L50-E transmission • DTC P0741 or P0742 for the 6L50/6L80/6L90 transmission
P0748	Pressure Control (PC) Solenoid Control Circuit	TCM	DTC P0748
P0751	1-2 Shift Solenoid (SS) Valve Performance - No First, Fourth or Fifth Gear	TCM	DTC P0751 for the 4L60-E/4L65-E/4L70-E transmission or DTC P0751 for the 5L40-E/5L50-E transmission
	Shift Solenoid (SS) 1 Valve Performance - Stuck Off		DTC P0751 for the 6L50/6L80/6L90 transmission
P0752	1-2 Shift Solenoid (SS) Valve Performance - No Second or Third Gear	TCM	DTC P0752 for the 4L60-E/4L65-E/4L70-E transmission or DTC P0752 for the 5L40-E/5L50-E transmission
	Shift Solenoid (SS) 1 Valve Performance - Stuck On		DTC P0752 for the 6L50/6L80/6L90 transmission
P0756	2-3 Shift Solenoid (SS) Valve Performance - No First or Second Gear	TCM	DTC P0756 for the 4L60-E/4L65-E/4L70-E transmission or DTC P0756 for the 5L40-E/5L50-E transmission

	Shift Solenoid (SS) 2 Valve Performance - Stuck Off		DTC P0756 for the 6L50/6L80/6L90 transmission
P0757	2-3 Shift Solenoid (SS) Valve Performance - No Third, Fourth or Fifth Gear	TCM	DTC P0757 for the 4L60-E/4L65-E/4L70-E transmission or DTC P0757 for the 5L40-E/5L50-E transmission
P0761	4-5 Shift Solenoid (SS) Valve Performance - No Fourth Gear	TCM	DTC P0761
P0762	4-5 Shift Solenoid (SS) Valve Performance - No Fifth Gear	TCM	DTC P0762
P0776	Clutch Pressure Control (PC) Solenoid 2 - Stuck Off	TCM	DTC P0776 or P0777
P0777	Clutch Pressure Control (PC) Solenoid 2 - Stuck On	TCM	DTC P0776 or P0777
P0787	3-2 Shift Solenoid (SS) Control Circuit Low Voltage	TCM	DTC P0787
P0788	3-2 Shift Solenoid (SS) Control Circuit High Voltage	TCM	DTC P0788
P0796	Clutch Pressure Control (PC) Solenoid 3 - Stuck Off	TCM	DTC P0796 or P0797
P0797	Clutch Pressure Control (PC) Solenoid 3 - Stuck On	TCM	DTC P0796 or P0797
P0801	Reverse Lockout Solenoid Control Circuit	ECM	DTC P0801
P0803	Skip Shift Solenoid Control Circuit	ECM	DTC P0803
P0806	Clutch Pedal Position (CPP) Sensor Circuit Performance	ECM	DTC P0806 for the Aisin AY6 transmission or DTC P0806 for the Tremec 6-Speed transmission
P0807	Clutch Pedal Position (CPP) Sensor Circuit Low Voltage	ECM	DTC P0807 or P0808 for the Aisin AY6 transmission or DTC P0807 or P0808 for the Tremec 6-Speed transmission
P0808	Clutch Pedal Position (CPP) Sensor Circuit High Voltage	ECM	DTC P0807 or P0808 for the Aisin AY6 transmission or DTC P0807 or P0808 for the Tremec

			6-Speed transmission
P080A	Clutch Pedal Position (CPP) Sensor Circuit High Voltage	ECM	DTC P080A for the Aisin AY6 transmission or DTC P080A for the Tremec 6-Speed transmission
P0815	Upshift Switch Circuit	TCM	DTC P0815, P0816, or P0826 for the 5L40-E/5L50-E transmission or DTC P0815, P0816, or P0826 for the 6L50/6L80/6L90 transmission
P0816	Downshift Switch Circuit	TCM	DTC P0815, P0816, or P0826 for the 5L40-E/5L50-E transmission or DTC P0815, P0816, or P0826 for the 6L50/6L80/6L90 transmission
P0826	Up and Down Shift Switch Circuit	TCM	DTC P0815, P0816, or P0826 for the 5L40-E/5L50-E transmission or DTC P0815, P0816, or P0826 for the 6L50/6L80/6L90 transmission
P0842	Transmission Fluid Pressure (TFP) Switch 1 Circuit Low Voltage	TCM	DTC P0842 or P0843
P0843	Transmission Fluid Pressure (TFP) Switch 1 Circuit High Voltage	TCM	DTC P0842 or P0843
P0850	Park/Neutral Position (PNP) Switch Circuit	TCM	DTC P0850 for the 5L40-E/5L50-E transmission or DTC P0850-P0852 for the 6L50/6L80/6L90 transmission
P0851	Park/Neutral Position (PNP) Switch Circuit Low Voltage	ECM	DTC P0850-P0852 for the 6L50/6L80/6L90 transmission
P0852	Park/Neutral Position (PNP) Switch Circuit High Voltage	ECM	DTC P0850-P0852 for the 6L50/6L80/6L90 transmission
P0856	Engine Control Module (ECM) Traction Control Torque Request Circuit	ECM	DTC P0856

P0872	Transmission Fluid Pressure (TFP) Switch 3 Circuit Low Voltage	TCM	DTC P0872 or P0873
P0873	Transmission Fluid Pressure (TFP) Switch 3 Circuit High Voltage	TCM	DTC P0872 or P0873
P0877	Transmission Fluid Pressure (TFP) Switch 4 Circuit Low Voltage	TCM	DTC P0877 or P0878
P0878	Transmission Fluid Pressure (TFP) Switch 4 Circuit High Voltage	TCM	DTC P0877 or P0878
P0897	Transmission Fluid Life	TCM	DTC P0897
P0961	Line Pressure Control (PC) Solenoid System Performance	TCM	DTC P0961 for the 4L60-E/4L65-E/4L70-E transmission or DTC P0961-P0963 for the 6L50/6L80/6L90 transmission
P0962	Line Pressure Control (PC) Solenoid Control Circuit Low Voltage	TCM	DTC P0961-P0963
P0963	Line Pressure Control (PC) Solenoid Control Circuit High Voltage	TCM	DTC P0961-P0963
P0965	Clutch Pressure Control (PC) Solenoid 2 System Performance	TCM	DTC P0965-P0967
P0966	Clutch Pressure Control (PC) Solenoid 2 Control Circuit Low Voltage	TCM	DTC P0965-P0967
P0967	Clutch Pressure Control (PC) Solenoid 2 Control Circuit High Voltage	TCM	DTC P0965-P0967
P0969	Clutch Pressure Control (PC) Solenoid 3 System Performance	TCM	DTC P0969-P0971
P0970	Clutch Pressure Control (PC) Solenoid 3 Control Circuit Low Voltage	TCM	DTC P0969-P0971
P0971	Clutch Pressure Control (PC) Solenoid 3 Control Circuit High Voltage	TCM	DTC P0969-P0971
P0973	1-2 Shift Solenoid (SS) Control Circuit Low Voltage	TCM	DTC P0973 for the 4L60-E/4L65-E/4L70-E transmission or

			DTC P0973 for the 5L40-E/5L50-E transmission
	Shift Solenoid (SS) 1 Control Circuit Low Voltage		DTC P0973 or P0974 for the 6L50/6L80/6L90 transmission
P0974	1-2 Shift Solenoid (SS) Control Circuit High Voltage	TCM	DTC P0974 for the 4L60-E/4L65-E/4L70-E transmission or DTC P0974 for the 5L40-E/5L50-E transmission
	Shift Solenoid (SS) 1 Control Circuit High Voltage		DTC P0973 or P0974 for the 6L50/6L80/6L90 transmission
P0976	2-3 Shift Solenoid (SS) Control Circuit Low Voltage	TCM	DTC P0976 for the 4L60-E/4L65-E/4L70-E transmission or DTC P0976 for the 5L40-E/5L50-E transmission
	Shift Solenoid (SS) 2 Control Circuit Low Voltage		DTC P0976 or P0977 for the 6L50/6L80/6L90 transmission
P0977	2-3 Shift Solenoid (SS) Control Circuit High Voltage	TCM	DTC P0977 for the 4L60-E/4L65-E/4L70-E transmission or DTC P0977 for the 5L40-E/5L50-E transmission
	Shift Solenoid (SS) 2 Control Circuit High Voltage		DTC P0976 or P0977 for the 6L50/6L80/6L90 transmission
P0979	4-5 Shift Solenoid (SS) Control Circuit Low Voltage	TCM	DTC P0979
P0980	4-5 Shift Solenoid (SS) Control Circuit High Voltage	TCM	DTC P0980
P0989	Transmission Fluid Pressure (TFP) Switch 5 Circuit Low Voltage	TCM	DTC P0989 or P0990
P0990	Transmission Fluid Pressure (TFP) Switch 5 Circuit High Voltage	TCM	DTC P0989 or P0990
P1011	Intake Camshaft Actuator Park Position Bank 1	ECM	DTC P1011-P1014
P1012	Exhaust Camshaft Actuator Park Position Bank 1	ECM	DTC P1011-P1014

P1174	Fuel Trim Cylinder Balance Bank 1	ECM	DTC P1174 or P1175
P1175	Fuel Trim Cylinder Balance Bank 2	ECM	DTC P1174 or P1175
P1258	Engine Coolant Over Temperature - Protection Mode Active	ECM	DTC P1258
P1380	Misfire Detected - Rough Road Data Not Available	ECM	DTC P1380 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P1380 or P1381 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P1381	Misfire Detected - No Communication with Brake Control Module	ECM	DTC P1380 or P1381
P1400	Cold Start Emission Reduction Control System	ECM	DTC P1400
P1516	Throttle Actuator Control (TAC) Module Throttle Actuator Position Performance	ECM	DTC P1516, P2101, P2119, or P2176
P1551	Throttle Control Lower Position not Reached during Learning Mode	ECM	DTC P1551
P1631	Theft Deterrent Fuel Enable Signal Not Correct	ECM	DTC P1631
P1668	Generator L-Terminal Control Circuit	ECM	DTC P1668, P2500, or P2501
P167D	Control Module Ignition Coil Internal Circuit	ECM	DTC P0601-P0604, P0606, P0607, P062B, P0167D, P2107, or P2610
P1682	Ignition 1 Switch Circuit 2	ECM	DTC P1682
P1751	Shift Valve 1 Performance	TCM	DTC P1751
P1761	Up and Down Shift Switch Signal Circuit	TCM	DTC P1761
P1793	Wheel Speed Signal	TCM	DTC P1793
P1810	Transmission Fluid Pressure (TFP) Position Switch Circuit	TCM	DTC P1810
P1815	Transmission Fluid Pressure (TFP) Valve Position Switch -	TCM	DTC P1815 for the 4L60-E/4L65-E/4L70-E transmission or

	Start in Wrong Range		DTC P1815 for the 5L40-E/5L50-E transmission
P1816	Transmission Fluid Pressure (TFP) Valve Position Switch Indicates Park/Neutral (P/N) with Drive Ratio	TCM	DTC P1816
P1818	Transmission Fluid Pressure (TFP) Valve Position Switch Indicates Drive without Drive Ratio	TCM	DTC P1818
P1820	Internal Mode Switch A Circuit Low Voltage	TCM	DTC P1820
P1822	Internal Mode Switch B Circuit High Voltage	TCM	DTC P1822
P1823	Internal Mode Switch P Circuit Low Voltage	TCM	DTC P1823
P1825	Internal Mode Switch - Invalid Range	TCM	DTC P1825 or P1915
P1826	Internal Mode Switch C Circuit High Voltage	TCM	DTC P1826
P182E	Internal Mode Switch - Invalid Range	TCM	DTC P182E or P1915
P1831	Pressure Control (PC)/Shift Lock Solenoid Control Circuit Low Voltage	TCM	DTC P1831 for the 5L40-E/5L50-E transmission
P1832	Pressure Control (PC)/Shift Lock Solenoid Control Circuit High Voltage	TCM	DTC P1832 for the 5L40-E/5L50-E transmission
P1833	Torque Converter Clutch (TCC)/Shift Solenoid (SS) Control Circuit Low Voltage	TCM	DTC P1833
P1834	Torque Converter Clutch (TCC)/Shift Solenoid (SS) Control Circuit High Voltage	TCM	DTC P1834
P1876	Up and Down Shift Switch Performance - Range Switch Not in D3	TCM	DTC P1876 for the 5L40-E/5L50-E transmission or DTC P1876 for the 6L50/6L80/6L90 transmission
P1915	Internal Mode Switch Does Not Indicate Park/Neutral (P/N) During Start	TCM	DTC P1825 or P1915 for the 5L40-E/5L50-E transmission
	Internal Mode Switch Start/Wrong Range		DTC P182E or P1915 for the 6L50/6L80/6L90 transmission
P2066	Fuel Level Sensor 2 Performance	ECM	DTC P2066

P2067	Fuel Level Sensor 2 Low Voltage	ECM	DTC P2067
P2068	Fuel Level Sensor 2 High Voltage	ECM	DTC P2068
P2072	Throttle Actuator Control System - Ice Blockage	ECM	DTC P2072
P2088	Intake Camshaft Position Control Solenoid Circuit Low Voltage Bank 1	ECM	DTC P0010, P0013, P0020, P0023, P2088, P2089, P2090, P2091, P2092, P2093, P2094, or P2095
P2089	Intake Camshaft Position Control Solenoid Circuit High Voltage Bank 1	ECM	DTC P0010, P0013, P0020, P0023, P2088, P2089, P2090, P2091, P2092, P2093, P2094, or P2095
P2090	Exhaust Camshaft Position Control Solenoid Circuit Low Voltage Bank 1	ECM	DTC P0010, P0013, P0020, P0023, P2088, P2089, P2090, P2091, P2092, P2093, P2094, or P2095
P2091	Exhaust Camshaft Position Control Solenoid Circuit High Voltage Bank 1	ECM	DTC P0010, P0013, P0020, P0023, P2088, P2089, P2090, P2091, P2092, P2093, P2094, or P2095
P2092	Intake Camshaft Position Control Solenoid Circuit Low Voltage Bank 2	ECM	DTC P0010, P0013, P0020, P0023, P2088, P2089, P2090, P2091, P2092, P2093, P2094, or P2095
P2093	Intake Camshaft Position Control Solenoid Circuit High Voltage Bank 2	ECM	DTC P0010, P0013, P0020, P0023, P2088, P2089, P2090, P2091, P2092, P2093, P2094, or P2095
P2094	Exhaust Camshaft Position Control Solenoid Circuit Low Voltage Bank 2	ECM	DTC P0010, P0013, P0020, P0023, P2088, P2089, P2090, P2091, P2092, P2093, P2094, or P2095
P2095	Exhaust Camshaft Position Control Solenoid Circuit High Voltage Bank 2	ECM	DTC P0010, P0013, P0020, P0023, P2088, P2089, P2090, P2091, P2092, P2093, P2094, or P2095
P2096	Post Catalyst O2 Sensor Fuel Trim Below Lower Limit Bank 1	ECM	DTC P2096 or P2098
P2097	Post Catalyst O2 Sensor Fuel Trim Above Upper Limit Bank 1	ECM	DTC P2097 or P2099
P2098	Post Catalyst O2 Sensor Fuel Trim Below Lower Limit Bank 2	ECM	DTC P2096 or P2098
P2099	Post Catalyst O2 Sensor Fuel Trim Above Upper Limit Bank 2	ECM	DTC P2097 or P2099
P2100	Throttle Control Motor Malfunction	ECM	DTC P0638, P2100, P2101, or P2119
P2101	Throttle Control Position Range/Performance	ECM	DTC P0638, P2100, P2101, or P2119 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	Throttle Actuator Position Performance		DTC P1516, P2101, P2119, or P2176 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P2105	Throttle Control Forced Engine Shutdown	ECM	DTC P2105

P2119	Closed Throttle Position Range/Performance	ECM	DTC P0638, P2100, P2101, or P2119 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	Throttle Closed Position Performance		DTC P1516, P2101, P2119, or P2176 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P2120	Accelerator Pedal Position Sensor 1 Circuit	ECM	DTC P2120, P2122, P2123, P2125, P2127, P2128, or P2138
P2122	Accelerator Pedal Position Sensor 1 Low Voltage	ECM	DTC P2122, P2123, P2127, P2128, or P2138 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P2120, P2122, P2123, P2125, P2127, P2128, or P2138 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P2123	Accelerator Pedal Position Sensor 1 High Voltage	ECM	DTC P2122, P2123, P2127, P2128, or P2138 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P2120, P2122, P2123, P2125, P2127, P2128, or P2138 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P2125	Accelerator Pedal Position Sensor 2 Circuit	ECM	DTC P2120, P2122, P2123, P2125, P2127, P2128, or P2138
P2127	Accelerator Pedal Position Sensor 2Low Voltage	ECM	DTC P2122, P2123, P2127, P2128, or P2138 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P2120, P2122, P2123, P2125, P2127, P2128, or P2138 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P2128	Accelerator Pedal Position Sensor 2 High Voltage	ECM	DTC P2122, P2123, P2127, P2128, or P2138 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P2120, P2122, P2123, P2125, P2127, P2128, or P2138 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
	Throttle Position Sensor 1-2		DTC P0120, P0122, P0123, P0220,

P2135	Correlation	ECM	P0222, P0223, or P2135
P2138	Accelerator Pedal Position Sensor 1-2 Correlation	ECM	DTC P2122, P2123, P2127, P2128, or P2138 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P2120, P2122, P2123, P2125, P2127, P2128, or P2138 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P2176	Throttle Actuator Control Lower Position Not Learned	ECM	DTC P2176 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	Minimum Throttle Position Not Learned		DTC P1516, P2101, P2119, or P2176 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P2177	Fuel Trim Lean during Cruising/Acceleration Bank 1	ECM	DTC P2177, P2179, P2187, or P2189
P2178	Fuel Trim Rich during Cruising/Acceleration Bank 1	ECM	DTC P2178, P2180, P2188, or P2190
P2179	Fuel Trim Lean during Cruising/Acceleration Bank 2	ECM	DTC P2177, P2179, P2187, or P2189
P2180	Fuel Trim Rich during Cruising/Acceleration Bank 2	ECM	DTC P2178, P2180, P2188, or P2190
P2187	Fuel Trim Lean during Idling/Deceleration Bank 1	ECM	DTC P2177, P2179, P2187, or P2189
P2188	Fuel Trim Rich during Idling/Deceleration Bank 1	ECM	DTC P2178, P2180, P2188, or P2190
P2189	Fuel Trim Lean during Idling/Deceleration Bank 2	ECM	DTC P2177, P2179, P2187, or P2189
P2190	Fuel Trim Rich during Idling/Deceleration Bank 2	ECM	DTC P2178, P2180, P2188, or P2190
P2227	Barometric Pressure Sensor Range/Performance	ECM	DTC P2227, P2228, or P2229
P2228	Barometric Pressure Sensor Voltage Low	ECM	DTC P2227, P2228, or P2229
P2229	Barometric Pressure Sensor Voltage High	ECM	DTC P2227, P2228, or P2229
P2232	HO2S Signal Circuit Shorted to Heater Circuit Bank 1 Sensor 2	ECM	DTC P2232 or P2235
P2235	HO2S Signal Circuit Shorted to Heater Circuit Bank 2 Sensor 2	ECM	DTC P2232 or P2235
P2270	O2 Sensor Lean/Rich Switch Signal Malfunction Bank 1 Sensor 2	ECM	DTC P2270 or P2272 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	HO2S Signal Stuck Lean Bank 1 Sensor 2		DTC P0133, P0134, P0140, P1133, P2270, or P2271 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine

P2271	O2 Sensor Rich/Lean Switch Signal Malfunction Bank 1 Sensor 2	ECM	DTC P2271 or P2273 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	HO2S Signal Stuck Rich Bank 1 Sensor 2		DTC P0133, P0134, P0140, P1133, P2270, or P2271 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P2272	O2 Sensor Lean/Rich Switch Signal Malfunction Bank 2 Sensor 2	ECM	DTC P2270 or P2272 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	HO2S Signal Stuck Lean Bank 2 Sensor 2		DTC P0153, P0154, P0160, P1153, P2272, or P2273 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P2273	O2 Sensor Rich/Lean Switch Signal Malfunction Bank 2 Sensor 2	ECM	DTC P2271 or P2273 for the 2.8L, 3.0L, 3.2L, or 3.6L engine
	HO2S Signal Stuck Rich Bank 2 Sensor 2		DTC P0153, P0154, P0160, P1153, P2272, or P2273 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
P2300	Ignition Coil Cylinder 1 Circuit Low Voltage	ECM	DTC P0351-P0356, P2300, P2301, P2303, P2304, P2306, P2307, P2309, P2310, P2312, P2313, P2315, or P2316
P2301	Ignition Coil Cylinder 1 Circuit High Voltage	ECM	DTC P0351-P0356, P2300, P2301, P2303, P2304, P2306, P2307, P2309, P2310, P2312, P2313, P2315, or P2316
P2303	Ignition Coil Cylinder 2 Circuit Low Voltage	ECM	DTC P0351-P0356, P2300, P2301, P2303, P2304, P2306, P2307, P2309, P2310, P2312, P2313, P2315, or P2316
P2304	Ignition Coil Cylinder 2 Circuit High Voltage	ECM	DTC P0351-P0356, P2300, P2301, P2303, P2304, P2306, P2307, P2309, P2310, P2312, P2313, P2315, or P2316
P2306	Ignition Coil Cylinder 3 Circuit Low Voltage	ECM	DTC P0351-P0356, P2300, P2301, P2303, P2304, P2306, P2307, P2309, P2310, P2312, P2313, P2315, or P2316
P2307	Ignition Coil Cylinder 3 Circuit High Voltage	ECM	DTC P0351-P0356, P2300, P2301, P2303, P2304, P2306, P2307, P2309, P2310, P2312, P2313, P2315, or P2316
P2309	Ignition Coil Cylinder 4 Circuit Low Voltage	ECM	DTC P0351-P0356, P2300, P2301, P2303, P2304, P2306, P2307, P2309, P2310, P2312, P2313, P2315, or P2316
P2310	Ignition Coil Cylinder 4 Circuit High Voltage	ECM	DTC P0351-P0356, P2300, P2301, P2303, P2304, P2306, P2307, P2309, P2310, P2312, P2313, P2315, or P2316

P2312	Ignition Coil Cylinder 5 Circuit Low Voltage	ECM	DTC P0351-P0356, P2300, P2301, P2303, P2304, P2306, P2307, P2309, P2310, P2312, P2313, P2315, or P2316
P2313	Ignition Coil Cylinder 5 Circuit High Voltage	ECM	DTC P0351-P0356, P2300, P2301, P2303, P2304, P2306, P2307, P2309, P2310, P2312, P2313, P2315, or P2316
P2315	Ignition Coil Cylinder 6 Circuit Low Voltage	ECM	DTC P0351-P0356, P2300, P2301, P2303, P2304, P2306, P2307, P2309, P2310, P2312, P2313, P2315, or P2316
P2316	Ignition Coil Cylinder 6 Circuit High Voltage	ECM	DTC P0351-P0356, P2300, P2301, P2303, P2304, P2306, P2307, P2309, P2310, P2312, P2313, P2315, or P2316
P2500	Generator L-Terminal Circuit Low Voltage	ECM	DTC P1668, P2500, or P2501
P2501	Generator L-Terminal Circuit High Voltage	ECM	DTC P1668, P2500, or P2501
P250A	Engine Oil Level Sensor Circuit	ECM	DTC P250A
P2534	Ignition 1 Switch Circuit Low Voltage	TCM	• DTC P2534 for the 4L60-E/4L65-E/4L70-E transmission • DTC P2534 for the 5L40-E/5L50-E transmission • DTC P2534 for the 6L50/6L80/6L90 transmission
P2544	Transmission Torque Request Circuit	ECM	DTC P2544 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P2544 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine
		TCM	DTC P2544 for the 5L40-E/5L50-E transmission
P2610	Control Module Ignition Off Timer Performance	ECM	DTC P0601-P0604, P0606, P0607, P062B, P0167D, P2107, or P2610 for the 2.8L, 3.0L, 3.2L, or 3.6L engine or DTC P0601, P0602, P0603, P0604, P0606, P0607, P060D, P062F, or P2610 for the 4.8L, 5.3L, 6.0L, 6.2L, or 7.0L engine

Road Test Caution

Caution: Road test a vehicle under safe conditions and while obeying all traffic laws. Do not attempt any maneuvers that could jeopardize vehicle control. Failure to adhere to these precautions could lead to serious personal injury and vehicle damage.

Valve Springs Can Be Tightly Compressed Caution

Caution: Valve springs can be tightly compressed. Use care when removing retainers and plugs. Personal injury could result.

Torque Reaction Against Timing Drive Chain Notice

Notice: A wrench must be used on the hex of the camshaft when loosening or tightening in order to prevent component damage. Failure to prevent the torque reaction against the timing drive chain can lead to timing drive chain failure.

Window Edge Damage Notice

Notice: Avoid damage to the window from impacting objects due to an exposed edge. The window must be 1 mm (0.025 in) below the surface of the sheet metal to avoid window damage.

Relieving Fuel Pressure Caution

Caution: Remove the fuel tank cap and relieve the fuel system pressure before servicing the fuel system in order to reduce the risk of personal injury. After you relieve the fuel system pressure, a small amount of fuel may be released when servicing the fuel lines, the fuel injection pump, or the connections. In order to reduce the risk of personal injury, cover the fuel system components with a shop towel before disconnection. This will catch any fuel that may leak out. Place the towel in an approved container when the disconnection is complete.

Gasoline / Gasoline Vapors Caution

Caution: Gasoline or gasoline vapors are highly flammable. A fire could occur if an ignition source is present. Never drain or store gasoline or diesel fuel in an open container, due to the possibility of fire or explosion. Have a dry chemical (Class B) fire extinguisher nearby.

Fuel Pipe Fitting Caution

Caution: Always apply a few drops of clean engine oil to the male pipe ends before connecting the fuel pipe fittings in order to reduce the risk of fire and personal injury. This will ensure proper reconnection and prevent a possible fuel leak. During normal operation, the O-rings located in the female connector will swell and may prevent proper reconnection if not lubricated.

Safety Glasses and Compressed Air Caution

Caution: Wear safety glasses when using compressed air in order to prevent eye injury.

Fuel Gage Leak Caution

Caution: Wrap a shop towel around the fuel pressure connection in order to reduce the risk of fire and personal injury. The towel will absorb any fuel leakage that occurs during the connection of the fuel pressure gage. Place the towel in an approved container when the connection of the fuel pressure gage is complete.

Fuel Storage Caution

Caution: Do not drain the fuel into an open container. Never store the fuel in an open container due to the possibility of a fire or an explosion.

Moving Parts and Hot Surfaces Caution

Caution: Avoid contact with moving parts and hot surfaces while working around a running engine in order to prevent physical injury.

Fuel and Evaporative Emission Pipe Caution

Caution: In order to reduce the risk of fire and personal injury observe the following items:

- Replace all nylon fuel pipes that are nicked, scratched or damaged during installation, do not attempt to repair the sections of the nylon fuel pipes
- Do not hammer directly on the fuel harness body clips when installing new fuel pipes. Damage to the nylon pipes may result in a fuel leak.
- Always cover nylon vapor pipes with a wet towel before using a torch near them. Also, never expose the vehicle to temperatures higher than 115°C (239°F) for more than one hour, or more than 90°C (194°F) for any extended period.
- Apply a few drops of clean engine oil to the male pipe ends before connecting fuel pipe fittings. This will ensure proper reconnection and prevent a possible fuel leak. (During normal operation, the O-rings located in the female connector will swell and may prevent proper reconnection if not lubricated.)

Safety Goggles and Fuel Caution

Caution: Always wear safety goggles when working with fuel in order to protect the eyes from fuel splash.

Fuel Pressure Notice

Notice: Do not allow the fuel pressure to exceed the specified value because damage to the fuel pressure regulator or the fuel pressure gage may result.

Powertrain Control Module and Electrostatic Discharge Notice

Notice: Do not touch the connector pins or soldered components on the circuit board in order to prevent possible electrostatic discharge (ESD) damage to the PCM.

OBDII Symbol Description Notice

Notice: The OBD II symbol is used on the circuit diagrams in order to alert the technician that the circuit is essential for proper OBD II emission control circuit operation. Any circuit which fails and causes the malfunction indicator lamp (MIL) to turn ON, or causes emissions-related component damage, is identified as an OBD II circuit.

ABS Component Handling Caution

Caution: Certain components in the Antilock Brake System (ABS) are not intended to be serviced individually. Attempting to remove or disconnect certain system components may result in personal injury and/or improper system operation. Only those components with approved removal and installation procedures should be serviced.

Definition of Caution, Notice, and Important

The diagnosis and repair procedures in a GM Service Manual contain both general and specific Cautions, Notices, and Importants. GM is dedicated to the presentation of service information that helps the technician to diagnose and repair the systems necessary for the proper operation of the vehicle, however, certain procedures may present a hazard to the technician if they are not followed in the recommended manner . Cautions, Notices, and Importants are elements designed to prevent these hazards, however, not all hazards can be foreseen. This information is placed at strategic locations within the service manual. This information is designed to prevent the following from occurring:

- Serious bodily injury or death to the technician
- Damage to the vehicle
- Unnecessary vehicle repairs
- Unnecessary component replacement
- Improper repair or replacement of vehicle components.
- Any caution or notice that appears in this service category is referenced from the individual service categories.

CAUTION Defined

When encountering a CAUTION, you will be asked to take a necessary action or not to take a prohibited action. If a CAUTION is not heeded, the following consequences may occur:

- Serious bodily injury or death to the technician
- Serious bodily injury or death to other technicians in the workplace area
- Serious bodily injury to the driver and/or passenger(s) of the vehicle, if the vehicle has been improperly repaired

NOTICE Defined

Notices call special attention to a necessary action or to a prohibited action. If a NOTICE is not heeded, the following consequences may occur:

- Damage to the vehicle
- Unnecessary vehicle repairs
- Unnecessary component replacement
- Improper operation or performance of the system or component under repair
- Damage to any systems or components which are dependent upon the proper operation of the system or component under repair
- Improper operation or performance of any systems or components which are dependent upon the proper operation or performance of the system or component under repair
- Damage to fasteners, basic tools, or special tools
- The leakage of coolant, lubricant, or other vital fluids

IMPORTANT Defined

IMPORTANT statements emphasize a necessary characteristic of a diagnostic or repair procedure. IMPORTANT statements are designed to do the following:

- Clarify a procedure
- Present additional information for accomplishing a procedure
- Give insight into the reason or reasons for performing a procedure in the manner recommended
- Present information that will help to accomplish a procedure in a more effective manner
- Present information that gives the technician the benefit of past experience in accomplishing a procedure with greater ease

Lower O-Ring Removal Caution

Caution: Verify that the lower (small) O-ring of each injector does not remain in the lower manifold in order to reduce the risk of fire and personal injury.

If the O-ring is not removed with the injector, the replacement injector with new O-rings will not seat properly in the injector socket. Improper seating could cause a fuel leak.

Ignition OFF When Disconnecting Battery Notice

Notice: Always turn the ignition OFF when connecting or disconnecting battery cables, battery chargers, or jumper cables. Failing to do so may damage the Powertrain Control Module (PCM) or other electronic components.

Single Cylinder Flooding Notice

Notice: In order to prevent flooding of a single cylinder and possible engine damage, relieve the fuel pressure before performing the fuel injector coil test procedure.

Adding Fluid to the Brake System Notice (Up to BSI)

Notice: When adding fluid to the brake master cylinder reservoir, use only Holden specification number HN 1796 (Super DOT 4/DOT 4 Plus) brake fluid from a clean, sealed brake fluid container. The use of any type of fluid other than the recommended type of brake fluid may cause contamination which may result in damage to the internal rubber seals and/or rubber linings of hydraulic brake system components.

Vehicle Lifting Caution

Caution: To avoid any vehicle damage, serious personal injury or death when major components are removed from the vehicle and the vehicle is supported by a hoist, support the vehicle with jack stands at the opposite end from which the components are being removed and strap the vehicle to the hoist.

Brake Dust Caution

Caution: Avoid taking the following actions when you service wheel brake parts:

- Do not grind brake linings.
- Do not sand brake linings.
- Do not clean wheel brake parts with a dry brush or with compressed air.

Some models or aftermarket brake parts may contain fibres which can become airborne in dust. Breathing dust with fibres may cause serious bodily harm. Use a water-dampened cloth in order to remove any dust on brake parts. Equipment is available commercially in order to perform this washing function. These wet methods prevent fibres from becoming airborne.

Brake Fluid Caution (Up to BSI)

Caution: Use only Heavy duty brake fluid conforming to Holden specification number HN 1796 (Super DOT 4/DOT 4 Plus), from a clean, sealed container. This polyglycol brake fluid is hygroscopic and absorbs moisture. Do not use fluid from an open container that may be contaminated with water. Improper or contaminated fluid could result in system failure, loss of vehicle control, and possible injury.

Clutch Dust Caution

Caution: When servicing clutch parts, do not create dust by grinding or sanding the clutch disc or by cleaning parts with a dry brush or with compressed air. A water-dampened cloth--NOT SOAKED--should be used. The clutch disc may contain fibres which can become airborne if dust is created during servicing. Breathing dust with fibres may cause serious bodily harm.

Differential Case Removal Caution

Caution: To prevent personal injury and/or component damage, support the differential case when removing the case from the rear subframe. If the case is not supported, the differential case could fall and cause personal injury or damage to the differential case.

Window Retention Caution

Caution: When replacing stationary windows, use a Urethane Adhesive System meeting Holden Specification Holden3651G, to maintain original installation integrity. Failure to use the urethane adhesive kit of the correct specification will result in poor retention of the window which may allow unrestrained occupants to be ejected from the vehicle resulting in personal injury.

Nylon Pipes Notice

Notice: Do not attempt to straighten any kinked nylon fuel lines. Replace any kinked nylon fuel feed or return pipes in order to prevent damage to the vehicle.

Service Programming System (SPS) Notice

Notice: Before programming a control module, the following must be observed, or control module damage may occur:

- The scan tool and the terminal must have the latest software.
- The vehicle battery must be fully charged. The battery voltage should be between 12-14 volts.
- The scan tool and the terminal cable connections must be secure.
- A battery charger must NOT be connected to the battery when programming a control module.

Test Probe Notice

Notice: Do not insert test equipment probes (DVOM etc.) into any connector or fuse block terminal. The diameter of the test probes will deform most terminals. A deformed terminal will cause a poor connection, which will result in a system failure. Always use the J-35616-C Holden-Approved Terminal Test Kit or the J 42675 Flat-Wire Probe Adapter in order to front probe terminals. Do not use paper clips or other substitutes to probe terminals.

When using the J-35616-C Holden-Approved Terminal Test Kit, ensure the terminal test adapter choice is the correct size for the connector terminal. Do not visually choose the terminal test adapter because some connector terminal cavities may appear larger than the actual terminal in the cavity. Using a larger terminal test adapter will damage the terminal. Refer to the J-35616-C Holden-Approved Terminal Test Kit label on the inside of the J-35616-C Holden-Approved Terminal Test Kit for the correct adapter along with the connector end view for terminal size.

Adding Fluid to the Brake System Notice (As of BSI)

Notice: When adding fluid to the brake master cylinder reservoir, use only brake fluid conforming to SAE J1704 from a clean, sealed brake fluid container. The use of any type of fluid other than the recommended type of brake fluid may cause contamination which may result in damage to the internal rubber seals and/or rubber linings of hydraulic brake system components.

Brake Fluid Caution (As of BSI)

Caution: Use only heavy duty brake fluid conforming to SAE 1704, from a clean, sealed container. This polyglycol brake fluid is hydroscopic and absorbs moisture. Do not use fluid from an open container that may be contaminated with water. Incorrect or contaminated fluid could result in system failure, loss of vehicle control and personal injury.

Emission Modification Notice

Notice: Modifications made to the following can affect the vehicle's emission controls and may cause the Malfunction Indicator Lamp (MIL), Check Engine or Service Engine Soon lamp to illuminate:

- The engine
- The transmission
- The exhaust
- The fuel system

Replacement tires that do not meet the same Tire Performance Criteria (TPC) of the original tires can also affect the vehicle's emission controls. This may also cause the Malfunction Indicator Lamp (MIL), Check Engine or Service Engine Soon lamp to illuminate.

Modifications to these systems or the installation of incorrect TPC tires could lead to repairs that are not covered by the manufacturer's warranty. This may also cause a required Emission Inspection/Maintenance test to fail.

Halogen Bulb Caution

Caution: Halogen bulbs contain gas under pressure. Handling a bulb improperly could cause it to shatter into flying glass fragments. To help avoid personal injury:

- Turn off the lamp switch and allow the bulb to cool before changing the bulb.
- Leave the lamp switch OFF until the bulb change is complete.
- Always wear eye protection when changing a halogen bulb.
- Handle the bulb only by its base. Avoid touching the glass.
- Keep dirt and moisture off the bulb.
- Properly dispose of the used bulb.
- Keep halogen bulbs out of the reach of children.

Component Fastener Tightening Notice

Notice: Replacement components must be the correct part number for the application. Components requiring the use of the thread locking compound, lubricants, corrosion inhibitors, or sealants are identified in the service procedure. Some replacement components may come with these coatings already applied. Do not use these coatings on components unless specified. These coatings can affect the final torque, which may affect the operation of the component. Use the correct torque specification when installing components in order to avoid damage.

Express Window Down Caution

Caution: Disconnect the power window switch when working inside the driver door. When operated, the Express Up/Down Feature allows the door window to move very quickly, without stopping, which could cause personal injury.

Engine Emission Notice

Notice: Modifications made to the engine or its individual components can effect the vehicle's emission controls and may cause the Malfunction Indicator Lamp (MIL), Check Engine, or Service Engine Soon lamp to illuminate. Modifications may also cause the vehicle to fail a required Emission Inspection/Maintenance test.

Batteries Produce Explosive Gases Caution

Caution: Batteries produce explosive gases. Batteries contain corrosive acid. Batteries supply levels of electrical current high enough to cause burns. Therefore, in order to reduce the risk of personal injury while working near a battery, observe the following guidelines:

- Always shield your eyes.
- Avoid leaning over the battery whenever possible.
- Do not expose the battery to open flames or sparks.
- Do not allow battery acid to contact the eyes or the skin.
  - Flush any contacted areas with water immediately and thoroughly.
  - Get medical help.

Brake Pipe Replacement Caution

Caution: Always use double-walled steel brake pipe when replacing brake pipes. The use of any other pipe is not recommended and may cause brake system failure. Carefully route and retain replacement brake pipes. Always use the correct fasteners and in the original location for replacement brake pipes. Failure to properly route and retain brake pipes may cause damage to the brake pipes and brake system resulting in personal injury.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Preface | Cautions and Notices | Introduction | **Document ID: 521558**

Fuel Tank Strap Fastener Notice

Notice: Tighten the strap fasteners by steps, alternating between the fasteners, until the specified torque is reached. A failure to tighten the strap fasteners as specified will cause the bottom of the tank to flex upward. This will result in the fuel gauge indicating that there is fuel remaining in the tank when the tank is empty.

Brake Fluid Irritant Caution

Caution: Brake fluid may be irritating to the skin or eyes. In case of contact, take the following actions:

- Eye contact--rinse eyes thoroughly with water.
- Skin contact--wash skin with soap and water.

Power Steering Hose Disconnected Notice

Notice: Do not start the vehicle with any power steering gear inlet or outlet hoses disconnected. When disconnected, plug or cap all openings of components. Failure to do so could result in contamination or loss of power steering fluid and damage to the system.

Belt Dressing Notice

Notice: Do not use belt dressing on the drive belt. Belt dressing causes the breakdown of the composition of the drive belt. Failure to follow this recommendation will damage the drive belt.

Installing Hoses without Twists or Bends Notice

Notice: The inlet and outlet hoses must not be twisted during installation. Do not bend or distort the inlet or outlet hoses to make installation easier. Failure to follow these procedures could result in component damage.

Using Proper Power Steering Fluid Notice

Notice: When adding fluid or making a complete fluid change, always use the proper power steering fluid. Failure to use the proper fluid will cause hose and seal damage and fluid leaks.

Fuel Vapors in Evaporative Emission Components Caution

Caution: Do not breathe the air through the EVAP component tubes or hoses. The fuel vapors inside the EVAP components may cause personal injury.

Heated Oxygen and Oxygen Sensor Notice

Notice: Do not remove the pigtail from either the heated oxygen sensor (HO2S) or the oxygen sensor (O2S). Removing the pigtail or the connector will affect sensor operation.

Handle the oxygen sensor carefully. Do not drop the HO2S. Keep the in-line electrical connector and the louvered end free of grease, dirt, or other contaminants. Do not use cleaning solvents of any type.

Do not repair the wiring, connector or terminals. Replace the oxygen sensor if the pigtail wiring, connector, or terminal is damaged.

This external clean air reference is obtained by way of the oxygen sensor signal and heater wires. Any attempt to repair the wires, connectors, or terminals could result in the obstruction of the air reference and degraded sensor performance.

The following guidelines should be used when servicing the heated oxygen sensor:

- Do not apply contact cleaner or other materials to the sensor or vehicle harness connectors. These materials may get into the sensor causing poor performance.
- Do not damage the sensor pigtail and harness wires in such a way that the wires inside are exposed. This could provide a path for foreign materials to enter the sensor and cause performance problems.
- Ensure the sensor or vehicle lead wires are not bent sharply or kinked. Sharp bends or kinks could block the reference air path through the lead wire.
- Do not remove or defeat the oxygen sensor ground wire, where applicable. Vehicles that utilize the ground wired sensor may rely on this ground as the only ground contact to the sensor. Removal of the ground wire will cause poor engine performance.
- Ensure that the peripheral seal remains intact on the vehicle harness connector in order to prevent damage due to water intrusion. The engine harness may be repaired using Packard's Crimp and Splice Seals Terminal Repair Kit. Under no circumstances should repairs be soldered since this could result in the air reference being obstructed.

Anti-Corrosion Materials Notice

Notice: Anti-corrosion compounds have been applied to the interior surfaces of some metal panels to provide rust resistance. When servicing these panels in areas on which this material has been disturbed, or when installing new panels, avoid corrosion damage by coating with anti-corrosion compound.

Breathing R-134a Caution

Caution: Avoid breathing the A/C Refrigerant 134a (R-134a) and the lubricant vapor or the mist. Exposure may irritate the eyes, nose, and throat. Work in a well ventilated area. In order to remove R-134a from the A/C system, use service equipment that is certified to meet the requirements of SAE J 2210 (R-134a recycling equipment). If an accidental system discharge occurs, ventilate the work area before continuing service. Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.

Radiator Cap Removal Caution

Caution: To avoid being burned, do not remove the radiator cap or surge tank cap while the engine is hot. The cooling system will release scalding fluid and steam under pressure if radiator cap or surge tank cap is removed while the engine and radiator are still hot.

Silicon Contamination of Heated Oxygen Sensors Notice

Notice: Contamination of the oxygen sensor can result from the use of an inappropriate RTV sealant (not oxygen sensor safe) or excessive engine coolant or oil consumption. Remove the HO2S and visually inspect the portion of the sensor exposed to the exhaust stream in order to check for contamination. If contaminated, the portion of the sensor exposed to the exhaust stream will have a white powdery coating. Silicon contamination causes a high but false HO2S signal voltage (rich exhaust indication). The control module will then reduce the amount of fuel delivered to the engine, causing a severe driveability problem. Eliminate the source of contamination before replacing the oxygen sensor.

Handling Electrostatic Discharge Sensitive Parts Notice

Notice: Electrostatic discharge (ESD) can damage many solid-state electrical components. ESD susceptible components may or may not be labeled with the ESD symbol. Handle all electrical components carefully. Use the following precautions in order to avoid ESD damage:

- Touch a metal ground point in order to remove your body's static charge before servicing any electronic component; especially after sliding across the vehicle seat.
- Do not touch exposed terminals. Terminals may connect to circuits susceptible the ESD damage.
- Do not allow tools to contact exposed terminals when servicing connectors.
- Do not remove components from their protective packaging until required to do so.
- Avoid the following actions unless required by the diagnostic procedure:
  - Jumpering or grounding of the components or connectors.
  - Connecting test equipment probes to components or connectors. Connect the ground lead first when using test probes.
- Ground the protective packaging of any component before opening. Do not rest solid-state components on metal workbenches, or on top of TVs, radios, or other electrical devices.

Steering Wheel in the Full Turn Position Notice

Notice: Do not hold the steering wheel in the full turn position longer than 5 seconds, as damage to the steering pump may result.

Engine Lifting Notice

Notice: When raising or supporting the engine for any reason, do not use a jack under the oil pan, any sheet metal, or the crankshaft pulley. Lifting the engine in an unapproved manner may cause component damage.

Engine Mounting Notice

Notice: Broken engine mountings can cause misalignment of certain drive-train components. Misalignment of drive-train components causes eventual destruction of the drive-train components.

If one engine mount breaks, the rest of the engine mounts will have increased stress put on them. This could cause the rest of the engine mounts to break.

Damage to Fuel Tank Straps Notice

Notice: Do not bend the fuel tank straps. Bending the fuel tank straps may damage the straps.

Exterior Trim Emblem Removal Notice

Notice: Use a plastic, flat-bladed tool to prevent paint damage when removing an emblem/name plate.

Hot Exhaust System Caution

Caution: While engine is operating, the exhaust system will become extremely hot. To prevent burns avoid contacting a hot exhaust system.

Brake Fluid Effects on Paint and Electrical Components Notice

Notice: Avoid spilling brake fluid onto painted surfaces, electrical connections, wiring, or cables. Brake fluid will damage painted surfaces and cause corrosion to electrical components. If any brake fluid comes in contact with painted surfaces, immediately flush the area with water. If any brake fluid comes in contact with electrical connections, wiring, or cables, use a clean shop cloth to wipe away the fluid.

Fuel Rail Stop Bracket Installation Caution

Caution: The fuel rail stop bracket must be installed onto the engine assembly. The stop bracket serves as a protective shield for the fuel rail in the event of a vehicle frontal crash. If the fuel rail stop bracket is not installed and the vehicle is involved in a frontal crash, fuel could be sprayed possibly causing a fire and personal injury from burns.

Safety Glasses Caution

Caution: Wear safety glasses in order to avoid eye damage.

Excessive Force and Oxygen Sensor Notice

Notice: The oxygen sensor may be difficult to remove when the engine temperature is below 48°C (120°F). Excessive force may damage threads in the exhaust manifold or the exhaust pipe.

Liftgate Assist Rod Notice

Notice: Apply pressure only at the end of the liftgate/hood assist rod that you are removing or attaching. Do NOT apply pressure to the middle of the rod because damage or bending will result.

Fuel Injector Balance Test Notice

Notice: Do Not repeat any portion of this test before running the engine in order to prevent the engine from flooding.

Exhaust Service Caution

Caution: In order to avoid being burned, do not service the exhaust system while it is still hot. Service the system when it is cool.

Exhaust System Inspection Notice

Notice: When inspecting or replacing exhaust system components, make sure there is adequate clearance from all points on the underbody to prevent overheating of the floor pan and possible damage to the passenger compartment insulation and trim materials.

Pinion Flange / Yoke Installation Notice

Notice: Do not hammer the pinion flange/yoke onto the pinion shaft. Pinion components may be damaged if the pinion flange/yoke is hammered onto the pinion shaft.

Machined Surface Damage Notice

Notice: Do not nick, scratch or damage the sealing surface. The sealing surface is a machined surface. Damage to the machined surface can cause leakage.

Protective Goggles and Glove Caution

Caution: Approved safety glasses and gloves should be worn when performing this procedure to reduce the chance of personal injury.

Ring Gear Removal Notice

Notice: Do not pry the ring gear from the differential case. Prying the ring gear from the differential case may cause damage to the ring gear and/or the differential case.

Foam Sound Deadeners Caution

Caution: Foam sound deadeners must be removed from areas within 152.4 mm (6 in) of where flame is to be used for body repairs. When reinstalling foam sound deadeners, avoid inhaling fumes as bodily injury may result.

Assistant Driving Caution

Caution: An assistant should drive the vehicle while the technician checks for the location of the reported condition. Otherwise, personal injury could result.

Eye Protection Caution

Caution: Approved safety glasses and gloves should be worn when performing this procedure to reduce the chance of personal injury.

Clearcoat / Ultraviolet Screeners Notice

Notice: Removing more than 0.5 mils of the clearcoat can result in early paint failure. The clearcoat contains ultraviolet screeners. Do not finesse sand more than what is required to remove the defect.

Sealant Notice

Notice: Do not allow the RTV sealant to enter any blind threaded hole. RTV sealant that is allowed to enter a blind threaded hole can cause hydraulic lock of the fastener when the fastener is tightened. Hydraulic lock of a fastener can lead to damage to the fastener and/or the components. Hydraulic lock of a fastener can also prevent the proper clamping loads to be obtained when the fastener is tightened. Improper clamping loads can prevent proper sealing of the components allowing leakage to occur. Preventing proper fastener tightening can allow the components to loosen or separate leading to extensive engine damage.

Collision Sectioning Caution

Caution: Sectioning should be performed only in the recommended areas. Failure to do so may compromise the structural integrity of the vehicle and cause personal injury if the vehicle is in a collision.

Cracked Window Caution

Caution: If a window is cracked but still intact, crisscross the window with masking tape in order to reduce the risk of damage or personal injury.

Approved Equipment for Collision Repair Caution

Caution: To avoid personal injury when exposed to welding flashes or to galvanized (Zinc Oxide) metal toxic fumes while grinding/cutting on any type of metal or sheet molded compound, you must work in a properly ventilated area, wearing an approved respirator, eye protection , earplugs, welding gloves, and protective clothing.

Propeller Shaft Notice

Notice: The propeller shaft must be supported carefully during handling to avoid jamming or bending of parts.

Valve Lifter Priming Notice

Notice: Ensure each valve lifter is filled with clean engine oil and the valve lifter does not tip over (plunger down) before the installation of the valve lifters. The loss of oil in the valve lifter lower pressure chamber or the dry stroking/cycling of the valve lifter plunger will allow air to travel into the high pressure chamber of the valve lifter. Air in the high pressure chamber of the valve lifter may not be purged causing extensive engine component damage.

Brake Caliper Notice

Notice: Support the brake caliper with heavy mechanic wire, or equivalent, whenever it is separated from its mount and the hydraulic flexible brake hose is still connected. Failure to support the caliper in this manner will cause the flexible brake hose to bear the weight of the caliper, which may cause damage to the brake hose and in turn may cause a brake fluid leak.

Avoid Touching the Bulb Notice

Notice: Avoid touching the bulb or letting the bulb come in contact with anything damp. Oil from your skin or moisture on the bulb can cause the bulb to explode when the bulb is turned on. If either comes in contact with the bulb, clean the bulb with alcohol or a suitable degreaser and wipe the bulb dry.

SIR Caution

Caution: When performing service on or near the SIR components or the SIR wiring, the SIR system must be disabled. Refer to SIR Disabling and Enabling . Failure to observe the correct procedure could cause deployment of the SIR components, personal injury, or unnecessary SIR system repairs.

SIR Inflator Module Handling and Storage Caution

Caution: When carrying an undeployed inflator module:

- Do not carry the inflator module by the wires or connector.
- Make sure the air bag opening points away from you.

When storing an undeployed inflator module:

- Make sure the air bag opening points away from the surface on which the inflator module rests.
- Provide free space for the air bag to expand in case of an accidental deployment.
- When storing a steering column, do not rest the column with the air bag opening facing down and the column vertical. Lay the column on its side.

Failure to observe these guidelines may result in personal injury.

Fastener Notice

Notice: Use the correct fastener in the correct location. Replacement fasteners must be the correct part number for that application. Fasteners requiring replacement or fasteners requiring the use of thread locking compound or sealant are identified in the service procedure. Do not use paints, lubricants, or corrosion inhibitors on fasteners or fastener joint surfaces unless specified. These coatings affect fastener torque and joint clamping force and may damage the fastener. Use the correct tightening sequence and specifications when installing fasteners in order to avoid damage to parts and systems.

Battery Disconnect Caution

Caution: Unless directed otherwise, the ignition and start switch must be in the OFF or LOCK position, and all electrical loads must be OFF before servicing any electrical component. Disconnect the negative battery cable to prevent an electrical spark should a tool or equipment come in contact with an exposed electrical terminal. Failure to follow these precautions may result in personal injury and/or damage to the vehicle or its components.

Glass and Sheet Metal Handling Caution

Caution: When working with any type of glass or sheet metal with exposed or rough edges, wear approved safety glasses and gloves in order to reduce the chance of personal injury.

Approved Equipment for Collision Repair Warning

Warning: To avoid personal injury when exposed to welding flashes or to galvanized (Zinc Oxide) metal toxic fumes while grinding/cutting on any type of metal or sheet molded compound, you must work in a properly ventilated area, wearing an approved respirator, eye protection , earplugs, welding gloves, and protective clothing.

Battery Disconnect Warning

Warning: Unless directed otherwise, the ignition and start switch must be in the OFF or LOCK position, and all electrical loads must be OFF before servicing any electrical component. Disconnect the negative battery cable to prevent an electrical spark should a tool or equipment come in contact with an exposed electrical terminal. Failure to follow these precautions may result in personal injury and/or damage to the vehicle or its components.

Brake Dust Warning

Warning: Avoid taking the following actions when you service wheel brake parts:

- Do not grind brake linings.
- Do not sand brake linings.
- Do not clean wheel brake parts with a dry brush or with compressed air.

Some models or aftermarket brake parts may contain asbestos fibers which can become airborne in dust. Breathing dust with asbestos fibers may cause serious bodily harm. Use a water-dampened cloth in order to remove any dust on brake parts. Equipment is available commercially in order to perform this washing function. These wet methods prevent fibers from becoming airborne.

Brake Fluid Irritant Warning

Warning: Brake fluid may irritate eyes and skin. In case of contact, take the following actions:

- Eye contact--rinse thoroughly with water.
- Skin contact--wash with soap and water.
- If ingested--consult a physician immediately.

Express Window Down Warning

Warning: Disconnect the power window switch when working inside the driver door. When operated, the Express Up/Down Feature allows the door window to move very quickly, without stopping, which could cause personal injury.

Eye Protection Warning

Warning: Approved safety glasses and gloves should be worn when performing this procedure to reduce the chance of personal injury.

Foam Sound Deadeners Warning

Warning: Foam sound deadeners must be removed from areas within 152.4 mm (6 in) of where flame is to be used for body repairs. When reinstalling foam sound deadeners, avoid inhaling fumes as bodily injury may result.

Gasoline / Gasoline Vapors Warning

Warning: Gasoline or gasoline vapors are highly flammable. A fire could occur if an ignition source is present. Never drain or store gasoline or diesel fuel in an open container, due to the possibility of fire or explosion. Have a dry chemical (Class B) fire extinguisher nearby.

Glass and Sheet Metal Handling Warning

Warning: When working with any type of glass or sheet metal with exposed or rough edges, wear approved safety glasses and gloves in order to reduce the chance of personal injury.

Halogen Bulb Warning

Warning: Halogen bulbs contain gas under pressure. Handling a bulb improperly could cause it to shatter into flying glass fragments. To help avoid personal injury:

- Turn off the lamp switch and allow the bulb to cool before changing the bulb.
- Leave the lamp switch OFF until the bulb change is complete.
- Always wear eye protection when changing a halogen bulb.
- Handle the bulb only by its base. Avoid touching the glass.
- Keep dirt and moisture off the bulb.
- Properly dispose of the used bulb.
- Keep halogen bulbs out of the reach of children.

Hot Exhaust System Warning

Warning: While engine is operating, the exhaust system will become extremely hot. To prevent burns avoid contacting a hot exhaust system.

Moving Parts and Hot Surfaces Warning

Warning: Avoid contact with moving parts and hot surfaces while working around a running engine in order to prevent physical injury.

Relieving Fuel Pressure Warning

Warning: Remove the fuel tank cap and relieve the fuel system pressure before servicing the fuel system in order to reduce the risk of personal injury. After you relieve the fuel system pressure, a small amount of fuel may be released when servicing the fuel lines, the fuel injection pump, or the connections. In order to reduce the risk of personal injury, cover the fuel system components with a shop towel before disconnection. This will catch any fuel that may leak out. Place the towel in an approved container when the disconnection is complete.

Road Test Warning

Warning: Road test a vehicle under safe conditions and while obeying all traffic laws. Do not attempt any maneuvers that could jeopardize vehicle control. Failure to adhere to these precautions could lead to serious personal injury and vehicle damage.

Safety Glasses Warning

Warning: Wear safety glasses in order to avoid eye damage.

Safety Glasses and Compressed Air Warning

Warning: Wear safety glasses when using compressed air in order to prevent eye injury.

SIR Deployed Inflator Modules Are Hot Warning

Warning: After deployment, the metal surfaces of the SIR component may be very hot. To help avoid a fire or personal injury:

- Allow sufficient time for cooling before touching any metal surface of the SIR component.
- Do not place the deployed SIR component near any flammable objects.

SIR Inflatable Module Deployment Outside Vehicle Warning

Warning: When you are deploying an inflator module for disposal, perform the deployment procedures in the order listed. Failure to follow the procedures in the order listed may result in personal injury.

SIR Inflator Module Disposal Warning

Warning: In order to prevent accidental deployment and the risk of personal injury, do not dispose of an undeployed inflator module as normal shop waste. Undeployed inflator modules contain substances that could cause severe illness or personal injury if their sealed containers are damaged during disposal. Use the following deployment procedures to safely dispose of an undeployed inflator module. Failure to observe the following disposal methods may be a violation of federal, state, or local laws.

Heated Oxygen and Oxygen Sensor Caution

Caution: Do not remove the pigtail from either the heated oxygen sensor (HO2S) or the oxygen sensor (O2S). Removing the pigtail or the connector will affect sensor operation.

Handle the oxygen sensor carefully. Do not drop the HO2S. Keep the in-line electrical connector and the louvered end free of grease, dirt, or other contaminants. Do not use cleaning solvents of any type.

Do not repair the wiring, connector or terminals. Replace the oxygen sensor if the pigtail wiring, connector, or terminal is damaged.

This external clean air reference is obtained by way of the oxygen sensor signal and heater wires. Any attempt to repair the wires, connectors, or terminals could result in the obstruction of the air reference and degraded sensor performance.

The following guidelines should be used when servicing the heated oxygen sensor:

- Do not apply contact cleaner or other materials to the sensor or vehicle harness connectors. These materials may get into the sensor causing poor performance.
- Do not damage the sensor pigtail and harness wires in such a way that the wires inside are exposed. This could provide a path for foreign materials to enter the sensor and cause performance problems.
- Ensure the sensor or vehicle lead wires are not bent sharply or kinked. Sharp bends or kinks could block the reference air path through the lead wire.
- Do not remove or defeat the oxygen sensor ground wire, where applicable. Vehicles that utilize the ground wired sensor may rely on this ground as the only ground contact to the sensor. Removal of the ground wire will cause poor engine performance.
- Ensure that the peripheral seal remains intact on the vehicle harness connector in order to prevent damage due to water intrusion. The engine harness may be repaired using Packard's Crimp and Splice Seals Terminal Repair Kit. Under no circumstances should repairs be soldered since this could result in the air reference being obstructed.

Heated Oxygen Sensor Resistance Learn Reset Caution

Caution: When replacing the HO2S perform the following:

- A code clear with a scan tool, regardless of whether or not a DTC is set
- HO2S heater resistance learn reset with a scan tool, where available

Perform the above in order to reset the HO2S resistance learned value and avoid possible HO2S failure.

Silicon Contamination of Heated Oxygen Sensors Caution

Caution: Contamination of the oxygen sensor can result from the use of an inappropriate RTV sealant (not oxygen sensor safe) or excessive engine coolant or oil consumption. Remove the HO2S and visually inspect the portion of the sensor exposed to the exhaust stream in order to check for contamination. If contaminated, the portion of the sensor exposed to the exhaust stream will have a white powdery coating. Silicon contamination causes a high but false HO2S signal voltage (rich exhaust indication). The control module will then reduce the amount of fuel delivered to the engine, causing a severe driveability problem. Eliminate the source of contamination before replacing the oxygen sensor.

Test Probe Caution

Caution: Do not insert test equipment probes (DMM etc.) into any connector or fuse block terminal. The diameter of the test probes will deform most terminals. A deformed terminal will cause a poor connection, which will result in a system failure. Always use the J-35616 GM-Approved Terminal Test Kit in order to front probe terminals. Do not use paper clips or other substitutes to probe terminals.

When using the J-35616 GM-Approved Terminal Test Kit, ensure the terminal test adapter choice is the correct size for the connector terminal. Do not visually choose the terminal test adapter because some connector terminal cavities may appear larger than the actual terminal in the cavity. Using a larger terminal test adapter will damage the terminal. Refer to the J-35616 GM-Approved Terminal Test Kit label on the inside of the J-35616 GM-Approved Terminal Test Kit for the correct adapter along with the connector end view for terminal size.

Three-Way Catalytic Converter Damage Caution

Caution: In order to avoid damaging the replacement three-way catalytic converter, correct the engine misfire or mechanical fault before replacing the three-way catalytic converter.

Fuel Pipe Fitting Warning

Warning: Always apply a few drops of clean engine oil to the male pipe ends before connecting the fuel pipe fittings in order to reduce the risk of fire and personal injury. This will ensure proper reconnection and prevent a possible fuel leak. During normal operation, the O-rings located in the female connector will swell and may prevent proper reconnection if not lubricated.

SIR Inflator Module Handling and Storage Warning

Warning: When carrying an undeployed inflator module:

- Do not carry the inflator module by the wires or connector.
- Make sure the air bag opening points away from you.

When storing an undeployed inflator module:

- Make sure the air bag opening points away from the surface on which the inflator module rests.
- Provide free space for the air bag to expand in case of an accidental deployment.
- When storing a steering column, do not rest the column with the air bag opening facing down and the column vertical. Lay the column on its side.

Failure to observe these guidelines may result in personal injury.

SIR Warning

Warning: This vehicle is equipped with a Supplemental Inflatable Restraint (SIR) System. Failure to follow the correct procedure could cause the following conditions:

- Air bag deployment
- Personal injury
- Unnecessary SIR system repairs

In order to avoid the above conditions, observe the following guidelines:

- Refer to SIR Component Views in order to determine if you are performing service on or near the SIR components or the SIR wiring.
- If you are performing service on or near the SIR components or the SIR wiring, disable the SIR system. Refer to Disabling the SIR System.

Cracked Window Warning

Warning: If a window is cracked but still intact, crisscross the window with masking tape in order to reduce the risk of damage or personal injury.

Defroster Outlet Warning

Warning: If broken glass falls into the defroster outlets, it can be blown into the passenger compartment and cause personal injury.

Exhaust Service Warning

Warning: In order to avoid being burned, do not service the exhaust system while it is still hot. Service the system when it is cool.

Protective Goggles and Glove Warning

Warning: Always wear protective goggles and gloves when removing exhaust parts as falling rust and sharp edges from worn exhaust components could result in serious personal injury.

Definition of Danger, Warning, Caution, and Note

The diagnosis and repair procedures in a GM Service Manual contain both general and specific Dangers, Warnings, Cautions, Notes or Importants. GM is dedicated to the presentation of service information that helps the technician to diagnose and repair the systems necessary for the proper operation of the vehicle, however, certain procedures may present a hazard to the technician if they are not followed in the recommended manner. Dangers, Warnings, Cautions and Notes or Importants are elements designed to prevent these hazards, however, not all hazards can be foreseen. This information is placed at strategic locations within the service manual. This information is designed to prevent the following from occurring:

- Serious bodily injury or death to the technician
- Damage to the vehicle
- Unnecessary vehicle repairs
- Unnecessary component replacement
- Improper repair or replacement of vehicle components.
- Any warning or caution that appears in this service category is referenced from the individual service categories.

DANGER Defined

When encountering a DANGER, you will be asked to take a necessary action or not to take a prohibited action. If a DANGER is not heeded, the following consequences may occur:

- Serious bodily injury or death to the technician
- Serious bodily injury or death to other technicians in the workplace area

WARNING Defined

When encountering a WARNING, you will be asked to take a necessary action or not to take a prohibited action. If a WARNING is not heeded, the following consequences may occur:

- Serious bodily injury to the technician
- Serious bodily injury to other technicians in the workplace area
- Serious bodily injury to the driver and/or passenger(s) of the vehicle, if the vehicle has been improperly repaired

CAUTION Defined

CAUTIONS call special attention to a necessary action or to a prohibited action. If a CAUTION is not heeded, the following consequences may occur:

- Damage to the vehicle
- Unnecessary vehicle repairs
- Unnecessary component replacement

- Improper operation or performance of the system or component under repair
- Damage to any systems or components which are dependent upon the proper operation of the system or component under repair
- Improper operation or performance of any systems or components which are dependent upon the proper operation or performance of the system or component under repair
- Damage to fasteners, basic tools, or special tools
- The leakage of coolant, lubricant, or other vital fluids

NOTE or IMPORTANT Defined

NOTE and IMPORTANT statements emphasize a necessary characteristic of a diagnostic or repair procedure. NOTE or IMPORTANT statements are designed to do the following:

- Clarify a procedure
- Present additional information for accomplishing a procedure
- Give insight into the reason or reasons for performing a procedure in the manner recommended
- Present information that will help to accomplish a procedure in a more effective manner
- Present information that gives the technician the benefit of past experience in accomplishing a procedure with greater ease

Collision Sectioning Warning

Warning: Sectioning should be performed only in the recommended areas. Failure to do so may compromise the structural integrity of the vehicle and cause personal injury if the vehicle is in a collision.

Fuel Rail Stop Bracket Installation Warning

Warning: The fuel rail stop bracket must be installed onto the engine assembly. The stop bracket serves as a protective shield for the fuel rail in the event of a vehicle frontal crash. If the fuel rail stop bracket is not installed and the vehicle is involved in a frontal crash, fuel could be sprayed possibly causing a fire and personal injury from burns.

Folding Top Hydraulic Pressure Warning

Warning: In order to reduce hydraulic pressure, ensure that the folding top has not been operated for 6 minutes before performing this procedure. Failure to do so may result in personal injury.

Servicing Electrical Components Warning

Warning: The ignition must be in the off position and all electrical loads must be turned off before servicing any electrical component. Failure to do so may result in personal injury or damage to the vehicle.

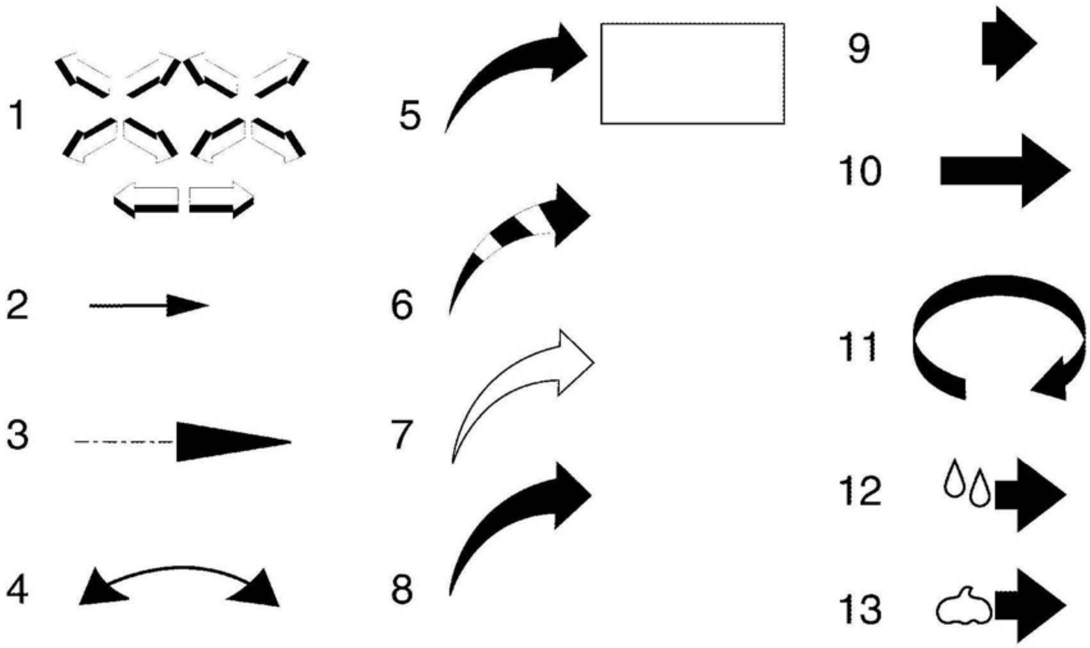
Arrows and Symbols

This service manual uses various symbols in order to describe different service operations.



(1) Front of Vehicle
(2) Dimension (1:2)
(3) Sectioning (1:3)
(4) Multidirectional Arrow
(5) View Detail
(6) Ambient Air Mixed With Another Gas or Indicate Temperature Change
(7) Ambient/Clean Air Flow or Cool Air Flow
(8) Gas Other Than Ambient Air or Hot Air Flow
(9) View Angle
(10) Task Related
(11) Motion or Direction
(12) Lubrication Point -- Oil or Fluid
(13) Lubrication Point -- Grease or Jelly

Vehicle, Engine and Transmission ID and VIN Location, Derivative and Usage (Sedan)

A Unique International Standards Vehicle Identification Number (ISOVIN) identifies the complete vehicle. This number is stamped or attached to the vehicle body at the locations shown below. Major mechanical components also have serial numbers and/or identification labels in various locations. It is essential that when compiling warranty claims or product and field reports, that the ISOVIN is quoted in conjunction with the identification data of the component affected.

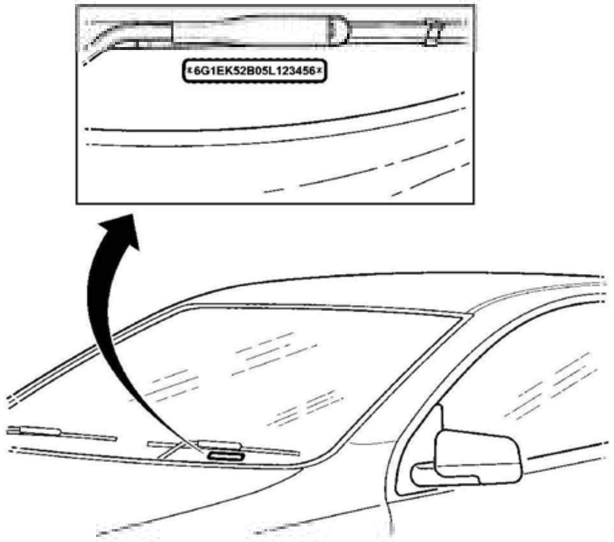
International Standards Vehicle Identification Number

The International Standards Vehicle Identification Numbering (ISOVIN) system is based on the uniform car model designation system. This identifies the vehicle in a coded series of characters.

The ISOVIN is positioned in the following locations:

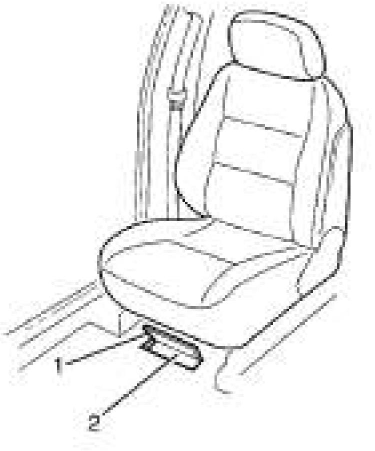
1. ISOVIN plate under the windscreen - Viewed through the windscreen aperture.
2. Body and option plate - Left hand strut tower
3. Safety compliance plate - Left hand B pillar
4. Stamping in the front floor panel under the front right-hand seat

ISOVIN Plate



The ISOVIN plate (1) is located under the windscreen and is viewed through the windscreen aperture and is attached to the dash panel assembly with unique rosette headed rivets.

ISOVIN Body Stamping



Important:

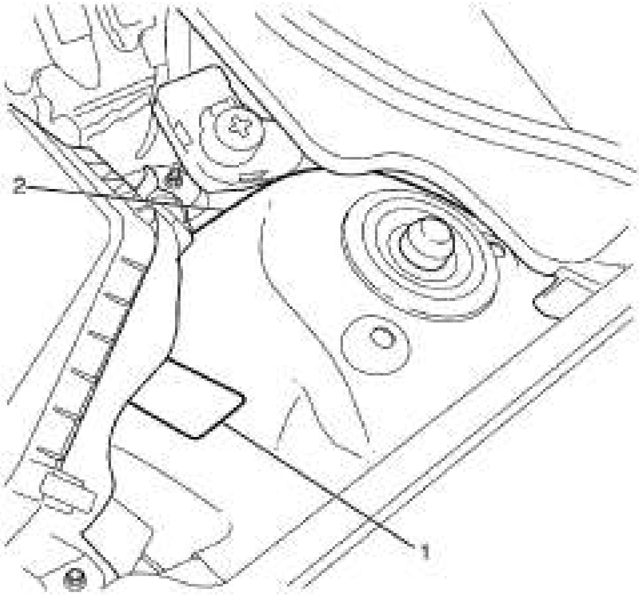
- If the front floor panel assembly is to be replaced, the ISOVIN will be lost. Contact your local Road Traffic Authority prior to replacing the panel to obtain the correct procedure for renumbering the vehicle.
- A replacement body shell assembly is stamped during manufacture with a unique ISOVIN that identifies it as a replacement part.
- If an error is made to the ISOVIN stamping during manufacture, it is crossed out so that it remains legible and the correct number is stamped underneath.

The ISOVIN is stamped into the front floor panel under the right-hand front seat. The ISOVIN (2) is visible by lifting the carpet flap (1).

Position	Description	Number / Letter	Meaning
1	Geographical Area	6	Asia Pacific
2	Country	G	Australia
3	Manufacturer Code	1	General Motors Holden
4	Carline	E	VE
		M	WM
5	Series	K	Omega / SV6 / SS
		P	SS-V
		L	Berlina
		X	Calais / Calais-V
		Y	Statesman

		Z	Caprice
6	Body Type Code	5	Sedan
7	Restraint Code	1	Active (Manual) Seat Belts
		2	Active (Manual) Seat Belts with Driver and Passenger Inflatable Restraint System
		3	Active (Manual) Seat Belts with Driver Inflatable Restraint System
		4	Active (Manual) Seat Belts with Driver, Passenger and Side Inflatable Restraint System
		5	Active (Manual) Seat Belts with Driver, Passenger, Side and Curtain Inflatable Restraint System
8	Engine Type Code	B	RPO LE0 3.6L Alloytec V6
		7	RPO LY7 3.6L Alloytec V6
		N	RPO LW2 3.6L LPG Alloytec V6
		H	RPO L98 6.0L GEN IV V8
9	VIN Check Digit	Varies	Calculated Check Digit
10	Model Year Code	6	2006
		7	2007
11	Manufacturer Plant Code	L	Adelaide (Elizabeth) South Australia
12-17	Plant Sequence Number	--	100001
Note: The production sequence number is sequentially allocated to each vehicle, regardless of vehicle type.			

Body and Option Plate



The body and option identification plate (1) is located on the left hand strut tower (2) and contains the following information:

Model

Combination of letters and numbers identifying the body style and the mechanical pack.

A listing of regular production option numbers can be found by referring to the latest spare parts information for the applicable model.

Body No

International Standards Vehicle Identification Number (ISOVIN)

Trim

Trim combination option code identification

Paint

Exterior paint material and color option code identification

Built

The date of manufacture by calendar month and year in which the body shell and powertrain are conjoined and the vehicle is driven or moved from the production line.

Susp

Suspension option code identification

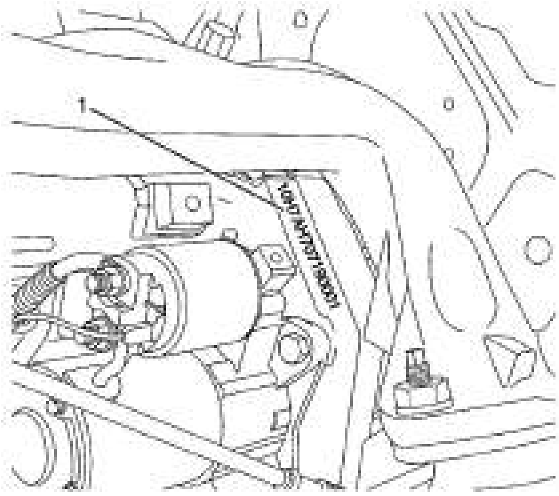
Engine, Transmission, and Axle

Identification option codes for specific engine, transmission, and rear axle (final drive)

A/C

- C60 identifies vehicles fitted with air conditioning.
- C63 identifies vehicles fitted with tri zone automatic climate control air conditioning.
- CJ2 identifies vehicles fitted with dual zone automatic climate control air conditioning.

Engine Serial Number - 3.6

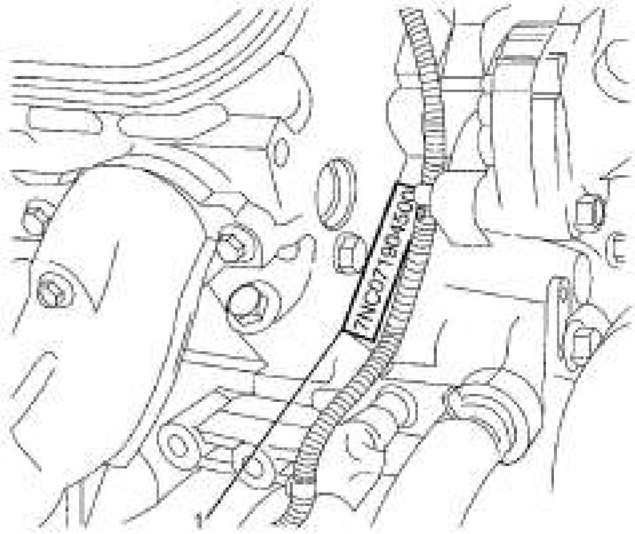


The Engine Serial Number is located on the left-hand side at the rear of the engine cylinder block (1) and is stamped or laser etched onto the block at the assembly plant. When reading the Engine Serial Number the following information can be obtained:

Engine Serial Number 10H7A H07190001 is used as an example:

- The first two digits, 10 identify the component ID.
- The next three digits, H7A, identify the engine model.
- The next digit, H, identifies the plant code as Holden.
- The next two digits, 07, identify the engine model year as 2007.
- The next three digits, 190, identify the Julian date the engine was manufactured as day 190.
- The next four digits, 0011, identify the assembly plant sequence number as 0011.

Engine Serial Number - 6.0



The Engine Serial Number is located on the right-hand side at the front of the engine cylinder block (1) and is stamped or laser etched onto the block at the assembly plant. The number is prefixed by the RPO code of the engine model. As an example 7NC is used. When reading the Engine Serial Number the following information can be obtained:

Engine Serial Number 7NC071904500 is used as an example:

- The first three digits, 7NC, identify the prefixed RPO code of the engine.
- The next two digits, 07, identify the engine model year as 2007.
- The next three digits, 190, identify the Julian date the engine was manufactured as day 190.
- The next four digits, 4500, identify the assembly plant sequence number as 4500.

Transmission Serial Number

Transmission Serial Numbers provide coded information that could be significant to parts interpretation and should be referred to when ordering replacement parts. Refer to the relevant transmission for the Transmission Serial Number location and code breakdown.

Vehicle, Engine and Transmission ID and VIN Location, Derivative and Usage (Sportwagon)

A unique International Standards Vehicle Identification Number (ISOVIN) identifies the vehicle. This number is stamped or attached to the vehicle body at the locations shown below. Major mechanical components also have serial numbers and/or identification labels in various locations. It is essential that when compiling warranty claims or product and field reports, that the ISOVIN is quoted in conjunction with the identification data of the component affected.

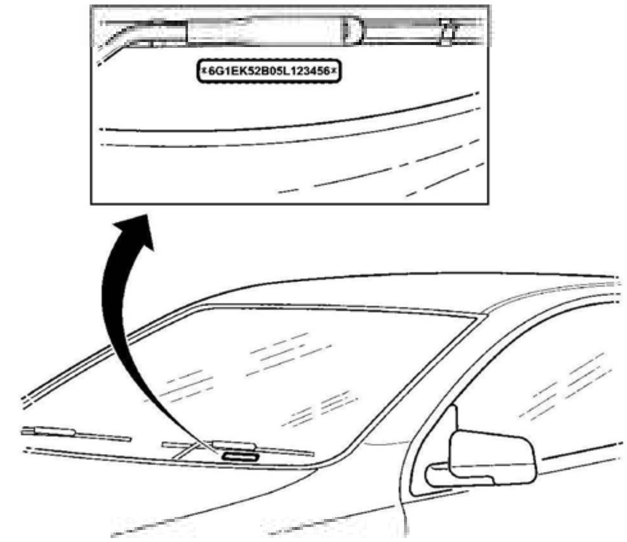
International Standards Vehicle Identification Number

The International Standards Vehicle Identification Numbering (ISOVIN) system is based on the uniform car model designation system. This identifies the vehicle in a coded series of characters.

The ISOVIN is positioned in the following locations:

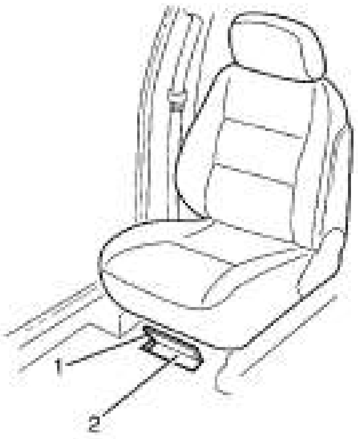
1. ISOVIN plate under the windscreen - Viewed through the windscreen aperture.
2. Body and option plate - Left hand strut tower.
3. Safety compliance plate - Left hand B pillar.
4. Stamping in the front floor panel under the front right-hand seat.

ISOVIN Plate



The ISOVIN plate (1) is located under the windscreen and is viewed through the windscreen aperture and is attached to the dash panel assembly with unique rosette headed rivets.

ISOVIN Body Stamping



Important:

- If the front floor panel assembly is to be replaced, the ISOVIN will be lost. Contact your local Road Traffic Authority prior to replacing the panel to obtain the correct procedure for renumbering the vehicle.
- A replacement body shell assembly is stamped during manufacture with a unique ISOVIN that identifies it as a replacement part.
- If an error is made to the ISOVIN stamping during manufacture, it is crossed out so that it remains legible and the correct number is stamped underneath.

The ISOVIN is stamped into the front floor panel under the right-hand front seat. The ISOVIN (2) is visible by lifting the carpet flap (1).

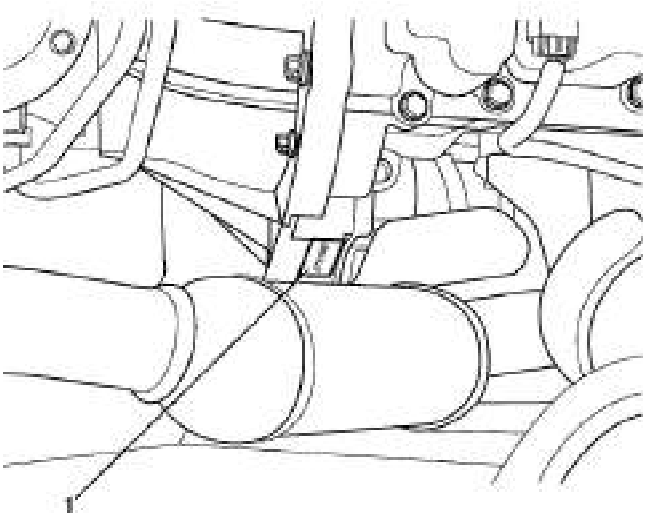
Engine, Transmission, and Axle

Identification option codes for specific engine, transmission, and rear axle (final drive)

A/C

- C60 identifies vehicles fitted with air conditioning.
- CJ2 identifies vehicles fitted with dual zone automatic climate control air conditioning.

Engine Serial Number - 3.6

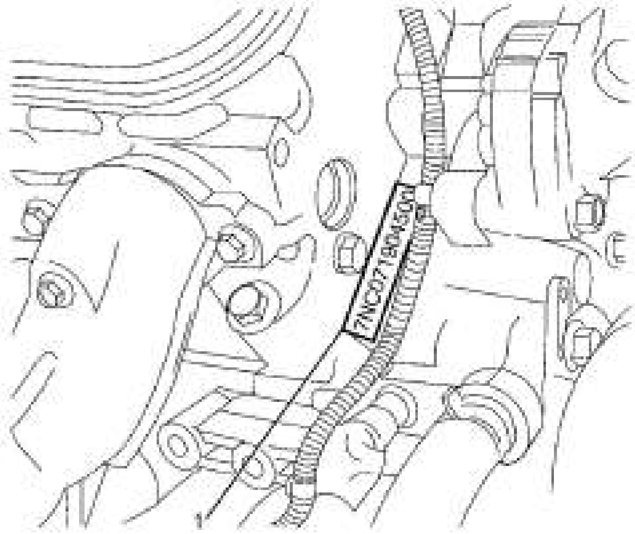


The Engine Serial Number is located on the left-hand side at the rear of the engine cylinder block (1) and is stamped or laser etched onto the block at the assembly plant. The engine serial number is viewed from underneath the vehicle. When reading the Engine Serial Number the following information can be obtained:

Engine Serial Number LY7*07190011* is used as an example:

- The next three digits, LY7*, identify the engine model.
- The next two digits, 07, identify the engine model year as 2007.
- The next three digits, 190, identify the Julian date the engine was manufactured as day 190.
- The next four digits, 0011*, identify the assembly plant sequence number as 0011*.

Engine Serial Number - 6.0



The Engine Serial Number is located on the right-hand side at the front of the engine cylinder block (1) and is stamped or laser etched onto the block at the assembly plant. The number is prefixed by the RPO code of the engine model. As an example 7NC is used. When reading the Engine Serial Number the following information can be obtained:

Engine Serial Number 7NC071904500 is used as an example:

- The first three digits, 7NC, identify the prefixed RPO code of the engine.
- The next two digits, 07, identify the engine model year as 2007.
- The next three digits, 190, identify the Julian date the engine was manufactured as day 190.
- The next four digits, 4500, identify the assembly plant sequence number as 4500.

Transmission Serial Number

Transmission Serial Numbers provide coded information that could be significant to parts interpretation and should be referred to when ordering replacement parts. Refer to the relevant transmission for the Transmission Serial Number location and code breakdown.

Security DNA

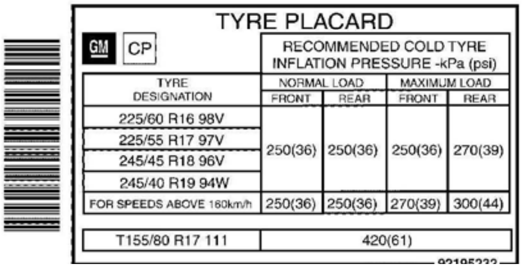
Important: Replacement datadots will not be supplied for components replaced in the field.

All HSV vehicles have Data Dots applied to major components of the vehicle. The Data Dots are imprinted with each vehicle's specific TAG number and can be seen with an illuminated magnifier. The Data Dots are applied to aid in identification of components originally fitted to the vehicle.

Tire Placard

Wheel and tyre sizes, inflation pressures and load capacity are specified on a tyre placard, located on the vehicle body surface under the driver door striker, right hand drive shown.

Except HSV



TYRE PLACARD

GM CP

TYRE DESIGNATION	RECOMMENDED COLD TYRE INFLATION PRESSURE -kPa (psi) NORMAL LOAD FRONT	NORMAL LOAD REAR	MAXIMUM LOAD FRONT	MAXIMUM LOAD REAR
225/60 R16 98V	250(36)	250(36)	250(36)	270(39)
225/55 R17 97V				
245/45 R18 96V				
245/40 R19 94W				
FOR SPEEDS ABOVE 160km/h	250(36)	250(36)	270(39)	300(44)

T155/80 R17 111	420(61)

Always check tyre pressures, with COLD tyres (after vehicle has stood for three hours or more, or driven less than 2 km) and should be checked weekly or before any extended trip.

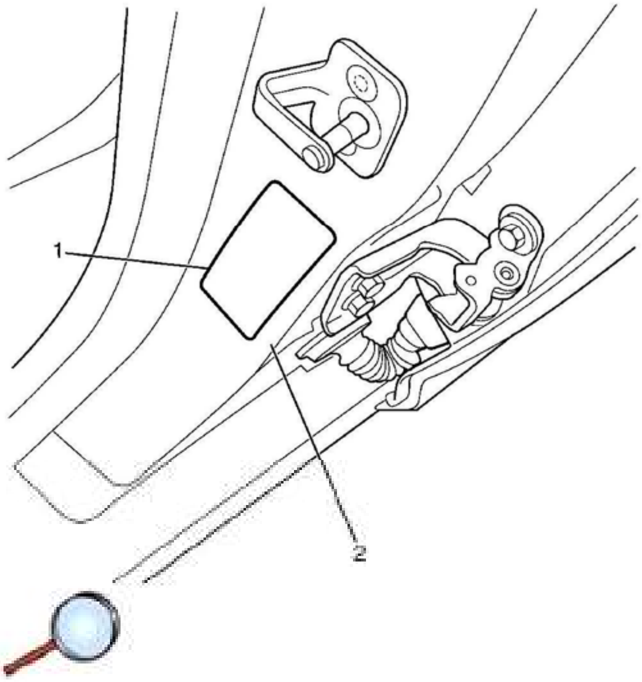
When checking tyre pressure, visually inspect tyres for excessive wear, sharp objects embedded in the tyre or damage to the sidewalls.

Important:

- Clean valve exterior, prior to applying air pressure nozzle when inflating tyre.
- Always install valve caps to keep out dust and water.

Vehicle Certification, Tire Placard, Anti-Theft, and Service Parts ID Label

Safety Compliance Label

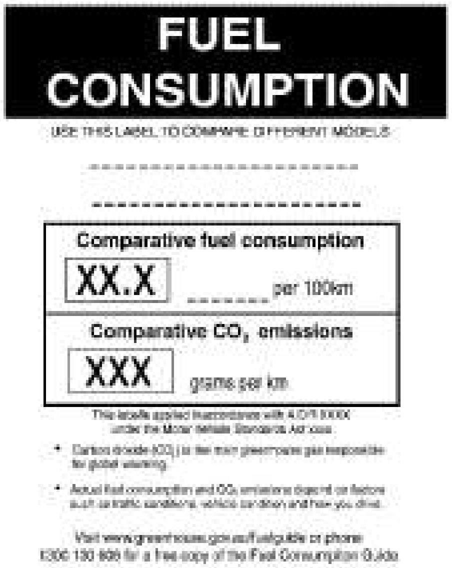


The safety compliance label (1) is located on the left hand B pillar (2).

The safety compliance plate contains the following information:

- Compliance plate approval number
- Vehicle category code
- Name appearing on compliance plate approval
- Make/Model
- Gross Vehicle Mass (GVM) - This is the maximum loaded mass at which the vehicle complies with the approved design rules. Not required for passenger vehicles. Required for utility, regular cab, and crew cab vehicles.
- Seating capacity - The number of adult positions for which seat belts are provided.
- Date of manufacture - The day, month and year that the vehicle is manufactured.
- International Standards Vehicle Identification Number (ISOVIN)

Fuel Consumption Label



FUEL CONSUMPTION

USE THIS LABEL TO COMPARE DIFFERENT MODELS

Comparative fuel consumption

XX.X per 100km

Comparative CO_2 emissions

XXX grams per km

From 1 January 2004, ADR 81/01 requires that all new domestic vehicles displayed for sale have a label attached to the windscreen similar to that shown above.

The Comparative fuel consumption figure and Comparative Carbon Dioxide emissions value quoted are the results of tests carried out in accordance with the ECE R101/00. This new Australian standard for fuel consumption and Carbon Dioxide emission testing harmonises our emission and consumption standards with those recognized internationally. Each vehicle is tested under identical conditions. The tests therefore enable a comparison to be made between vehicles.

The label should be removed from the windscreen immediately prior to the vehicle being delivered to the owner.

Fasteners

Table 1: Metric Prevailing Torque Fastener Minimum Torque Development
Table 2: English Prevailing Torque Fastener Minimum Torque Development
Table 3: Consumable Fasteners List

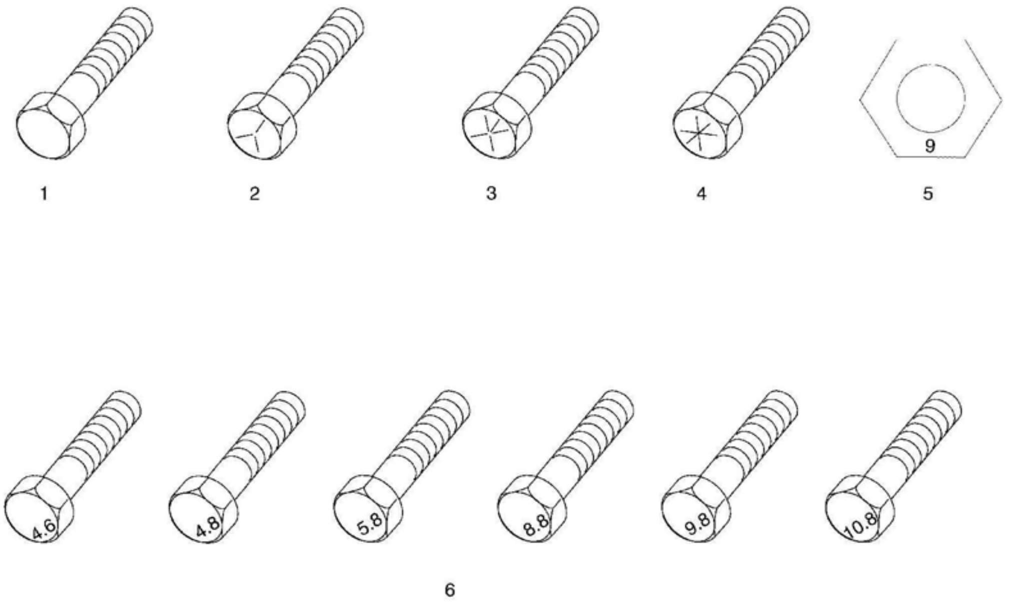
Metric Fasteners

This vehicle provides fastener dimensions using the metric system. Most metric fasteners are approximate in diameter to equivalent English fasteners. Make replacements using fasteners of the same nominal diameter, thread pitch, and strength.

A numerical marking identifies the OE metric fasteners except cross-recess head screws. The number also indicates the strength of the fastener material. A Posidrive® or Type 1A cross-recess identifies a metric cross-recess screw. For best results, use a Type 1A cross-recess screwdriver, or equivalent, in Posidrive® recess head screws.

Holden Engineering Standards have adopted a portion of the ISO-defined standard metric fastener sizes. The purpose was to reduce the number of fastener sizes used while retaining the best thread qualities in each thread size. For example, the metric M6.0 X 1 screw, with nearly the same diameter and 25.4 threads per inch replaced the English 1/4-20 and 1/4-28 screws. The thread pitch is midway between the English coarse and fine thread pitches.

Fastener Strength Identification



(1) English Bolt, Grade 2 (Strength Class)
(2) English Bolt, Grade 5 (Strength Class)
(3) English Bolt, Grade 7 (Strength Class)
(4) English Bolt, Grade 8 (Strength Class)
(5) Metric Nut, Strength Class 9
(6) Metric Bolts, Strength Class Increases as Numbers Increase

The most commonly used metric fastener strength property classes are 9.8 and 10.9. The class identification is embossed on the head of each bolt. The English, inch strength classes range from grade 2 to grade 8. Radial lines are embossed on the head of each bolt in order to identify the strength class. The number of lines on the head of the bolt is 2 lines less than the actual grade. For example, a grade 8 bolt will have 6 radial lines on the bolt head. Some metric nuts are marked with a single digit strength identification number on the nut face.

The correct fasteners are available through Holden Spare Parts Operations (HSPO). Many metric fasteners available in the aftermarket parts channels are designed to different metric standards of countries, and may exhibit the following:

- Lower strength
- No numbered head marking system
- Wrong thread pitch

The metric fasteners on Holden products are designed to new, international standards. The following are the common sizes and pitches, except for special applications:

- M6.0 X 1
- M8 X 1.25
- M10 X 1.5
- M12 X 1.75
- M14 X 2.00
- M16 X 2.00

Prevailing Torque Fasteners

Prevailing torque fasteners create a thread interface between the fastener and the fastener counterpart in order to prevent the fastener from loosening.

All Metal Prevailing Torque Fasteners

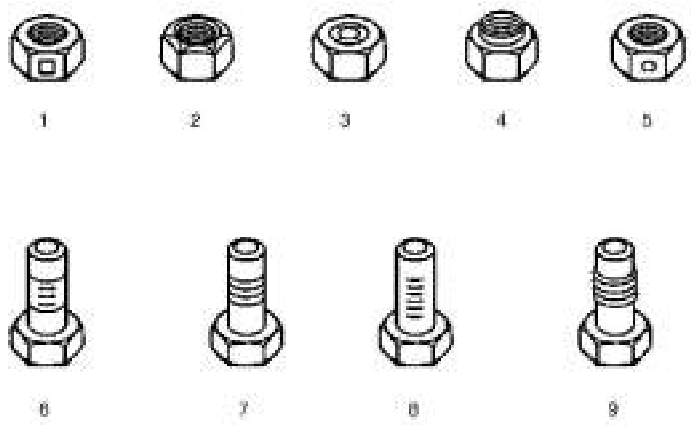
These fasteners accomplish the thread interface by a designed distortion or deformation in the fastener.

Nylon Interface Prevailing Torque Fasteners

These fasteners accomplish the thread interface by the presence of a nylon material on the fastener threads.

Adhesive Coated Fasteners

These fasteners accomplish the thread interface by the presence of a thread-locking compound on the fastener threads. Refer to the appropriate repair procedure in order to determine if the fastener may be reused and the applicable thread-locking compound to apply to the fastener.



(1) Prevailing Torque Nut, Center Lock Type
(2) Prevailing Torque Nut, Top Lock Type
(3) Prevailing Torque Nut, Nylon Patch Type
(4) Prevailing Torque Nut, Nylon Washer Insert Type
(5) Prevailing Torque Nut, Nylon Insert Type
(6) Prevailing Torque Bolt, Dry Adhesive Coating Type
(7) Prevailing Torque Bolt, Thread Profile Deformed Type
(8) Prevailing Torque Bolt, Nylon Strip Type
(9) Prevailing Torque Bolt, Out-of-Round Thread Area Type

A prevailing torque fastener may be reused only if:

- The fastener and the fastener counterpart are clean and not damaged
- There is no rust on the fastener
- The fastener develops the specified minimum torque against its counterpart prior to the fastener seating

Metric Prevailing Torque Fastener Minimum Torque Development

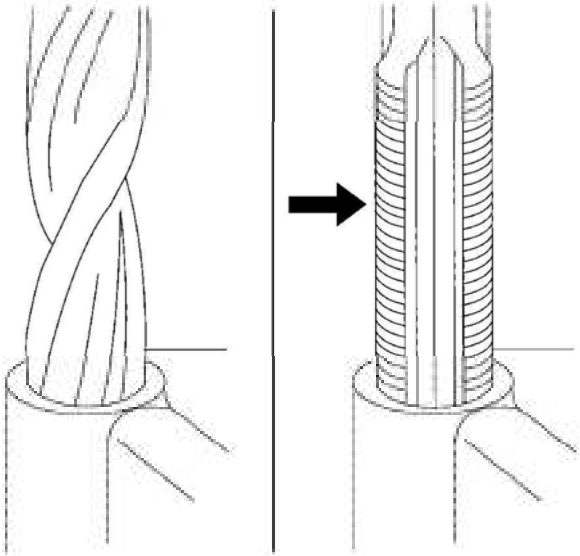
Door Hinge Pin Keeper Bolt	92138945	4 (2 per side)
Door Check Link Attaching Bolt	11517868	4 (2 per side)
Door Latch Attaching Screw (Front)	11609341	6 (3 per side)
Door Latch Attaching Screw (Rear)	11609341	6 (3 per side)

Thread Inserts

General purpose thread repair kits. These kits are available commercially.

Repair Procedure

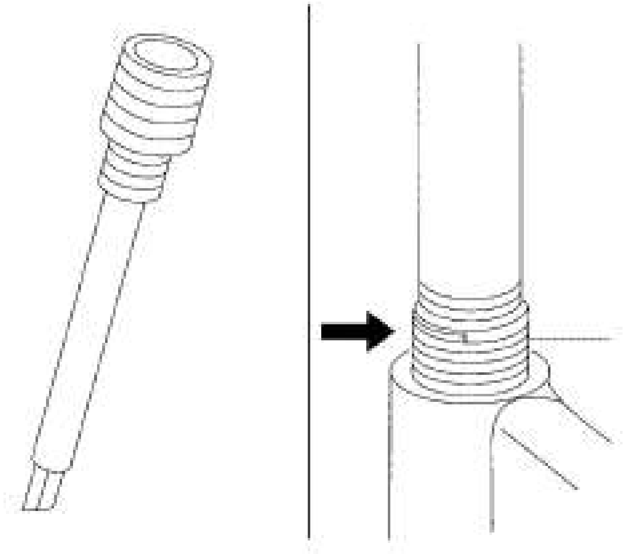
Caution: Refer to Safety Glasses Caution in the Preface section.



Important: Refer to the thread repair kit manufacturer's instructions regarding the size of the drill and tap to use.

Important: Avoid any buildup of chips. Back out the tap every few turns and remove the chips.

1. Determine the size, the pitch and the depth of the damaged thread. If necessary, adjust the stop collars on the cutting tool and tap to the required depth.
2. Drill out the damaged threads. Clean out any chips.
3. Lubricate the tap with light engine oil. Tap the hole. Clean the threads.



4. Thread the thread insert onto the mandrel of the installer. Engage the tang of the insert onto the end of the mandrel.

   Important: The insert should be flush to one turn below the surface.

5. Lubricate the insert with light engine oil, except when installing in aluminum and install the insert.
6. If the tang of the insert does not break off when backing out the installer, break the tang off with a drift.

Abbreviations and Meanings

Abbreviation	Meaning
A	
A	Ampere(s)
ABS	Antilock Brake System
A/C	Air Conditioning
AC	Alternating Current
ACC	Accessory, Automatic Climate Control
ACL	Air Cleaner
A/D	Analog to Digital
A/F	Air/Fuel Ratio
AM/FM	Amplitude Modulation/Frequency Modulation
Ant	Antenna
AP	Accelerator Pedal
APP	Accelerator Pedal Position
ASM	Assembly
A/T	Automatic Transmission/Transaxle
ATDC	After Top Dead Center
ATSLC	Automatic Transmission Shift Lock Control
Auto	Automatic
avg	Average
B	
B+	Battery Positive Voltage
BARO	Barometric Pressure
BATT	Battery
BBV	Brake Booster Vacuum
BCM	Body Control Module
BHP	Brake Horsepower
BLK	Black
BLU	Blue
BP	Back Pressure
BPMV	Brake Pressure Modulator Valve
BPP	Brake Pedal Position
BRN	Brown
BTDC	Before Top Dead Center
C	
°C	Degrees Celsius

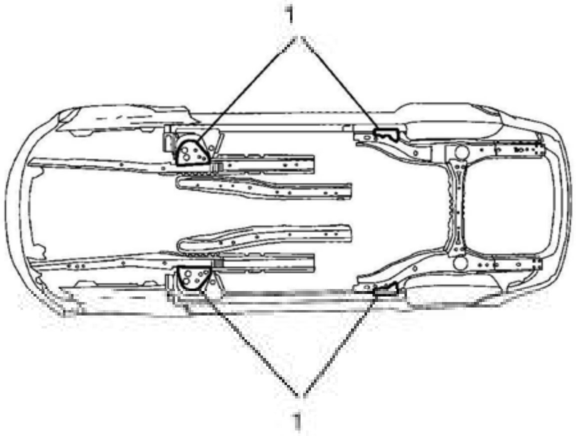
Lifting and Jacking the Vehicle



Caution: To help avoid personal injury, always use jack stands when you are working on or under any vehicle that is supported only by a jack.

Caution: Refer to General Repair Instructions in the Preface section.

Notice: Refer to General Repair Instructions in the Preface section.

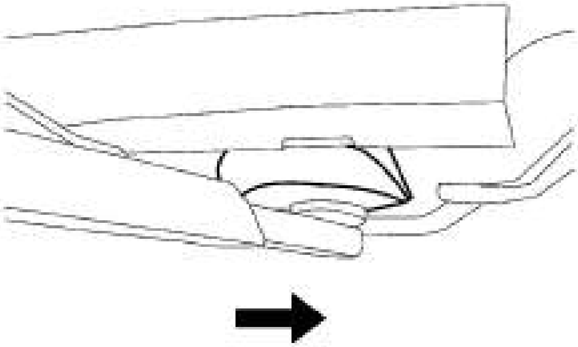
Before you begin any lifting procedure, be sure the vehicle is on a clean, hard, level surface. Be sure all the lifting equipment meets weight standards and is in good working order. Be sure all the vehicle loads are equally distributed and secure. If you are only supporting the vehicle at the frame side rails, make sure the lifting equipment does not put too much stress on or weaken the frame side rails.

If you use any other lifting methods than the preferred vehicle jacking locations (1), take special care not to damage the fuel tanks, the exhaust system or the underbody.

Notice: Refer to General Repair Instructions in the Preface section.

Vehicle Lifting - Frame Contact Hoist

Front Hoist Pads

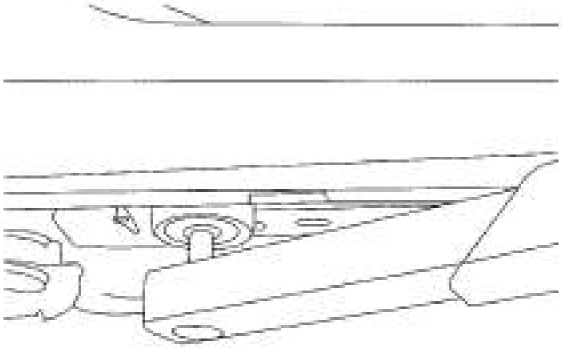


Important: The front hoist pads must not contact the rocker panels, the front mud guards, or the floor pan.

Position the front hoist pads as follows:

Under the front frame box section.

Rear Hoist Pads



Important: The rear hoist pads must not contact the rocker panels to the outside of the side frame rails or the floor pan.

Position the rear hoist pads as follows:

Under the junction between the rear frame rails and the side frame rails.

Special Tools Ordering Information

The special service tools shown in this service manual that have product numbers beginning with J, SA or BT are available for worldwide distribution from:

SPX Australia Pty.Ltd
300 Wellington Road
Mulgrave, Victoria Australia 3170

Phone: (03) 9544 6222

Fax: (03) 9544 6222

Email: sales@spx.com.au

Internet: www.spx.com.au

Air / Wind Noise

Caution: Refer to Assistant Driving Caution in the Preface section.

- Test drive the vehicle to determine the origin of the reported wind noise.
- Choose a regular route with smooth and straight roads that run in all 4 directions: North, South, East, and West. The area should have little traffic or little noise in order to eliminate interference with the test.

  Important: Often there is one primary leak source and one or more secondary leak sources that contribute to the noise condition. Repairing only one of the contributing leak sources may not completely repair the total condition but only reduce the condition.

- Drive the vehicle at the speed in which the noise was noticed, or until the noise is heard. Maintain safe and legal speeds.
- Many of the waterleak diagnosis tests are also used for the wind noise diagnosis.
- Most wind noise is caused either by leaking seals or by misaligned body surfaces.
- Wind whistle

  When moving at highway speeds, air pressure inside the vehicle becomes greater than the air pressure outside. When a leak occurs, the escaping air causes a hiss or a whistle.

- Wind roar

  Wind roar occurs when air passes over or through an opening between the 2 body surfaces. To correct the condition, adjust the alignment of the body surfaces.

- Wind rush

  Wind rush occurs when air presses over the vehicle's body, and is related to the aerodynamics of the vehicle. Wind whistle and wind roar are repairable. Rule out wind whistle and wind roar before concluding that the wind noise is due to wind rush.

Use the following inspections in order to aid in diagnosing wind whistle or wind roar:

1. Note the details for wind noise:
   - The perceived location
   - The location where the noise is loudest
   - When the noise occurs
   - The vehicle speed
   - The interior fan speed
   - The position of the windows
   - What the noise sounds like
2. Inspect the vehicle for the possible cause of the wind noise.
3. Test drive the vehicle and determine if the wind noise is external or internal.
4. Perform a visual inspection at the perceived location of the wind noise for the following:
   - Loose fasteners
   - Torn weatherstrips
   - Broken weld joints

- Sealer and/or adhesive skips

Tracing Powder or Chalk Test

1. Clean the weatherstrips and the contact surfaces with cleaning solvent.
2. Apply tracing powder or chalk in an unbroken line to the contact surface of the weatherstrip surrounding the perimeter of the suspected areas.
3. Close the panel completely without slamming the panel. Closing the panel completely presses the weatherstrip firmly against the mating surface.
4. Inspect the applied line on the weatherstrip. The applied line is marred where contact is good. A corresponding imprint is on the mating surfaces.
5. Gaps or irregularities in the powder or the chalk line on the mating surfaces indicate the areas with a poor seal.

Air Pressure Test

1. Mask off the body ventilation outlets.
2. Close all the windows.
3. Turn the vehicle's ventilation fan to the ON position, with the selector on high speed and in the defrost mode.
4. Unlock and close the doors.
5. Listen for escaping air along the door and the window seals with a mechanic's stethoscope or a length of heater hose.

Soap Suds or Bubble Test

1. Mask off the body ventilation outlets.
2. Close all the windows and the doors.
3. Turn the vehicle's ventilation fan to the ON position, with the selector on high speed and in the defrost mode.
4. Unlock and close the doors.
5. Apply the soap solution to the potential leak areas.
6. Look for bubbles revealing escaping air.

Exterior Windnoise

Caution: Refer to Assistant Driving Caution in the Preface section.

Exterior wind noise is louder when the vehicle is driven with one or more windows down. Exterior wind noise occurs when air passes over the body panels, the seams, or the openings. Use the following items during the test drive in order to aid in the detection of leaks:

- Mechanic's stethoscope or heater hose
- Masking tape - 50 mm (2 in) width

1. While driving, determine the location of the exterior wind noise by lowering one window at a time. If the location corresponds with the condition in step 2, pull over and make a temporary repair with 50 mm (2 in) wide masking tape.
2. Tape over the gaps and the moldings one at a time. Test between each taping. Taping over the gaps and moldings will correct the condition.
3. Temporarily repair the condition with masking tape. Adjust the tape when needed.
4. Continue testing in order to determine if the noise has been eliminated or other leak areas exist.
5. When all the reported leak conditions are located, make permanent repairs using the correct alignment techniques and sealing materials.

Interior Windnoise

Caution: Refer to Assistant Driving Caution in the Preface section.

Interior wind noise is not heard when the window is lowered. Interior wind noise is caused by the air leaving the inside of the vehicle through a seal or a seam.

1. Mask off the body ventilation outlets to cause added air pressure within the vehicle.
2. Test drive the vehicle and listen for wind noise or a whistle.
3. Pull the vehicle over and make the temporary repairs using masking tape. If you cannot determine the source of the wind noise, perform one or more of the following diagnostic tests:
    - Tracing Powder or Chalk Test.
    - Air Pressure Test.
    - Soap Suds or Bubble Test.

Approximate Fluid Capacities

The following approximate capacities are given in English and metric conversions. See Fluid and Lubricant Recommendations, for more information. All capacities are approximate. When adding, be sure to fill to the approximate level, as recommended in this manual. Re check fluid level after filling.

Application	Specification	
	Metric	English
Cooling System		
3.6L Engine	10 Litres	8.8 Quarts
6.0L Engine	11 Litres	9.7 Quarts
Engine Oil with Filter		
3.6L Engine	6.5 Litres	5.7 Quarts
6.L0 Engine	8.3 Litres	7.3 Quarts
Fuel Tank	73 Litres	16 Gallons
Automatic Transmission		
5L40E 5-Speed - Drain and Refill	6 liters	5.3 quarts
4L60E 4-Speed - Drain and Refill	4.8 Litres	4.22 Quarts
4L65E 4-Speed - Drain and Refill	5 Litres	4.4 Quarts
6L80E 6-Speed - Drain and Refill	5.7 Litres	6.0 Quarts
5L40E 5-Speed - Complete Overhaul	8.5 Liters	7.4 Quarts
4L60E 4-Speed - Complete Overhaul	7.9 Litres	7 Quarts
4L65E 4-Speed - Complete Overhaul	10.6 Litres	9.3 Quarts
6L80E 6-Speed - Complete Overhaul	9.9 Litres	8.7 Quarts
5L40E 5-Speed - Dry	8.5 Liters	7.4 Quarts
4L60E 4-Speed - Dry	7.9 Litres	7 Quarts
4L65E 4-Speed - Dry	10.6 Litres	9.3 Quarts
6L80E 6-Speed - Dry	9.9 Litres	8.7 Quarts
Manual Transmission		
D173 6-Speed	1.8 liters	1.6 quarts
Tremec T56 6-Speed	3.9 liters	3.4 quarts
Differential		
Drain and Fill With Cover Removed	1.2 liters	1 quart
Drain and Fill With Use of Drain Plug	1.0 liters	0.88 quarts

Tire Inflation Pressure Specifications

Inflation Pressure Conversion (Kilopascals to Psi)

Refer to the Tyre Placard located on the B pillar of the vehicle for the correct tyre inflation pressure and load for the factory installed tyres. The tyre pressures may be printed in both kilopascal (kPa) and psi. The correct tyre inflation pressures for the factory installed tyres is when the tyres are cold. "Cold" means the vehicle has been sitting for at least 3 hours or driven no more than 1.6 km (1 mi). Inspect the tyres inflation pressure when the tyres are cold. *One psi equals 6.9 kPa.*

kPa	psi	kPa	psi
140	20	215	31
145	21	220	32
155	22	230	33
160	23	235	34
165	24	240	35
170	25	250	36
180	26	275	40
185	27	310	45
190	28	345	50
200	29	380	55
205	30	415	60

Conversion: 6.9 kPa=1 psi

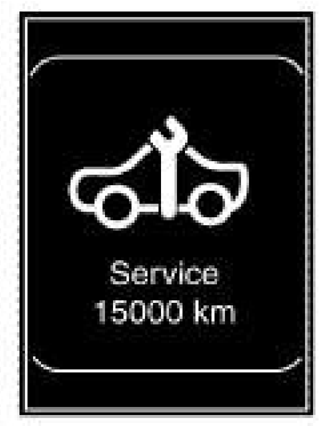
Service Display Reminders

Service Reminder Display



The instrument cluster will display the service condition of the vehicle on the Multi Function Display (MFD). Activation of the Service Reminder Display is determined on the current odometer value and value of the next service interval. The three possible states of the display are as follows:

Service Before Due

The MFD shows a reminder 1000 km before a service is due. The service interval becoming due is displayed on the MFD, and only the spanner in the icon flashes. This service reminder is displayed for up to 10 seconds whenever the ignition is switched ON or OFF. This will occur until the service reminder is cleared from the display using the TRIP or ENTER steering wheel switches or until the service reminder is reset.

Service Overdue

When a service is overdue by less than 5000 km, the MFD shows a flashing icon for up to 10 seconds when the ignition is switched ON or OFF. This will occur until the service reminder is cleared from the display using the TRIP or ENTER steering wheel switches or until the service reminder is reset.

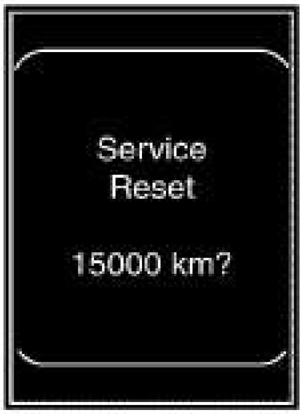
Service Well Overdue

When a service is overdue by more than 5000 km, the MFD shows a flashing icon for up to 10 seconds whenever the ignition is switched ON or OFF. This will occur until the service reminder is cleared from the display using the TRIP or ENTER steering wheel switches or until the service reminder is reset. This event is permanently logged in the instrument cluster memory (EEPROM).

Service Reminder Reset Procedure

The displayed service reminder is reset using the scan tool or by the following procedure:

1. Turn the ignition to the OFF position.
2. Press and hold the TRIP button.
3. Turn the ignition to the ON position.
4. Release the TRIP button.



Service
Reset

15000 km?

Important: A confirmation beep will sound upon reset.

5. Once in the Service Reset screen, press and hold the ENTER switch for 3-5 seconds.

   Important: If the service reminder comes back on when you start the vehicle, the Service Reminder Display has not reset. Repeat the procedure.

6. Turn the ignition to the OFF position.

GM Oil Life System Resetting

When the system has calculated that oil life has been diminished, it will indicate that an oil change is necessary. A CHANGE ENGINE OIL SOON message will come on. Change the engine oil as soon as possible within the next 600 miles (1000 km). It is possible that, if driving under the best conditions, the oil life may not indicate that an oil change is necessary for over a year. However, the engine oil and filter must be changed at least once a year and at this time the system must be reset.

If the system is ever reset accidentally, change the engine oil at 3000 miles (5000 km) since last oil change.

Resetting Procedure

Follow this procedure to reset the GM Oil Life System ™:

1. Turn the ignition to ON with the engine off.
2. Press the TRIP button so the OIL LIFE percentage is displayed.
3. Press the RESET and hold for two seconds. OIL LIFE REMAIN 100 percent will appear.

Tire and Wheel Assembly Runout Measurement - Off Vehicle

Tire and Wheel Runout Measurement - Off-Vehicle

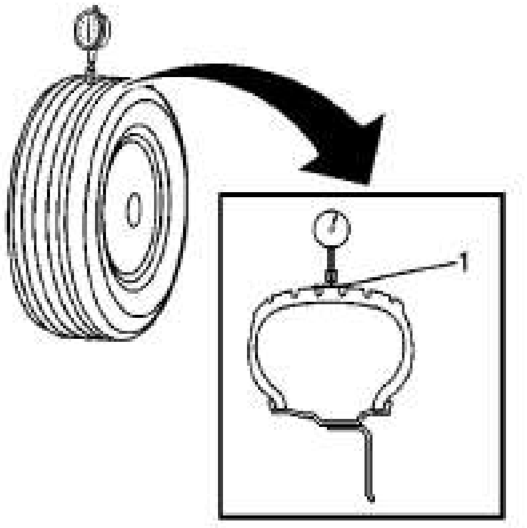
Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Mark the location of each tyre and wheel assembly in relation to the vehicle.
3. Remove the tyre and wheel assemblies from the vehicle. Refer to Tire and Wheel Removal and Installation.
4. Closely inspect each tyre for correct and even bead seating.
5. If any of the tyre beads were not correctly or evenly seated, reseat the tyre bead, then proceed to step 6. Refer to Tire Dismounting and Mounting.

Important: The wheel must be mounted on the spin-type wheel balancer in accordance with manufacturers instructions.

6. Mount a tyre and wheel assembly on a spin-type wheel balancer.

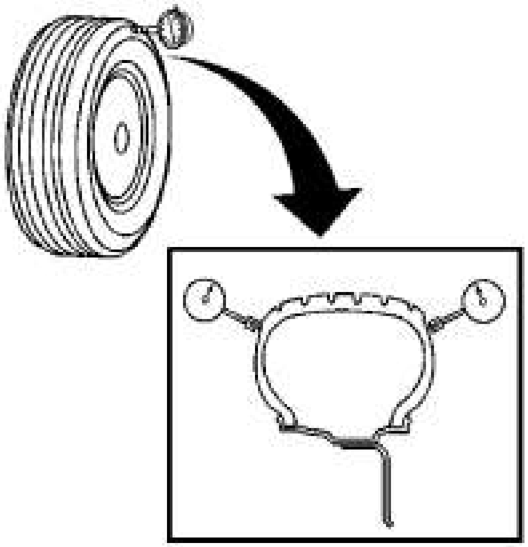


Important: Wrapping the tread with tape allows for a smooth and accurate reading of radial runout to be obtained.

7. Wrap the outer circumference of each tire with tape (1) in the center tread area.
8. Position the dial indicator fitted with a roller, on the taped portion of the tyre tread perpendicular to the surface.

9. Slowly rotate the tyre and wheel assembly one complete revolution in order to find the low point.
10. Set the dial indicator to zero at the low point.
11. Slowly rotate the tyre and wheel assembly one more complete revolution and measure the total amount of radial runout.

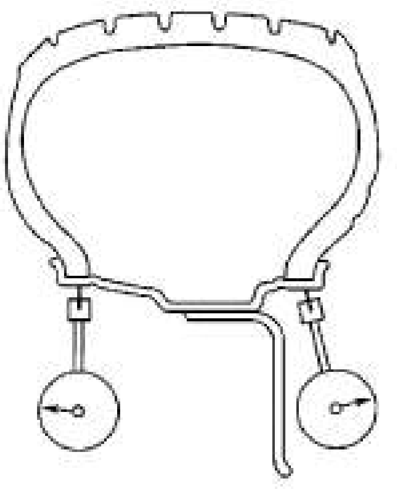
    Specification
    Maximum tyre and wheel assembly radial runout - measured off-vehicle: 1.27 mm (0.050 in)



12. Position the dial indicator fitted with a roller on a smooth portion of the tyre sidewall, perpendicular to the surface, as close as possible to the tread area.
13. Slowly rotate the tyre and wheel assembly one complete revolution in order to find the low point. Ignore any jumps or dips due to sidewall splices.
14. Set the dial indicator to zero at the low point.
15. Slowly rotate the tyre and wheel assembly one more complete revolution and measure the total amount of lateral runout. Ignore any jumps or dips due to sidewall splices and attain an average runout measurement.

    Specification
    Maximum tyre and wheel assembly lateral runout - measured off-vehicle: 1.27 mm (0.050 in)

16. Repeat steps 6 through 15 until all tyre and wheel assembly, radial and lateral runout measurements have been taken.
17. If the tyre and wheel assembly runout measurements are not within specifications, proceed to step 19.
18. If the tyre and wheel assembly runout measurements are within specifications, then the off-vehicle tyre and wheel assembly runout is considered acceptable.

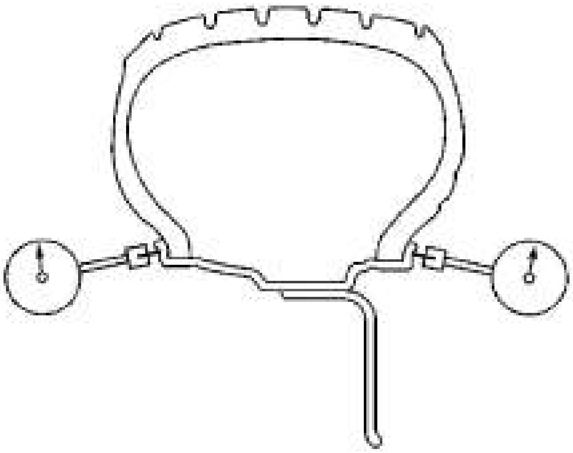


Important: Wheel runout should be measured on both the inboard and outboard rim flanges, unless wheel design will not permit. Ignore any jumps or dips due to paint drips, chips, or welds.

19. Position the dial indicator fitted with a roller perpendicular to the horizontal outer surface of the wheel rim flange, with the tyre still mounted.
20. Slowly rotate the tyre and wheel assembly one complete revolution in order to find the low point.
21. Set the dial indicator to zero at the low point.
22. Slowly rotate the tyre and wheel assembly one more complete revolution and measure the total amount of wheel radial runout.

Specification

- Maximum aluminium wheel radial runout - measured off-vehicle, tire mounted: 0.762 mm (0.030 in)
- Maximum steel wheel radial runout - measured off-vehicle, tire mounted: 1.015 mm (0.040 in)



Important: Wheel runout should be measured on both the inboard and outboard rim flanges, unless wheel design will not permit. Ignore any jumps or dips due to paint drips, chips, or welds.

23. Position the dial indicator fitted with a roller perpendicular to the vertical outer surface of the wheel rim flange, with the tyre still mounted.
24. Slowly rotate the tyre and wheel assembly one complete revolution in order to find the low point.
25. Set the dial indicator to zero at the low point.
26. Slowly rotate the tyre and wheel assembly one more complete revolution and measure the total amount of wheel lateral runout.

    Specification

    - Maximum aluminium wheel lateral runout - measured off-vehicle, tire mounted: 0.762 mm (0.030 in)
    - Maximum steel wheel lateral runout - measured off-vehicle, tire mounted: 1.143 mm (0.045 in)
27. Repeat steps 19 through 26 until all tyre and wheel assembly wheel, radial and lateral runout measurements have been taken.
28. If any of the wheel runout measurements are not within specifications. Refer to Wheel Runout Measurement below.
29. If the wheel runout measurements are within specifications, replace the tyre. Refer to Tire Dismounting and Mounting.
30. Remeasure the runout of the affected tyre and wheel assembly, or assemblies after replacement of any tyres.
31. Install the tyre and wheel assembly in the original location in relation to the vehicle. Refer to Tire and Wheel Removal and Installation.
32. Remove the safety stands.
33. Lower the vehicle.

Wheel Runout Measurement

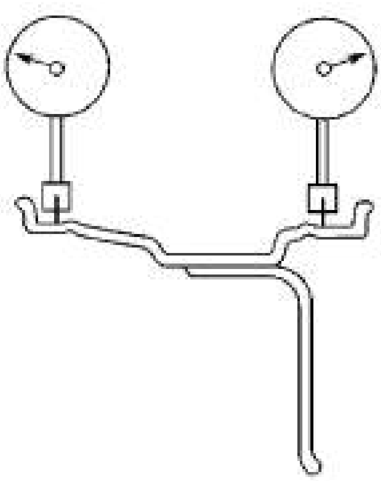
Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Mark the location of each tyre and wheel assembly in relation to the vehicle.
3. Remove the tyre and wheel assemblies from the vehicle. Refer to Tire and Wheel Removal and Installation.
4. Using a suitable marker indicate on the tyre, the orientation of the tyre to the wheel valve stem.
5. Remove the tyre from the wheel. Refer to Tire Dismounting and Mounting.

Important: The wheel must be mounted on the spin-type wheel balancer in accordance with manufacturers instructions.

6. Install the wheel on a spin-type wheel balancer.

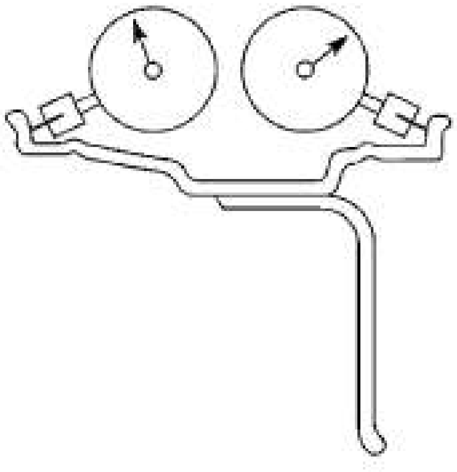


Important: Measure wheel runout on both the inboard and outboard rim flanges. Ignore any jumps or dips due to paint drips, chips, or welds.

7. Position the dial indicator fitted with a roller perpendicular to the horizontal inner surface of the wheel rim flange.
8. Slowly rotate the wheel one complete revolution in order to find the low point.
9. Set the dial indicator to zero at the low point.
10. Slowly rotate the wheel one more complete revolution and measure the total amount of wheel radial runout.

Specification

- Maximum aluminium wheel radial runout - measured off-vehicle, tyre dismounted: 0.762 mm (0.030 in)
- Maximum steel wheel radial runout - measured off-vehicle, tyre dismounted: 1.015 mm (0.040 in)



Important: Measure wheel runout on both the inboard and outboard rim flanges. Ignore any jumps or dips due to paint drips, chips, or welds.

11. Position the dial indicator fitted with a roller perpendicular to the vertical inner surface of the wheel rim flange.
12. Slowly rotate the wheel one complete revolution in order to find the low point.
13. Set the dial indicator to zero at the low point.
14. Slowly rotate the wheel one more complete revolution and measure the total amount of wheel lateral runout.

    Specification

    - Maximum aluminium wheel lateral runout - measured off-vehicle, tyre dismounted: 0.762 XX mm (0.030 in)
    - Maximum steel wheel lateral runout - measured off-vehicle, tyre dismounted: 1.143 XX mm (0.045 in)
15. Repeat steps 2 through 14 until all tyre and wheel assemblies, radial and lateral runout measurements have been taken.
16. If any of the wheel runout measurements are not within specifications, replace the wheel. Refer to Replacement Wheels Description and Tire Dismounting and Mounting.

Important: Always measure the runout of any of the tyre and wheel assemblies after mounting the tyre.

Important: If refitting the original tyre on the original wheel align the mark on the tyre with the valve stem on the wheel.

17. Install the tyre to the wheel. Refer to Tire Dismounting and Mounting.
18. Install the tyre and wheel assembly in the original location in relation to the vehicle. Refer to Tire and Wheel Removal and Installation.
19. Remove the safety stands.
20. Lower the vehicle.

Tire and Wheel Assembly Runout Measurement - On-Vehicle

Because the runout of a tyre and wheel assembly will directly affect the amount of imbalance and radial force variation, it should be minimised. The smaller the amount of runout, the less imbalance and force variation. Radial and lateral runout can be corrected at the same time. There are two methods to measure runout of the tyre and wheel assemblies:

- On the vehicle (mounted to the hub), the wheel bearing must be in good condition.
- Off the vehicle (mounted on a spin-type wheel balancer). Refer to Tire and Wheel Assembly Runout Measurement - Off Vehicle .

Measuring the tyre and wheel runout off the vehicle is most accurate. It is usually easier to mount a dial indicator in the correct position and possibilities of inaccuracies are decreased. Once the runout has been measured and corrected off the vehicle, a quick visual check of runout on the vehicle will indicate if any further problems exist.

If there is a large difference in the runout measurements from on-vehicle to off-vehicle, then the runout problem is due to hub flange runout, refer to Front Wheel Hub Assembly Inspection , or a mounting problem between the wheel and the vehicle.

Before measuring or attempting to correct excessive runout, carefully check the tyre for an uneven bead seat. The distance from the edge of the ring to the concentric rim locating-ring should be equal around the entire circumference. If the beads are not seated correctly, the tyre should be remounted. Otherwise, excessive runout and imbalance will result.

If the runout of the wheel is within tolerance, and the tyre and wheel assembly runout cannot be reduced to an acceptable level by using the match-mounting technique, the tyre must be replaced. ALWAYS MEASURE THE TYRE AND WHEEL ASSEMBLY runout AFTER REPLACING THE TYRE.

The tolerances listed are to serve as guidelines. If runout measurements are within tolerance but are marginal, some sensitive vehicles may still be affected. It is always advisable to reduce runout to as little as possible in order to attain optimum results under all conditions.

Important: If the vehicle has been sitting in one place for a long time, flat spots may exist in the area where the tyre is in contact with ground. As the flat spots affect runout readings, they should be removed by driving the vehicle until the tyres reach normal operating temperature before conducting any runout measurements.

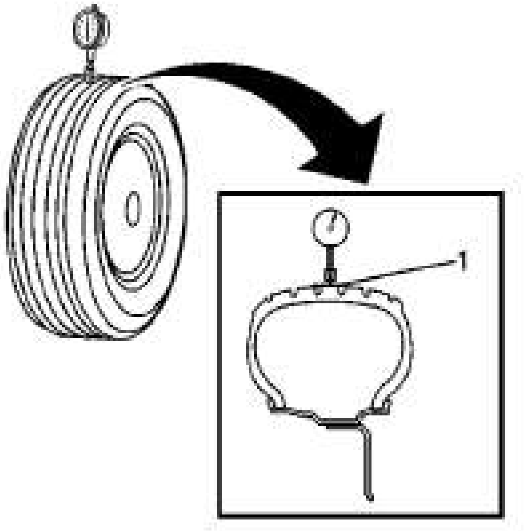
Tire and Wheel Runout Measurement - On-Vehicle

Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle .
2. Inspect each tyre for correct and even bead seating.
3. If any of the tyre beads are not correctly or evenly seated, reseat the tyre bead. Refer to Tire

Dismounting and Mounting , then proceed to step 4.

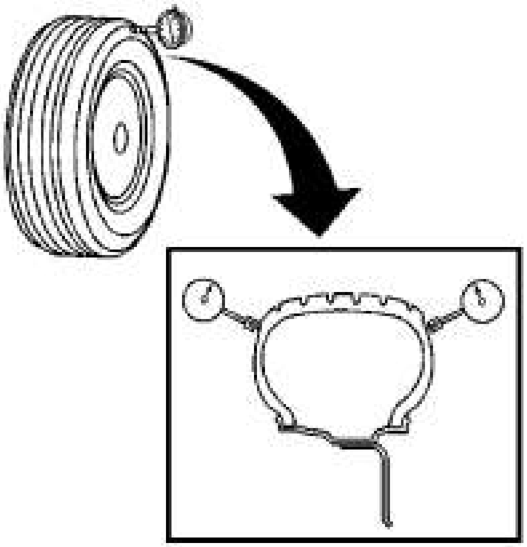


Important: Wrapping the tread with tape allows for a smooth and accurate reading of radial runout to be obtained.

4. Wrap the circumference of each tyre with tape (1) in the center of the tread area.
5. Position a dial indicator fitted with a roller, on the taped portion of the tyre tread perpendicular to the surface.
6. Slowly rotate the tyre and wheel assembly one complete revolution in order to find the low point.
7. Set the dial indicator to zero at the low point.
8. Slowly rotate the tyre and wheel assembly one more complete revolution and measure the total amount of radial runout.

Specification

Maximum tyre and wheel assembly radial runout - measured on-vehicle: 1.52 mm (0.060 in)



9. Position the dial indicator fitted with a roller on a smooth portion of the tyre sidewall, perpendicular to the surface, as close as possible to the tread area.
10. Slowly rotate the tyre and wheel assembly one complete revolution in order to find the low point. Ignore any jumps or dips due to sidewall splices.
11. Set the dial indicator to zero at the low point.
12. Slowly rotate the tyre and wheel assembly one more complete revolution and measure the total amount of lateral runout. Ignore any jumps or dips due to sidewall splices and attain an average runout measurement.

    Specification
    Maximum tyre and wheel assembly lateral runout - measured on-vehicle: 1.52 mm (0.060 in)

13. If required repeat steps 4 through 12 until all tyre and wheel assemblies, radial and lateral runout measurements have been taken.
14. Remove the dial indicator
15. Remove the safety stands.
16. Lower the vehicle.

Tire and Wheel Assembly Balancing - Off Vehicle (LWB SWB)

Caution: Failure to adhere to the following precautions before tire balancing can result in personal injury or damage to components:

- Clean away any dirt or deposits from the inside of the wheels.
- Remove any stones from the tread.
- Wear eye protection.
- Use coated weights on aluminum wheels.

Tyre and Wheel Assembly Balancer Calibration

1. Tyre and wheel balancers can drift out of calibration over time, or can become inaccurate as a result of heavy use. It is likely there will not be any visual evidence that a calibration problem exists. If a balancer is not calibrated within specifications, and a tyre and wheel assembly is balanced on that machine, the assembly may actually be unbalanced.
2. Tyre and wheel assembly balancer calibration should be checked and serviced in accordance with manufacturer's specifications and recommendations.

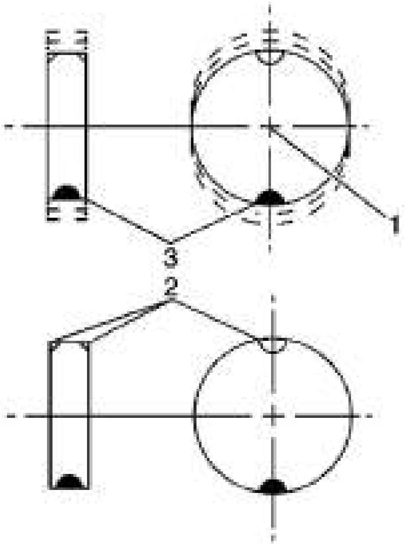
Tyre and Wheel Assembly Balancing Guidelines

Important: Tyre and wheel assemblies which exhibit excessive runout can produce vibrations even if the assemblies are balanced.

It is strongly recommended that the tyre and wheel assembly runout be measured and corrected if necessary before the assemblies are balanced.

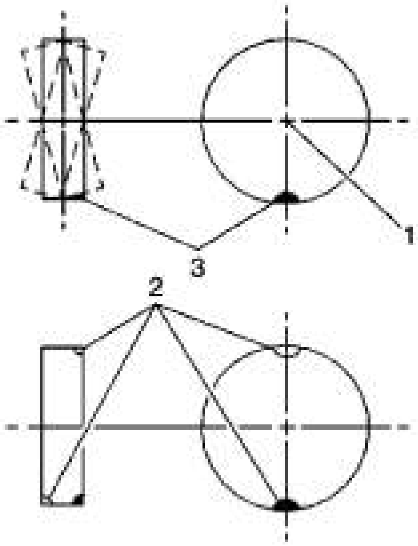
1. If the runout of the tyre and wheel assemblies has not yet been measured, refer to Tire and Wheel Assembly Runout Measurement - On-Vehicle , before proceeding.
2. There are 2 types of tyre and wheel balance:

Static Balance



1. Static balance is the equal distribution of weight around the wheel circumference. The wheel balance weights (2) are positioned on the wheel in order to offset the effects of a heavy spot (3).
2. Wheels that have static imbalance can produce a bouncing action around the wheel centre (1) called tramp.

Dynamic Balance



1. Dynamic balance is the equal distribution of weight on each side of the tyre and wheel assembly centre-line. The wheel balance weights (2) are positioned on the wheel in order to offset the effects of a heavy spot (3). Wheels that have dynamic imbalance have a tendency to move from side to side around the wheel centre (1) called shimmy.

2. Most off-vehicle balancers are capable of checking both types of balance simultaneously.
3. As a general rule, most vehicles are more sensitive to static imbalance than to dynamic imbalance; however, vehicles equipped with low profile, wide tread path, high performance tyres and wheels are susceptible to small amounts of dynamic imbalance.

Balancing Procedure

Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

Important: When balancing tyre and wheel assemblies, use a calibrated and well maintained, off-vehicle, two-plane dynamic balancer set to the finest balance mode available.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.

   Important: Note the location of each tyre and wheel assembly in relation to the original position on the vehicle.

2. Remove the tyre and wheel assemblies. Refer to Tire and Wheel Removal and Installation.

   Important: The wheel must be mounted on the spin-type wheel balancer in accordance with manufacturers instructions.

3. Mount a tyre and wheel assembly on a spin-type wheel balancer.
4. Cycle the wheel balancer to determine if a tyre and wheel assembly imbalance exists.
   - If an imbalance is found remove and discard all wheel weights from the tyre and wheel assembly and continue the procedure.
   - If an imbalance is not found. Refer to Strategy Based Diagnosis.

   Important: The correct type of wheel balance weights for the type of wheel rim being balanced must be used. The correct type of coated wheel balance weights for aluminium wheels must be used. Refer to Wheel Weight Usage within this procedure.

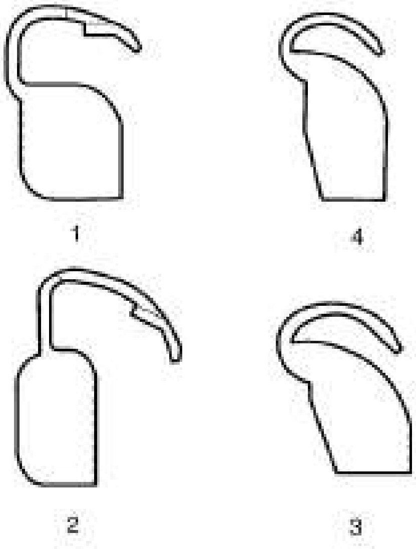
   Important: The tyre and wheel assembly must be balanced in accordance with the wheel balancer manufacturers instructions.

5. Balance all of the tyre and wheel assemblies.

   Important: The tyre and wheel assemblies must be installed in the correct location in relation to the original position on the vehicle.

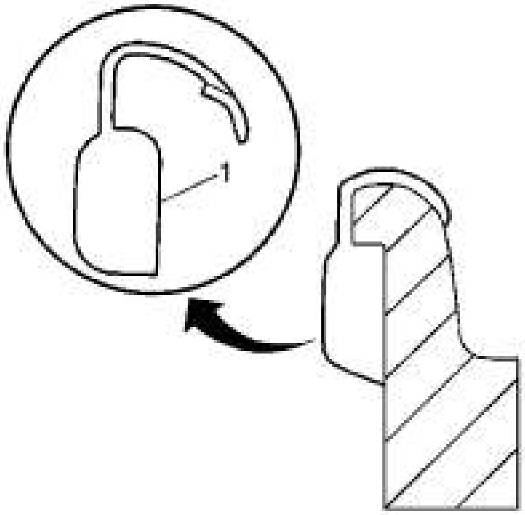
6. Install the tyre and wheel assemblies. Refer to Tire and Wheel Removal and Installation.
7. Remove the safety stands.
8. Lower the vehicle.

Wheel Weight Usage



Important: When balancing factory aluminium wheels with clip-on wheel balance weights, be sure to use special polyester-coated weights. These coated weights reduce the potential for corrosion and damage to aluminium wheels.

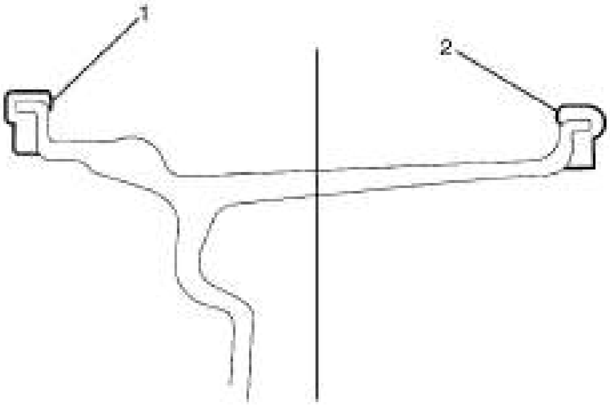
1. MC (1) and AW (2) series weights are approved for use on aluminium wheels.
2. P (3) series weights are approved for use on steel wheels only.
3. T (4) series coated weights are approved for use on both steel and aluminium wheels.



Important: A nylon or plastic-tipped hammer must be used when installing coated clip-on wheel balance weights to minimize the possibility of damage to the polyester coating and wheel surface.

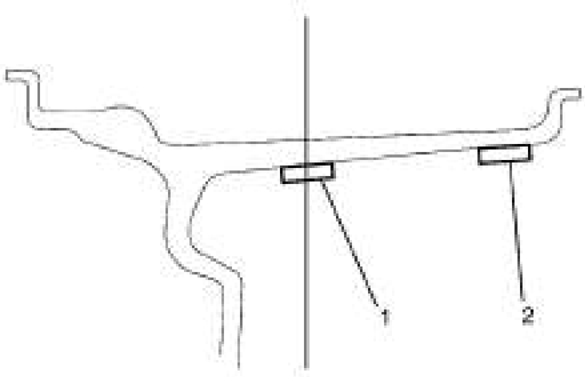
1. The contour and style of the wheel rim flange will determine which type of clip-on wheel weight (1) should be used.
2. The weight should follow the contour of the rim flange. The weight clip should firmly grip the rim flange.

Wheel Weight Placement - Clip-on Weights



When balancing, install the wheel balance weights on the inboard (2) and outboard (1) rim flanges at the positions specified by the wheel balancer.

Wheel Weight Placement - Adhesive Weights



Important: When installing adhesive balance weights on flangeless wheels, do not install the weight on the outboard surface of the rim.

1. Adhesive wheel balance weights may be used on factory aluminium wheels. Perform the following procedure to install adhesive wheel balance weights.
2. Determine the correct areas for placement of the wheel weights on the wheel.

   When balancing, locate the wheel balance weights along the wheel centre-line (1) and the inboard edge (2) of the inner wheel surface at the positions specified by the wheel balancer.

3. Make sure that there is sufficient clearance between the wheel weights and brake system components.

   Important: Do not use abrasives to clean any surface of the wheel. The balance weight attachment areas must be free from corrosion, dirt, oil or any other foreign material.

4. Clean the designated balance weight attachment areas.
5. Dry the attachment areas with hot air until the wheel surface is warm to the touch.
6. Warm the adhesive backing on the wheel balance weights to room temperature.

   Important: Do not touch the adhesive surface.

7. Remove the protective covering from the adhesive backing on the back of the balance weights.

   Important: Press the wheel balance weights into place with firm hand pressure.

8. Install the wheel balance weights to the wheel.

Tire and Wheel Assembly Balancing - On-Vehicle (LWB SWB)

Important: The tyre and wheel assembly must be balanced off vehicle before attempting to balance the tyre and wheel assembly on vehicle. Refer to Tire and Wheel Balancing.

If after following the tyre and wheel vibration diagnostic process, some amount of tyre and wheel vibration is still evident, an on-vehicle high-speed spin balancer may be used to perform an on-vehicle balance in an attempt to finish balance the tyre and wheel assemblies, wheel hubs, brake rotors and wheel trim, if equipped, simultaneously. On-vehicle balancing can also compensate for minor amounts of residual runout encountered as a result of mounting the tyre and wheel assembly on the vehicle, as opposed to the balance which was achieved with the off-vehicle balancing procedure.

Important: Note the following information before performing the on-vehicle tyre and wheel balance:

- Vehicles equipped with low profile, wide tread path, high performance tyres and wheels are susceptible to small amounts of dynamic imbalance.
- When performing an on-vehicle balance, care must be taken when placing the wheel balance weights on the wheels. If the wheel balance weights are not placed accurately, they can induce dynamic imbalance and increase the severity of the vibration.
- Inspect the wheel bearings to ensure that they are in good condition. Refer to Front Wheel Bearing and Hub Replacement or Rear Wheel Bearing and Hub Replacement.
- Thoroughly inspect all on-vehicle balancing equipment and make sure that it is within the manufacturer's recommended specifications.
- Do not remove the off-vehicle balance weights. The purpose of on-vehicle balance is to fine tune the assembly balance already achieved off-vehicle, not to start over.
- Leave all wheel trims installed whenever possible.
- If the on-vehicle balancer calls for more than 56 g (2 oz) of additional weight, split the weight between the inboard and outboard flanges of the wheel, so as not to upset the dynamic balance of the assembly achieved in the off-vehicle balance.

Perform the on-vehicle balancing procedure in accordance with the on-vehicle balancer manufacturer's instructions.

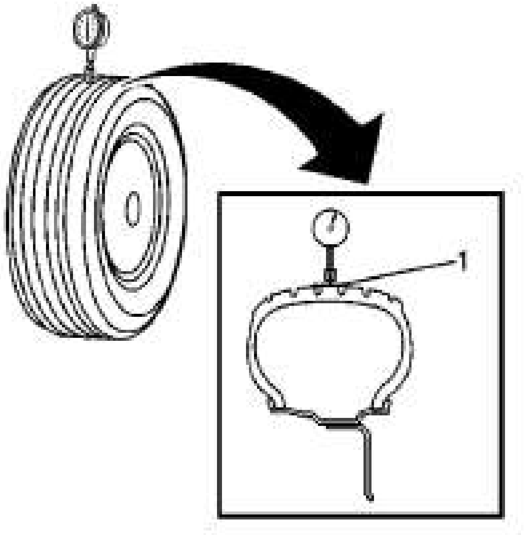
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | General Information | Vibration Diagnosis and Correction | Repair Instructions | **Document ID: 1990896**

Tire-to-Wheel Match-Mounting (Vectoring)

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle .
2. Remove the tyre and wheel assembly from the vehicle. Refer to Tire and Wheel Removal and Installation .

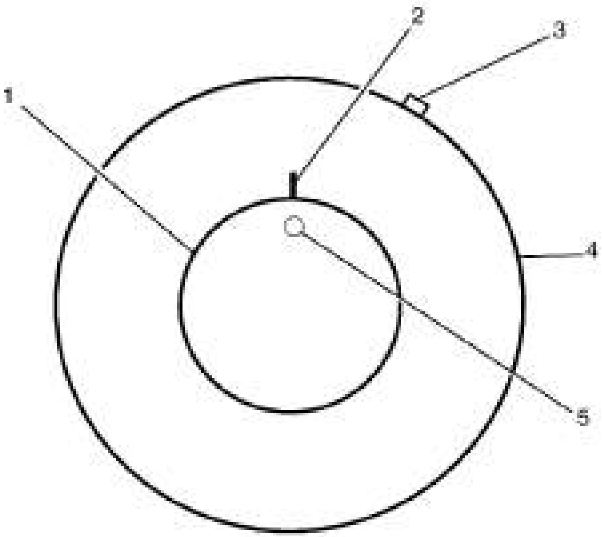
Important: The wheel must be mounted on the spin-type wheel balancer in accordance with manufacturers instructions.

3. Install the wheel on a spin-type wheel balancer.



Important: Wrapping the tread with tape allows for a smooth and accurate reading of radial runout to be obtained.

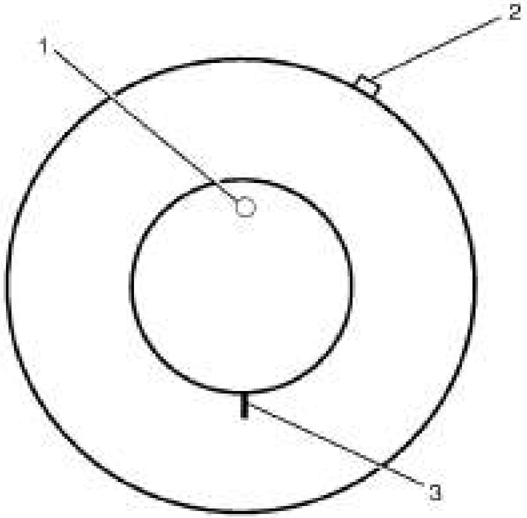
4. Wrap the circumference of each tyre with tape (1) in the center of the tread area.
5. Position a dial indicator fitted with a roller, on the taped portion of the tyre tread perpendicular to the surface.
6. Slowly rotate the tyre and wheel assembly one complete revolution in order to find the wheel high point.



7. Mark the location of the high point (3) on the tyre (4).
8. Place a reference mark (2) on the tyre sidewall at the location of the valve stem (5).
    - Always refer to the valve stem (5) as the 12 O'clock position.
    - Refer to the location of the high point (3) by its clock position on the wheel (1), relative to the valve stem (5).

Important: Do not dismount the tyre from the wheel.

9. Mount the tyre and wheel assembly on a tyre changing machine and break down the bead.



Important: lubricate the bead area in order to easily rotate the tyre on the wheel.

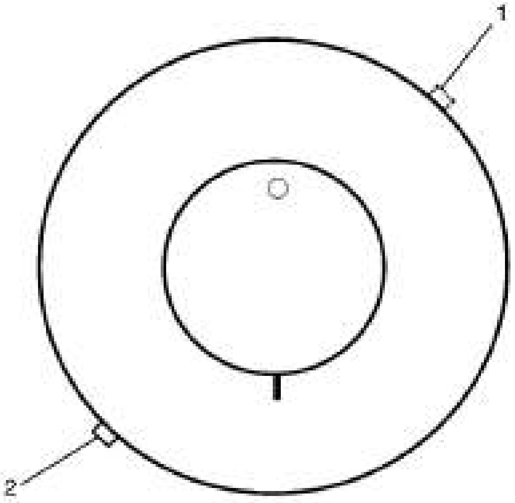
10. Rotate the tyre 180 degrees on the rim so that the valve stem reference mark (3) is now at the 6 O'clock position in relation to the valve stem (1).
11. Inflate the tyre and seat the bead, closely inspect each tyre for correct and even bead seating.

    Important: The wheel must be mounted on the spin-type wheel balancer in accordance with manufacturers instructions.

12. Install the wheel on a spin-type wheel balancer.
13. Position a dial indicator fitted with a roller, on the taped portion of the tyre tread perpendicular to the surface.
14. Slowly rotate the tyre and wheel assembly one complete revolution in order to find the wheel high point.

    Important: After remounting a tyre to a wheel or after replacing a tyre and/or a wheel, remeasure the tyre and wheel assembly runout in order to verify that the runout has been reduced and is within tolerance. Ensure that the tyre and wheel assembly is balanced before installing to the vehicle.

15. Measure the wheel and tyre assembly runout.
16. Mark the new location of the assembly runout high point on the tyre.
17. If the assembly runout has been reduced and is within tolerance, no further steps are necessary. Balance the tyre and wheel assembly, then install the assembly to the vehicle. Refer to the following:
    - Tire and Wheel Assembly Balancing - On-Vehicle Tire and Wheel Assembly Balancing - Off Vehicle .
    - Tire and Wheel Removal and Installation .
18. If the clock location of the high point remained at or near the original clock location of the high point (2) and the assembly runout has not been reduced, the wheel is the major contributor to the assembly runout concern. Replace the wheel. Refer to Tire Dismounting and Mounting and Replacement Wheels Description .



19. If the clock location of the high point has moved, however the assembly runout has not been reduced, perform the following steps:

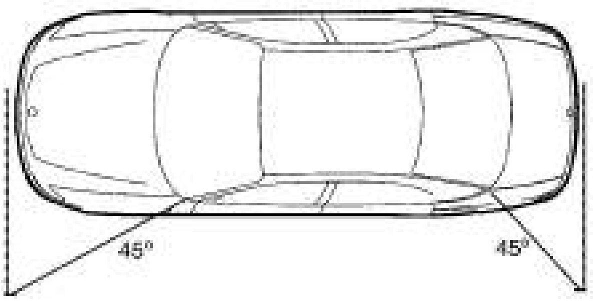
19.1. If the clock location of the high point (2) is now at or near a position 180 degrees from the original clock location of the high point (1), the tyre is the major contributor to the assembly runout concern. Replace the tyre. Refer to Tire Dismounting and Mounting .

19.2. If the clock location of the high point is now between the original high point position and the opposite extreme, then both the tyre and the wheel are contributing to the assembly runout concern. Continue rotating the tyre in relation to the wheel and remeasuring the assembly runout until the lowest amount of runout is achieved. If the lowest amount of runout achieved is not within tolerance measure the off vehicle tyre and wheel runout, refer to Tire and Wheel Assembly Runout Measurement - On-Vehicle in Tires and Wheels, in order to isolate the tyre or wheel as the cause of the runout concern.

Waterleak Test Preparation

- Holden vehicles are designed to operate under normal environmental conditions.
- The design criteria for sealing materials and components takes into consideration the sealing forces required to withstand the natural elements. These specifications cannot take into consideration any artificial conditions, i.e. high pressure car washes.
- The water leak test procedure has been correlated to the natural elements and will determine the ability of a vehicle to perform under normal operating conditions.
- The first step in diagnosing a leak is determining the conditions under which the leak occurs. If the general leak area can be found, the exact entry point can be isolated using a water hose or an air hose. Some trim panels or components may need to be removed in order to repair the leak.
- If leaks are found around a door, door window, or boot lid area this does not necessarily indicate a bad weatherstrip. An adjustment to these areas may resolve the condition.

1. Have an assistant inside of the vehicle during the test in order to locate any leaks.
2. Adjust the hose nozzle to simulate rainfall.
3. The water pressure at the nozzle should maintain a 155 kPa (22 psi), for at least 4 minutes.



4. In order to check the windscreen, aim the water spray 30 degrees down and 45 degrees toward the rear.
5. Aim the water towards the corner of the windshield.
6. In order to check the side windows for leaks aim the water spray 30 degrees down and 45 degrees toward the rear.
7. In order to check the rear windscreen, aim the water spray 30 degrees down and 30 degrees toward the front.

Dust Leaks

- Dust may leak into the vehicle where water will not. This happens particularly in the lower portion of the interior.
- Forward motion of the vehicle can create a slight vacuum which pulls air and dust into the vehicle.
- In order to determine the location of dust leaks, perform the following steps:

1. Remove the interior floor mats.
2. Remove the kick panels.
3. Remove the interior floor insulation.
4. Remove the kick panel insulation.
5. Drive the vehicle on a dusty road.
6. Examine the interior.

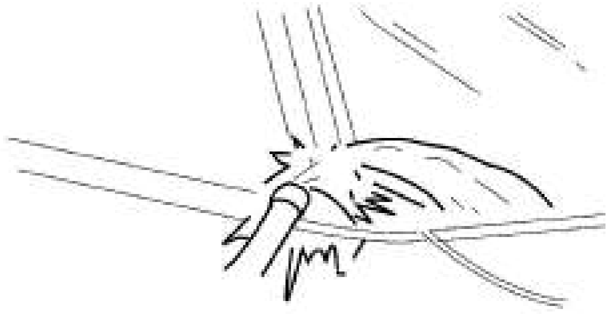
   Dust in the shape of a small cone or slit will usually be found at the point of leakage.

7. Mark the points of leakage.

   Important: Make sure that the interior is darkened when performing this step.

8. Shine bright lamps on the underside of the floor and the bulkhead.
9. Have an assistant mark any points inside of the vehicle for any points where the light shines through.
   - Inspect the weld joints.
   - Inspect the body mounts.
10. Seal any leaks with an air-drying, body-sealing compound.

Water Hose Test

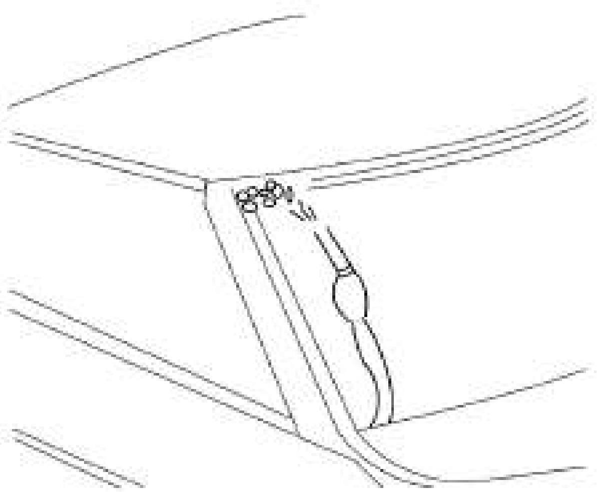


1. Have an assistant inside of the vehicle in order to locate the leak.

   Important: Use a water hose without the nozzle attached.

2. Begin testing at the base of the window or the windshield.
3. Slowly move the hose upward and across the top of the vehicle.

Air Hose Test



Notice: The air hose test should only be used on fully cured urethane adhesive. Otherwise, damage to the urethane adhesive bead could result in additional leaks.

Important: Use a liquid detergent, diluted with water in a spray bottle. Begin at the bottom and gradually move up and across the top.

1. Spray the window at the edges.

   Important: The compressed air should not exceed 205 kPa (30 psi).

2. Have an assistant inside of the vehicle with an air hose.

   Important: Bubbles will form in the soap solution at the location of the leak.

3. Have the assistant aim the compressed air at the suspected areas.

Body Waterleak Repair

Important: If any water enters the vehicle's interior up to the level of the carpet or higher and soaks the carpet, the sensing and diagnostic module (SDM) and the SDM harness connector may need to be replaced. The SDM could be activated when powered, which could cause deployment of the air bag(s) and result in personal injury. Before attempting these procedures, the SRS system must be disabled. Refer to Disabling the SRS System.

With the ignition OFF, inspect the SDM mounting area, including the carpet. If any significant soaking or evidence of significant soaking is detected, you must perform the following tasks:

1. Remove all water.
2. Repair the water damage.
3. Replace the SDM harness connector.
4. Replace the SDM.

Failure to follow these tasks could result in possible air bag deployment, personal injury, or otherwise unneeded SRS system repairs.

Depending on the location of the waterleak, you may have to remove certain interior components in order to repair the leak.

1. If the floor carpet is wet refer to Floor Carpet Drying in Interior Trim.
2. Cut out a portion of the adhesive caulking in the leak area from inside or outside of the vehicle.
3. Clean and remove all loose particles of the adhesive old caulking from the area.
4. Apply joint body and seam sealer where the old adhesive caulking was removed.
5. Allow the adhesive caulking to dry for several hours.
6. Test for leaks.
7. Install any removed trim.

Stationary Window Waterleak Repair

Important: If any water enters the vehicle's interior up to the level of the carpet or higher and soaks the carpet, the sensing and diagnostic module (SDM) and the SDM harness connector may need to be replaced. The SDM could be activated when powered, which could cause deployment of the air bag(s) and result in personal injury. Before attempting these procedures, the SRS system must be disabled. Refer to Disabling the SRS System.

With the ignition OFF, inspect the SDM mounting area, including the carpet. If any significant soaking or evidence of significant soaking is detected, you must perform the following tasks:

1. Remove all water.
2. Repair the water damage.
3. Replace the SDM harness connector.
4. Replace the SDM.

Failure to follow these tasks could result in possible air bag deployment, personal injury, or otherwise unneeded SRS system repairs.

1. If the floor carpet is wet, refer to Floor Carpet Drying in Interior Trim.
2. Remove the trim moldings or the headlining assembly in order to repair the leak, if needed. Refer to Section 8 Interior Trim, for appropriate procedures.
3. Determine the source of water entry.
4. If water is leaking at the edge of the windscreen, reseal the windscreen using a Holden approved Urethane Adhesive Caulking Kit
5. If water leaks into the vehicle at the sides of the stationary windows, reseal the window using a Holden approved Urethane Adhesive Caulking Kit.

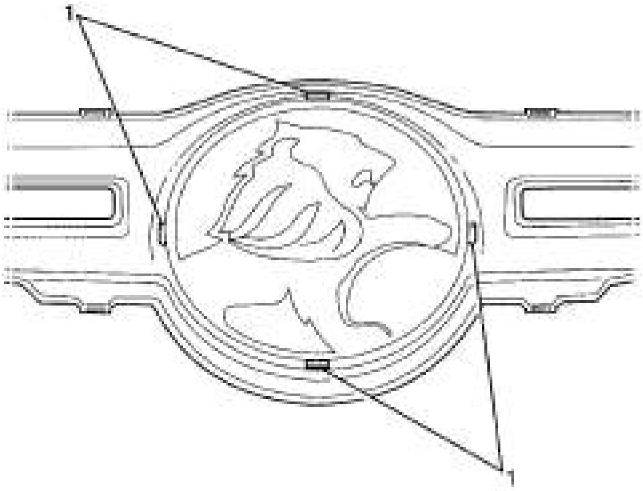
Front Emblem and Nameplate Replacement (RHD)

Removal Procedure

Important: Carefully remove the front radiator grille emblem from the radiator grille applique to avoid damage to the front radiator grille emblem.

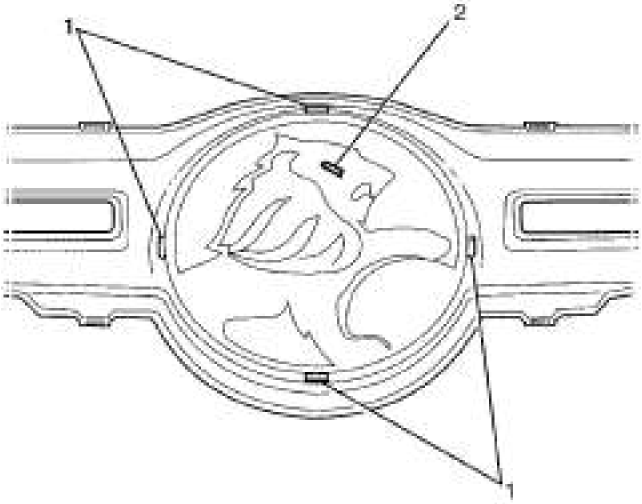
1. Remove the radiator grille applique. Refer to Radiator Grille Retainer Replacement



Important: Carefully release the radiator grille emblem to radiator grille applique retaining clips.

2. Release the radiator grille emblem to radiator grille applique retaining clips (1).
3. Remove the radiator grille emblem from the radiator grille applique.

Installation Procedure



Important: Make sure the centre retaining clip is located in position.

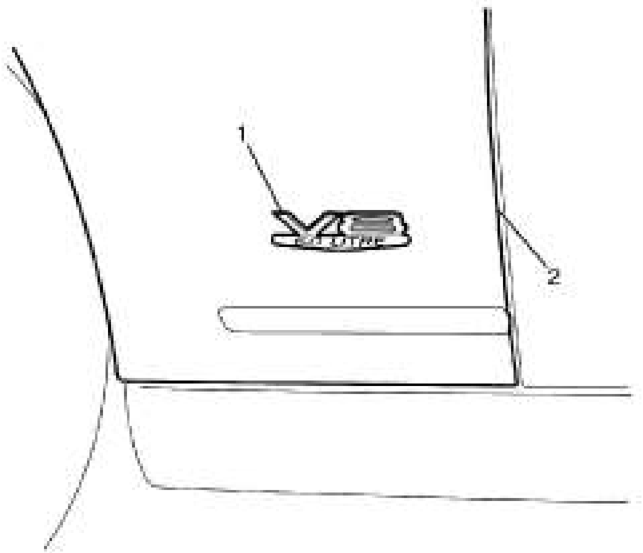
1. Install the radiator grille emblem to the radiator grille applique, locating the centre retaining clip (2).
2. Apply pressure to the radiator grille emblem retaining clips (1) to engage the radiator grille applique.
3. Install the radiator grille applique.Refer to Radiator Grille Retainer Replacement
4. Make sure that the radiator grille emblem retaining clips are secure.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Exterior Trim | Repair Instructions | **Document ID: 1991799**

Front Fender Emblem / Nameplate Replacement

Removal Procedure

Important: Protect the paint and body work with tape or a clean cloth. Failure to do so may result in damage to the paint work.



1. To assist in the removal of the front fender emblem (1), warm the front fender emblem with a heat gun.

Important: Take care not to damage the paint work when prying the front fender emblem from the fender.

2. Use a suitable tool to carefully prise the front fender emblem from the fender.
3. Remove any remaining adhesive from the fender and clean the surface with a suitable cleaning solution using a lint free cloth.

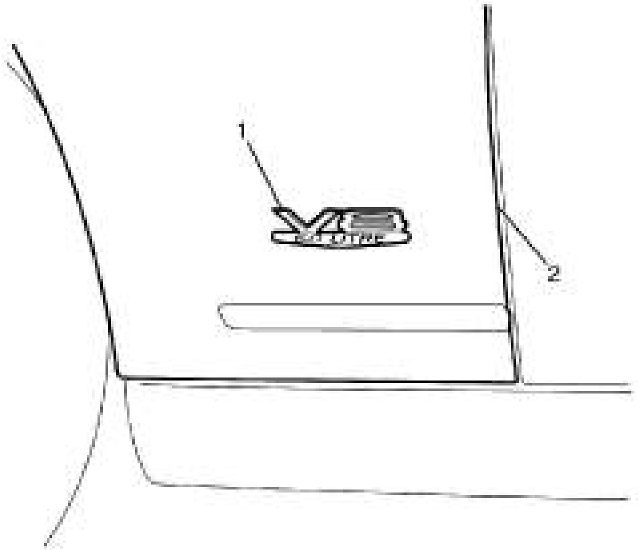
Installation Procedure

Important: Use spec HN2021 or equivalent.

1. If reusing the front fender emblem, clean the front fender emblem with a suitable cleaning solution, using a lint free cloth.
   1.1. Apply new polyethylene double sided tape to the back of the front fender emblem.
   1.2. Trim back the tape to the inner edge of the front fender emblem.

Important: Do not allow the adhesive tape to come in contact with any dirt or foreign matter.

2. Peel the backing from the adhesive tape.



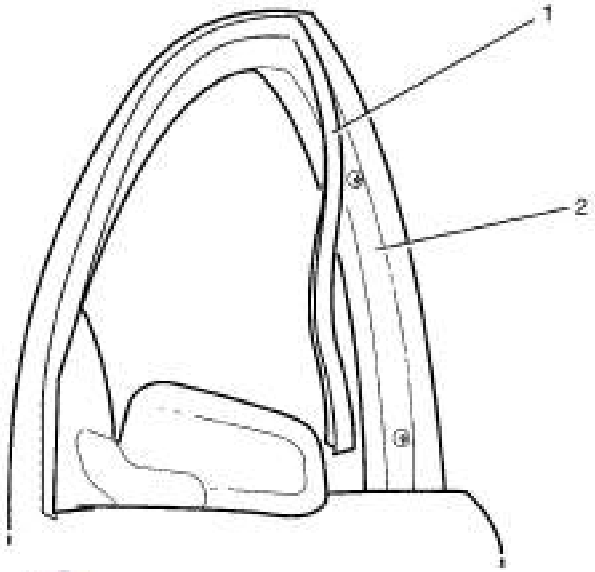
3. Apply the front fender emblem (1) to the position shown, measuring from the front side of the side turn signal lamp. Make sure the front fender emblem is centred with the side turn signal lamp.
4. Firmly press the front fender emblem into place for 30 seconds to make sure proper adhesion of the front fender emblem.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Exterior Trim | Repair Instructions | Document ID: 1993095

Front Door Frame Applique Replacement

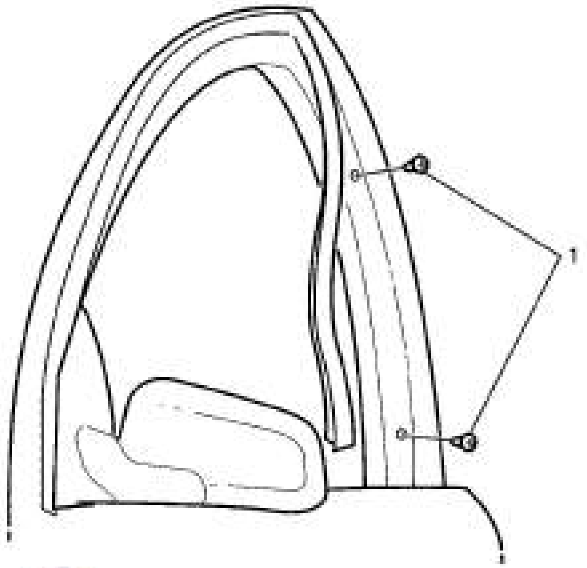
Removal Procedure

1. Remove the door trim panel. Refer to Front Side Door Trim Panel Replacement .
2. Remove the window inner belt sealing strip. Refer to Front Side Door Window Belt Inner Sealing Strip Replacement in Doors.
3. Remove the door garnish molding. Refer to Front and Rear Side Door Window Garnish Molding Replacement .

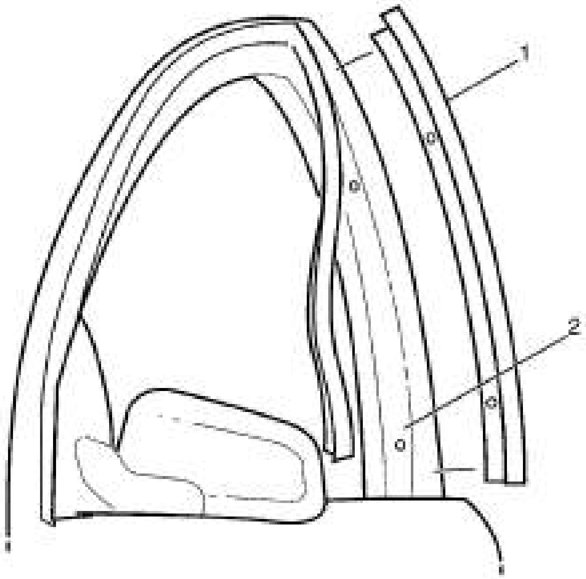


Important: Pry out the window inner sealing strip (1) then pull by hand to expose door applique retaining screws.

4. Detach the rear part of the window inner sealing strip (1) from the door (2).

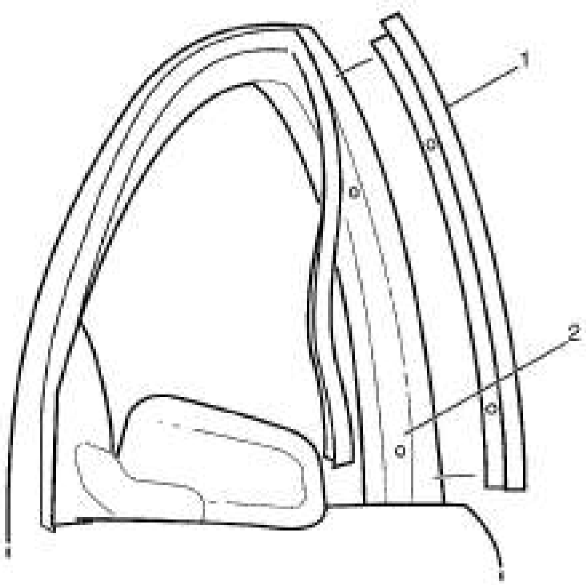


5. Remove the door applique to door retaining screws (1).



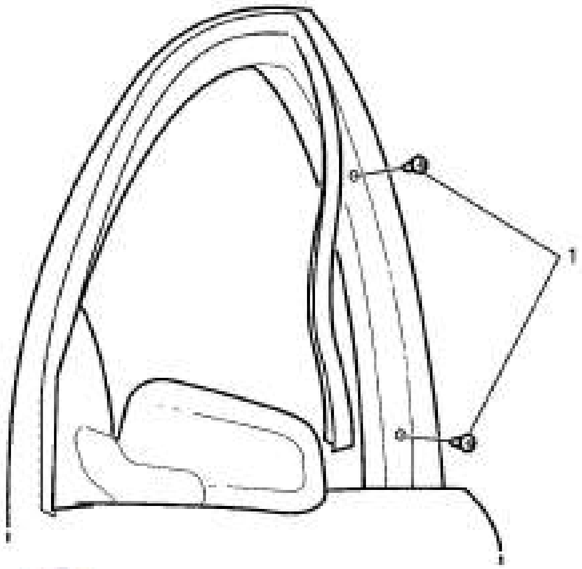
6. Remove the door applique (1) from the door (2).

Installation Procedure



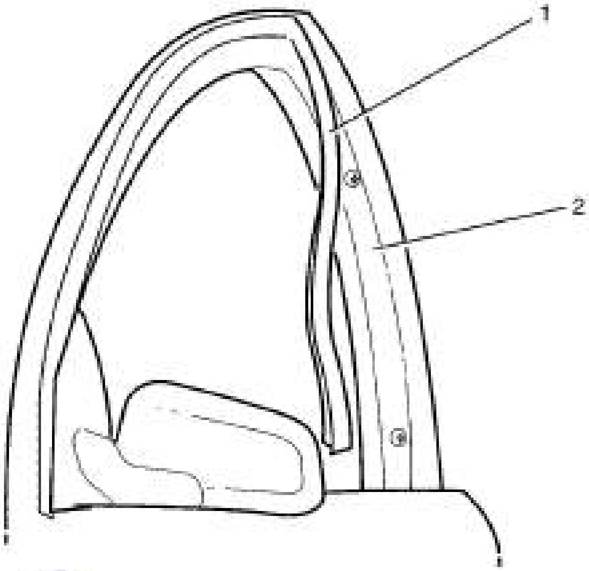
1. Position the door applique (1) to the door (2).

   Notice: Refer to Fastener Notice in the Preface section.



2. Install the door applique to door retaining screws (1).

   Tighten
   Tighten the screws to 3 N·m (27 lb in).



3. Attach the rear part of the window inner sealing strip (1) to the door (2).
4. Install the door garnish molding. Refer to Front and Rear Side Door Window Garnish Molding Replacement .
5. Install the window inner belt sealing strip. Refer to Front Side Door Window Belt Inner Sealing Strip Replacement in Doors.
6. Install the door trim panel. Refer to Front Side Door Trim Panel Replacement .

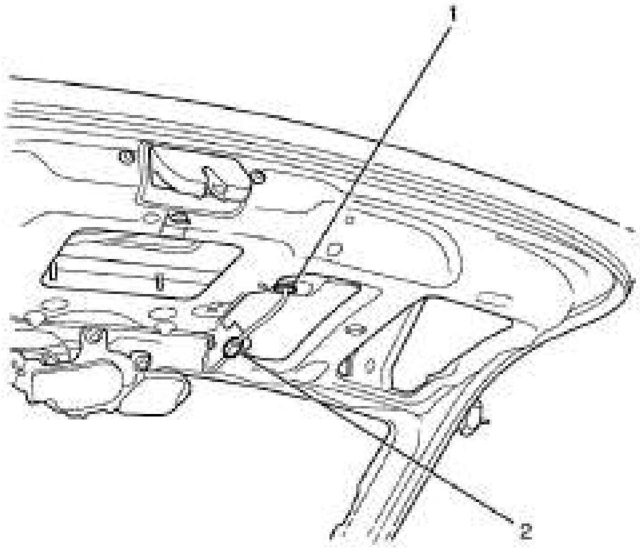
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Exterior Trim | Repair Instructions | Document ID: 2067615

Liftgate Center Applique Replacement

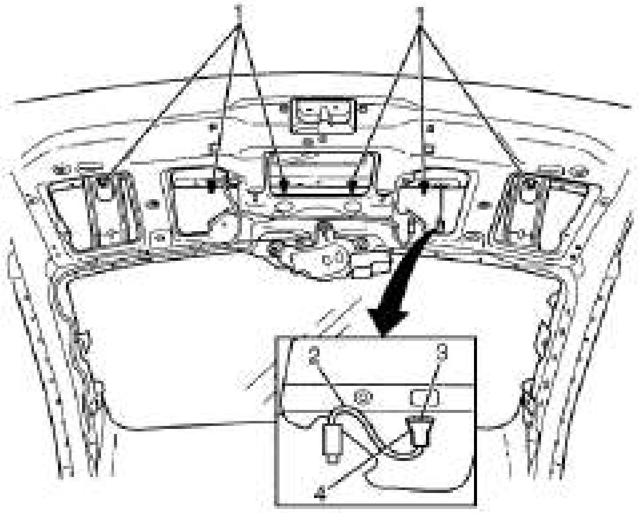
Removal Procedure

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

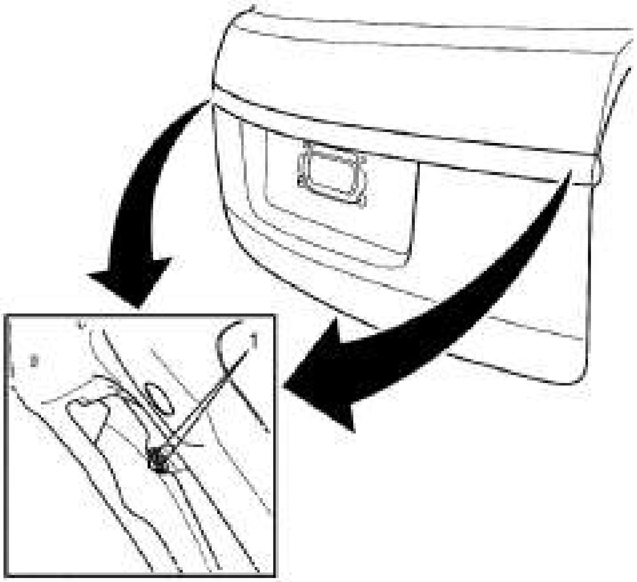
1. Open the liftgate.
2. Install a suitable liftgate brace to the vehicle.
3. Remove the liftgate window side garnish moulding. Refer to Liftgate Window Side Garnish Molding Replacement.
4. Remove the liftgate window lower garnish moulding. Refer to Liftgate Window Lower Garnish Molding Replacement.
5. Remove the liftgate trim panel. Refer to Liftgate Trim Panel Replacement.



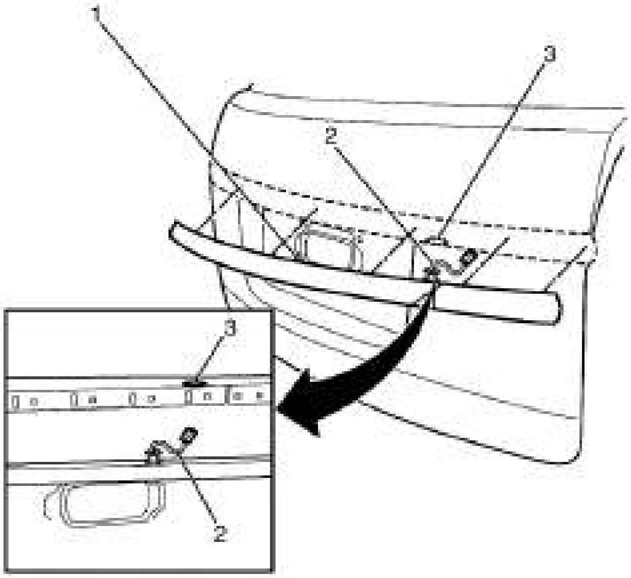
6. Disconnect the licence lamp/liftgate release electrical connector (2).
7. Detach the liftgate centre applique to body grommet (1).



8. Remove the liftgate centre applique to liftgate body retaining nuts (1).
9. Push the grommet (4) on the harness (2) through the grommet hole (3).

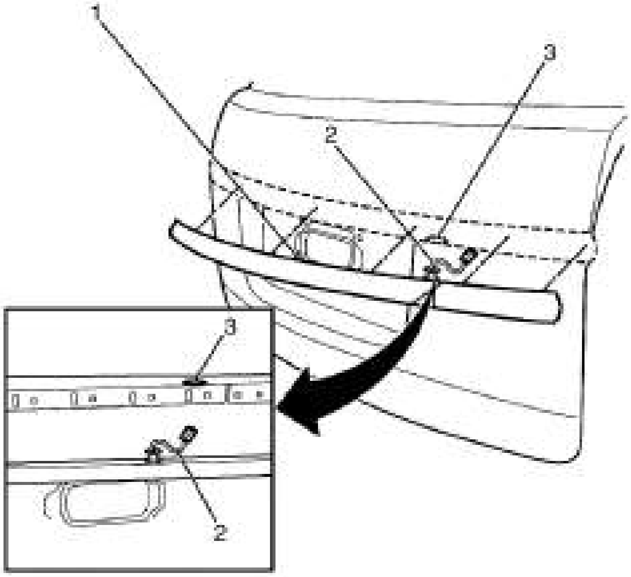


10. Carefully release the liftgate centre applique to liftgate body retaining clips tangs (1).



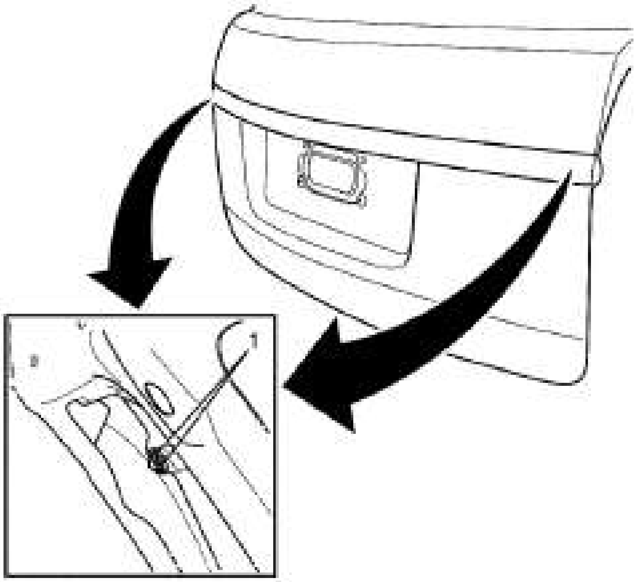
11. Pull the harness (2) through the grommet hole (3) on the liftgate.
12. Remove the liftgate centre applique (1) from the liftgate.

Installation Procedure



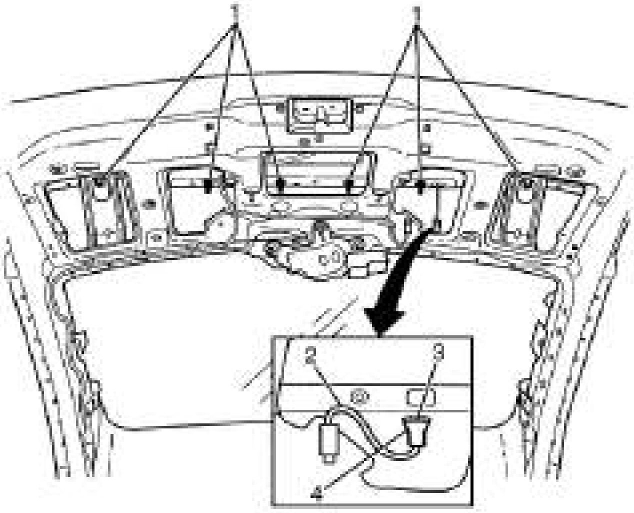
Important: Take care to feed the licence lamp/liftgate release connector through the grommet hole.

1. Insert the harness (2) through the grommet hole (3) on the liftgate.
2. Position the liftgate centre applique (1) to the liftgate.



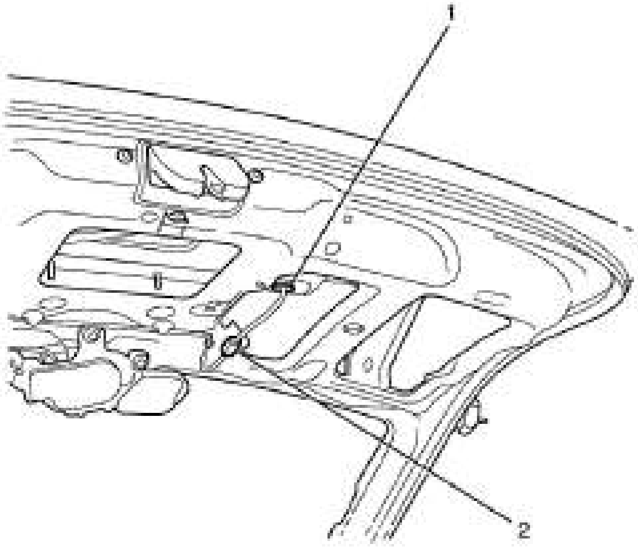
3. Carefully engage the liftgate centre applique to liftgate body retaining clips tangs (1).

   Notice: Refer to Fastener Notice in the Preface section.



4. Pull on the harness (2) to seat the grommet (4) in the grommet hole (3).
5. Install the liftgate centre applique to liftgate body retaining nuts (1).

   Tighten
   Tighten the nuts to 3 N·m (27 lb in).



6. Attach the liftgate centre applique to body grommet (1).
7. Connect the licence lamp/liftgate release electrical connector (2).
8. Install the liftgate trim panel. Refer to Liftgate Trim Panel Replacement.
9. Install the liftgate window lower garnish moulding. Refer to Liftgate Window Lower Garnish Molding Replacement.
10. Install the liftgate window side garnish moulding. Refer to Liftgate Window Side Garnish Molding Replacement.

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

11. Remove the suitable liftgate brace to the vehicle.
12. Close the liftgate.

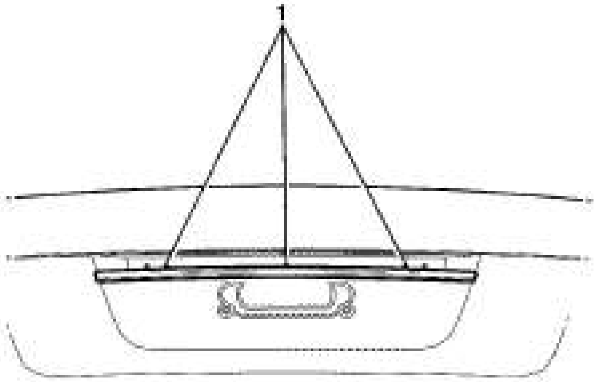
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Exterior Trim | Repair Instructions | **Document ID: 1993196**

Rear Compartment Lid Applique Replacement (SWB)

Removal Procedure

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Open the rear compartment lid.
2. Support the rear compartment lid with a suitable brace.
3. Remove the rear compartment lid trim. Refer to Rear Compartment Lid Inner Panel Trim Replacement.



4. Starting from the outer edges, slowly disengage the rear compartment lid applique retaining clips (1) and discard.

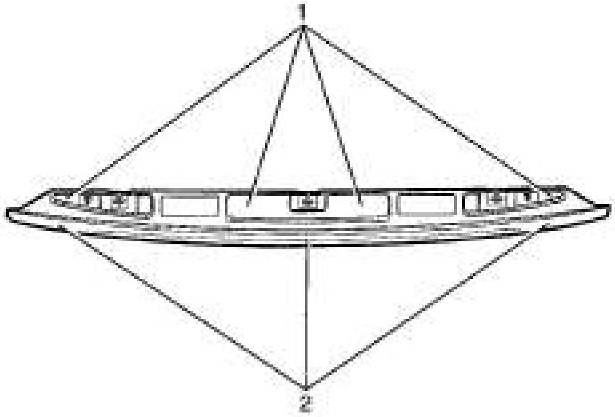
   Discard the retaining clips.

5. Remove the rear compartment lid applique from the rear compartment lid.
6. Remove any remaining adhesive from the rear compartment lid applique and clean the surface with a suitable cleaning solution, using a lint free cloth.

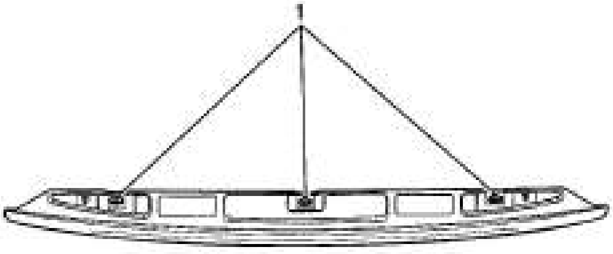
Installation Procedure

Important: Use spec HN2021 type 13A and HN2021 type 6.

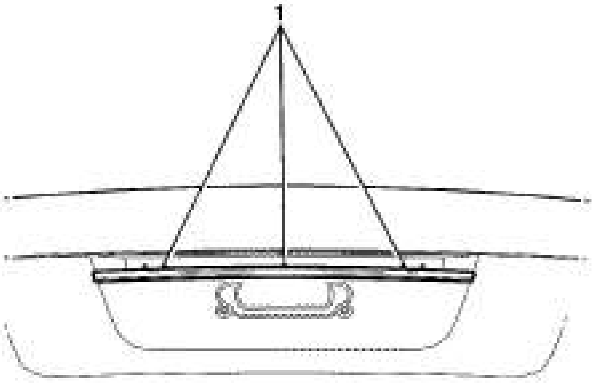
Important: Do not allow the adhesive tape to come in contact with any dirt or foreign matter.



1. If reusing the rear compartment lid applique, clean the rear compartment lid applique with a suitable cleaning solution, using a lint free cloth.
   1.1. Apply the double sided tape HN2021 type 13A (2) to the outer edges of the rear compartment lid applique.
   1.2. Trim back the double sided tape to the outer edges of the rear compartment lid applique.
   1.3. Apply the double sided tape HN2021 type 6 (1) to the centre of the rear compartment lid applique.
   1.4. Trim back the double sided tape to the centre of the rear compartment lid applique.



2. Install the NEW rear compartment lid applique retaining clips (1) to the rear compartment lid applique.

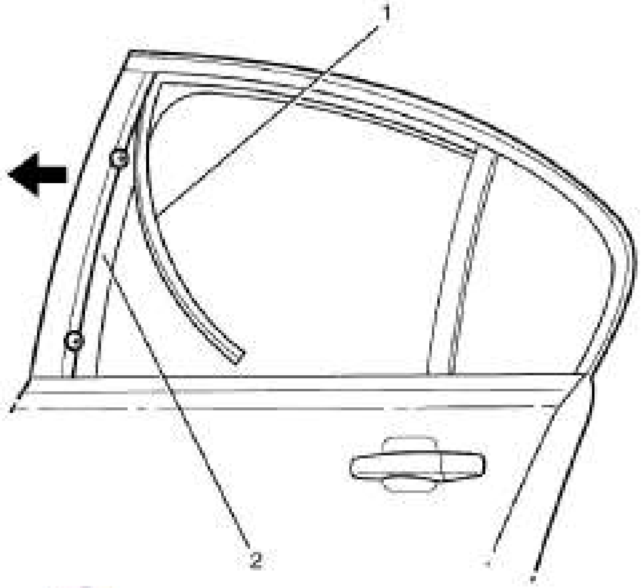


3. Install the rear compartment lid applique by starting from the centre retaining clip (1) to the rear compartment lid.
4. Make sure that the rear compartment lid applique retaining clips (2) are installed to the rear compartment lid.
5. Firmly press the rear compartment lid applique into place by starting from the centre of the rear compartment lid applique and working towards the outer edges, to prevent trapped air behind the adhesive.
6. Install the rear compartment lid trim. Refer to Rear Compartment Lid Inner Panel Trim Replacement.
7. Remove the suitable brace from the rear compartment lid.
8. Close the rear compartment lid.

Rear Door Frame Applique Replacement

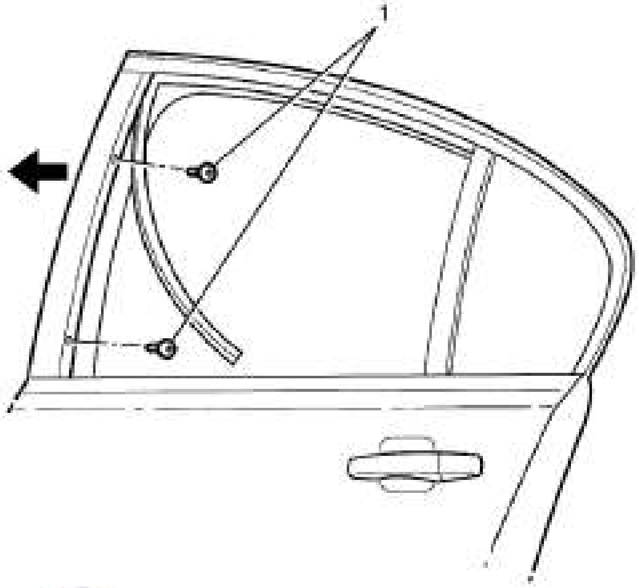
Removal Procedure

1. Remove the door trim panel. Refer to Rear Side Door Trim Panel Replacement .
2. Remove the window inner belt sealing strip. Refer to Rear Side Door Window Inner Sealing Strip Replacement .
3. Remove the door garnish molding. Refer to Front and Rear Side Door Window Garnish Molding Replacement .

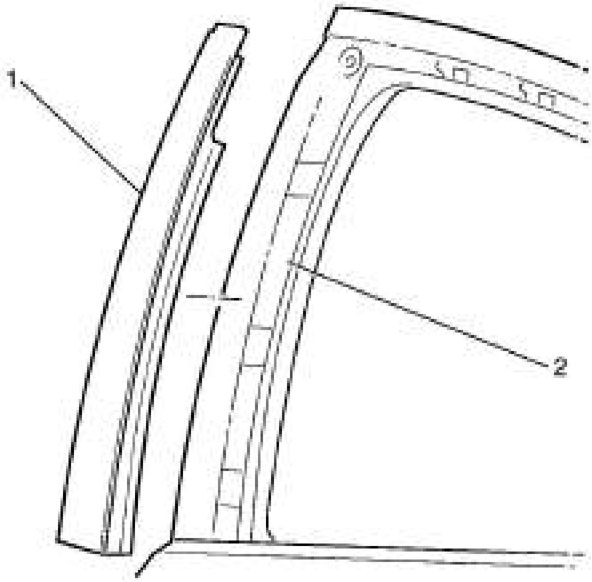


Important: Pry out the window inner sealing strip (1) then pull by hand to expose the door applique retaining screws.

4. Detach the front part of the window inner sealing strip (1) from the door (2).

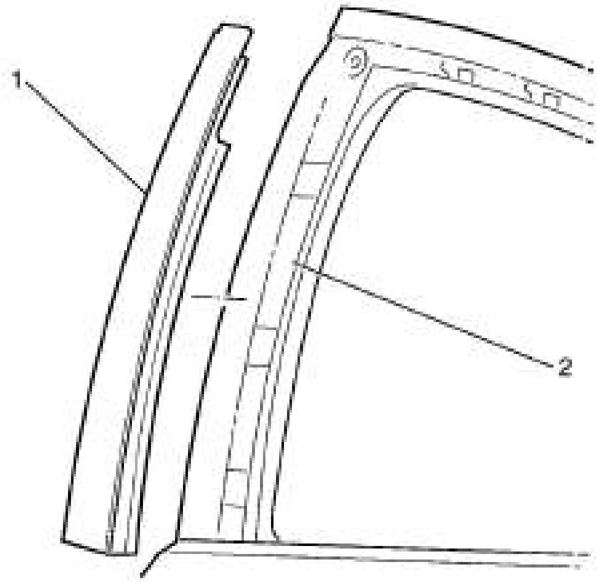


5. Remove the door applique to door retaining screws (1).



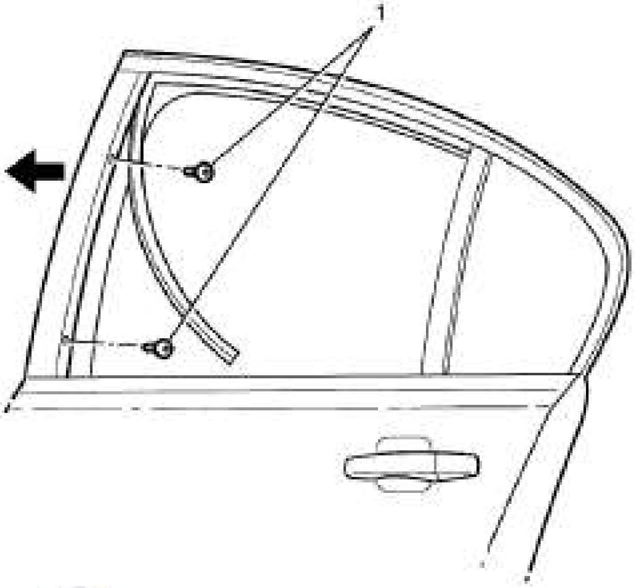
6. Remove the door applique (1) from the door (2).

Installation Procedure



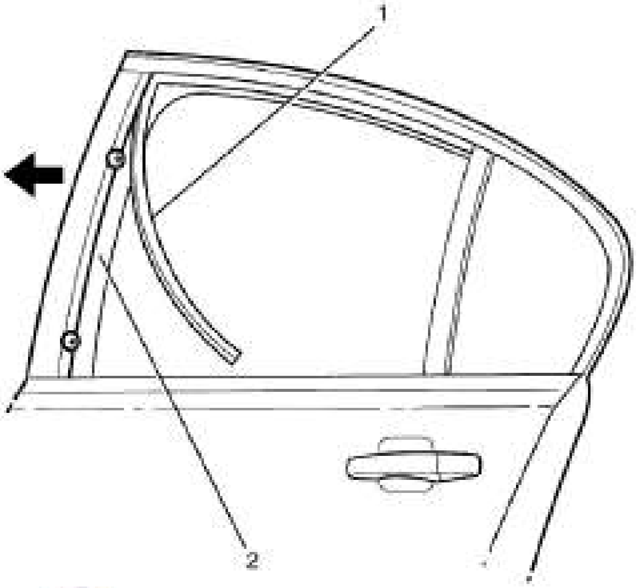
1. Position the door applique (1) to the door (2).

   Notice: Refer to Fastener Notice in the Preface section.



2. Install the door applique to door retaining screws (1).

   Tighten
   Tighten the screws to 3 N-m (27 lb in).



3. Attach the attach part of the window inner sealing strip (1) to the door (2).
4. Install the door garnish molding.Refer to Front and Rear Side Door Window Garnish Molding Replacement .
5. Install the window inner belt sealing strip. Refer to Rear Side Door Window Inner Sealing Strip Replacement .
6. Install the door trim panel. Refer to Rear Side Door Trim Panel Replacement .

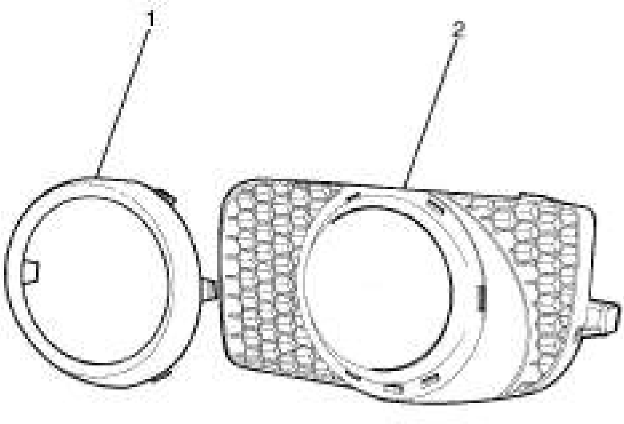
Front Fog Lamp Bezel Replacement

Removal Procedure

Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

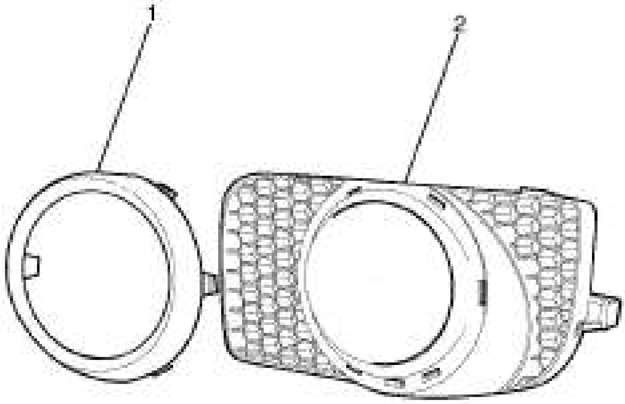
1. Remove the front fog lamp cover. Refer to Front Fog Lamp Cover Replacement.



2. Carefully pry the front fog lamp bezel (1) from the front fog lamp cover (2).
3. Remove the front fog lamp bezel from the front fog lamp cover.

Installation Procedure

1. Install the front fog lamp bezel to the front fog lamp cover.



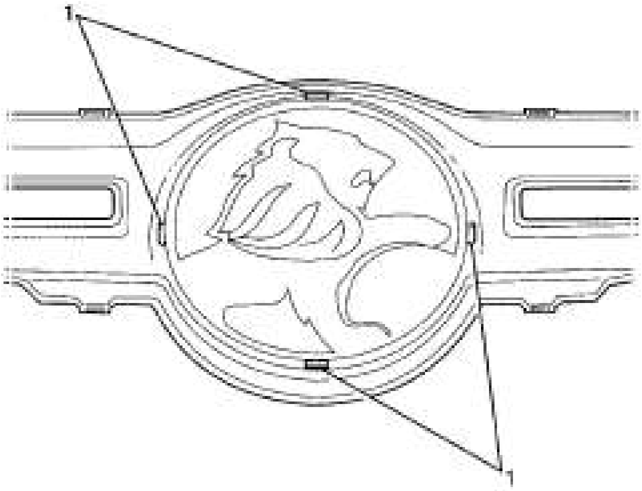
2. Firmly press the front fog lamp bezel (1) into the front fog lamp cover (2).
3. Make sure the retaining clips on the front fog lamp bezel (1) are secure to the front fog lamp cover (2).
4. Install the front fog lamp cover. Refer to Front Fog Lamp Cover Replacement.

Radiator Grille Emblem / Nameplate Replacement (RHD)

Removal Procedure

Important: Do not damage the painted radiator grille.

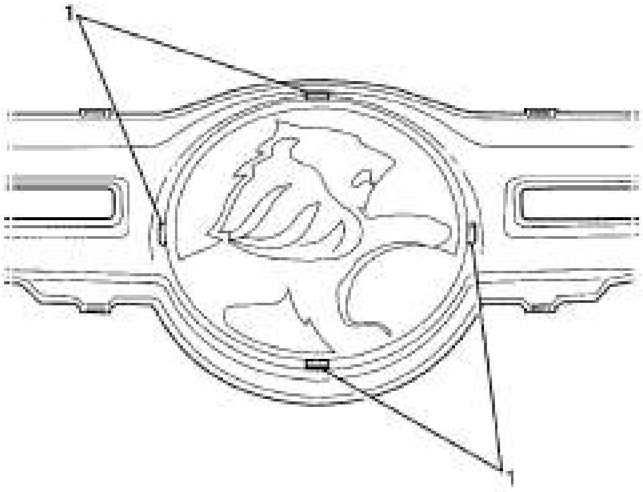
1. Remove the radiator grille applique. Refer to Radiator Grille Replacement



2. Remove the radiator grille emblem to radiator grille applique retaining clips (1).

Installation Procedure

Important: Do not damage the painted radiator grille.



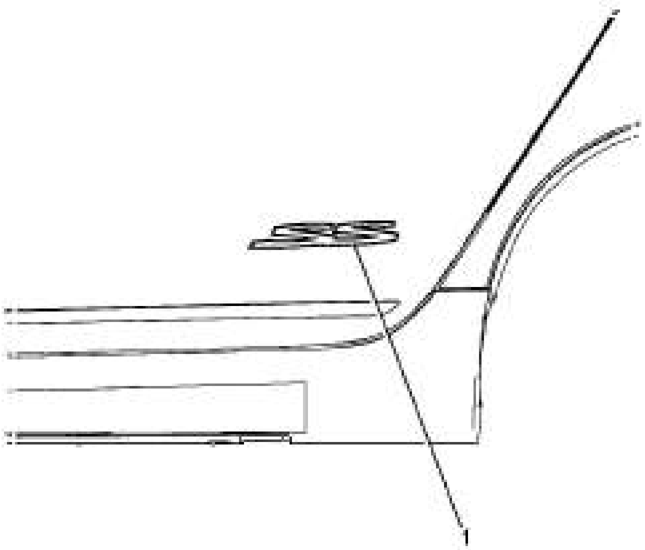
1. Install the radiator grille emblem to radiator grille applique retraining clips (1).
2. Install the grille applique front upper. Refer to Radiator Grille Replacement

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Exterior Trim | Repair Instructions | **Document ID: 1974879**

Body Side Emblem / Nameplate Replacement

Removal Procedure

Important: Protect the paint and body work with tape or a clean cloth. Failure to do so may result in damage to the paint work.



1. To assist in the removal of the body side emblem, warm the body side emblem (1) with a suitable tool.

   Important: Take care not to damage the paint on the vehicle when prying the emblem from the body.

2. Use a suitable tool to carefully prise the emblem from the body.
3. Remove any remaining adhesive from the body and clean the surface with a suitable cleaning solution using a lint free cloth.

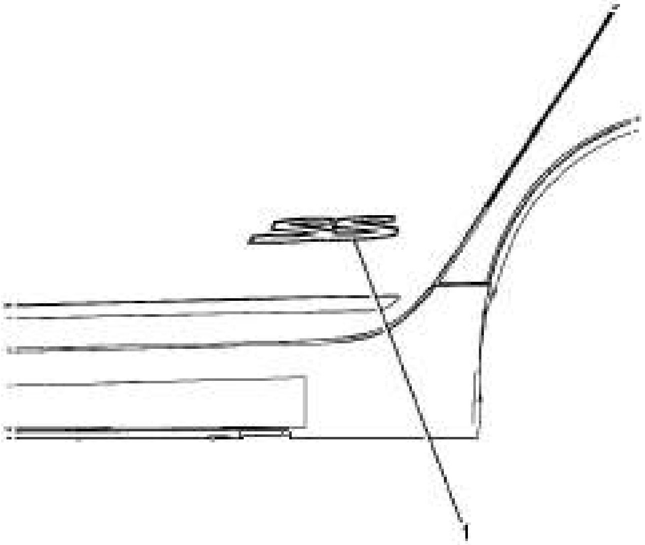
Installation Procedure

Important: Use spec HN2021 or equivalent.

Important: Do not allow the adhesive tape to come in contact with any dirt or foreign matter.

1. If reusing the body side emblem, clean the body side emblem with a suitable cleaning solution, using a lint free cloth.
   1.1. Apply new polyethylene double sided tape to the back of the body side emblem.
   1.2. Trim back the tape to the inner edge of the body side emblem.

2. Peel the backing from the adhesive tape.

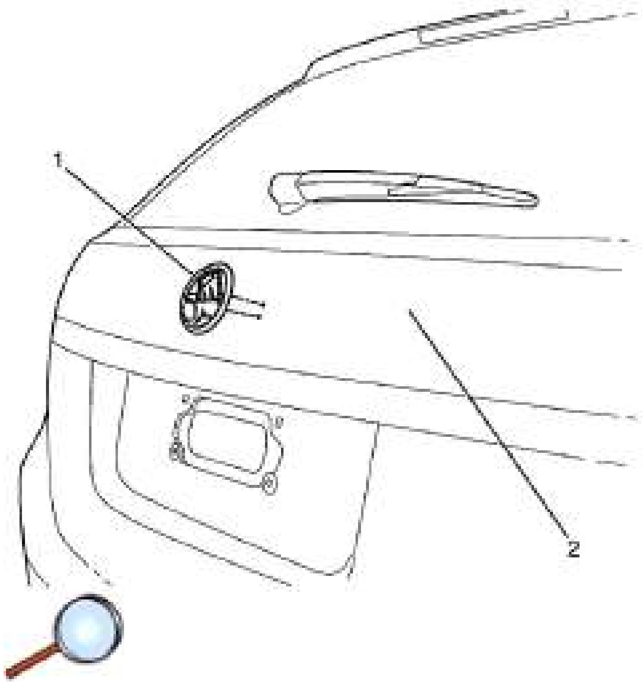


3. Apply the body side emblem (1) to the position shown,
4. Firmly press the body side emblem into place for 30 seconds to make sure proper adhesion of the body side emblem.

Liftgate Emblem / Nameplate Replacement

Removal Procedure

Important: Protect the paint and body work with tape or a clean cloth. Failure to do so may result in damage to the paint work.



Important: To assist in the removal of the liftgate emblem, warm the liftgate emblem with a suitable tool.

Important: Take care not to damage the paint work when prying the liftgate emblem from the liftgate.

1. Use a suitable tool to carefully prise the liftgate emblem (1) from the liftgate (2).
2. Remove any remaining adhesive from the liftgate and clean the surface with a suitable cleaning solution, using a lint free cloth.

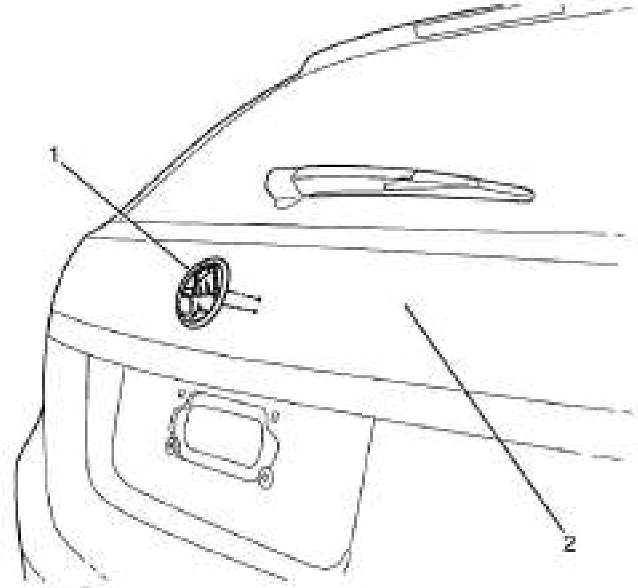
Installation Procedure

Important: Use spec HN2021 or equivalent.

1. If reusing the liftgate emblem, clean the liftgate emblem with a suitable cleaning solution, using a lint free cloth.
   1.1. Apply new polyethylene double sided tape to the back of the liftgate emblem.
   1.2. Trim back the tape to the inner edge of the liftgate emblem.

Important: Do not allow the adhesive tape to come in contact with any dirt or foreign matter.

2. Peel the backing from the adhesive tape.



3. Apply the liftgate emblem (1) to the liftgate (2) as shown. Refer to Graphics/Decals/Emblems.
4. Firmly press the liftgate emblem into place for 30 seconds to make sure proper adhesion of the liftgate emblem.

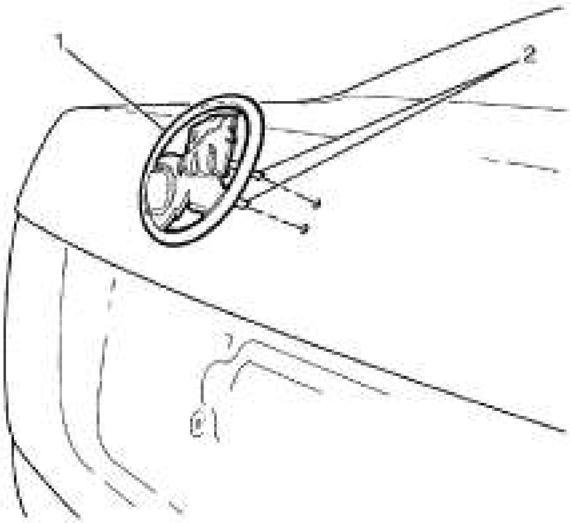
Rear Compartment Lid Emblem / Nameplate Replacement (RHD)

Removal Procedure with Locating Pins

Important: Protect the paint and body work with tape or a clean cloth. Failure to do so may result in damage to the paint work.



1. To assist in the removal of the rear compartment lid emblem, warm the rear compartment lid emblem with a suitable tool.

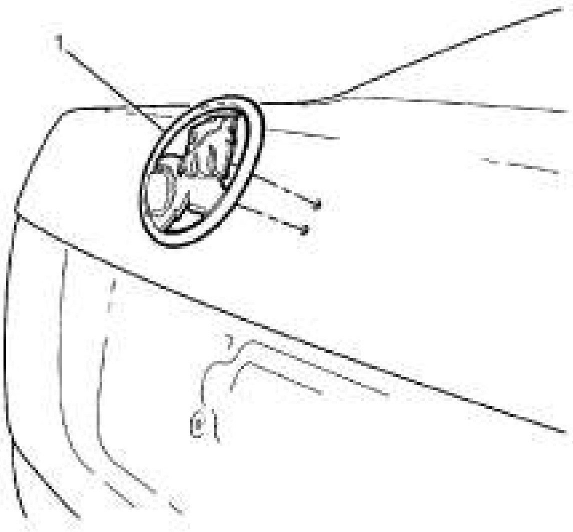
   Important: The rear compartment lid emblem has two locating pins (2). Avoid damage to the pins when removing the rear compartment lid emblem.

   Important: Take care not to damage the paint work when prying the rear compartment lid emblem from the rear compartment lid.

2. Use a suitable tool to carefully prise the rear compartment lid emblem (1) from the rear compartment lid.
3. Remove any remaining adhesive from the rear compartment lid and clean the surface with a suitable cleaning solution, using a lint free cloth.

Removal Procedure without Locating Pins

Important: Protect the paint and body work with tape or a clean cloth. Failure to do so may result in damage to the paint work.



1. To assist in the removal of the rear compartment lid emblem, warm the rear compartment lid emblem with a suitable tool.

   Important: Take care not to damage the paint work when prying the rear compartment lid emblem from the rear compartment lid.

2. Use a suitable tool to carefully prise the rear compartment lid emblem (1) from the rear compartment lid.
3. Remove any remaining adhesive from the rear compartment lid and clean the surface with a suitable cleaning solution, using a lint free cloth.

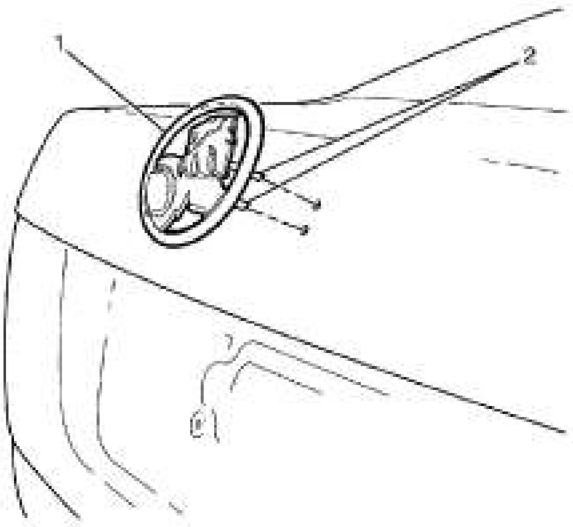
Installation Procedure with Locating Pins

Important: Use spec HN2021 or equivalent.

1. If reusing the rear compartment lid emblem, clean the rear compartment lid emblem with a suitable cleaning solution, using a lint free cloth.
   1.1. Apply new polyethylene double sided tape to the back of the rear compartment lid emblem.
   1.2. Trim back the tape to the inner edge of the rear compartment lid emblem.

   Important: Do not allow the adhesive tape to come in contact with any dirt or foreign matter.

2. Peel the backing from the adhesive tape.



3. Apply the rear compartment lid emblem (1) to the position shown, making sure that the locating pins (2) are in position.
4. Firmly press the rear compartment lid emblem into place for 30 seconds to make sure proper adhesion of the rear compartment lid emblem.

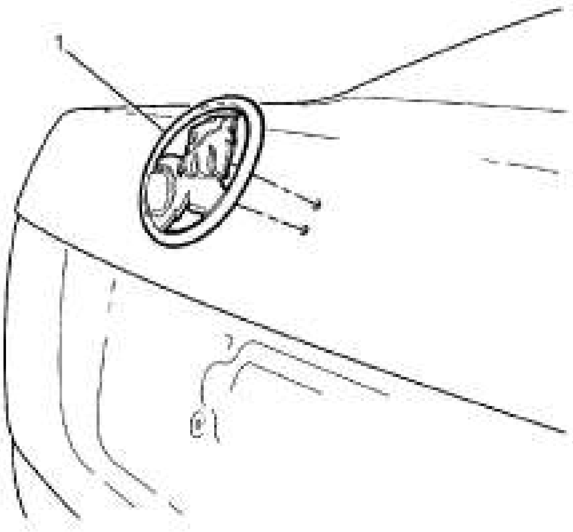
Installation Procedure without Locating Pins

Important: Use spec HN2021 or equivalent.

1. If reusing the rear compartment lid emblem, clean the rear compartment lid emblem with a suitable cleaning solution, using a lint free cloth.
   1.1. Apply new polyethylene double sided tape to the back of the rear compartment lid emblem.
   1.2. Trim back the tape to the inner edge of the rear compartment lid emblem.

Important: Do not allow the adhesive tape to come in contact with any dirt or foreign matter.

2. Peel the backing from the adhesive tape.



3. Apply the rear compartment lid emblem (1) to the position shown, making sure that the rear compartment lid emblem in position. Refer to Graphics/Decals/Emblems .
4. Firmly press the rear compartment lid emblem into place for 30 seconds to make sure proper adhesion of the rear compartment lid emblem.

Front Bumper Lower Fascia Grille Replacement

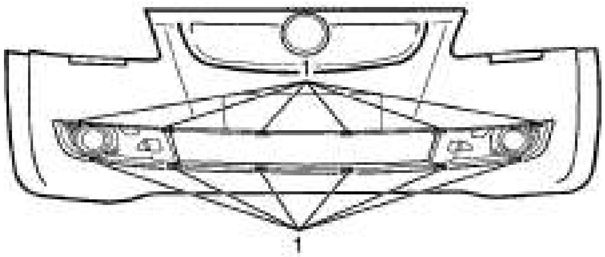
Removal Procedure

Type A

Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Remove the front bumper fascia. Refer to Front Bumper Fascia Replacement.



3. Carefully pry the front bumper fascia lower grille retaining tabs (1) from the front bumper fascia.
4. Remove the front bumper fascia lower grille from the front bumper fascia.

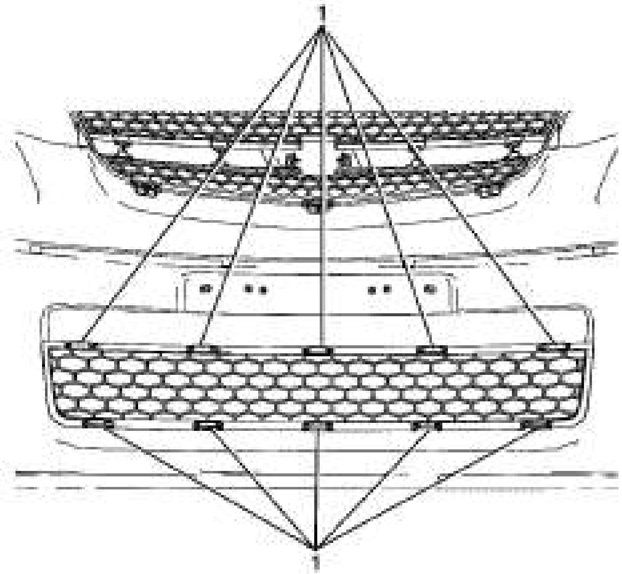
Removal Procedure

Type B

Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Remove the front bumper fascia. Refer to Front Bumper Fascia Replacement.

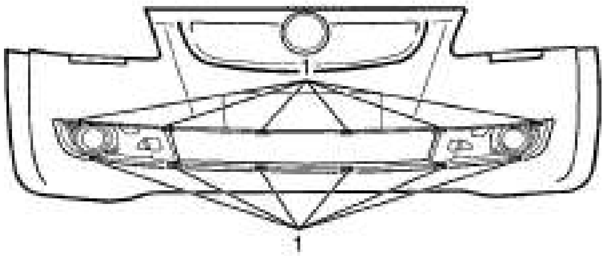


3. Carefully pry the front bumper fascia lower grille retaining tabs (1) from the front bumper fascia.
4. Remove the front bumper fascia lower grille from the front bumper fascia.

Installation Procedure

Type A

1. Install the front bumper fascia lower grille to the front bumper fascia.

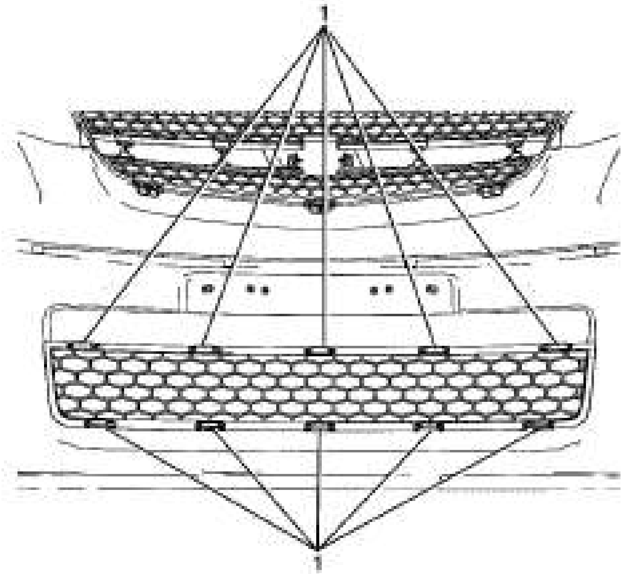


2. Firmly press the front bumper fascia lower grille retaining tabs (1) into the front bumper fascia.
3. Install the front bumper fascia. Refer to Front Bumper Fascia Replacement.
4. Lower the vehicle.

Installation Procedure

Type B

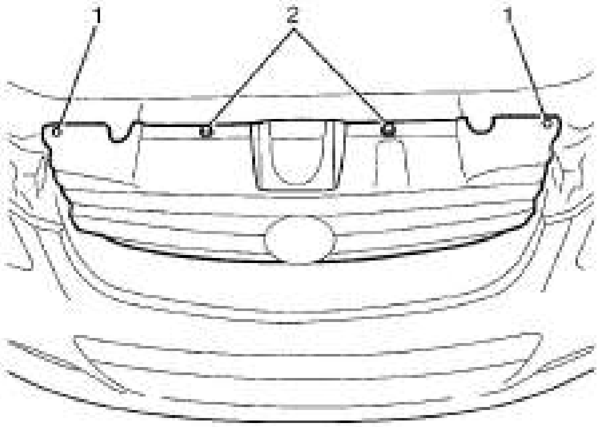
1. Install the front bumper fascia lower grille to the front bumper fascia.



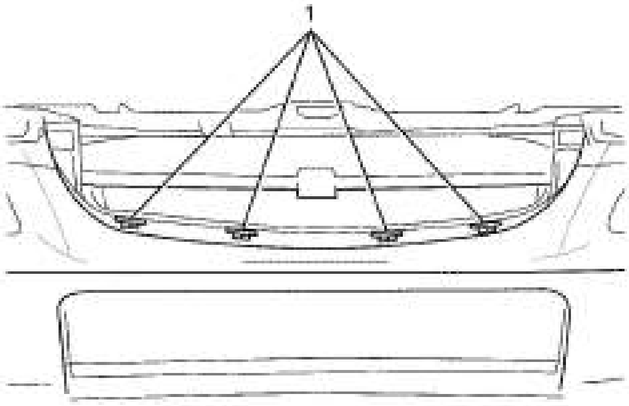
2. Firmly press the front bumper fascia lower grille retaining tabs (1) into the front bumper fascia.
3. Install the front bumper fascia. Refer to Front Bumper Fascia Replacement.
4. Lower the vehicle.

Radiator Grille Replacement (SWB)

Removal Procedure



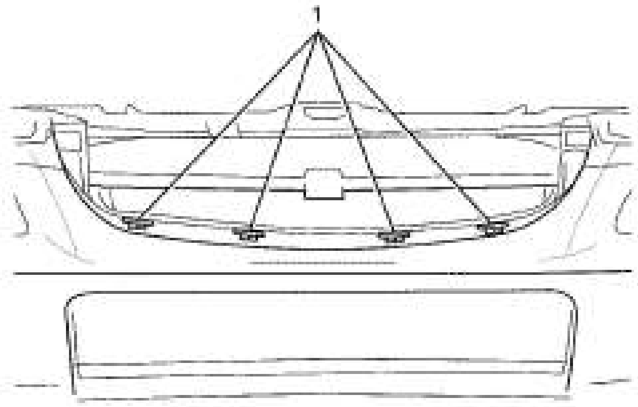
1. Remove the radiator grille to front end module retaining bolts (1).
2. Remove the radiator grille to front end module push-in retainers (2).



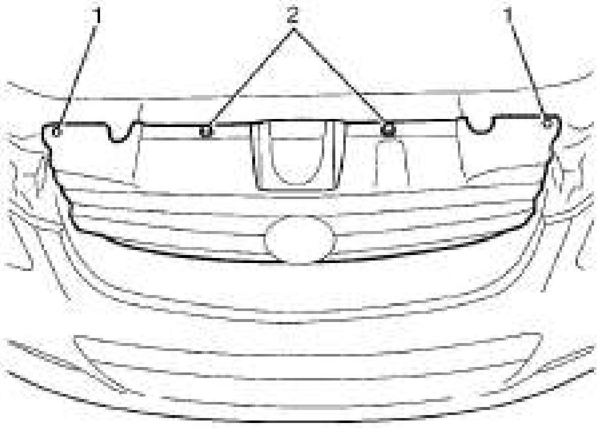
3. Carefully pry the radiator grille retaining tabs (1) from the upper edge of the front bumper fascia.
4. Remove the radiator grille from the front bumper fascia.

Installation Procedure

1. Install the radiator grille to the front bumper fascia.



2. Firmly press the radiator grille retaining tabs (1) into the upper edge of the front bumper fascia.



3. Install the radiator grille to front end module push-in retainers (2).

   Notice: Refer to Fastener Notice in the Preface section.

4. Install the radiator grille to front end module retaining bolts (1).

   Tighten
   Tighten the bolts to 4.5 N·m (39 lb in).

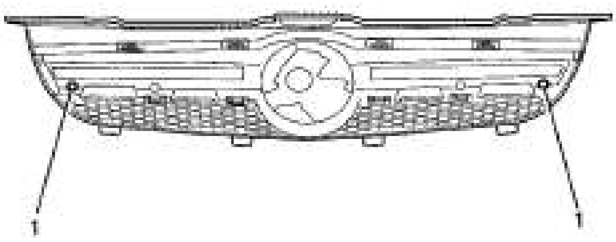
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Exterior Trim | Repair Instructions | **Document ID: 2040115**

Radiator Grille Retainer Replacement

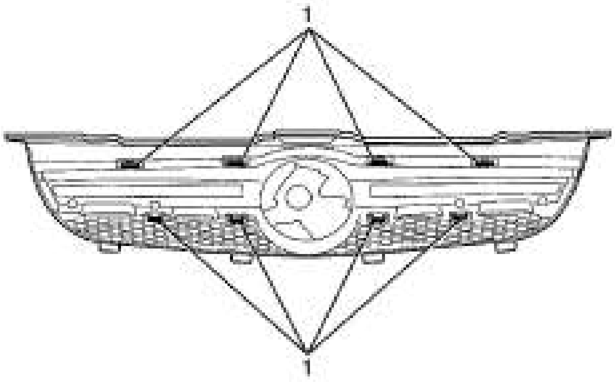
Removal Procedure

Important: Carefully remove the radiator grille applique from the radiator grille. Failure to do so will result in damage to the radiator grille applique.

1. Remove the radiator grille. Refer to Radiator Grille Replacement.



2. Remove the radiator grille applique to radiator grille retaining screws (1).

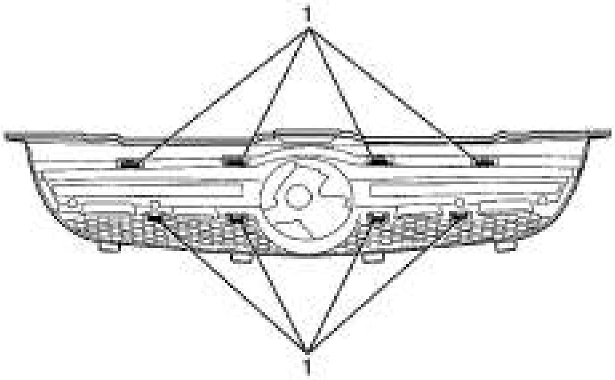


3. Remove the radiator grille applique by releasing the retaining clips (1).

4. Remove the radiator grille applique from the radiator grille.
5. Remove the radiator grille emblem. Refer to Radiator Grille Emblem/Nameplate Replacement.

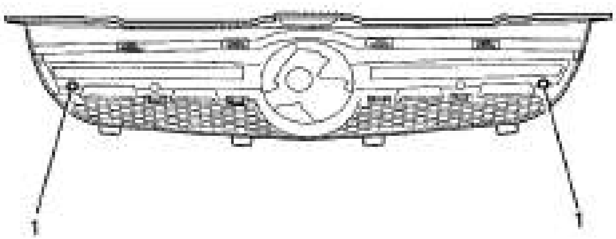
Installation Procedure

1. Install the radiator grille emblem. Refer to Radiator Grille Emblem/Nameplate Replacement.
2. Install the radiator grille applique to the radiator grille.



3. Apply pressure to the radiator grille applique to engage the retaining clips (1) to the radiator grille.
4. Make sure that the retaining clips are secure.

Notice: Refer to Fastener Notice in the Preface section.



5. Install the radiator grille applique to radiator grille retaining screws (1).

   Tighten
   Tighten the screws to 2 N·m (18 lb in).

6. Install the radiator grille. Refer to Radiator Grille Replacement.

Body Side Molding Replacement

Removal Procedure

Important: Protect the paint and body work with tape or a clean cloth. Failure to do so may result in damage to the paint work.

1. To assist in the removal of the body side mouldings, warm the body side mouldings with a heat gun.

Important: Take care not to damage the paint on the vehicle when prying the body side mouldings from the body.

2. Use a suitable tool to carefully prise the body side mouldings from the body.
3. Remove any remaining adhesive from the body and clean the surface with a suitable cleaning solution, using a lint free cloth.

Installation Procedure

Important: Use spec HN2021 or equivalent.

Important: Do not allow the adhesive tape to come in contact with any dirt or foreign matter.

1. If reusing the body side mouldings, clean the body with a suitable cleaning solution, using a lint free cloth.
    - 1.1. Apply new polyethylene double sided tape to the back of the body side mouldings.
    - 1.2. Trim back the tape to the inner edge of the body side mouldings.
2. Peel the backing from the adhesive tape.
3. Apply the body side mouldings to the body. Refer to Graphics/Decals/Emblems for moulding placement and measurement details.
4. Press firmly over the length of the mouldings for 10 seconds to make sure correct adhesion, starting at the front of the vehicle working towards the rear.

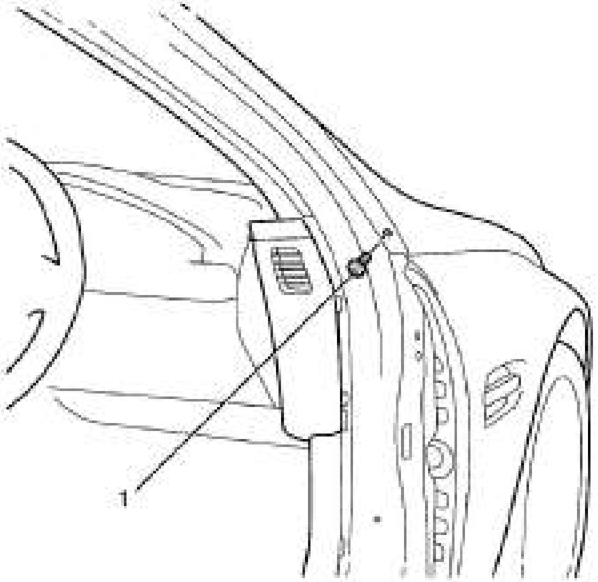
Body Side Roof Drip Molding Replacement (Sportwagon)

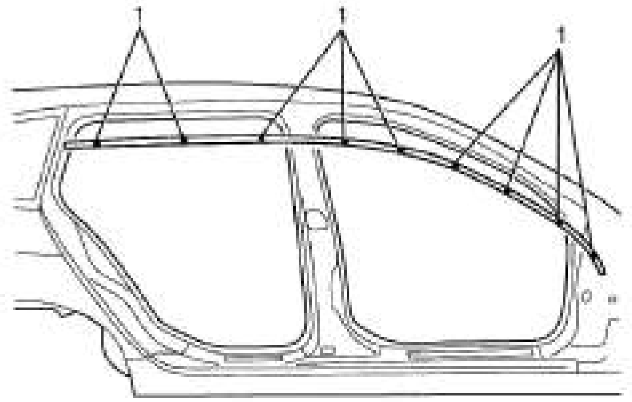
Removal Procedure

Important: Carefully remove the roof drip moulding, failure to do so will result in damage to the roof drip moulding.

1. Open the front and rear doors of the vehicle on the relevant side.



2. Remove the body side roof drip moulding to vehicle retaining screw (1).

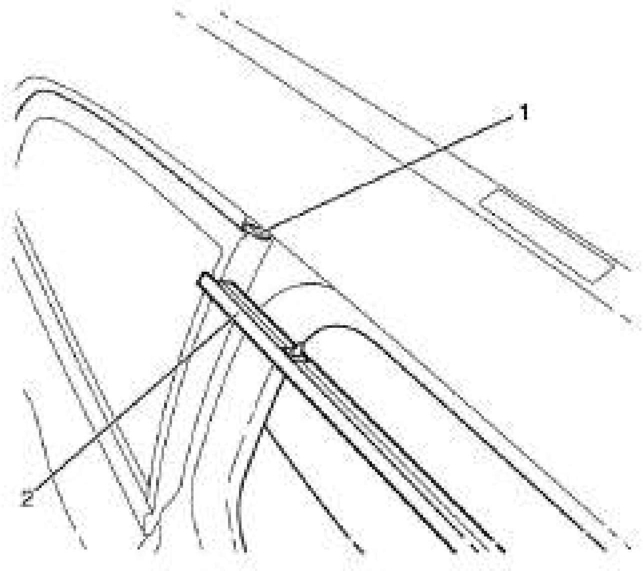


Important: Take care not to damage the paint on the vehicle when prying the roof drip moulding from the vehicle.

3. Use a suitable tool to carefully remove the roof drip moulding, starting from the front of the vehicle, by prying the roof drip moulding retaining clips (1) away from the vehicle.
4. Remove the roof drip moulding from the vehicle.

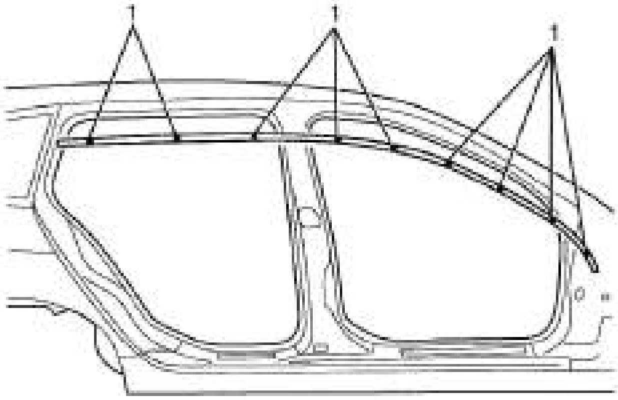
Installation Procedure

1. Clean the roof drip gutter with a suitable cleaning solution, using a lint free cloth.
2. Install the roof drip moulding starting at the rear of the moulding.



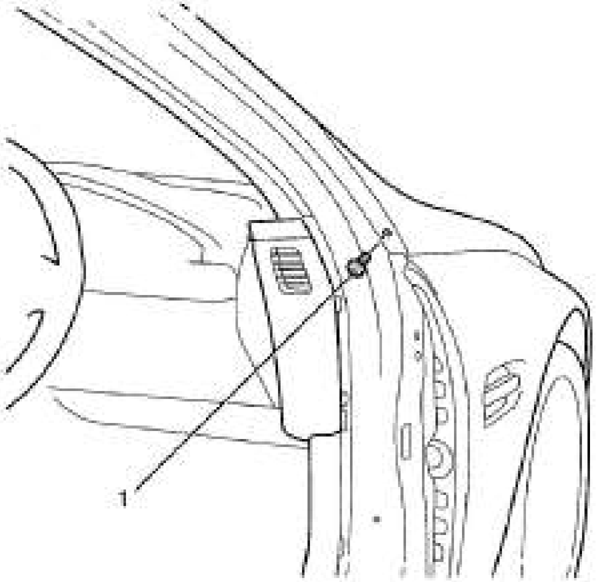
Important: Make sure that the rear of the body side roof moulding (2) is correctly positioned on the body side stationary window locating tab (1).

3. Install the body side roof drip moulding (2) to the body side stationary window locating tab (1).



4. Install the remaining roof drip moulding retaining clips (1) working from the rear to the front of the vehicle.

   Notice: Refer to Fastener Notice in the Preface section.



5. Install the body side roof drip moulding to vehicle retaining screw (1).

   Tighten
   Tighten the screw to 2 N·m (18 lb in).

6. Close the front and rear doors of the vehicle on the relevant side.

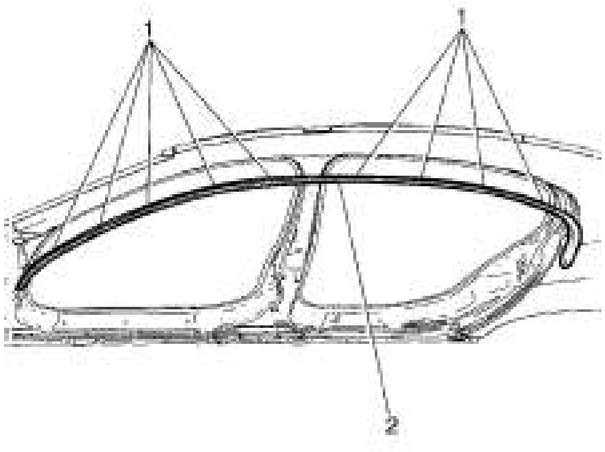
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Exterior Trim | Repair Instructions | **Document ID: 2067488**

Body Side Roof Drip Molding Replacement (Sedan)

Removal Procedure

Important: Carefully remove the roof drip moulding, failure to do so will result in damage to the roof drip moulding.

1. Open the front and rear doors of the vehicle on the relevant side.

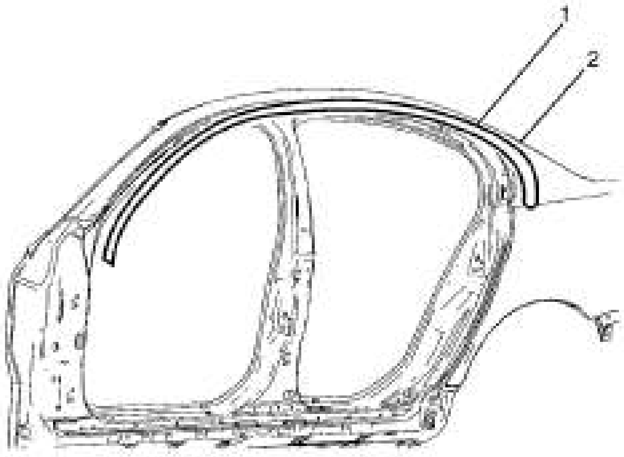


Important: Take care not to damage the paint on the vehicle when prying the roof drip moulding from the vehicle.

2. Use a suitable tool to carefully remove the roof drip moulding, starting from the front of the vehicle, by prying the roof drip moulding retaining clips (1) away from the vehicle.
3. Remove the roof drip moulding (2) from the vehicle.

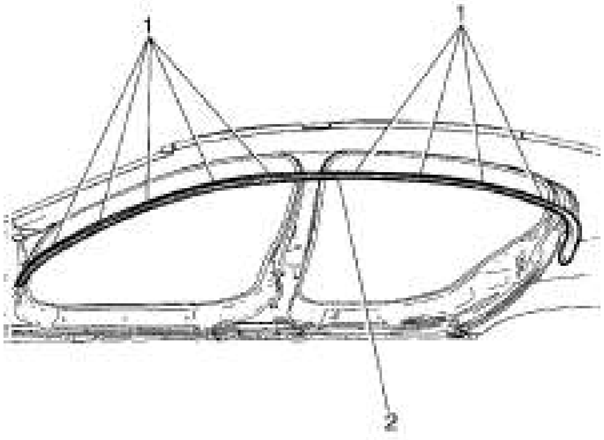
Installation Procedure

1. Clean the roof drip gutter with a suitable cleaning solution, using a lint free cloth.
2. Install the roof drip moulding (1) starting at the rear of the moulding.



Important: Make sure that the rear datum pin is secure and in the correct position.

3. Install the body side roof drip moulding (1) rear datum pin (2) to the vehicle.



4. Install the remaining roof drip moulding retaining clips (1) working from the rear to the front of the vehicle.
5. Close the front and rear doors of the vehicle on the relevant side.

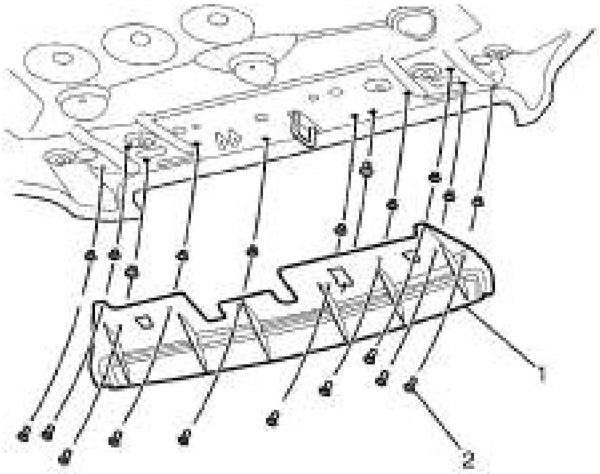
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Exterior Trim | Repair Instructions | **Document ID: 1974875**

Hood Front Molding Replacement

Removal Procedure

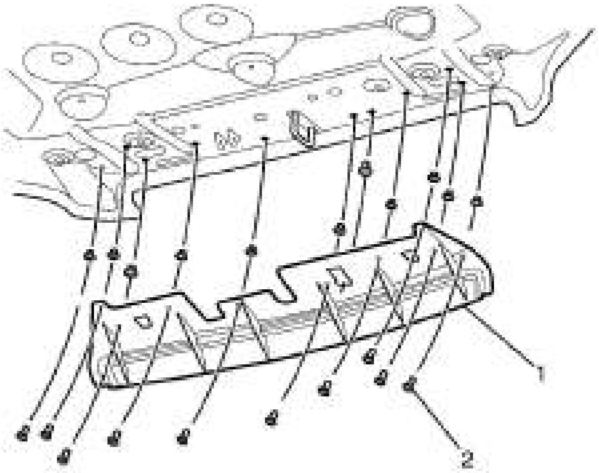
> **Important:** When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Install a suitable hood brace to the vehicle.



2. Remove the front hood moulding to hood retaining screws (2).
3. Remove the front hood moulding (1) from the hood.

Installation Procedure



1. Position the front hood moulding (1) to the hood.

   Notice: Refer to Fastener Notice in the Preface section.

2. Install the front hood moulding to hood retaining screws (2).

   Tighten
   Tighten the screws to 3 N·m (27 lb in).

3. Remove the suitable hood brace from the vehicle.
4. Close the hood.

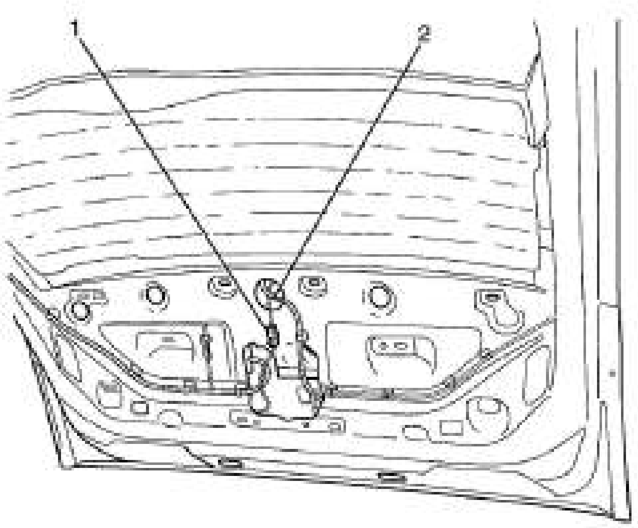
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Exterior Trim | Repair Instructions | **Document ID: 2067616**

Liftgate Upper Molding Replacement

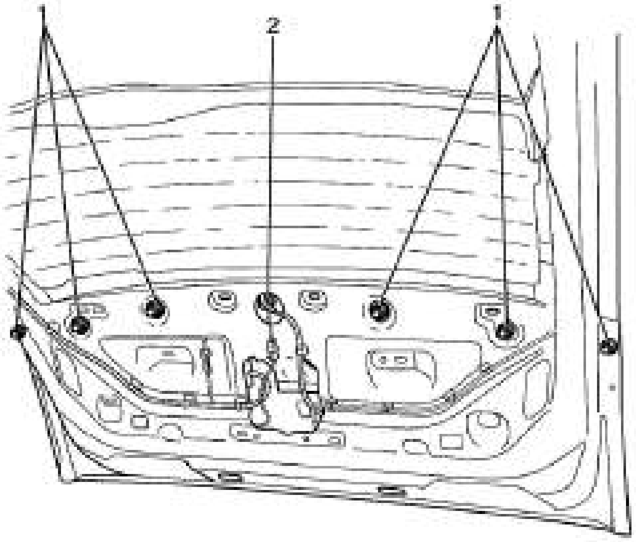
Removal Procedure

> **Important:** When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

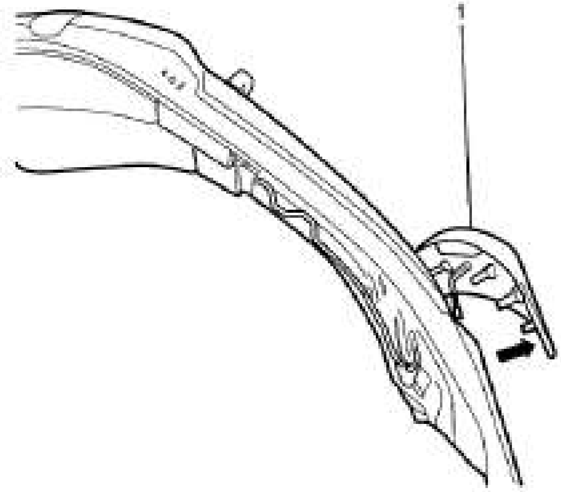
1. Open the liftgate.
2. Install a suitable liftgate brace to the vehicle.
3. Remove the liftgate window side garnish moulding. Refer to Liftgate Window Side Garnish Molding Replacement.
4. Remove the liftgate window upper garnish moulding. Refer to Liftgate Window Upper Garnish Molding Replacement.



5. Disconnect the high mounted stop lamp electrical connector (1) and detach from liftgate.
6. Disconnect the rear window washer hose (2).



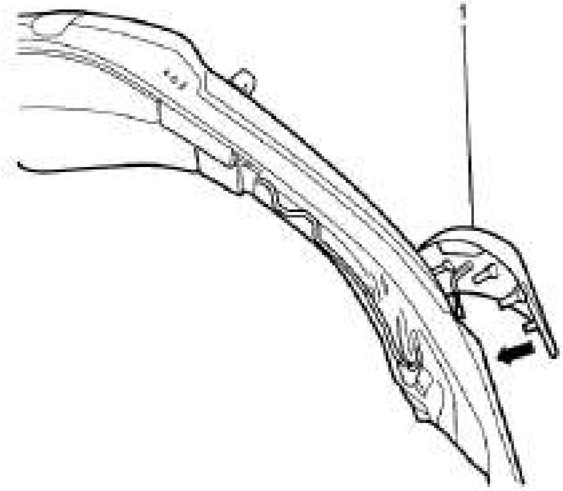
7. Remove the liftgate upper moulding to body grommet (2).
8. Remove the liftgate upper moulding to body retaining nuts (1).



Important: Take care to feed the high mounted stop lamp wiring connector and rear window washer hose through the grommet hole.

9. Remove the liftgate upper moulding (1) from the vehicle

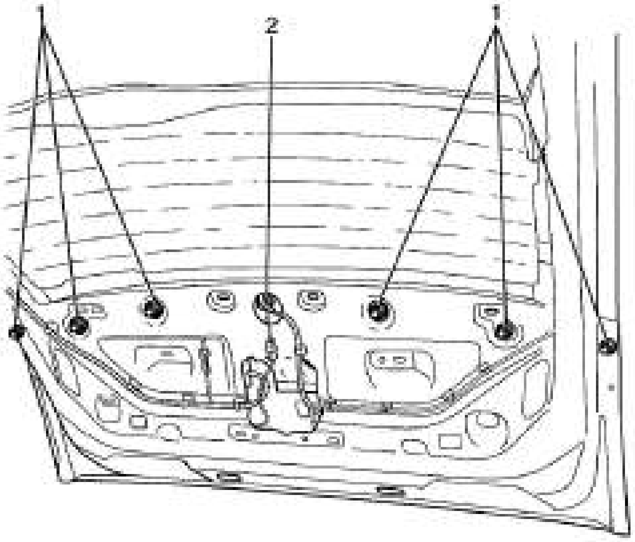
Installation Procedure



Important: Take care to feed the high mounted stop lamp wiring connector and rear window washer hose through the grommet hole.

1. Position the liftgate upper moulding to the vehicle.

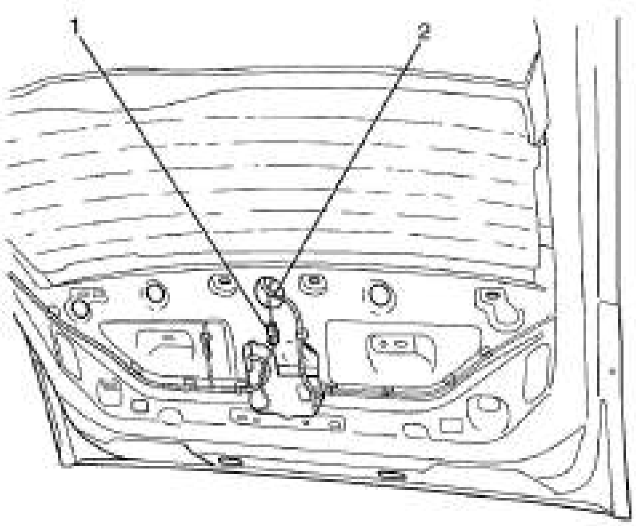
   Notice: Refer to Fastener Notice in the Preface section.



2. Install the liftgate upper moulding to body retaining nuts (1).

   Tighten
   Tighten the nuts to 3 N·m (26 lb in).

3. Install the liftgate upper moulding to body grommet (2).



Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

4. Connect the rear window washer hose (2).
5. Connect the high mounted stop lamp electrical connector (1) and attach to liftgate.
6. Install the liftgate window upper garnish moulding. Refer to Liftgate Window Upper Garnish Molding Replacement.
7. Install the liftgate window side garnish moulding. Refer to Liftgate Window Side Garnish Molding Replacement.
8. Remove the suitable liftgate brace from the vehicle.

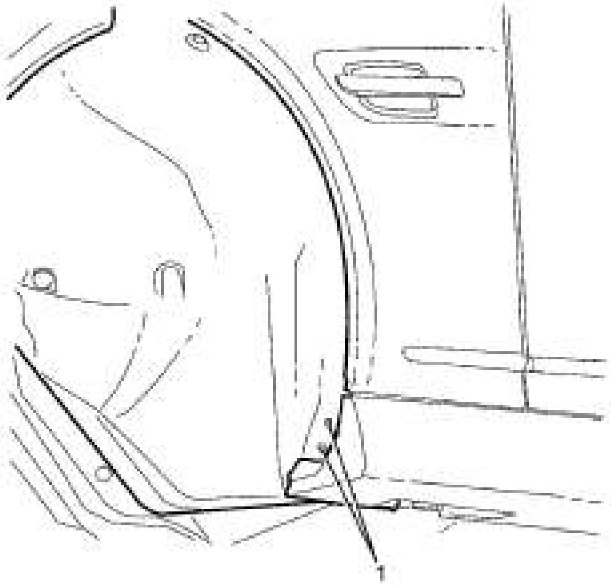
Rocker Panel Molding Replacement (Sportwagon)

Removal Procedure

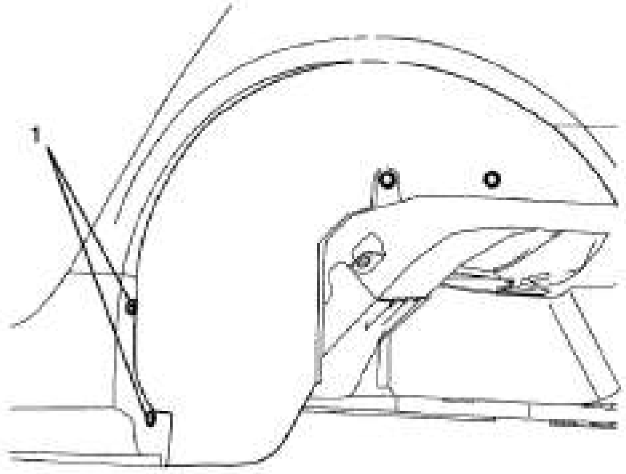
Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

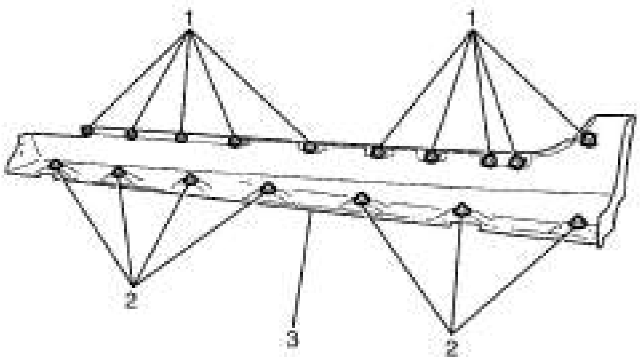
1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Remove the front and rear wheels. Refer to Tire and Wheel Removal and Installation.
3. Open the front and rear doors of the vehicle on the relevant side.
4. Remove the side door sill nameplate. Refer to Side Door Sill Nameplate Replacement.



5. Remove the front wheelhouse liner to rocker panel retaining screws (1).



6. Remove the rear wheelhouse liner to rocker panel retaining screws (1).
7. Pull the bottom edge of the rocker panel moulding away from the rocker panel to disengage the retainers.
8. Use a suitable tool to gently separate the front of the rocker panel moulding from the rocker panel.
9. With the aid of an assistant, carefully remove the rocker panel moulding from the body.

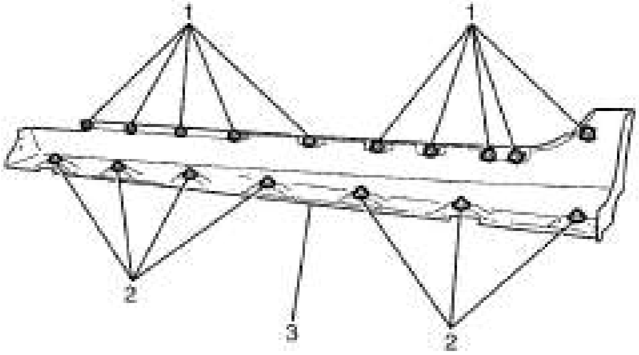


Important: The rocker panel moulding retaining clips are single use parts. They must be discarded after removal.

10. Remove the rocker panel moulding retaining clips (1 and 2) from the rocker panel moulding.

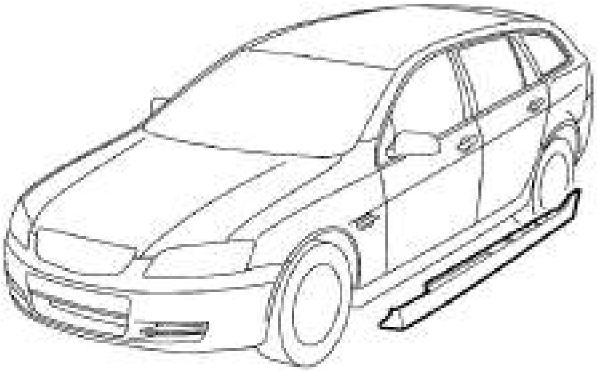
    Discard the retaining clips.

Installation Procedure

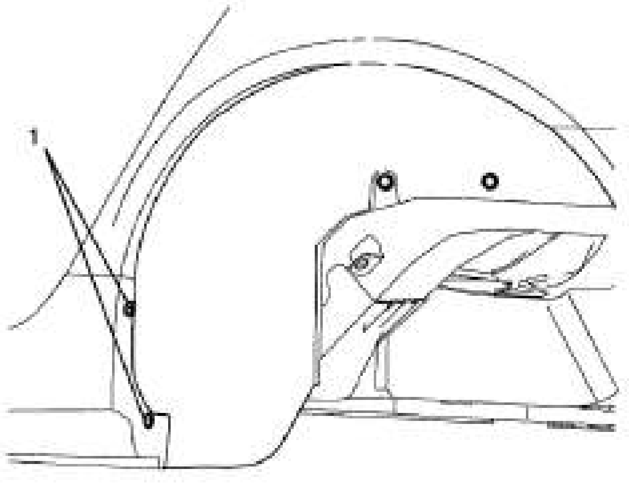


Important: New retainers are required for the installation of the rocker panel moulding. The retainer clips will break upon removal.

1. Install all new rocker panel retaining clips (1 and 2) into the rocker panel moulding.

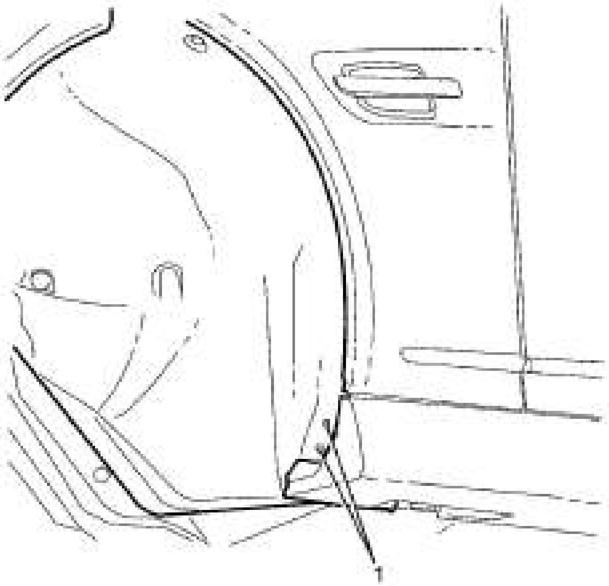


2. With the aid of an assistant, position the rocker panel moulding to the body.
3. Starting from the centre of the rocker panel moulding, apply pressure to secure the rocker panel moulding retaining clips to the upper part of the rocker panel.
4. Starting from the centre of the rocker panel moulding, apply pressure to secure the rocker panel moulding retaining clips to the lower part of the rocker panel.



5. Install the rear wheelhouse liner to rocker panel retaining screws (1).

   Tighten
   Tighten the screws to 2 N·m (18 lb in).



6. Install the front wheelhouse liner to rocker panel retaining screws (1).

   Tighten
   Tighten the screws to 2 N·m (18 lb in).

7. Install the side door sill nameplate. Refer to Side Door Sill Nameplate Replacement.
8. Install the front and rear wheels. Refer to Tire and Wheel Removal and Installation.

9. Lower the vehicle.
10. Close the front and rear doors.

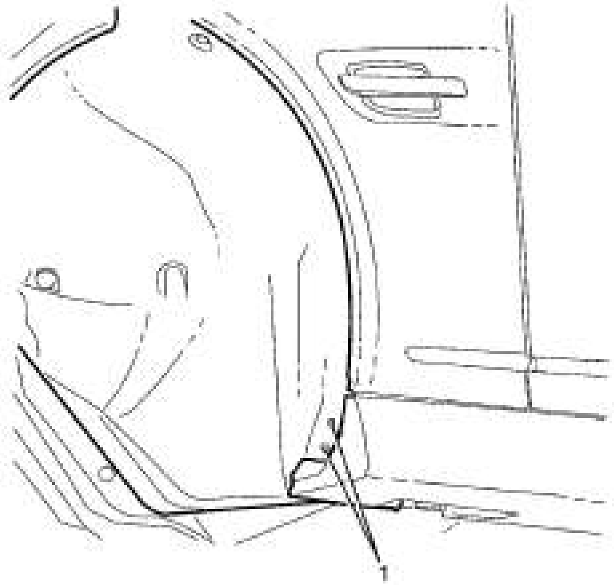
Rocker Panel Molding Replacement (Sedan)

Removal Procedure

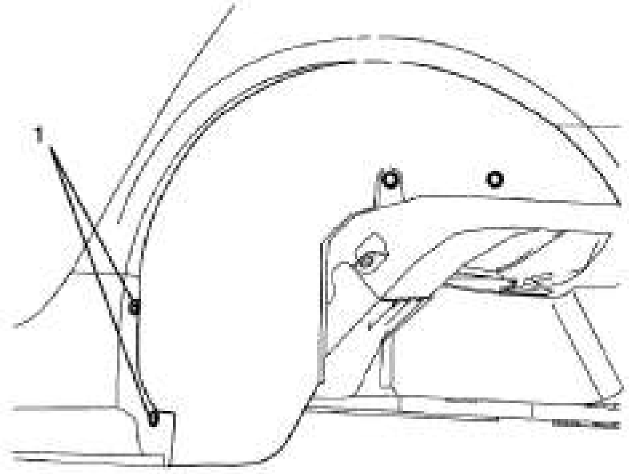
Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

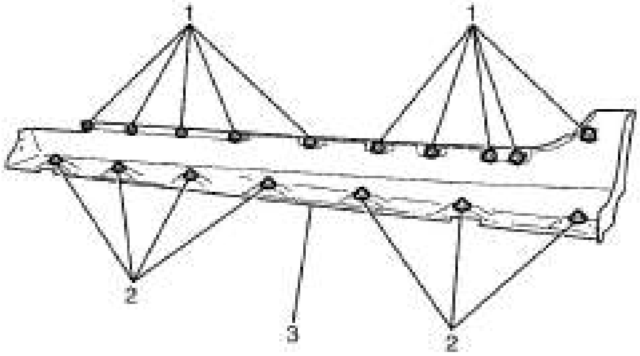
1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Remove the Side Door Sill Nameplate. Refer to Side Door Sill Nameplate Replacement.
3. Remove the front and rear wheels. Refer to Tire and Wheel Removal and Installation.
4. Open the front and rear doors of the vehicle on the relevant side.



5. Remove the front wheelhouse liner to rocker panel retaining screws (1).



6. Remove the rear wheelhouse liner to rocker panel retaining screws (1).
7. Pull the bottom edge of the rocker panel moulding away from the rocker panel to disengage the retainers.
8. Use a suitable tool to gently separate the front of the rocker panel moulding from the rocker panel.
9. With the aid of an assistant, carefully remove the rocker panel moulding from the body.

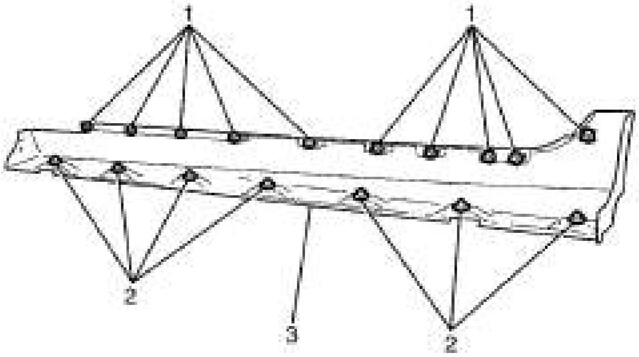


Important: The rocker panel moulding retaining clips are single use parts. They must be discarded after removal.

10. Remove the rocker panel moulding retaining clips (1 and 2) from the rocker panel moulding.

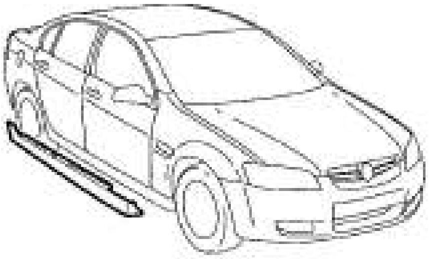
    Discard the retaining clips.

Installation Procedure

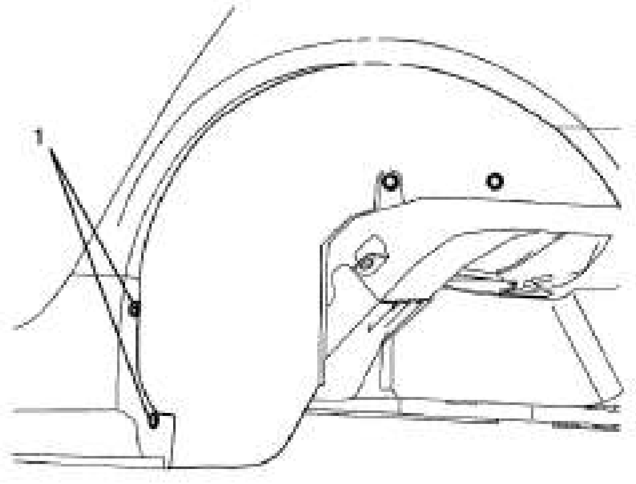


Important: New retainers are required for the installation of the rocker panel moulding. The retainer clips will break upon removal.

1. Install all new rocker panel retaining clips (1 and 2) into the rocker panel moulding.

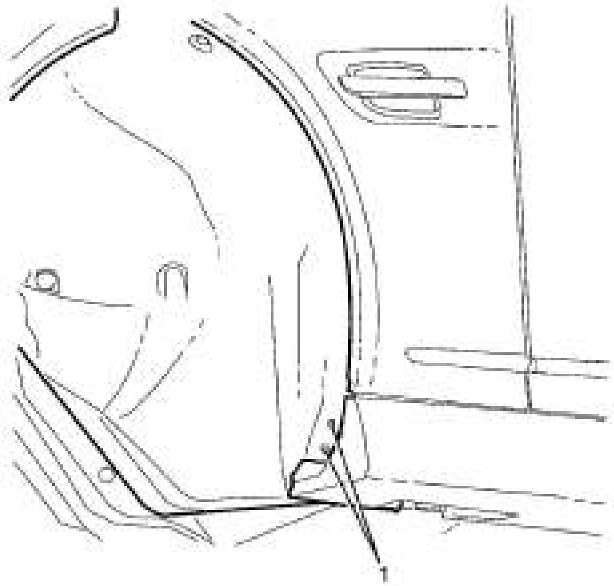


2. With the aid of an assistant, position the rocker panel moulding to the body.
3. Starting from the centre of the rocker panel moulding, apply pressure to secure the rocker panel moulding retaining clips to the upper part of the rocker panel.
4. Starting from the centre of the rocker panel moulding, apply pressure to secure the rocker panel moulding retaining clips to the lower part of the rocker panel.



5. Install the rear wheelhouse liner to rocker panel retaining screws (1).

   Tighten
   Tighten the screws to 2 N·m (18 lb in).



6. Install the front wheelhouse liner to rocker panel retaining screws (1).

   Tighten
   Tighten the screws to 2 N·m (18 lb in).

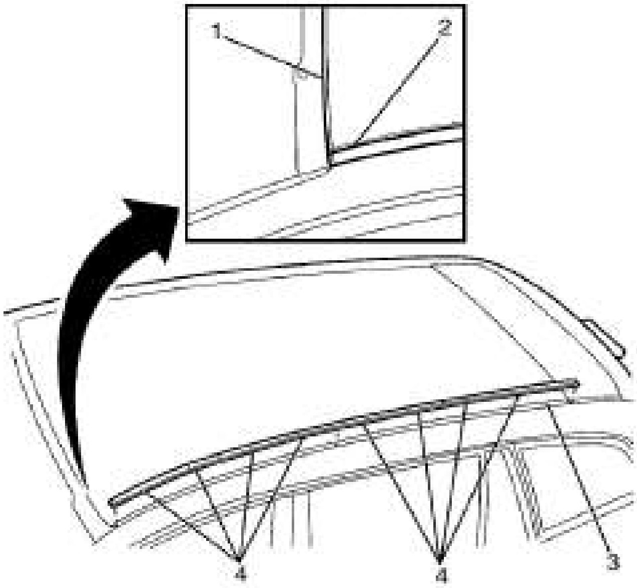
7. Install the Side Door Sill Nameplate. Refer to Side Door Sill Nameplate Replacement.
8. Install the front and rear wheels. Refer to Tire and Wheel Removal and Installation.

9. Lower the vehicle.
10. Close the front and rear doors.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Exterior Trim | Repair Instructions | **Document ID: 2067525**

Roof Weld Joint Reveal Molding Replacement (Sportwagon)

Removal Procedure



Important: Protect the paint and body with tape or a clean cloth. Failure to do so may result in damage to the paint work.

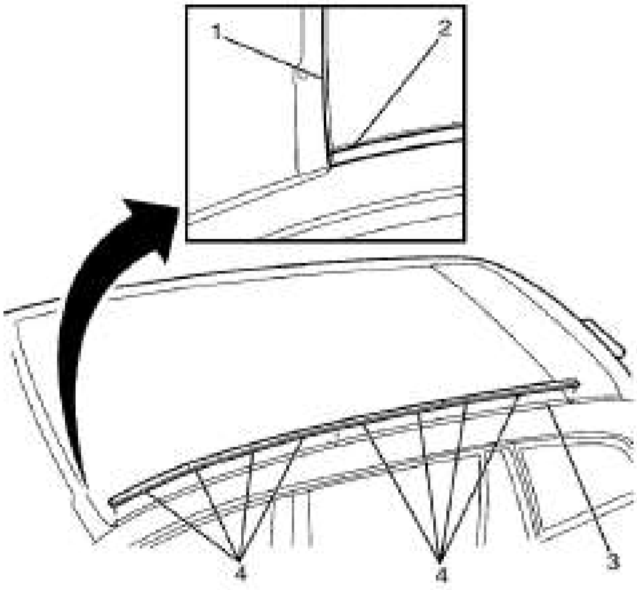
Important: Using a suitable tool lift the roof weld joint reveal moulding (2) from the roof weld joint (3) starting at the front of the vehicle at points close to the top edge of the front windshield seal (1).

1. Remove the roof weld joint reveal moulding (2) from the roof weld joint (3) by lifting the front edge of the roof weld joint reveal moulding upwards to disengage the roof weld joint reveal moulding retaining clips (4).

Important: Clean the surface with a suitable cleaning solution and a lint free cloth to remove any dirt or debris from the roof weld joint (3).

2. Remove any dirt or debris from the roof weld joint (3).

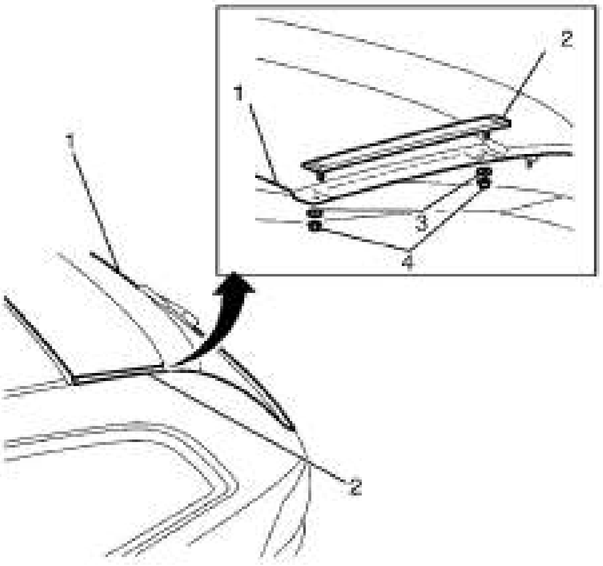
Installation Procedure



Important: If the roof weld joint reveal moulding or roof weld joint reveal moulding retaining clips are cracked, broken or damaged, replace the damaged components.

1. Make sure the front edge of the roof weld joint reveal moulding (2) is located correctly under the top edge of the front windshield seal (1).
2. Align the roof weld joint reveal moulding retaining clips (4) in the correct position and push firmly into place engaging the roof weld joint reveal moulding (2) into the body.

Removal Procedure - Rear



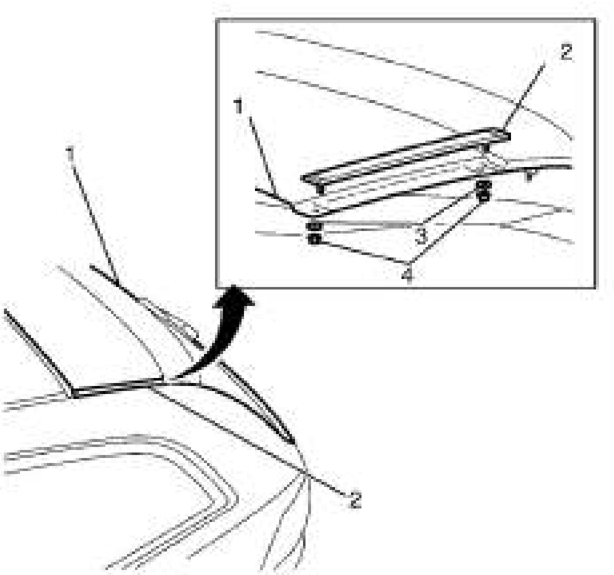
Important: Care must be taken when removing the roof weld joint rear reveal moulding (2) not to damage the vehicle paint.

1. Open the liftgate (1).
2. Remove the roof weld joint rear reveal moulding nuts (4) and washers (3).
3. Remove the roof weld joint rear reveal moulding (2) from the liftgate (1).

   Important: Clean the roof weld joint rear reveal moulding mounting surface with a suitable cleaning solution and a lint free cloth to remove any dirt or debris.

4. Remove any dirt or debris from the roof weld joint rear reveal moulding mounting surface.

Installation Procedure - Rear



1. Install the roof weld joint rear reveal moulding (2) to the liftgate (1).

   Important: NEW sealing washers (3) must be used with the roof weld joint rear reveal moulding nuts (4) when installing the roof weld joint rear reveal moulding (2).

2. Install the roof weld joint rear reveal moulding nuts (4) and washers (3).

   Notice: Refer to Fastener Notice in the Preface section.

3. Tighten the roof weld joint rear reveal moulding nuts (4).

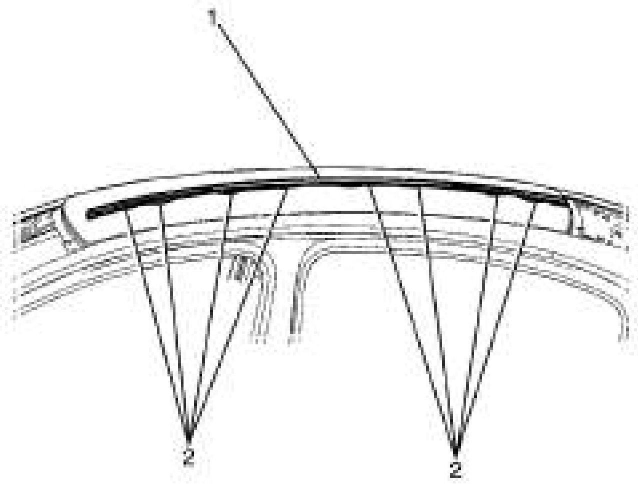
   Tighten
   Tighten the nuts to 3 N·m (27 lb in).

Roof Weld Joint Reveal Molding Replacement (Sedan)

Removal Procedure

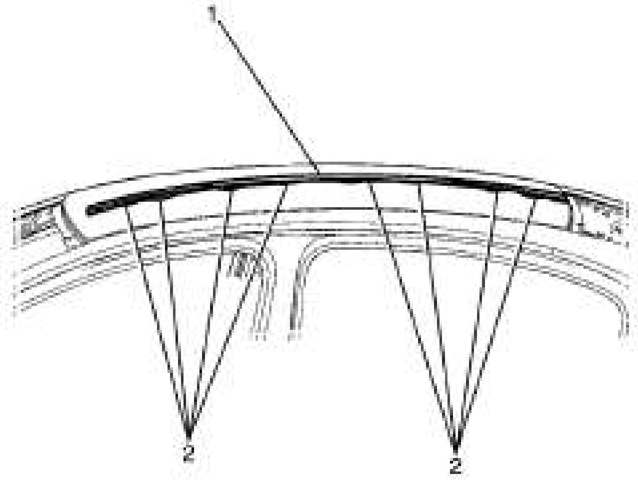
Important: If the roof weld joint reveal moulding cracks, breaks or is damaged in any way, replace the moulding.

Important: Take care not to damage the paint on the vehicle when prying the roof weld joint reveal moulding from the roof.



1. Starting at the windshield pillar rear, carefully pry off the roof weld joint reveal moulding from the roof weld joint, taking care not to break the roof weld joint reveal moulding retaining clips (2).
2. Remove the roof weld joint reveal moulding (1).
3. Clean the accessible roof weld joint with a suitable cleaning solution, using a lint free cloth.

Installation Procedure



Important: Make sure that the rear datum pin is positioned correctly.

1. Position the roof weld joint reveal moulding on the vehicle and slide the rear end of the moulding into the rear moulding retainer.
2. Seat the roof weld joint reveal moulding in the roof weld joint and starting at the rear, carefully engage the roof weld joint reveal moulding retaining clips (2) into position.

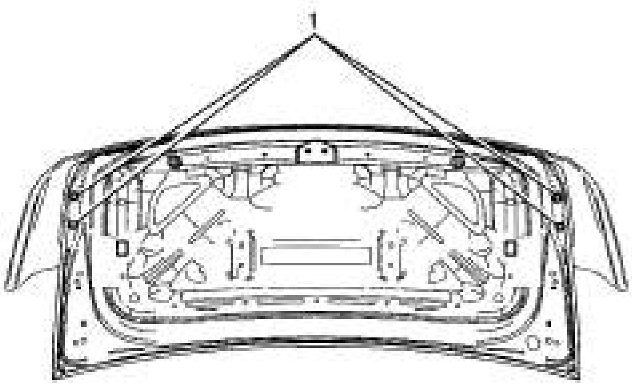
Rear Spoiler Replacement (LWB SWB CSV Clubsport GTS VXR8)

Removal Procedure

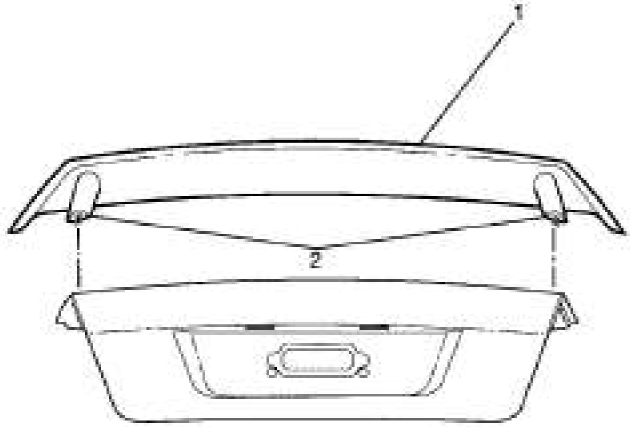
Type A

> **Important:** When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Open the rear compartment lid.
2. Support the rear compartment lid with a suitable brace.



3. Remove the rear spoiler to rear compartment lid retaining nuts (1).
4. Remove the suitable brace from the rear compartment lid.
5. Close the rear compartment lid.



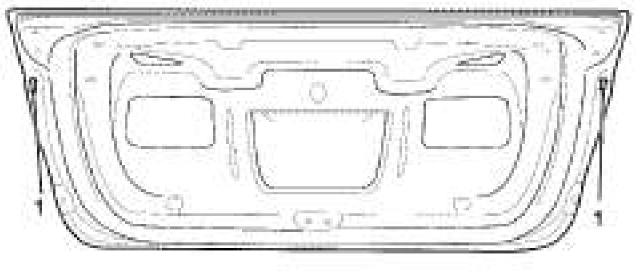
6. Carefully remove the rear spoiler (1) from the vehicle.
7. Make sure the rear spoiler gaskets (2) are intact and on the rear spoiler.
8. Clean the rear compartment lid with a suitable cleaning solution, using a lint free cloth.

Removal Procedure

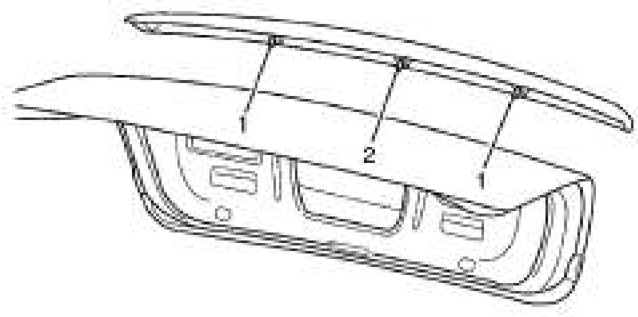
Type B

> **Important:** When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Open the rear compartment lid.
2. Support the rear compartment lid with a suitable brace.



3. Remove the rear spoiler to rear compartment lid retaining nuts (1).



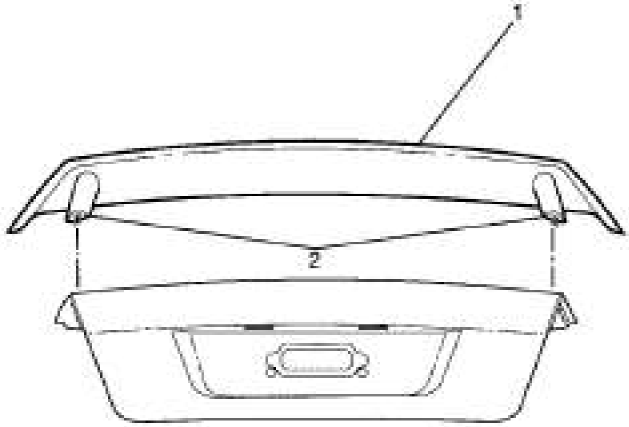
4. Carefully disengage the rear compartment lid lip spoiler retaining clips (1) from the rear compartment lid.
5. Slowly remove the rear compartment lid lip spoiler from the rear compartment lid.
6. Clean the rear compartment lid with a suitable cleaning solution, using a lint free cloth.

Installation Procedure

Type A

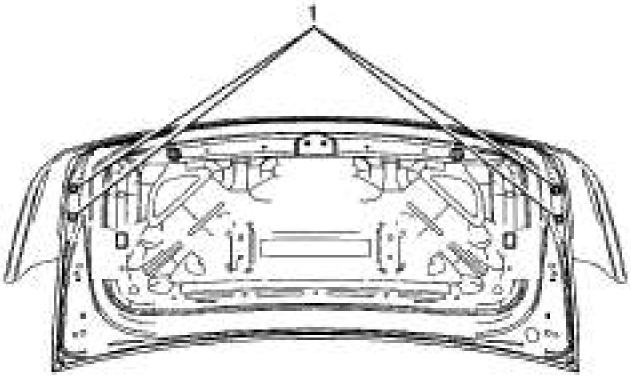
> **Important:** When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Clean the rear spoiler gaskets with a suitable cleaning solution, using a lint free cloth.



2. Install the rear spoiler (1) to the rear compartment lid.
3. Open the rear compartment lid.
4. Support the rear compartment lid with a suitable brace.

Notice: Refer to Fastener Notice in the Preface section.



5. Install the rear spoiler to rear compartment lid retaining nuts (1).

Tighten
Tighten the nuts to 3 N·m (27 lb in).

6. Remove the suitable brace from the rear compartment lid.

7. Close the rear compartment lid.

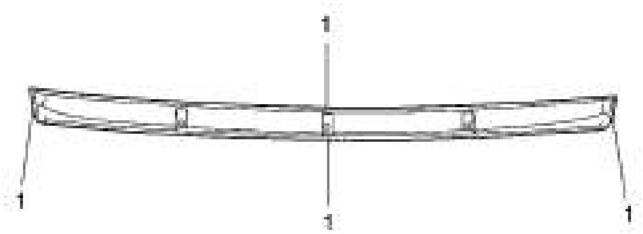
Installation Procedure

Type B

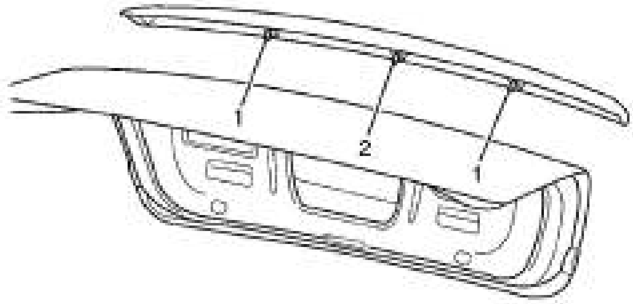
Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

Important: Use spec HN2021 type 13A and HN2021 type 6.

Important: Do not allow the adhesive tape to come in contact with any dirt or foreign matter.

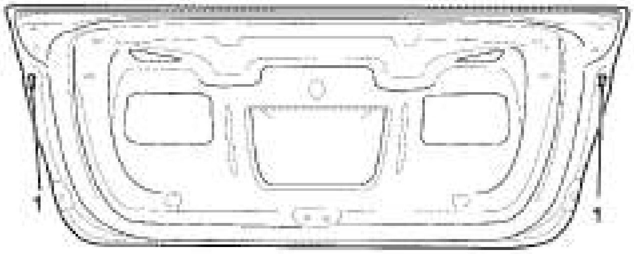


1. If reusing the compartment lid rear applique, clean the compartment lid rear applique with a suitable cleaning solution, using a lint free cloth.
   1.1. Apply the double sided tape HN2021 (1) to the outer edges of the rear compartment lid lip spoiler.
   1.2. Trim back the tape to the outer edges of the rear compartment lid lip spoiler.



2. Install the rear compartment lid lip spoiler to the rear compartment lid retraining clips (1).
3. Open the compartment lid rear.
4. Support the rear compartment lid with a suitable brace.

   Notice: Refer to Fastener Notice in the Preface section.



5. Install the rear compartment lid lip spoiler to rear compartment lid retaining nuts (1).

   Tighten
   Tighten the nuts to 3 N·m (27 lb in).

6. Remove the suitable brace from the rear compartment lid.

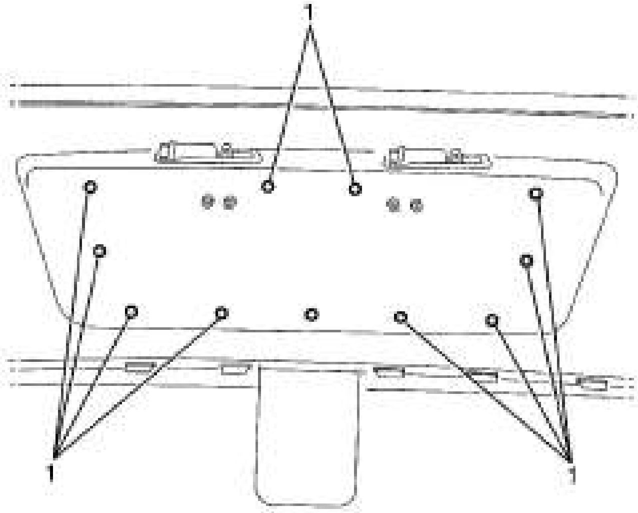
7. Close the compartment lid rear.

Rear License Plate Housing Replacement

Removal Procedure

Important: Carefully remove the licence lamp moulding. Failure to do so will result in damage to the moulding and the rear compartment lid.

1. Remove the rear licence lamp. Refer to Rear License Lamp Replacement.



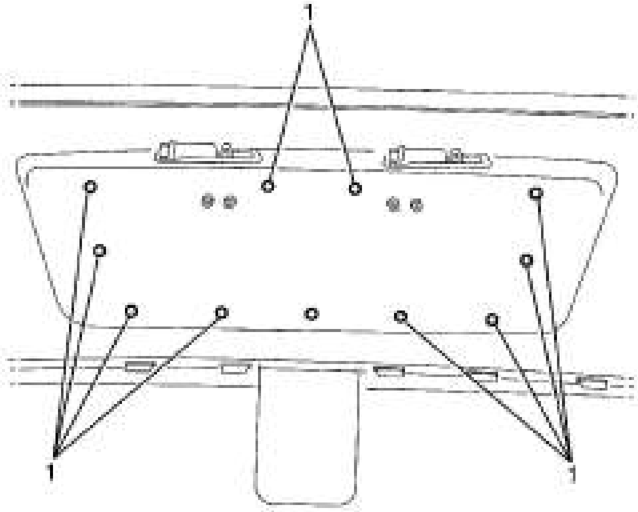
Important: Take care not to damage the paint on the vehicle when prying the rear licence lamp moulding from the rear compartment lid.

2. Remove the rear licence lamp moulding to rear bumper fascia retaining clips (1) and discard.

   Discard the retaining clips.

3. Use a suitable tool to carefully remove the rear licence lamp moulding starting from the rear edge of the rear bumper fascia by prying the rear licence lamp moulding away from the rear bumper fascia.
4. Remove the rear licence lamp moulding from the rear bumper fascia.

Installation Procedure



1. Install the licence lamp rear moulding to the rear bumper fascia.
2. Install NEW retaining clips (1) the rear licence lamp moulding.
3. Install the rear licence lamp . Refer to Rear License Lamp Replacement.

Floor Carpet Drying

If the carpet or the pad or insulator is wet, use the following criteria for drying or for replacing the components:

- For a 1-piece carpet assembly bonded to a cotton or a fiber padding, replace the entire assembly.
- For a 2-piece carpet assembly with a cotton or a fiber padding, replace the padding only. While the carpet is out of the vehicle, dry the carpet using the method described below.
- For a 1-piece carpet assembly bonded to a foam padding or attached to a synthetic padding, dry the carpet using the method described below.
- For a 2-piece carpet assembly with a synthetic padding, dry the assembly using the method described below.

Drying Method

1. If you observe puddles of liquid on the carpet face, use a wet vacuum to remove the excess moisture.
2. Blot the face of the carpet with a towel in order to absorb as much moisture as possible.
3. Point a fan at the affected area and air dry the carpet.

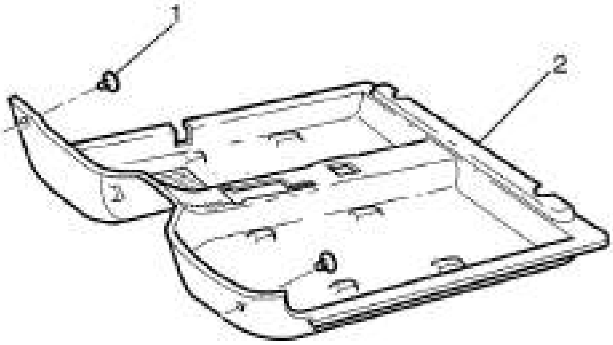
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Floor Coverings and Headlinings | Repair Instructions | **Document ID: 1994445**

Front Floor Panel Carpet Replacement (RHD)

Removal Procedure

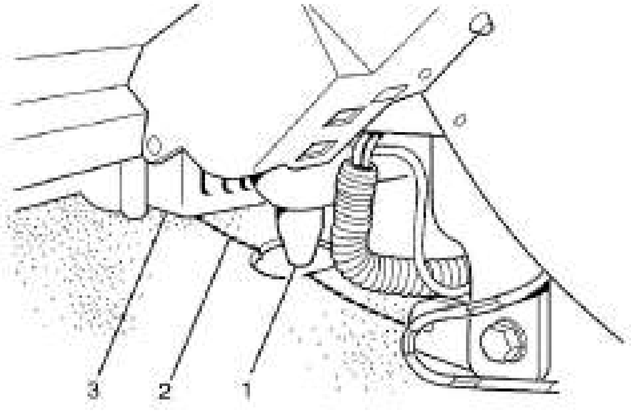
Caution: Refer to Battery Disconnect Caution in the Preface section.

1. Disconnect the battery ground cable from the battery. Refer to Battery Negative Cable Disconnection and Connection.
2. Remove the following components if required :
    - Front sill trim plate. Refer to Door Sill Plate Replacement.
    - Sill panel trim. Refer to Door Sill Plate Replacement.
    - Rear panel trim plate. Refer to Door Sill Plate Replacement.
    - Rear seat cushion. Refer to Rear Seat Cushion Replacement.
    - Front seat belt retaining bolts. Refer to Front Seat Belt Replacement.
    - Body hinge pillar trim assembly on both sides. Refer to Body Hinge Pillar Trim Panel Replacement.
    - Both front seat assemblies. Refer to Front Seat Replacement - Bucket.
    - Park brake assembly. Refer to Parking Brake Release Handle Assembly Replacement.
    - Instrument panel lower trim plate assembly right side. Refer to Instrument Panel Insulator Panel Replacement - Right Side.
    - Instrument panel lower trim plate assembly left side. Refer to Instrument Panel Insulator Panel Replacement - Left Side.
    - Instrument panel compartment. Refer to Instrument Panel Compartment Replacement.
    - Floor console assembly. Refer to Front Floor Console Replacement.



3. Remove the retaining clips (1) from the front floor carpet assembly (2).

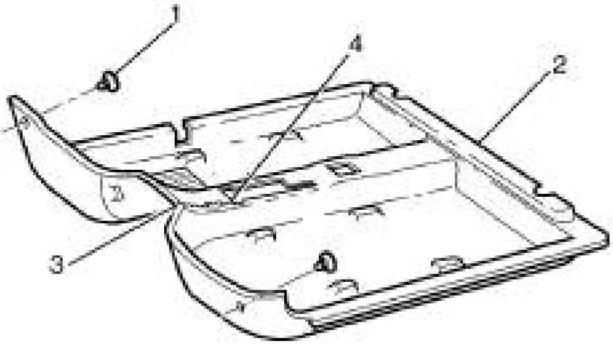
Notice: Refer to General Repair Instructions in the Preface section.



4. From inside the left-hand footwell, grasp the edge of the hole in the front carpet assembly around the evaporator drain hose (1) and carefully tear open along the perforated line (2).
5. Slide the remaining flap of carpet out from under the (HVAC) unit (3).
6. Carefully remove the front floor carpet.

Installation Procedure

Notice: Refer to General Repair Instructions in the Preface section.

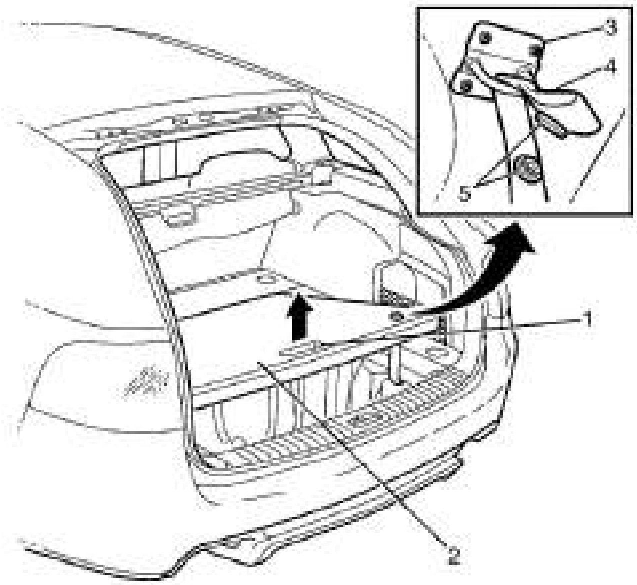


1. Carefully install the front carpet (2) ensuring the cut-outs (3) and (4) are correctly aligned.
2. Install the retaining clips (1) to the front of the carpet.
3. Install the following components as per removal:
    - Floor console assembly. Refer to Front Floor Console Replacement.
    - Instrument panel compartment. Refer to Instrument Panel Compartment Replacement.
    - Instrument panel lower trim plate assembly right side. Refer to Instrument Panel Insulator Panel Replacement - Right Side.
    - Instrument panel lower trim plate assembly left side. Refer to Instrument Panel Insulator Panel Replacement - Left Side.
    - Park brake assembly. Refer to Parking Brake Release Handle Assembly Replacement.
    - Both front seat assemblies. Refer to Front Seat Replacement - Bucket.
    - Body hinge pillar trim assembly on both sides. Refer to Body Hinge Pillar Trim Panel Replacement.
    - Front seat belt retaining bolts. Refer to Front Seat Belt Replacement.
    - Rear panel trim plate. Refer to Door Sill Plate Replacement.
    - Sill panel trim. Refer to Door Sill Plate Replacement.
    - Rear seat cushion. Refer to Rear Seat Cushion Replacement.
4. Connect the battery ground lead to the vehicle. Refer to Battery Negative Cable Disconnection and Connection.
5. Carry out testing of all electrical components removed, to ensure correct operation.

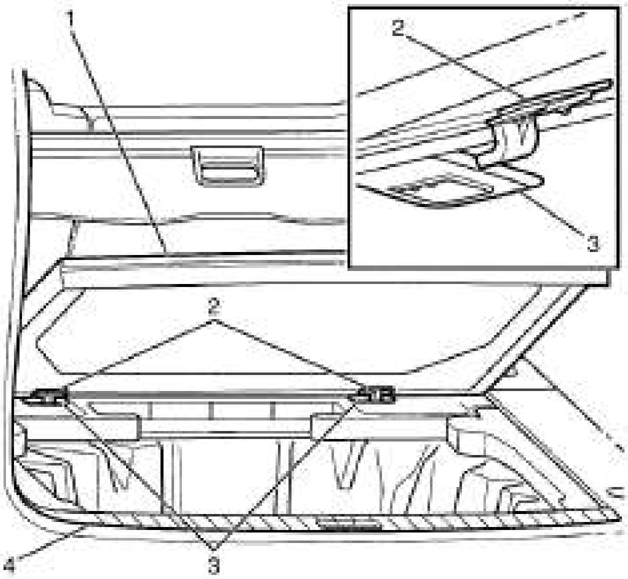
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Floor Coverings and Headlinings | Repair Instructions | **Document ID: 2067564**

Rear Compartment Floor Panel Carpet Replacement (Sportwagon)

Removal Procedure

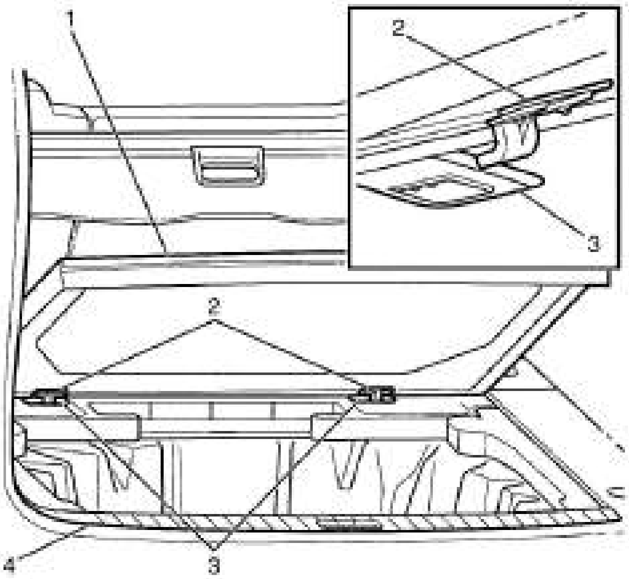


1. Open the liftgate.
2. Lift the rear compartment floor panel carpet (2) up using the rear compartment floor panel carpet handle (1).
3. Unclip the rear compartment floor panel carpet tether button (5) and thread the rear compartment floor panel carpet tether (4) out of the rear compartment floor panel carpet pad eye (3).



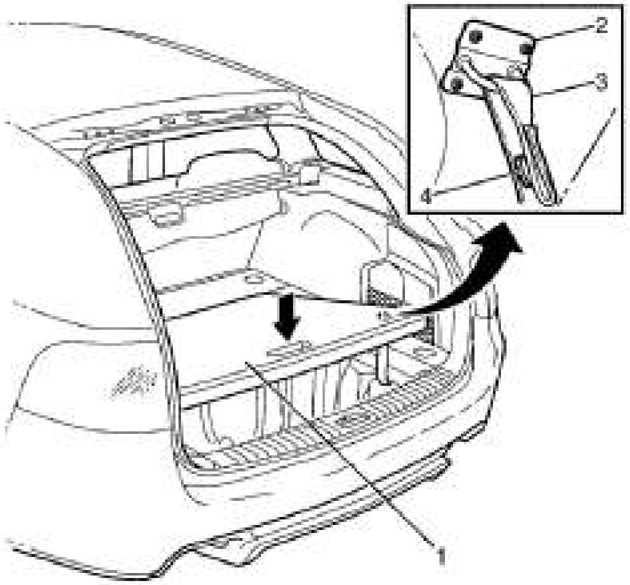
4. Lift the rear compartment floor panel carpet (1) up and out of the liftgate opening (4), disengaging the rear compartment floor panel carpet hooks (2) from the rear compartment floor panel centre support foam hook housings (3).

Installation Procedure



Important: Make sure the rear compartment floor panel carpet hooks (2) engage into the rear compartment floor panel centre support foam hook housings (3).

1. Install the rear compartment floor panel carpet (1) through the liftgate opening (4).

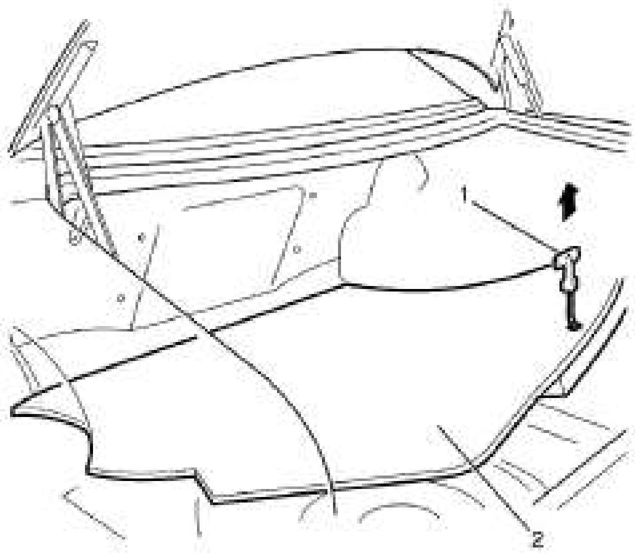


2. Thread the rear compartment floor panel carpet tether (3) through the rear compartment floor panel carpet pad eye (2) and clip the rear compartment floor panel carpet tether button (4).
3. Lower the rear compartment floor panel carpet (1) to is original position making sure it is correctly seated.

Rear Compartment Floor Panel Carpet Replacement (Sedan)

Removal Procedure

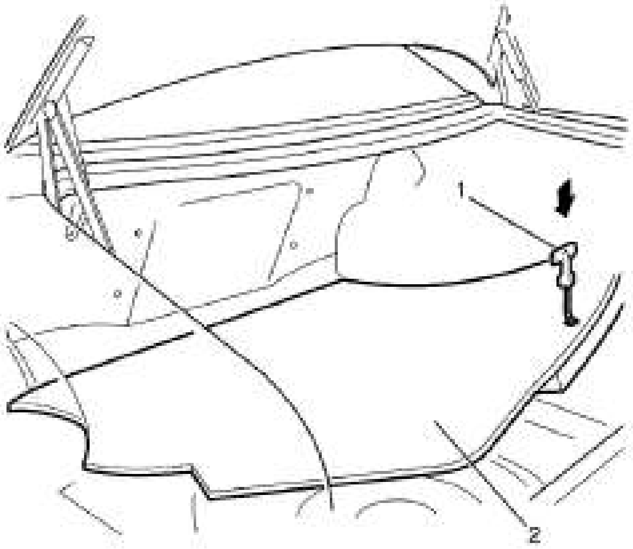
1. Open the luggage compartment lid.



2. Pull the strap (1) on the rear compartment floor panel carpet assembly (2) and lift the rear edge upward.
3. Lift and remove the rear compartment floor panel carpet assembly (2) from the rear compartment.

Installation Procedure

Notice: Refer to General Repair Instructions in the Preface section.



1. Install the rear compartment floor panel carpet assembly (2).
2. Firmly press down on the rear compartment floor panel carpet assembly (2) ensuring correct fitment with quarter panels.
3. Close the luggage compartment lid.

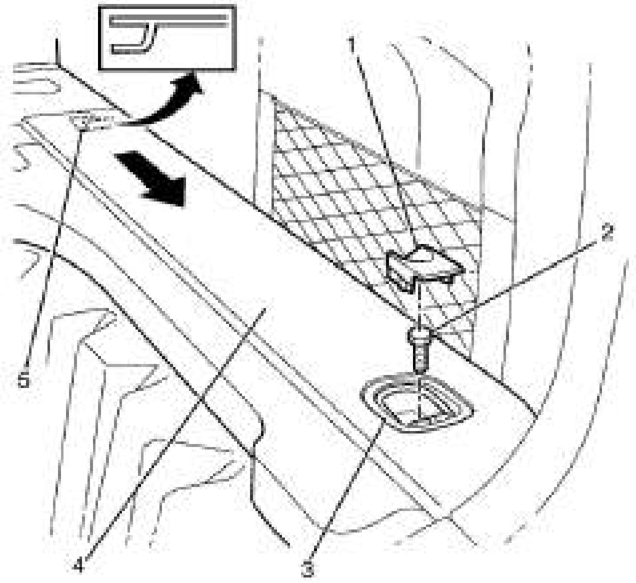
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Floor Coverings and Headlinings | Repair Instructions | **Document ID: 2080802**

Load Floor Stationary Panel Carpet Replacement

Removal Procedure

> **Important:** When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Install a suitable liftgate brace to the vehicle.
2. Remove the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.

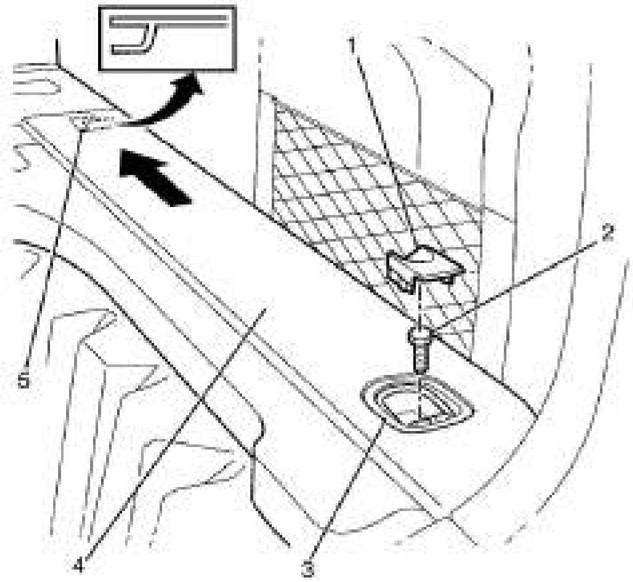


3. Remove the cargo tie down loop bolt cap (1) from the cargo tie down loop assembly (3).
4. Remove the cargo tie down loop assembly to body retaining bolt (2).

> **Important:** Remove the load floor stationary panel by sliding rearward to release the tang (5).

5. Remove the load floor stationary panel carpet (4) from the vehicle.
6. Repeat for opposite side.

Installation Procedure



Important: Install the load floor stationary panel by sliding forward to engage the tang (5).

1. Position the load floor stationary panel carpet (4) to the vehicle.

   Notice: Refer to Fastener Notice in the Preface section.

2. Install the cargo tie down loop assembly to body retaining bolt (2).

   Tighten
   Tighten the bolt to 20 N·m (15 lb ft).

3. Install the cargo tie down loop bolt cap (1) to the cargo tie down loop assembly (3).
4. Repeat for opposite side.
5. Install the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.

   Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

6. Remove the suitable liftgate brace from the vehicle.

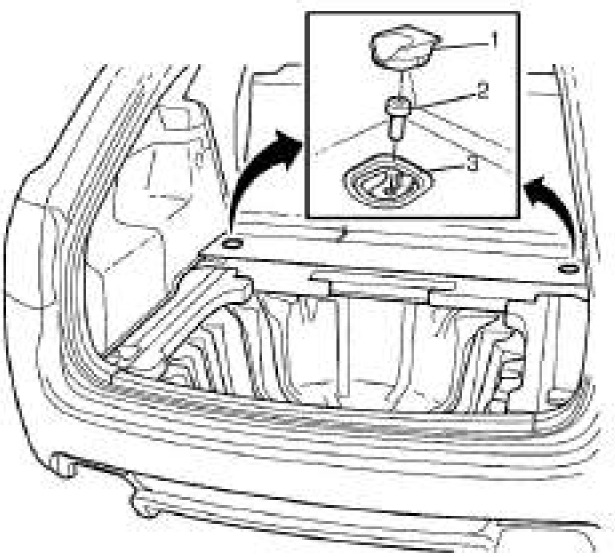
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Floor Coverings and Headlinings | Repair Instructions | **Document ID: 2080803**

Load Floor Front Panel Carpet Replacement

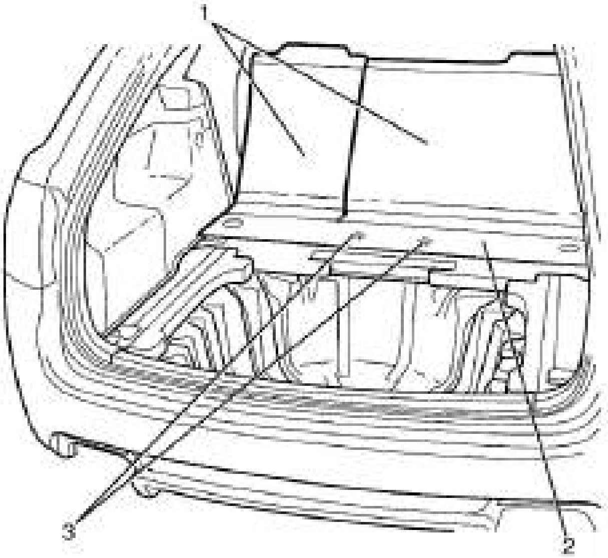
Removal Procedure

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Install a suitable liftgate brace to the vehicle.
2. Remove the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
3. Remove the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.

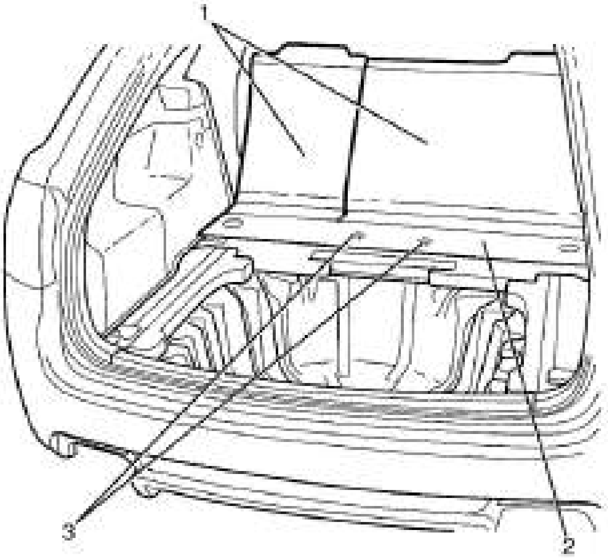


4. Remove the cargo tie down loop bolt caps (1) from the cargo tie down loop assemblies (3).
5. Remove the cargo tie down loop assembly to body retaining bolts (2).



6. Fold the rear seat backs (1) down exposing the load floor front panel carpet (2).
7. Carefully disengage the load floor front panel carpet to body retaining clips (3).
8. Remove the load floor front panel carpet (2) from the vehicle.

Installation Procedure

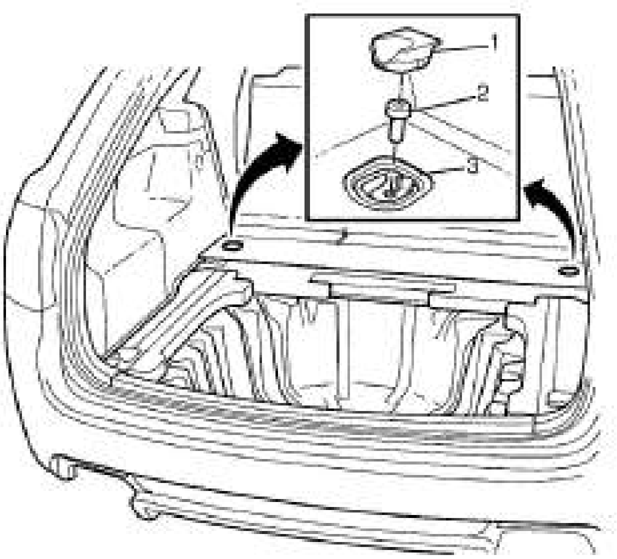


Important: Ensure front of load floor front panel carpet locates under the rear seats.

1. Position the load floor front panel carpet (2) to the vehicle.
2. Push down on the load floor front panel carpet (2) to engage the load floor front panel carpet to body retaining clips (3).

3. Fold the rear seat backs (1) to the up position.

   Notice: Refer to Fastener Notice in the Preface section.



Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

4. Install the cargo tie down loop assembly to body retaining bolts (2).

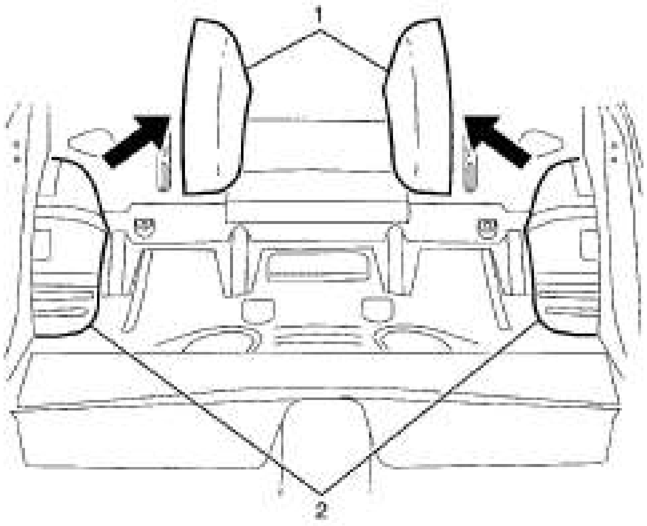
   Tighten
   Tighten the bolts to 20 N·m (15 lb ft)

5. Install the cargo tie down loop bolt caps (1) to the cargo tie down loop assemblies (3).
6. Install load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
7. Install the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
8. Remove the suitable liftgate brace from the vehicle.

Rear Wheelhouse Inner Panel Front Sound Barrier Replacement (Sedan)

Removal Procedure

1. Remove the rear seat back. Refer to Rear Seat Back Replacement.
2. Remove the rear seat cushion. Refer to Rear Seat Cushion Replacement.
3. Remove the seat belt lower retaining bolt. Refer to Front Seat Belt Replacement.
4. Remove the lower quarter trim panel. Refer to Quarter Lower Rear Trim Panel Replacement.



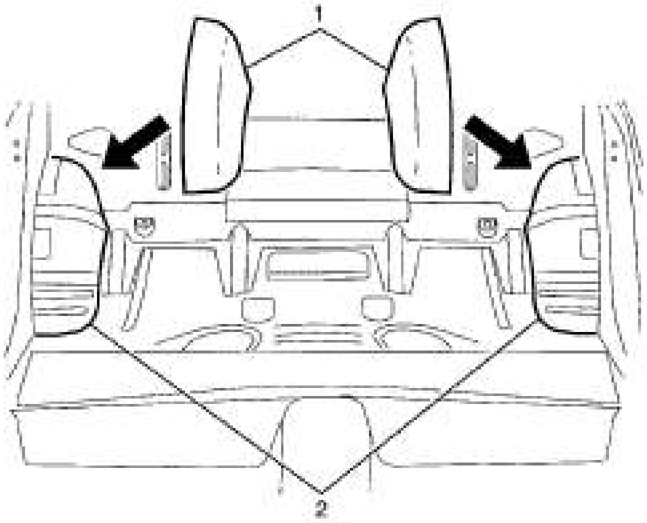
5. Remove the wheelhouse sound barriers (1) by peeling back from the wheel house panel (2).

Installation Procedure

Caution: All floor pan insulator material must meet Federal Vehicle Safety Standards for flammability. Failure to do so could result in personal injury and/or vehicle damage.

Important: Align the sound barriers in order to keep the seat belt and seat attachment areas are clear.

1. Ensure the attachment areas are clear.
2. Remove the backing of the sound barriers.



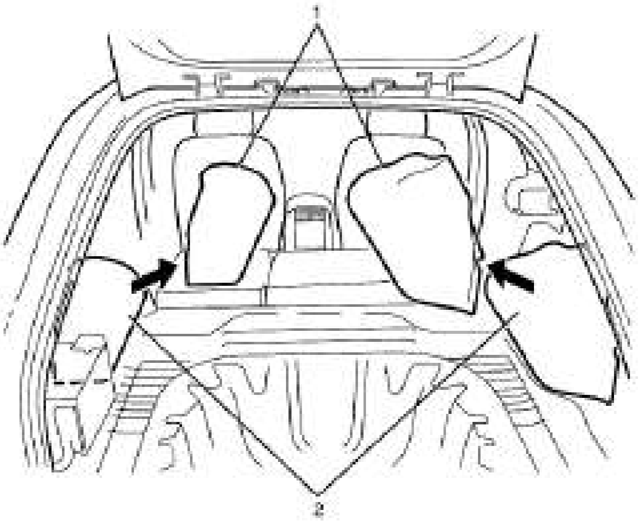
3. Press firmly in all areas in order to secure the sound barriers (1) to the wheelhouse panel (2).
4. Install the lower quarter trim panel. Refer to Quarter Lower Rear Trim Panel Replacement.
5. Install the seat belt lower retaining bolt. Refer to Front Seat Belt Replacement.
6. Install the rear seat cushion. Refer to Rear Seat Cushion Replacement.
7. Install the rear seat back. Refer to Rear Seat Back Replacement.

Rear Wheelhouse Inner Panel Front Sound Barrier Replacement (Sportwagon)

Removal Procedure

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Install a suitable liftgate brace to the vehicle.
2. Remove the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.
3. Remove the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
4. Remove the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
5. Remove the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
6. Remove the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.

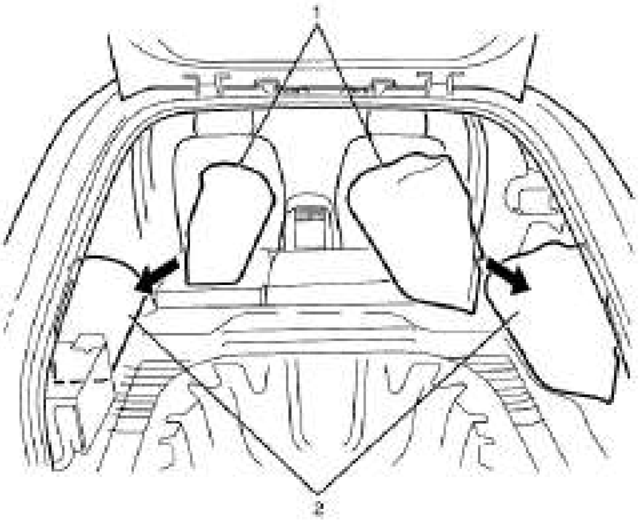


7. Remove the wheelhouse sound barriers (1) from the wheelhouse panels (2).

Installation Procedure

Important: Align the sound barriers in order to keep the seat belt and seat attachment areas clear.

1. Ensure the attachment areas are clear.



2. Install the sound barriers (1) to the wheelhouse panels (2).
3. Install the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
4. Install the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
5. Install the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
6. Install the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
7. Install the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

8. Remove the suitable liftgate brace from the vehicle.

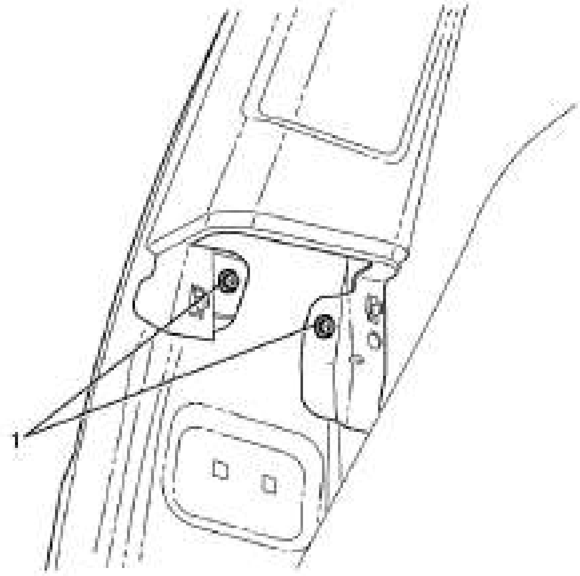
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Floor Coverings and Headlinings | Repair Instructions | Document ID: 2080801

Headlining Trim Panel Replacement (Sportwagon)

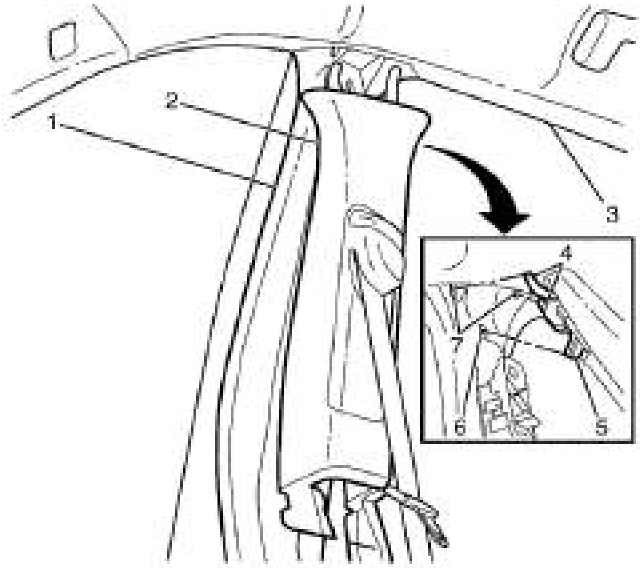
Removal Procedure

Caution: Refer to Battery Disconnect Caution in the Preface section.

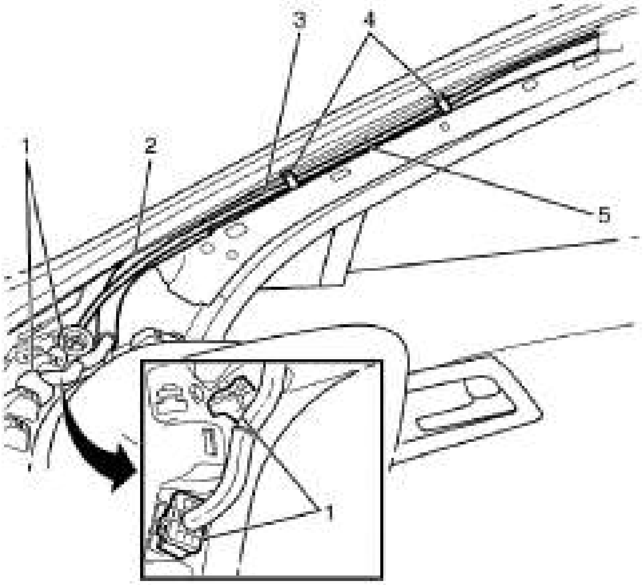
1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
2. Remove the dome lamp assembly. Refer to Dome Lamp Replacement.
3. Remove the rear dome lamp assembly. Refer to Dome Lamp Replacement.
4. Remove the sunshade assembly on both sides. Refer to Sunshade Replacement.
5. Remove the video disc player display bezel - Display (where fitted). Refer to Video Disc Player Bezel Replacement.
6. Remove the video disc player display bezel - Player (where fitted). Refer to Video Disc Player Display Bezel Replacement.
7. Remove the assist handles on both sides. Refer to Assist Handle Replacement.
8. Remove the windshield garnish molding on both sides. Refer to Windshield Garnish Molding Replacement.
9. Remove the center pillar lower trim panel on both sides. Refer to Center Pillar Lower Trim Panel Replacement.



10. Remove the center pillar upper trim panel retaining screws (1). Repeat on opposite side.

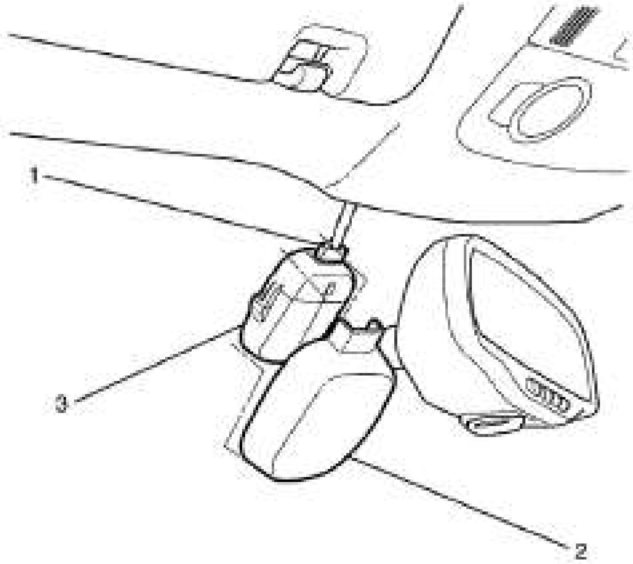


11. Tilt the base of the center pillar upper trim panel (2) away from the center pillar (1) until the center pillar upper trim panel locating dowel (5) has disengaged from the center pillar datum hole (6). Repeat on opposite side.
12. Lower the center pillar upper trim panel (2) down and away from the roof panel trim (3) until the center pillar upper trim panel locating pins (4) have disengaged from the roof panel datum holes (7). Repeat on opposite side.
13. Remove the body lock pillar upper trim panel on both sides. Refer to Body Lock Pillar Upper Trim Panel Replacement.
14. Remove the headlining rear trim panel retainer. Refer to Headlining Rear Trim Panel Retainer Replacement.
15. Remove the body side window rear garnish moulding on both sides. Refer to Body Side Window Rear Garnish Molding Replacement.

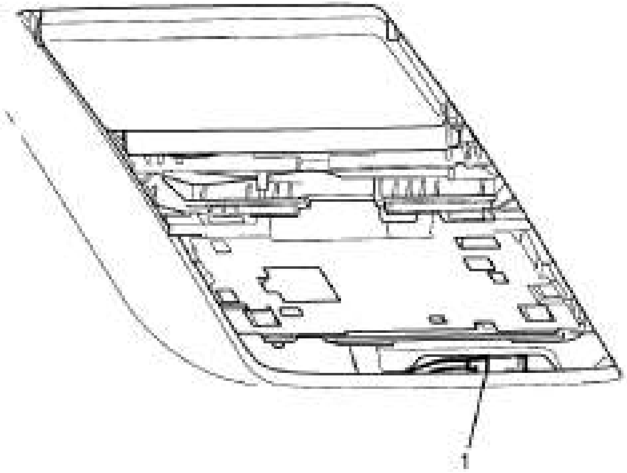


16. Detach the headlining wiring harness (2) from the headlining wiring harness/washer hose retaining clips (4).

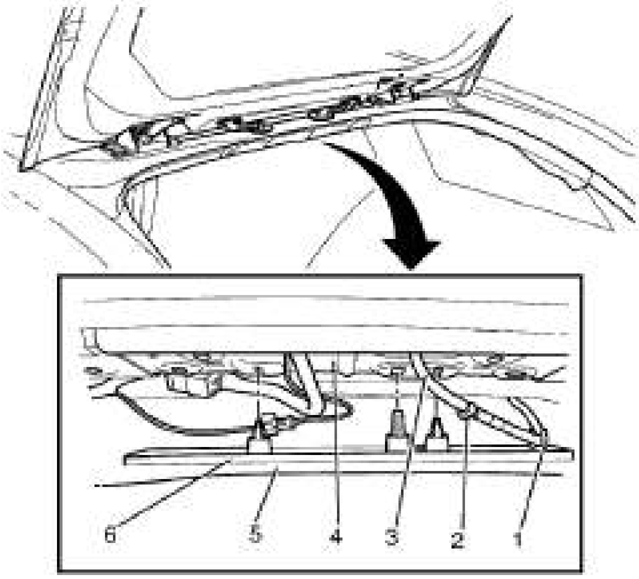
17. Disconnect the headlining wiring harness to instrument panel wiring harness electrical connectors (1).
18. Detach the headlining washer hose (3) from the headlining wiring harness/washer hose retaining clips (4).
19. Cut the headlining washer hose (3) between the headlining wiring harness/washer hose retaining clips (5).



20. Detach the windshield outside moisture sensor cover (2) from the windshield outside moisture sensor (3).
21. Disconnect the windshield outside moisture sensor electrical connector (1) from the windshield outside moisture sensor (3).

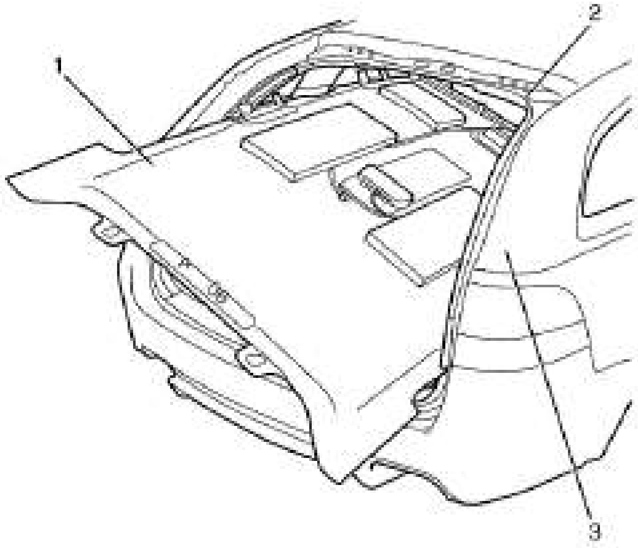


22. Disconnect the headlining wiring harness to rear seat entertainment assembly wiring harness connector (1) (where fitted).
23. Recline both the rear split fold seat backs to their forward position.
24. Recline both the front seat backs to their lowest position.



Important: To avoid damage to the headlining carefully pull down on the headlining rear clip assembly (6) to detach the headlining (5) from the roof panel (4).

25. Detach and lower the headlining (5).
26. Remove the rear window washer hose (3) from the headlining clip assembly washer hose guide (1).
27. Disconnect the rear window washer hose (3) from rear window washer connector (2).



Important: Remove the headlining (1) from the vehicle (3) with the aid or an assistant to avoid marking or damaging it.

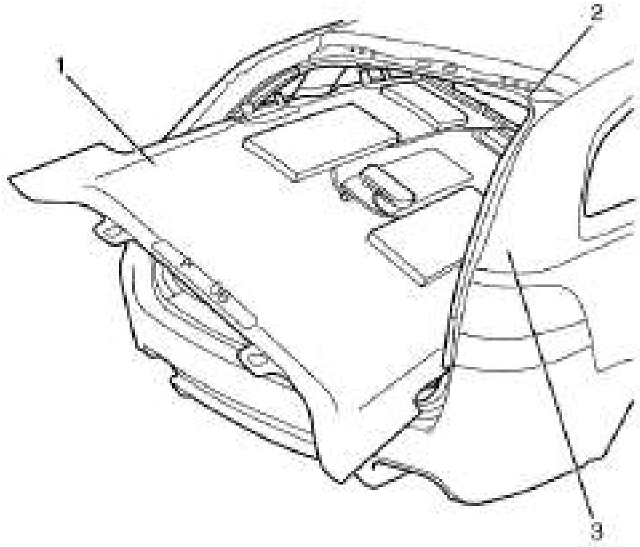
28. Tilt the headlining (1) to one side to achieve maximum clearance between the headlining (1)

and the liftgate opening (2).

Important: Care must be taken not to crease the headlining (1) when removing it through the liftgate opening (2).

29. Remove the headlining (1) from the vehicle (3) through the liftgate opening (2).

Installation Procedure

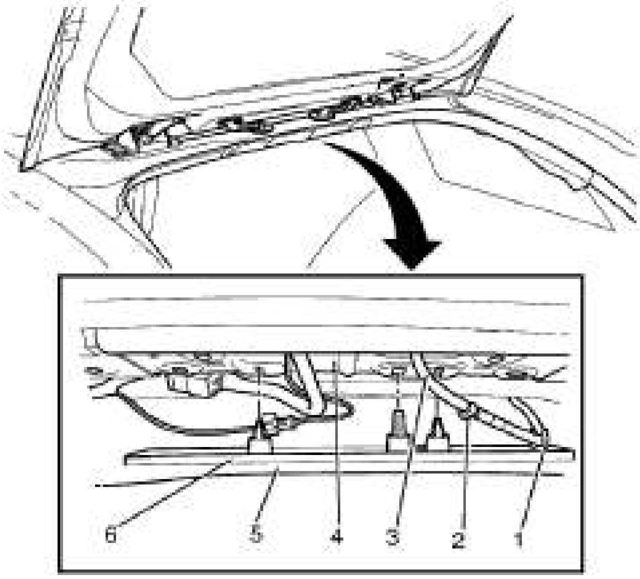


Important: Install the headlining (1) to the vehicle (3) with the aid or an assistant to avoid marking or damaging it.

1. Tilt the headlining (1) to one side to achieve maximum clearance between the headlining (1) and the liftgate opening (2).

   Important: Care must be taken not to crease the headlining (1) when installing it through the liftgate opening (2).

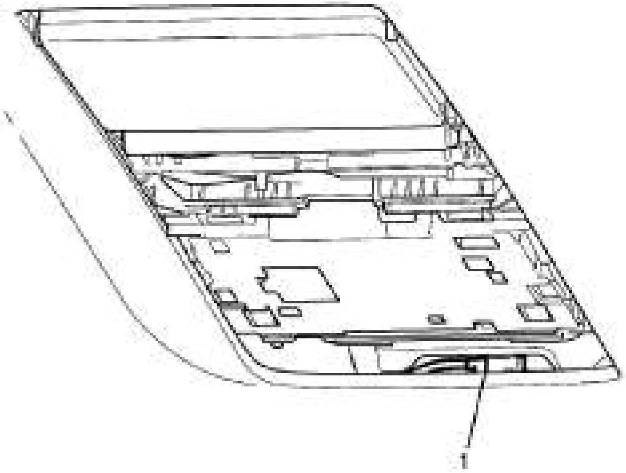
2. Install the headlining (1) to the vehicle (3) through the liftgate opening (2).



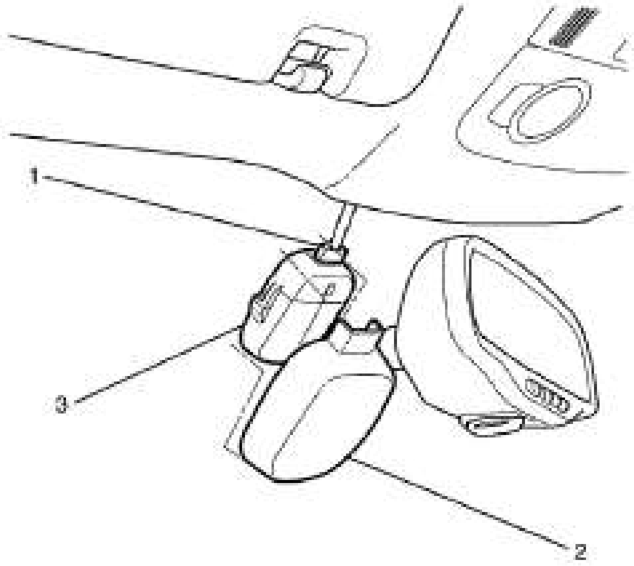
3. Connect the rear window washer hose (3) to the rear window washer connector (2).

   Important: To avoid crimping or puncturing the rear window washer hose (3) make sure it locates correctly into the headlining clip assembly washer hose guide (1).

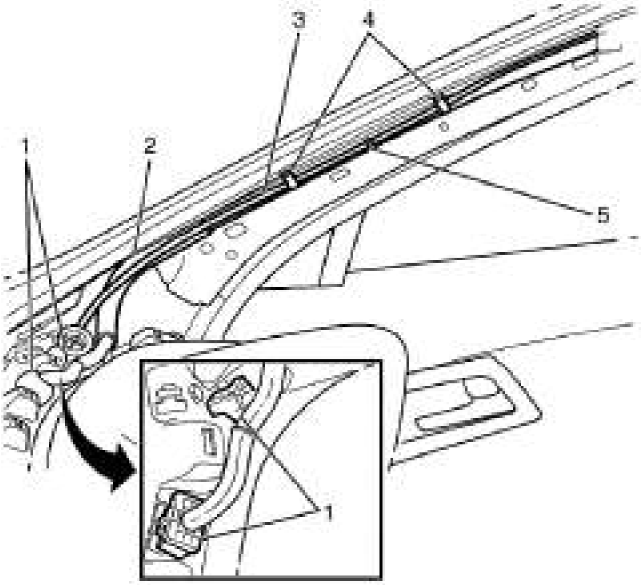
4. Install the headlining clip assembly (6) into the roof panel (4).



5. Connect the headlining wiring harness to rear seat entertainment assembly wiring harness connector (1) (where fitted).
6. Recline both the rear split fold seat backs to their upright position.
7. Recline both the front seat backs to their upright position.



8. Connect the windshield outside moisture sensor electrical connector (1) to the windshield outside moisture sensor (3).
9. Attach the windshield outside moisture sensor cover (2) to the windshield outside moisture sensor (3).

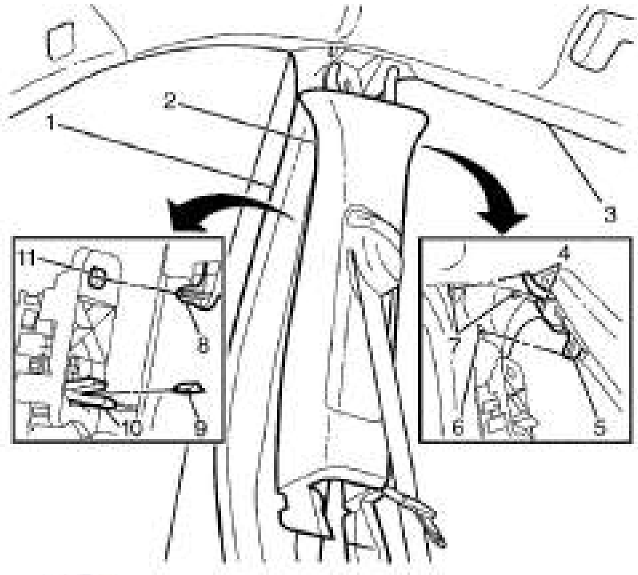


Important: Make sure the headlining washer hose in line joiner (5) is securely installed into both ends of the headlining washer hose (3).

10. Cut the NEW headlining washer hose to the correct length, so it meets up with the old headlining washer hose which was cut.
11. Join the headlining washer hose ends with an in line hose joiner, GMH part number 92213809.
12. Attach the headlining washer hose (2) to the headlining wiring harness/washer hose retaining

clips (4).

13. Connect the headlining wiring harness to instrument panel wiring harness electrical connectors (1).
14. Attach the headlining wiring harness (2) to the headlining wiring harness/washer hose retaining clips (4).
15. Install the body side window rear garnish moulding on both sides. Refer to Body Side Window Rear Garnish Molding Replacement.
16. Install the headlining rear trim panel retainer on both sides. Refer to Headlining Rear Trim Panel Retainer Replacement.
17. Install the body lock pillar upper trim panel on both sides. Refer to Body Lock Pillar Upper Trim Panel Replacement.

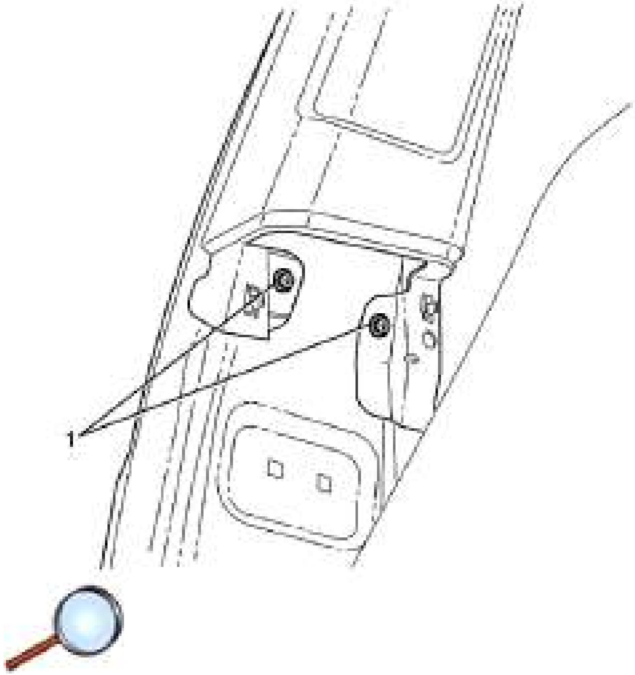


18. Raise the center pillar upper trim panel (2) up towards the roof panel trim (3) until the center pillar upper trim panel locating pins (4) have engaged into the roof panel datum holes (7). Repeat on opposite side.

Important: Make sure the center pillar upper trim height adjuster lever (9) locates into the seat belt height adjuster release lever (10) and the center pillar upper trim height adjuster dowel (8) locates into the seat belt height adjuster datum hole (11). Incorrect fitment may damage the center pillar upper trim height adjuster and/or restrict the front seat belt movement (where fitted).

19. Tilt the base of the center pillar upper trim panel (2) towards the center pillar (1) until the center pillar upper trim panel locating dowel (5) has engaged into the center pillar datum hole (6). Repeat on opposite side.

Notice: Refer to Fastener Notice in the Preface section.



20. Install the center pillar upper trim panel retaining screws (1). Repeat on opposite side.

    Tighten
    Tighten the screws to 2 N·m (18 lb in).

21. Check the seat belt operation on both sides.
22. Install the center pillar lower trim panel on both sides. Refer to Center Pillar Lower Trim Panel Replacement.
23. Install the windshield garnish molding on both sides. Refer to Windshield Garnish Molding Replacement.
24. Install the assist handles on both sides. Refer to Assist Handle Replacement.
25. Install the video disc player display bezel - Player (where fitted). Refer to Video Disc Player Display Bezel Replacement.
26. Install the video disc player display bezel - Display (where fitted). Refer to Video Disc Player Bezel Replacement.
27. Install the sunshade assembly on both sides. Refer to Sunshade Replacement.
28. Install the rear dome lamp assembly. Refer to Dome Lamp Replacement.
29. Install the dome lamp assembly. Refer to Dome Lamp Replacement.

    Caution: Refer to Battery Disconnect Caution in the Preface section.

30. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
31. Check the operation of the rear window washer and make sure there are no water leaks.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Floor Coverings and Headlinings | Repair Instructions | **Document ID: 2080804**

Headlining Trim Panel Replacement (RHD Sedan)

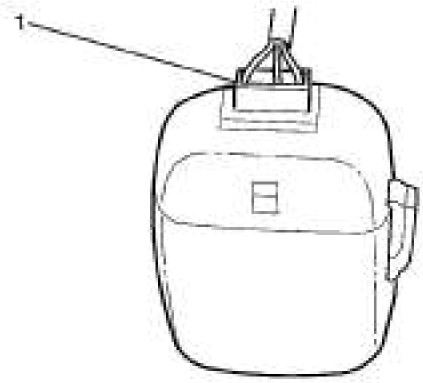
Removal Procedure

Notice: Refer to General Repair Instructions in the Preface section.

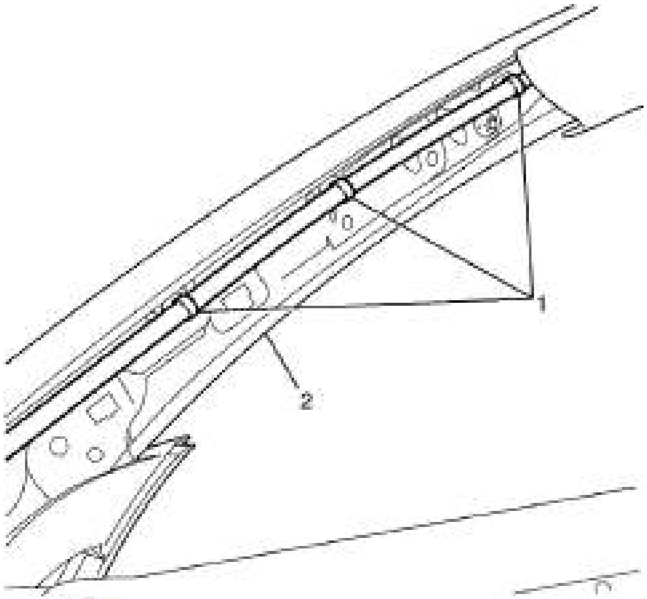
1. Remove the fuse from the passenger compartment fuse and relay panel assembly.
2. Remove the following components as required:
   - Front seats. Refer to Front Seat Replacement - Bucket.
   - Seat head restraints, if fitted. Refer to Rear Seat Head Restraint Replacement.
   - Windshield side garnish, on both sides. Refer to Windshield Garnish Molding Replacement.
   - Trim Panel - Upper Centre Pillar, on both sides. Refer to Center Pillar Upper Trim Panel Replacement.
   - Assist handles (if fitted). Refer to Assist Handle Replacement.
   - Sunshade assembly, on both sides. Refer to Sunshade Replacement.
   - Trim panel rear quarter on both sides. Refer to Quarter Upper Trim Panel Replacement.
   - Dome lamp assembly. Refer to Dome Lamp Replacement.
   - Windshield defroster grille. Refer to Defroster Grille Replacement.

Notice: Refer to General Repair Instructions in the Preface section.

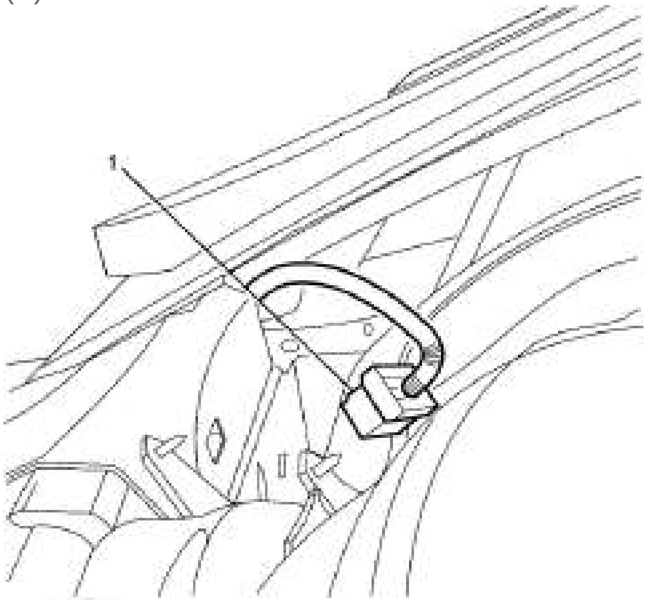
- DVD player surround. Refer to Video Disc Player Display Bezel Replacement in Entertainment.
- DVD screen surround. Refer to Video Disc Player Display Bezel Replacement in Entertainment.



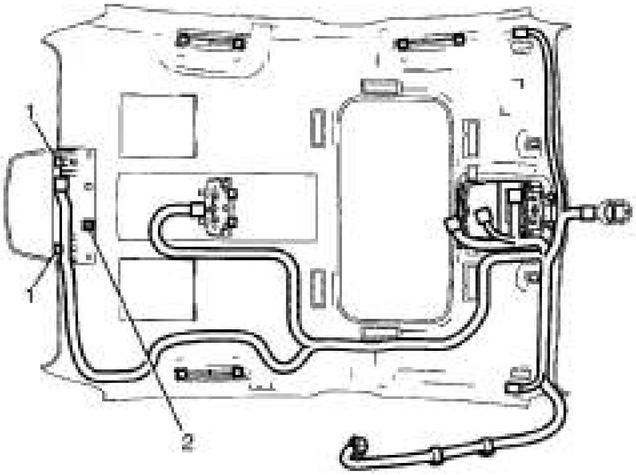
3. Disconnect the rain sensor electrical connector (1).



4. Detach the headlining wiring harness retaining clips (1) located on the A-pillar inner panel (2).

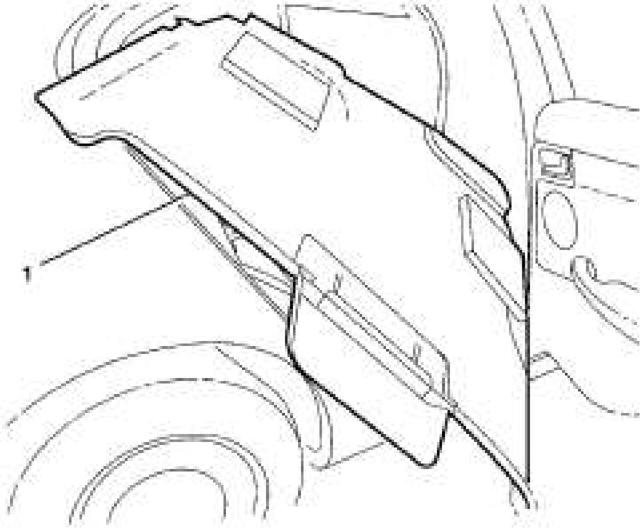


5. Disconnect the headliner electrical connector (1), which is located under the defroster grille.



Important: Removal and installation of the headliner requires the aid of an assistant, under no circumstances should it be removed or installed by one person.

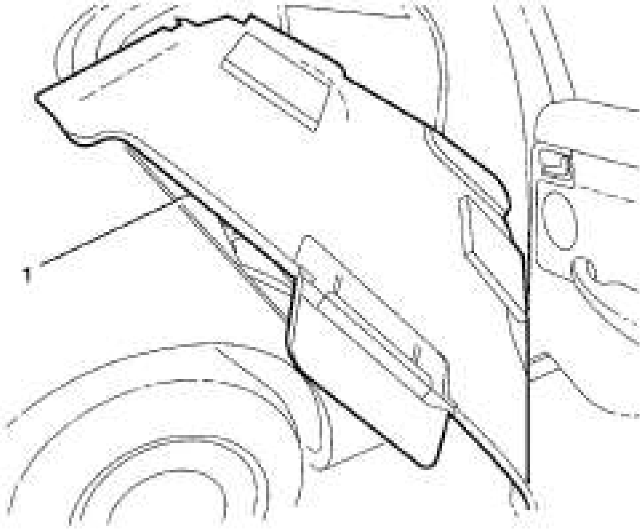
6. Once all the components have been removed, disengage the rear retaining clips (1).
7. Remove the headliner assembly.



Important: The headliner must be removed as shown above.

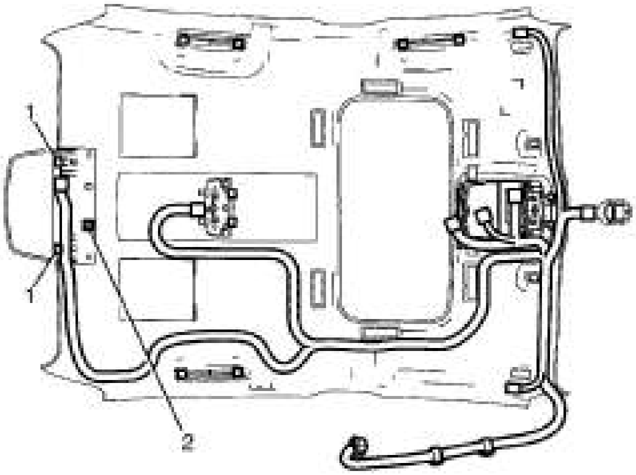
8. With the aid of an assistant, remove the headlining (1) via the right hand passenger rear door.

Installation Procedure



Important: Take care not to fold the headliner. Folding the headliner will result in visible creases in the headliner fabric.

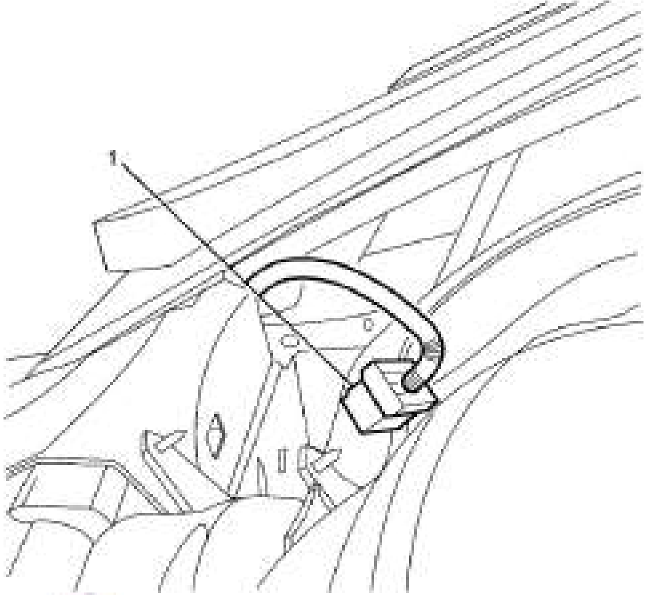
1. With the aid of an assistant, carefully place headlining (1) into vehicle via right hand rear door, as per removal.



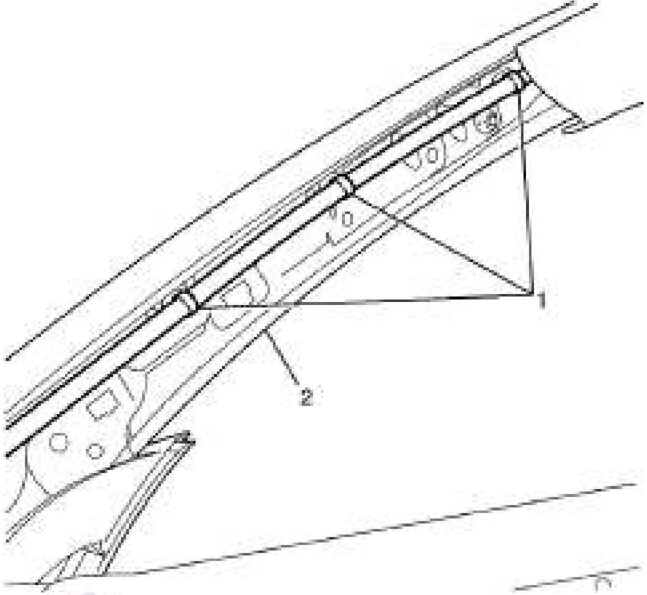
2. Locate the datum pin (2) to the rear of the roof assembly.

Important: Make sure that the headliner datum pin is located in the rear of the roof assembly.

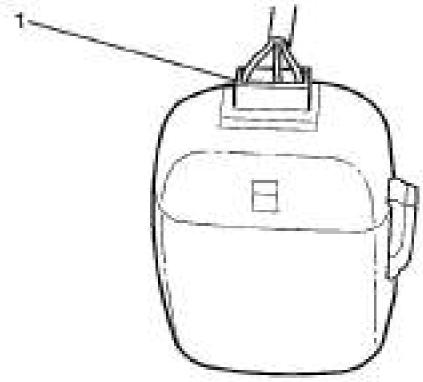
3. Carefully engage the headliner retaining clips (1).



4. Connect the headliner electrical connector (1).



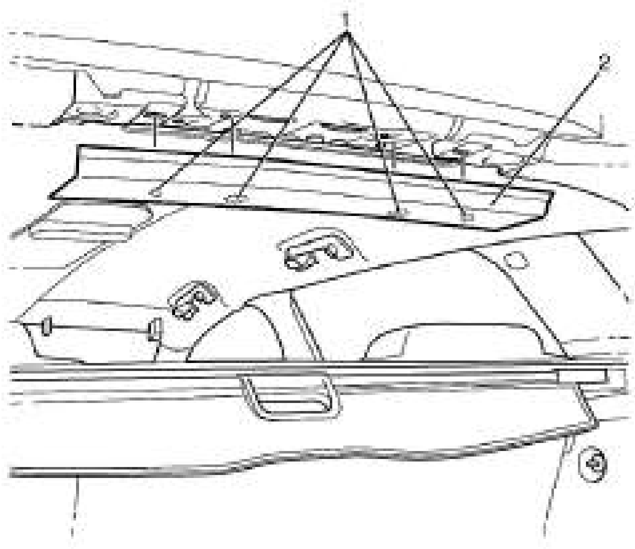
5. Attach the headlining wiring harness retaining clips (1) to the A-pillar inner panel (2).



6. Connect the rain sensor electrical connector (1).
7. Install the following components as per removal:
    - DVD player surround. Refer to Video Disc Player Display Bezel Replacement.
    - DVD screen surround. Refer to Video Disc Player Display Bezel Replacement.
    - Windshield defrost grille. Refer to Defroster Grille Replacement.
    - Dome lamp assembly. Refer to Dome Lamp Replacement.
    - Trim panel rear quarter on both sides. Refer to Quarter Upper Trim Panel Replacement.
    - Sunshade assembly, on both sides. Refer to Sunshade Replacement.
    - Assist handles (if fitted). Refer to Assist Handle Replacement.
    - Trim Panel - Upper Centre Pillar, on both sides. Refer to Center Pillar Upper Trim Panel Replacement.
    - Windshield side garnish, on both sides. Refer to Windshield Garnish Molding Replacement.
    - Seat head restraints, if fitted. Refer to Rear Seat Head Restraint Replacement.
    - Front seats. Refer to Front Seat Replacement - Bucket.
8. Test all components removed for correct operation.

Headlining Rear Trim Panel Retainer Replacement

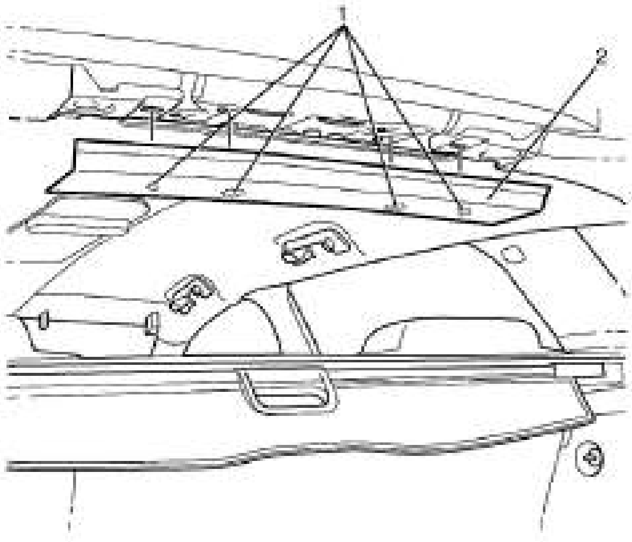
Removal Procedure



Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Install a suitable liftgate brace to the vehicle.
2. Using both hands, carefully disengage the headlining rear trim panel retainer forward edge to body retaining clips (1).
3. Remove the headlining rear trim panel retainer (2) from the vehicle.

Installation Procedure



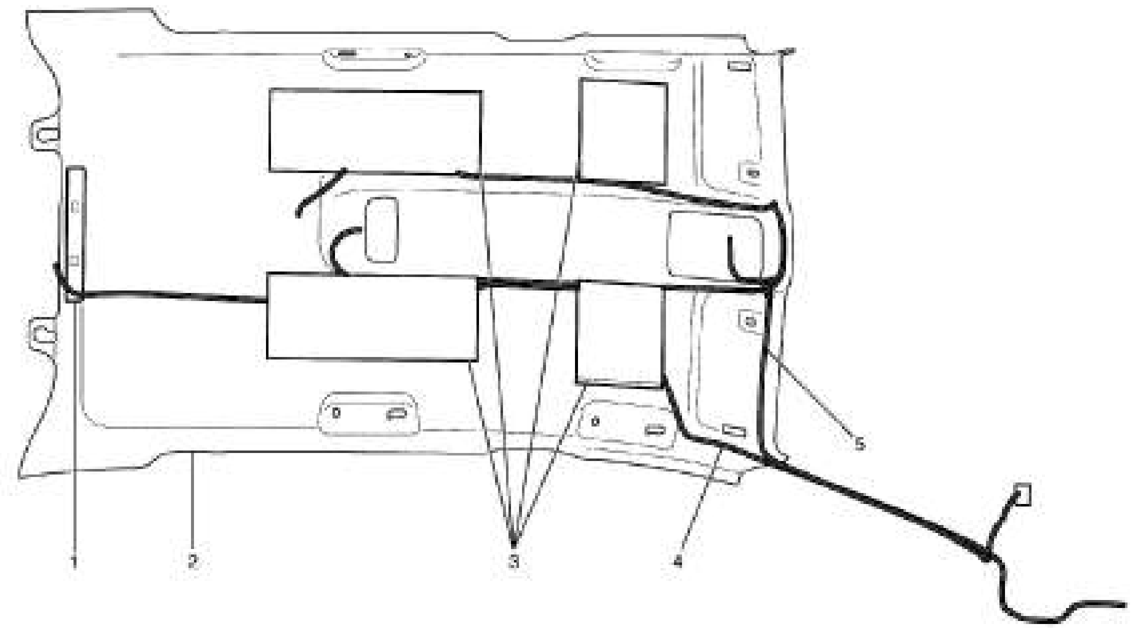
Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Position the headlining rear trim panel retainer (2) to the vehicle.
2. Carefully engage the headlining rear trim panel retainer to body retaining clips (1). An audible click will confirm correct installation.
3. Ensure the trailing edge of the headlining rear trim panel is correctly engaged into the liftgate opening seal.
4. Remove the suitable liftgate brace from the vehicle.

Headliner Description (Sportwagon)

Formed Headlining

Headliner Component View



(1) Headliner Rear Clip Assembly
(2) Headliner
(3) Acoustic Pads
(4) Washer Hose
(5) Wiring Harnesses

Important: The headlining (2) is only serviced as a complete assembly.

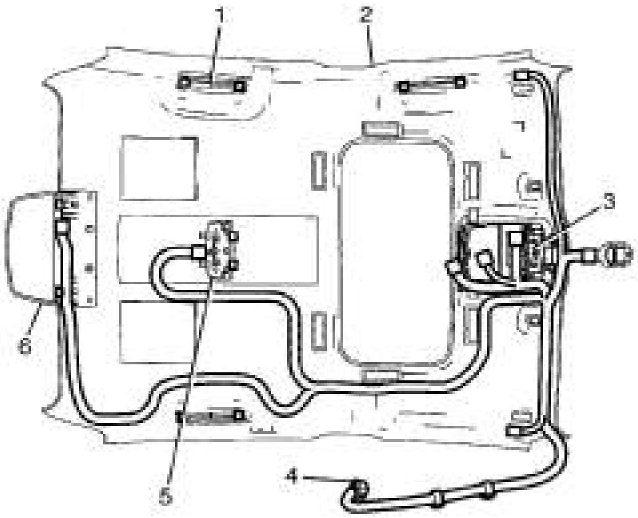
The headlining (2) is a one-piece composite substrate that is covered with a foam cloth facing. The construction of the composite substrate does not allow for replacement of the cloth facing and requires that the headlining substrate and cloth be serviced as a complete assembly. The headlining wiring harness (5), acoustic pads (3), and the headlining rear clip assembly (1) are an integral part of the headlining (2) and are not serviced as separate components. The rear window washer hose (4) is also an integral part of the headlining (2) but is serviceable. The headlining is retained to the roof panel by the headlining rear clip assembly (1), assist handles and the front sunshades. Additional support is also provided by interior trims and panels around the perimeter and in the centre of the headlining (2).

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Floor Coverings and Headlinings | Description and Operation | **Document ID: 2067563**

Headliner Description (RHD Sedan)

Formed Headliner

Important: The headliner is only serviced as a complete assembly



- The headliner (2) is a one-piece composite substrate that is covered with a foam cloth facing.
- The electrical wiring harness (4) for the roof lighting (3, 5), is not a serviceable item and should be left attached to the headliner when the headliner is being removed.
- The headliner is held up to the roof panel by the use of located components, the overhead console (3), the assist handles (1) fasteners, the rear high mounted stop lamp (6).
- If the vehicle is equipped with a sunroof, there are six patches of velcro™ material around the sunroof opening which add extra support for the headliner.

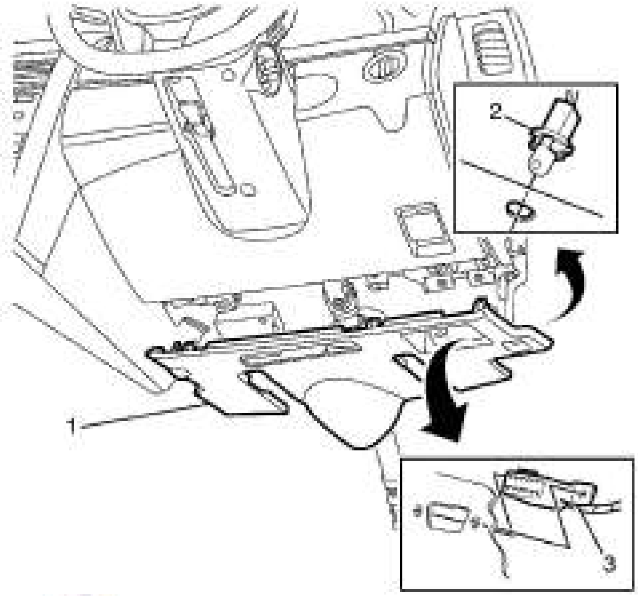
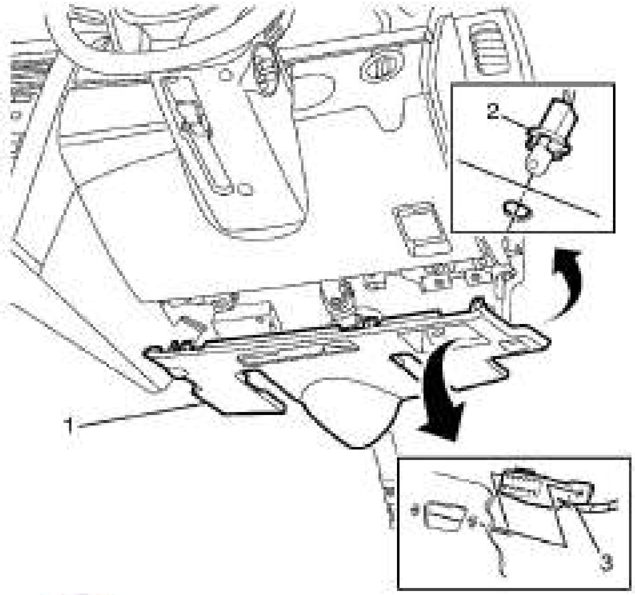
Instrument Panel Insulator Panel Replacement - Right Side (RHD)

Removal Procedure



1. Remove the diagnostic plug (3) from the I/P lower trim plate assembly (1).
2. Grasp the I/P lower trim plate assembly (1) and carefully pull downward to disengage the retaining clips.
3. Disconnect the courtesy lamp socket assembly (2) from the right lower trim plate by turning the socket counterclockwise.
4. Remove the I/P lower trim plate assembly (1).

Installation Procedure

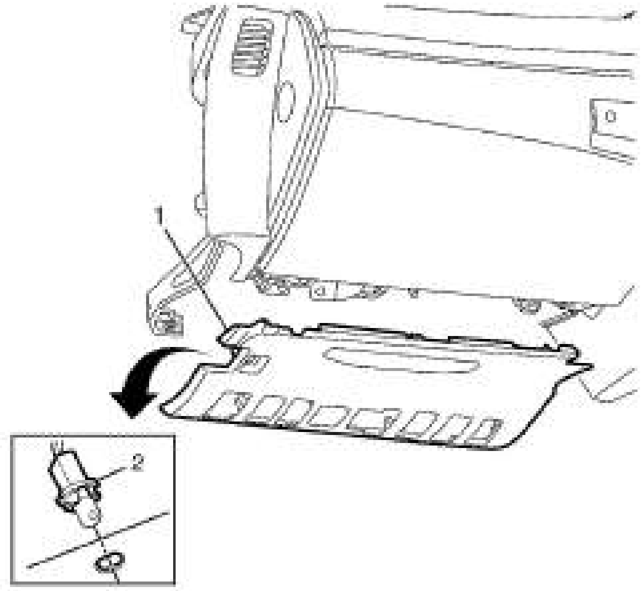


1. Connect the courtesy lamp socket assembly (2) to the I/P lower trim plate assembly (1).
2. Install the diagnostic plug (3) to the I/P lower trim plate assembly (1).
3. Align the I/P lower trim plate assembly (1) to the I/P.
4. Install the I/P lower trim plate assembly (1) to the I/P by pushing in the area of the retaining clips (2).
5. Ensure all clips are located correctly.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Instrument Panel and Console Trim | Repair Instructions | Document ID: 1982202

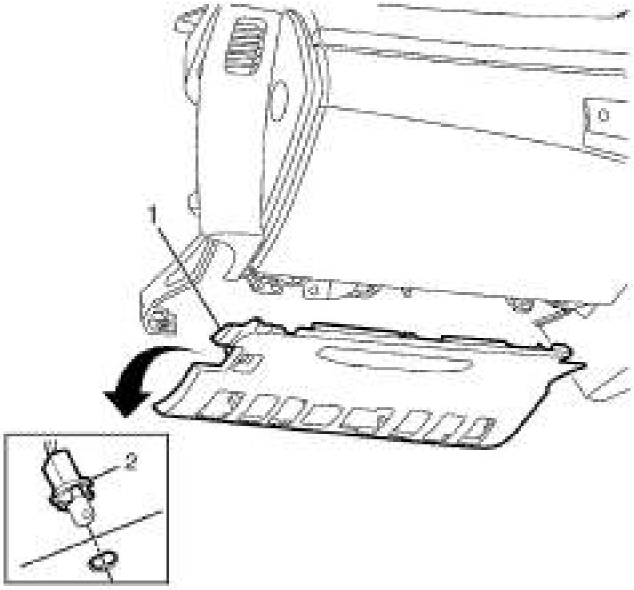
Instrument Panel Insulator Panel Replacement - Left Side (RHD)

Removal Procedure



1. Grasp the I/P lower trim plate assembly (1) and carefully pull downward to disengage the retaining clips.
2. Remove the courtesy lamp socket assembly (2) from the left lower trim plate by turning the socket counter-clockwise.
3. Remove the I/P lower trim plate assembly (1).

Installation Procedure

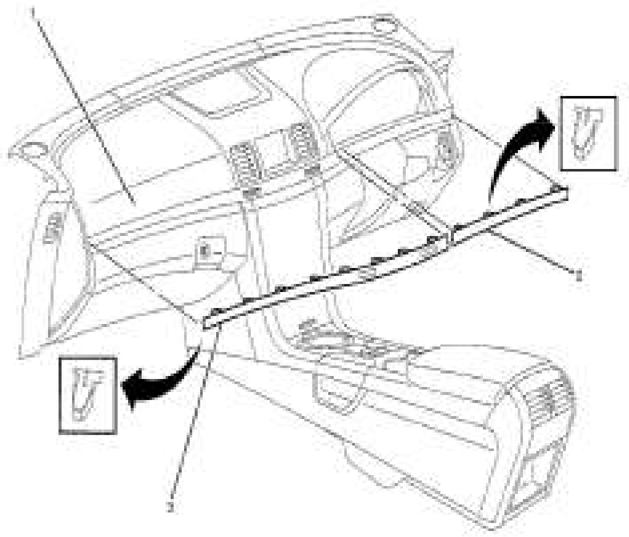


1. Install the courtesy lamp socket assembly (2) to the I/P lower trim plate assembly (1).
2. Align the I/P lower trim plate assembly (1) to the I/P.
3. Attach the I/P lower trim plate assembly (1) to the I/P by engaging the retaining clips.
4. Ensure all clips are located correctly.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Instrument Panel and Console Trim | Repair Instructions | Document ID: 1992224

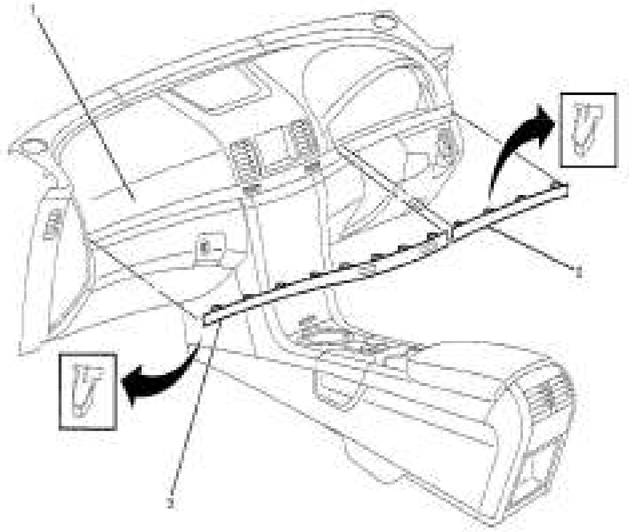
Instrument Panel Trim Panel Replacement (SWB RHD)

Removal Procedure



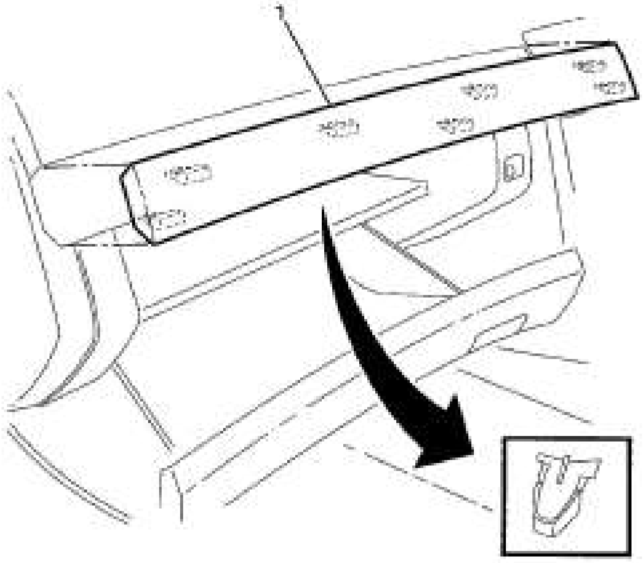
1. Using a suitable tool disengage the right hand side trim panel (2) retaining clips and remove the trim panel (2) from the I/P pad (1).
2. Using a suitable tool disengage the left hand side trim panel (3) retaining clips and remove the trim panel (3) from the I/P pad (1).

Installation Procedure



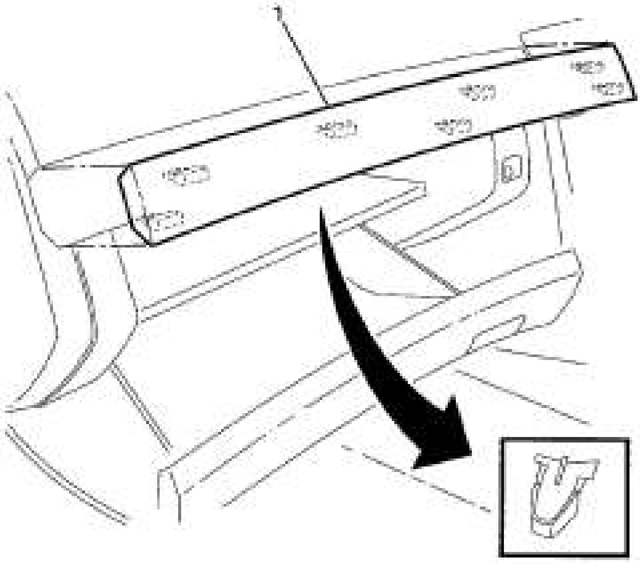
1. Align the left hand trim panel (3) with the I/P pad (1).
2. Install the trim panel (3) by firmly engaging the retaining clips.
3. Align the right hand trim (2) panel with the I/P pad (1).
4. Install the trim panel (2) by firmly engaging the retaining clips.

Removal Procedure - (SV6, SS and SSV)



1. Using a suitable tool disengage the trim panel (1) retaining clips.
2. Remove the trim panel (1) from the I/P pad.

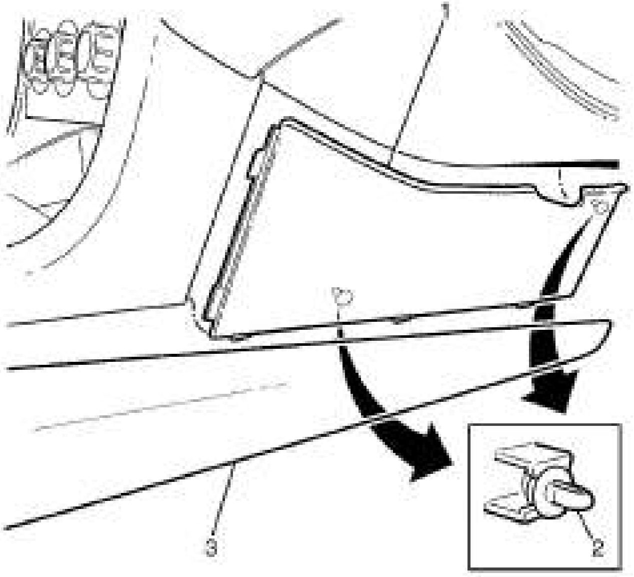
Installation Procedure



1. Align the trim panel (1) with the I/P pad.
2. Install the trim panel (1) to the I/P pad by engaging the retaining clips.
3. Ensure the trim panel (1) is flush with the I/P pad.

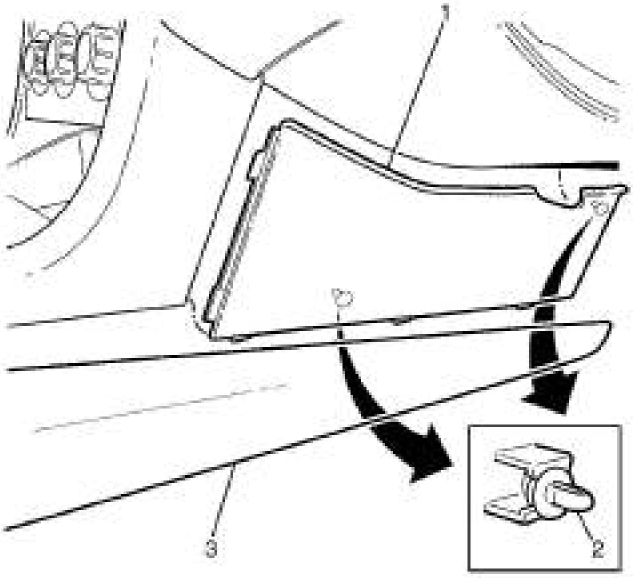
Instrument Panel Extension Replacement

Removal Procedure



1. Disengage the I/P extension panel (1) to I/P carrier retaining clips (2).
2. Remove the I/P extension panel (1) from the centre console side trim panel (3).

Installation Procedure



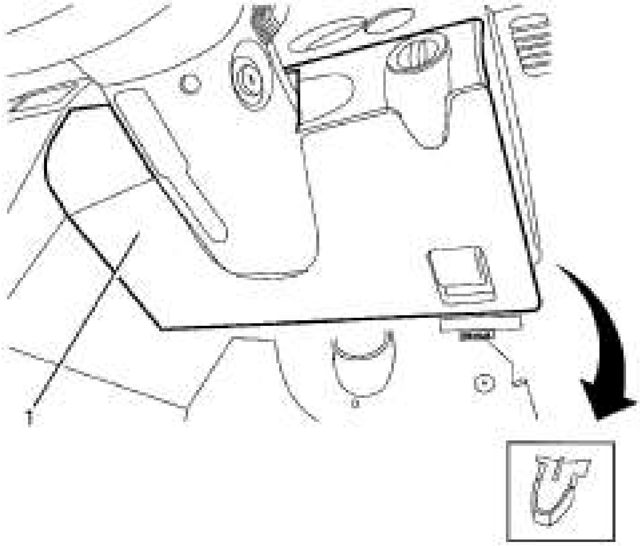
1. Align the I/P extension panel (1) with the I/P carrier.
2. Engage the I/P extension panel (1) to I/P carrier retaining clips (2).
3. Install the centre console side trim panel (3) to the I/Pextension panel (1).

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Instrument Panel and Console Trim | Repair Instructions | **Document ID: 1982201**

Knee Bolster Replacement (RHD)

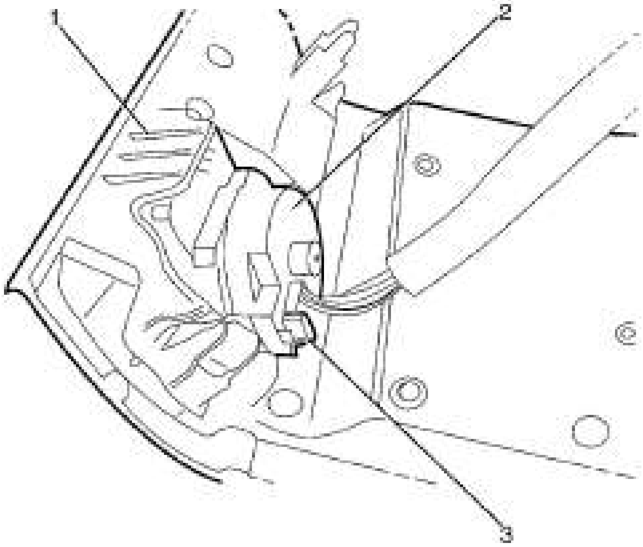
Removal Procedure

1. Remove the insulator panel. Refer to Instrument Panel Insulator Panel Replacement - Right Side .
2. Remove the Instrument Panel Outer Trim Cover. Refer to Instrument Panel Outer Trim Cover Replacement .



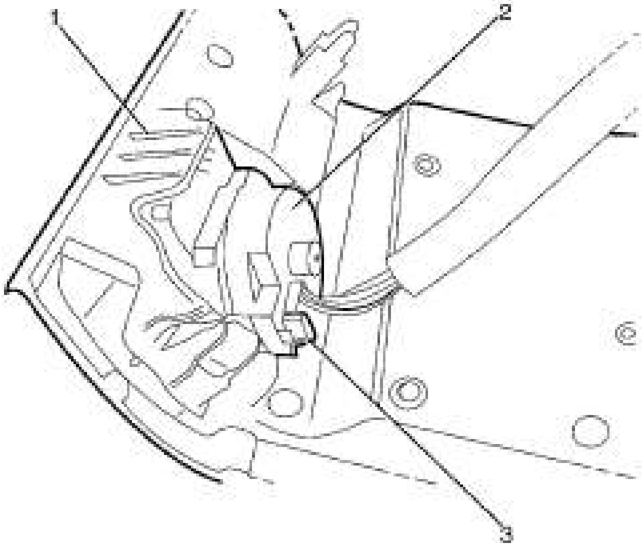
Important: When removing the knee bolster, care must be taken not to scratch the steering column cover. This can be achieved by slightly bending the knee bolster to avoid contact with the steering column.

3. Grasp the knee bolster assembly (1) and carefully pull downward to disengage the retaining clips.

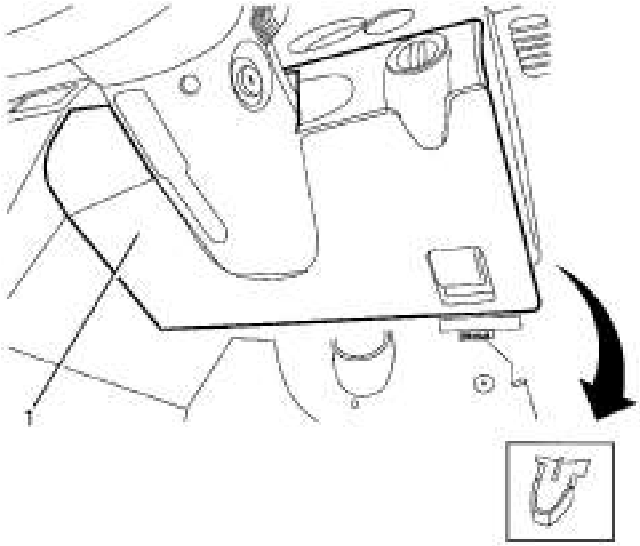


4. Disconnect the headlamp switch (2) electrical connecter (3) from headlamp switch.
5. Remove the knee bolster (1).

Installation Procedure



1. Connect the headlamp switch (2) electrical connector (3).
2. Align the knee bolster (1) with the I/P pad.



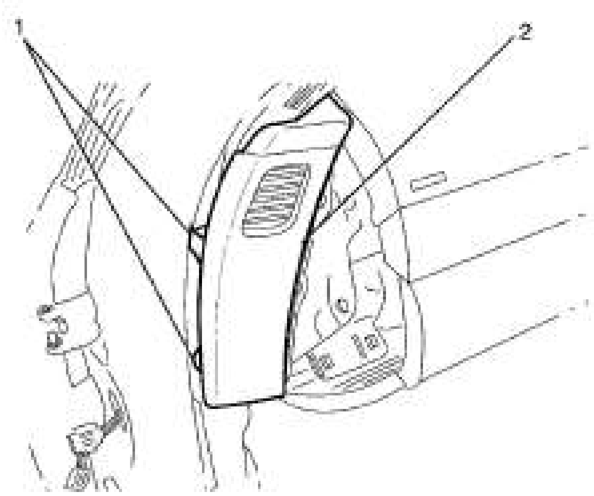
3. Install the knee bolster (1) to the I/P by engaging the retaining clips.
4. Install the Instrument Panel Outer Trim Cover. Refer to Instrument Panel Outer Trim Cover Replacement .
5. Install the insulator panel. Refer to Instrument Panel Insulator Panel Replacement - Right Side .
6. Ensure all clips are located correctly.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Instrument Panel and Console Trim | Repair Instructions | **Document ID: 2005931**

Instrument Panel Side Trim Panel Replacement

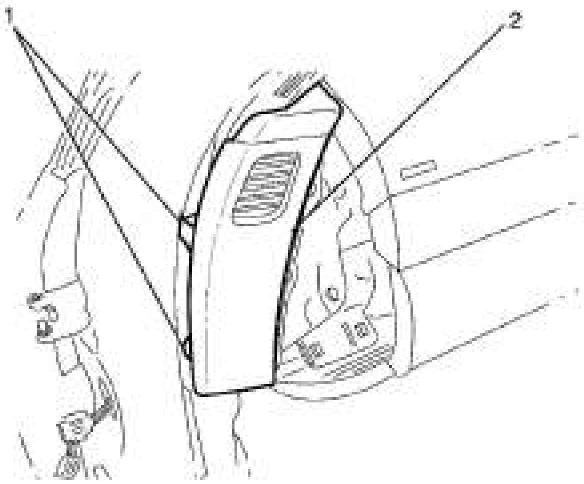
Removal Procedure

1. Remove the instrument panel outer trim cover. Refer to Instrument Panel Outer Trim Cover Replacement.



2. Grasp the front lower area of the centre A pillar ventilation trim panel (2) and carefully pull to disengage the retaining clips (1). The left side is shown, the right side is similar.
3. Remove the centre A pillar ventilation trim panel (2) rotating upwards to disengage remaining clips.

Installation Procedure



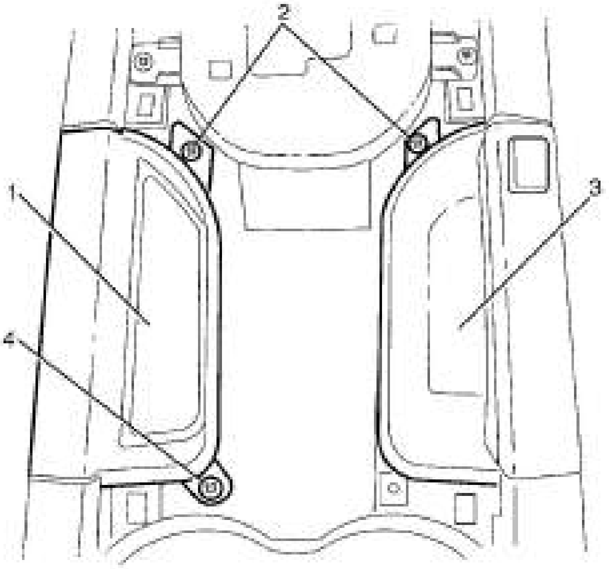
1. Align the center A pillar ventilation trim panel (2) to the A pillar and correctly locate the upper clips (1).
2. Install the center A pillar ventilation trim panel (2) to the A pillar by engaging the retaining clips (1).
3. Ensure all clips are installed correctly.
4. Install the instrument panel outer trim cover. Refer to Instrument Panel Outer Trim Cover Replacement.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Instrument Panel and Console Trim | Repair Instructions | **Document ID: 1995053**

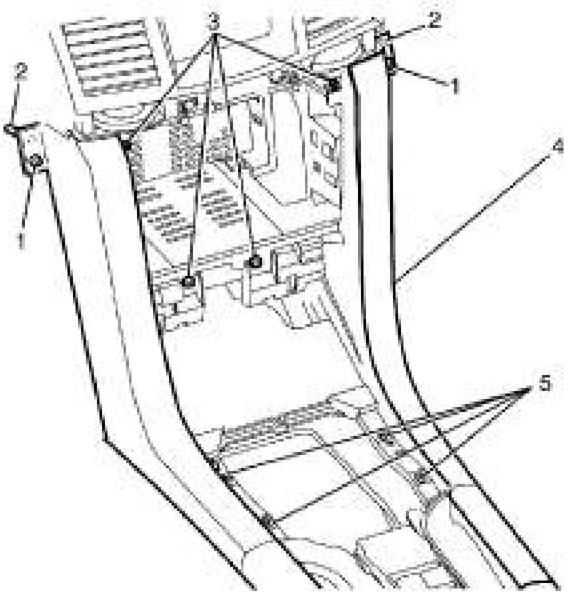
Instrument Panel Center Trim Panel Replacement (SWB RHD)

Removal Procedure - (Omega)

1. Remove the knee bolster. Refer to Knee Bolster Replacement .
2. Remove the instrument panel compartment. Refer to Instrument Panel Compartment Replacement .
3. Remove the radio. Refer to Radio Replacement .
4. Remove the centre console trim plate. Refer to Console Trim Plate Replacement .

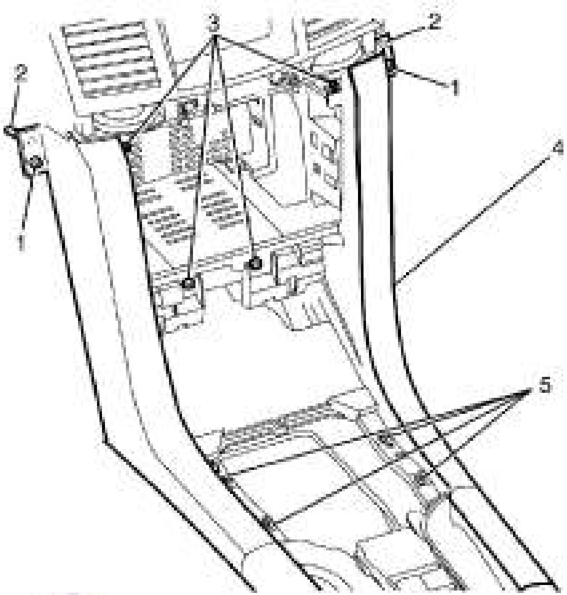


5. Remove the coin holder upper retaining screws (2,4) and remove the coin holder (1).
6. Remove the park recces tray upper retaining screw (2) and remove the recess trim (3).



7. Remove the trim panel (4) to I/P tower lower retaining screws (1).
8. Remove the upper trim panel retaining screws (1) from the trim panel (4).
9. Remove the trim panel (3) to centre console retaining screws (5).
10. Remove the trim panel (5) to centre console

Installation Procedure



1. Install the trim panel to the I/P carrier.

   Notice: Refer to Fastener Notice in the Preface section.

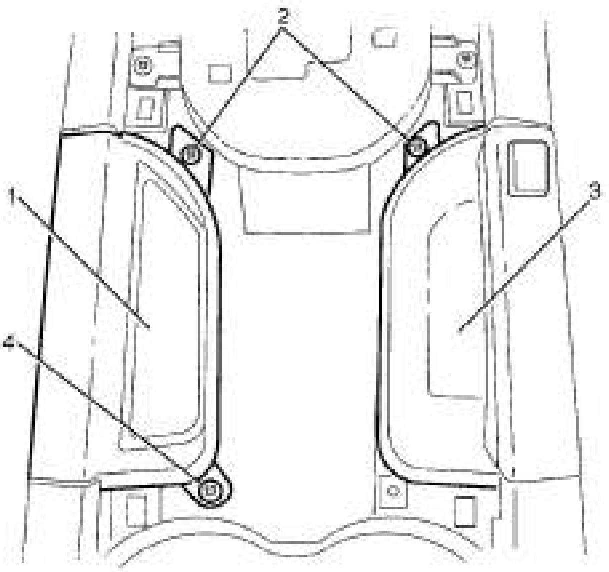
2. Install the trim panel to centre console retaining screws (1) and (3).

   Tighten
   Tighten the screws (1) and (3) to 2 N·m (18 lb in).

3. Install the trim panel (4) to I/P tower retaining screws (1) and (3).

   Tighten
   Tighten the screws (3) to 2 N·m (18 lb in).

   Notice: Refer to Fastener Notice in the Preface section.



4. Install the coin holder upper retaining screws (2,4) and remove the coin holder (1).

   Tighten
   Tighten the screws (1) to 2 N·m (18 lb in).

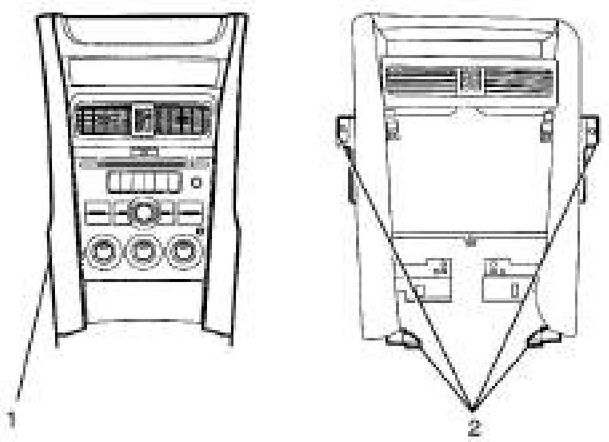
5. Install the park recces tray upper retaining screw (2) and remove the recess trim (3).

   Tighten
   Tighten the screws (1) to 2 N·m (18 lb in).

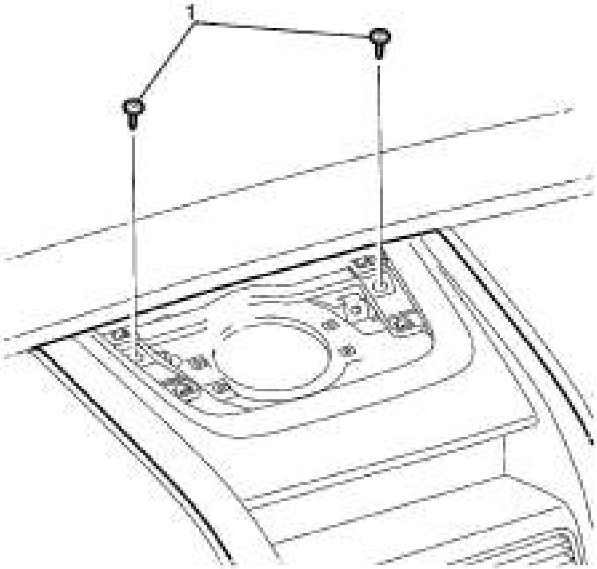
6. Install the radio. Refer to Radio Replacement .
7. Install the instrument panel compartment. Refer to Instrument Panel Compartment Replacement .
8. Install the knee bolster. Refer to Knee Bolster Replacement .
9. Install the centre console trim plate. Refer to Console Trim Plate Replacement .
10. Test radio for correct operation.

Removal Procedure - (SV6,SS and SS-V)

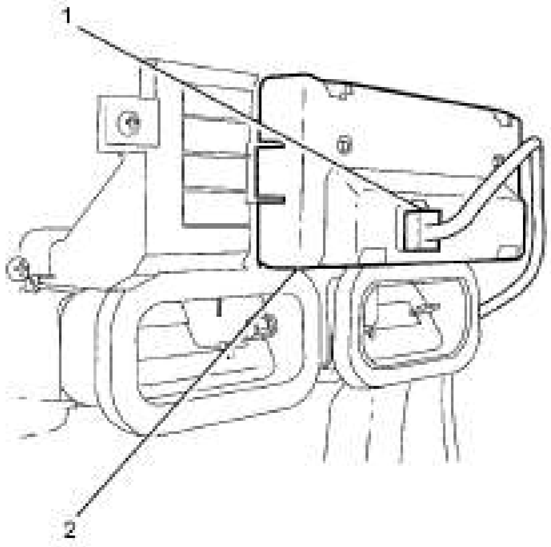
1. Remove the knee bolster. Refer to Knee Bolster Replacement .
2. Remove the instrument panel compartment. Refer to Instrument Panel Compartment Replacement .
3. Remove the radio fascia. Refer to Instrument Panel Compartment Replacement .



4. Remove the trim panel (1) to I/P tower lower retaining screws (2).

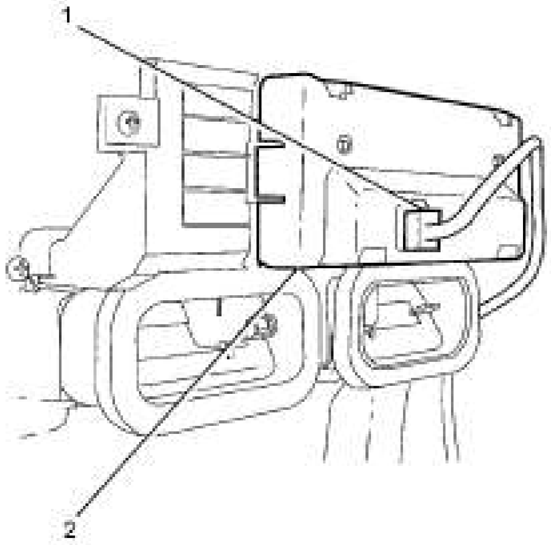


5. Remove the upper trim panel to I/P pad retaining screws (1).
6. Disengage the trim panel to I/P pad retaining clips, located at the top of the trim panel.
7. Lift the trim panel upward and forward to gain access to the multi function display unit electrical connector.



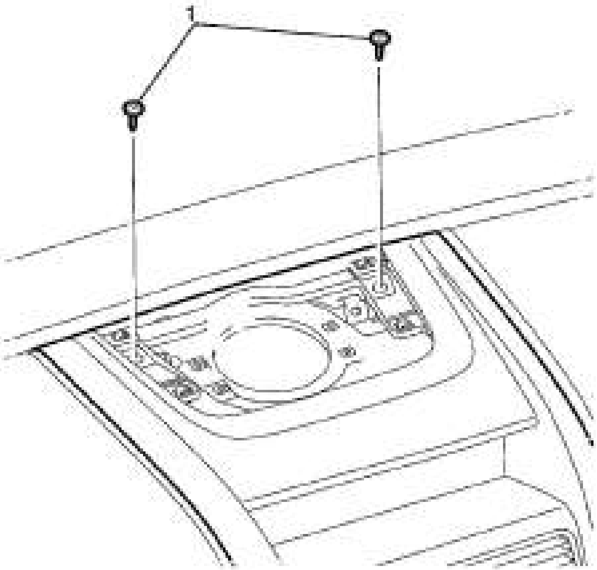
8. Disconnect the multi function display unit (2) electrical connector (1).
9. Remove the trim panel.

Installation Procedure



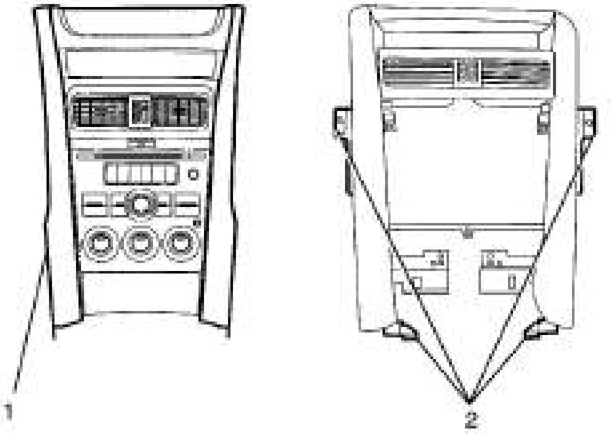
1. Connect the multi function display unit (2) electrical connector (1).

   Notice: Refer to Fastener Notice in the Preface section.



2. Install the top trim panel to I/P pad retaining screws (1).

   Tighten
   Tighten the screws (1) to 2 N·m (18 lb in).



3. Align the trim panel (1) with the I/P tower.
4. Engage the trim panel retaining clips.

   Notice: Refer to Fastener Notice in the Preface section.

5. Install the trim panel to I/P tower retaining screws (2).

Tighten
Tighten the screws (1) to 2 N·m (18 lb in).

6. Install the radio fascia. Refer to Instrument Panel Compartment Replacement .
7. Install the instrument panel compartment. Refer to Instrument Panel Compartment Replacement
8. Install the knee bolster. Refer to Knee Bolster Replacement .
9. Test the multi function display and radio for correct operation.

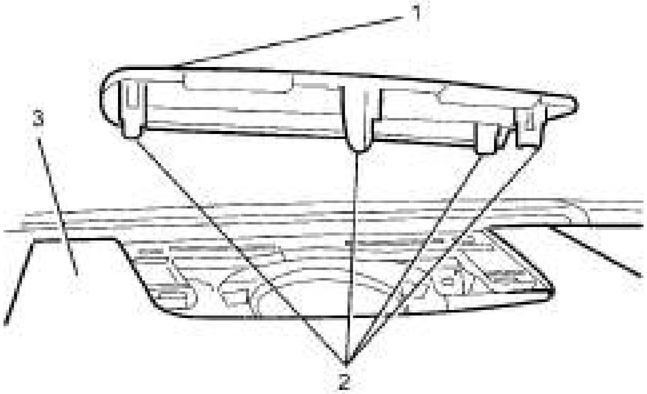
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Instrument Panel and Console Trim | Repair Instructions | **Document ID: 1995179**

Instrument Panel Upper Trim Panel Replacement (LWB SWB)

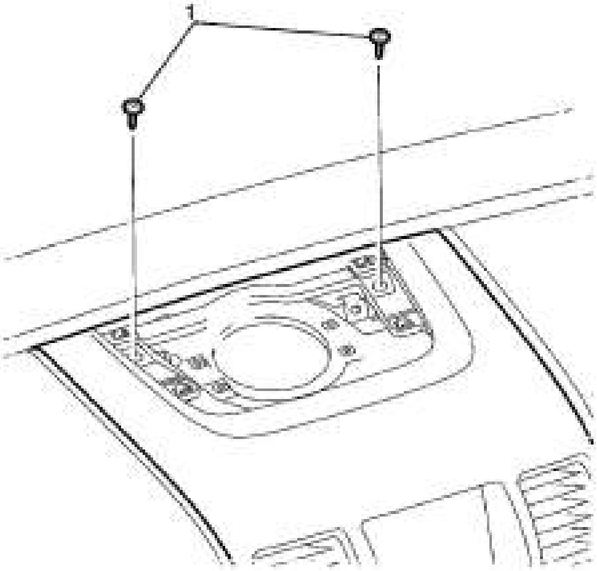
Removal Procedure

Notice: Refer to General Repair Instructions in the Preface section.

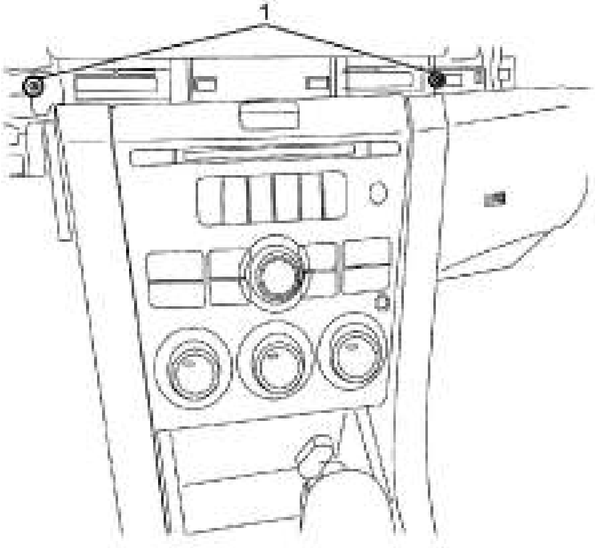
1. Remove the I/P trim panel. Refer to Instrument Panel Trim Panel Replacement.



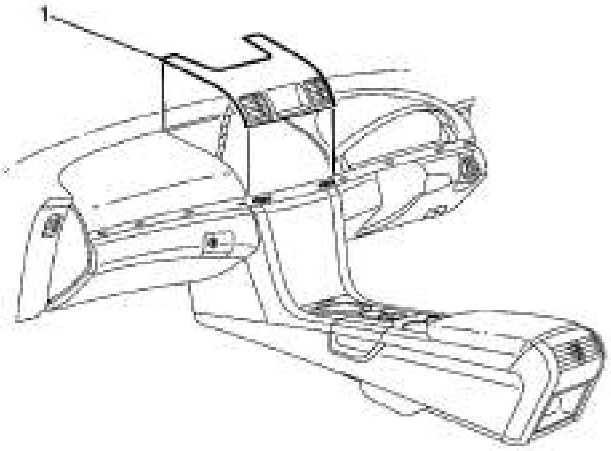
2. Remove the I/P upper trim panel (1) by disengaging the trim panel retaining clips (2) and removing the I/P upper trim panel from the I/P pad (3).



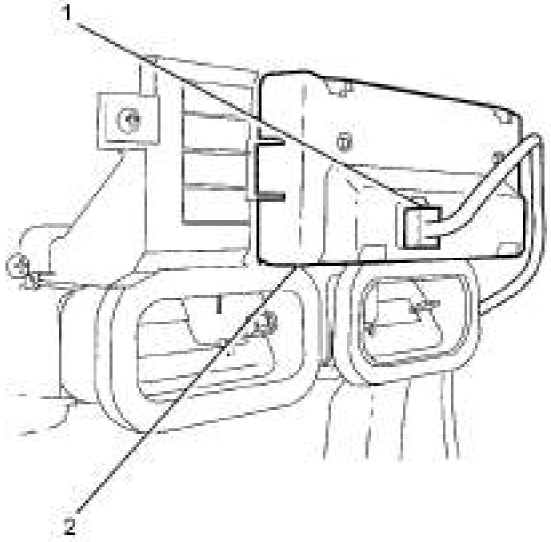
3. Remove the trim panel to I/P pad upper retaining screws (1).



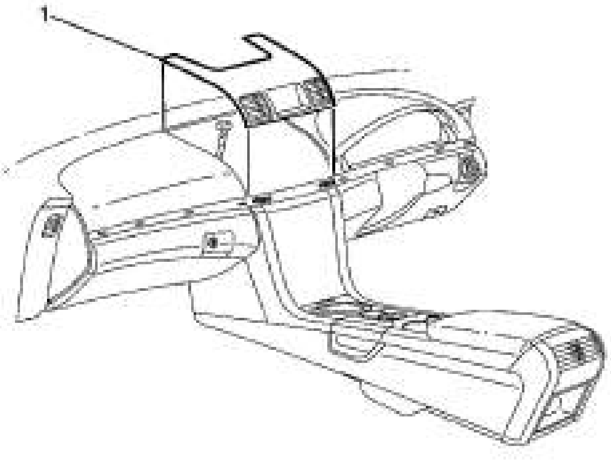
4. Remove the trim panel to I/P pad lower retaining screws (1).



5. Disengage the trim panel (1) retaining clips and raise the trim panel to gain access to the electrical connector.

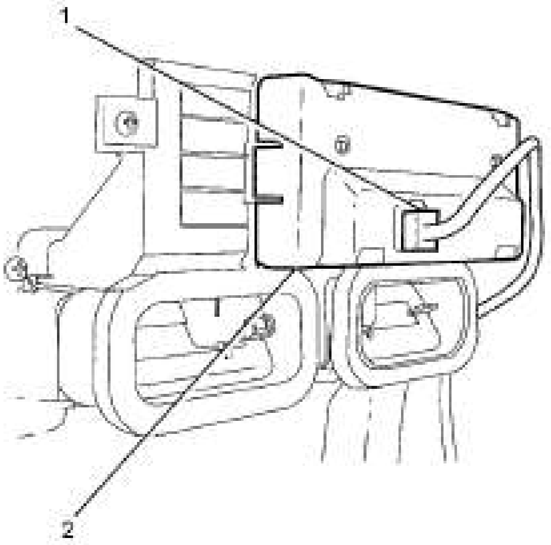


6. Disconnect the secondary information centre (2) (SIC) electrical connector (1).

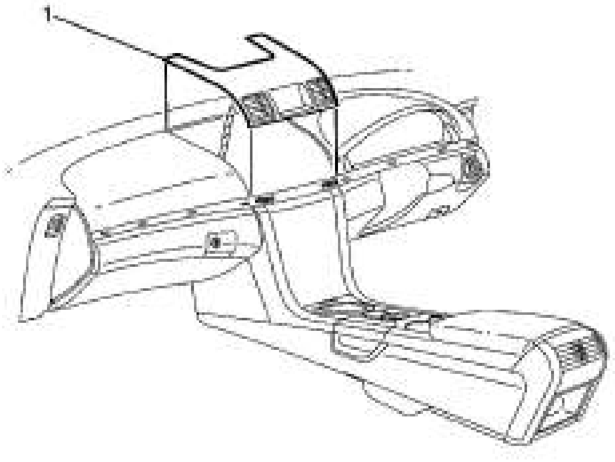


7. Remove the trim panel (1) from the I/P pad.

Installation Procedure

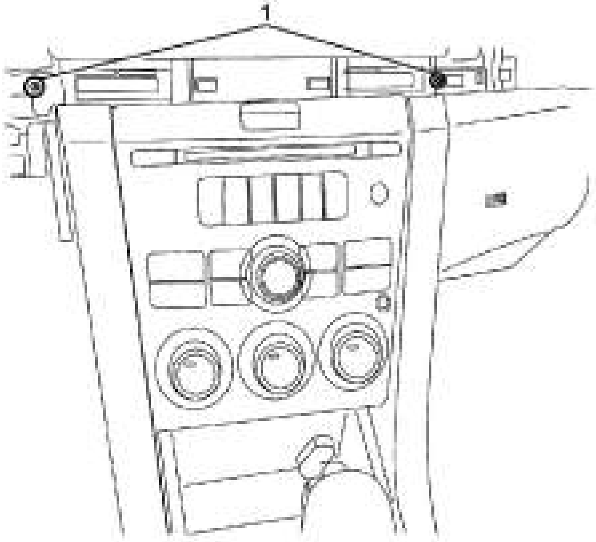


1. Connect the secondary information centre (2) (SIC) electrical connector (1).



2. Engage the trim panel (1) to I/P pad retaining clips.

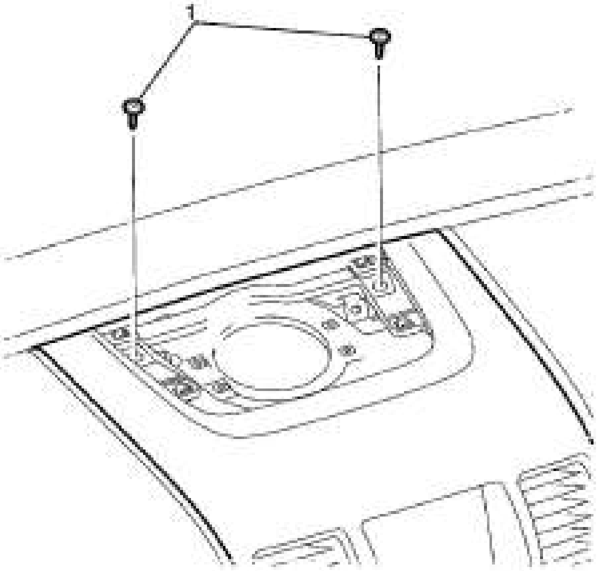
   Notice: Refer to Fastener Notice in the Preface section.



3. Install the trim panel to I/P pad lower retaining screws (1).

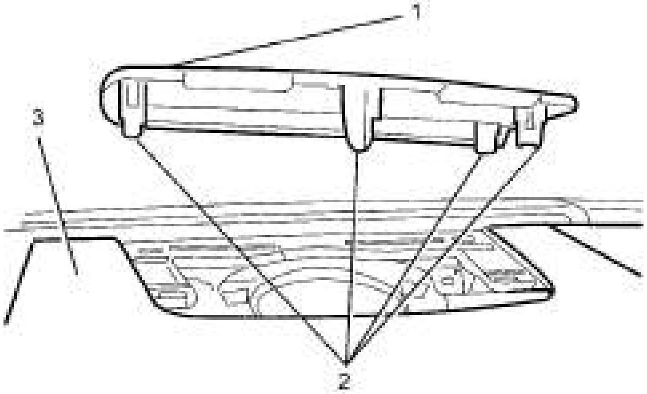
   Tighten
   Tighten the screws (1) to 2 N·m (18 lb in).

   Notice: Refer to Fastener Notice in the Preface section.



4. Install the trim panel to I/P pad upper retaining screws (1).

   Tighten
   Tighten the screws (1) to 2 N·m (18 lb in).

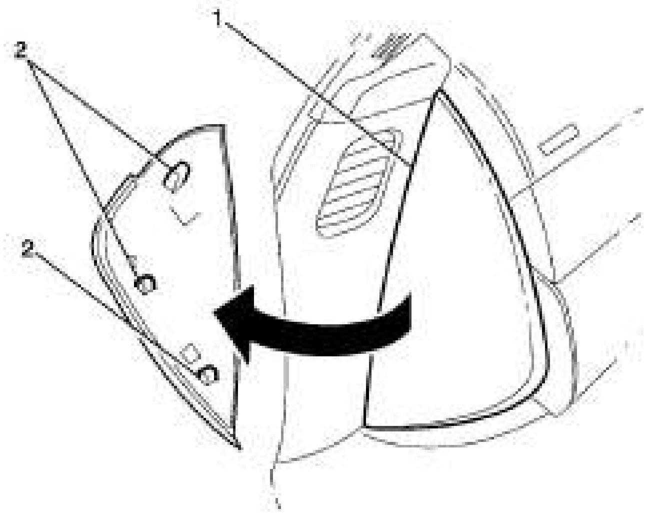


5. Install the trim panel top cover (1) by engaging the trim panel retaining clips (2) and securing it to the I/P pad.
6. Ensure the trim panel (1) is flush with the I/P pad.
7. Install the I/P trim panel. Refer to Instrument Panel Trim Panel Replacement.

Instrument Panel Outer Trim Cover Replacement

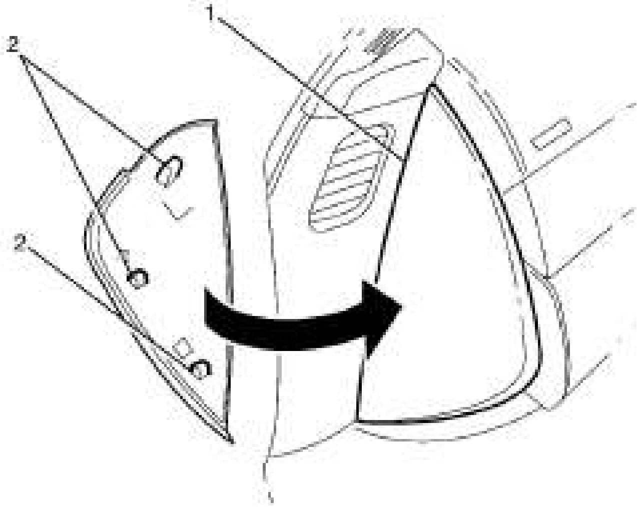
Removal Procedure

1. Remove the I/P trim panel. Refer to Instrument Panel Trim Panel Replacement.



2. Grasp the lower area of the instrument panel outer cover (1) and carefully pull to disengage the retaining clips (2). The left side is shown, the right side is similar.
3. Remove the instrument panel outer cover (1) rotating upwards to disengage remaining clip (2).

Installation Procedure

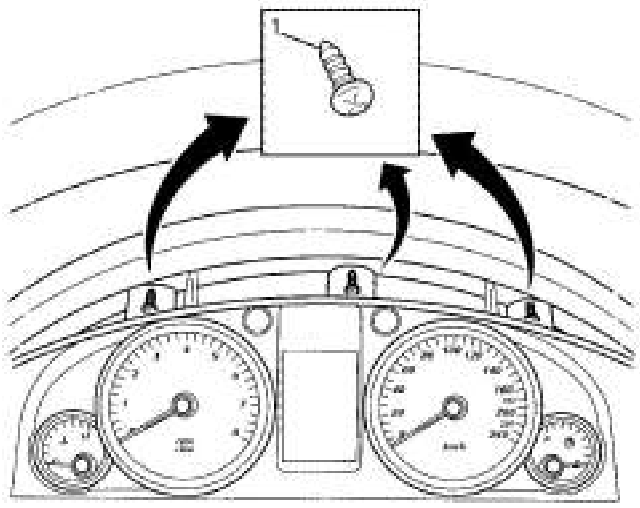


1. Align the instrument panel outer cover (1) to the I/P and correctly locate the upper clips (2).
2. Install the instrument panel outer cover (1) to the I/P by disengaging the retaining clips (2).
3. Install the I/P trim panel. Refer to Instrument Panel Trim Panel Replacement.
4. Ensure all clips are installed correctly.

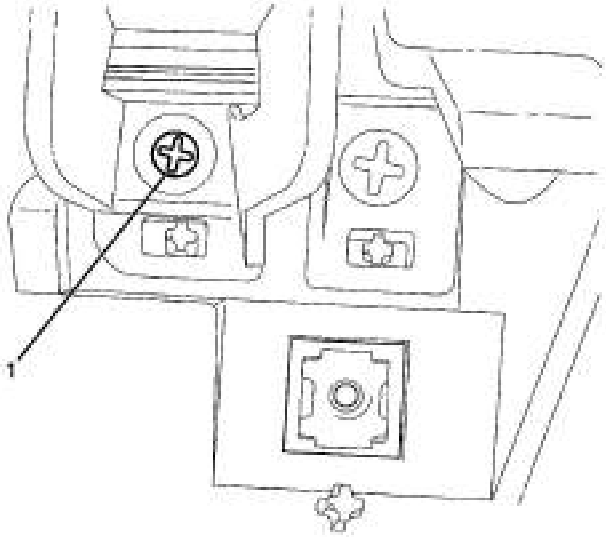
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Instrument Panel and Console Trim | Repair Instructions | **Document ID: 1982200**

Instrument Cluster Trim Panel Replacement (SWB)

Removal Procedure

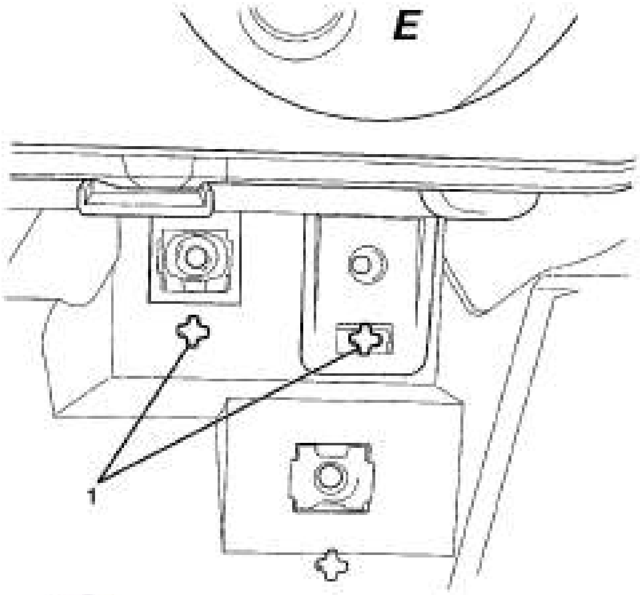


1. Remove the upper instrument cluster trim panel to I/P trim pad retaining screws (1).



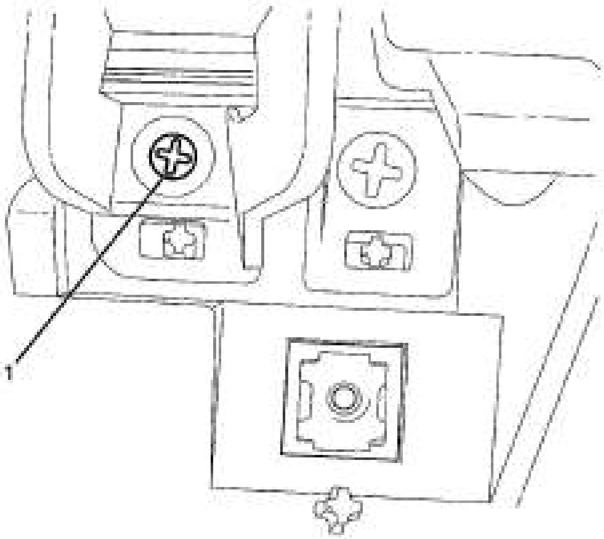
2. Remove the lower instrument cluster to I/P pad retaining screws (1), located on either side of the instrument cluster trim panel.
3. Using a suitable tool, carefully remove the top of the trim panel toward the steering wheel.
4. Remove the instrument cluster trim panel.

Installation Procedure



1. When installing the instrument cluster trim panel, make sure the locating lugs (1) are correctly located.
2. Install the instrument cluster trim panel.

   Notice: Refer to Fastener Notice in the Preface section.

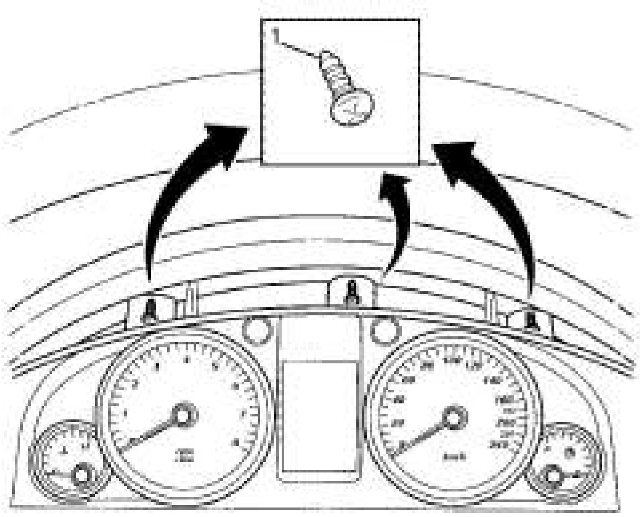


3. Install the lower instrument cluster trim panel to I/P pad retaining screws (1).

   Tighten

Tighten the screws (1) to 2 N·m (18 lb in).

Notice: Refer to Fastener Notice in the Preface section.



4. Install the upper instrument cluster trim panel to I/P trim pad retaining screws (1).

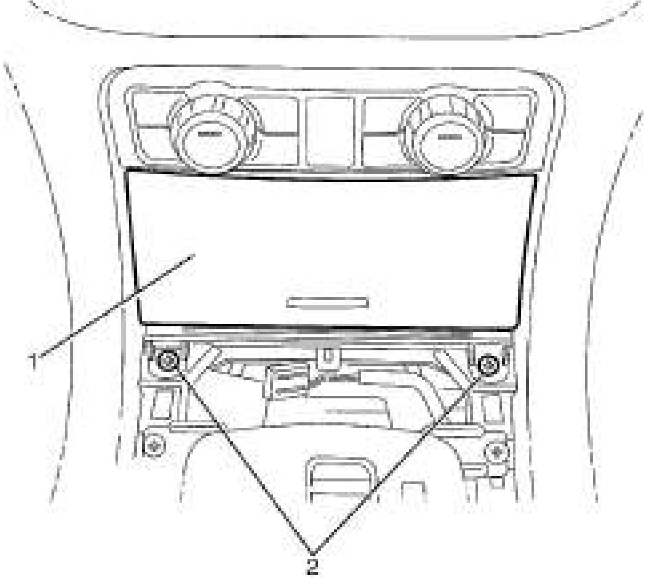
Tighten
Tighten the screws (1) to 2 N·m (18 lb in).

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Instrument Panel and Console Trim | Repair Instructions | **Document ID: 1995194**

Instrument Panel Storage Compartment Replacement (SWB)

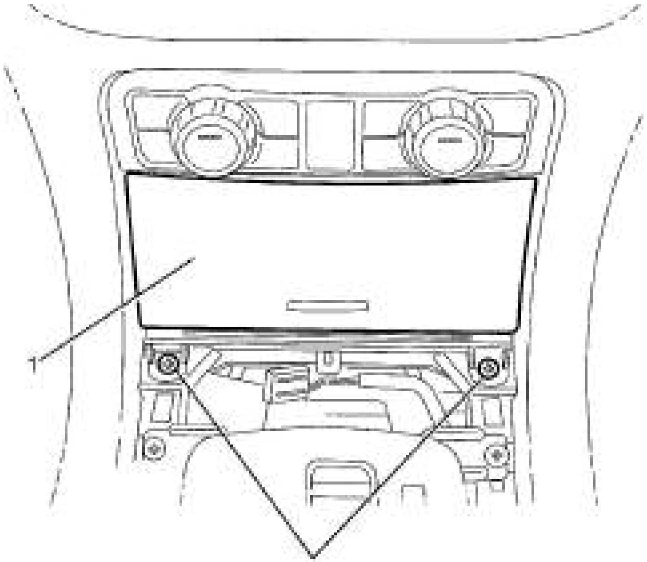
Removal Procedure - (Omega, Calais, Berlina)

1. Remove the trim plate. Refer to Console Trim Plate Replacement.



2. Remove the storage compartment (1) to I/P tower retaining screws (2).
3. Remove the storage compartment (1) from the I/P tower.

Installation Procedure



1. Install the storage compartment (1) to the I/P tower.

   Notice: Refer to Fastener Notice in the Preface section.

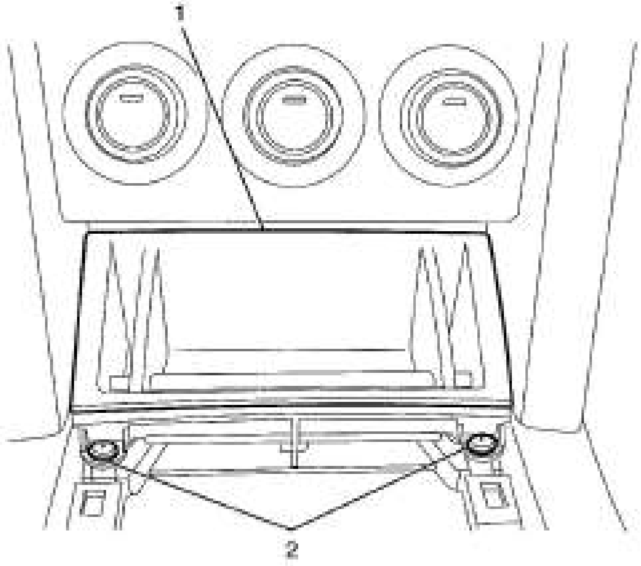
2. Install the storage compartment to I/P tower retaining screws (2).

   Tighten
   Tighten the screws (2) to 2 N·m (18 lb in).

3. Install the trim plate. Refer to Console Trim Plate Replacement.
4. Operate the storage compartment lid for correct operation.

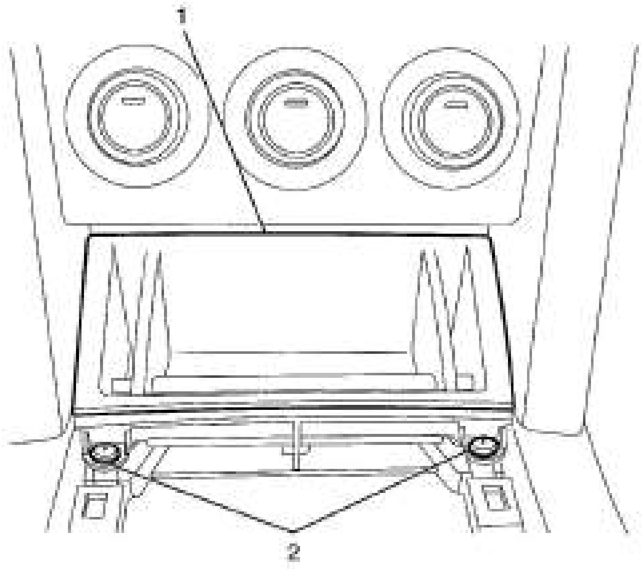
Removal Procedure - (SV6, SS and SS-V)

1. Remove the trim plate. Refer to Console Trim Plate Replacement.



2. Remove the storage compartment (1) to centre console retaining screws (2).
3. Remove the storage compartment (1) from the centre console.

Installation Procedure



1. Install the storage compartment (1) into the centre console.

   Notice: Refer to Fastener Notice in the Preface section.

2. Install the storage compartment (1) to centre console retaining screws (2).

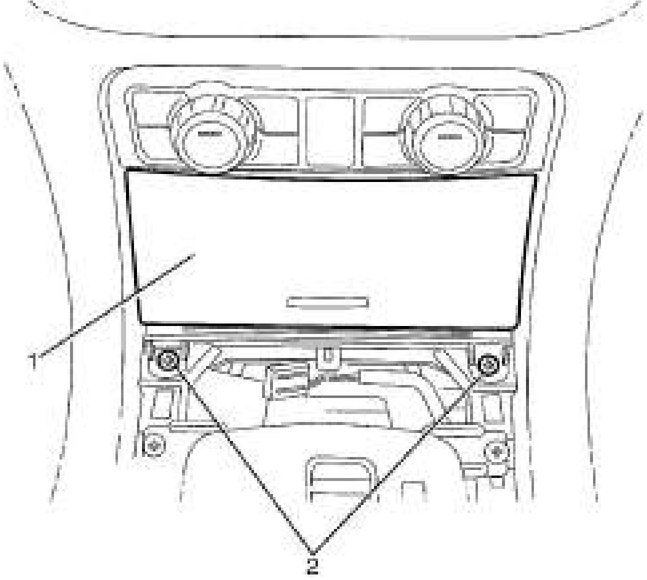
   Tighten
   Tighten the screws (2) to 2 N·m (18 lb in).

3. Install the trim plate. Refer to Console Trim Plate Replacement.

Instrument Panel Storage Compartment Replacement (LWB)

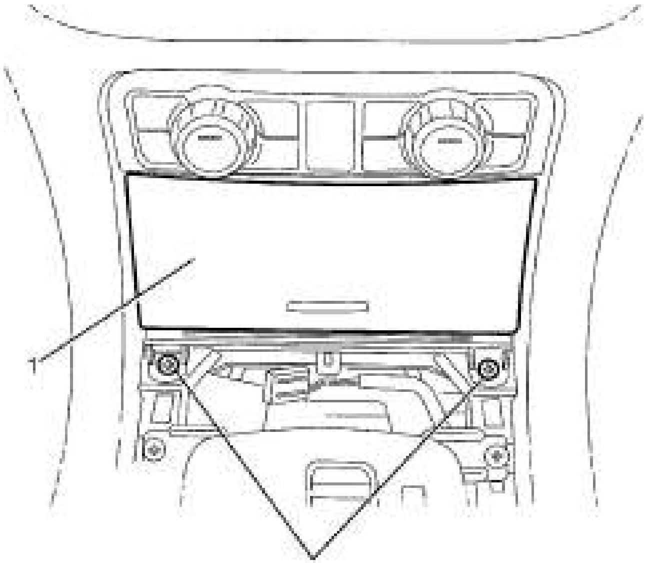
Removal Procedure

1. Remove the trim plate. Refer to Console Trim Plate Replacement.



2. Remove the storage compartment (1) to I/P tower retaining screws (2).
3. Remove the storage compartment (1) from the I/P tower.

Installation Procedure



1. Install the storage compartment (1) to the I/P tower.

   Notice: Refer to Fastener Notice in the Preface section.

2. Install the storage compartment to I/P tower retaining screws (2).

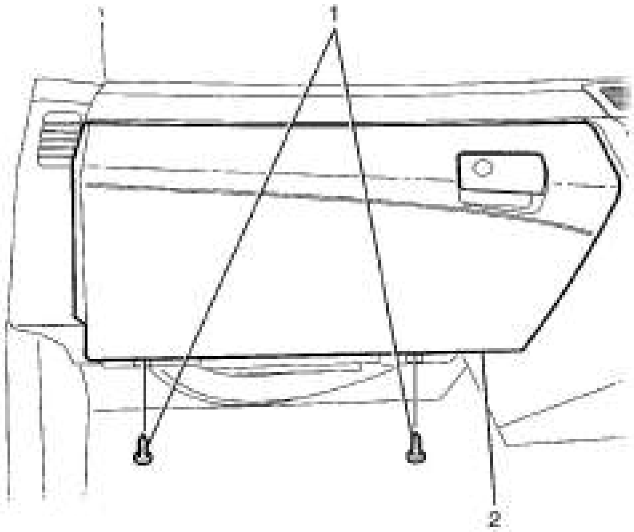
   Tighten
   Tighten the screws (2) to 2 N·m (18 lb in).

3. Install the trim plate. Refer to Console Trim Plate Replacement.
4. Operate the storage compartment lid for correct operation.

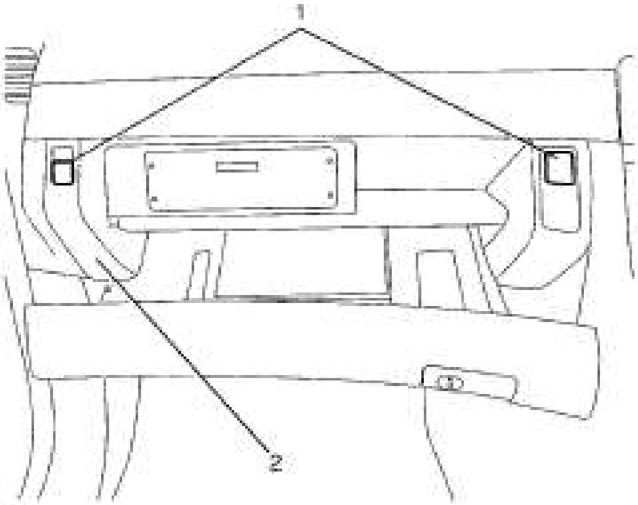
Instrument Panel Compartment Replacement (RHD)

Removal Procedure

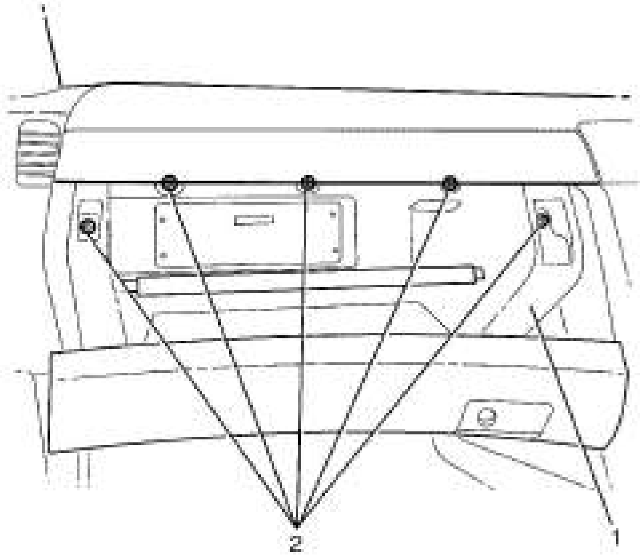
1. Remove the instrument panel insulator panel -- Left Side. Refer to Instrument Panel Insulator Panel Replacement - Right Side.
2. Remove the instrument panel outer trim cover. Refer to Instrument Panel Outer Trim Cover Replacement.



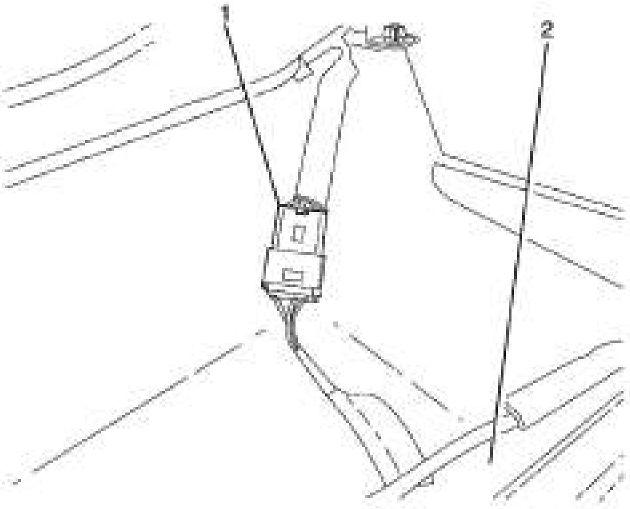
3. Remove the I/P compartment assembly lower retaining screws (1).
4. Open the I/P compartment assembly door (2).



5. Remove the I/P compartment retaining screw covers (1) from the I/P compartment (2).

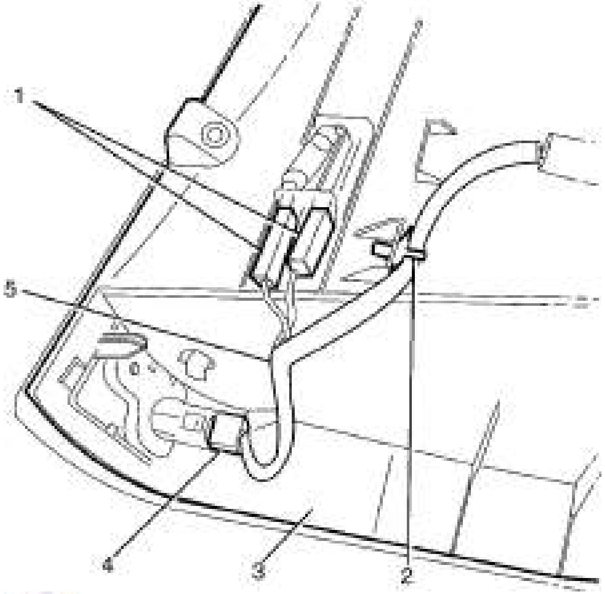


6. Remove the I/P compartment upper retaining screws (2).
7. Remove the I/P compartment (1).

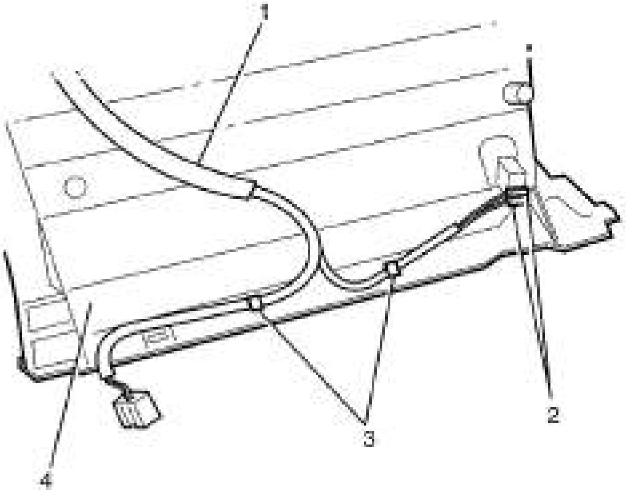


8. Disconnect the I/P compartment electrical connector (1) from the I/P compartment (2).

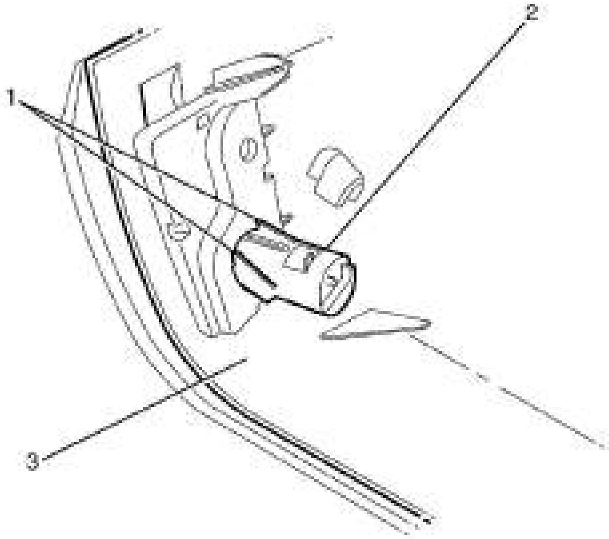
Disassemble Procedure



1. Disconnect the I/P compartment lamp electrical connectors (1), where fitted.
2. Disconnect the rear compartment release button electrical connector (4), where fitted.
3. Detach the I/P compartment electrical harness retaining clip (2) and harness (5) from the I/P compartment (3)

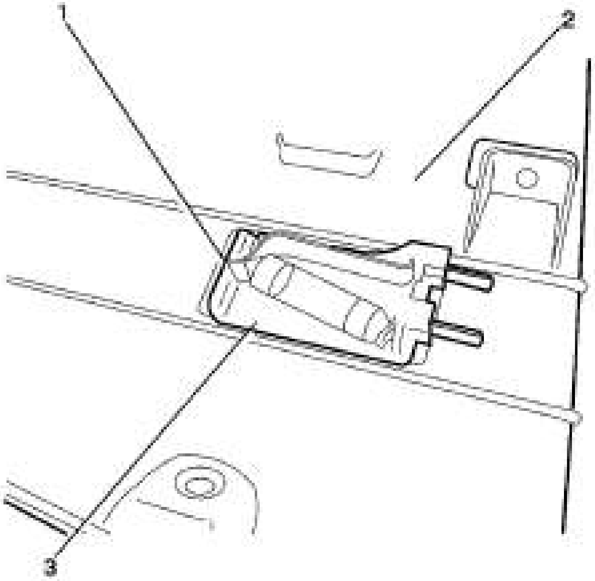


4. Disconnect the I/P compartment lamp switch electrical connectors (2), where fitted.
5. Detach the wiring harness retaining clips (3) from the I/P compartment (4).
6. Remove the I/P compartment wiring harness (1) from the I/P compartment (4).

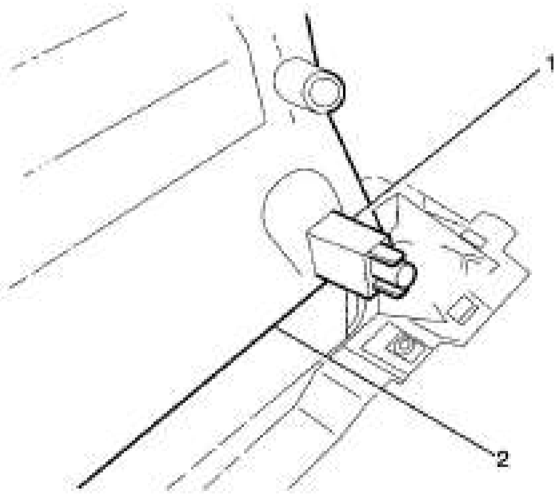


Important: Press the retaining clips (1) and push the rear compartment release button (2) through the I/P compartment (3) to remove.

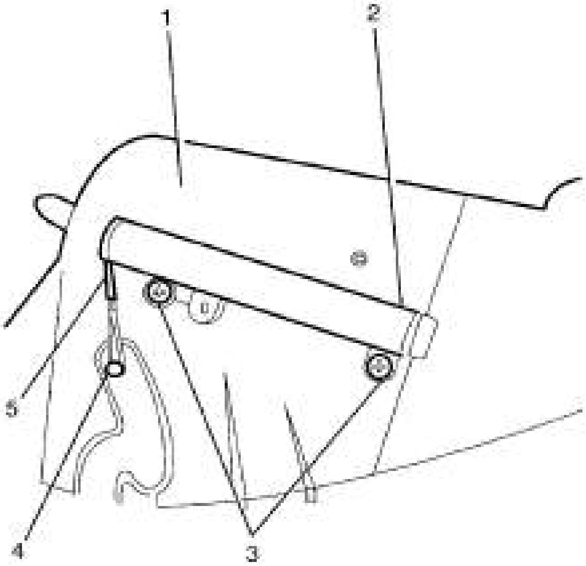
7. Remove the rear compartment release button (2) from the I/P compartment (3).



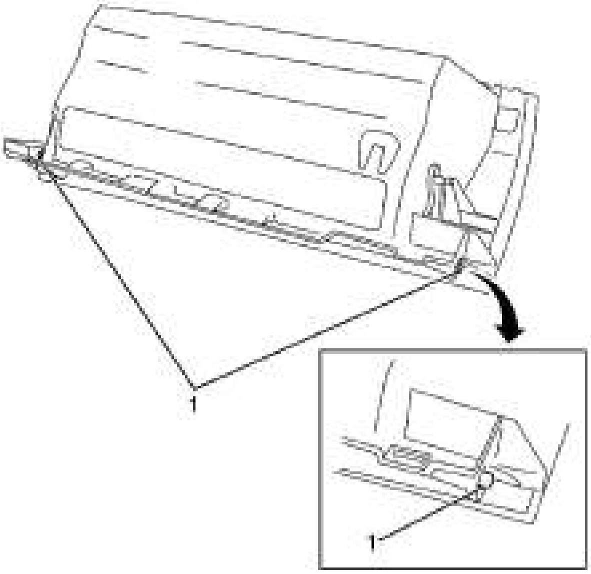
8. Remove the I/P compartment lamp (3), where fitted, by releasing the I/P compartment lamp retaining clip (1) and pushing it through the I/P compartment (2),.



9. Remove the I/P compartment lamp switch (1) from the I/P compartment (2), where fitted



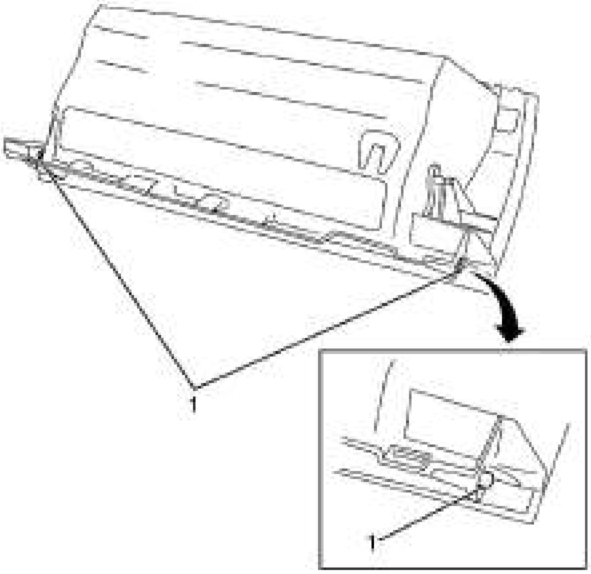
10. Remove the I/P compartment damper cord (5) by detaching it from the securing hook (4).
11. Remove the I/P compartment damper retaining screws (3).
12. Remove the I/P compartment damper (2) from the I/P compartment (1).



13. Remove the I/P compartment door hinge retaining pins (1) and remove the I/P compartment door.

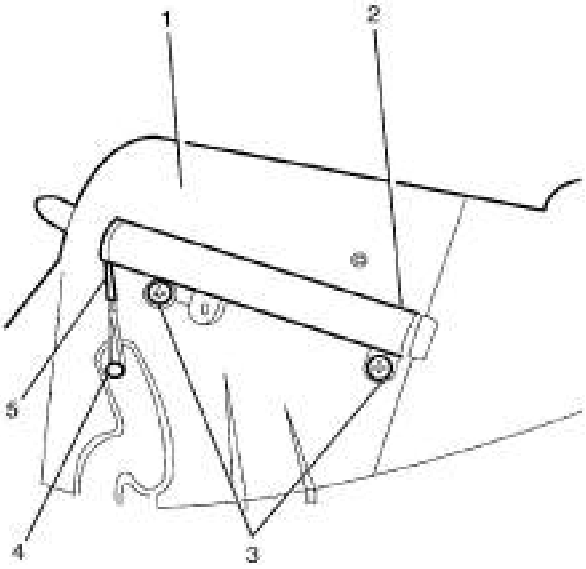
Assemble Procedure

1. Align the I/P compartment door with the I/P compartment.



2. Install the I/P compartment door hinge retaining pins (1) to the I/P compartment door.

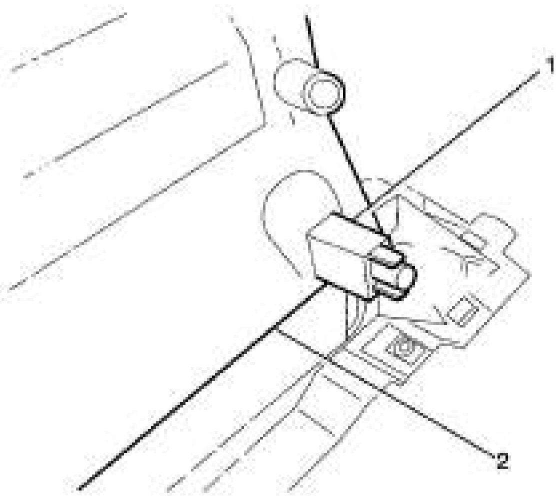
Notice: Refer to Fastener Notice in the Preface section.



3. Install the I/P compartment damper (2) to the I/P compartment (1).
4. Install the I/P compartment damper retaining screws (3).

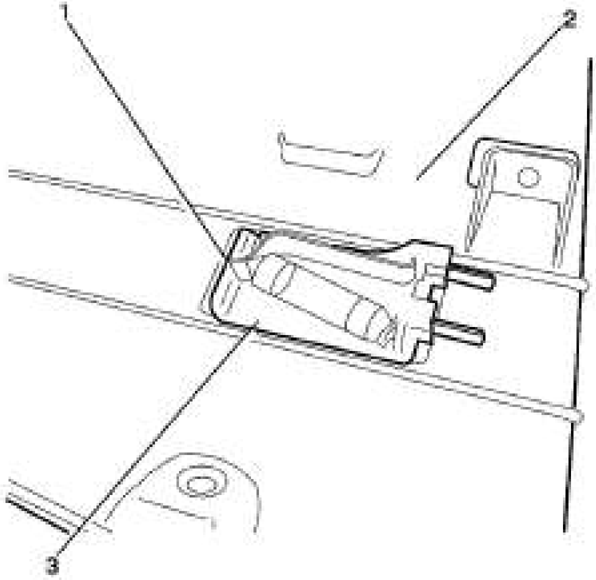
   Tighten
   Tighten the screws to 2 N·m (18 lb in).

5. Install the I/P compartment damper cord (5) by attaching it to the securing hook (4).



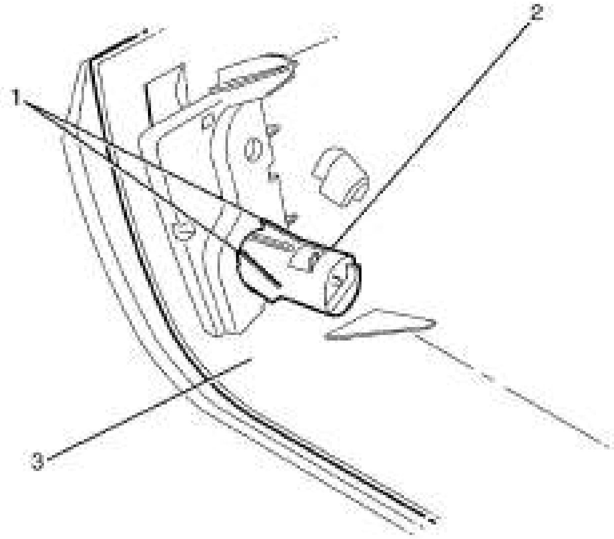
Important: Listen for audible click to confirm correct fitting

6. Install the I/P compartment lamp switch (1), where fitted, to the I/P compartment (2).



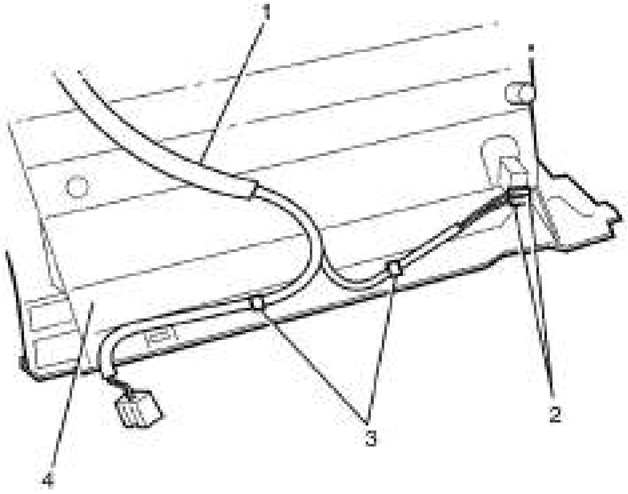
Important: Listen for audible click to confirm correct fitting

7. Install the I/P compartment lamp (3), where fitted, by pushing it through the I/P compartment (2).
8. Ensure the I/P compartment lamp retaining clip (1) is fully engaged.

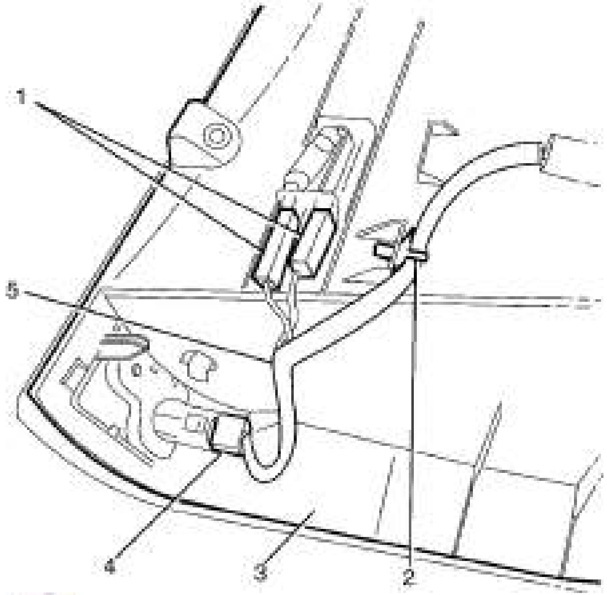


Important: When installing the rear compartment release button, take care not to damage the retaining clips (1).

9. Install the rear compartment release button (2), where fitted, to the I/P compartment (3), listen for an audible click to confirm fitting.

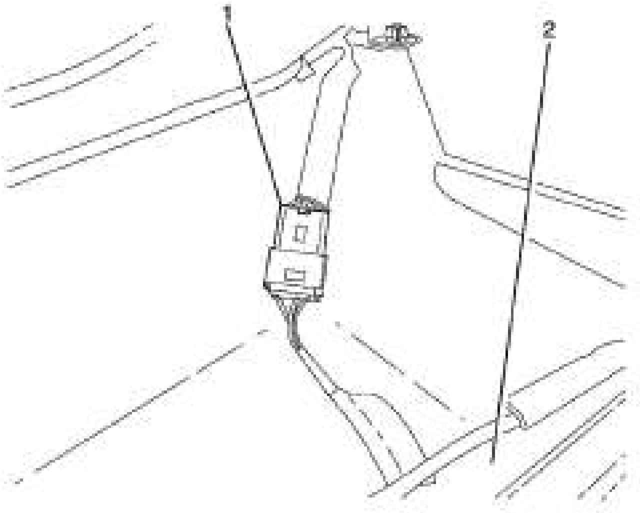


10. Position the I/P compartment wiring harness (1) to the I/P compartment (4).
11. Attach the I/P compartment wiring harness retaining clips (3).
12. Connect the I/P compartment lamp switch electrical connectors (2), where fitted.

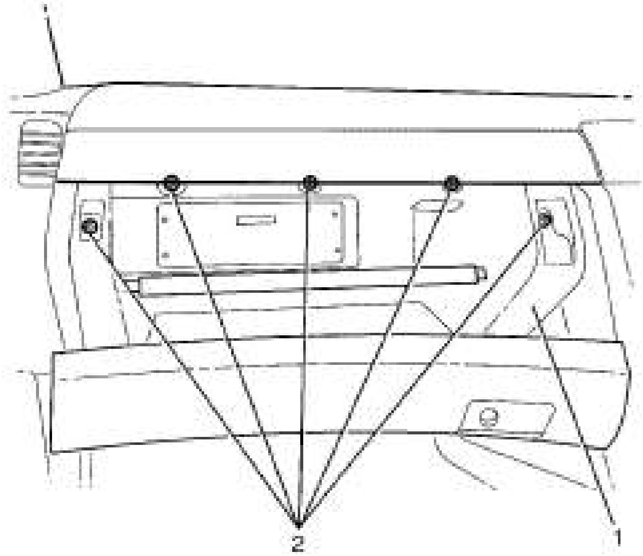


13. Position the I/P compartment harness (5) and attach the I/P compartment wiring harness retaining clip (2) to the I/P compartment (3).
14. Connect the rear compartment release button electrical connector (4), where fitted.
15. Connect the I/P compartment lamp electrical connectors (1), where fitted

Installation Procedure



1. Connect the I/P compartment electrical connector (1) to the I/P compartment (2).

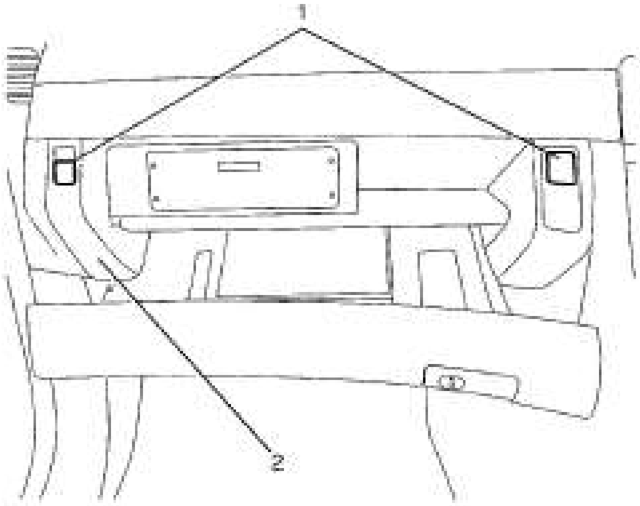


2. Install the I/P compartment (1).

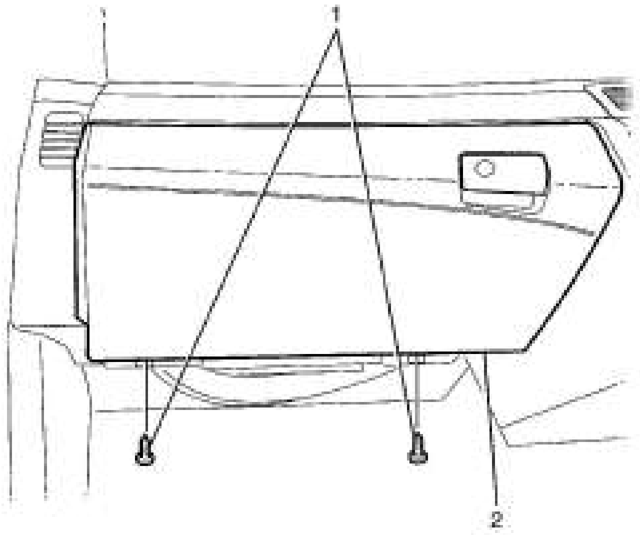
   Notice: Refer to Fastener Notice in the Preface section.

3. Install the I/P compartment upper retaining screws (2).

   Tighten
   Tighten the screws to 2 N·m (18 lb in).



4. Install the I/P compartment retaining screw covers (1) to the I/P compartment (2)



5. Close the I/P compartment assembly door (2).
6. Install the I/P compartment lower retaining screws (1).

   Tighten
   Tighten the screws to 2 N·m (18 lb in).

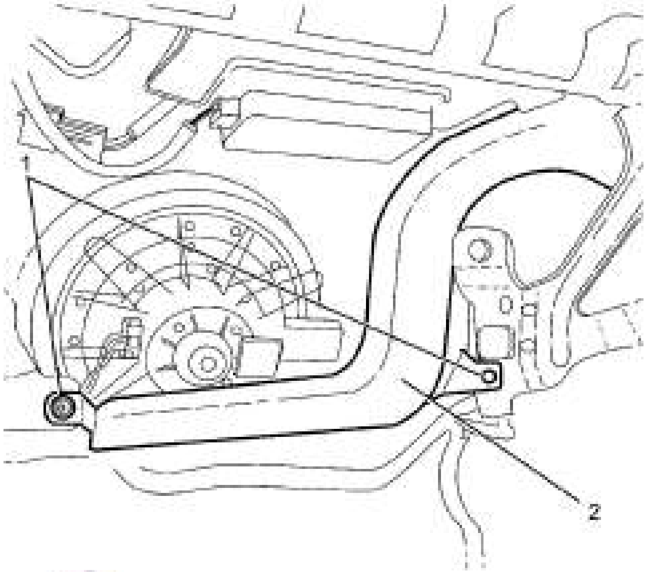
7. Install the instrument panel outer trim cover. Refer to Instrument Panel Outer Trim Cover Replacement.
8. Install the instrument panel insulator panel -- Left Side. Refer to Instrument Panel Insulator Panel Replacement - Right Side.
9. Test all electrical components for correct operation.

Instrument Panel Upper Trim Pad Replacement (RHD)

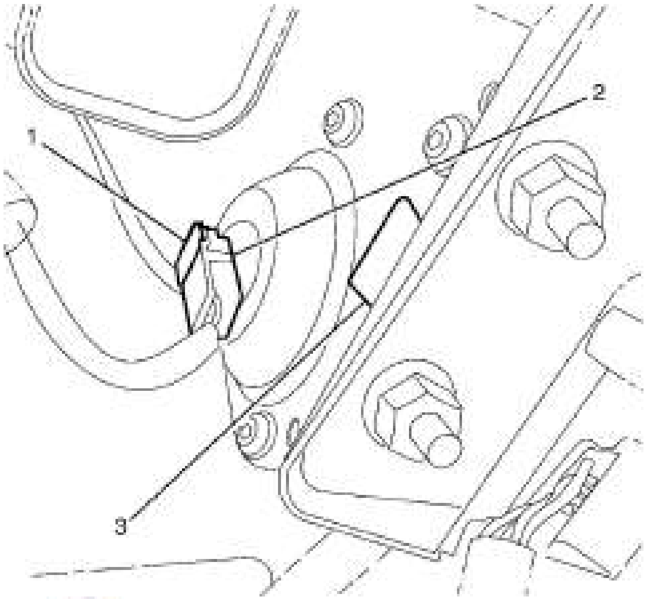
Removal Procedure

Caution: Refer to Battery Disconnect Caution in the Preface section.

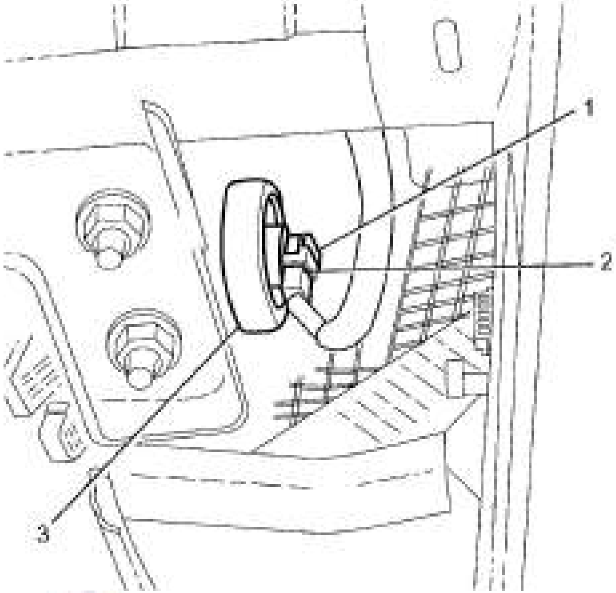
1. Disconnect the battery ground cable from the battery. Refer to Battery Negative Cable Disconnection and Connection .
2. Disable the SIR system. Refer to SIR Disabling and Enabling .
3. Remove the I/P compartment. Refer to Instrument Panel Compartment Replacement .
4. Remove the trim panel - (I/P) Upper. Refer to Instrument Panel Upper Trim Panel Replacement .
    - Trim Panel - (I/P) Upper : (with secondary information centre SIC)
    - Trim Panel - (I/P) Upper : (with multi function display)
5. Remove the outer trim covers. Refer to Instrument Panel Outer Trim Cover Replacement .
6. Remove the ventilation trim panel. Refer to Instrument Panel Side Trim Panel Replacement .
7. Remove the trim plate - console side. Refer to Console Trim Plate Replacement .
8. Remove the instrument panel trim panel. Refer to Instrument Panel Center Trim Panel Replacement .
9. Remove the instrument cluster. Refer to Instrument Cluster Replacement .
10. Remove the defroster grille. Refer to Defroster Grille Replacement .
11. Remove the knee bolster. Refer to Knee Bolster Replacement .
12. Remove the trim panel - I/P centre. Refer to Instrument Panel Center Trim Panel Replacement .
13. Remove the I/P centre speaker. Refer to Radio Front Speaker Replacement .



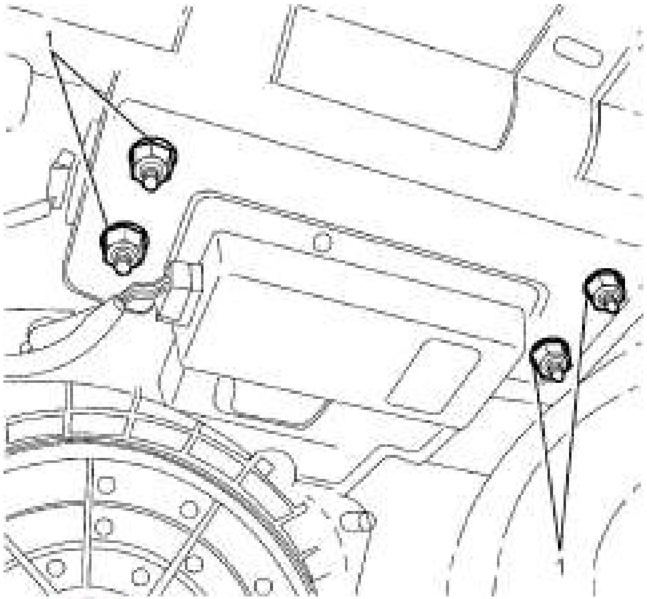
14. Remove the lower air duct (2) retaining clips (1).
15. Remove the lower air duct (2).



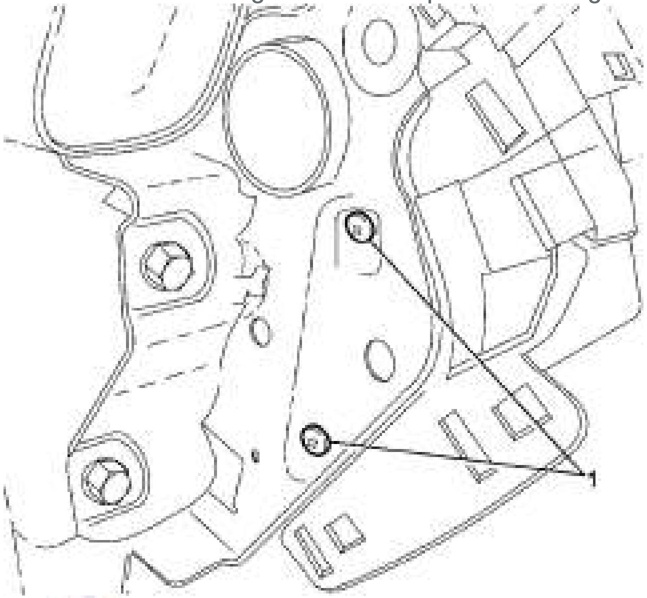
16. Release the air bag (3) electrical connector retaining clip (1) and disconnect the electrical connector (2).



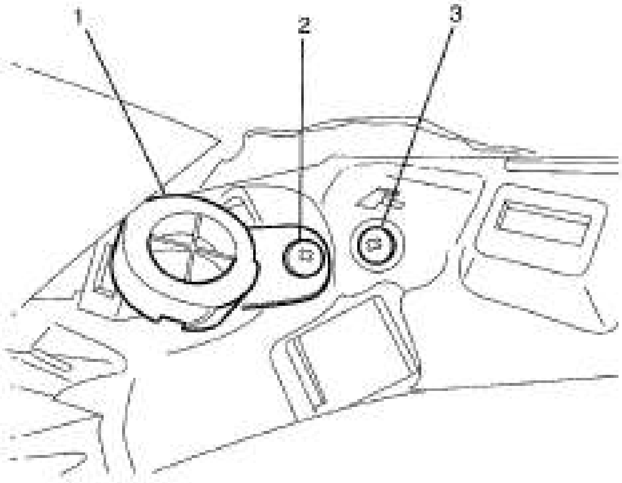
17. Release the air bag (3) electrical connector retaining clip (1) and disconnect the electrical connector (2).



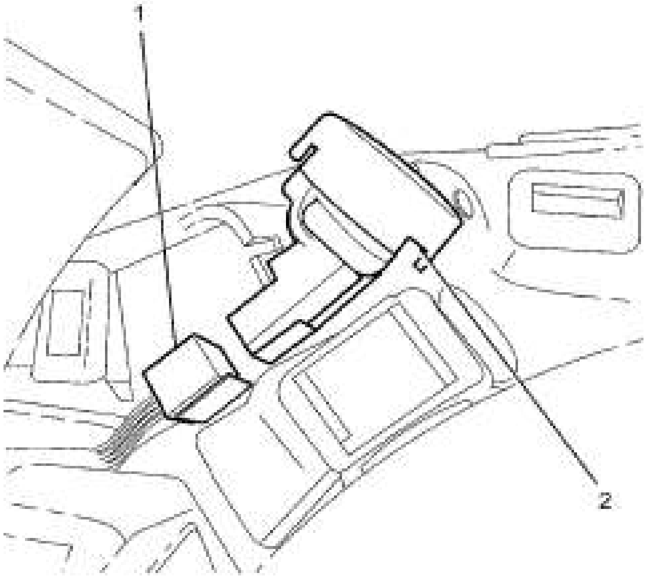
18. Remove the air bag to I/P trim pad retaining nuts (1).



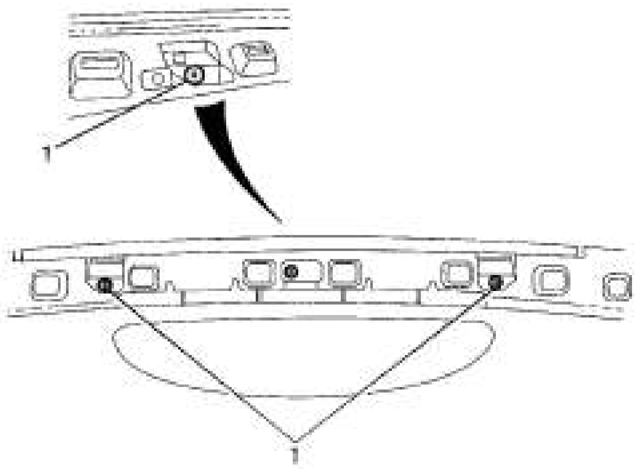
19. Remove the I/P carrier to I/P pad outer retaining screws (1).



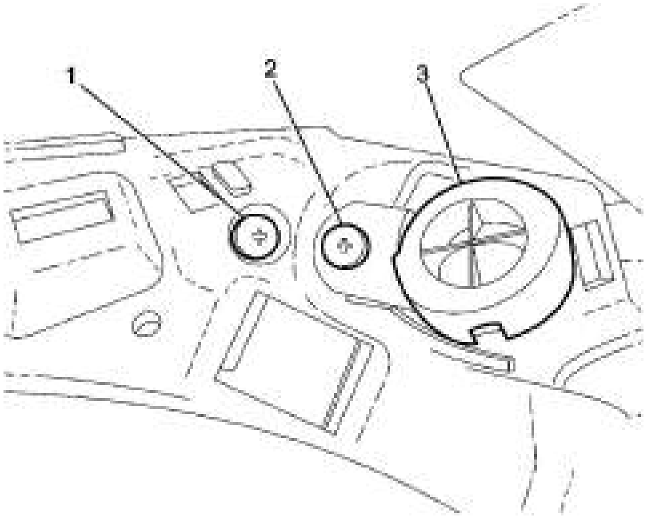
20. Remove the left hand tweeter (1) to I/P pad retaining screw (2).
21. Remove the I/P pad retaining screw (3).



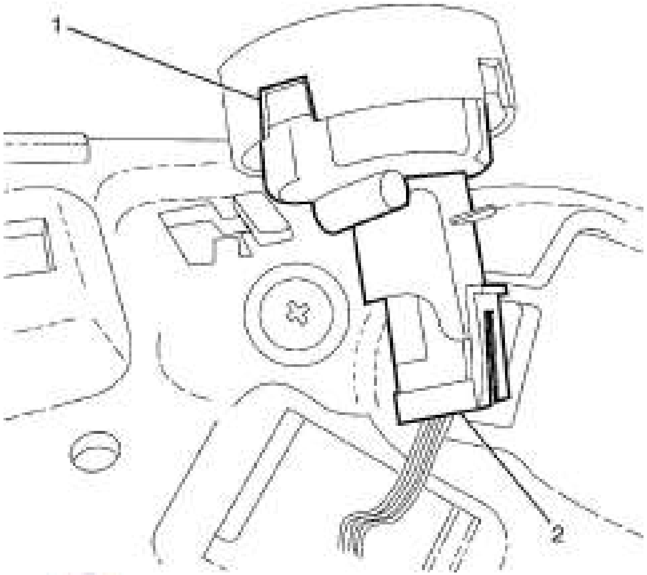
22. Disconnect the left hand tweeter (2) electrical connector (1).
23. Remove the left hand tweeter (2).



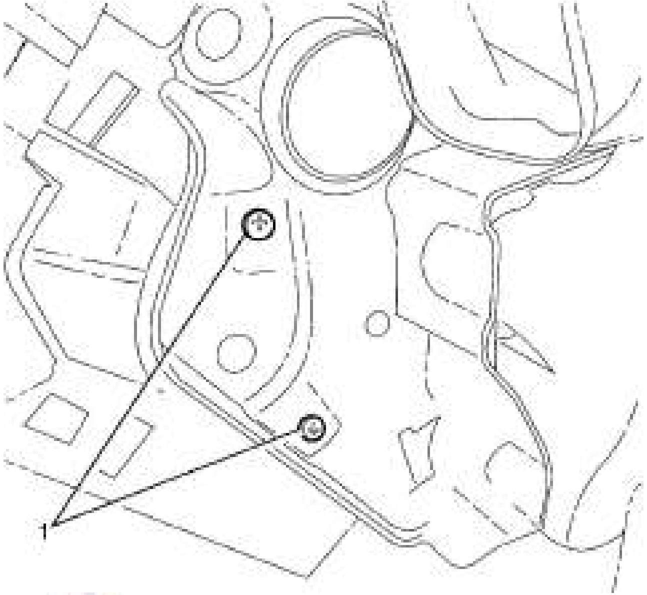
24. Remove the top I/P pad to I/P carrier retaining screws (1).



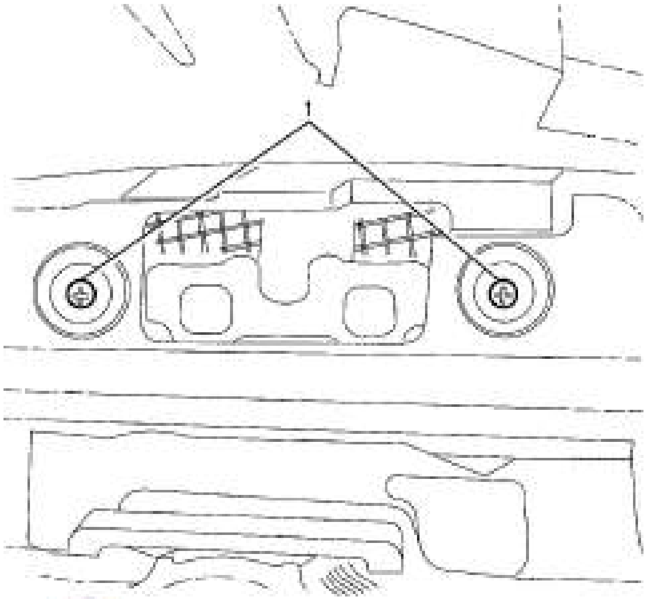
25. Remove the right hand tweeter (3) to I/P pad retaining screw (2).
26. Remove the I/P pad to I/P carrier retaining screw (1).



27. Disconnect the right hand tweeter (1) electrical connector (2).
28. Remove the right hand tweeter (1).

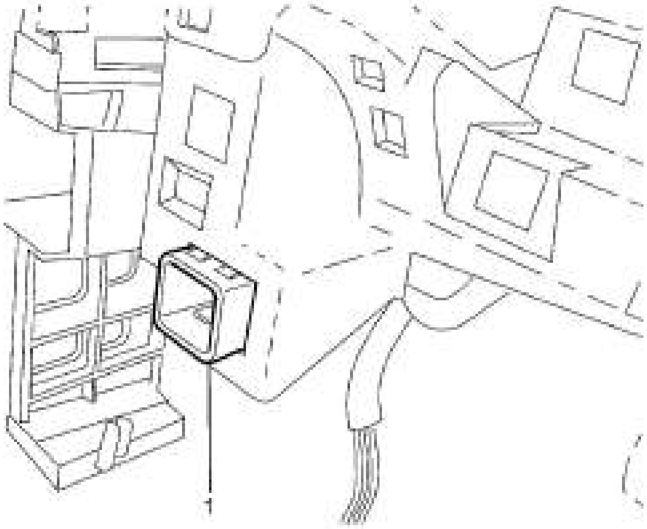


29. Remove the I/P carrier to I/P pad outer retaining screws (1).

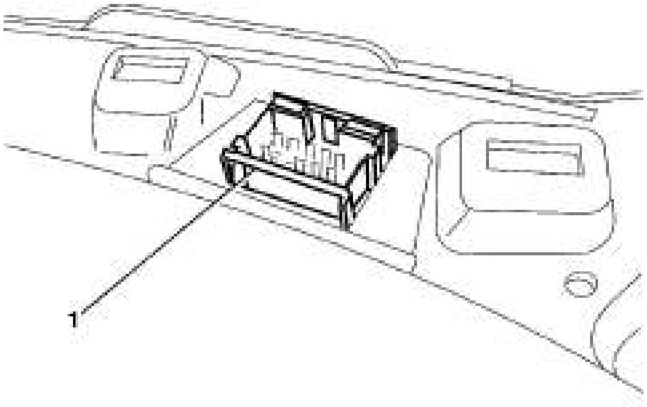


30. Remove the Instrument cluster housing to I/P pad retaining screws (1).

Notice: Refer to General Repair Instructions in the Preface section.



31. Remove the centre console fresh air vent outlet (1).



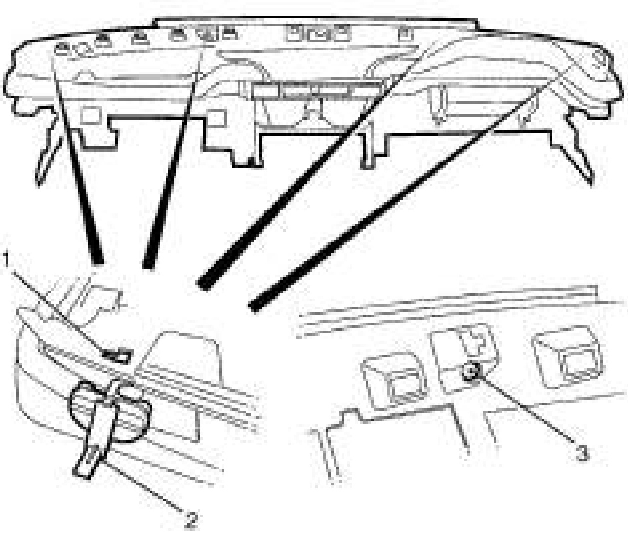
32. Detach the headliner main wiring harness connector (1).

    Important: The removal of the I/P pad must be done with the aid if an assistant under no circumstances must it be removed by one person.

33. Remove the I/P pad.
34. Remove datum four pins from vehicle.

Installation Procedure

1. Place the I/P pad on a clean and suitable work surface.

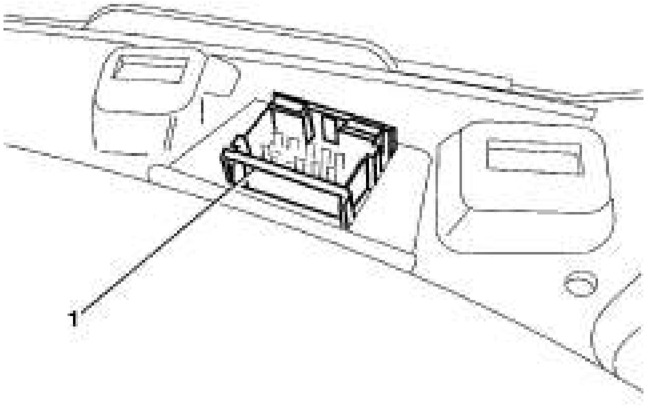


2. Install the four datum pins (2) to the I/P pad (1).
3. Secure the datum pins (2) using the datum pin retaining screws (3).

Tighten
Tighten the screws (3) to 2 N·m (18 lb in).

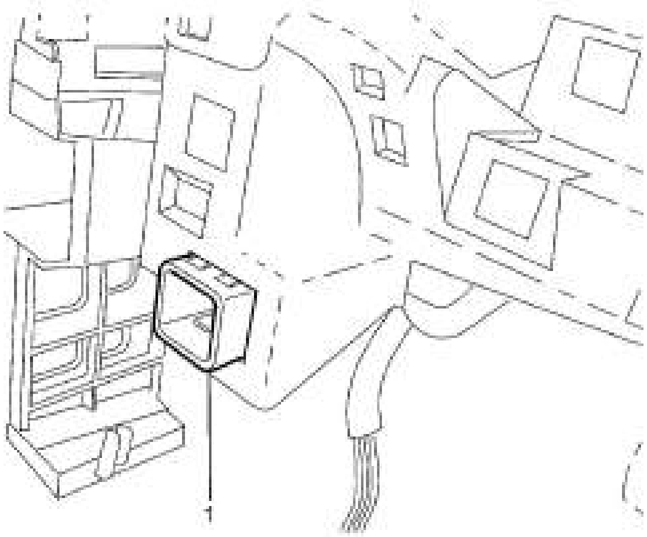
Important: Before installing the I/Ppad, ensure all electrical connectors are correctly positioned.

4. Install the I/P pad to the vehicle.



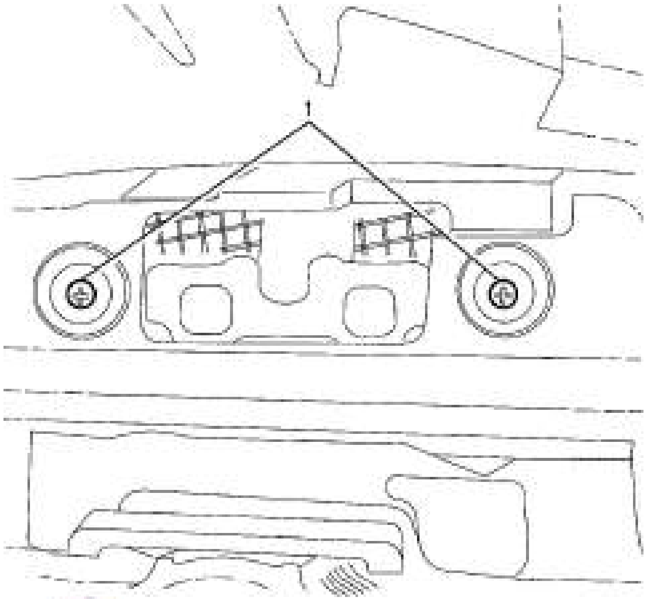
Headliner main harness connector: If difficulty is found securing the harness connector to the I/P pad, bring the I/P pad towards the steering wheel to gain access.

5. Secure the headliner main wiring harness connector (1).



6. Install the centre console fresh air vent outlet (1).

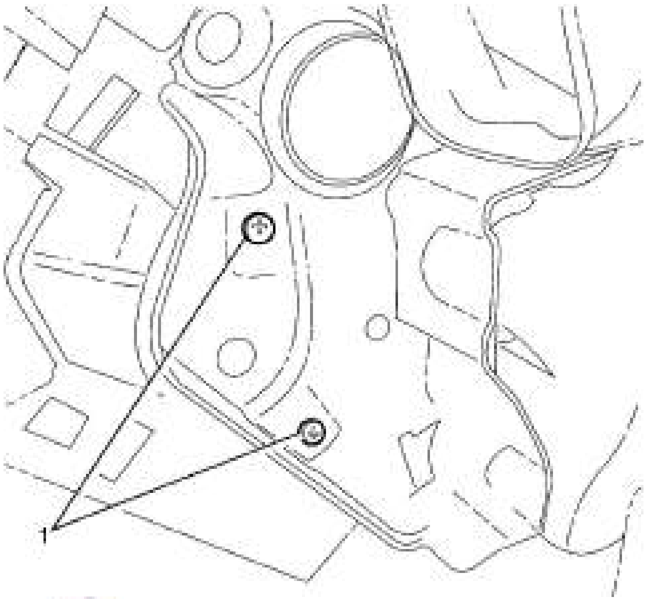
Notice: Refer to Fastener Notice in the Preface section.



7. Install the Instrument cluster to I/P pad retaining screws (1).

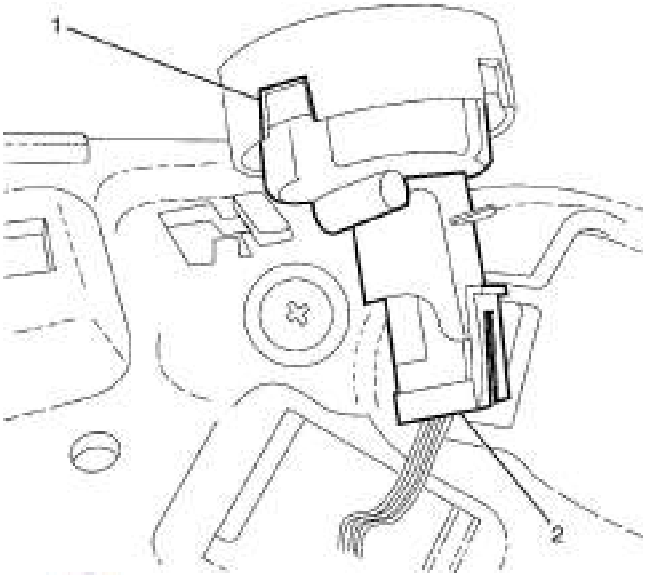
Tighten
Tighten the screws (1) to 2 N·m (18 lb in).

Notice: Refer to Fastener Notice in the Preface section.



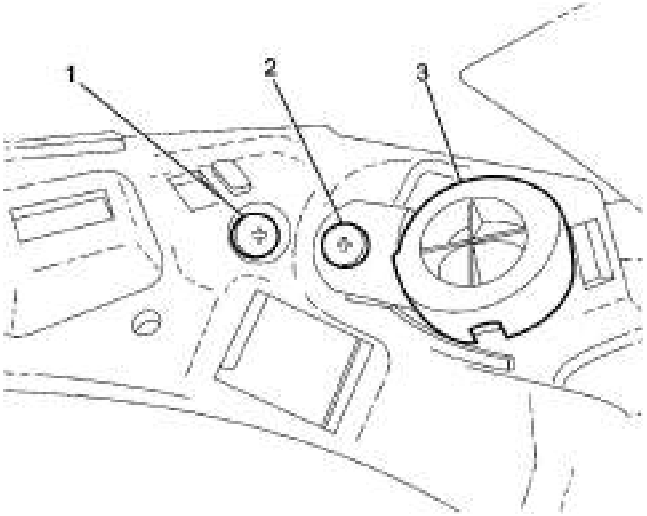
8. Install the I/P carrier to I/P pad outer retaining screws (1).

Tighten
Tighten the screws (1) to 2 N·m (18 lb in).



9. Connect the right hand tweeter (1) electrical connector (2).
10. Install the right hand tweeter (2).

Notice: Refer to Fastener Notice in the Preface section.



11. Install the right hand tweeter (3) to I/P pad retaining screw (2).

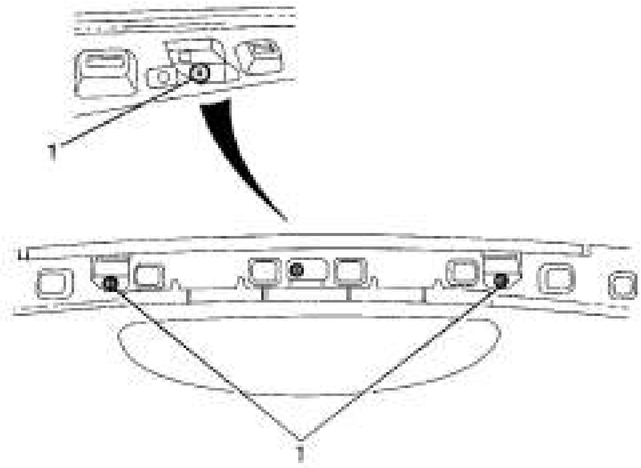
Tighten

Tighten the screws (2) to 2 N·m (18 lb in).

12. Install the I/P pad to I/P carrier retaining screw (1).

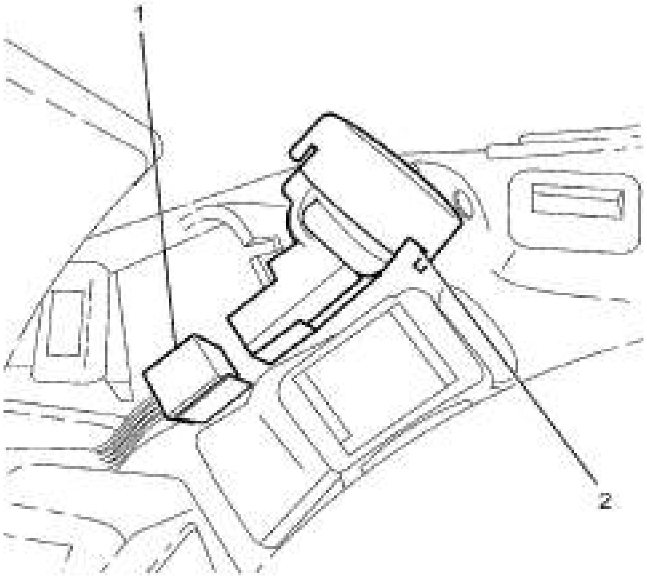
Tighten
Tighten the screws (1) to 2 N·m (18 lb in).

Notice: Refer to Fastener Notice in the Preface section.



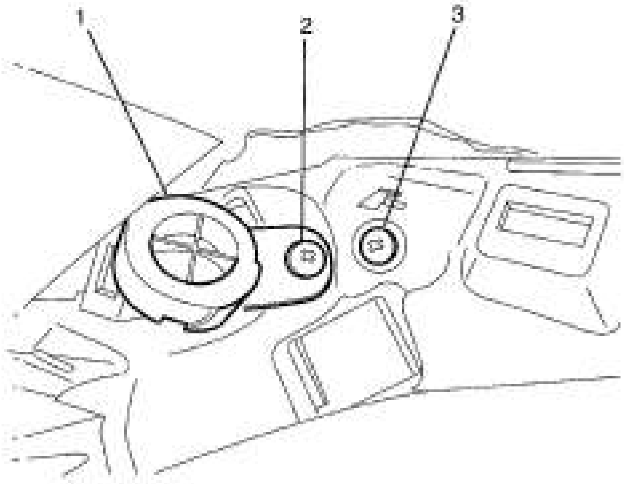
13. Install the top I/Ppad to I/P carrier retaining screws (1).

Tighten
Tighten the screws (1) to 2 N·m (18 lb in).



14. Connect the left hand tweeter (2) electrical connector (1).
15. Install the left hand tweeter (2).

Notice: Refer to Fastener Notice in the Preface section.



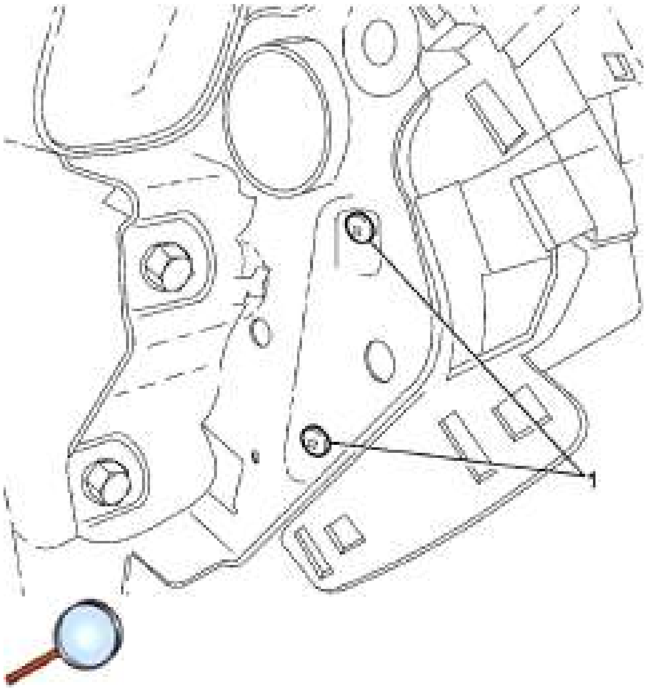
16. Install the left hand tweeter (1) to I/P pad retaining screw (2).

Tighten
Tighten the screw (2) to 2 N·m (18 lb in).

17. Install the I/P pad retaining screw (3).

Tighten
Tighten the screws (3) to 2 N·m (18 lb in).

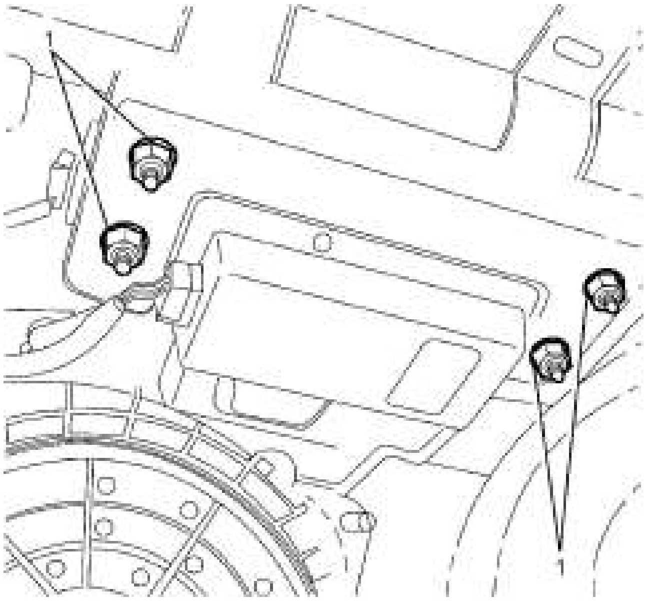
Notice: Refer to Fastener Notice in the Preface section.



18. Install the I/P carrier to I/P pad outer retaining screws (1).

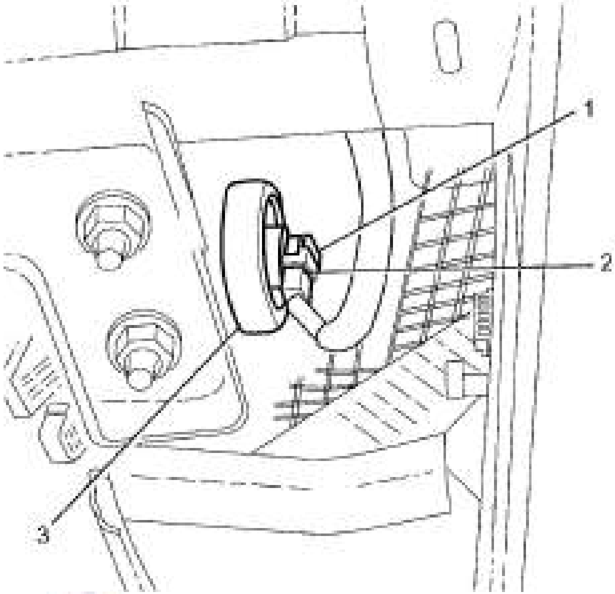
Tighten
Tighten the screws (1) to 2 N·m (18 lb in).

Notice: Refer to Fastener Notice in the Preface section.

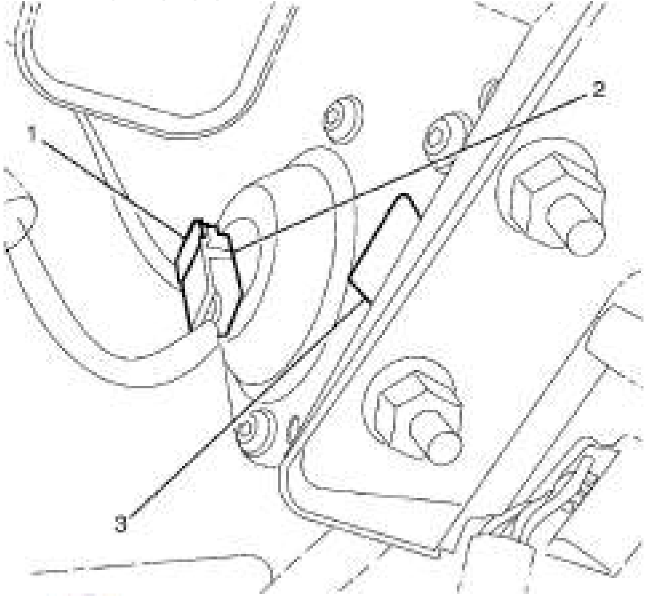


19. Install the air bag to I/P trim pad retaining nuts (1).

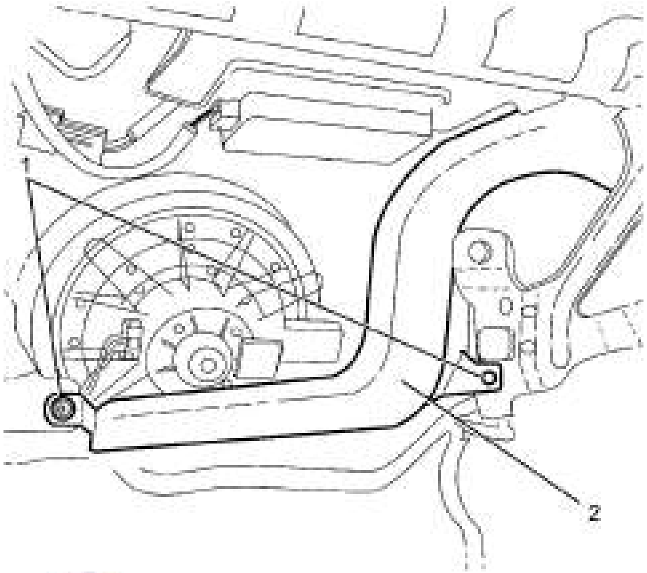
Tighten
Tighten the nuts to 16 N·m (12 lb ft).



20. Install the air bag (3) electrical connector (2) and secure by inserting the electrical connector retaining clip (1).



21. Install the air bag (3) electrical connector (2) and secure by inserting the electrical connector retaining clip (1).



22. Install the lower air duct (2).
23. Install the lower air duct (2) retaining clip (1).
24. Install the I/P centre speaker. Refer to Radio Front Speaker Replacement .
25. Install the trim panel - I/P centre. Refer to Instrument Panel Center Trim Panel Replacement .
26. Install the knee bolster. Refer to Knee Bolster Replacement .
27. Install the defroster grille. Refer to Defroster Grille Replacement .
28. Instal the instrument cluster. Refer to Instrument Cluster Replacement .
29. Install the instrument panel trim panel. Refer to Instrument Panel Center Trim Panel Replacement .
30. Install the trim plate - console side. Refer to Console Trim Plate Replacement .
31. Install the ventilation trim panel. Refer to Instrument Panel Side Trim Panel Replacement
32. Install the outer trim covers. Refer to Instrument Panel Outer Trim Cover Replacement .
33. Install the trim panel - (I/P) Upper. Refer to Instrument Panel Upper Trim Panel Replacement .
    - Trim Panel - (I/P) Upper : (with secondary information centre SIC)
    - Trim Panel - (I/P) Upper : (with multi function display)
34. Install the I/P compartment. Refer to Instrument Panel Compartment Replacement .
35. Enable the SIR system. Refer to SIR Disabling and Enabling .
36. Connect the battery ground cable to the battery. Refer to Battery Negative Cable Disconnection and Connection .
37. Test all electrical components for correct operation.

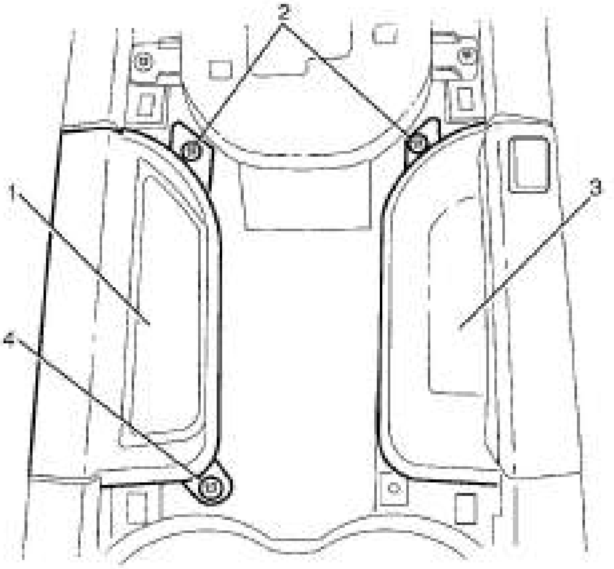
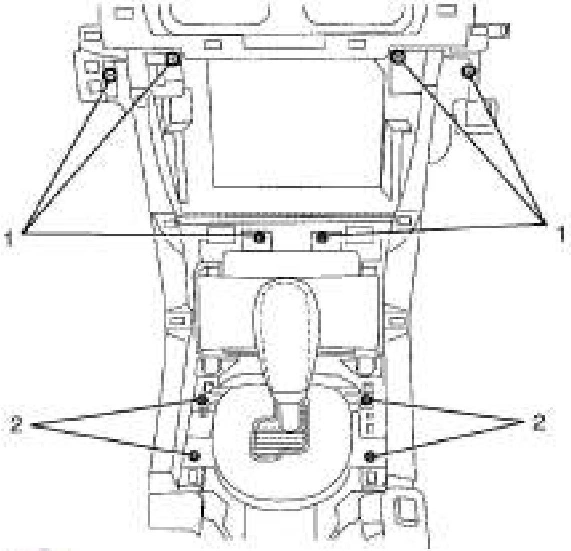
Instrument Panel Center Support Bracket Replacement

Removal Procedure

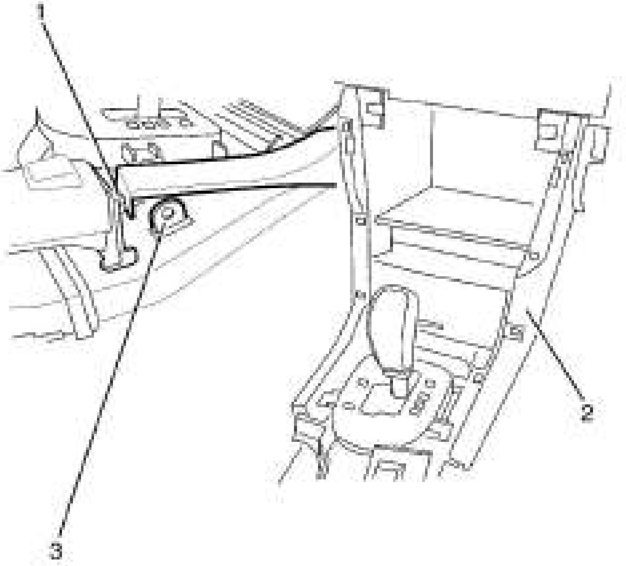
1. Remove the trim panel (I/P) centre. Refer to Instrument Panel Center Trim Panel Replacement .
2. Remove the trim plate. Refer to Instrument Panel Center Trim Panel Replacement .
3. Remove the radio. Refer to Radio Replacement .



4. Remove the coin holder upper retaining screws (2,4) and remove the coin holder (1).
5. Remove the park recess tray upper retaining screw (2) and remove the recess trim (3).

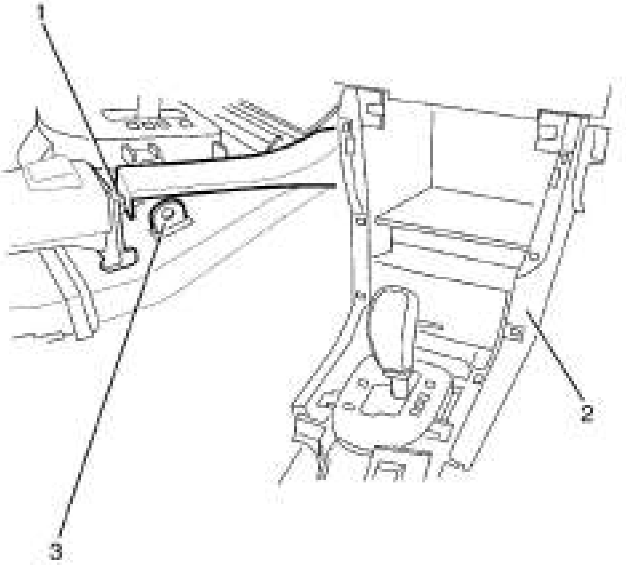


6. Remove the I/P bracket to I/P carrier retaining screws (1).
7. Remove the I/P bracket to centre console retaining screws (2).



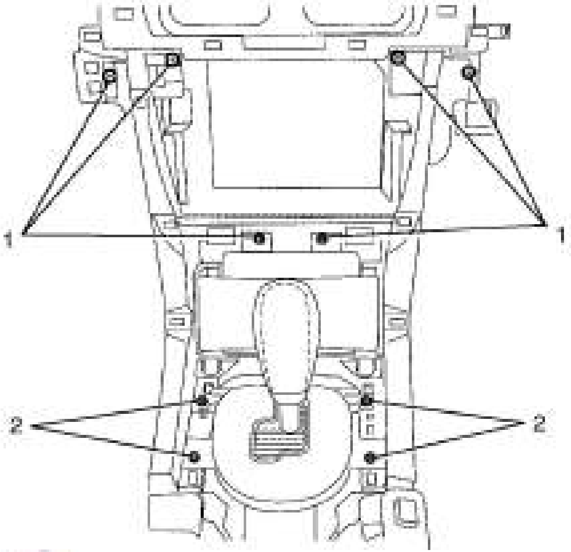
8. Remove the I/P bracket (2) to centre vent retaining clip (3).
9. Disengage the I/P bracket (2) from the centre console trim (1).
10. Carefully remove the I/P bracket (2) from the I/P carrier.

Installation Procedure



1. Install the I/P bracket into the I/P tower.
2. Carefully engage the I/P bracket (2) into the centre console trim (1).
3. Install the I/P bracket (2) to centre vent retaining clip (3).

Notice: Refer to Fastener Notice in the Preface section.



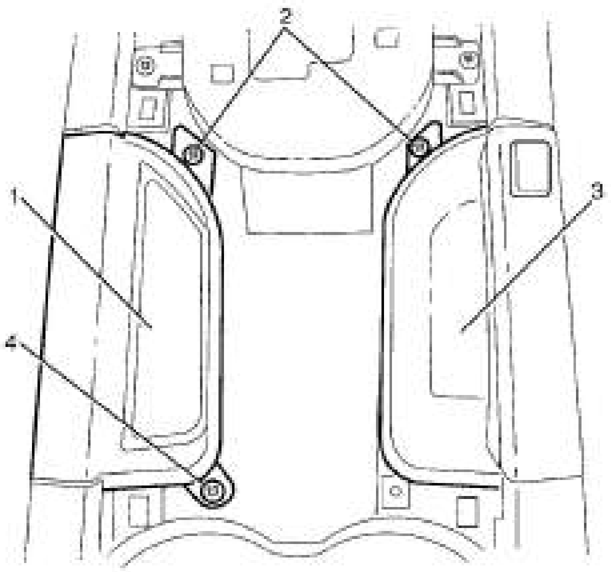
4. Install the I/P bracket to centre console retaining screws (2).

   Tighten
   Tighten the screws (1) to 2 N·m (18 lb in).

5. Install the I/P bracket to I/P carrier retaining screws (1).

   Tighten
   Tighten the screws (1) to 2 N·m (18 lb in).

   Notice: Refer to Fastener Notice in the Preface section.



6. Install the coin holder upper retaining screws (2,4) and remove the coin holder (1).

   Tighten
   Tighten the screws (2,4) to 2 N·m (18 lb in).

7. Install the park recess (3) tray upper retaining screw (2).

   Tighten
   Tighten the screws (1) to 2 N·m (18 lb in).

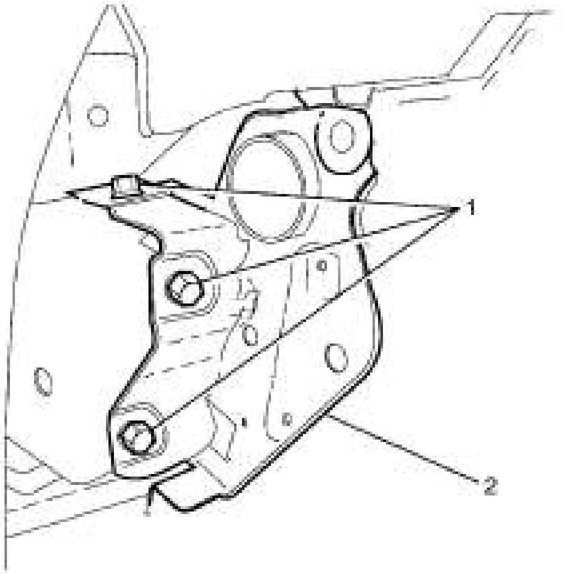
8. Install the radio. Refer to Radio Replacement .
9. Install the trim plate. Refer to Console Trim Plate Replacement .
10. Install the trim panel (I/P) centre. Refer to Instrument Panel Center Trim Panel Replacement .
11. Ensure all trims are fitted correctly and are flush with the corresponding trims.

Instrument Panel Carrier Replacement

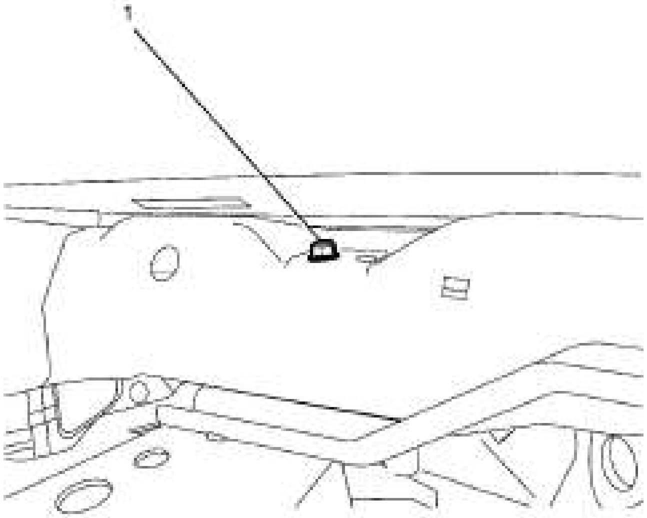
Removal Procedure

Caution: Refer to Battery Disconnect Caution in the Preface section.

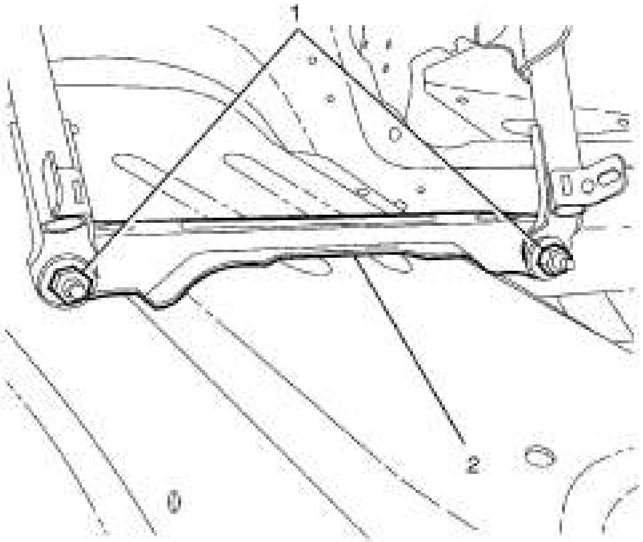
1. Disconnect the battery ground cable from the battery. Refer to Battery Negative Cable Disconnection and Connection.
2. Remove the trim pad - (I/P) Upper. Refer to Instrument Panel Upper Trim Pad Replacement in Instrument Panel, Gages, and Console.
3. Remove the floor console. Refer to Front Floor Console Replacement.



4. Remove the I/P carrier (2) to A - pillar retaining bolts (1) the left side is shown the right side is the same.



5. Remove the upper I/P carrier to body panel retaining bolts (1) located at the top of the I/P carrier under the windshield.



6. Remove the lower I/P carrier (2) to transmission tunnel bracket retaining bolts (1).

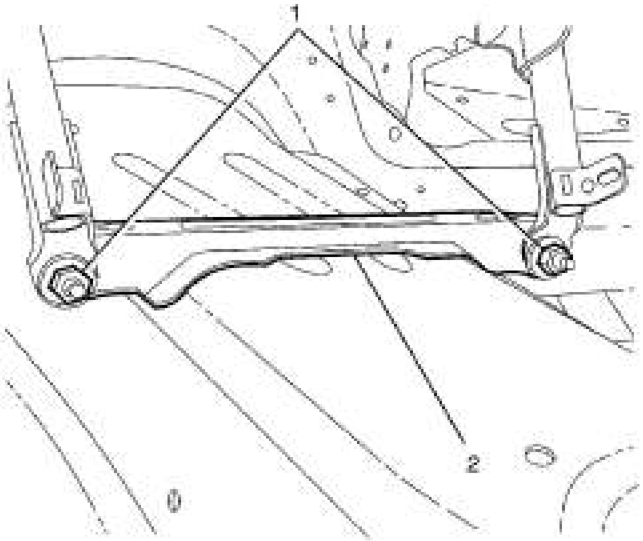
Important: When detaching the I/P wiring harness, make sure the I/P harness is attached as removed.

7. Detach the I/P electrical wiring harness.
8. Carefully remove the I/P carrier from the vehicle.

Installation Procedure

1. Carefully install the I/P carrier to the vehicle.
2. Attach the I/P electrical wiring harness the I/P carrier.

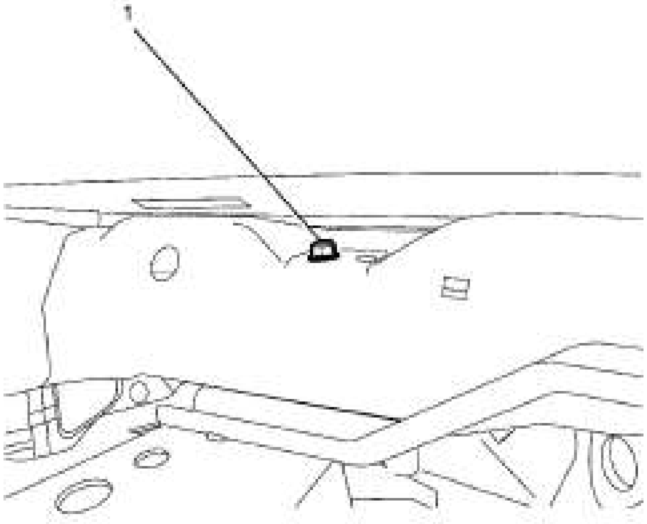
Notice: Refer to Fastener Notice in the Preface section.



3. Install the lower I/P carrier (2) to transmission tunnel bracket retaining bolts (1).

   Tighten
   Tighten the nuts to 30 N·m (22 lb ft).

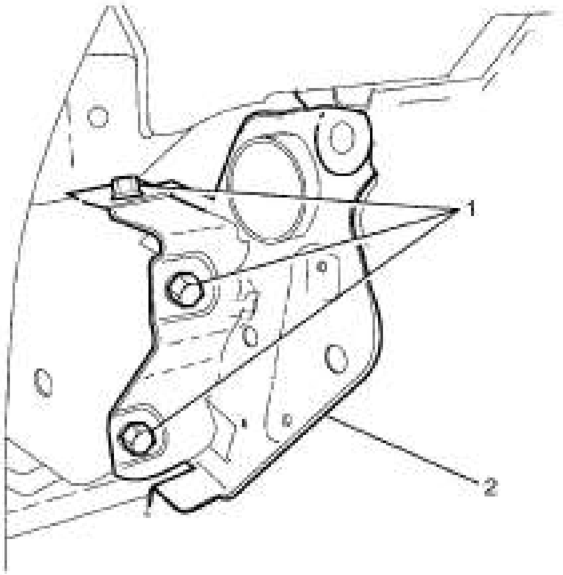
   Notice: Refer to Fastener Notice in the Preface section.



4. Install the upper I/P carrier to body panel retaining bolts (1).

   Tighten
   Tighten the bolts to 32 N·m (24 lb ft).

Notice: Refer to Fastener Notice in the Preface section.



5. Install the I/P carrier (2) to A - pillar retaining bolts (1).

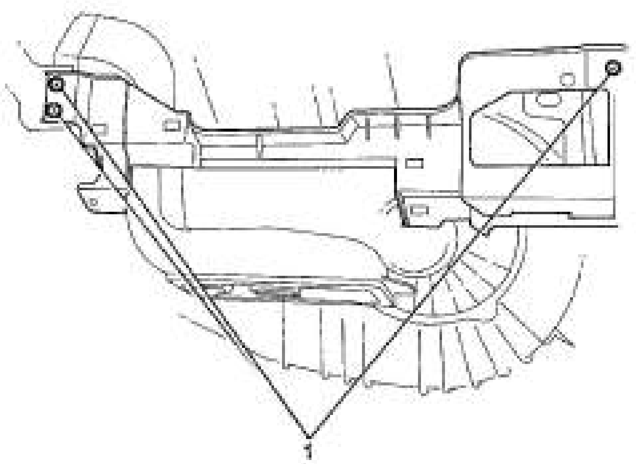
   Tighten
   Tighten the bolts to 37 N·m (27 lb ft).

6. Install the centre console. Refer to Front Floor Console Replacement.
7. Install the trim pad - (I/P) Upper. Refer to Instrument Panel Upper Trim Pad Replacement in Instrument Panel, Gages, and Console.
8. Connect the battery ground cable to the battery. Refer to Battery Negative Cable Disconnection and Connection.
9. Test all electrical components for correct operation.

Instrument Panel Retainer Replacement

Removal Procedure

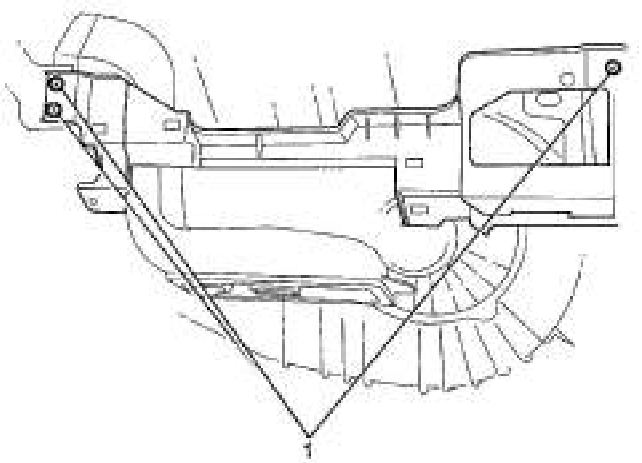
1. Remove the knee bolster. Refer to Knee Bolster Replacement .
2. Remove the right close out panel. Refer to Instrument Panel Insulator Panel Replacement - Right Side .
3. Remove the hood release handle. Refer to Hood Primary Latch Release Cable Replacement .



Important: The right side is shown, the left side is similar.

4. Remove the I/P retainer to I/P carrier retaining screws (1).
5. Remove the I/P retainer.

Installation Procedure



1. Align the I/P retainer to the I/P carrier.

   Notice: Refer to Fastener Notice in the Preface section.

2. Install the I/P retainer to I/P carrier retaining screws (1).

   Tighten
   Tighten the screws (1) to 2 N·m (18 lb in).

3. Install the hood release handle. Refer to Hood Primary Latch Release Cable Replacement .
4. Install the right close out panel. Refer to Instrument Panel Insulator Panel Replacement - Right Side .
5. Install the knee bolster. Refer to Knee Bolster Replacement .

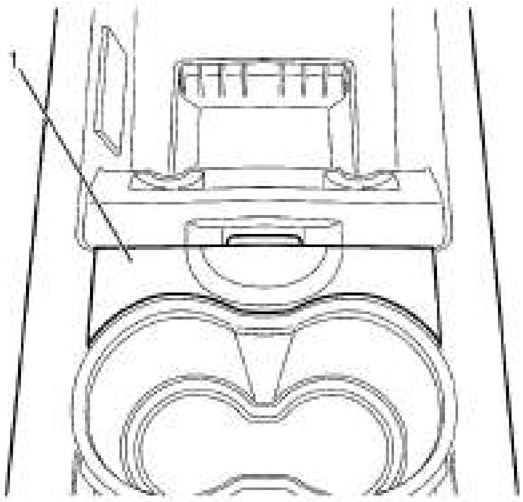
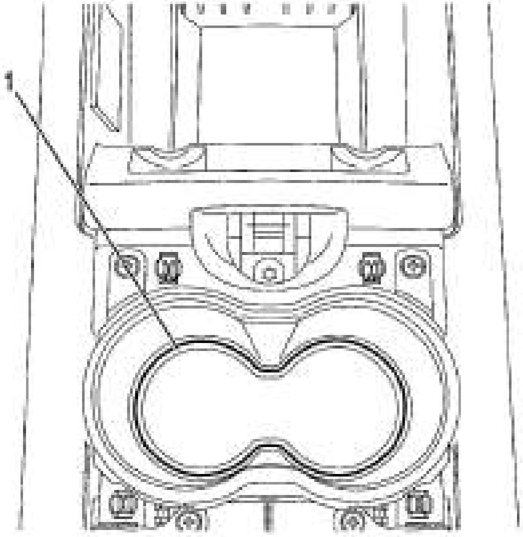
Front Floor Console Cup Holder Replacement

Removal Procedure (Up to 17 Sept 2007)

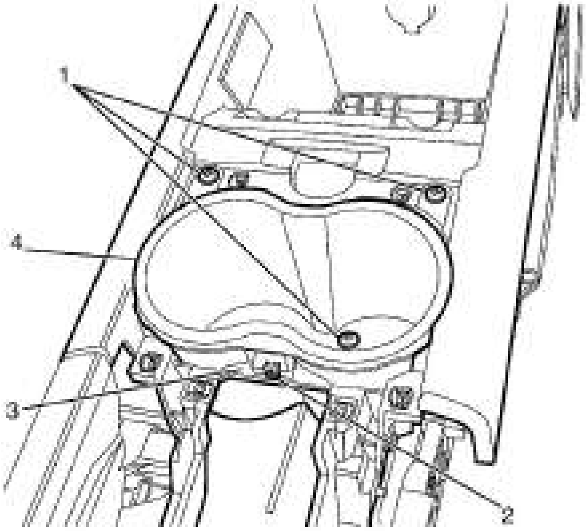
1. Remove the centre console trim plate. Refer to Console Trim Plate Replacement .



2. Using a suitable tool carefully remove cupholder trim (1) by disengaging the retaining clips.

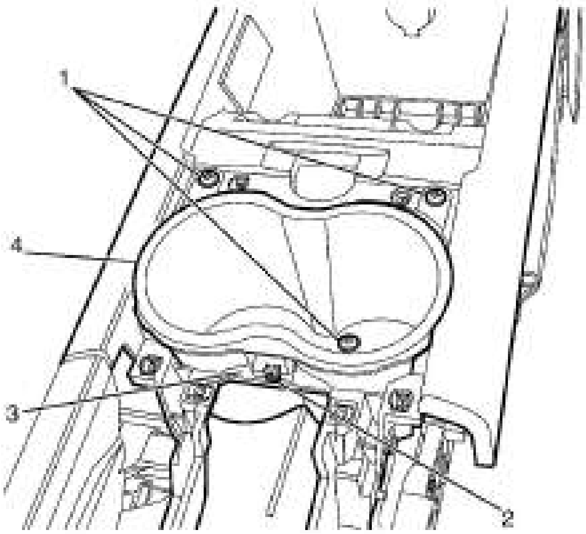


3. Remove the cupholder mat (1) located at the base of the cupholder.



4. Remove the cupholder (4) retaining screws (1).
5. Remove the cupholder (4) from the centre console (3) by releasing the retaining lug (2) and lifting upwards.

Installation Procedure (Up to 17 Sept 2007)

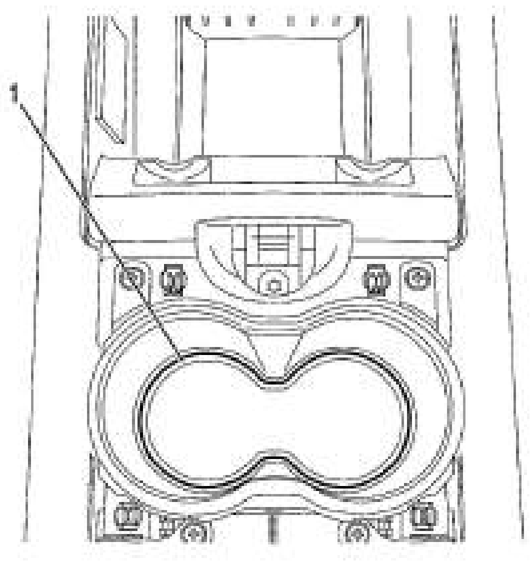


1. Install the cupholder (4) into the centre console (3) listen for an audible click from the retaining lug (2) to confirm fitting.

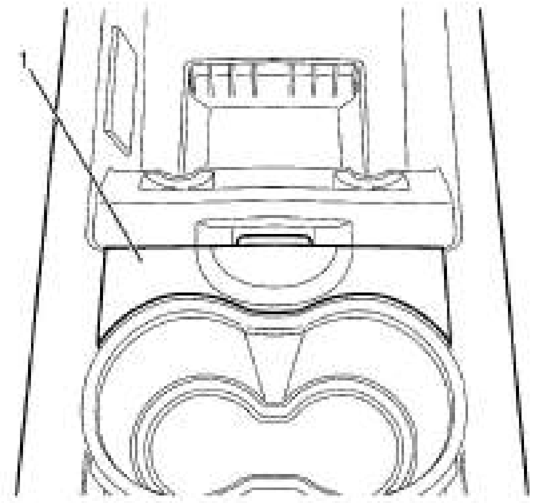
   Notice: Refer to Fastener Notice in the Preface section.

2. Install the cupholder to centre console retaining screws (1).

Tighten
Tighten the screws (1) to 2 N·m (18 lb in).



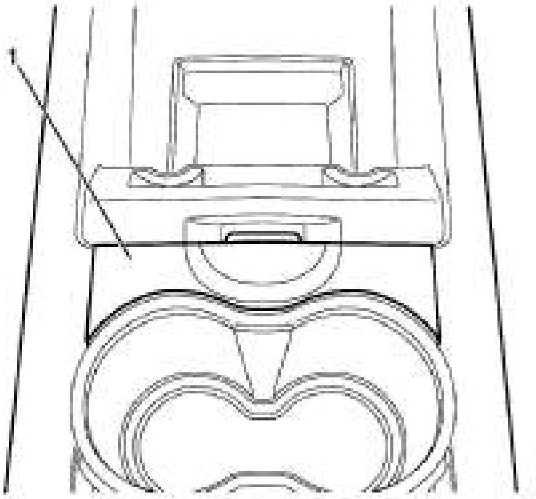
3. Install the cupholder mat (1).



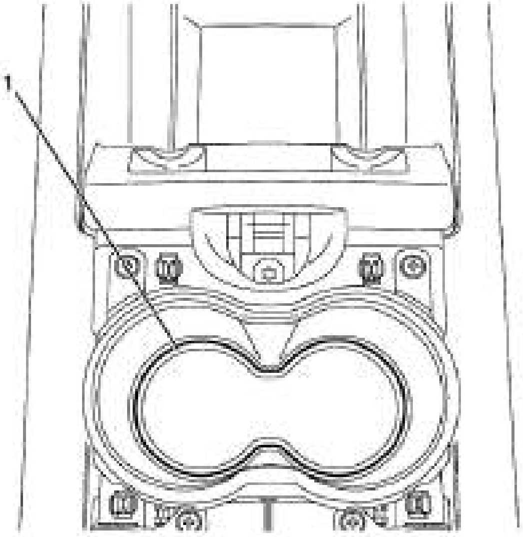
4. Install the cup holder trim (1) by firmly engaging the retaining clips.
5. Install the centre console trim plate. Refer to Console Trim Plate Replacement .

Removal Procedure (From 17 Sept 2007)

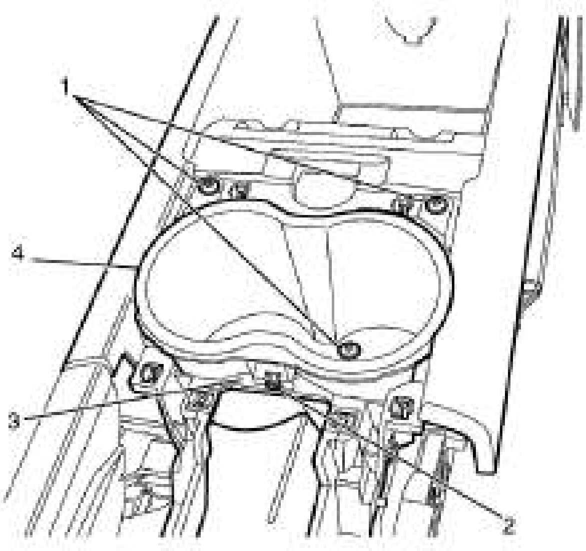
1. Remove the centre console trim plate. Refer to Console Trim Plate Replacement .



2. Using a suitable tool carefully remove the cupholder trim (1) by disengaging the retaining clips.

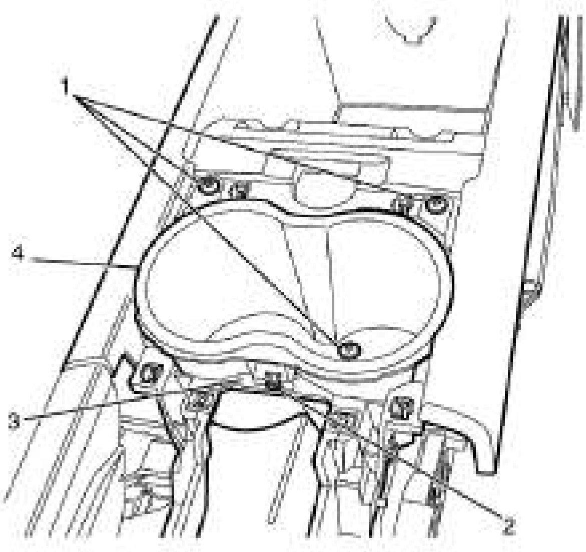


3. Remove the cupholder mat (1) located at the base of the cupholder.



4. Remove the cupholder to centre console retaining screws (1).
5. Remove the cupholder (4) from the centre console (3) by releasing the retaining lug (2) and lifting upwards.

Installation Procedure (From 17 Sept 2007)



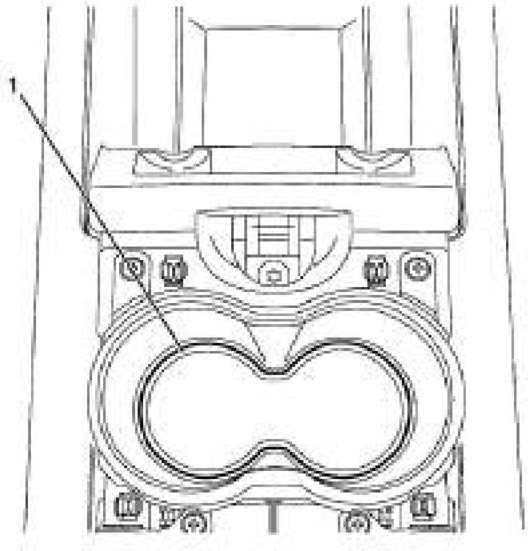
Important: Listen for an audible click from the retaining lug (2) to confirm fitting.

1. Install the cupholder (4) into the centre console (3)

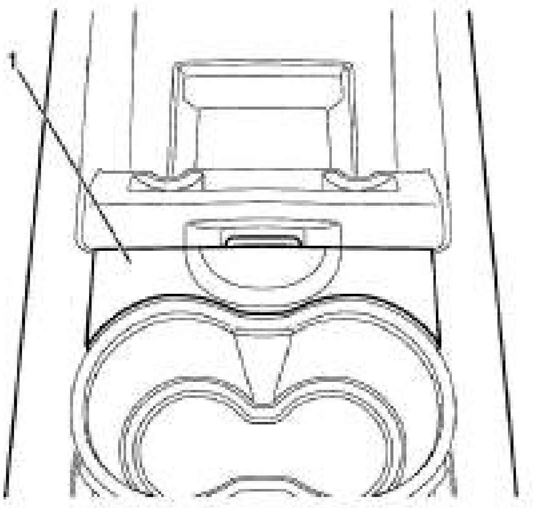
Notice: Refer to Fastener Notice in the Preface section.

2. Install the cupholder to centre console retaining screws (1).

Tighten
Tighten the screws to 2 N·m (18 lb in).



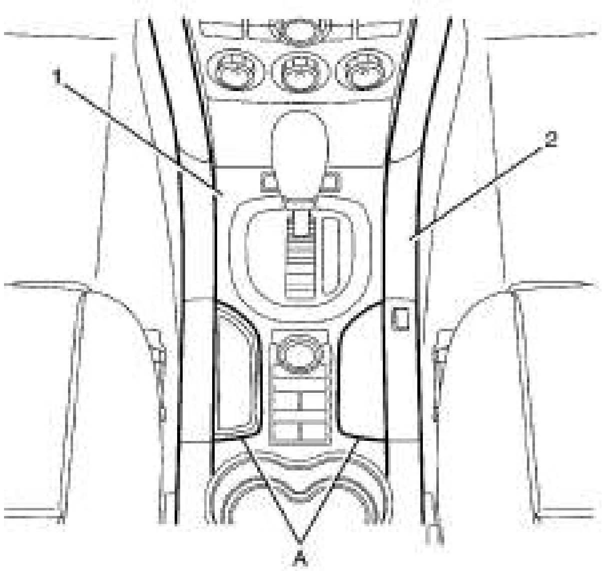
3. Install the cupholder mat (1).



4. Install the cup holder trim (1) by firmly engaging the retaining clips.
5. Install the centre console trim plate. Refer to Console Trim Plate Replacement .

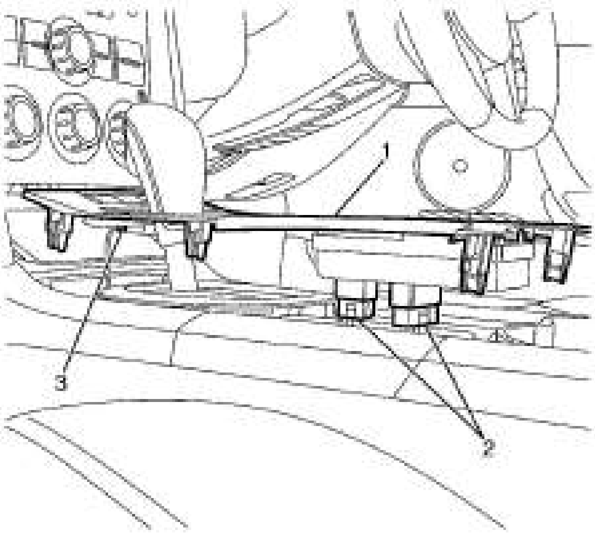
Console Trim Plate Replacement

Removal Procedure



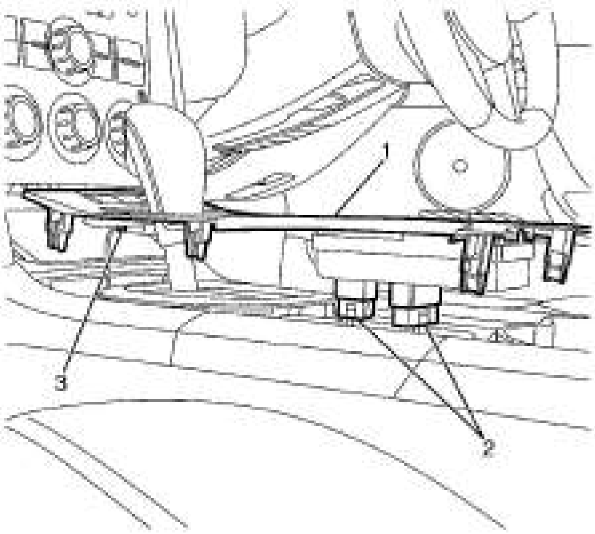
Important: The front floor console front cover (1) is retained by clips.

1. Grasp the front floor console front cover (1) at (A) and pull upwards to disengage the retaining clips from the floor console (2).

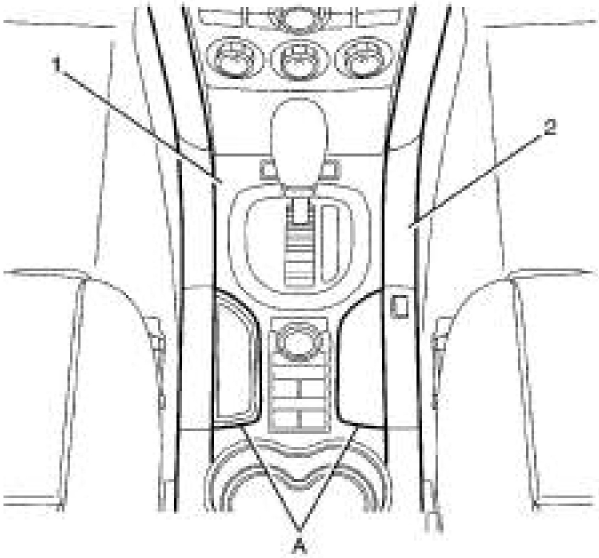


2. Disconnect the window and exterior mirror switch electrical connector (2).
3. Disconnect the Traction Control/ESP and Power switch (if fitted) electrical connectors (3).
4. Remove the front floor console front cover (1).

Installation Procedure



1. Connect the Traction Control/ESP and Power switch (if fitted) electrical connectors (3).
2. Connect the window and exterior mirror switch electrical connectors (2).
3. Install the front floor console front cover (1).

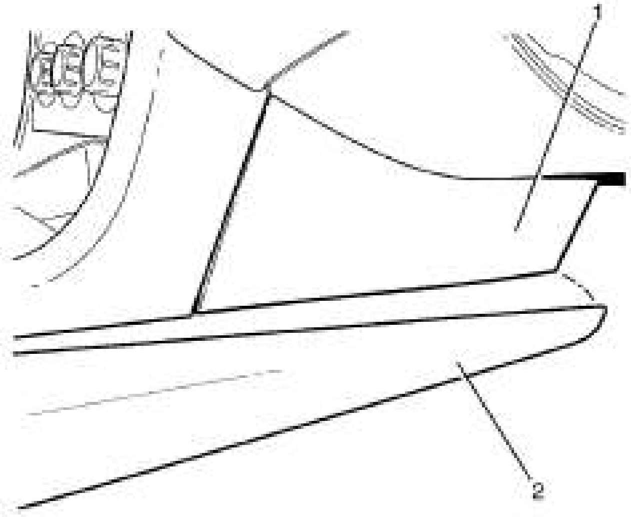


Important: The front floor console front cover (1) is retained by clips.

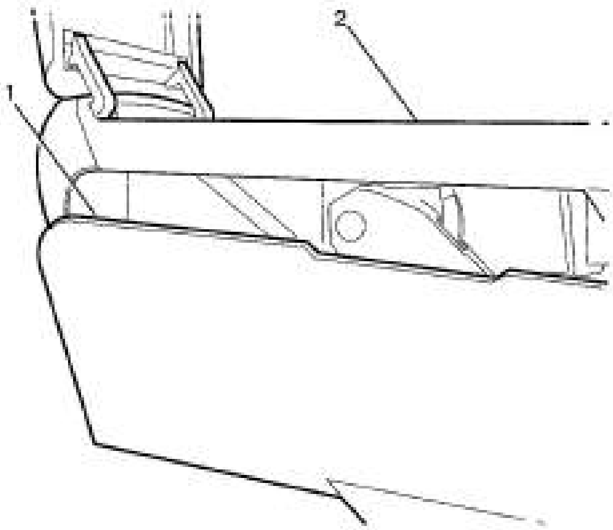
4. Install the front floor console front cover (1) and push downwards at (A) to engage the retaining clips to the floor console (2).
5. Test all switches for correct operation.

Front Floor Console Side Trim Panel Replacement - Right Side

Removal Procedure



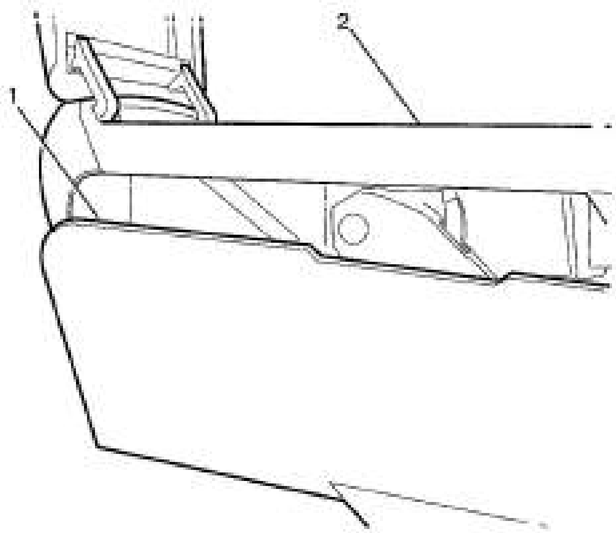
1. Slide the front of the trim plate (2) away from the centre console extension panel (1).



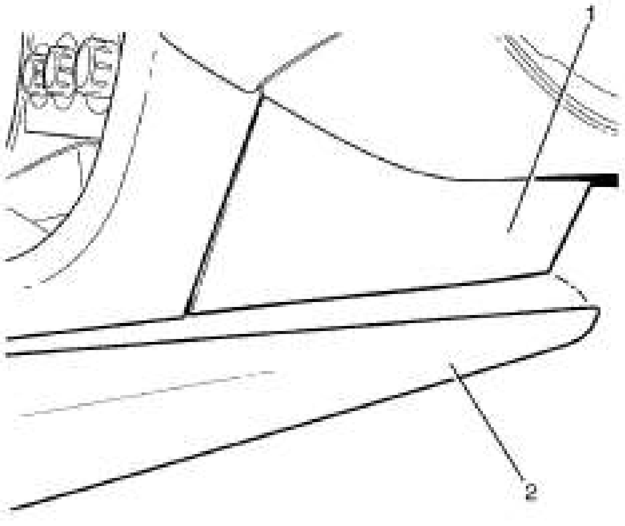
2. Detach the rear of the trim plate (1) from the centre console (2) by disengaging the retaining clips.

3. Remove the trim plate (1).

Installation Procedure



1. Engaged the retaining clips at rear of the trim plate (1) to secure it to the centre console (2).

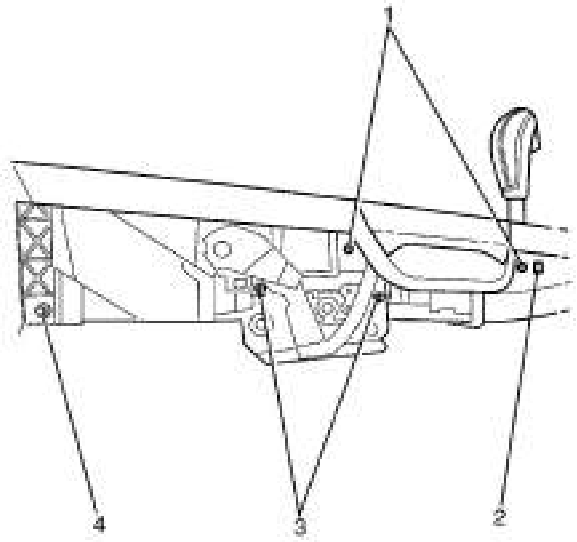


2. Slide the front of the trim plate (2) up into the centre console extension panel (1).
3. Ensure the trim plate is correctly located in the centre console and end panel.

Front Floor Console Replacement (RHD)

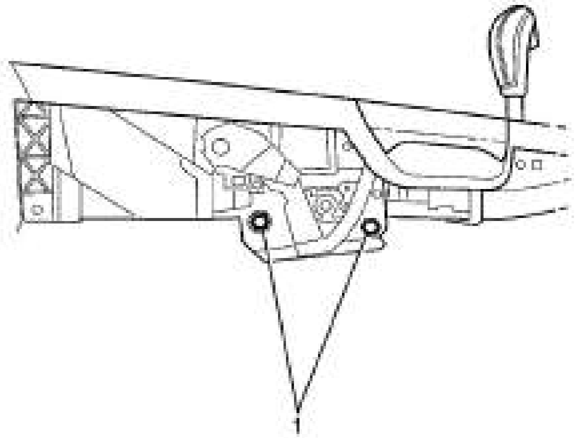
Removal Procedure

1. Remove the side trim plate - Console. Refer to Console Trim Plate Replacement .
2. Remove the centre console end panel. Refer to Center Console End Panel Replacement .
3. Remove the armrest assembly. Refer to Front Floor Console Armrest Replacement .
4. Remove the trim plate - console. Refer to Console Trim Plate Replacement .
5. Remove the centre console cupholder. Refer to Front Floor Console Cup Holder Replacement .

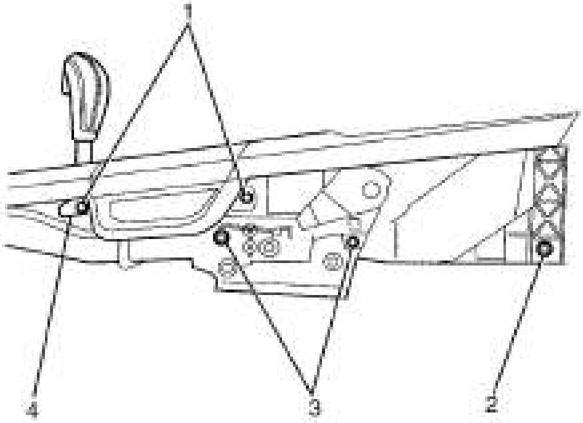


Important: The following procedure is carried out on the right side of the centre console.

6. Remove the retaining screws from the centre console (3).
7. Remove the rear centre console retaining bolt (4).
8. Remove the park recess tray retaining screws (1) and retaining clip (2).

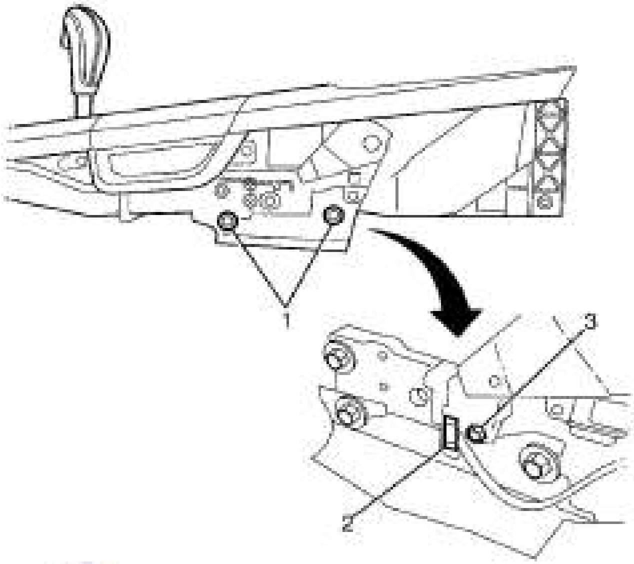


9. Loosen the centre console to park brake assembly bracket retaining bolts (1).

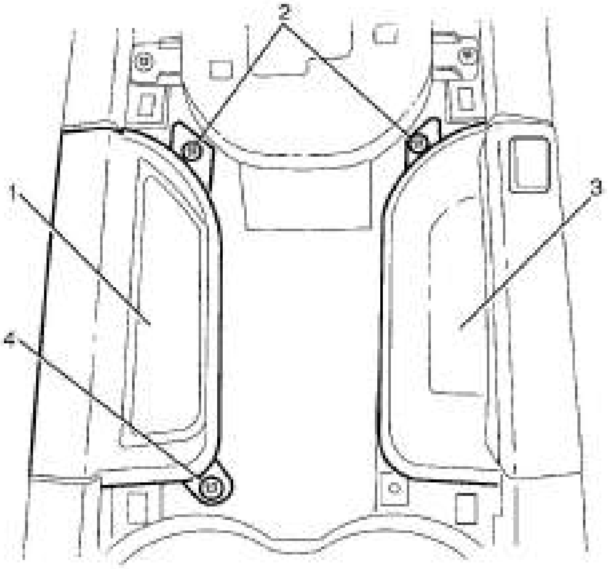


Important: The following procedures are carried out on the left hand side.

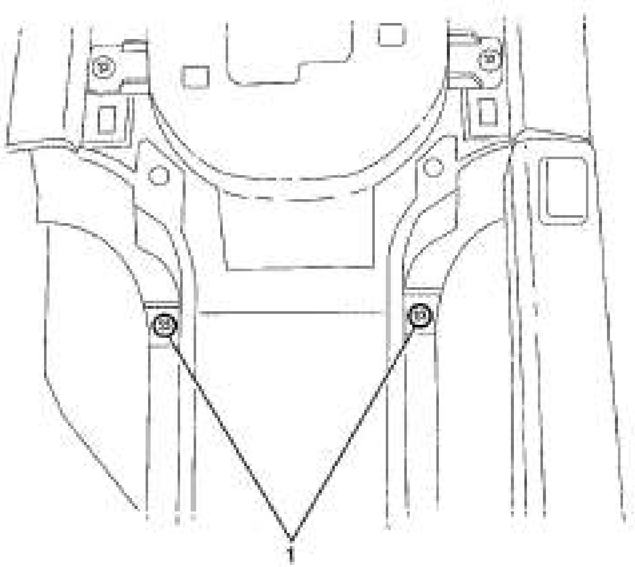
10. Remove the rear centre console retaining bolt (2).
11. Remove the centre console retaining screws (3).
12. Remove the coin holder retaining screws (1) and retaining clip (4).



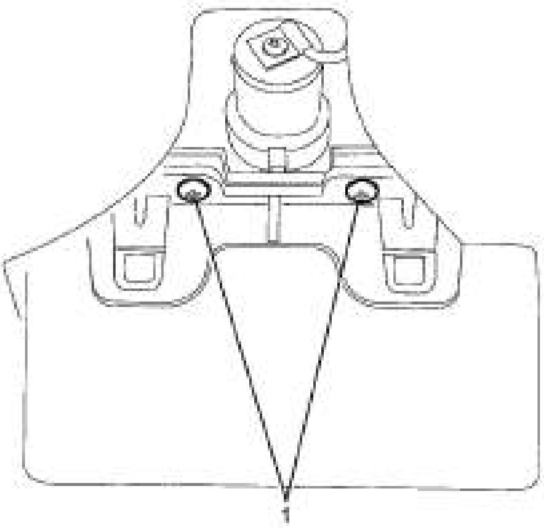
13. Remove the park brake warning lamp switch (2) retaining torx screw (3).
14. Loosen the centre console retaining bolts (1).



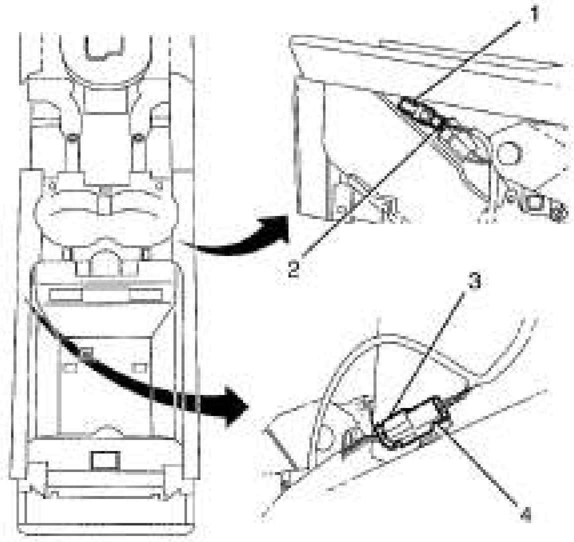
15. Remove the coin holder upper retaining screws (2,4) and remove the coin holder (1).
16. Remove the park brake recess tray upper retaining screw (2) and remove the recess trim (3).



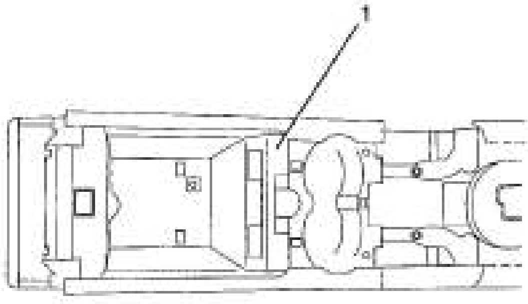
17. Remove the centre console top retaining screws (1).



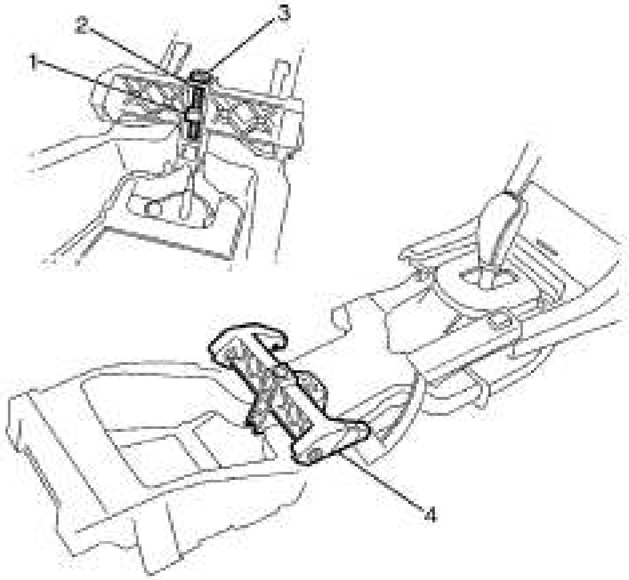
18. Remove the lower centre console retaining bolts (1).



19. Disconnect the centre console electrical connectors (1,3).
20. Detach and remove the centre console electrical connectors (4,2).



21. Remove the centre console (1).

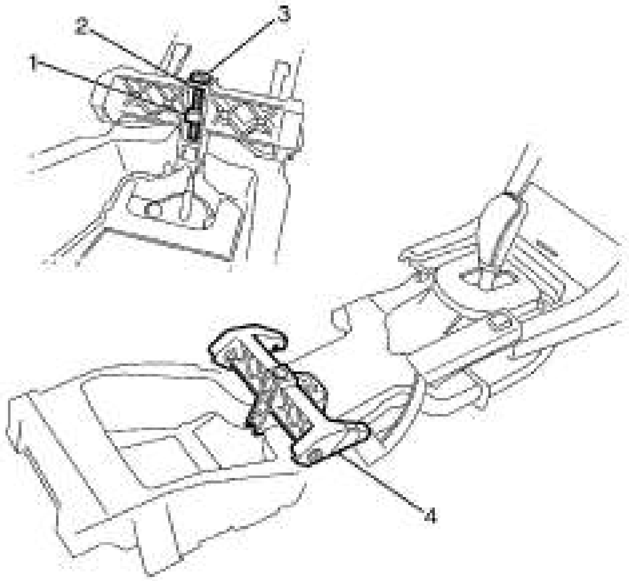


22. Remove the adjuster circlip (2) from the park brake adjuster (3).
23. Remove the park brake adjuster (3), by rotating counter clockwise until it leaves the retaining nut insert (1).
24. Remove the park brake adjuster (3) retaining nut insert (1).

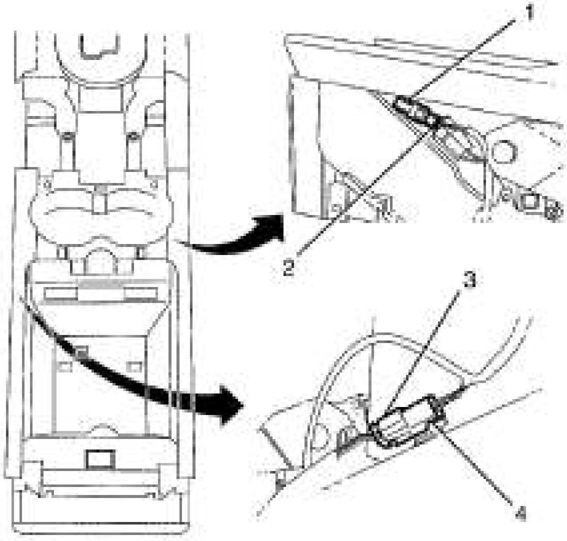
Important: If replacing the park brake assembly. Refer to Parking Brake Release Handle Assembly Replacement .

25. Remove the park brake assembly (4).

Installation Procedure

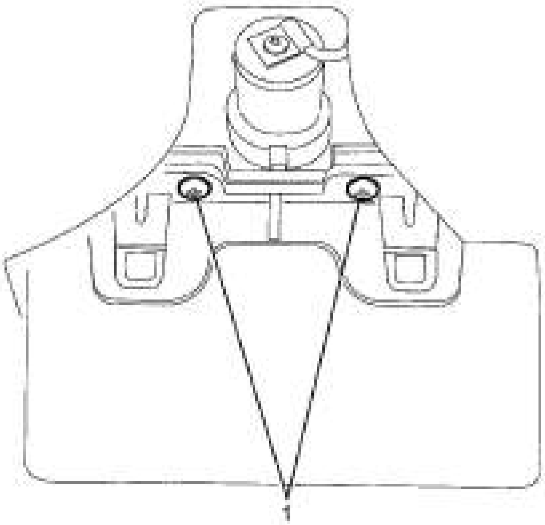


1. Align the park brake assembly (4) with the transmission tunnel.
2. Install the park brake adjuster nut insert (1) into the park brake assembly (4).
3. Install the park brake adjuster (3) by rotating it clockwise until the desired tension is reached.
4. Once the desired tension is reached install the park adjuster circlip (2).
5. Align the centre console over the park brake assembly.



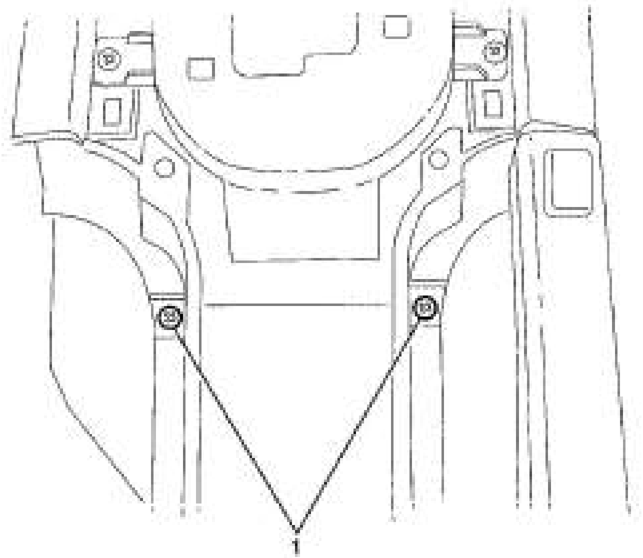
6. Attach and remove the centre console electrical connectors (4,2).
7. Connect the centre console electrical connectors (1,3).
8. Install the centre console cupholder. Refer to Front Floor Console Cup Holder Replacement .

Notice: Refer to Fastener Notice in the Preface section.



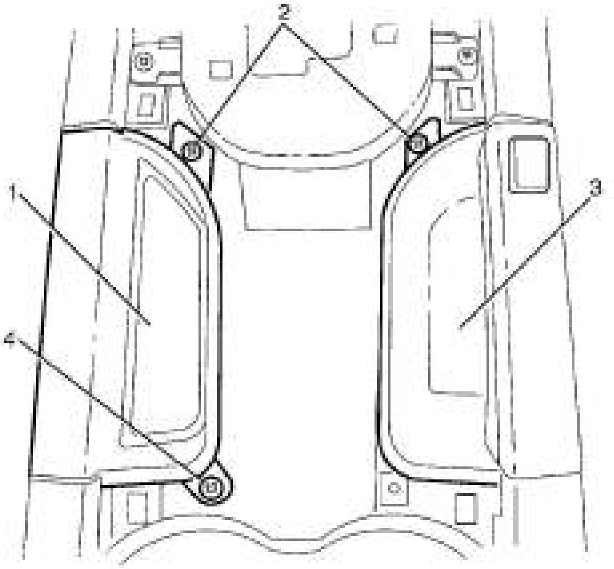
9. Install the lower centre console retaining screws (1).

Tighten
Tighten the screws (1) to 2 N·m (18 lb in).



10. Install the upper centre console retaining screws (1).

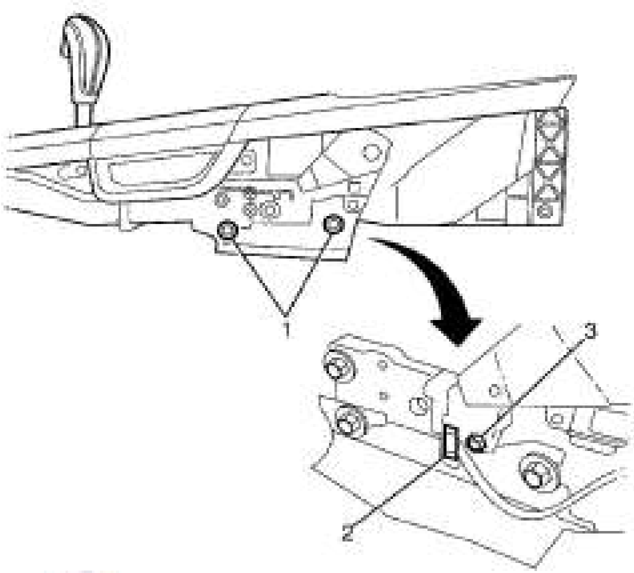
Tighten
Tighten the screws (1) to 2 N·m (18 lb in).



11. Install the coinholder (1) and park brake recess trim (3).

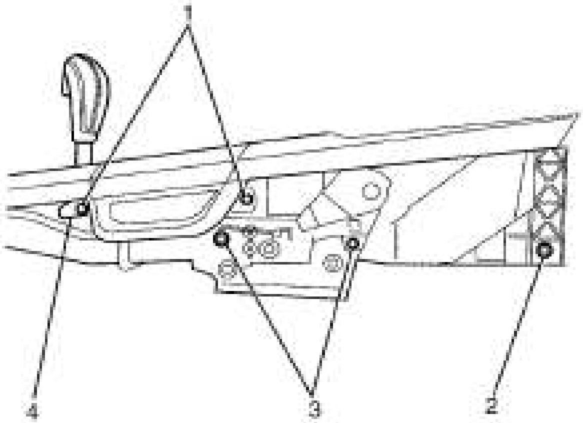
12. Install the coinholder and park brake recess trim upper retaining screws (2,4).

Tighten
Tighten the screws (2,4) to 2 N·m (18 lb in).



13. Install the park brake warning lamp switch (2).
14. Install the park brake warning lamp switch retaining torx screw (3).
15. Tighten the centre console to park brake assembly retaining bolts (1).

Tighten
Tighten the bolts to 25 N·m (18 lb ft).



16. Install the rear centre console retaining bolt (2).

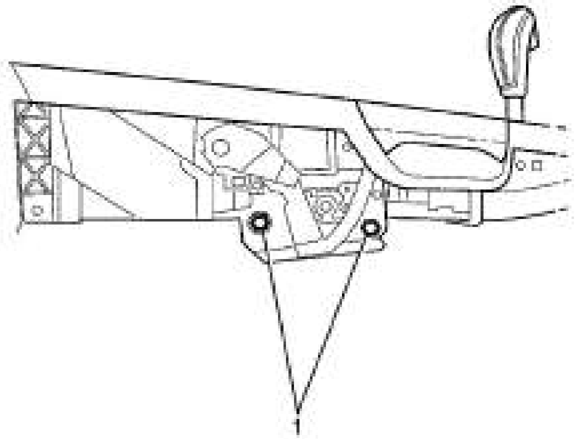
    Tighten
    Tighten the bolt to 25 N·m (18 lb ft).

17. Install the centre console retaining screws (3).

    Tighten
    Tighten the screws (3) to 2 N·m (18 lb in).

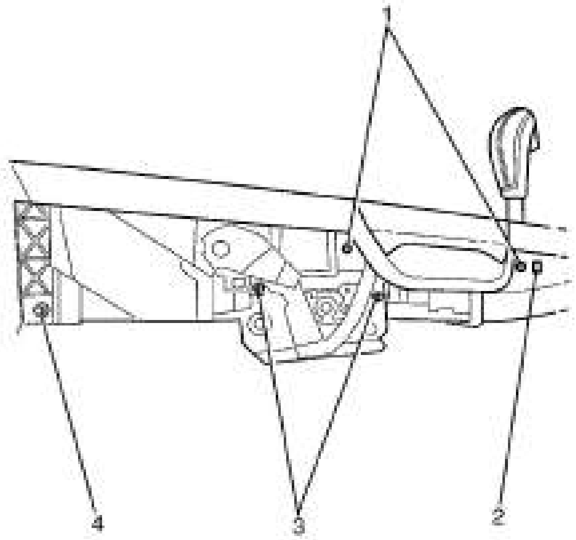
18. Install the coinholder lower retaining screws (1) and retaining clip (4).

    Tighten
    Tighten the screws (1) to 2 N·m (18 lb in).



19. Tighten the centre console to park brake assembly retaining bolts (1).

    Tighten
    Tighten the bolts to 25 N·m (18 lb ft).



20. Install the centre console retaining screws (3).

    Tighten
    Tighten the screws (3) to 2 N·m (18 lb in).

21. Install the park brake recess lower retaining screws (1) and retaining clip (2).

    Tighten
    Tighten the screws (1) to 2 N·m (18 lb in).

22. Tighten the rear centre console retaining bolt (4).

    Tighten
    Tighten the bolt to 25 N·m (18 lb ft).

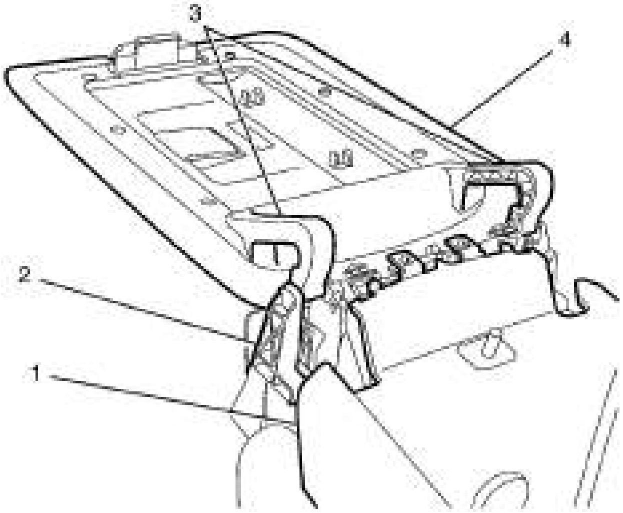
23. Install the trim plate - Console. Refer to Console Trim Plate Replacement .
24. Install the armrest assembly. Refer to Front Floor Console Armrest Replacement .
25. Install the centre console end panel. Refer to Center Console End Panel Replacement .
26. Install the side trim plate - Console. Refer to Console Trim Plate Replacement .
27. Test all electrical components for correct operation.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Instrument Panel and Console Trim | Repair Instructions | Document ID: 1995172

Front Floor Console Armrest Replacement

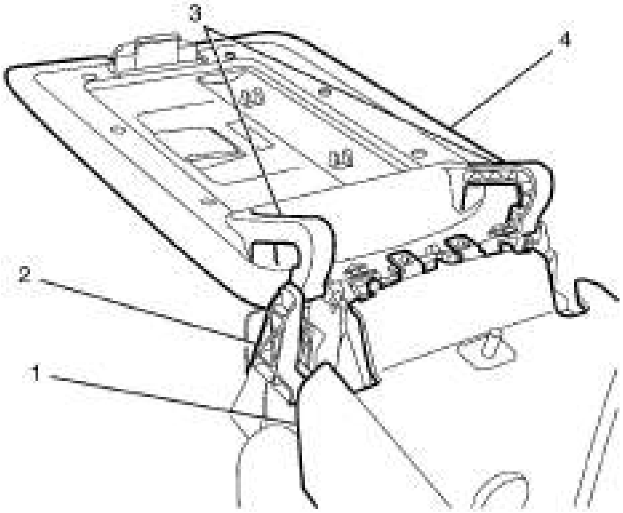
Removal procedure

1. Remove the centre console end panel. Refer to Center Console End Panel Replacement.
2. Open the armrest assembly to 180° to the horizontal position.



3. Using a suitable tool spread the centre console retaining lugs (2) away from the armrest assembly arms (3) and remove the armrest assembly (4) from the centre console (1).

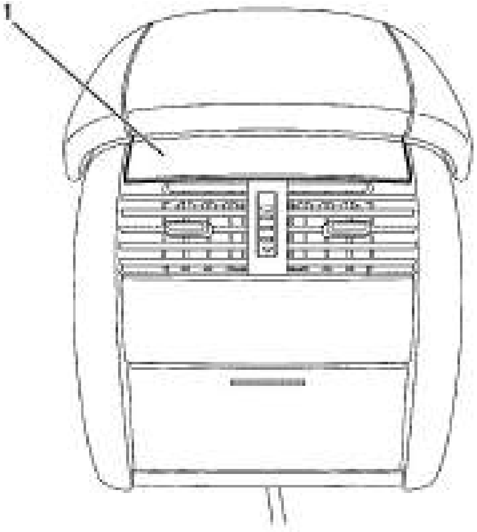
Installation Procedure



1. Align the armrest assembly (4) with centre console assembly (1).
2. Install the armrest assembly arms (3) by firmly inserting it into the centre console retaining lugs (2) listen for an audible click to confirm fitting.
3. Close the armrest assembly (4).
4. Install the centre console end panel. Refer to Center Console End Panel Replacement.

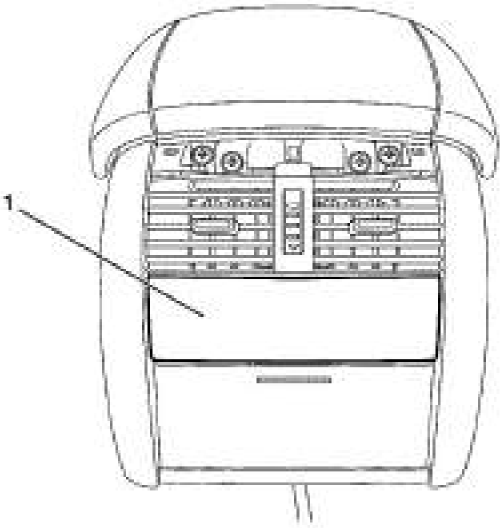
Center Console End Panel Replacement

Removal Procedure - Up to 17 Sept 2007

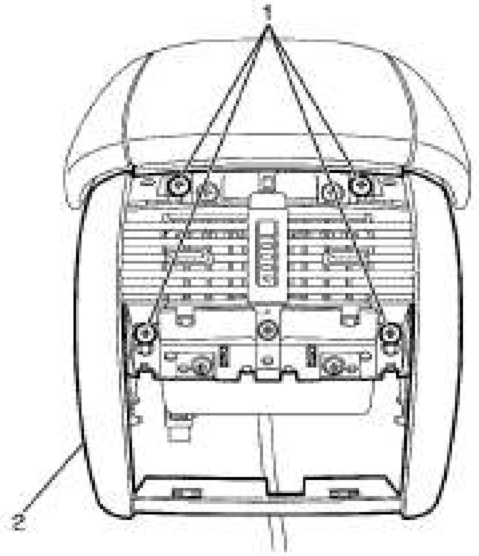


Important: From inside the front floor console compartment carefully lift upwards with a small flat blade screwdriver to detach the retaining clips. Close the armrest and remove the front floor console upper end panel (1).

1. Remove the front floor console upper end panel (1), by lifting from the base of the trim panel to disengage.

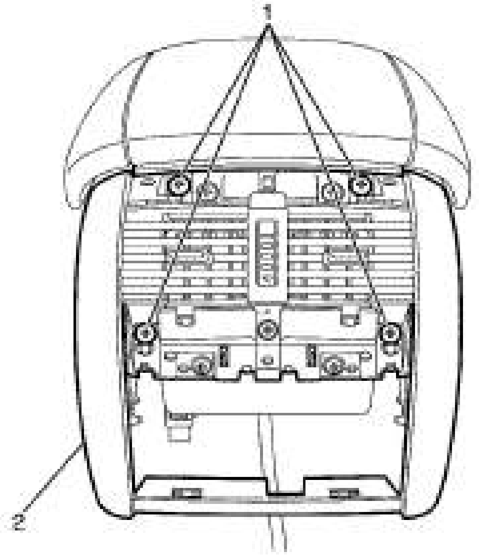


2. Remove the rear floor console rear compartment (1).



3. Remove the end panel to front floor console retaining screws (1).
4. Remove the end panel and rear air outlet assembly (2).

Installation Procedure - Up to 17 Sept 2007

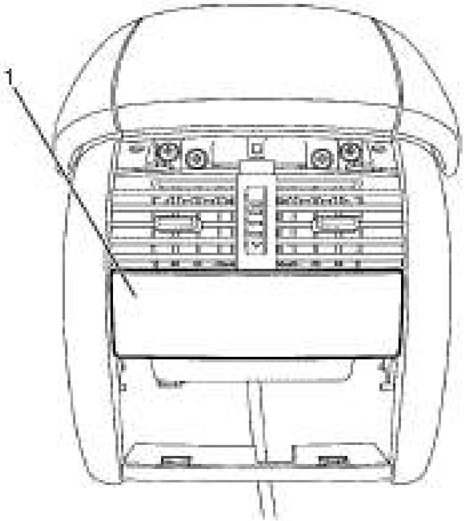


1. Install the end panel and rear air outlet assembly (2).

   Notice: Refer to Fastener Notice in the Preface section.

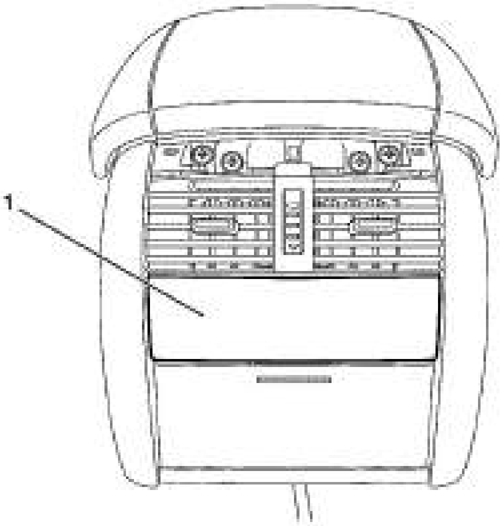
2. Install the end panel to front floor console retaining screws (1).

   Tighten
   Tighten the screws (1) to 2 N·m (18 lb in).

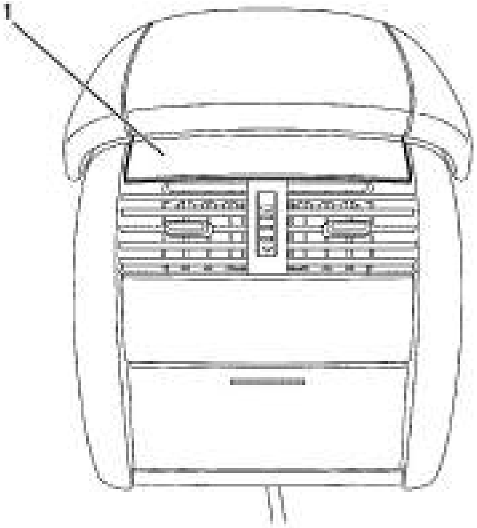


Important: The front floor console lower end panel (1) is retained by clips. Make sure all the clips are aligned with the front floor console and are engaged to avoid an induced rattle condition.

3. Install the front floor console lower end panel (1).



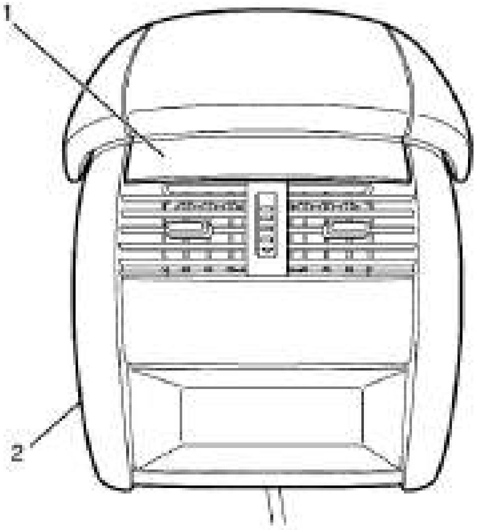
4. Install the rear floor console rear compartment (1).



Important: The front floor console upper end panel (1) is retained by clips. Make sure all the clips are aligned with the front floor console and are engaged to avoid an induced rattle condition.

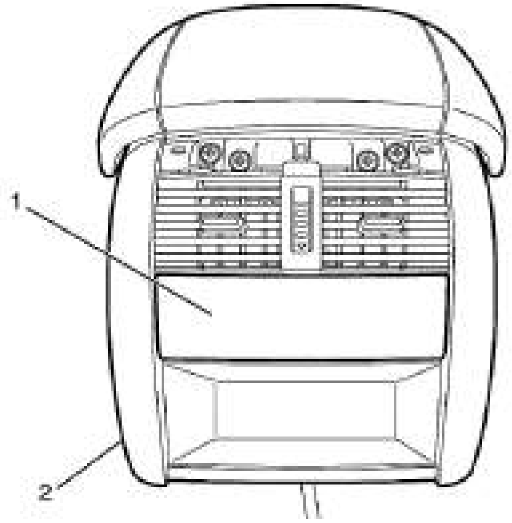
5. Align the trim panel with the console end panel.
6. Push down on trim to engage retaining clips.

Removal Procedure - From 17 Sept 2007



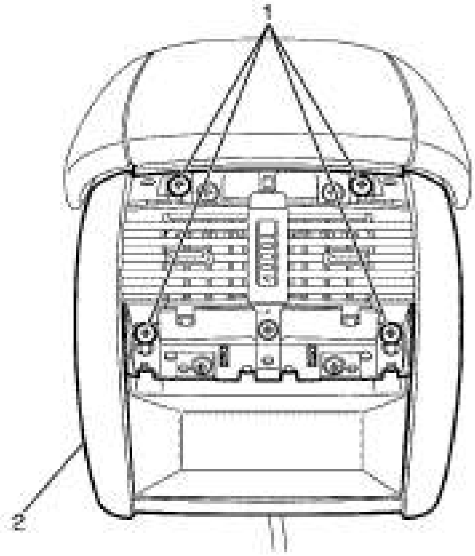
Important: Raise the arm rest and from inside the front floor console compartment carefully lift upwards with a small flat blade screwdriver to detach the retaining clips. Lower the armrest.

1. Remove the front floor console upper trim panel (1) from the end panel (2).



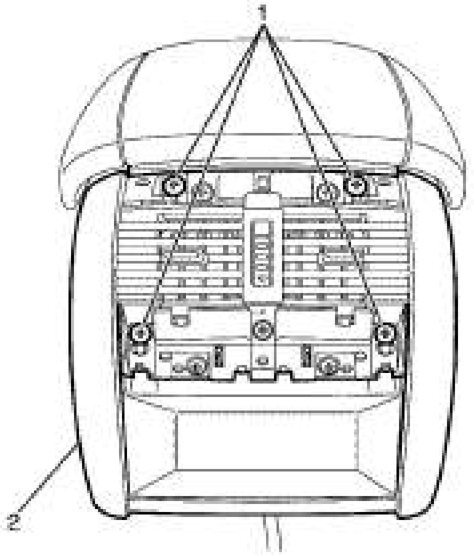
Important: Carefully lift upwards with a small flat blade screwdriver to detach the retaining clips.

2. Remove the rear floor console lower trim panel (1) from the end panel (2).



3. Remove the end panel to front floor console retaining screws (1).
4. Remove the end panel (2) from the front floor console.

Installation Procedure - From 17 Sept 2007

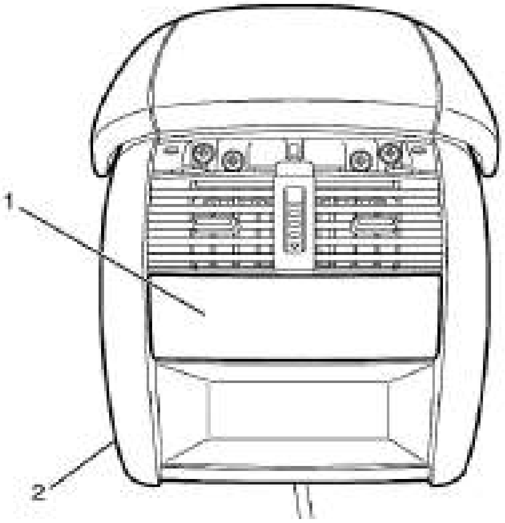


1. Install the end panel (2) to the front floor console.

   Notice: Refer to Fastener Notice in the Preface section.

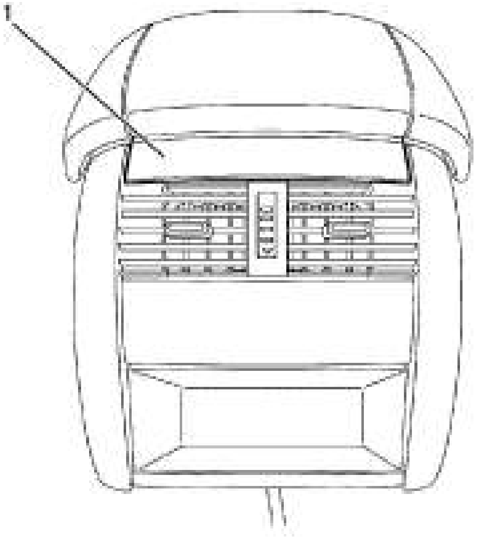
2. Install the end panel to front floor console retaining screws (1).

   Tighten
   Tighten the screws to 2 N·m (18 lb in).



Important: The front floor console lower trim panel (1) is retained by clips. Make sure all the clips are aligned with the front floor console and are engaged to avoid an induced rattle condition.

3. Install the front floor console lower trim panel (1) to the end panel (2). Listen for an audible click to confirm fitting.



Important: The front floor console upper trim panel (1) is retained by clips. Make sure all the clips are aligned with the front floor console and are engaged to avoid an induced rattle condition.

4. Align the upper trim panel (1) with the console end panel.
5. Push down on the upper trim panel (1) to engage retaining clips. Listen for an audible click to confirm fitting.

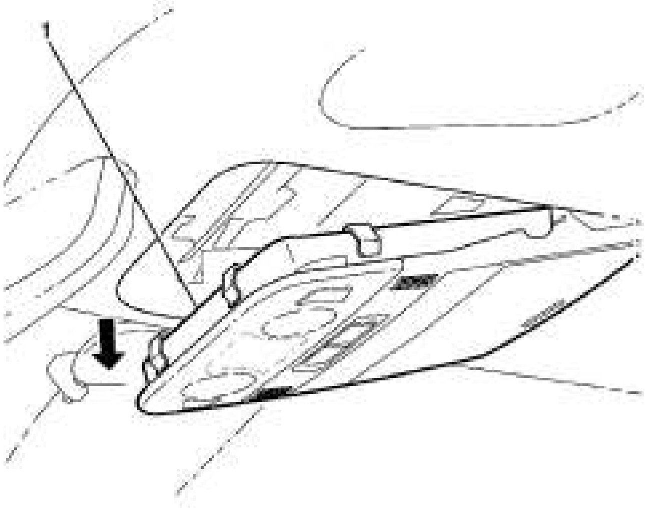
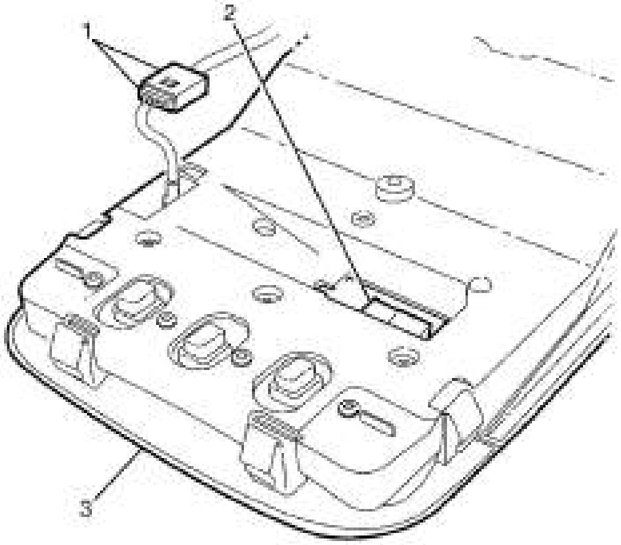
Roof Console Replacement

Removal Procedure



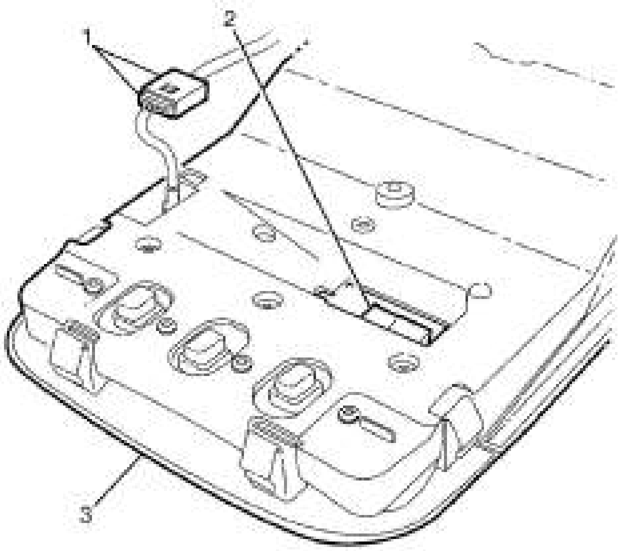
1. Grasp the front of the console compartment (1) and carefully pull away from the headlining assembly.
2. Slide the console compartment (1) in a forward motion to allow the two locator arms to clear the headlining.



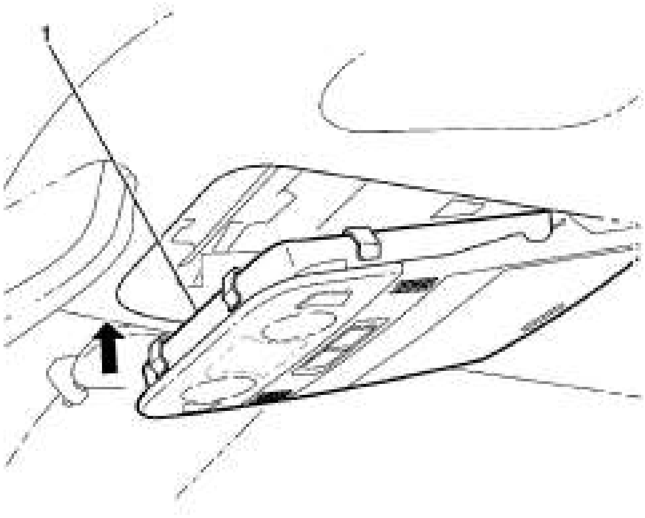
3. Disconnect the console compartment (3) electrical connector (2).

4. Disconnect the bluetooth microphone connection (1).
5. Remove the console compartment (3).

Installation Procedure



1. Connect the bluetooth microphone connection (1).
2. Connect the console compartment (3) electrical connector (1).
3. Insert the two locating arms into the headlining assembly.



4. Carefully push the console compartment (1) into the headlining assembly.
5. Test console compartment for correct operation.

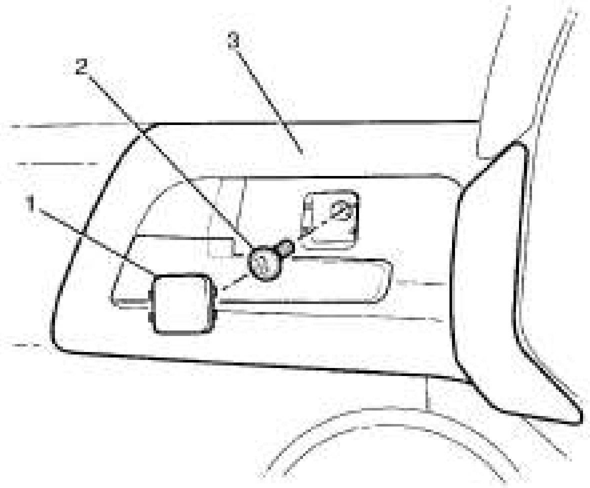
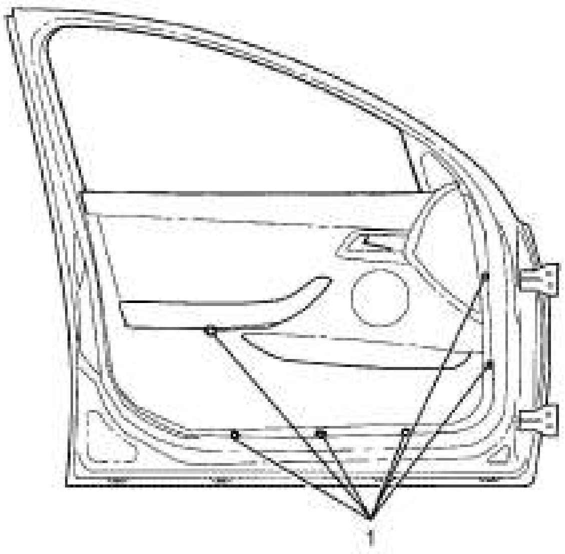
Front Side Door Trim Panel Replacement

Removal Procedure



Important: Pry the inside door handle to door retaining screw cover (1) using a suitable tool.

1. Remove the inside door handle to door retaining screw cover (1) from the door trim panel (3).
2. Remove the inside door handle to door retaining screw (2).

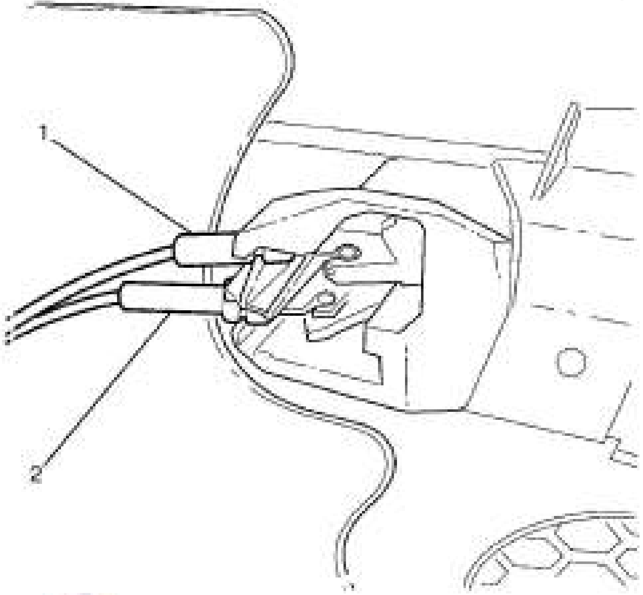


Important: Screw locations for type B door trim panel.

3. Remove the door trim panel to door retaining screws (1).

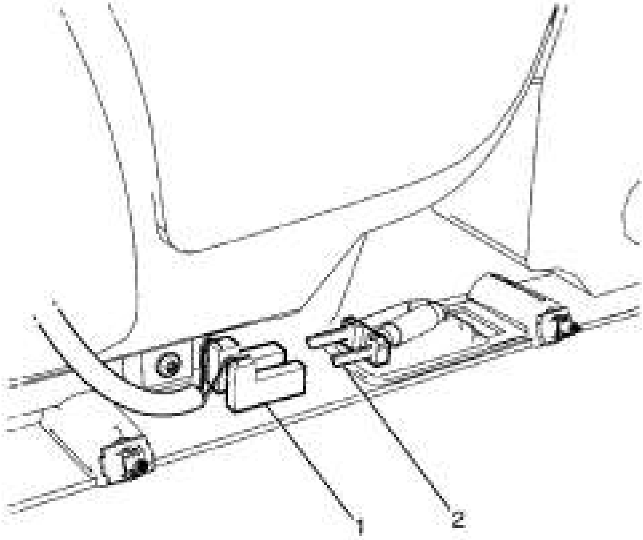
Important: Firmly pull on the armrest handle to release the door trim panel to door retaining clips.

4. Remove the door trim panel from the door to allow access to door handle cable, door lock cable and courtesy light electrical connectors (if fitted).



Important: The door handle and lock cables slide out and lift up to remove from the door trim panel.

5. Disconnect the inside door handle cable (1) and door lock cable (2) from the door trim panel.



6. Disconnect the courtesy light electrical connectors (1) from the door trim panel (2) (if fitted).
7. Remove the door trim panel (2) from the door.

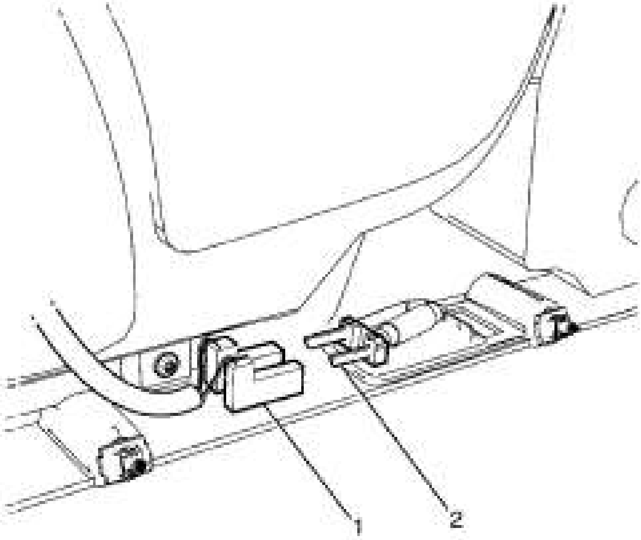
Installation Procedure

Important: Green retaining clips are along the front edge and white retaining clips are along the back edge.

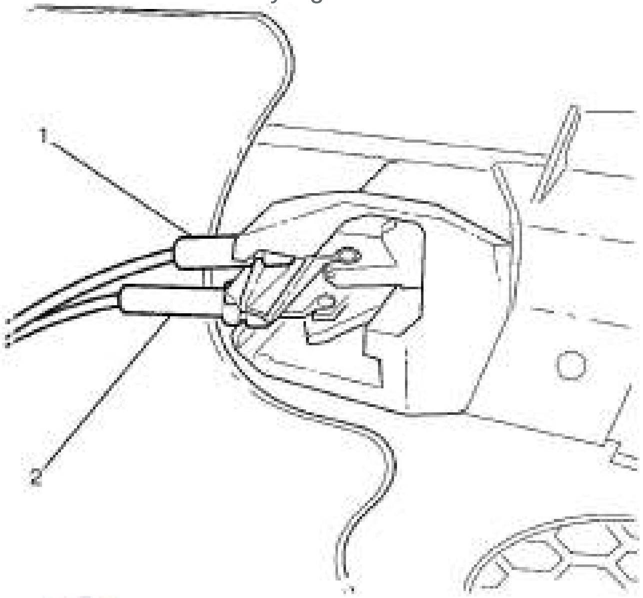
1. Make sure that all of the retaining clips are on the door trim panel and not still attached to the sheetmetal.

Important: Do not fully install the door trim panel at this stage. The inside door handle cable, door lock cable and courtesy light electrical connector have to be attached first (if fitted).

2. Position the door trim panel to the door.

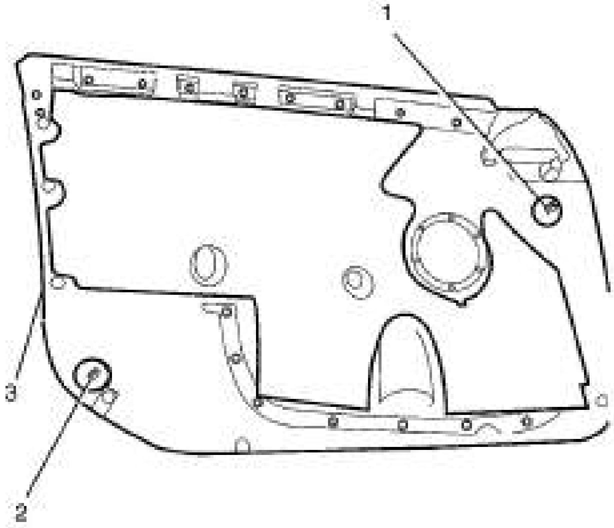


3. Connect the courtesy light electrical connectors (1) to the door trim panel (2) (if fitted).



Important: The door handle and lock cables slide down and in to the door trim panel to install.

4. Connect the inside door handle cable (2) and door lock cable (1) to the door trim panel.

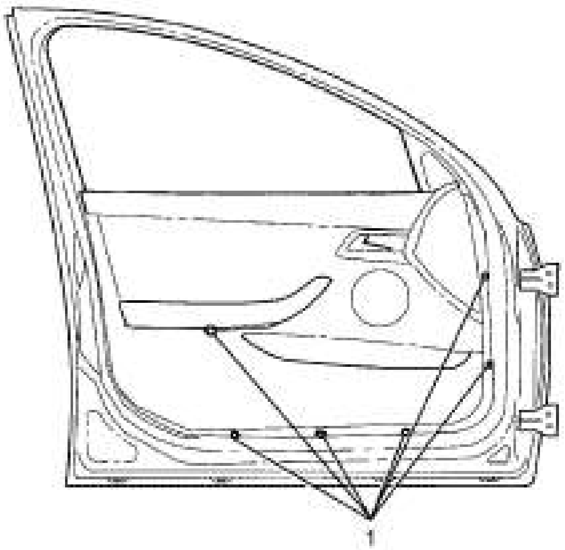


Important: Datum pins (1, 2) align the door trim panel to the door.

Important: Apply pressure around the door trim panel (3) to secure the retainers to the door.

5. Position the door trim panel (3) to the door.

   Notice: Refer to Fastener Notice in the Preface section.

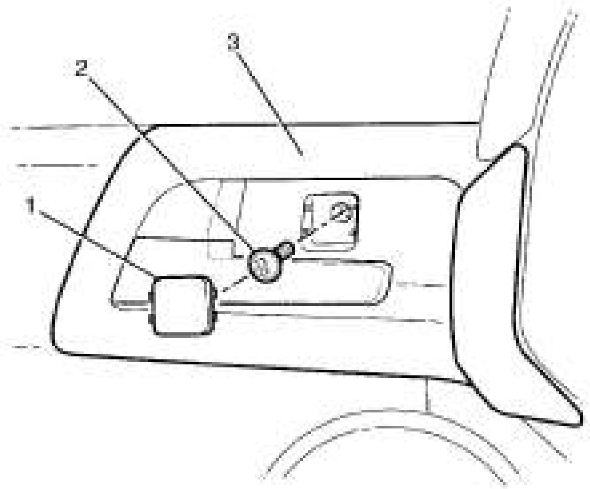


Important: Screw locations for type B door trim panel.

6. Install the door trim panel to door retaining screws (1).

   Tighten
   Tighten the screws to 3 N-m (27 lb in).

   Notice: Refer to Fastener Notice in the Preface section.



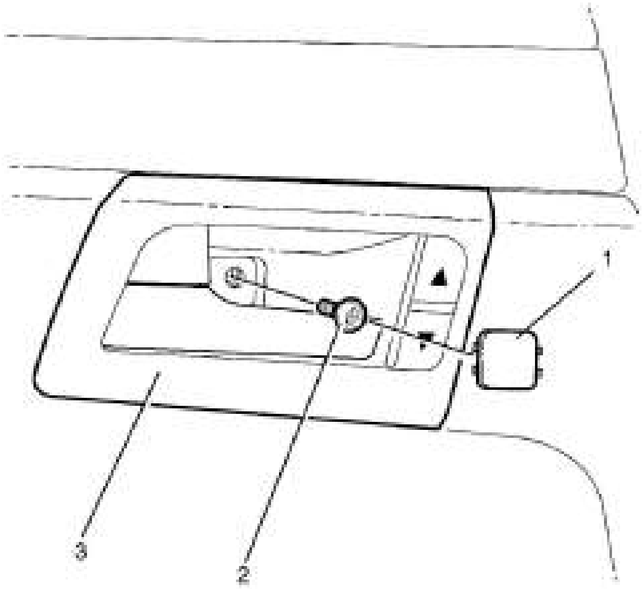
7. Install the inside door handle to door trim panel retaining screw (2).

   Tighten
   Tighten the screws to 3 N-m (27 lb in).

8. Install the inside door handle to door retaining screw cover (1) to the door trim panel (3).

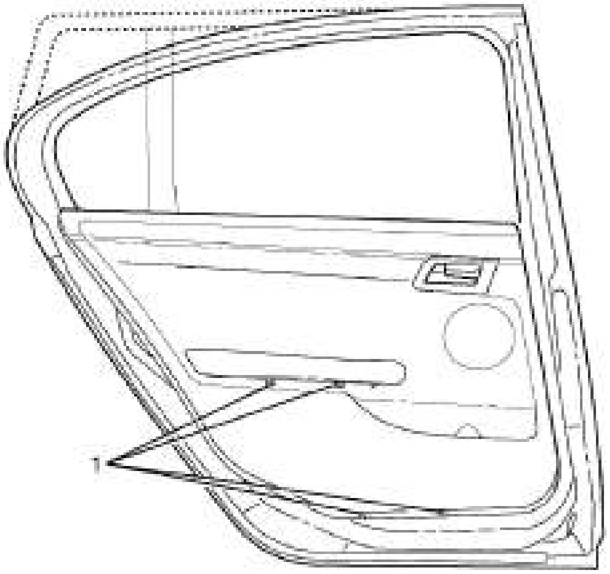
Rear Side Door Trim Panel Replacement (SWB)

Removal Procedure



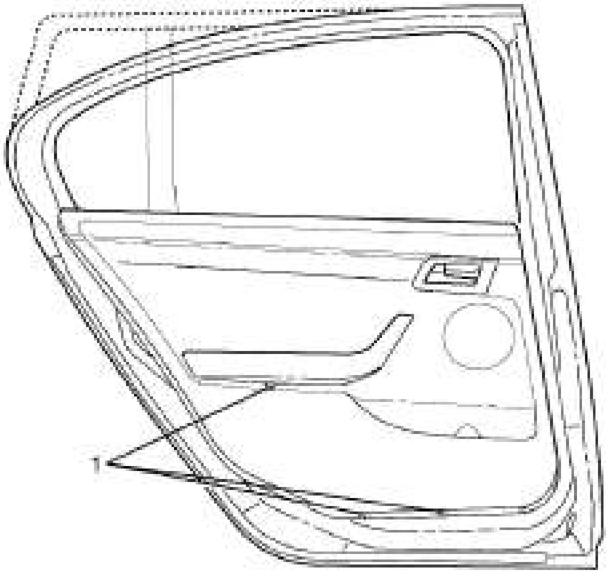
Important: Pry the inside door handle to door retaining screw cover (3) using a suitable tool.

1. Remove the inside door handle to door retaining screw cover (3) from the door trim panel (1).
2. Remove the inside door handle to door retaining screw (2).



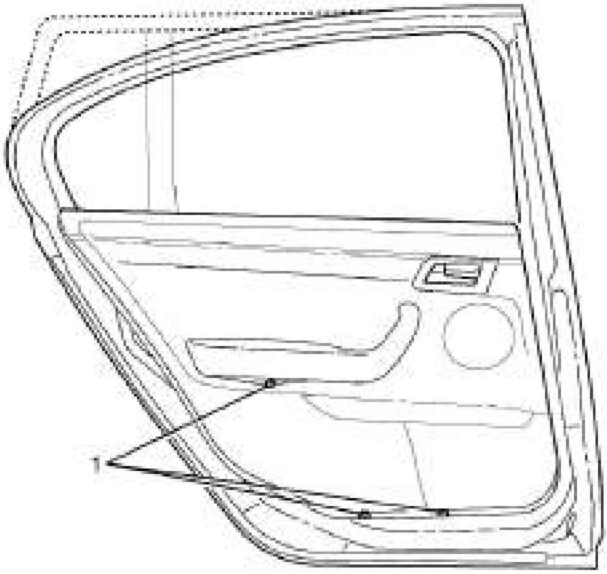
Important: Screw locations for type A door trim panel.

3. Remove the door trim panel to door retaining screws (1).



Important: Screw locations for type B door trim panel.

4. Remove the door trim panel to door retaining screws (1).

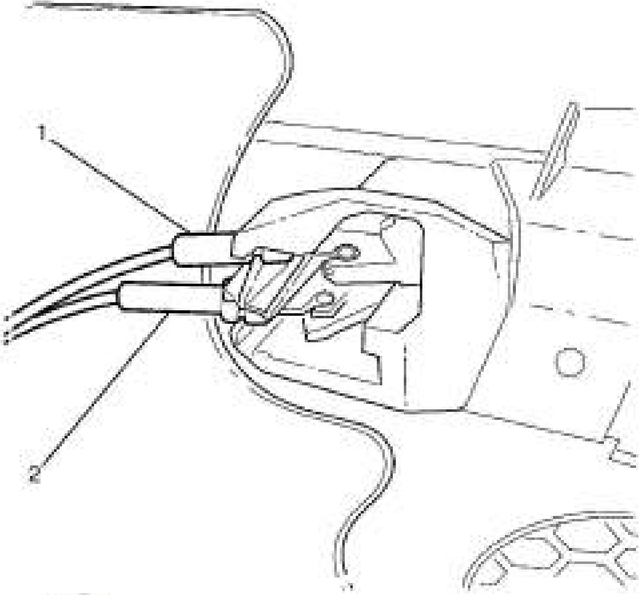


Important: Screw locations for type C door trim panel.

5. Remove the door trim panel to door retaining screws (1).
6. Pry the top of the door trim panel to release the inner belt seal clips.

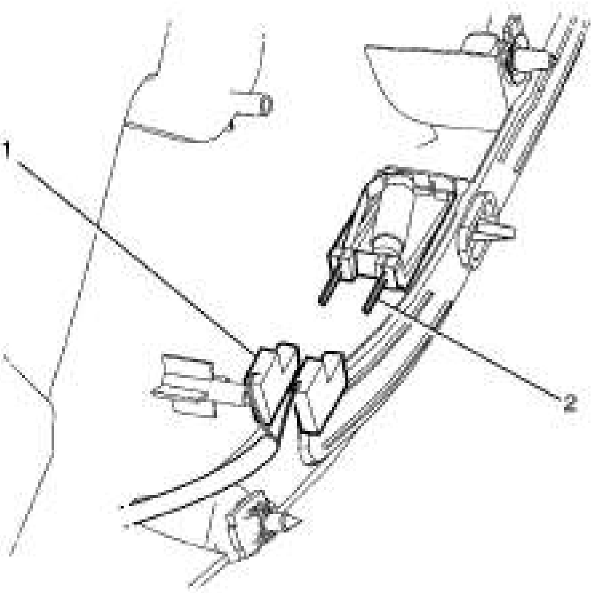
Important: Firmly pull on the armrest handle to release the door trim panel to door retaining clips.

7. Remove the door trim panel (1) from the door to allow access to door handle cable, door lock cable and courtesy light electrical connectors (if fitted).

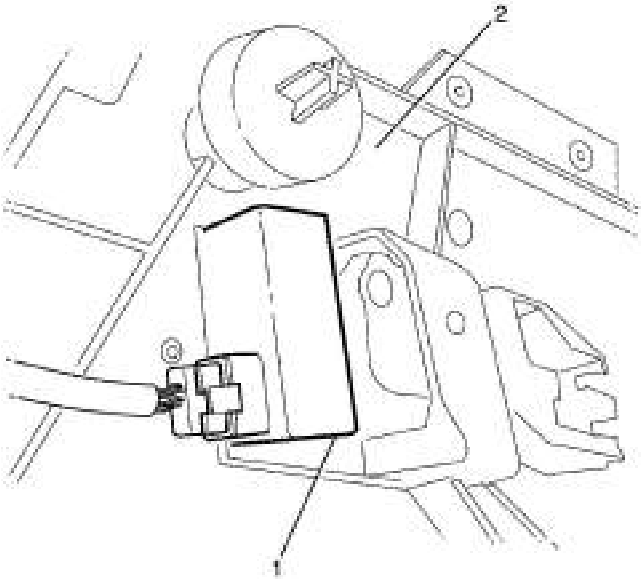


Important: The door handle and lock cables slide out and lift up to remove from the door trim panel.

8. Disconnect the inside door handle cable (1) and door lock cable (2) from the door trim panel.



9. Disconnect the courtesy light electrical connectors (1) from the door trim panel (2) (if fitted).



Important: Pull the window switch (1) from the door trim panel (2) to release the retaining clips.

10. Remove the window switch (1) from the door trim panel (1).
11. Remove the door trim panel (2) from the door.

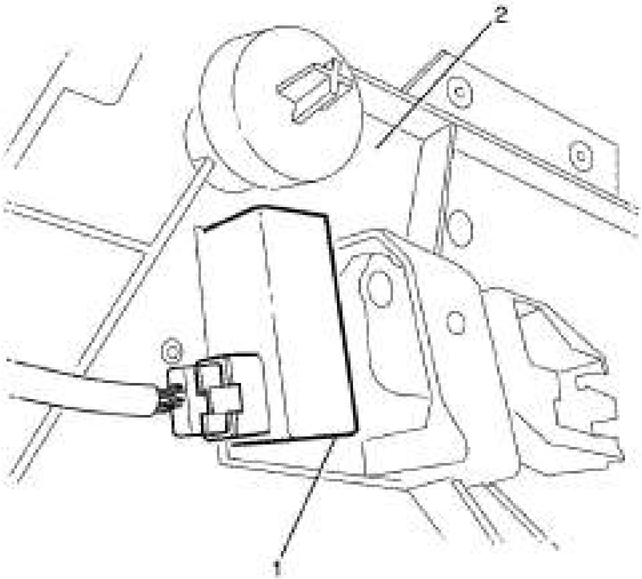
Installation Procedure

Important: Green retaining clips are along the front edge and white retaining clips are along the back edge.

1. Make sure that all of the retaining clips are on the door trim panel and not still attached to the door sheetmetal.

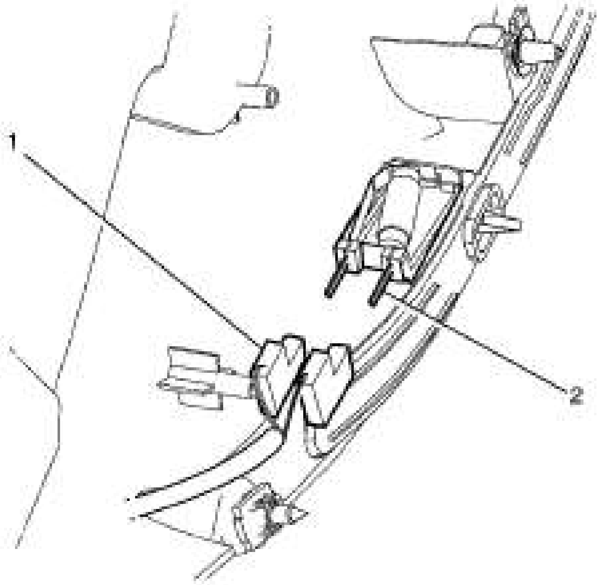
Important: Do not fully install the door trim panel at this stage. The inside door handle cable, door lock cable, window switch and courtesy light electrical connector (if fitted) have to be attached first.

2. Position the door trim panel to the door.

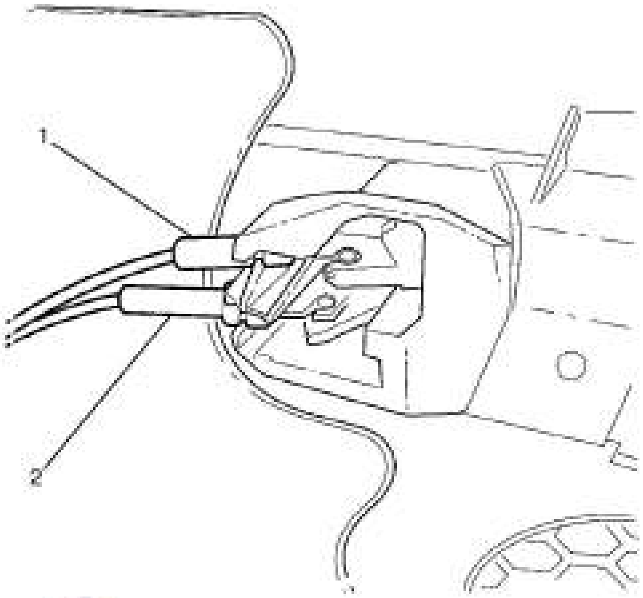


Important: Firmly push the window switch (1) to the door trim panel (2) to install.

3. Install the window switch (1) to the door trim panel (2).

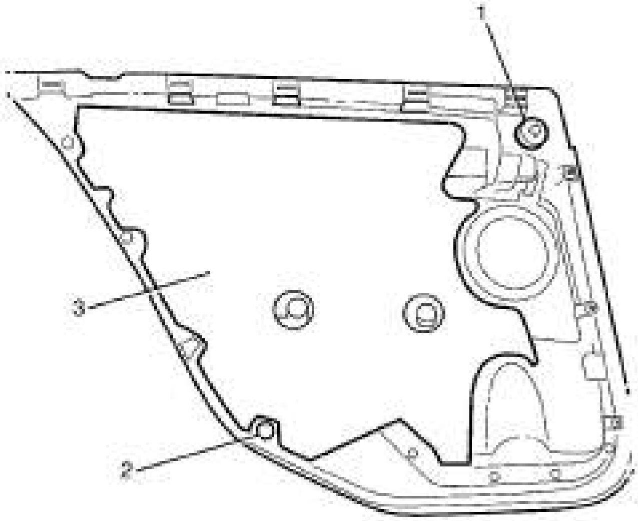


4. Connect the courtesy light electrical connectors (1) to the door trim panel (2) (if fitted).



Important: The door handle and lock cables slide down and in to the door trim panel to install.

5. Connect the inside door handle cable (2) and door lock cable (1) to the door trim panel.

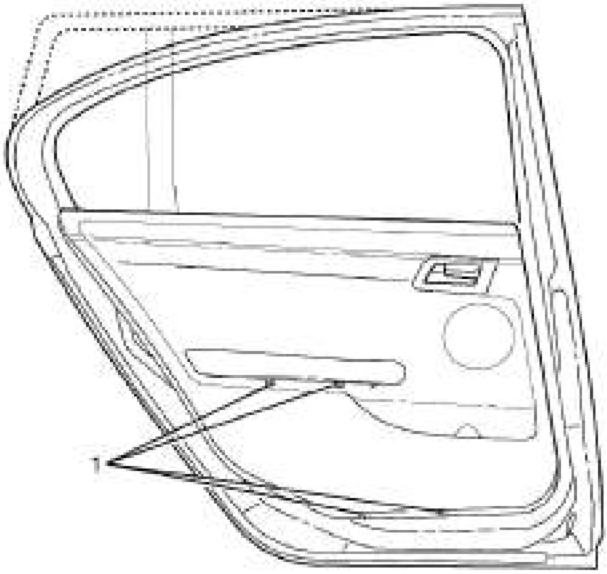


Important: Datum pins (1, 2) align the door trim panel to the door.

Important: Apply pressure around the door trim panel (3) to secure the retainers to the door.

6. Position the door trim panel (3) to the door.

Notice: Refer to Fastener Notice in the Preface section.

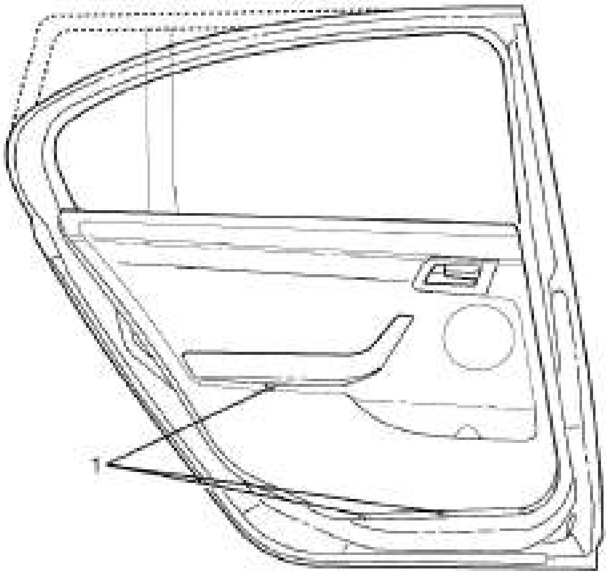


Important: Screw locations for type A door trim panel.

7. Install the door trim panel to door retaining screws (1).

Tighten
Tighten the screws to 3 N-m (27 lb in).

Notice: Refer to Fastener Notice in the Preface section.

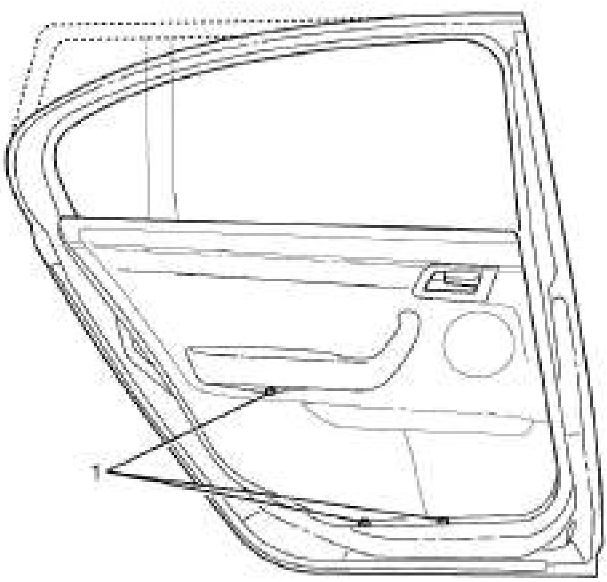


Important: Screw locations for type B door trim panel.

8. Install the door trim panel to door retaining screws (1).

   Tighten
   Tighten the screws to 3 N-m (27 lb in).

   Notice: Refer to Fastener Notice in the Preface section.

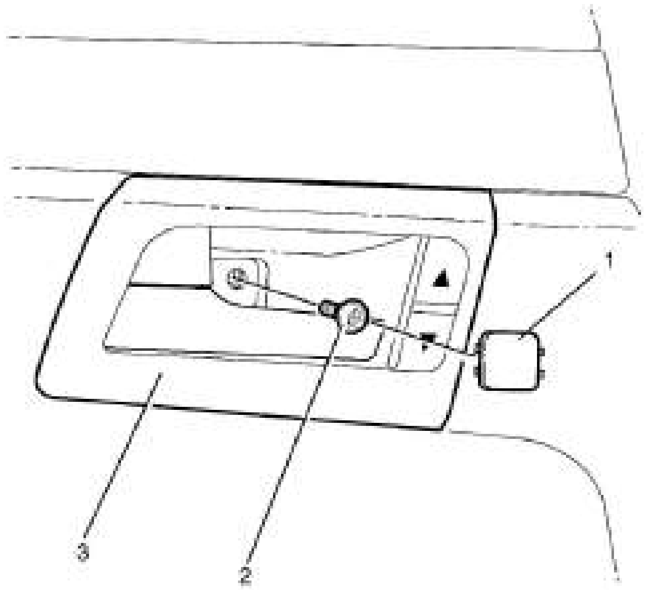


Important: Screw locations for type C door trim panel.

9. Install the door trim panel to door retaining screws (1).

   Tighten
   Tighten the screws to 3 N-m (27 lb in).

   Notice: Refer to Fastener Notice in the Preface section.



10. Install the inside door handle to door retaining screw (2).

    Tighten
    Tighten the screws to 3 N-m (27 lb in).

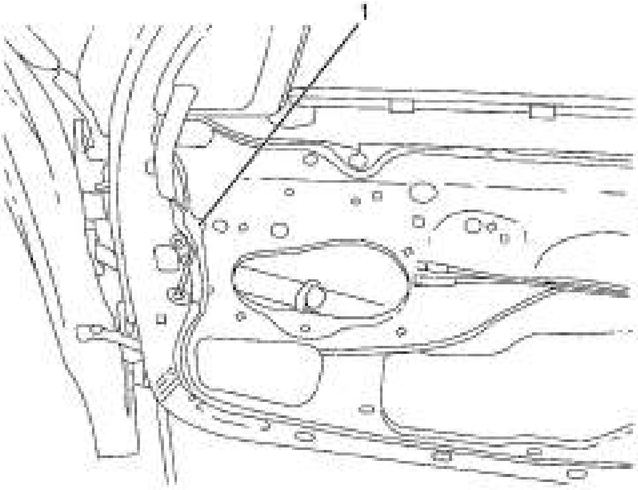
11. Install the inside door handle to door retaining screw cover (3) to the door trim panel (1).

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Interior Trim and Paneling | Repair Instructions | **Document ID: 1990961**

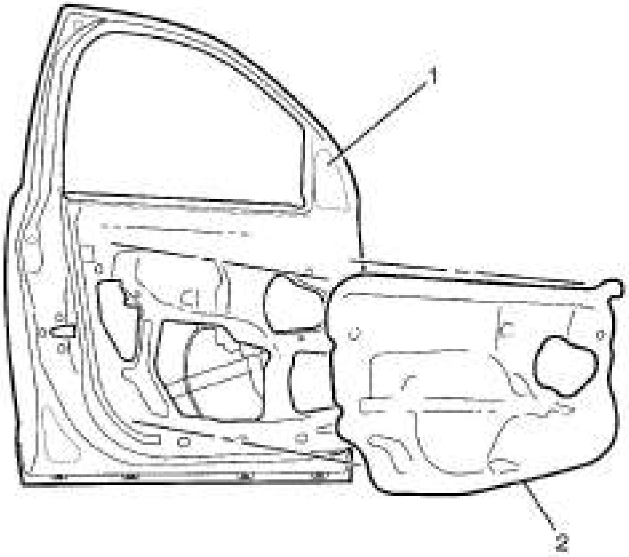
Front Side Door Water Deflector Replacement

Removal Procedure

1. Remove the door trim panel. Refer to Front Side Door Trim Panel Replacement.
2. Remove the speaker. Refer to Radio Front Side Door Lower Speaker Replacement.



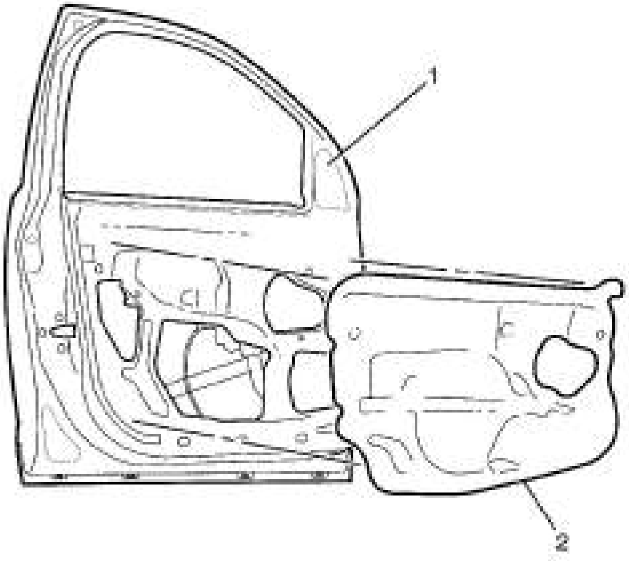
3. Detach the wiring harness to door retaining clip (1).



Important: Pull the water deflector (2) from the door (1) to release the adhesive bond.

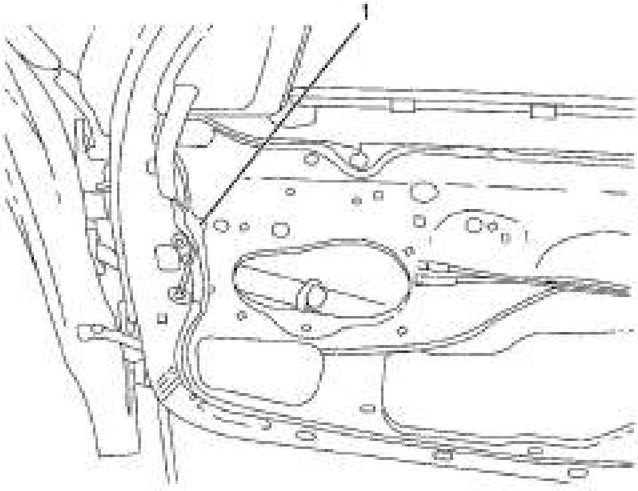
4. Remove the water deflector (2) from the door (1).

Installation Procedure



Important: Firmly press the water deflector (2) where adhesive is applied to make sure of a water tight seal to the door (1).

1. Install the water deflector (2) to the door (1).

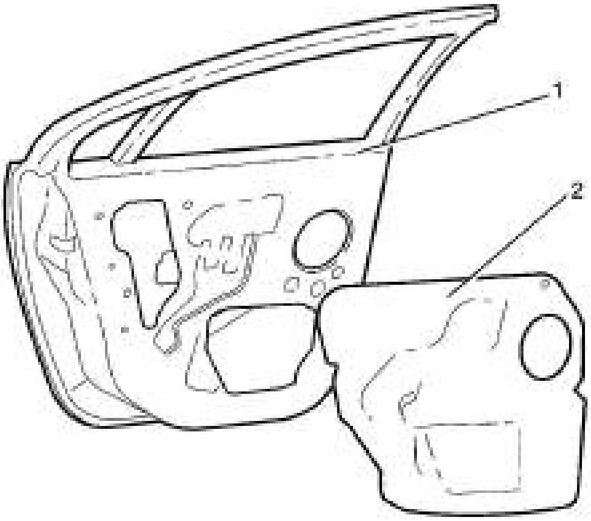


2. Attach the wiring harness to door retaining clip (1).
3. Install the speaker. Refer to Front Side Door Trim Panel Replacement.
4. Install the door trim panel. Refer to Front Side Door Trim Panel Replacement.

Rear Side Door Water Deflector Replacement

Removal Procedure

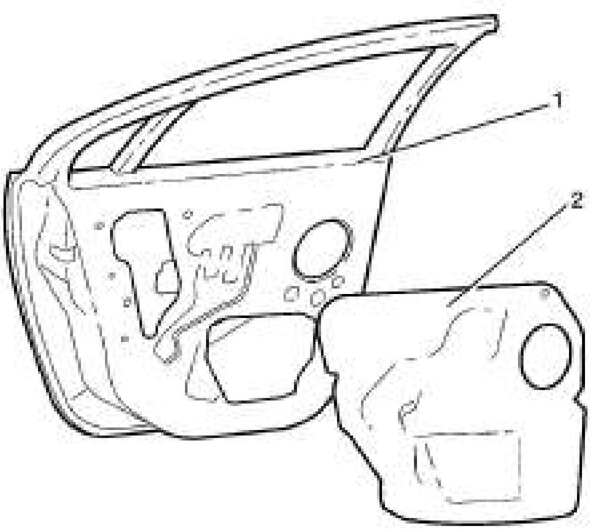
1. Remove the door trim panel. Refer to Rear Side Door Trim Panel Replacement.
2. Remove the speaker. Refer to Radio Rear Side Door Speaker Replacement.



Important: Pull the water deflector (2) from the door (1) to release the adhesive bond.

3. Remove the water deflector (2) from the door (1).

Installation Procedure



Important: Firmly press the water deflector (2) where adhesive is applied to make sure of a water tight seal to the door (1).

1. Install the water deflector (2) to the door (1).
2. Install the speaker. Refer to Radio Rear Side Door Speaker Replacement.
3. Install the door trim panel. Refer to Rear Side Door Trim Panel Replacement.

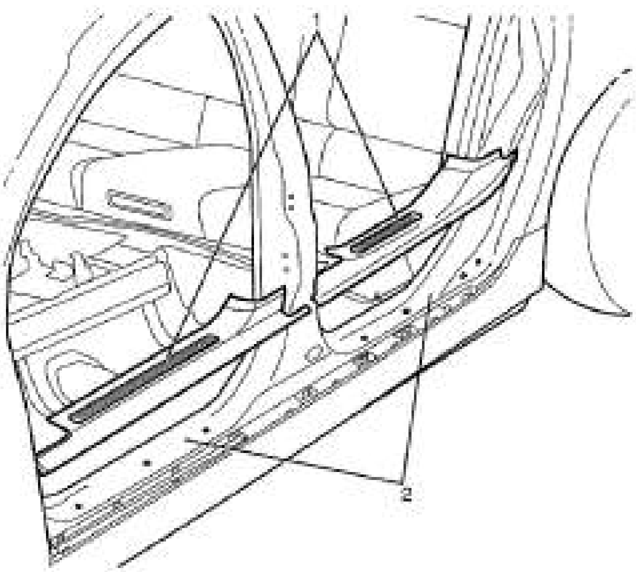
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Interior Trim and Paneling | Repair Instructions | Document ID: 2110821

Side Door Sill Nameplate Replacement

Removal Procedure

1. Open the front and rear door.

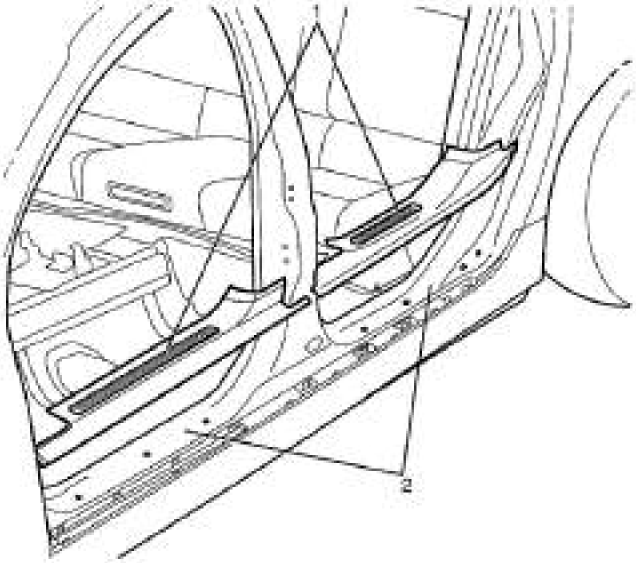
   Caution: Refer to Safety Glasses Caution in the Preface section.



Important: When removing the sill name plates (1), make sure the retaining clips are retained in the sill name plates (1).

2. Using a suitable tool carefully remove the sill name plates (1) from the vehicle (2).

Installation Procedure



Important: Before installing rear side door sill name plates (1), make sure all retaining clips are not damaged, if damaged replace as necessary.

Important: Make sure the lip of the weatherstrip sits over the sill plate.

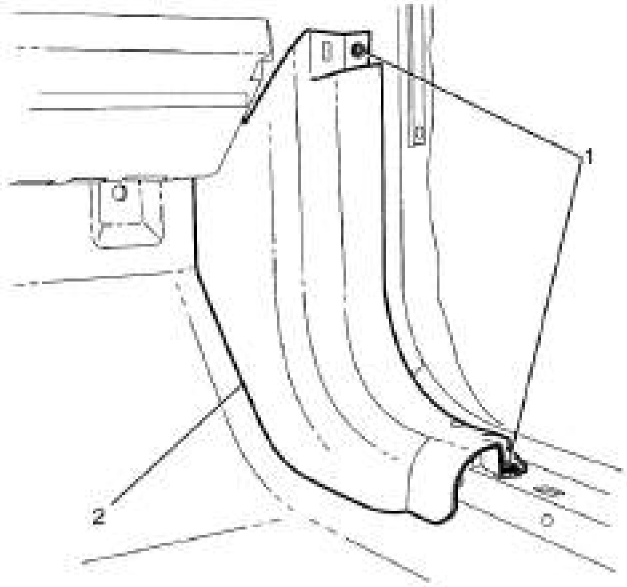
Important: Firmly push down on the sill plates (1) to install. Listen for an audible click to confirm fitting.

1. Install the rear side door sill name plates (1) to the vehicle (2).
2. Close the front and rear door.

Body Hinge Pillar Trim Panel Replacement

Removal Procedure

1. Remove the front sill trim plate. Refer to Front Side Door Sill Plate Replacement.
2. Remove the instrument panel outer trim cover. Refer to Instrument Panel Outer Trim Cover Replacement.

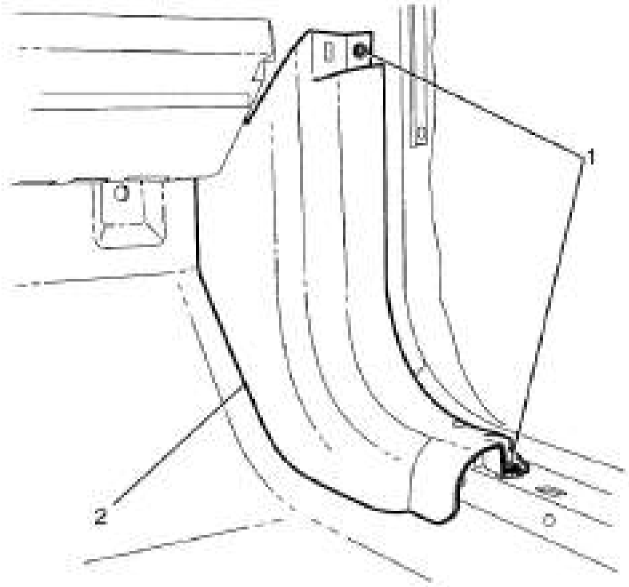


3. Remove the two retaining torx screws (1) from the body hinge pillar trim (2).
4. Disengage the body hinge pillar trim pulling upwards and then rearwards.
5. Remove the body hinge pillar trim assembly.
6. If required, remove the two nut inserts.

Installation Procedure

Important: Ensure the body hinge pillar trim clip is correctly engaged in the A-pillar inner panel.

1. Engage body hinge pillar trim (2) into the A-pillar sheetmetal.



2. Install the two body hinge pillar trim (2) retaining torx screws (1).

   Tighten
   Tighten the hinge pillar trim (2) retaining torx screws (1) to 2.0 N·m (18 lb in).

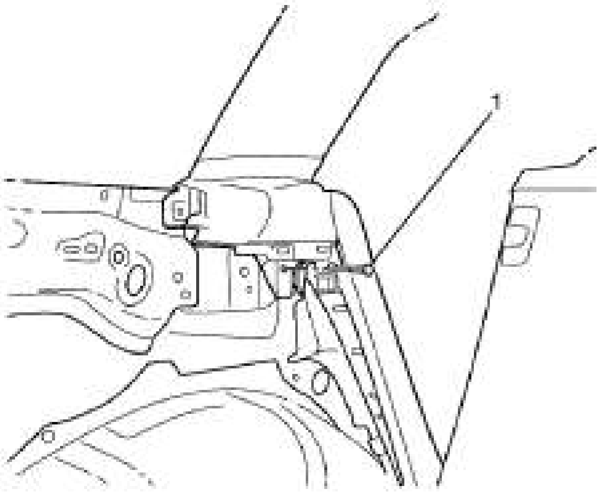
3. Install the instrument panel outer trim cover. Refer to Instrument Panel Outer Trim Cover Replacement.
4. Install the front sill trim plate. Refer to Front Side Door Sill Plate Replacement.

Body Lock Pillar Trim Panel Replacement

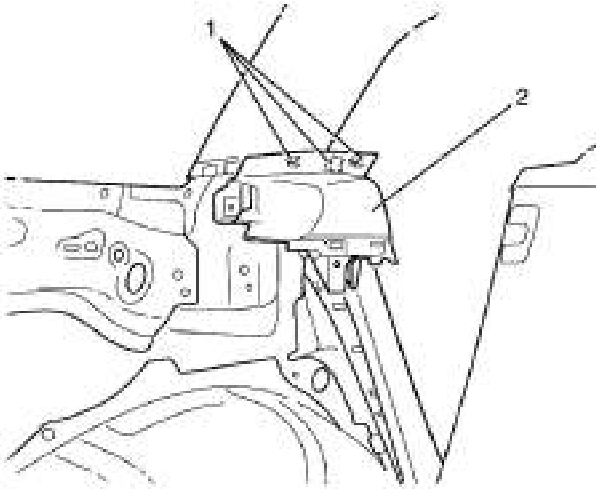
Removal Procedure

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Install a suitable liftgate brace to the vehicle.
2. Remove the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.
3. Remove the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
4. Remove the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
5. Remove the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
6. Remove the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
7. Remove the body lock pillar lower trim panel. Refer to Body Lock Pillar Lower Trim Panel Replacement.

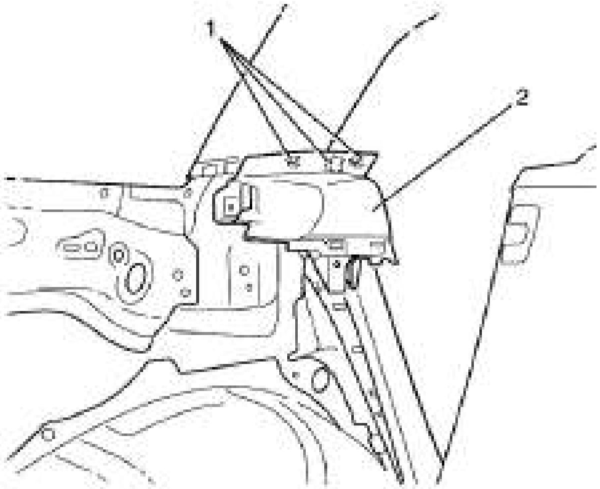


8. Remove the body lock pillar trim panel to body retaining screw (1).



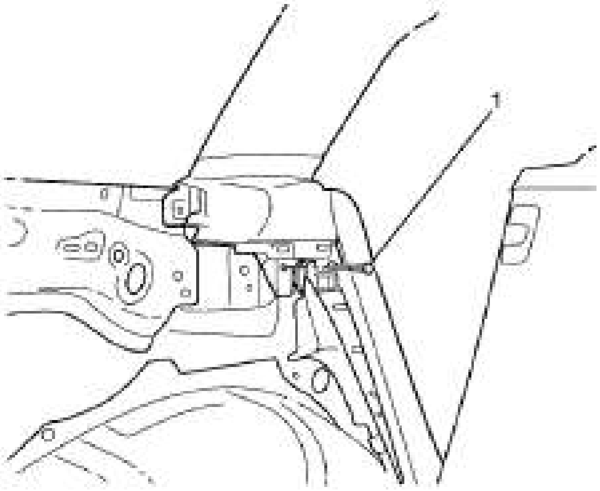
9. Carefully release the body lock pillar trim panel to body retaining clips (1).
10. Remove the body lock pillar trim panel (2) from the vehicle.

Installation Procedure



1. Position the body lock pillar trim panel (2) to the vehicle.
2. Carefully engage the body lock pillar trim panel to body retaining clips (1). An audible click will confirm correct fitment.

Notice: Refer to Fastener Notice in the Preface section.



3. Install the body lock pillar trim panel to body retaining screw (1).

   Tighten
   Tighten the screw to 2 N·m (18 lb in).

4. Install the body lock pillar lower trim panel. Refer to Body Lock Pillar Lower Trim Panel Replacement.
5. Install the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
6. Install the headlining rear trim panel retainer. Refer to Headlining Rear Trim Panel Retainer Replacement.
7. Install the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
8. Install the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
9. Install the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
10. Install the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.

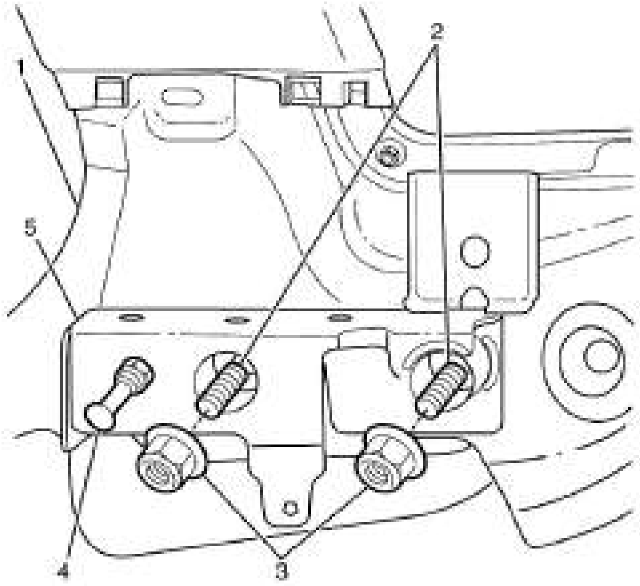
    Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

11. Remove the suitable liftgate brace to the vehicle.

Body Lock Pillar Inner Panel Bracket Replacement

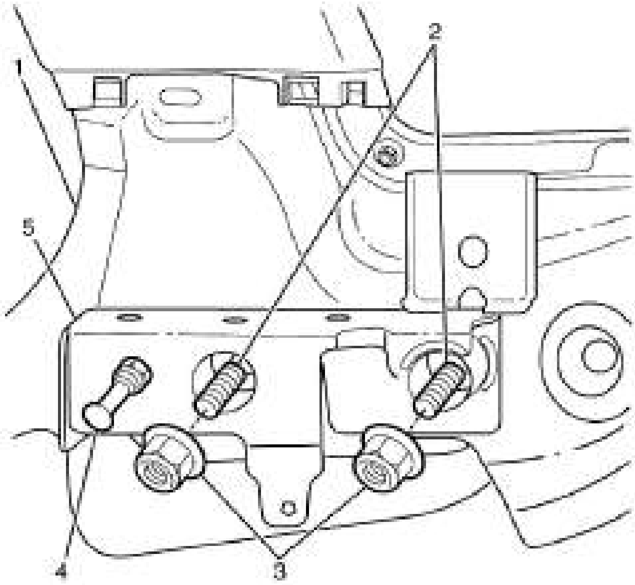
Removal Procedure

1. Remove the rear seat belt. Refer to Rear Seat Belt Replacement.



2. Remove the rear seat back cushion stop striker (4) from the body lock pillar inner panel bracket (5).
3. Remove the body lock pillar inner panel bracket nuts (3) from the body lock pillar inner panel bracket retaining studs (2).
4. Remove the body lock pillar inner panel bracket (5) from the vehicle body (1).

Installation Procedure



1. Install the body lock pillar inner panel bracket (5) to the vehicle body (1).

   Notice: Refer to Fastener Notice in the Preface section.

2. Install the body lock pillar inner panel bracket nuts (3) to the body lock pillar inner panel bracket retaining studs (2).

   Tighten
   Tighten the nuts to 35 N·m (26 lb ft).

   Notice: Refer to Fastener Notice in the Preface section.

3. Install the rear seat back cushion stop striker (4) to the body lock pillar inner panel bracket (5).

   Tighten
   Tighten the striker to 70 N·m (52 lb ft).

4. Install the rear seat belt. Refer to Rear Seat Belt Replacement.

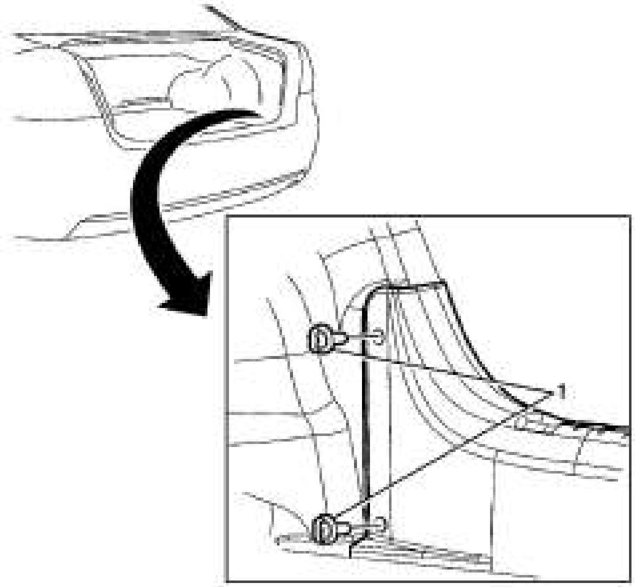
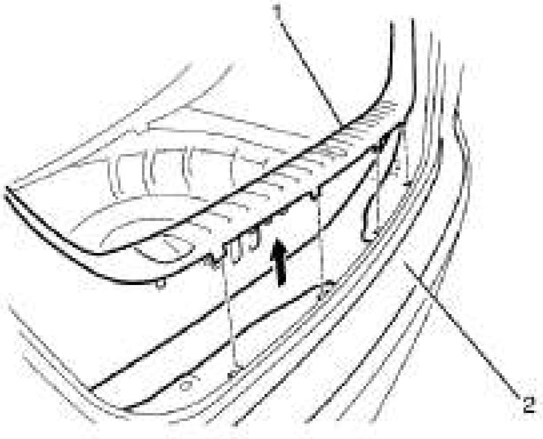
Rear Compartment Trim Panel Replacement

Removal Procedure

1. Remove the convenience net (if fitted). Refer to Rear Compartment Stowage Tray Net Replacement .
2. Remove the rear carpet. Refer to Rear Compartment Floor Panel Carpet Replacement .



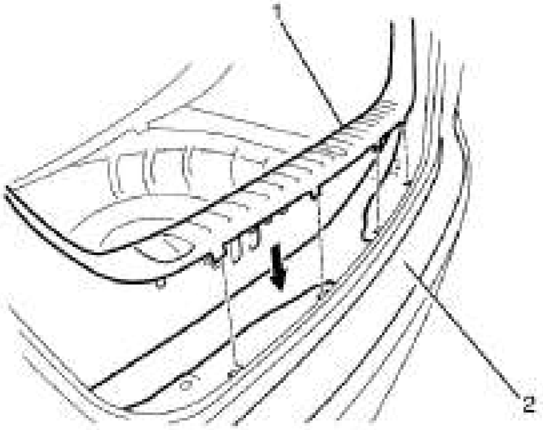
3. Remove the four convenience net retaining hooks (1) or the four fir tree retainers.



Important: Pull the end panel (1) to disengage the end panel retaining pins.

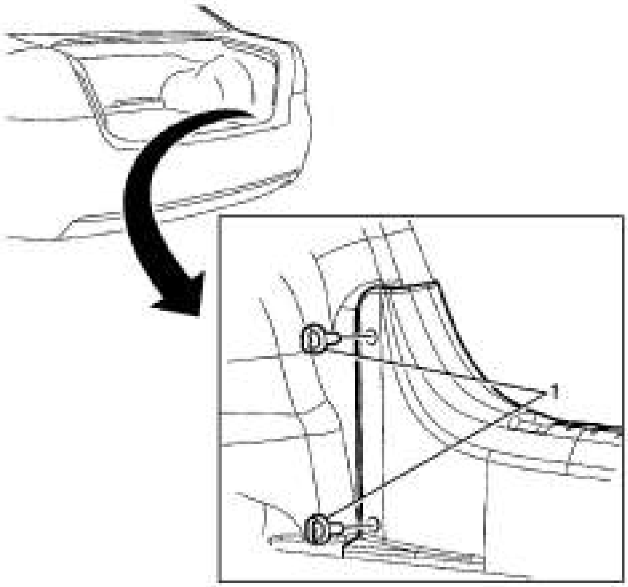
4. Remove the end panel (1) from the vehicle (2).

Installation Procedure



Important: Push the end panel (1) to engage the end panel retaining pins.

1. Install the end panel (1) to the vehicle (2).



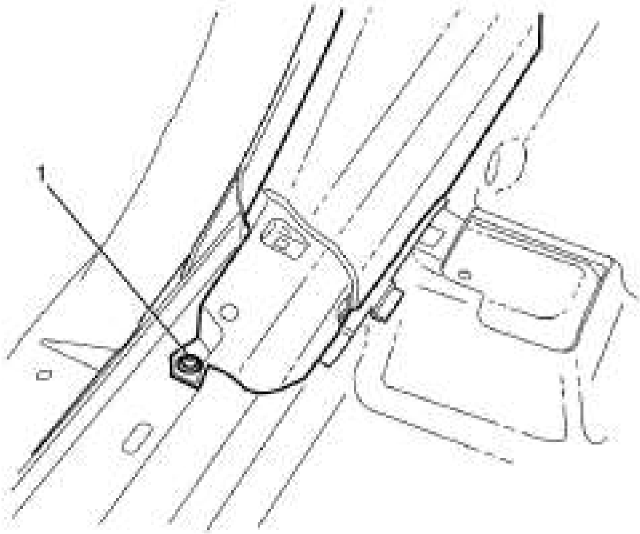
2. Install the four convenience net retaining hooks (1) or the four fir tree retainers.
3. Install the rear carpet. Refer to Rear Compartment Floor Panel Carpet Replacement .
4. Install the convenience net (if fitted). Refer to Rear Compartment Stowage Tray Net Replacement .

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Interior Trim and Paneling | Repair Instructions | Document ID: 1982190

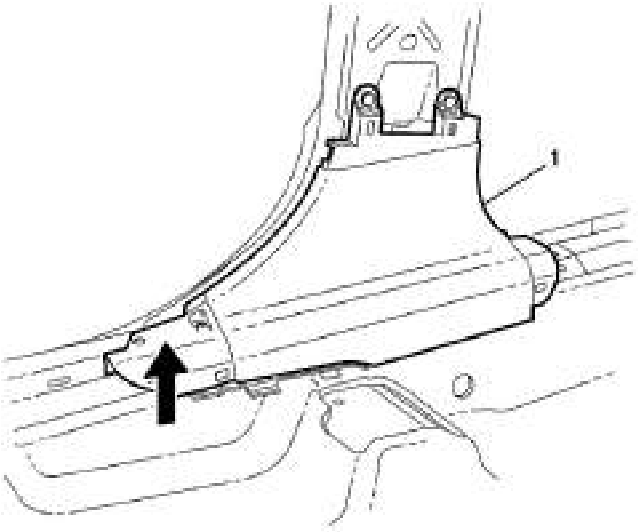
Door Sill Plate Replacement

Removal Procedure

1. Remove the centre pillar lower trim. Refer to Center Pillar Lower Trim Panel Replacement.
2. Remove the front sill trim plate. Refer to Front Side Door Sill Plate Replacement.
3. Remove the rear sill trim plate. Refer to Rear Side Door Sill Plate Replacement.



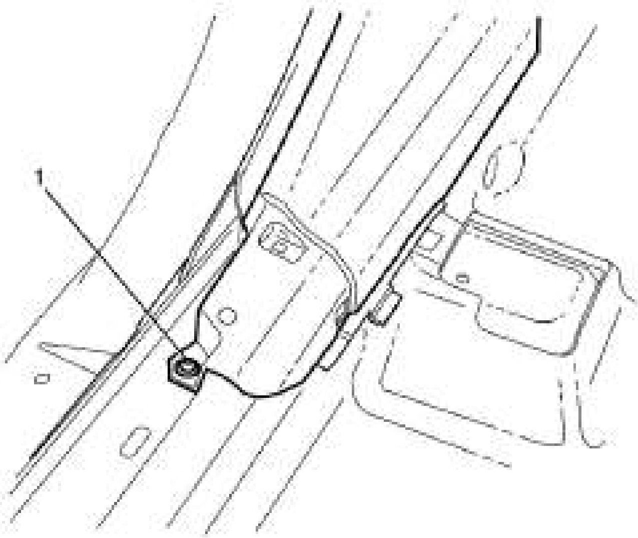
4. Remove the centre trim panel torx screw (1).



Important: When removing the centre sill trim panel, ensure the two white retaining clips at the top of the part remain in the sheet metal.

5. Remove the centre sill trim panel (1).

Installation Procedure



Important: Before installing trims, ensure all retaining clips are not damaged, if damaged replace as necessary.

1. Install the centre sill trim panel.
2. Install the centre sill trim panel torx screw

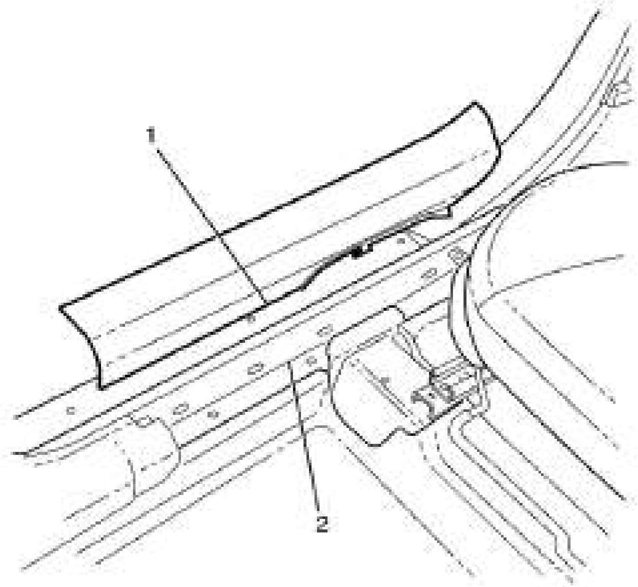
Tighten
Tighten the centre sill trim panel torx screw (1) to 2.0 N·m (18 lb in).

3. Install the rear sill trim plate. Refer to Rear Side Door Sill Plate Replacement.
4. Install the front sill trim plate. Refer to Front Side Door Sill Plate Replacement.
5. Install the centre pillar lower trim. Refer to Center Pillar Lower Trim Panel Replacement.

Front Side Door Sill Trim Plate Replacement

Removal Procedure

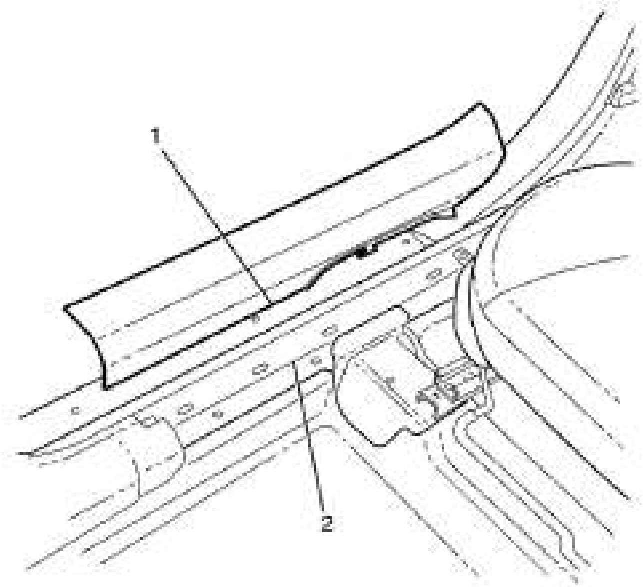
1. Remove the seat outer adjuster rear finish cover. Refer to Driver or Passenger Seat Outer Adjuster Rear Finish Cover Replacement.
2. Remove the seat outer adjuster front finish cover. Refer to Driver or Passenger Seat Outer Adjuster Front Finish Cover Replacement.



Important: While carrying out the following procedure, take care not to damage the sill panel trim (1).

3. Carefully disengage the front sill panel trim (1) from the sill (2).
4. Remove the front sill panel trim (1).

Installation Procedure

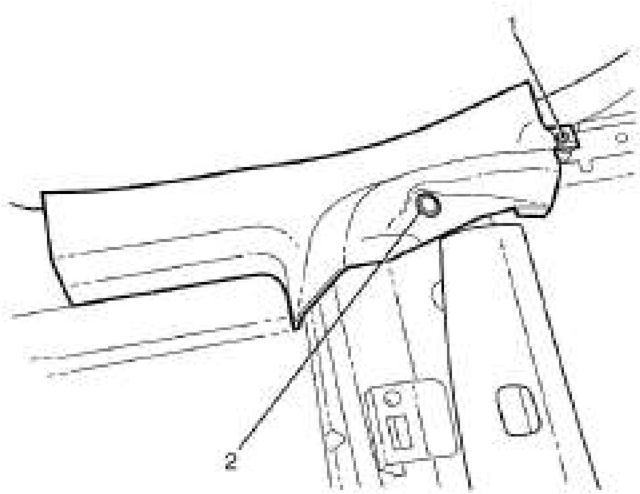


1. Install the front sill trim panel (1) to the sill (2).
2. Install the seat outer adjuster front finish cover. Refer to Driver or Passenger Seat Outer Adjuster Front Finish Cover Replacement.
3. Install the seat outer adjuster rear finish cover. Refer to Driver or Passenger Seat Outer Adjuster Rear Finish Cover Replacement.

Rear Side Door Sill Trim Plate Replacement

Removal Procedure

1. Remove the rear seat cushion. Refer to Rear Seat Cushion Replacement.

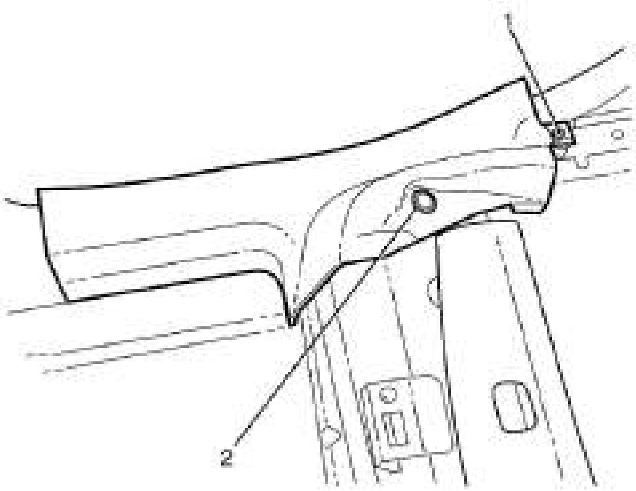


2. Remove the retaining torx screw (1) from the rear sill panel trim.
3. Remove the retaining pin (2) and remove the rear sill panel trim by pulling from the lower edge and disengaging the retaining clips.

Installation Procedure

Notice: Refer to Fastener Notice in the Preface section.

1. Install the rear sill panel trim.



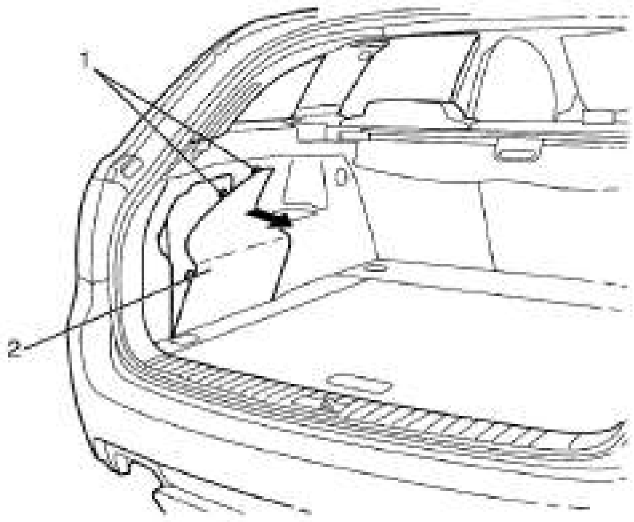
2. Install the rear sill panel trim retaining torx screw (1).

   Tighten
   Tighten the torx screw (1) to 2.0 N·m (18 lb in).

3. Install the rear sill panel trim retaining pin (2).
4. Install the rear seat cushion. Refer to Rear Seat Cushion Replacement.

Rear Compartment Side Trim Panel Access Hole Cover Replacement

Removal Procedure - Left Side

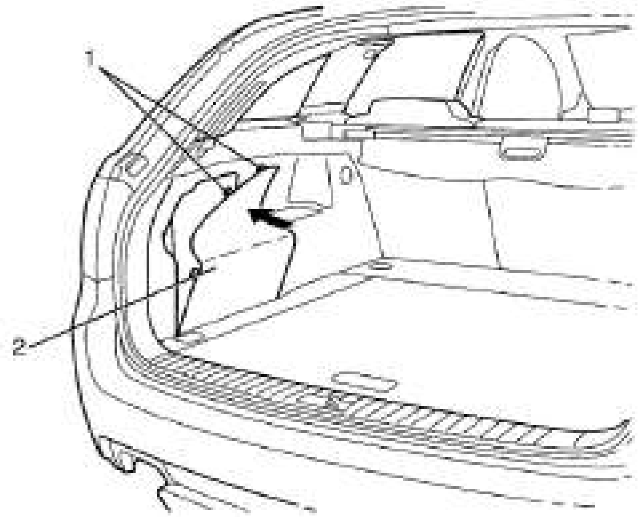


Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

Important: Push down on the centre of the rear compartment side trim panel access hole cover and pull on the top of the cover to release the upper retaining tangs.

1. Install a suitable liftgate brace to the vehicle.
2. Carefully disengage the rear compartment side trim panel access hole cover retaining tangs (1).
3. Remove rear compartment side trim panel access hole cover (2) from the vehicle.

Installation Procedure - Left Side

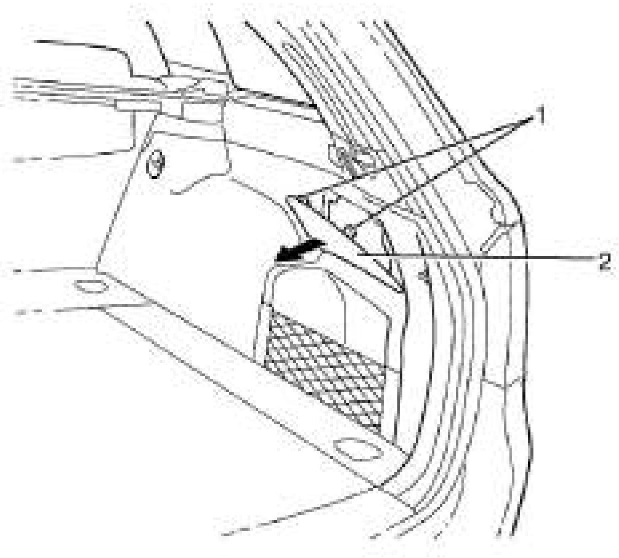


Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

Important: Insert the locating tabs on the bottom of the rear compartment side trim panel access hole cover then push the top of the rear compartment side trim panel access hole cover to engage the retaining tangs.

1. Position the rear compartment side trim panel access hole cover (2) to the vehicle.
2. Carefully engage the rear compartment side trim panel access hole cover retaining tangs (1). An audible click will confirm correct fitment.
3. Remove the suitable liftgate brace from the vehicle.

Removal Procedure - Right Side

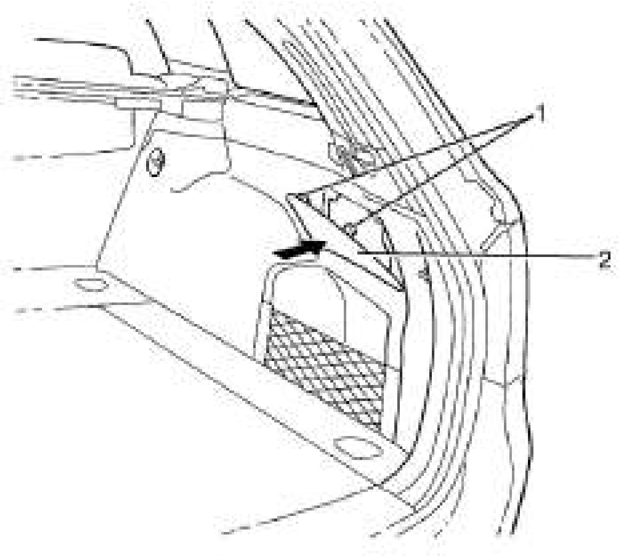


Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

Important: Push down on the centre of the tail lamp access cover trim panel and pull on the top of the tail lamp access cover trim panel to release the retaining tangs.

1. Install a suitable liftgate brace to the vehicle.
2. Carefully disengage the tail lamp access cover trim panel retaining tangs (1).
3. Remove tail lamp access cover trim panel (2) from the vehicle.

Installation Procedure - Right Side



Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

Important: Insert the locating tabs on the bottom of the tail lamp access cover trim panel then push the top of the tail lamp access cover trim panel to engage the retaining tangs.

1. Position the tail lamp access cover trim panel (2) to the vehicle.
2. Carefully engage the tail lamp access cover trim panel retaining tangs (1). An audible click will confirm correct fitment.
3. Remove the suitable liftgate brace from the vehicle.

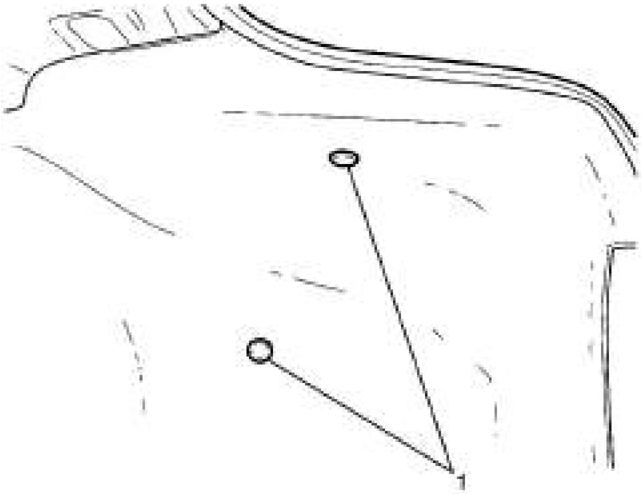
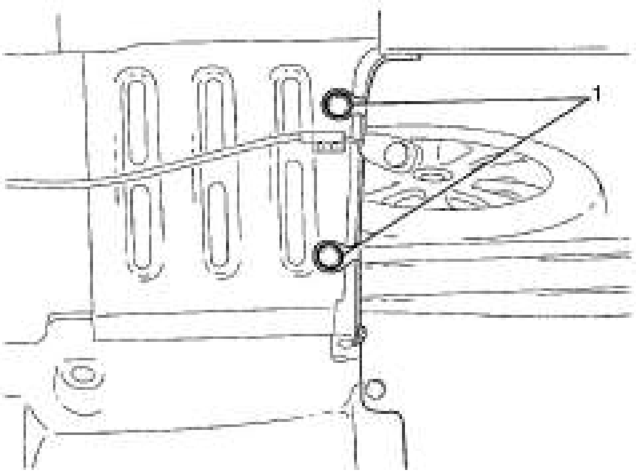
Rear Compartment Side Trim Panel Replacement

Removal Procedure (Up to 13 Jun 2007)

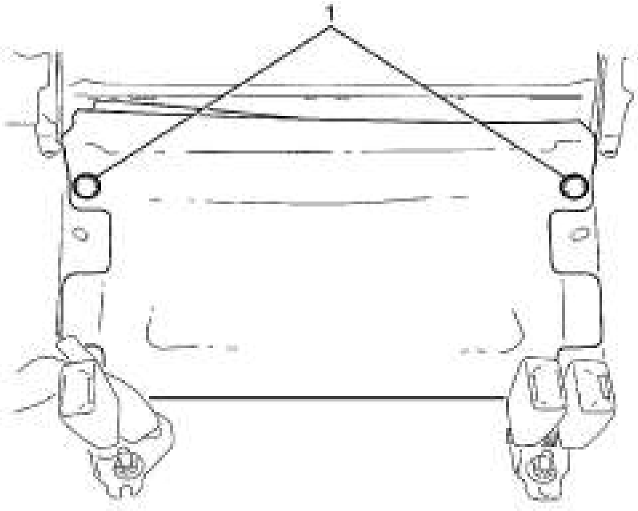
1. Remove the convenience net (if fitted). Refer to Rear Compartment Stowage Tray Net Replacement.
2. Remove the rear carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
3. Remove the rear end panel trim. Refer to Rear Compartment Trim Panel Replacement.
4. Remove the seat back assembly. Refer to Rear Seat Back Replacement.



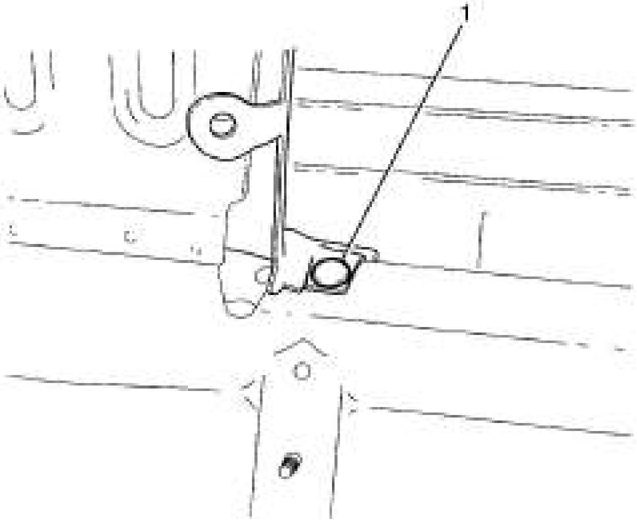
5. Remove the two carpet retainers (1) securing the rear quarter panel side carpet. The left side is shown, the right side is similar.



6. Remove the two carpet retainers (1) securing the rear quarter panel side carpet, which are located inside of the vehicle.

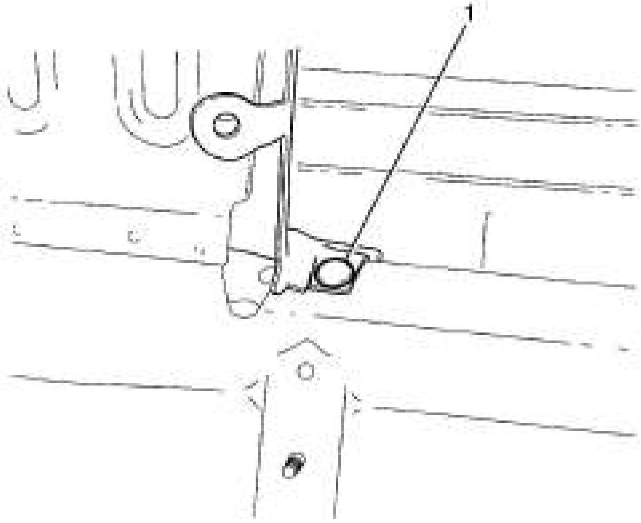


7. Remove the two carpet retainers (1) securing the centre panel carpet.

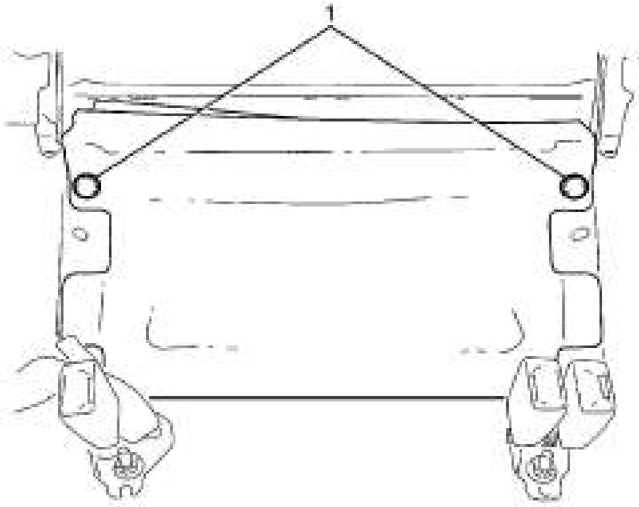


8. Remove the quarter panel side carpet retainer (1) securing the rear quarter panel side carpet.
9. Remove the quarter panel side carpet.
10. Carry out this procedure for the opposite side.

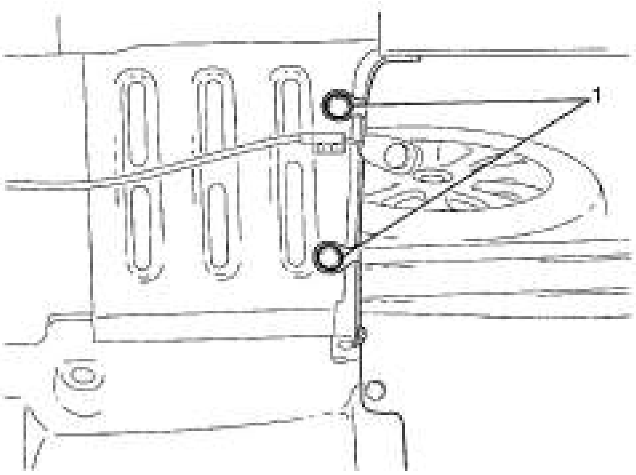
Installation Procedure (Up to 13 Jun 2007)



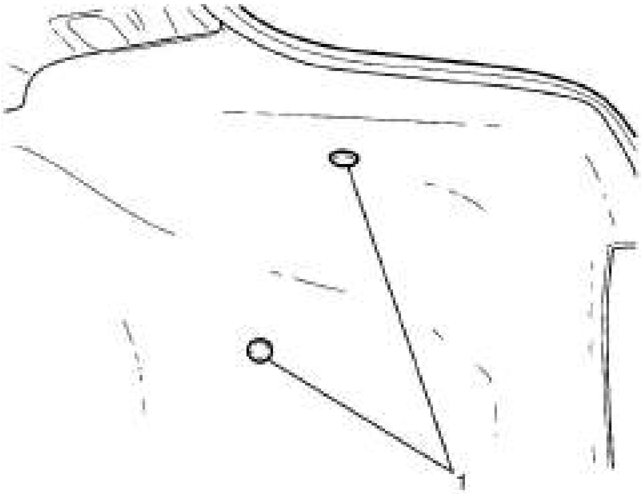
1. Install the quarter panel side carpet.
2. Install the quarter panel side carpet retainer (1).



3. Install the two carpet retainers (1) to secure the centre panel carpet.



4. Install the two carpet retainers (1) securing the rear quarter panel side carpet.

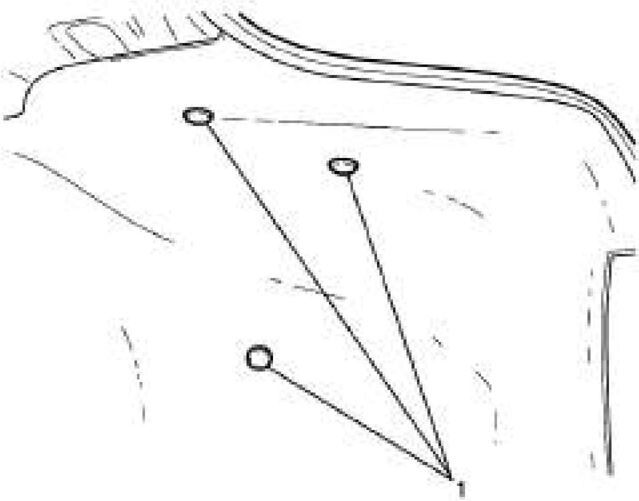


5. Install the two carpet retainers securing the rear quarter panel side carpet.
6. Ensure the carpet has a flush finish with the quarter panel.
7. Install the seat back assembly. Refer to Rear Seat Back Replacement.
8. Install the rear end panel trim. Refer to Rear Compartment Trim Panel Replacement.
9. Install the rear carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
10. Install the convenience net. Refer to Rear Compartment Stowage Tray Net Replacement.

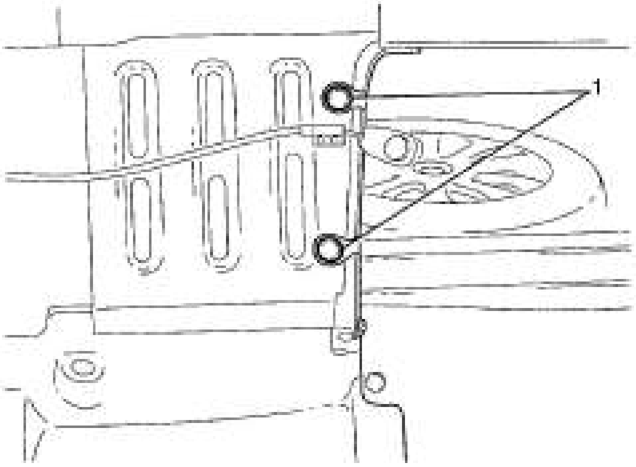
Removal Procedure (From 13 Jun 2007)

1. Remove the convenience net (if fitted). Refer to Rear Compartment Stowage Tray Net Replacement.
2. Remove the rear carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.

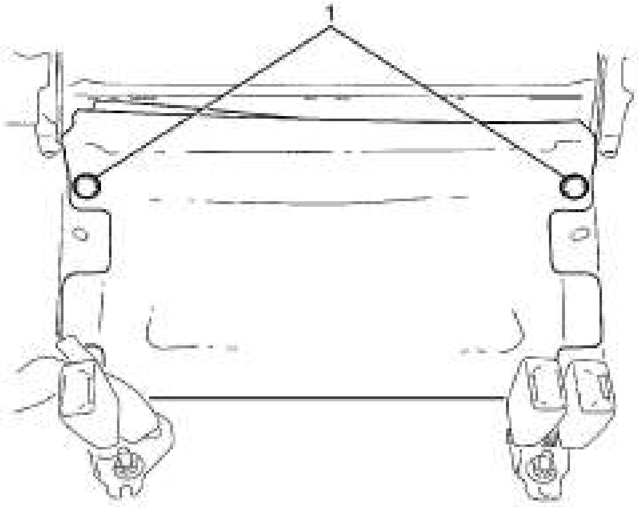
3. Remove the rear end panel trim. Refer to Rear Compartment Trim Panel Replacement.
4. Remove the seat back assembly. Refer to Rear Seat Back Replacement.



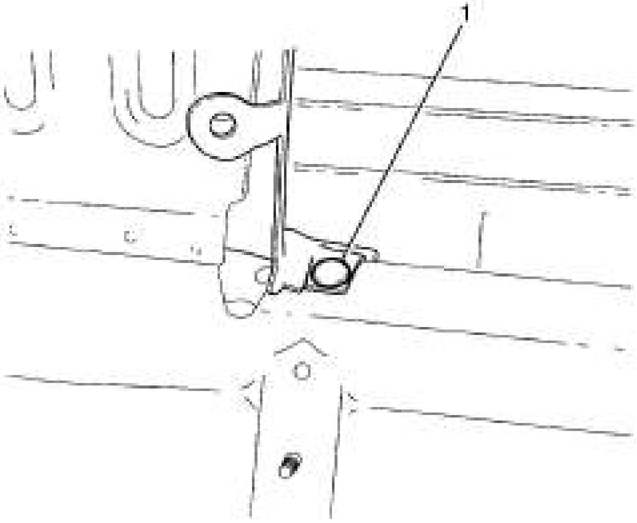
5. Remove the three carpet retainers (1) securing the rear quarter panel side carpet. The right side is shown, the left side is similar.



6. Remove the two carpet retainers (1) securing the rear quarter panel side carpet, which are located inside of the vehicle.



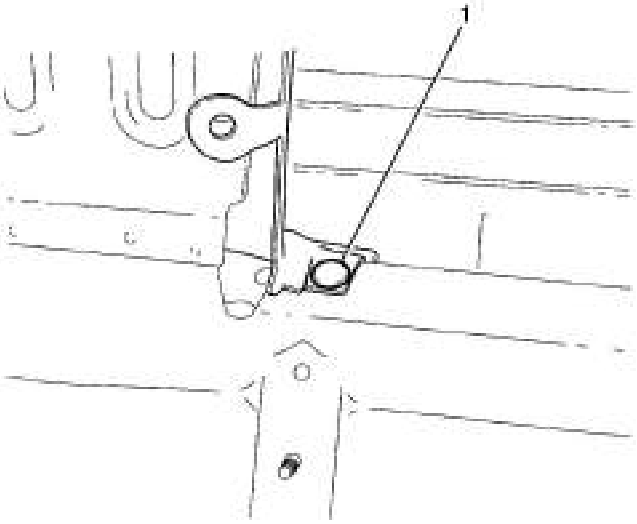
7. Remove the two carpet retainers (1) securing the centre panel carpet.



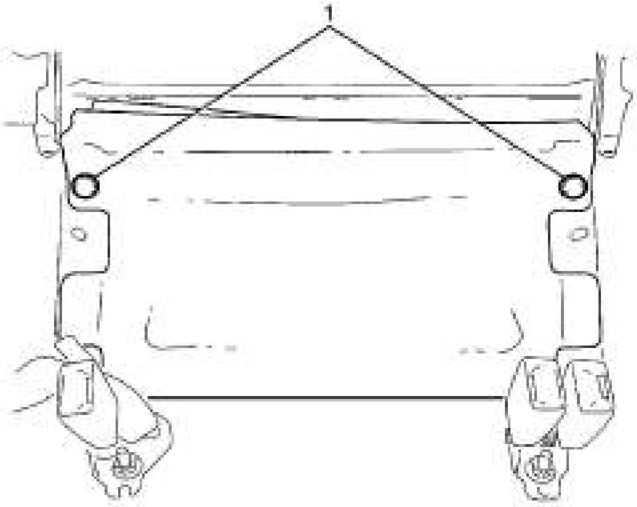
8. Remove the quarter panel side carpet retainer (1) securing the rear quarter panel side carpet.
9. Remove the quarter panel side carpet.
10. Carry out this procedure for the opposite side.

Installation Procedure (From 13 Jun 2007)

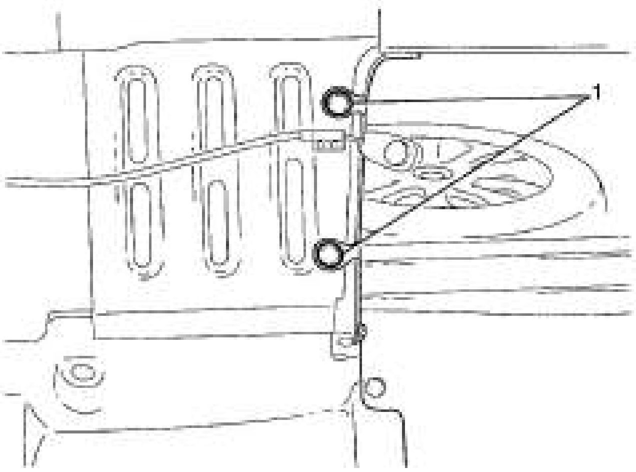
1. Install the quarter panel side carpet.



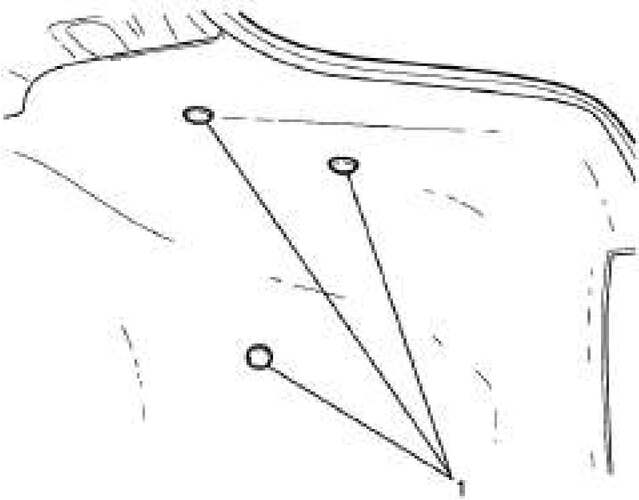
2. Install the quarter panel side carpet retainer (1).



3. Install the two carpet retainers (1) to secure the centre panel carpet.



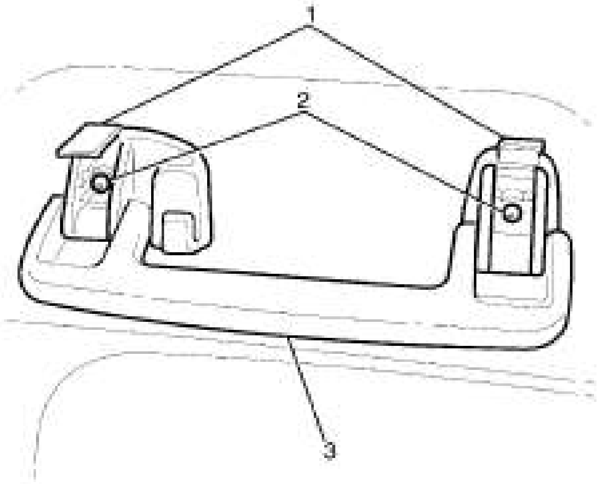
4. Install the two carpet retainers (1) securing the rear quarter panel side carpet.



5. Install the three carpet retainers (1) securing the rear quarter panel side carpet.
6. Make sure the carpet has a flush finish with the quarter panel.
7. Install the seat back assembly. Refer to Rear Seat Back Replacement.
8. Install the rear end panel trim. Refer to Rear Compartment Trim Panel Replacement.
9. Install the rear carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
10. Install the convenience net. (If fitted). Refer to Rear Compartment Stowage Tray Net Replacement..

Assist Handle Replacement

Removal Procedure - Up to xx/xx

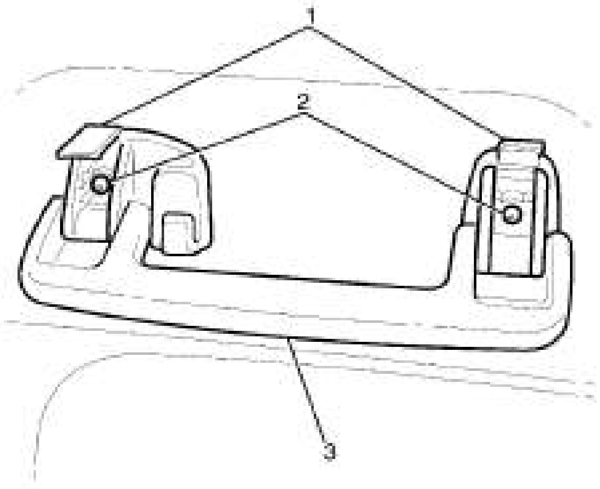


1. Pull the assist handle (3) into the down position.
2. Prise open the assist handle screw covers (1).
3. Remove the two retaining torx screws (2).

Important: When removing the assist handle assembly, take care not to damage the locating pins.

4. Remove the assist handle assembly (3).

Installation Procedure Up to xx/xx



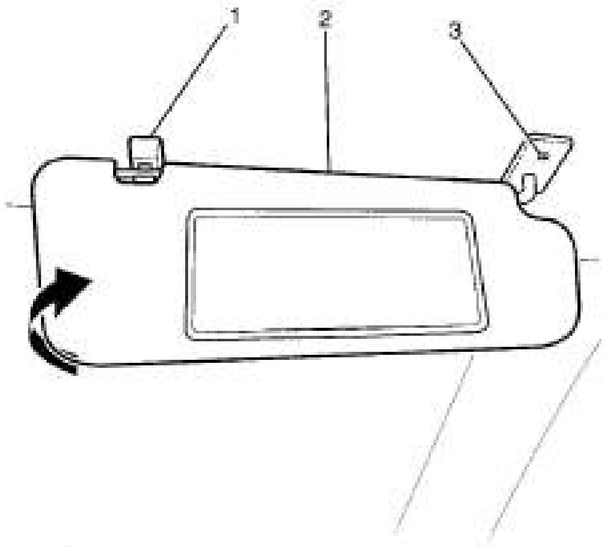
1. Install the assist handle assembly (3) ensuring that the locating pins are correctly aligned with the locating holes and spacer behind the headlining.
2. Install the assist handle retaining screws (2).

   Tighten
   Tighten the assist handle retaining screws to 2.0 N·m (18 lb in).

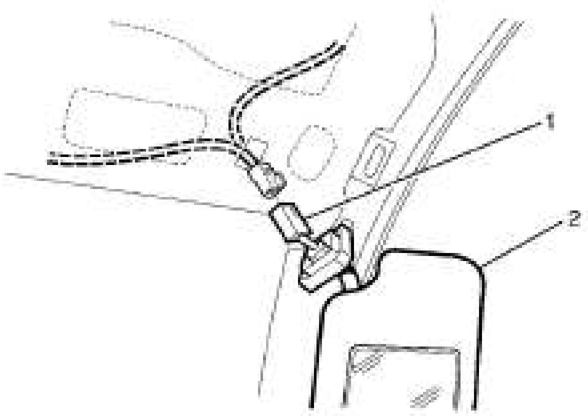
3. Close the assist handle screw covers (1).

Sunshade Replacement

Removal Procedure

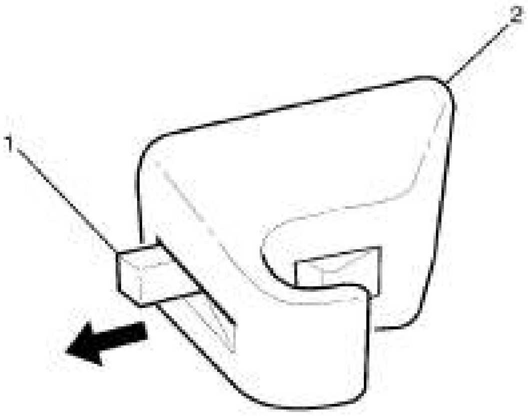


1. Detach the sunshade assembly (2) from the sunshade support (1) and rotate to gain access.
2. Remove the retaining screw (3) attaching the sunshade assembly to the head lining assembly.



3. Pull the sunshade assembly (2) away from the roof lining assembly and disconnect the sun shade assembly electrical connection (1).

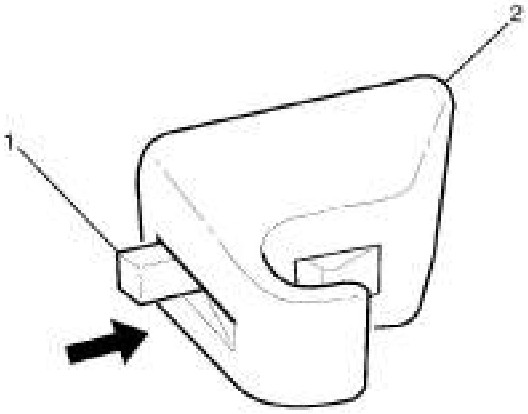
4. Remove the sunshade assembly (2). The right side is shown, the left side is the same.



Important: Take care not to loose the sunshade support retaining mechanism and spring.

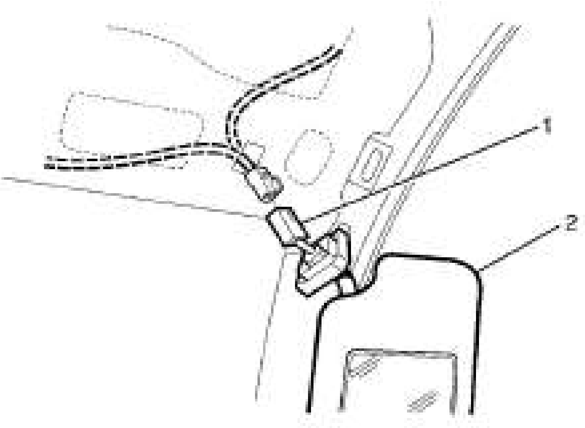
5. Remove the retaining pin (1) attaching the sunshade support (2) to the sunshade retainer.
6. Remove the sunshade support.

Installation Procedure

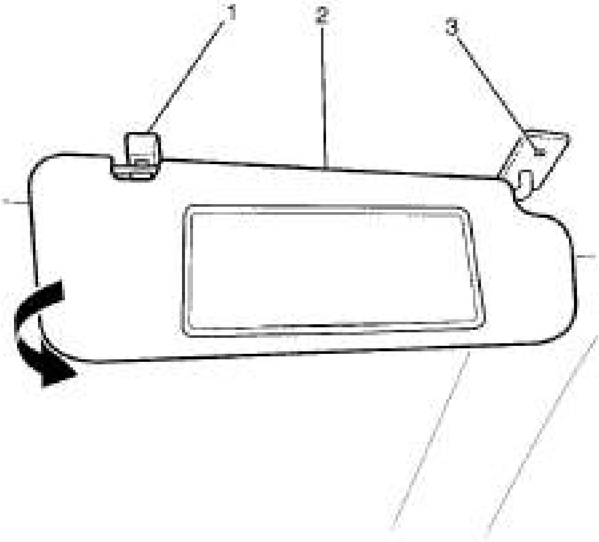


Important: When installing the sunshade, ensure the pivot line is vertical.

1. Install the sunshade support (2) by inserting the sunshade support retaining pin (1).



2. Connect the sun shade assembly (2) electrical connector (1).



3. Rotate the sunshade assembly (2) and install it into the sunshade support (1).

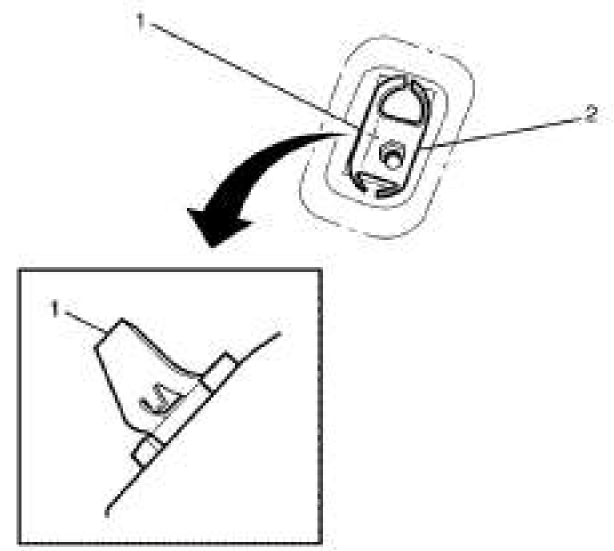
   Tighten
   Tighten the torx screw (3) to 2.0 N·m (18 lb in).

4. Install the sunshade assembly (2) into the sunshade support (1).
5. Test sunshade for correct operation.

Sunshade Retainer Bezel Replacement

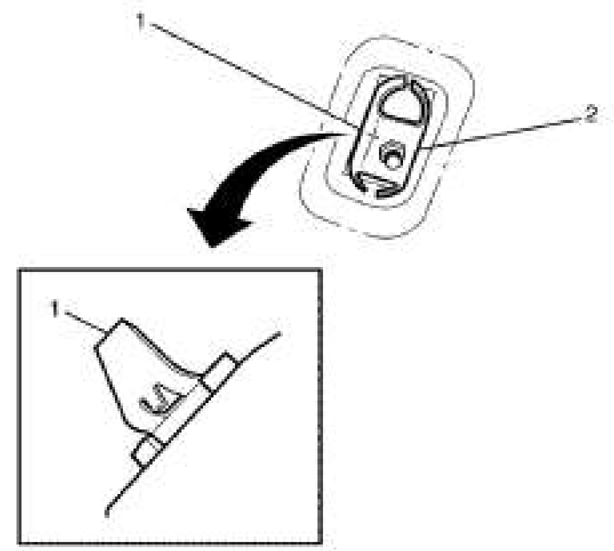
Removal Procedure

1. Remove the sunshade assembly. Refer to Sunshade Replacement.



2. Using a suitable screwdriver, release the retaining tabs (1) on the retainer (2).
3. Remove the retainer (2).

Installation Procedure



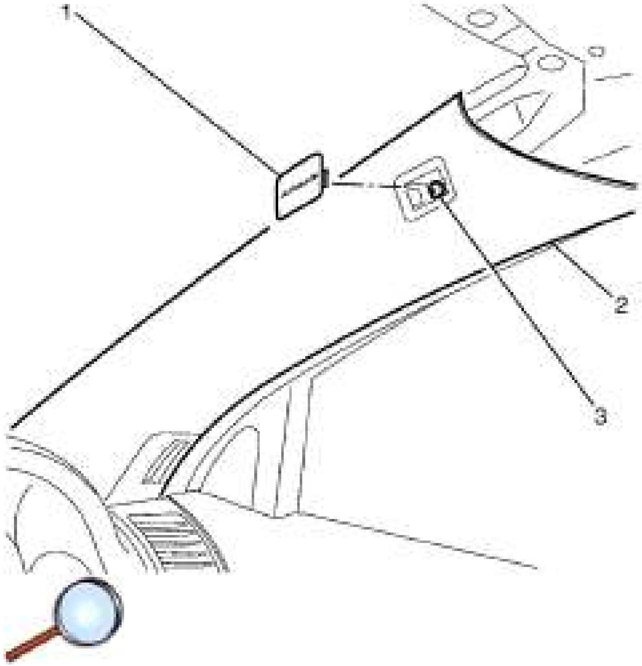
1. Install the sunshade retainer (2) by inserting the retaining tabs (1) into the roof panel, listen for an audible click to confirm fitting.
2. Install the sunshade assembly. Refer to Sunshade Replacement.

Windshield Garnish Molding Replacement

Removal Procedure

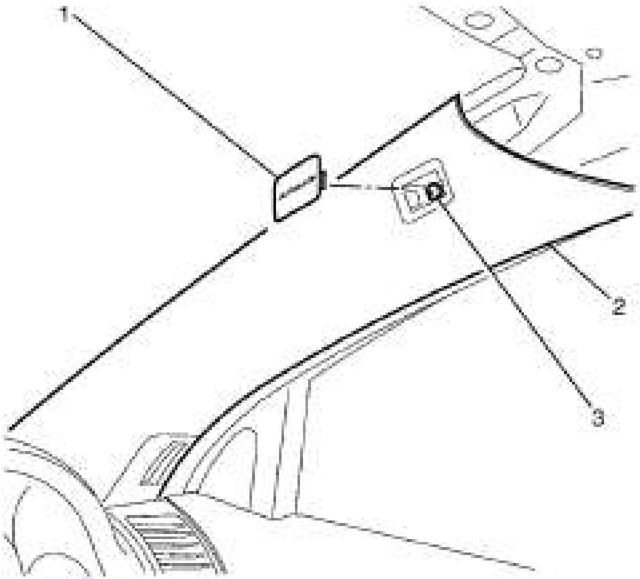
Important: If vehicle is equipped with side curtain air bags. Refer to SIR Caution .

1. Remove the defroster grille. Refer to Defroster Grille Replacement .
2. Partially detach the weatherstrip. Refer to Front Door Opening Weatherstrip Replacement .



3. Unclip the retaining torx screw cover (1) from the windshield garnish moulding (2).
4. Remove the retaining torx screw (3) from the windshield garnish moulding (2).
5. Carefully disengage the windshield garnish moulding (2) from the A pillar body panel.
6. Remove the windshield garnish moulding (2).

Installation Procedure



1. Install the windshield garnish moulding (2) ensuring the bottom edge is correctly located in the Instrument panel trim.
2. Engage the windshield garnish moulding (2) to the A-pillar body panel.

   Important: Make sure the Roof Rail Module tether is routed below the screw attachment clip and pin feature on the windshield garnish moulding when replacing this garnish. Roof Rail Air Bag deployment maybe inhibited if incorrectly installed.

3. Install the windshield garnish moulding (2) retaining torx screw (3).

   Tighten
   Tighten the retaining torx screw to 2.0 N·m (18 lb in).

4. Install the retaining torx screw cover (1).
5. Attach the weatherstrip. Refer to Front Door Opening Weatherstrip Replacement .
6. Install the defroster grille. Refer to Defroster Grille Replacement .

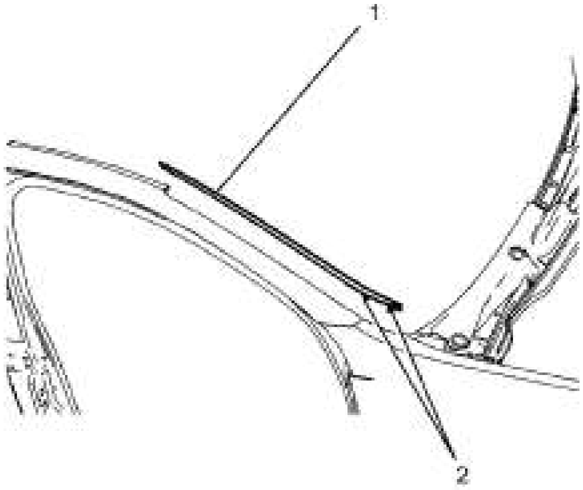
Windshield Pillar Garnish Molding Replacement

Removal Procedure

Caution: Refer to Glass and Sheet Metal Handling Caution in the Preface section.

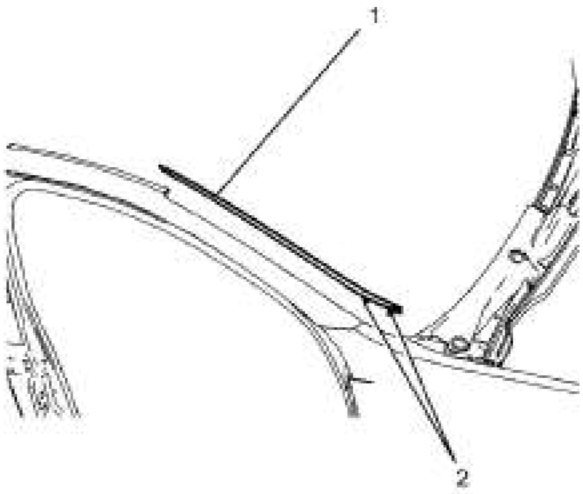
Important: Take care not to damage the paint on the vehicle when prying the windshield pillar garnish moulding from the windshield pillar.

1. Use a suitable tool to carefully pry the windshield pillar garnish moulding front from the windshield pillar.



2. Remove the windshield pillar garnish moulding by sliding the moulding towards the roof, to remove the retaining tabs (2) from the fender.
3. Remove the windshield pillar garnish moulding (1) from the vehicle.

Installation Procedure



Important: Align the locating marks on the reveal moulding (2) with the locating marks on the windshield .

1. Install the windshield pillar garnish moulding retaining tabs (2) to the fender.
2. Install the windshield pillar garnish moulding to the retaining clip on the windshield pillar.
3. Slide the windshield pillar garnish moulding towards the roof weld joint reveal moulding until the windshield pillar garnish moulding is flush with the roof weld joint reveal moulding.

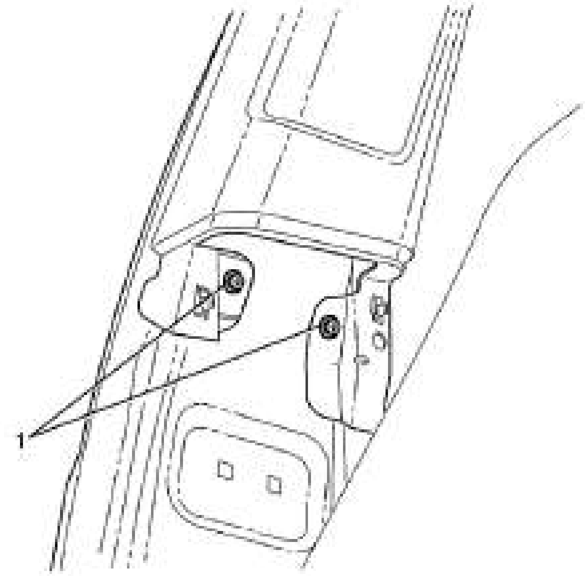
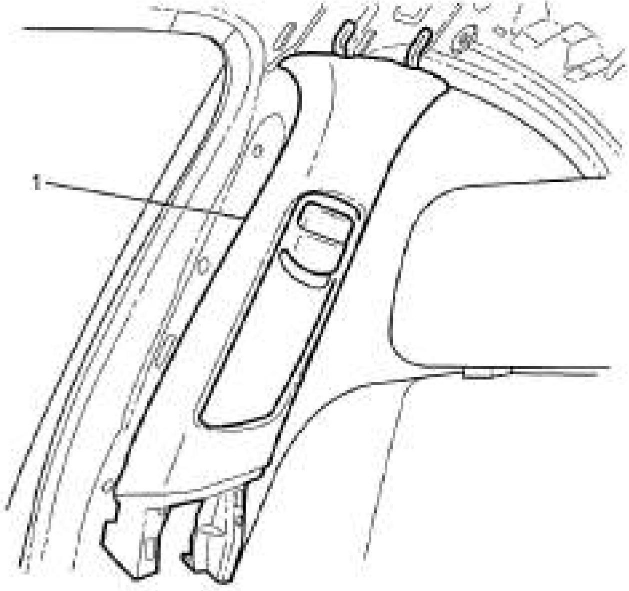
Center Pillar Upper Trim Panel Replacement

Removal Procedure

1. Remove the centre pillar lower trim. Refer to Center Pillar Lower Trim Panel Replacement.
2. Remove the lower seat belt bolt. Refer to Front Seat Belt Replacement.



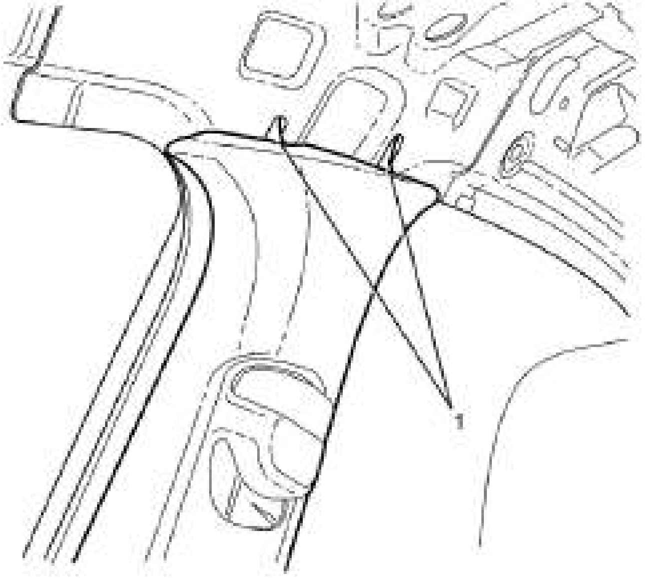
3. Remove the centre trim panel retaining torx screws (1).



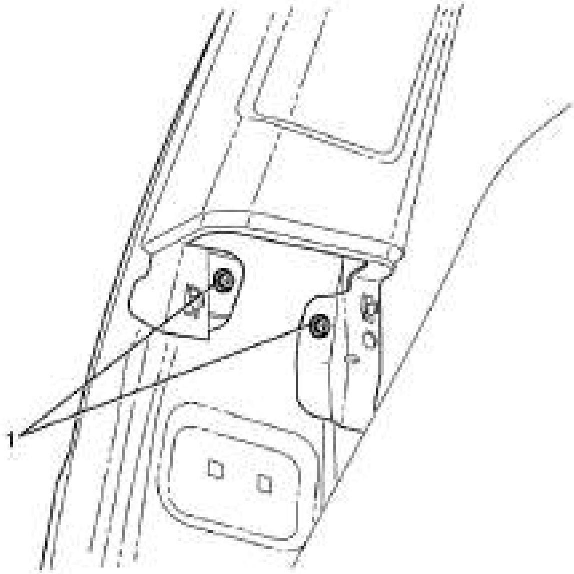
4. Detach the trim panel (1) from the B pillar by pulling inwards then downwards.

Installation Procedure

1. Move height adjuster to the upper position.
2. Move B pillar slide to the upper position.



3. Install the trim panel, by inserting the locating pins (1) into the roof panel first.
4. Line up pin on trim to slot in height adjuster.
5. Ensure main datum pin is correctly assembled into the datum hole.



6. Install the centre trim panel retaining torx screws (1).

   Tighten
   Tighten the centre trim panel retaining torx screws to 2.0 N·m (18 lb in).

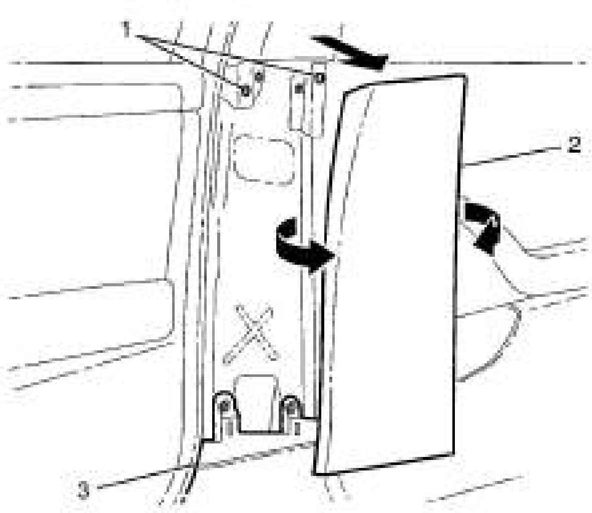
7. Install the lower seat belt bolt. Refer to Front Seat Belt Replacement.
8. Install the centre pillar lower trim. Refer to Center Pillar Lower Trim Panel Replacement.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Interior Trim and Paneling | Repair Instructions | **Document ID: 1995217**

Center Pillar Lower Trim Panel Replacement

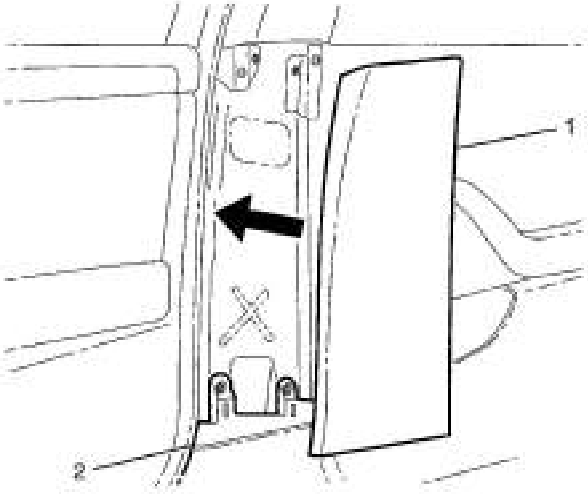
Removal Procedure

1. Partially detach the weatherstrip. Refer to Front Door Opening Weatherstrip Replacement .
2. Partially detach the weatherstrip. Refer to Rear Door Opening Weatherstrip Replacement .



3. Grasp both sides at the top of the trim panel (2) and while spreading, pull away from the door opening, disengaging the trim clip (1).
4. Pull the trim panel inward out of the lower sill trim panel (3) and remove.

Installation Procedure



1. Install the top edge of the centre trim panel (1) into upper sill trim panel.

   Important: Make sure datum pins on the lower trim panel (2) line up with the hole on the upper trim.

2. Firmly push in lower section of the trim panel (1).
3. Attach the weatherstrip. Refer to Rear Door Opening Weatherstrip Replacement .
4. Attach the weatherstrip. Refer to Front Door Opening Weatherstrip Replacement .

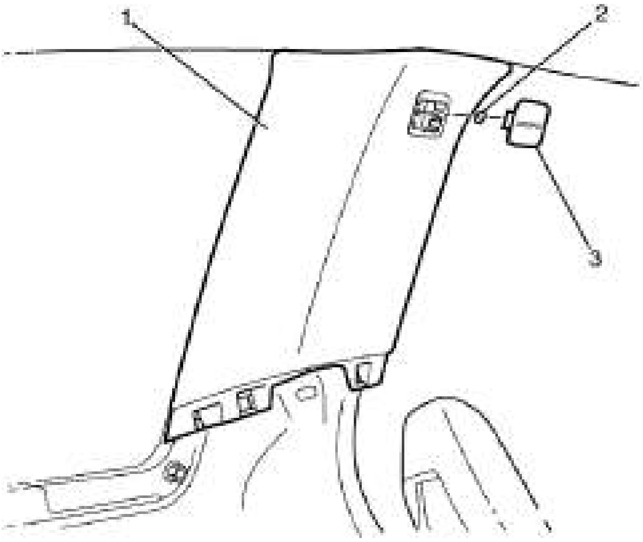
Body Lock Pillar Upper Trim Panel Replacement

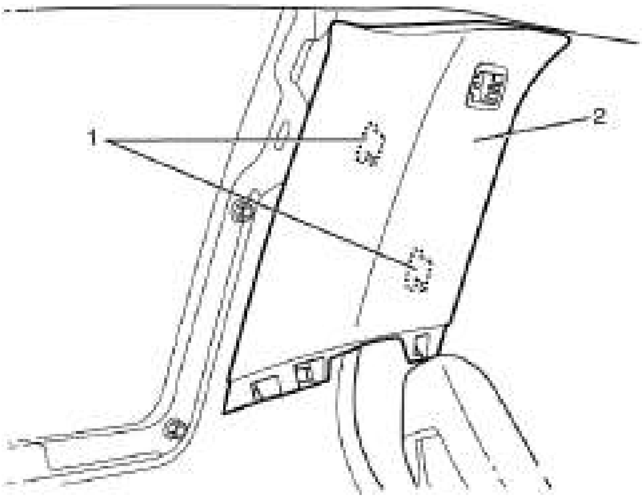
Removal Procedure

> **Important:** When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Install a suitable liftgate brace to the vehicle.
2. Remove the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.
3. Remove the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
4. Remove the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
5. Remove the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
6. Remove the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
7. Remove the body lock pillar lower trim panel. Refer to Body Lock Pillar Lower Trim Panel Replacement.
8. Remove the body lock pillar trim panel. Refer to Body Lock Pillar Trim Panel Replacement.

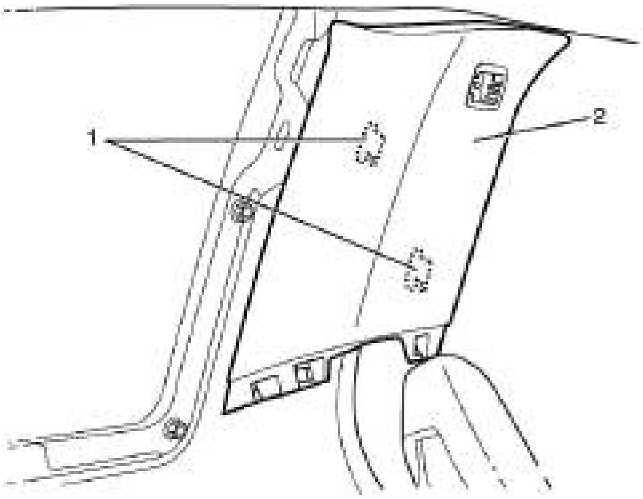


9. Remove the torx screw cover (3) from the body lock pillar upper trim panel (1).
10. Remove the body lock pillar upper trim panel to body retaining torx screw (2).



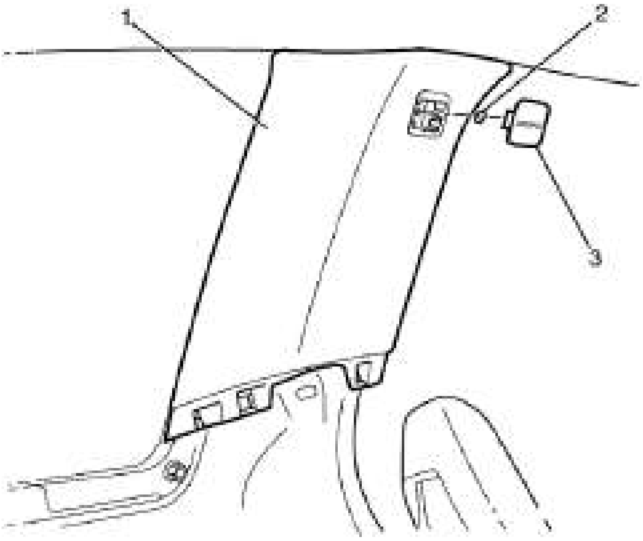
11. Carefully release the body lock pillar upper trim panel to body retaining clips (1).
12. Remove the body lock pillar upper trim panel (2) from the vehicle.

Installation Procedure



1. Position the body lock pillar upper trim panel (2) to the vehicle.
2. Carefully engage the body lock pillar upper trim panel to body retaining clips (1).

   Notice: Refer to Fastener Notice in the Preface section.



3. Install the body lock pillar upper trim panel to body retaining torx screw (2).

   Tighten
   Tighten the torx screw to 2 N·m (18 lb in).

4. Install the torx screw cover (3) to the body lock pillar upper trim panel (1).
5. Install the body lock pillar trim panel. Refer to Body Lock Pillar Trim Panel Replacement.
6. Install the body lock pillar lower trim panel. Refer to Body Lock Pillar Lower Trim Panel Replacement.
7. Install the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
8. Install the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
9. Install the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
10. Install the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
11. Install the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.

    Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

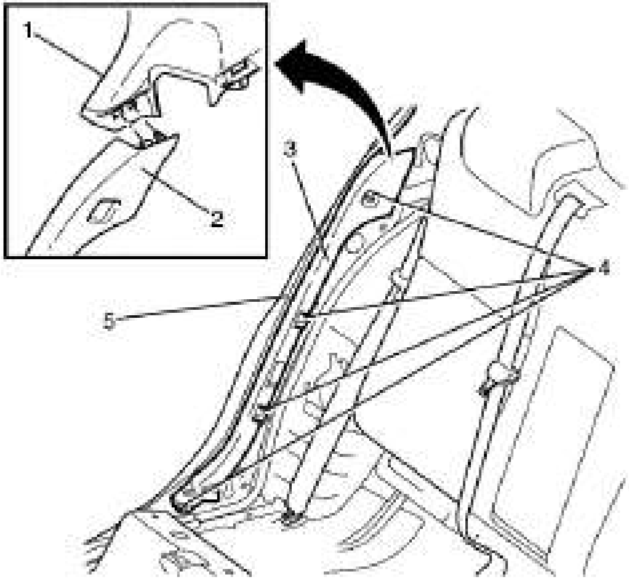
12. Remove the suitable liftgate brace to the vehicle.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Interior Trim and Paneling | Repair Instructions | **Document ID: 2125460**

Body Lock Pillar Lower Trim Panel Replacement

Removal Procedure

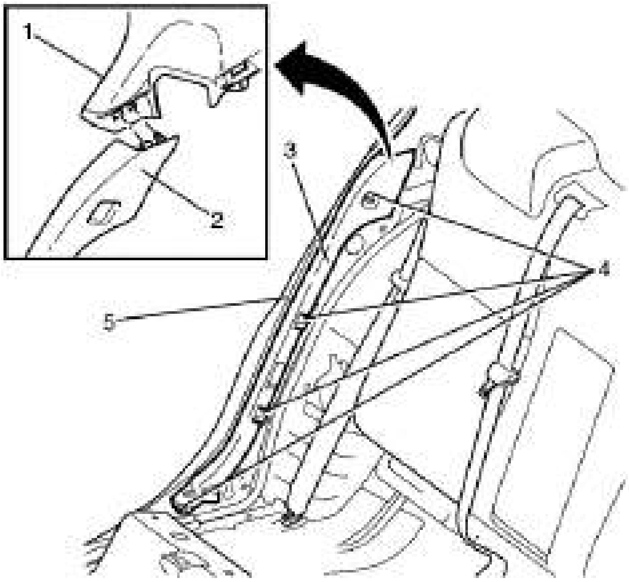
1. Remove the rear seat cushion. Refer to Rear Seat Cushion Replacement.
2. Remove the rear seat back bolster. Refer to Rear Seat Back Replacement .
3. Remove the rear sill trim panel. Refer to Rear Side Door Sill Trim Plate Replacement.



Important: When removing the body lock pillar lower trim take care not to damage the locating pins.

4. Partially remove the rear door weatherstrip to gain access behind the body lock pillar lower trim (3).
5. With a suitable tool pry the body lock pillar lower trim clips (4) away from the vehicle body (5).
6. With a suitable tool pry the body lock pillar lower trim (2) away from the body lock pillar (1).
7. Remove the body lock pillar trim (3).

Installation Procedure



Important: When installing the body lock pillar lower trim (3) ensure the retaining clips (4) and the locating pins are correctly aligned with the cavities in the vehicle body lock pillar (1).

1. Install the body lock pillar lower trim (3).

   Important: Make sure the lip of the weatherstrip sits over the trim panels.

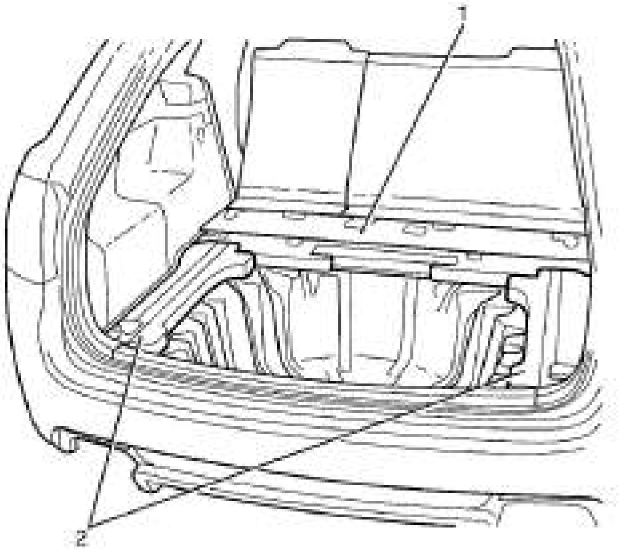
2. Install the removed portion of the rear door weatherstrip.
3. Install the rear sill trim panel. Refer to Rear Side Door Sill Trim Plate Replacement.
4. Install the rear seat back bolster. Refer to Rear Seat Back Replacement.
5. Install the rear seat cushion. Refer to Rear Seat Cushion Replacement.

Quarter Inner Trim Finish Panel Replacement

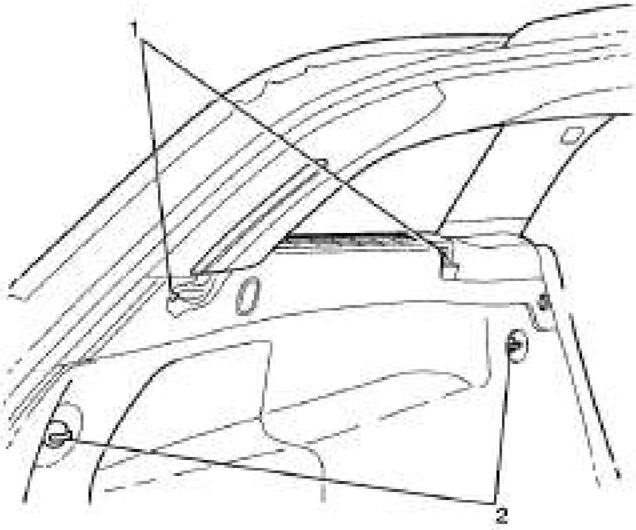
Removal Procedure

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

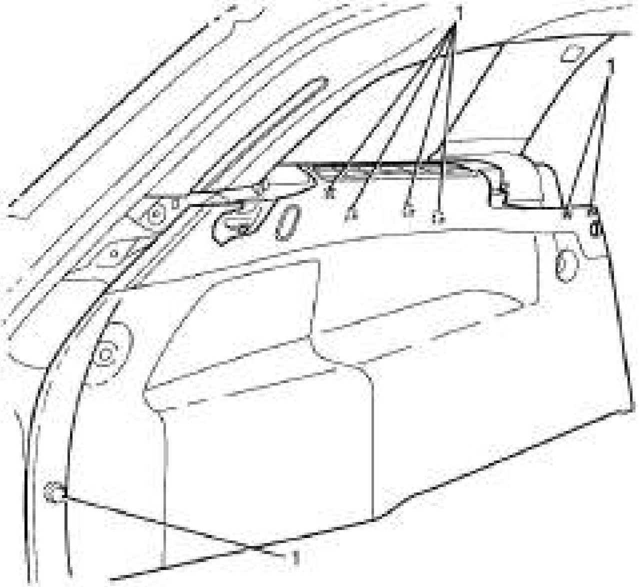
1. Install a suitable liftgate brace to the vehicle.
2. Remove the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.
3. Remove the luggage shade. Refer to Luggage Shade Replacement.
4. Remove the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
5. Remove the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
6. Remove the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.



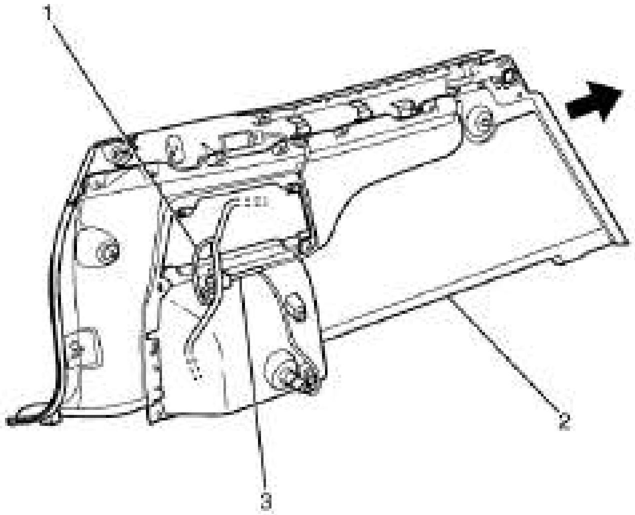
7. Remove the rear compartment floor panel carpet exterior support foams (2).
8. Remove the rear compartment floor panel centre support foam (1).
9. Fold the rear seat forward.



10. Remove the quarter upper trim panel to body retaining screws (1).
11. Remove the rear compartment convenience hooks (2).



12. Carefully disengage the quarter trim panel to body retaining clips (1).

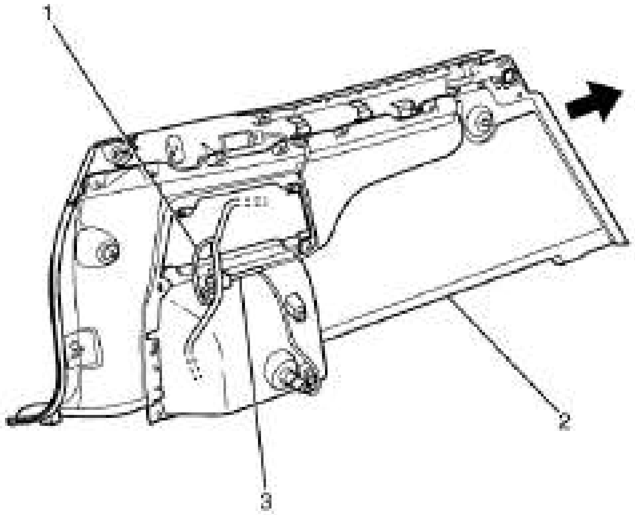


Important: Step 13 is valid for the removal of the right-hand side quarter trim panel only.

13. Disconnect the right side quarter trim panel wiring harness (1) from the rear body wiring harness (2).
14. Remove the quarter panel trim (3) from the vehicle.

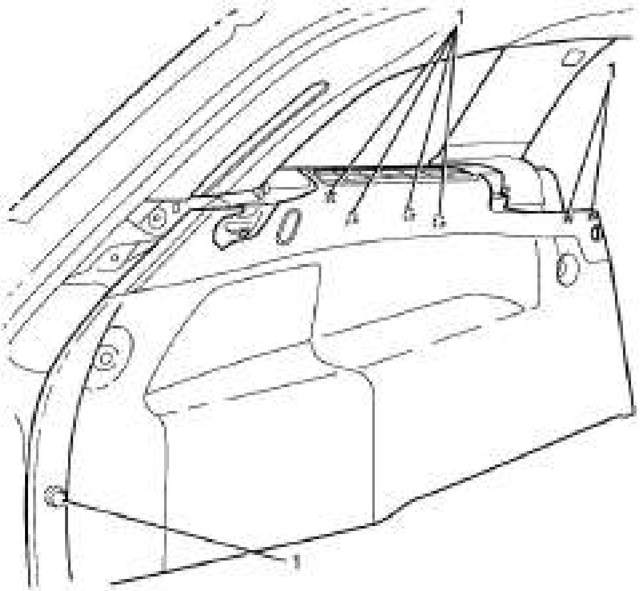
Installation Procedure

1. Position the quarter trim panel to the vehicle.

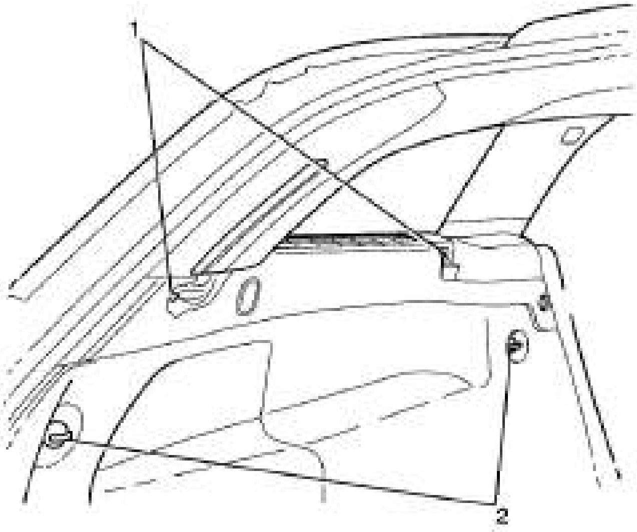


Important: Step 2 is valid for the installation of the right-hand side quarter trim panel only.

2. Connect the right side quarter trim panel wiring harness (1) to the rear body wiring harness (2).



3. Carefully engage the quarter trim panel to body retaining clips (1).



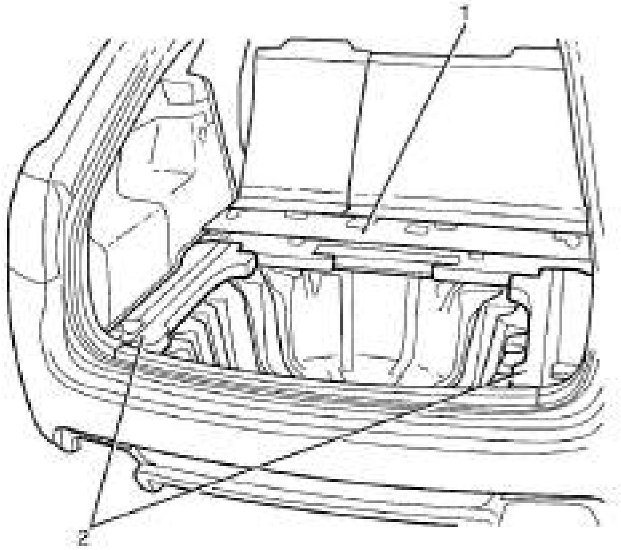
4. Install the rear compartment convenience hooks (2).

   Notice: Refer to Fastener Notice in the Preface section.

5. Install the quarter upper trim panel to body retaining screws (1).

   Tighten
   Tighten the screws to 2 N·m (18 lb in).

6. Position the rear seat to the original upright locked position.



7. Install the rear compartment floor panel centre support foam (1).
8. Install the rear compartment floor panel carpet exterior support foams (2).
9. Install the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
10. Install the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
11. Install the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
12. Install the luggage shade. Refer to Luggage Shade Replacement.
13. Install the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.

    Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

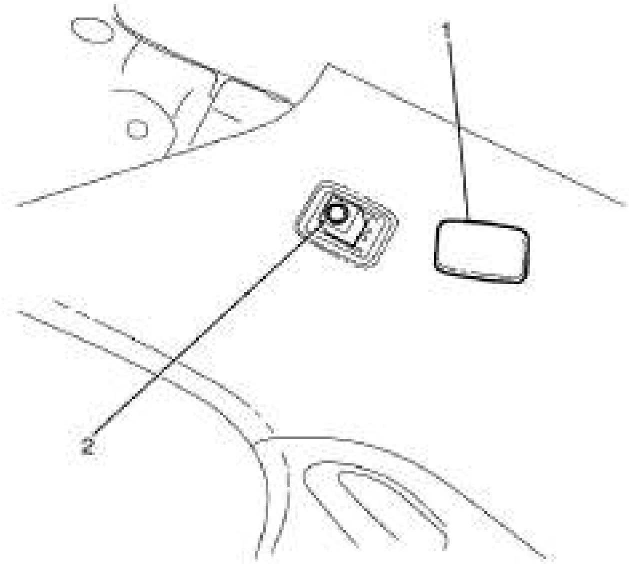
14. Remove the suitable liftgate brace from the vehicle.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Interior Trim and Paneling | Repair Instructions | **Document ID: 1995219**

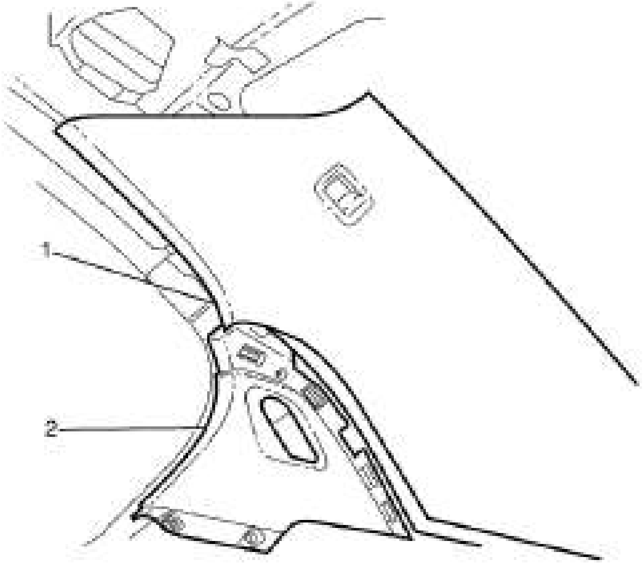
Quarter Upper Trim Panel Replacement (SWB)

Removal Procedure

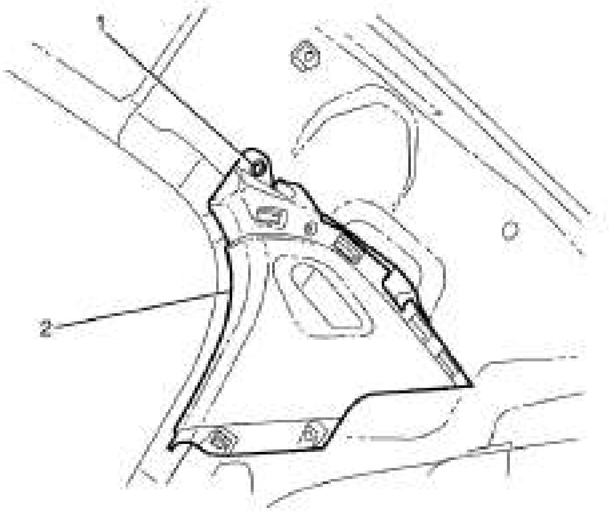
1. Remove the seat back assembly. Refer to Front Seat Back Replacement .
2. Remove the seat belt lower retaining bolt. Refer to Front Seat Belt Replacement .
3. Remove the trim panel - rear quarter lower. Refer to Quarter Lower Rear Trim Panel Replacement .



4. Remove the retaining torx screw cover (1).
5. Remove the upper quarter trim panel retaining torx screw (2).

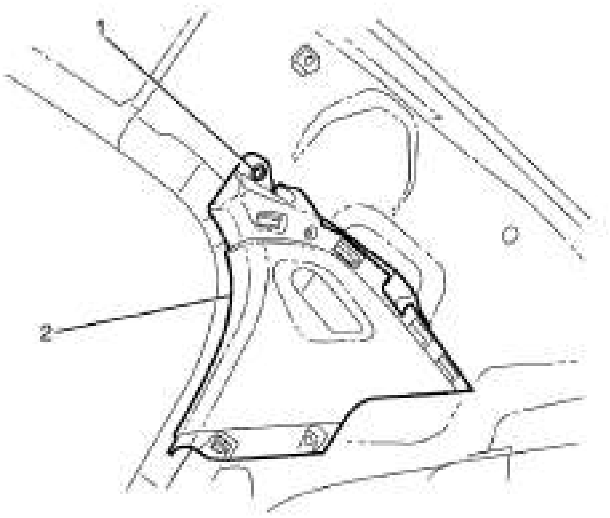


6. Working from the top of the upper quarter trim panel (1) disengage the retaining trim clips from the lower section (2).



7. Remove the lower section retaining torx screw (1).
8. Remove the trim panel (2).

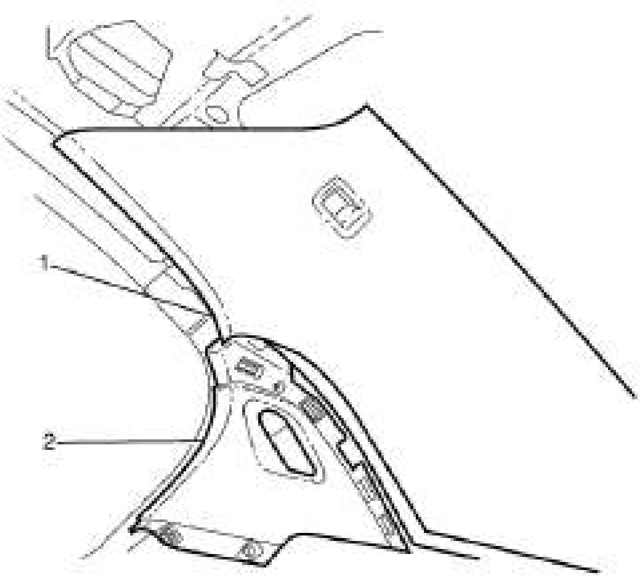
Installation Procedure



Important: When installing the upper quarter panel trim, ensure that the seat belt is correctly fed through the seat belt access hole.

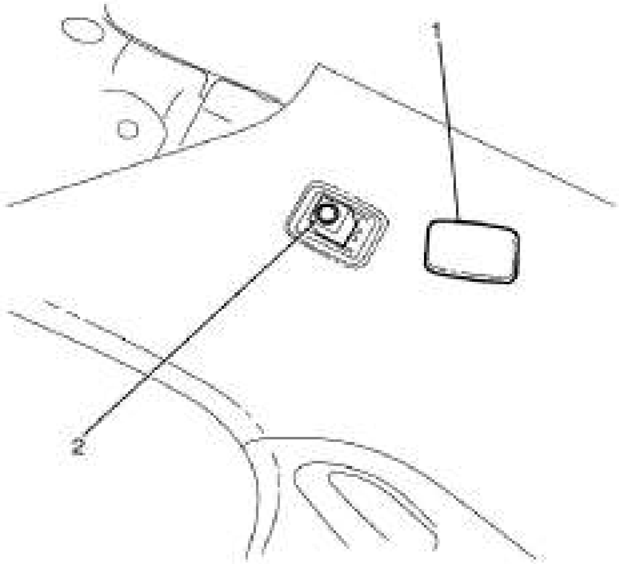
1. Install the lower section of the upper quarter trim panel (2).

Tighten
Tighten the torx screw (1) to 2.0 N·m (18 lb in).



Important: Make sure datum pins on the upper trim line up with the hole on the mid trim.

2. Install the upper quarter trim panel (1) by firmly pushing it into the lower section of the trim panel (2).



3. Install the upper quarter panel retaining torx screw (2).

Tighten
Tighten the retaining torx screw to 2.0 N·m (18 lb in).

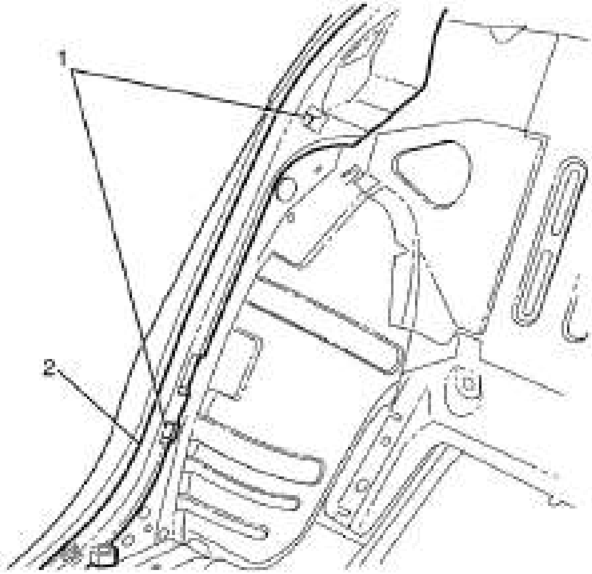
4. Install the retaining torx screw cover (1).
5. Install the seat belt lower retaining bolt. Refer to Front Seat Belt Replacement .
6. Install the seat back assembly. Refer to Rear Seat Back Replacement .
7. Attach the rear door weatherstrip. Refer to Rear Door Opening Weatherstrip Replacement .

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Interior Trim and Paneling | Repair Instructions | **Document ID: 1995222**

Quarter Lower Rear Trim Panel Replacement

Removal Procedure

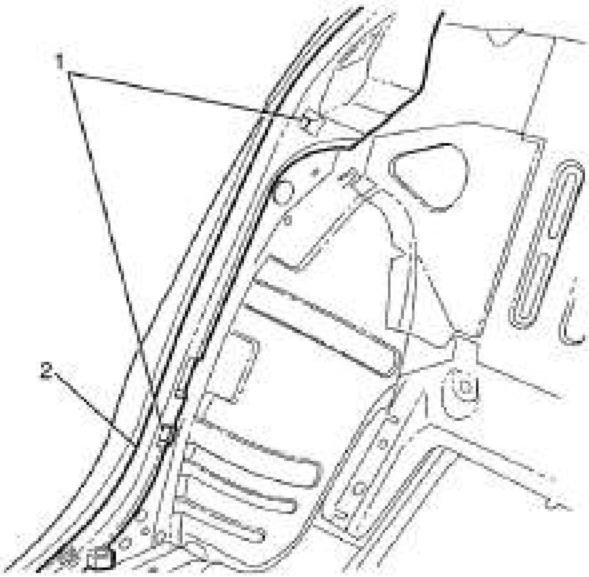
1. Remove the seat cushion. Refer to Rear Seat Cushion Replacement.
2. Remove the seat back assembly. Refer to Rear Seat Back Replacement.
3. Remove the rear sill trim panel. Refer to Rear Side Door Sill Plate Replacement.



Important: When removing the trim take care not to damage the locating pins.

4. Carefully disengage the retaining trim clips (1) and remove the trim (2).

Installation Procedure



Important: When installing the lower quarter trim panel, ensure the retaining clips are correctly aligned with the retainers before installation.

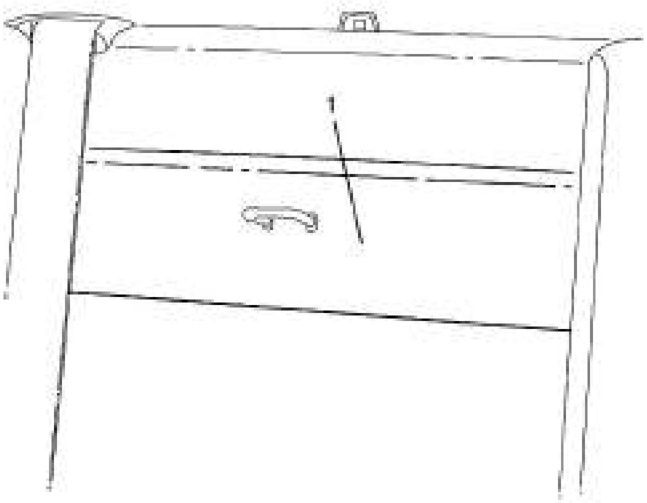
1. Carefully install the lower quarter trim panel (2) by engaging the retaining clips (1).
2. Install the rear sill trim panel. Refer to Rear Side Door Sill Plate Replacement.
3. Install the seat back assembly. Refer to Rear Seat Back Replacement.
4. Install the seat cushion. Refer to Rear Seat Cushion Replacement.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Interior Trim and Paneling | Repair Instructions | **Document ID: 1982185**

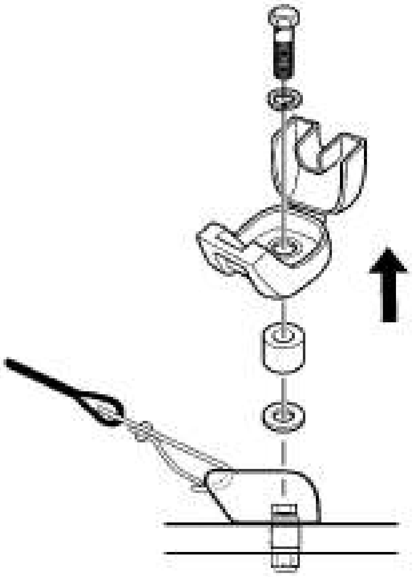
Rear Window Shelf Trim Panel Replacement (SWB)

Removal Procedure

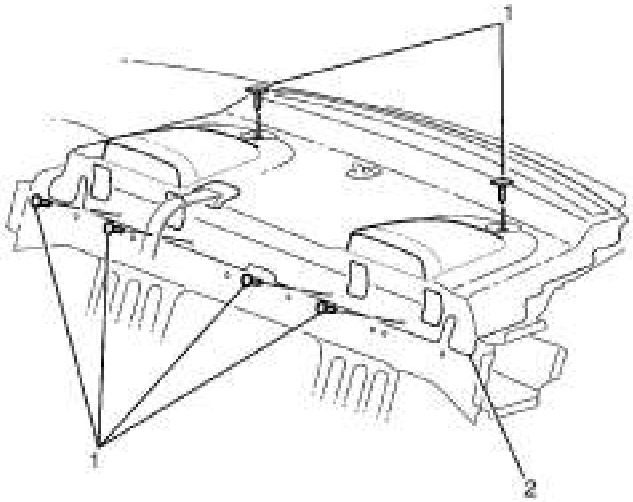
1. Remove the seat back assembly. Refer to Rear Seat Back Replacement.
2. Remove the centre seat back assembly. Refer to Rear Split Folding Seat Back Replacement.
3. Remove the upper quarter trim panel. Refer to Quarter Upper Trim Panel Replacement.
4. Remove the centre seat belt lower retaining bolt. Refer to Seat Belt Replacement - Center Rear.



5. Remove the rear lock striker trim panel by disengaging the retaining clips (1).



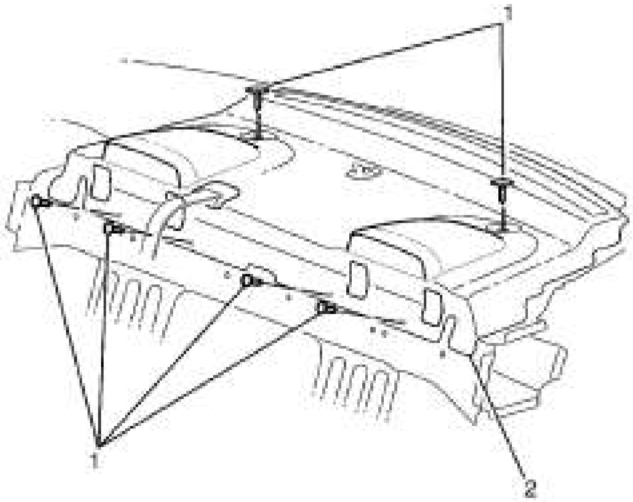
6. Remove the child restraint anchor assembly, as shown in illustration.



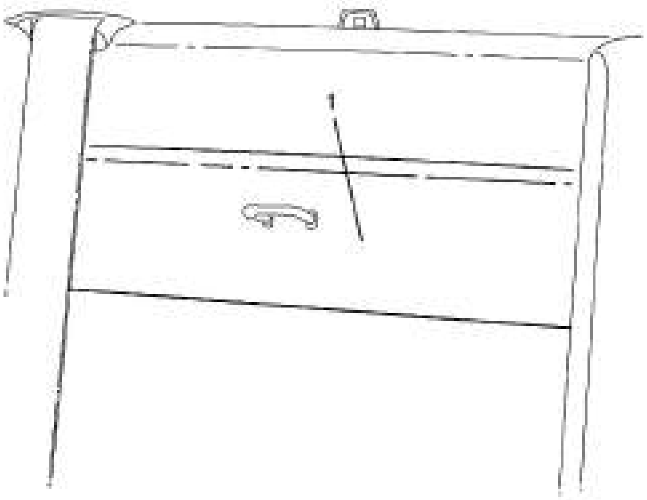
7. Remove the six retaining clips (1) two at the back of the rear window shelf trim panel (2) and six on the front.
8. Pull the rear window shelf (2) forward at centre and then lift upward to disengage datum tower from clip.
9. Slide the centre seat belt through the centre seat belt slot and remove the rear window shelf trim panel (2).

Installation Procedure

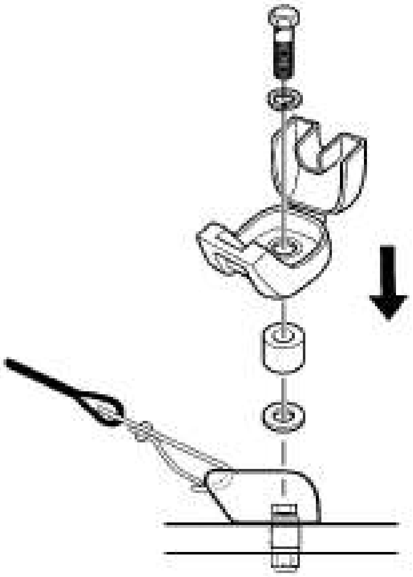
1. Install the centre seat belt by sliding the belt through the slot.



2. Install the rear window shelf trim panel (2).
3. Install the rear window shelf trim panel retaining clips (1).



4. Install the rear lock striker trim panel by engaging the retaining clips.



Important: Ensure child restraint assembly is installed as per illustration, failure to adhere to this installation will result in incorrect operation of the child restraint assembly.

5. Install child restraint anchor assembly.

   Tighten
   Tighten the retaining bolt to 22 N·m (16 lb ft).

6. Install the centre seat belt lower retaining bolt. Refer to Front Seat Belt Replacement.
7. Install the centre seat back assembly. Refer to Rear Split Folding Seat Back Replacement.
8. Install the upper quarter trim panel. Refer to Quarter Upper Trim Panel Replacement.

9. Install the seat back assembly. Refer to Rear Seat Back Replacement.

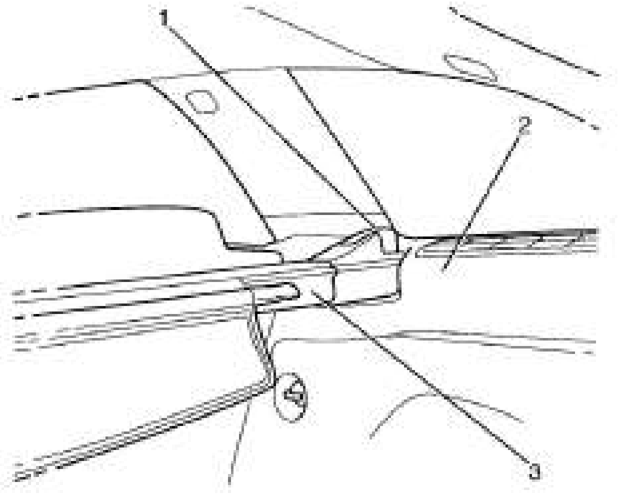
Luggage Shade Replacement

Removal Procedure



Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

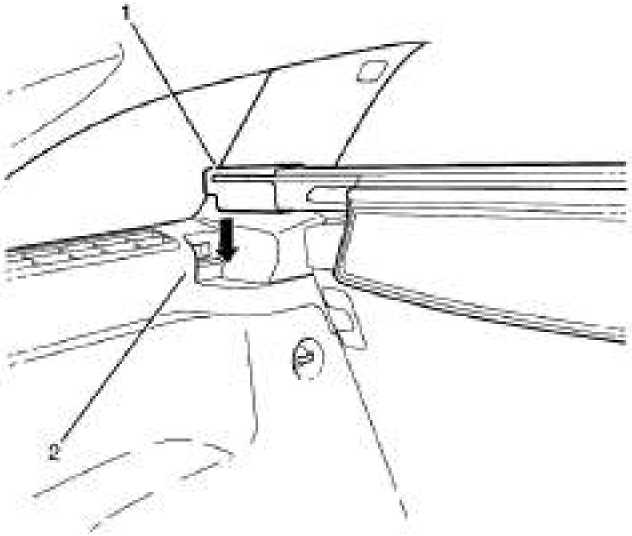
Important: Ensure the luggage shade is full retracted before begin this procedure.

1. Install a suitable liftgate brace to the vehicle.
2. Pull the luggage shade lever (1) to disengage the right-hand side of the luggage shade assembly (3) from the quarter upper trim panel (2).

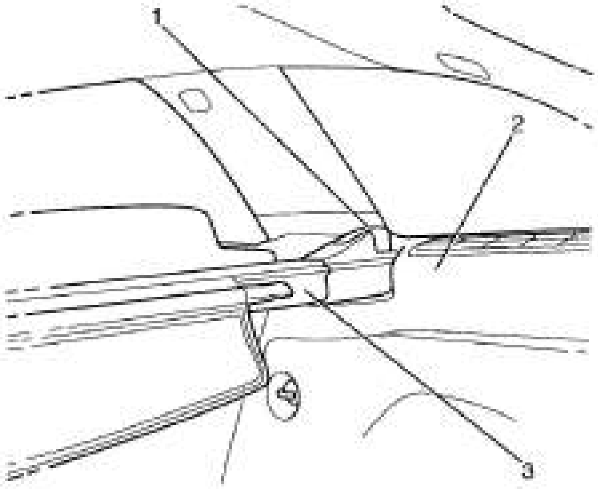
Important: Take care not to damage the surrounding trim panels.

3. Manoeuvre the luggage shade assembly (3) from the vehicle.

Installation Procedure



1. Position the left-hand side of the luggage shade assembly (1) into the quarter upper trim panel (2).

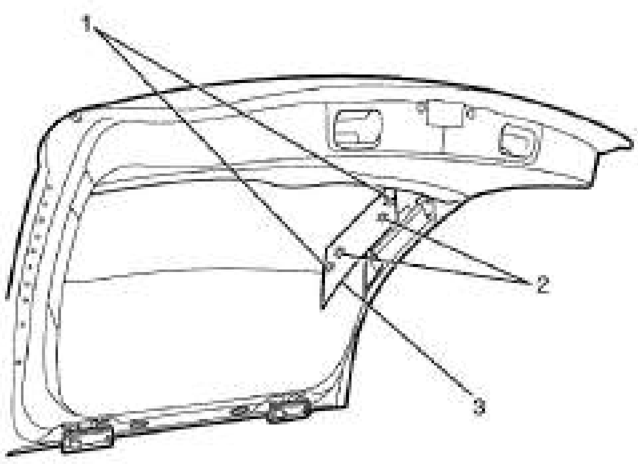


Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

2. Pull the luggage shade lever (1) and locate the right-hand side of the luggage shade assembly (3) into the quarter upper trim panel (2).
3. Check the luggage shade assembly (3) for correct operation.
4. Remove the suitable liftgate brace from the vehicle.

Liftgate Window Side Garnish Molding Replacement

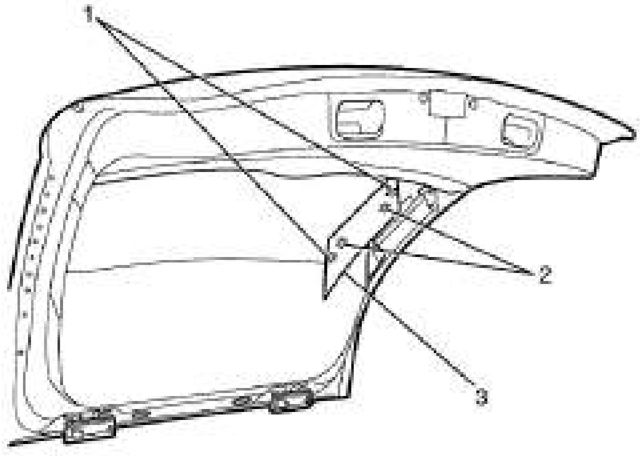
Removal Procedure



Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Install a suitable liftgate brace to the vehicle.
2. Using a suitable tool, carefully disengage the liftgate window side garnish moulding to liftgate window upper and lower garnish moulding retaining clips (1).
3. Using a suitable tool, carefully disengage the liftgate window side garnish moulding to liftgate retaining clips (2).
4. Remove liftgate window side garnish moulding (3) from the vehicle.

Installation Procedure



Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

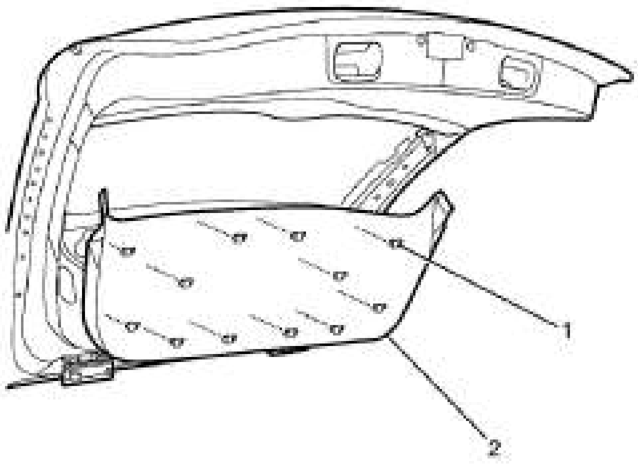
1. Position the liftgate window side garnish moulding (3) to the liftgate.
2. Carefully engage the liftgate window side garnish moulding retaining clips (2) to the liftgate. An audible click will confirm correct installation.
3. Carefully engage the liftgate window side garnish moulding retaining clips (1) to the liftgate window upper and lower garnish mouldings.
4. Remove the suitable liftgate brace from the vehicle.

Liftgate Window Upper Garnish Molding Replacement

Removal Procedure

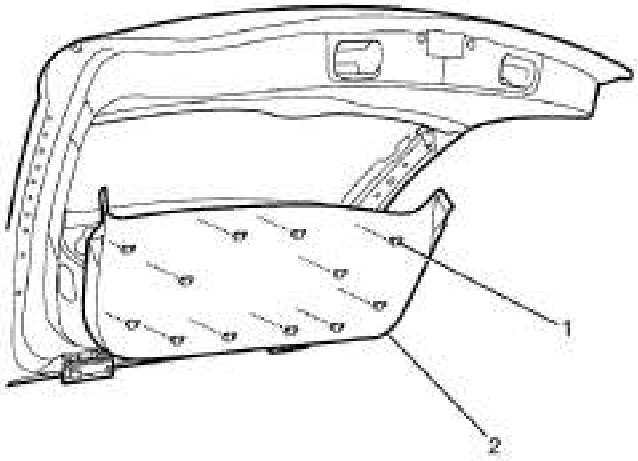
Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Install a suitable liftgate brace to the vehicle.
2. Remove the liftgate window side garnish moulding. Refer to Liftgate Window Side Garnish Molding Replacement.



3. Using a suitable tool, carefully disengage the liftgate window upper garnish moulding to liftgate retaining clips (1).
4. Remove the liftgate window upper garnish moulding (2) from the vehicle.

Installation Procedure



Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

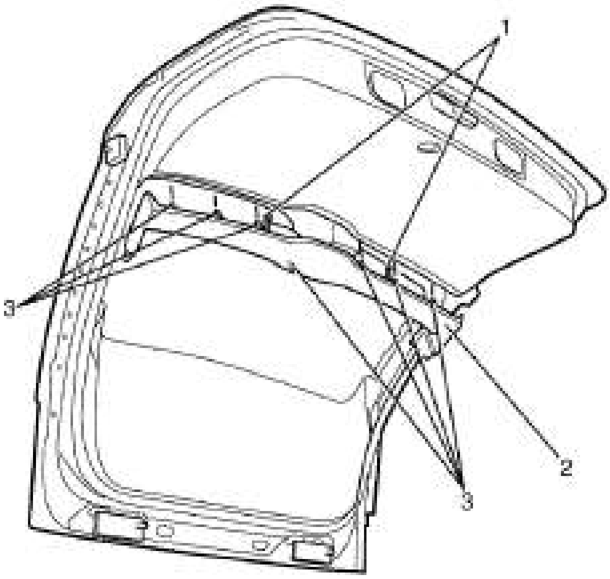
1. Position the liftgate window upper garnish moulding (2) to the liftgate.
2. Carefully engage the liftgate window upper garnish moulding retaining clips (1) to the liftgate. An audible click will confirm correct fitment.
3. Install the liftgate window side garnish moulding. Refer to Liftgate Window Side Garnish Molding Replacement.
4. Remove the suitable liftgate brace from the vehicle.

Liftgate Window Lower Garnish Molding Replacement

Removal Procedure

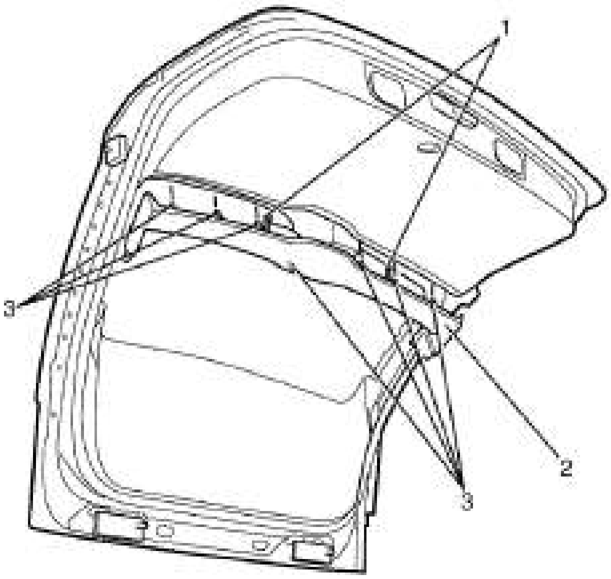
Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Install a suitable liftgate brace to the vehicle.
2. Remove the liftgate window side garnish moulding. Refer to Liftgate Window Side Garnish Molding Replacement.



3. Using a suitable tool, carefully disengage the liftgate window lower garnish moulding to liftgate retaining clips (3) and datum pins (1).
4. Remove liftgate window lower garnish moulding (2) from the vehicle.

Installation Procedure



Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Position the liftgate window lower garnish moulding (2) to the liftgate.
2. Carefully engage the liftgate window lower garnish moulding retaining clips (3) and datum pins (1) to the liftgate. An audible click will confirm correct installation.
3. Install the liftgate window side garnish moulding. Refer to Liftgate Window Side Garnish Molding Replacement.
4. Remove the suitable liftgate brace from the vehicle.

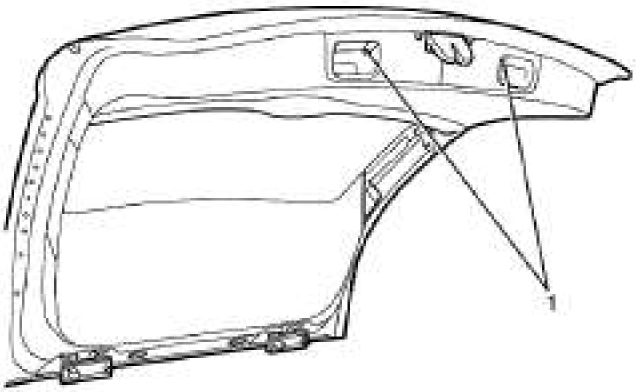
Liftgate Trim Panel Replacement

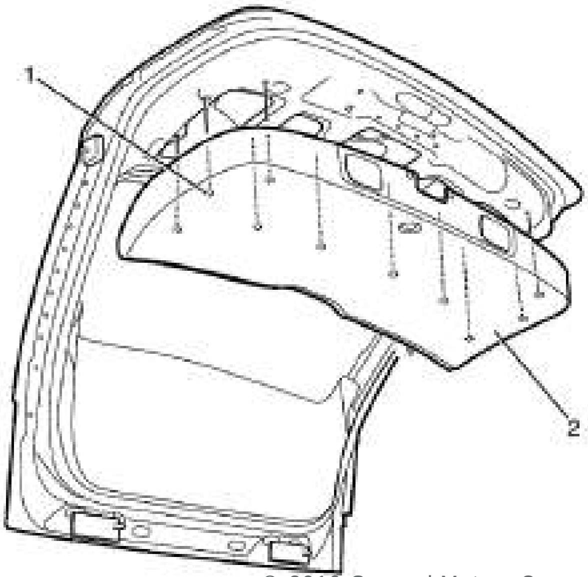
Removal Procedure

> **Important:** When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Install a suitable liftgate brace to the vehicle.
2. Remove the liftgate window side garnish moulding. Refer to Liftgate Window Side Garnish Molding Replacement.
3. Remove the liftgate window lower garnish moulding. Refer to Liftgate Window Lower Garnish Molding Replacement.

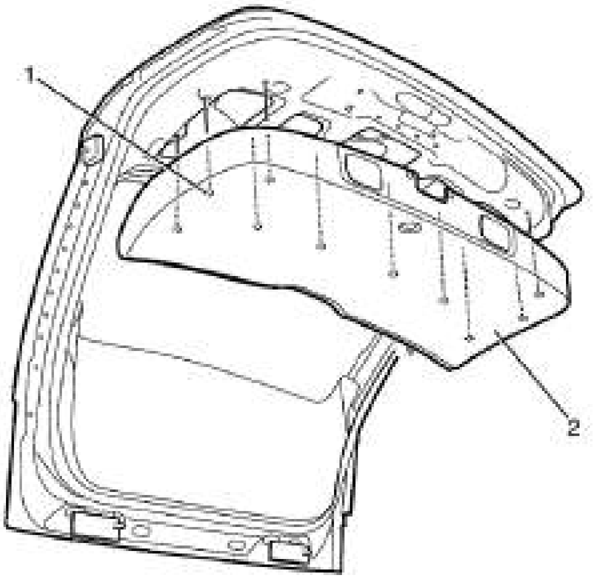


4. Remove the liftgate inside pull handle to liftgate retaining screws (1).



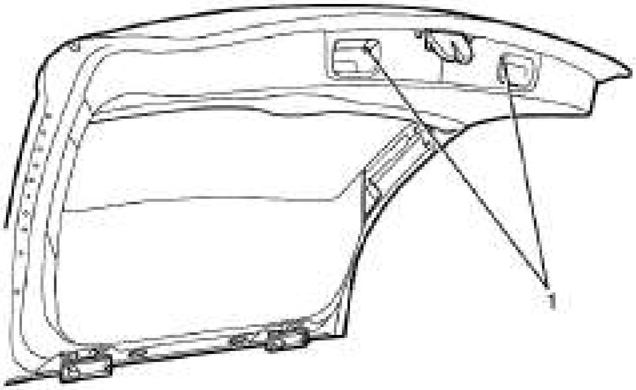
5. Using a suitable tool, carefully disengage the liftgate trim panel to liftgate retaining clips (1).
6. Remove the liftgate trim panel (2) from the vehicle.

Installation Procedure



1. Position the liftgate trim panel (2) to the vehicle.
2. Carefully engage the liftgate trim panel retaining clips (1) to the liftgate.

Notice: Refer to Fastener Notice in the Preface section.



3. Install the liftgate inside pull handle to liftgate retaining screws (1).

   Tighten
   Tighten the screws to 2 N·m (18 lb. in).

4. Install the liftgate window lower garnish moulding. Refer to Liftgate Window Lower Garnish Molding Replacement.
5. Install the liftgate window side garnish moulding. Refer to Liftgate Window Side Garnish Molding Replacement.

   Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

6. Remove the suitable liftgate brace from the vehicle.

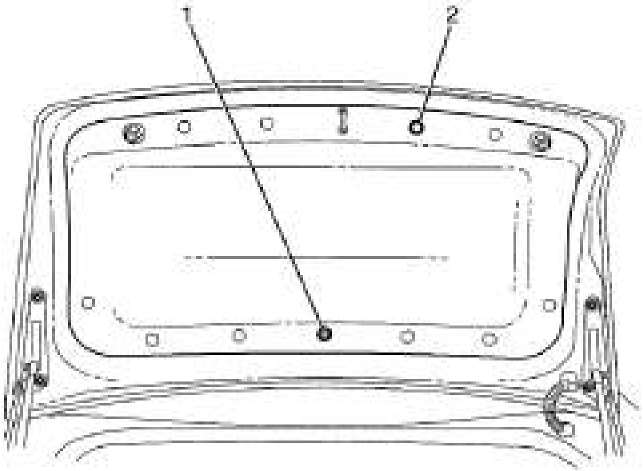
Rear Compartment Lid Inner Panel Trim Replacement

Removal Procedure

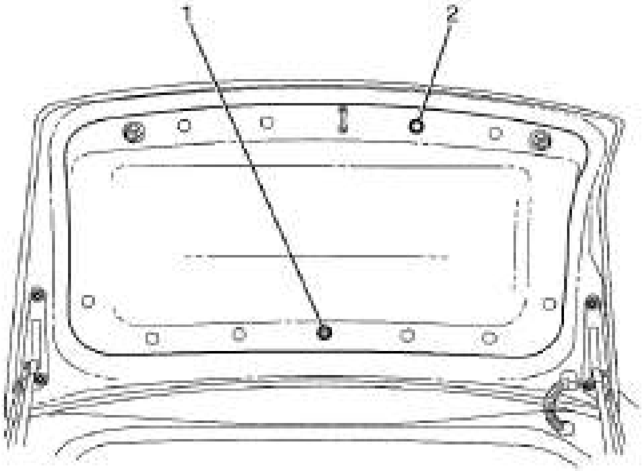
1. Open the luggage compartment lid.



2. Remove the retaining screw (1) attaching the cargo compartment carpet retaining stay to the luggage compartment lid.
3. Remove the luggage compartment lid trim retaining clips (2).
4. Remove the luggage compartment lid trim.

Installation Procedure

1. Install the luggage compartment lid trim.



2. Install the luggage compartment lid trim retaining clips (2).
3. Install the luggage compartment carpet stay and retaining screw (1).
4. Close the luggage compartment lid.

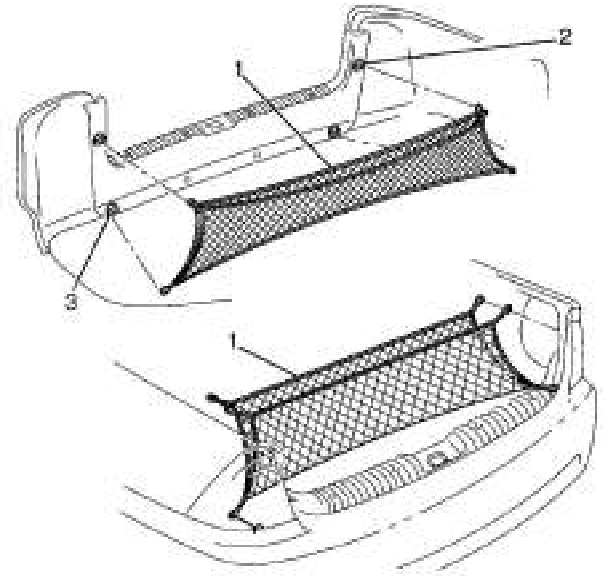
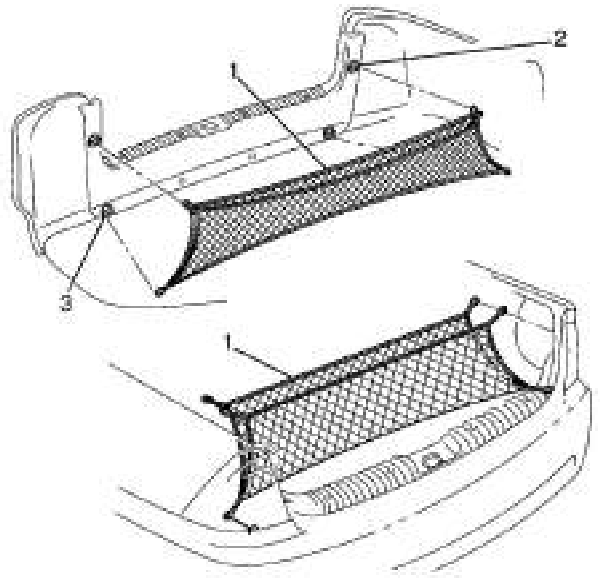
Rear Compartment Stowage Tray Net Replacement

Removal Procedure



1. Carefully unhook the convenience net (1) from the two lower retainer hooks (3) and the two upper retainer hooks (2).
2. Remove the convenience net from the rear compartment trim assembly.
3. If required, unscrew the two upper and two lower retainer hooks.

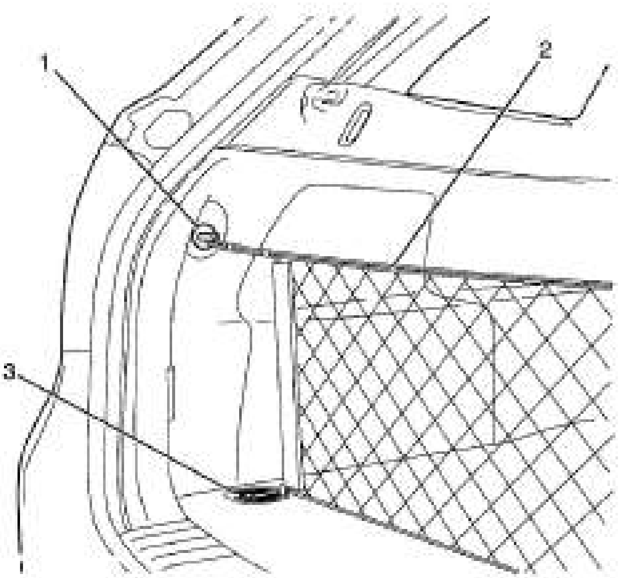
Installation Procedure



1. If removed install the upper and lower retainer hooks (2 and 3).
2. Install the convenience (1) net to the rear compartment end panel.

Convenience Net Replacement (Sportwagon)

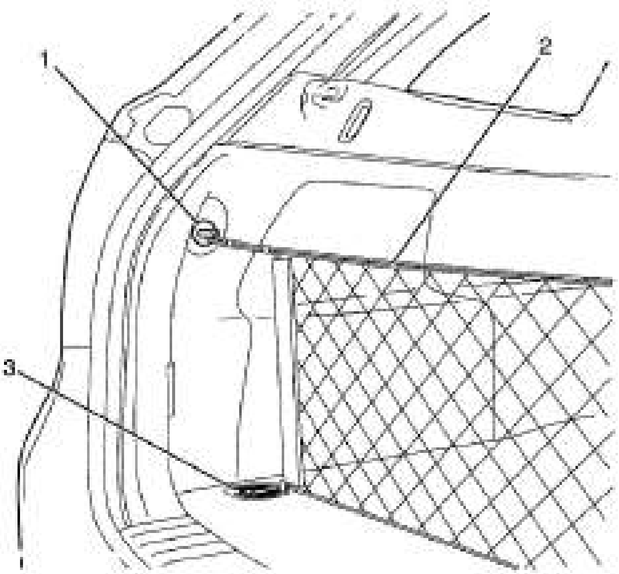
Removal Procedure



Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Install a suitable liftgate brace to the vehicle.
2. Carefully unhook the convenience net (2) from the cargo tie downs (3) and the rear compartment convenience hooks (1).
3. If required, unscrew the rear compartment convenience hooks (1).

Installation Procedure



Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

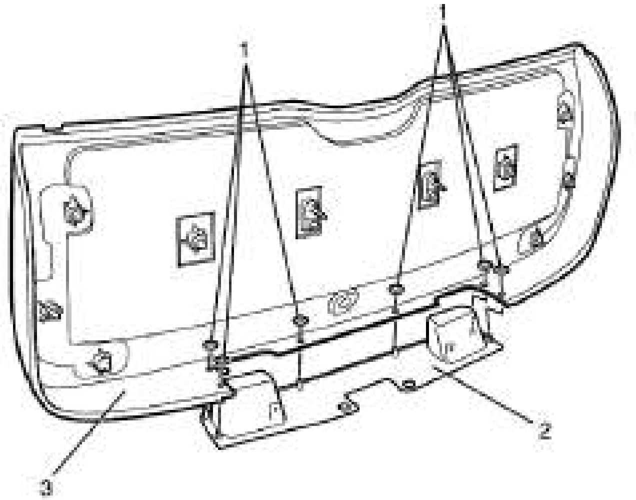
1. If removed, install the rear compartment convenience hooks (1).
2. Install the convenience net (2) to the cargo tie downs (3) and the rear compartment convenience hooks (1).
3. Remove the suitable liftgate brace from the vehicle.

Liftgate Inside Pull Handle Replacement

Removal Procedure

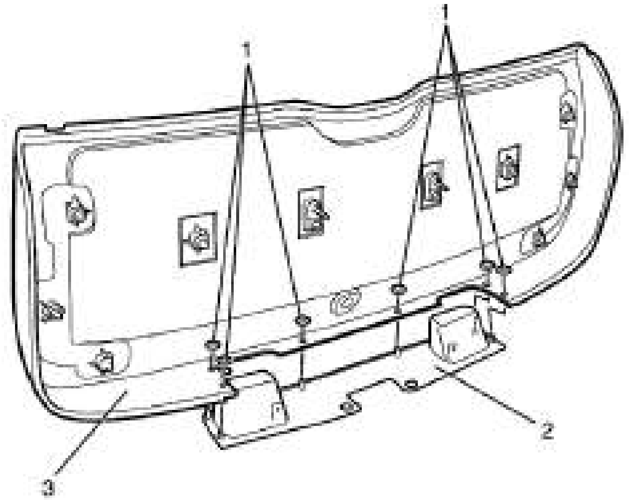
Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Install a suitable liftgate brace to the vehicle.
2. Remove the liftgate window side garnish moulding. Refer to Liftgate Window Side Garnish Molding Replacement.
3. Remove the liftgate window lower garnish moulding. Refer to Liftgate Window Lower Garnish Molding Replacement.
4. Remove the liftgate trim panel. Refer to Liftgate Trim Panel Replacement.



5. Remove the liftgate inside pull handle to liftgate trim panel stop nuts (1).
6. Remove the liftgate inside pull handle (2) from the liftgate trim panel (3).

Installation Procedure



Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

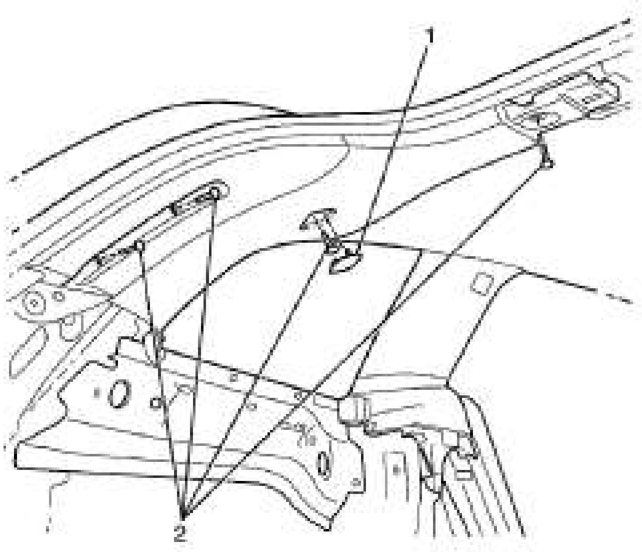
1. Position the liftgate inside pull handle (2) to the liftgate trim panel (3).
2. Install the liftgate inside pull handle to liftgate trim panel stop nuts (1)
3. Install the liftgate trim panel. Refer to Liftgate Trim Panel Replacement.
4. Install the liftgate window lower garnish moulding. Refer to Liftgate Window Lower Garnish Molding Replacement.
5. Install the liftgate window side garnish moulding. Refer to Liftgate Window Side Garnish Molding Replacement.
6. Remove the suitable liftgate brace from the vehicle.

Body Side Window Rear Garnish Molding Replacement

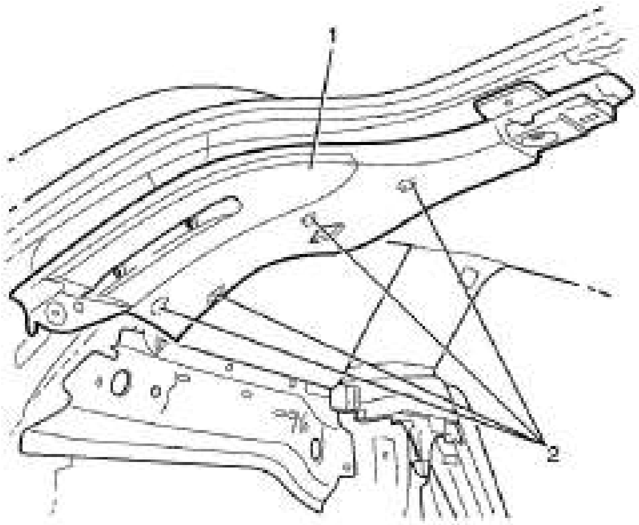
Removal Procedure

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Install a suitable liftgate brace to the vehicle.
2. Remove the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.
3. Remove the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
4. Remove the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
5. Remove the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
6. Remove the headlining rear trim panel retainer. Refer to Headlining Rear Trim Panel Retainer Replacement.
7. Remove the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.

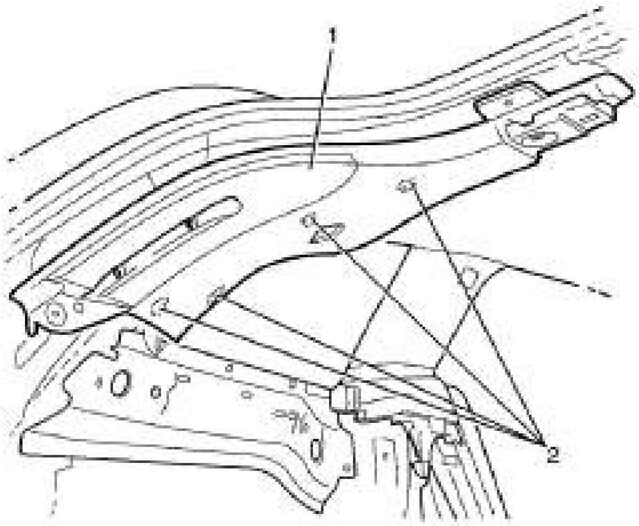


8. Remove the retaining torx screw cover (1).
9. Remove the body side window rear garnish moulding to body retaining screws (2).



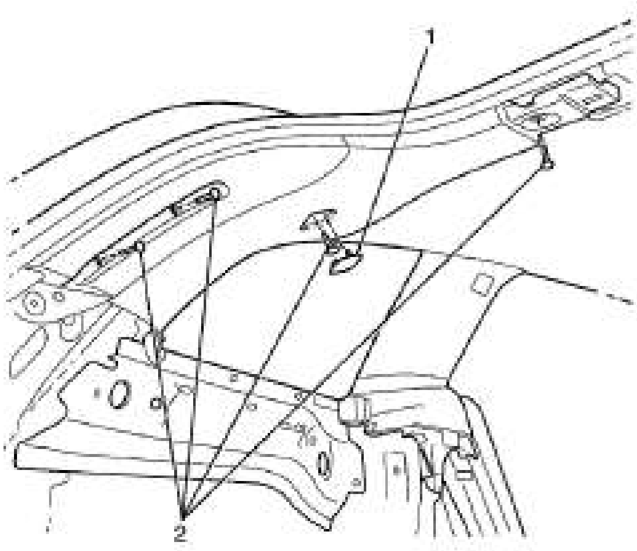
10. Carefully release the body side window rear garnish moulding to body retaining clips (2).
11. Remove the body side window rear garnish moulding (1) from the vehicle.

Installation Procedure



1. Position the body side window rear garnish moulding (1) to the vehicle.
2. Carefully engage the body side window rear garnish moulding to body retaining clips (2).

   Notice: Refer to Fastener Notice in the Preface section.



3. Install the body side window rear garnish moulding to body retaining screws (2).

   Tighten
   Tighten the screws to 3 N·m (27 ft. in).

4. Install the retaining torx screw cover (1).
5. Install the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
6. Install the headlining rear trim panel retainer. Refer to Headlining Rear Trim Panel Retainer Replacement.
7. Install the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
8. Install the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
9. Install the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
10. Install the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.

    Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

11. Remove the suitable liftgate brace to the vehicle.

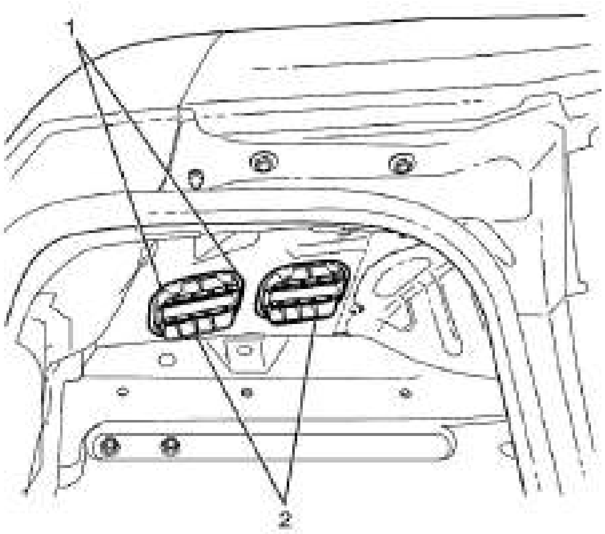
Pressure Relief Valve Replacement (Sedan)

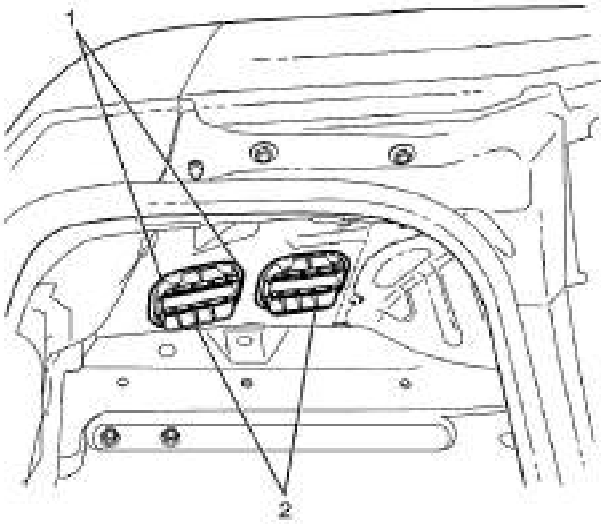
Removal Procedure

1. Remove the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
2. Remove the rear compartment side trim panel. Refer to Rear Compartment Side Trim Panel Replacement.
3. Remove the battery. Refer to Battery Replacement.
4. Remove the batter tray. Refer to Battery Tray Replacement.
5. Remove the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.



6. From inside the rear compartment, press the retaining tabs (1) while pushing outward in order to release the pressure relief valve (2) from the rear quarter panel.

Installation Procedure



1. Position the pressure relief valve (2) to the opening in the rear quarter panel.
2. Press inward on the pressure relief valve until the retaining tabs (1) engage to secure the pressure relief valve (2) to the rear quarter panel.
3. Install the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
4. Install the battery tray. Refer to Battery Tray Replacement.
5. Install the battery. Refer to Battery Replacement.
6. Install the rear compartment side trim panel. Refer to Rear Compartment Side Trim Panel Replacement.
7. Install the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Hardware and Trim | Interior Trim and Paneling | Repair Instructions | Document ID: 2090801

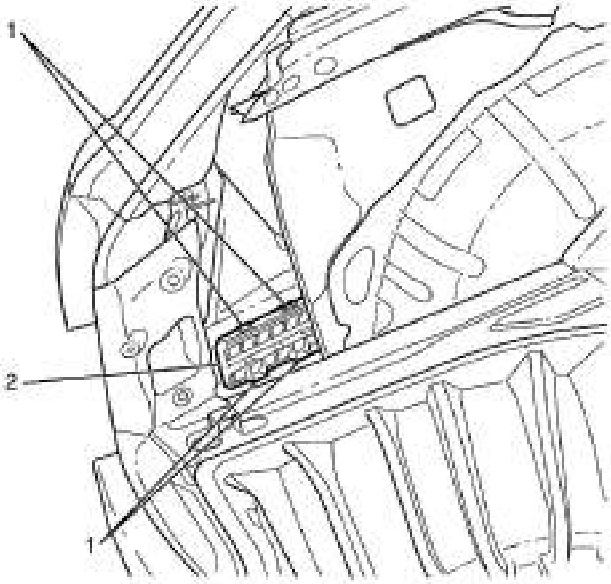
Pressure Relief Valve Replacement (Sportwagon)

Removal Procedure

1. Open the liftgate.

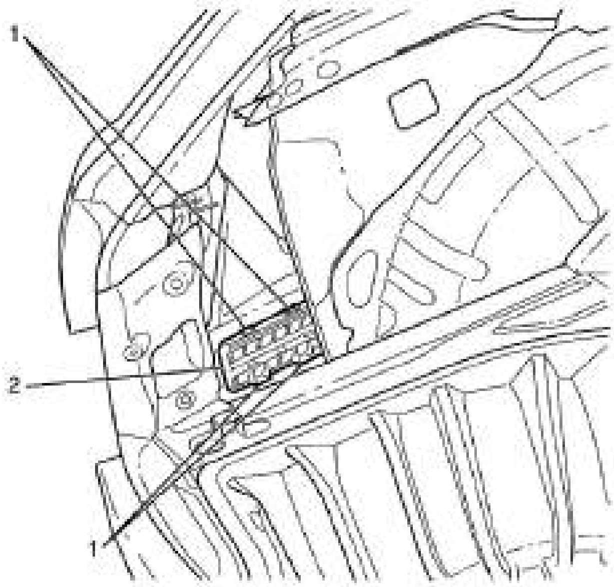
   Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

2. Install a suitable liftgate brace to the vehicle.
3. Remove the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.
4. Remove the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
5. Remove the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
6. Remove the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
7. Remove the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.



8. From inside the rear compartment, press the retaining tabs (1) while pushing outward in order to release the pressure relief valve (2) from the rear quarter panel.

Installation Procedure



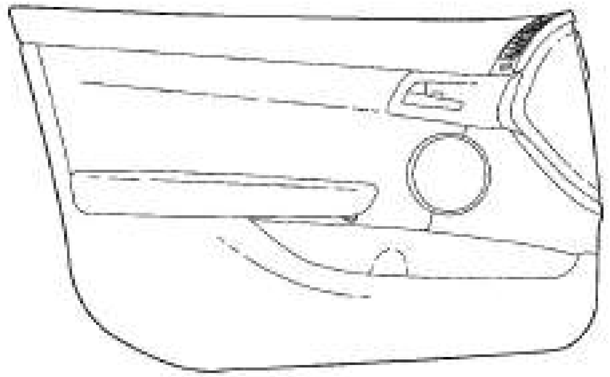
1. Position the pressure relief valve (2) to the opening in the rear quarter panel.
2. From outside the rear compartment, press inward on the pressure relief valve until the retaining tabs (1) engage to secure the pressure relief valve (2) to the rear quarter panel.
3. Install the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
4. Install the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
5. Install the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
6. Install the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
7. Install the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

8. Remove the suitable liftgate brace from the vehicle.
9. Close the liftgate.

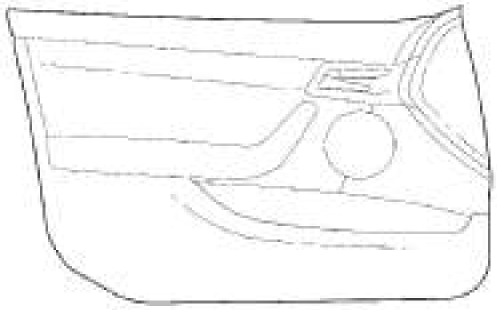
Door Trim Option Level Recognition

Type A - Front Door Trim



Type A door trims feature a flat type door handle and a fixed storage bin incorporating a cup holder.

Type B - Front Door Trim



Type B door trims feature an ergonomically styled armrest incorporating a grab handle and a fixed storage bin incorporating a cup holder.

Front End Panel Module Carrier Assembly Replacement

Removal Procedure

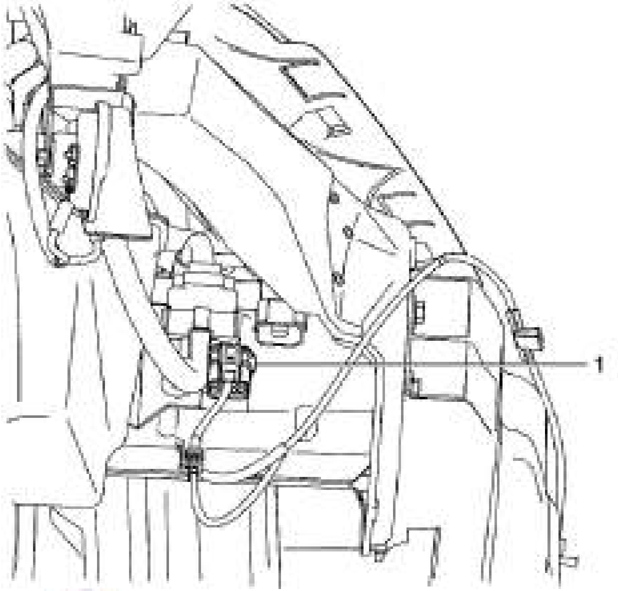
Caution: Refer to Safety Glasses Caution in the Preface section.

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

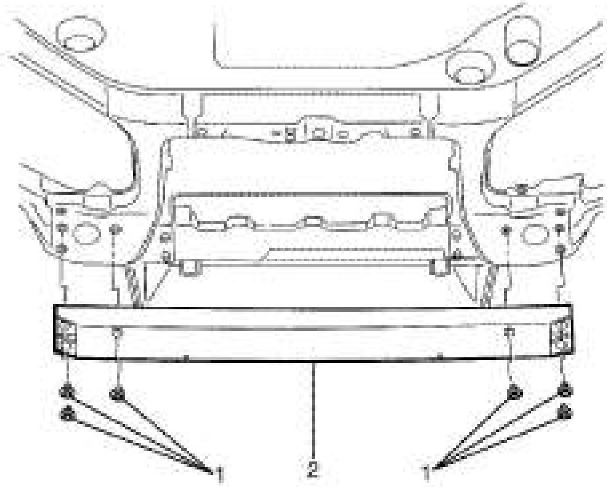
1. Install a suitable hood brace to the vehicle.
2. Apply tape to corners of the panels and adjacent surfaces to help prevent paint damage.
3. Remove the radiator air baffle. Refer to Radiator Air Upper Baffle and Deflector Replacement .

Caution: Refer to Vehicle Lifting Caution in the Preface section.

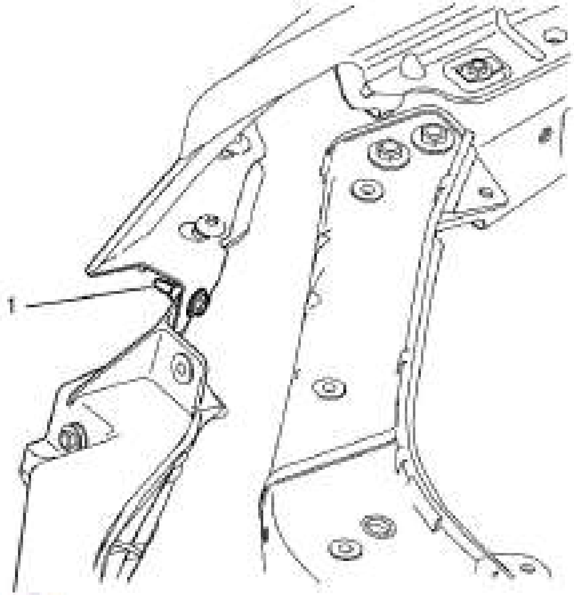
4. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle .
5. Remove the front wheels. Refer to Tire and Wheel Removal and Installation .
6. Remove the front wheelhouse liners. Refer to Front Wheelhouse Liner Replacement .
7. Remove the front bumper fascia. Refer to Front Bumper Fascia Replacement .
8. Remove the front air deflector. Refer to Front Air Deflector Replacement .



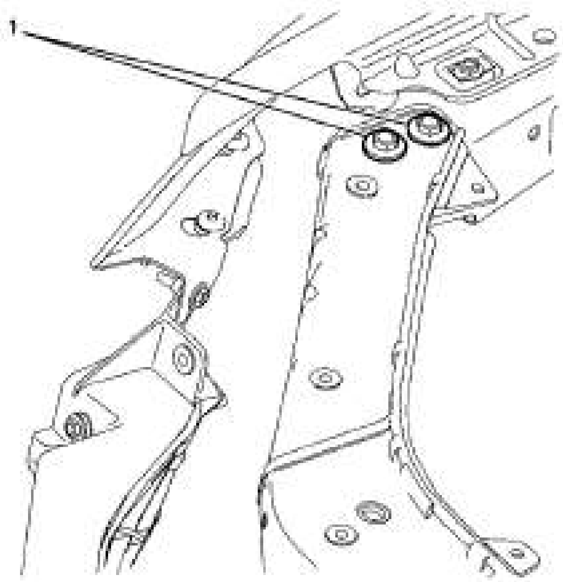
9. Disconnect the main wiring harness (1) to the front end module.
10. Remove the front bumper fascia bracket. Refer to Front Bumper Impact Bar Bracket Replacement .
11. Remove the headlights. Refer to Headlamp Replacement .
12. Remove the hood latch. Refer to Hood Primary and Secondary Latch Replacement .
13. Remove the front energy absorber. Refer to Front Bumper Fascia Energy Absorber Replacement .
14. Disconnect the washer jet pump to washer jet lines. Refer to Washer Pump Replacement .
15. Remove the fog lamp wiring loom. Refer to Front Fog Lamp Replacement .



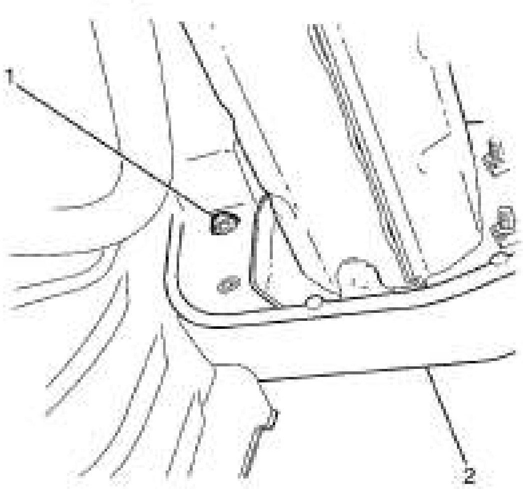
16. Remove the front bumper impact bar to front end module retaining bolts (1).



17. Remove the front fender to front end module retaining bolt (1).



18. Remove the front end module to inner wheelhouse retaining bolts (1).
19. With the aid of an assistant, remove the front end module from the vehicle.

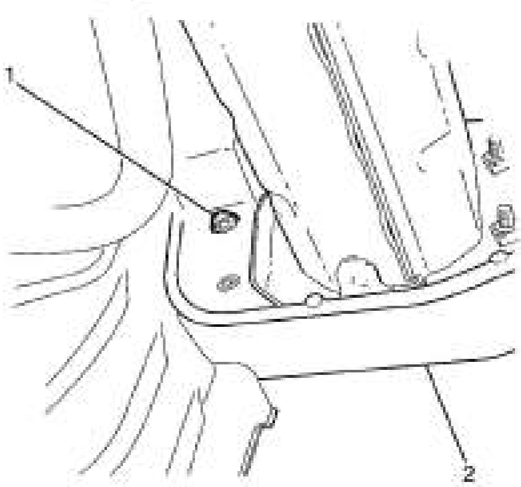


20. Remove the front end module to front bumper impact bar retaining bolts (1). Repeat for opposite side.
21. Remove the front bumper impact bar from the front end module.
22. Remove the windshield washer bottle. Refer to Windshield Washer Solvent Container Replacement .
23. Remove the radiator air intake baffle. Refer to Radiator Air Lower Baffle and Deflector Replacement .
24. Remove the horns. Refer to Horn Replacement .
25. Remove the wiring loom from the front end module.

Installation Procedure

1. Install the wiring loom to the front end module.
2. Install the horns. Refer to Horn Replacement .
3. Install the radiator air intake baffle. Refer to Radiator Air Lower Baffle and Deflector Replacement .
4. Install the windshield washer bottle. Refer to Windshield Washer Solvent Container Replacement .
5. Install the front bumper impact bar to the front end module.

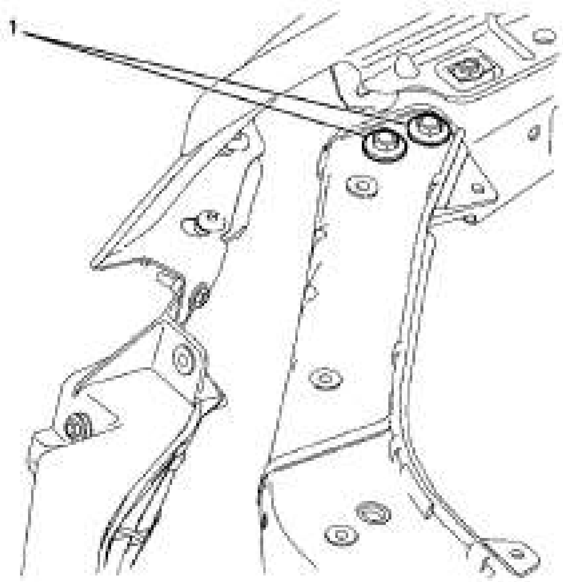
   Notice: Refer to Fastener Notice in the Preface section.



6. Install the front bumper impact bar to front end module retaining bolts (1). Repeat for opposite side.

   Tighten
   Tighten the bolts to 4 N·m (35 lb in).

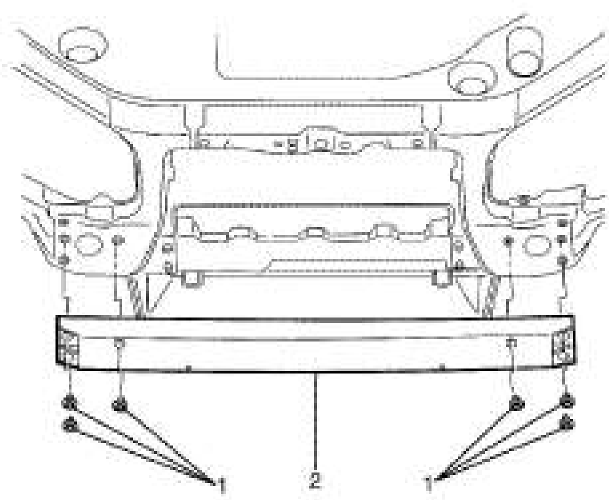
7. With the aid of an assistant, install the front end module to the vehicle.



Important: Do not fully tighten at this stage.

8. Install the front end module to inner wheelhouse retaining bolts (1).

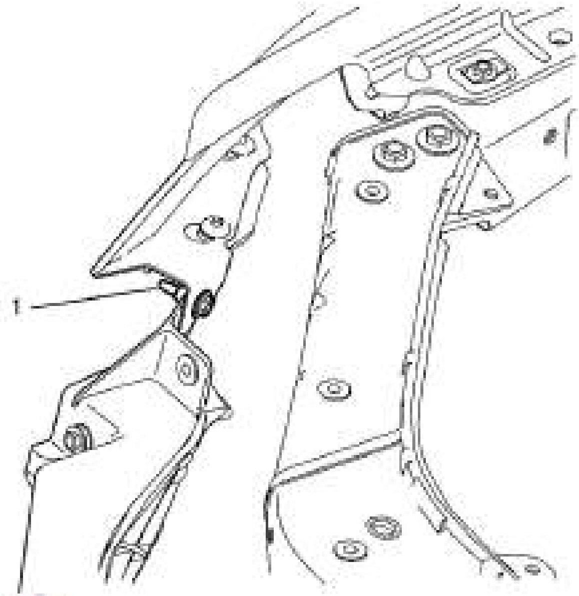
   Do not fully tighten at this stage.



Important: Do not fully tighten at this stage.

9. Install the front bumper impact bar to front end module retaining bolts (1).

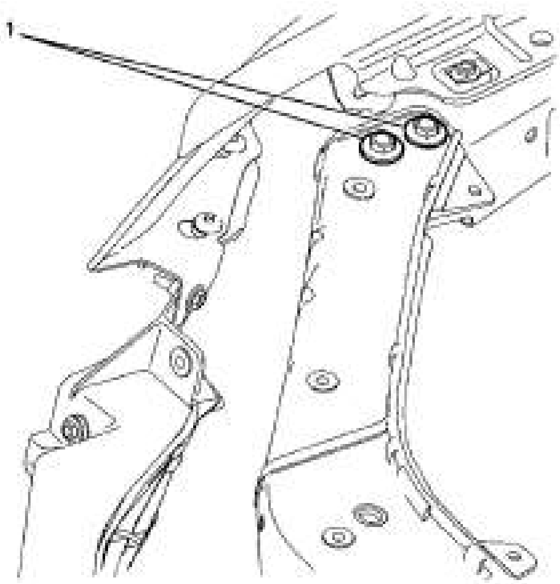
Do not fully tighten at this stage.



Important: Do not fully tighten at this stage.

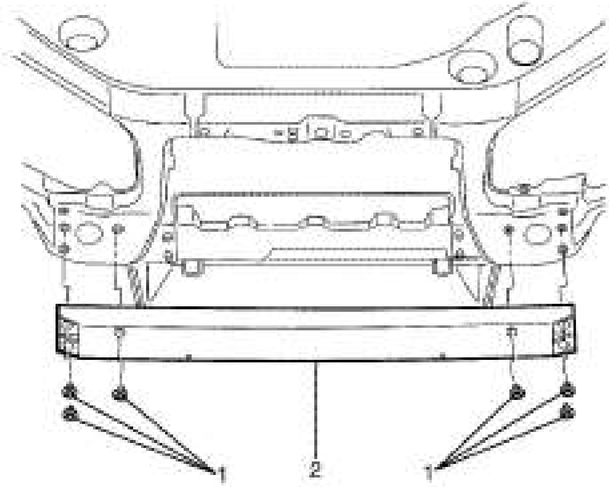
10. Install the front fender to front end module retaining bolt (1). Repeat for opposite side.

    Do not fully tighten at this stage.



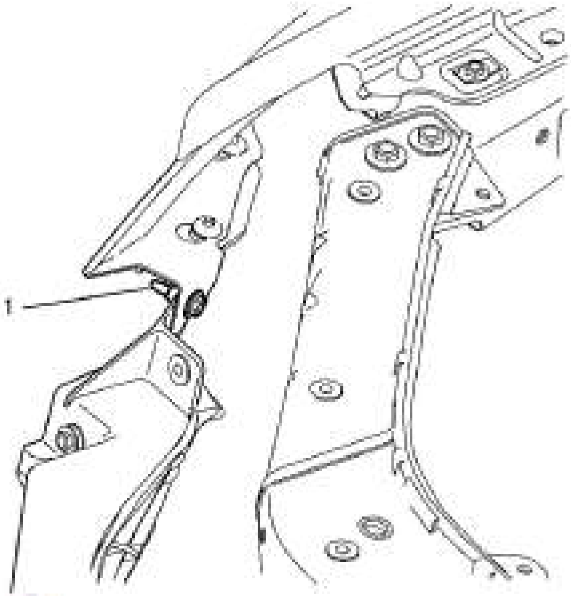
11. Tighten the front end module to inner wheelhouse retaining bolts (1).

Tighten
Tighten the bolts to 9 N·m (80 lb in).



12. Tighten the front bumper impact bar to front end module retaining bolts (1).

Tighten
Tighten the bolts to 22 N·m (16 lb ft).

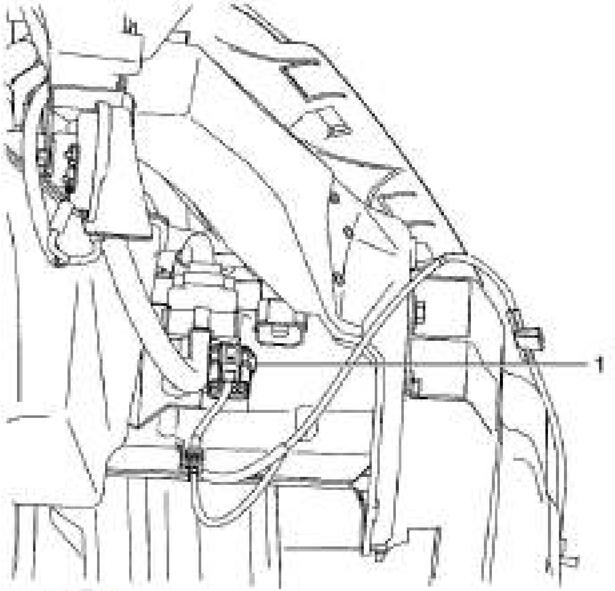


13. Tighten the front fender to front end module retaining bolt (1). Repeat for opposite side.

Tighten

Tighten the bolts to 9 N·m (80 lb in).

14. Install the washer jet pump to washer jet lines. Refer to Washer Pump Replacement .
15. Install the front energy absorber. Refer to Front Bumper Fascia Energy Absorber Replacement .
16. Install the fog lamp wiring loom. Refer to Front Fog Lamp Replacement .
17. Install the hood latch. Refer to Hood Primary and Secondary Latch Replacement .
18. Install the headlight. Refer to Headlamp Replacement .
19. Install the front bumper fascia bracket. Refer to Front Bumper Impact Bar Bracket Replacement .
20. Install the front air deflector. Refer to Front Air Deflector Replacement .
21. Install the front bumper fascia. Refer to Front Bumper Fascia Replacement .



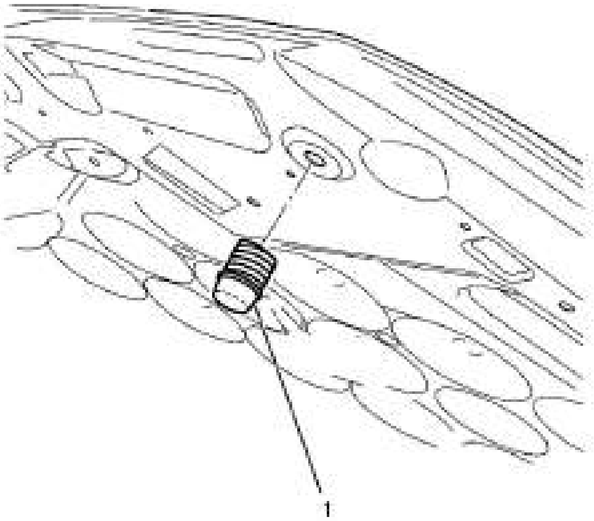
22. Connect the main wiring harness (1) to the front end module.
23. Install the front wheelhouse liners. Refer to Front Wheelhouse Liner Replacement .
24. Install the front wheels. Refer to Tire and Wheel Removal and Installation .
25. Lower the vehicle.
26. Install the radiator air baffle. Refer to Radiator Air Upper Baffle and Deflector Replacement .
27. Remove the suitable hood brace from the vehicle.
28. Remove the tape from the vehicle.

Hood Bumper Replacement

Removal Procedure

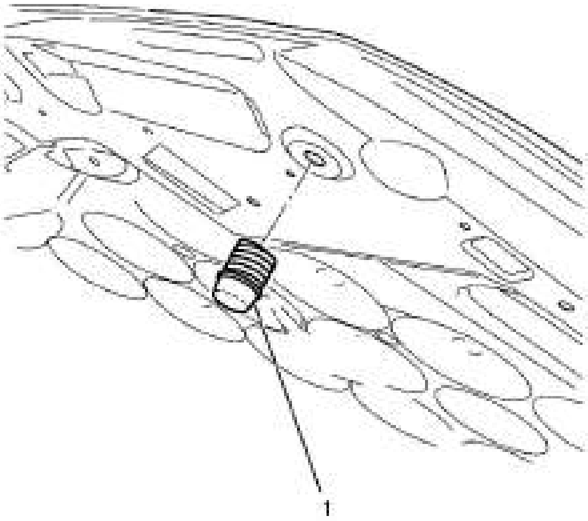
Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Install a suitable hood brace to the vehicle.



2. Remove the hood bumpers (1) from the hood by turning counter clockwise.

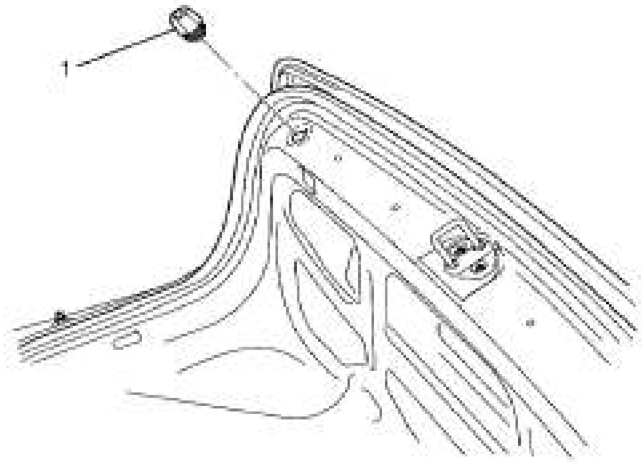
Installation Procedure



1. Position the hood bumpers (1) to the opening in the hood.
2. Turn the hood bumpers clockwise until they bottom out in the hood.
3. Turn the hood bumpers anti clockwise until the hood is flush with the fenders.
4. Remove the suitable hood brace from the vehicle.

Rear Compartment Lid Overslam Bumper Replacement

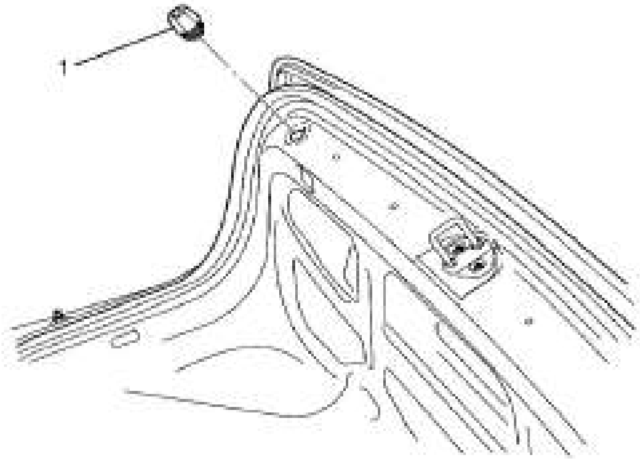
Removal Procedure



Important: Turn the overslam bumper (1) counter-clockwise to remove.

1. Remove the overslam bumper (1) from the rear compartment lid.
2. Remove the overslam bumper (1) from the vehicle.

Installation Procedure



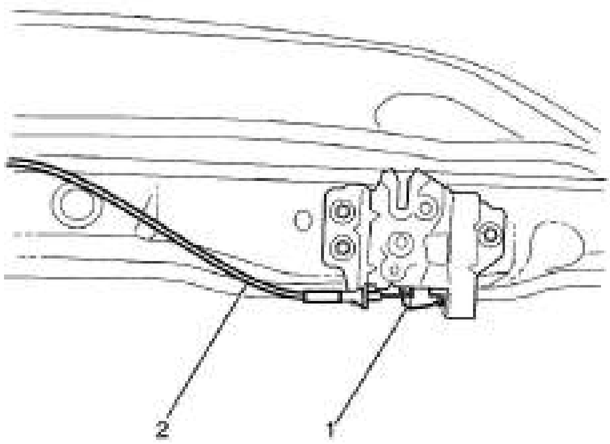
Important: Turn the overslam bumper (1) clockwise to install.

1. Install the overslam bumper (1) to the rear compartment lid.
2. Turn the overslam bumper as required for flushness. Refer to Rear Compartment Lid Adjustment .

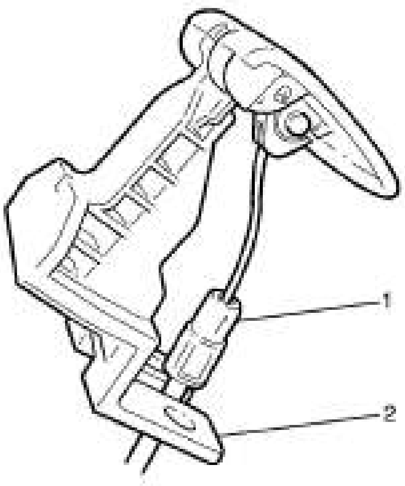
Hood Primary Latch Release Cable Replacement

Removal Procedure

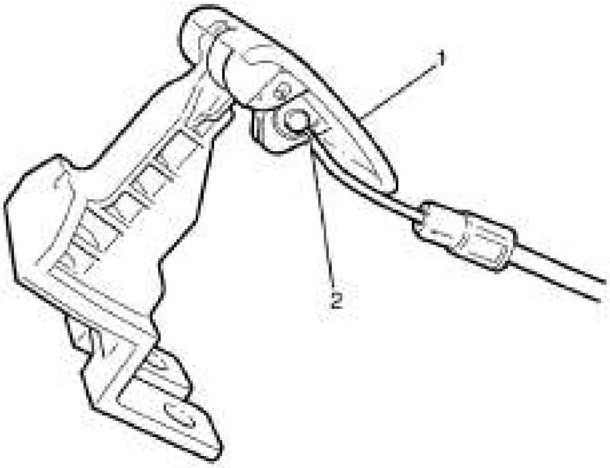
1. Remove the hood latch. Refer to Hood Primary and Secondary Latch Replacement.



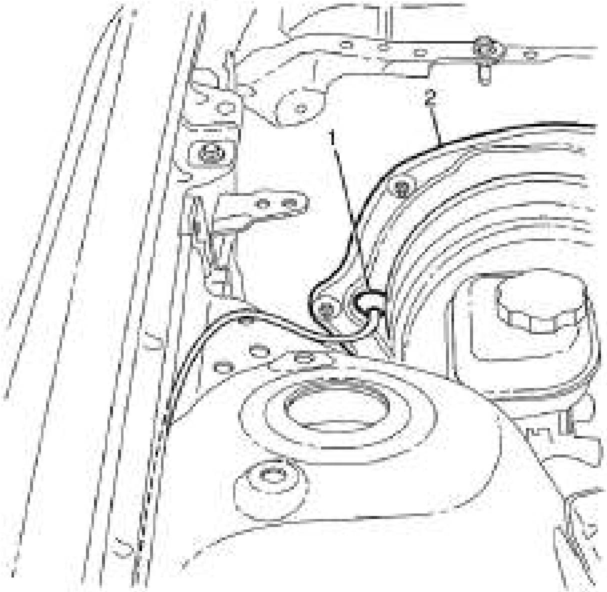
2. Attach a piece of string around the hood release cable (2). This will ease the installation of the hood release cable through the engine compartment.
3. Remove the right side hinge pillar trim panel. Refer to Body Hinge Pillar Trim Panel Replacement.
4. Remove the right knee bolster. Refer to Knee Bolster Replacement.



5. Disconnect the hood release cable (1) from the hood release handle (2).



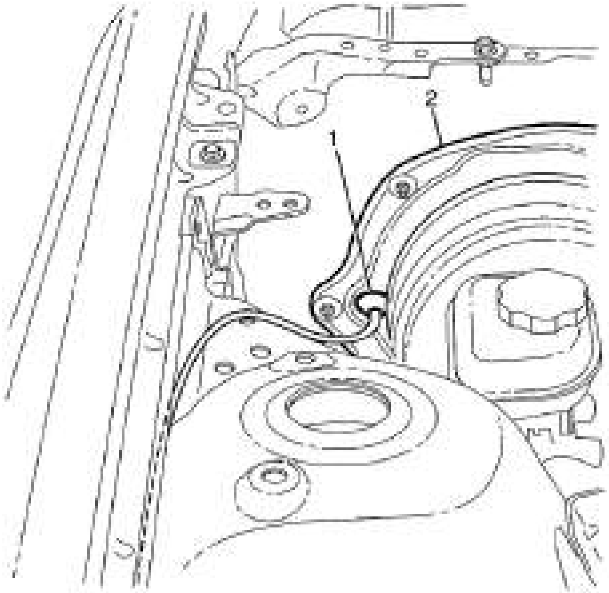
6. Rotate the hood release cable and detach the hood release cable barrel (2) from the hood release handle (1).



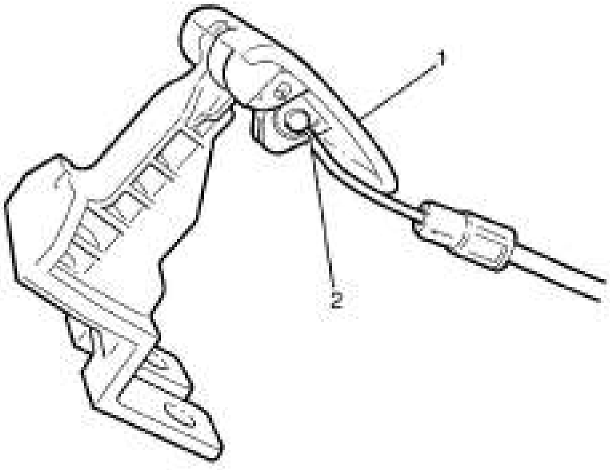
7. Remove the hood release cable grommet (1) from the mod plate (2).
8. Remove the hood release cable from the vehicle.

Installation Procedure

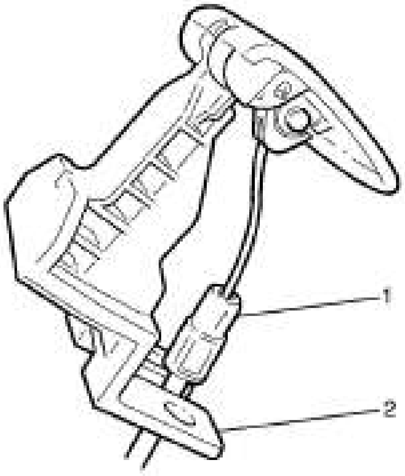
1. Transfer the string to the end of the new hood release cable.
2. Route the string and the hood release cable into the passenger compartment.
3. Remove the string from the hood release cable.



4. Seat the hood release cable grommet (1) into the mod plate (2).



5. Attach the hood release cable barrel (2) to the hood release handle (1).

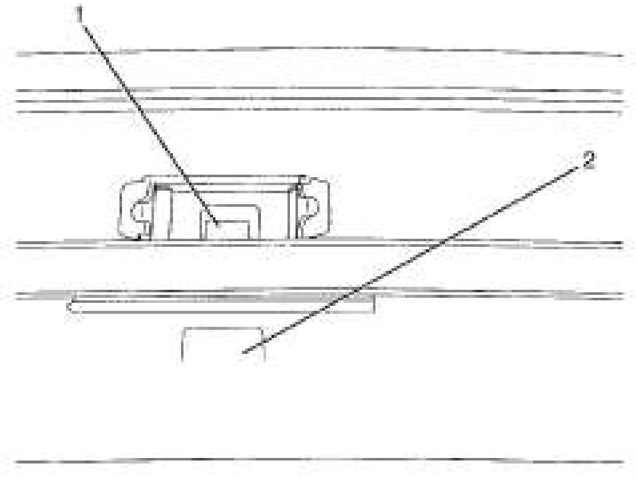


6. Rotate and connect the hood release cable (1) to the hood release handle assembly (2).
7. Install the right knee bolster. Refer to Knee Bolster Replacement.
8. Install the right side hinge pillar trim panel. Refer to Body Hinge Pillar Trim Panel Replacement.
9. Install the hood latch. Refer to Hood Primary and Secondary Latch Replacement.

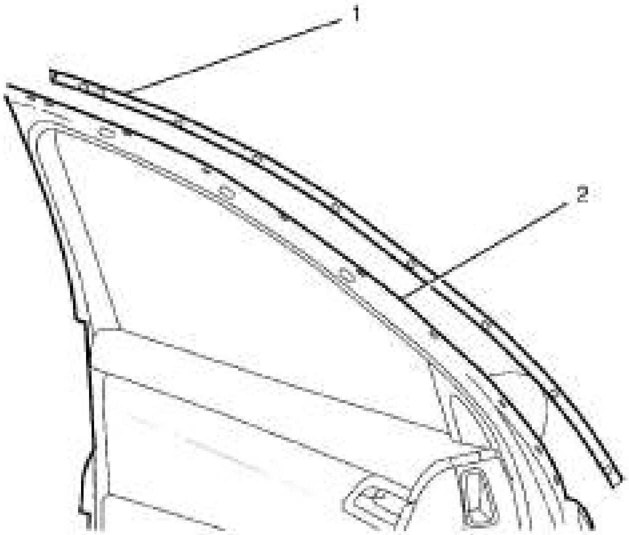
Front and Rear Side Door Window Garnish Molding Replacement (Sportwagon)

Removal Procedure - Front

1. Remove the front door upper auxiliary weatherstrip. Refer to Front Side Door Upper Auxiliary Weatherstrip Replacement.

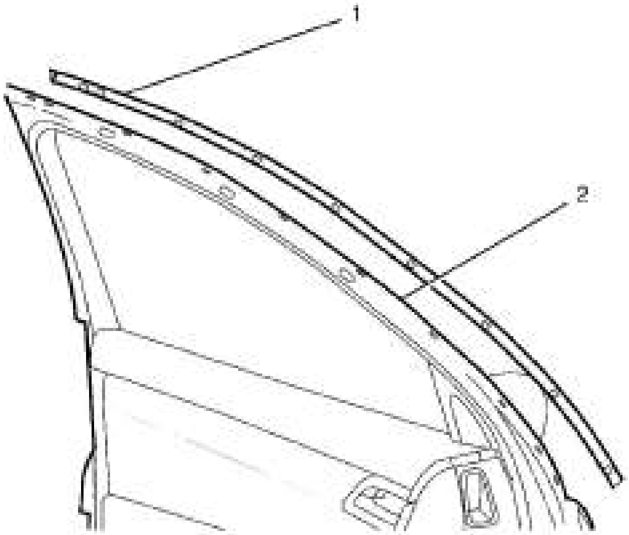


2. Detach the door frame garnish moulding locking tab (1) from the door frame (2) using a suitable flat bladed tool

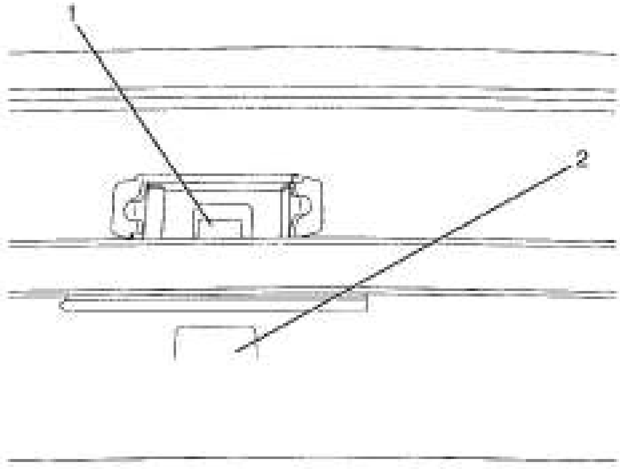


3. Remove the door frame garnish moulding (1) from the door (2).

Installation Procedure - Front



1. Position the door frame garnish moulding (1) to the door (2).

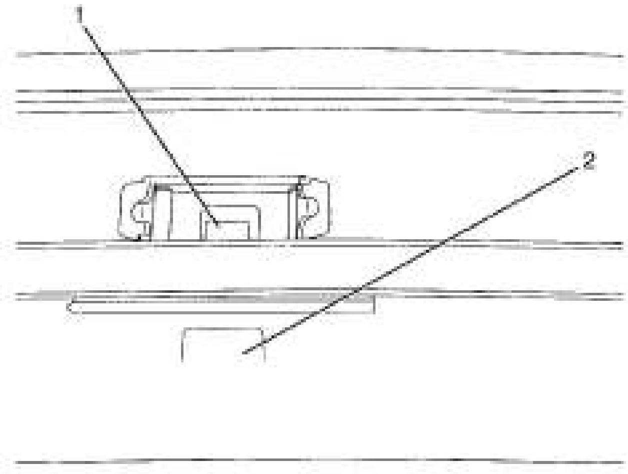


Important: Push the door frame garnish moulding until the locking tab (1) locates in the door frame (2).

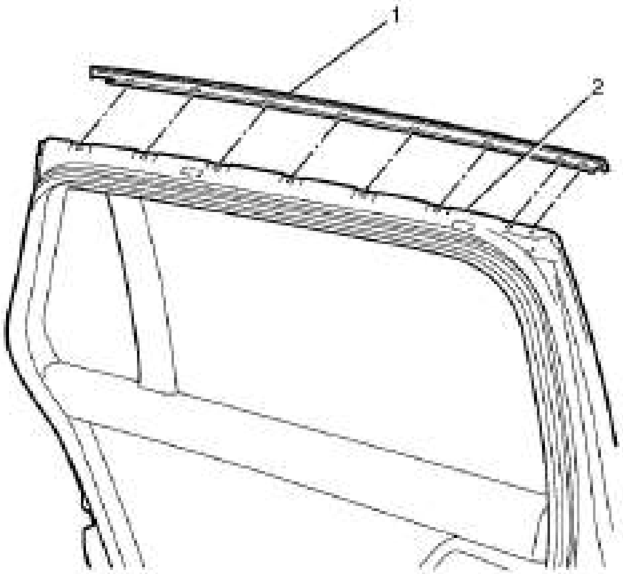
2. Attach the door frame garnish moulding locking tab (1) to the door frame (2).
3. Install the front door upper auxiliary weatherstrip. Refer to Front Side Door Upper Auxiliary Weatherstrip Replacement.

Removal Procedure - Rear

1. Remove the rear door bottom auxiliary weatherstrip. Refer to Rear Side Door Bottom Auxiliary Sealing Strip Replacement.



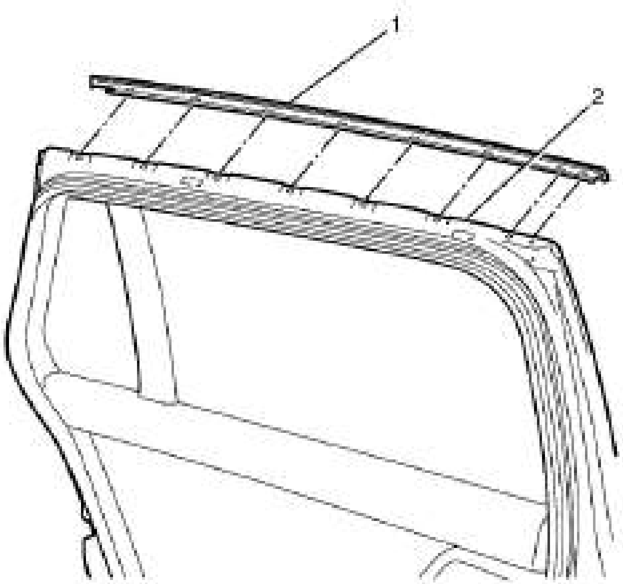
2. Detach the door frame garnish moulding locking tab (1) from the door frame (2) using a suitable flat bladed tool



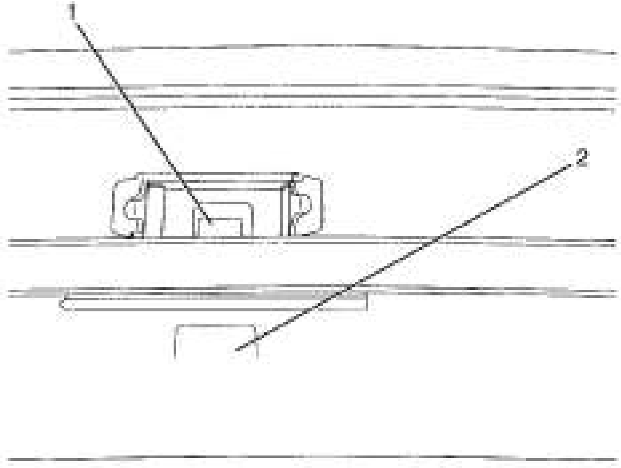
Important: Detach the clips on the door frame garnish moulding (1) with a suitable flat bladed tool.

3. Remove the door frame garnish moulding (1) from the door (2).

Installation Procedure - Rear



1. Install the door frame garnish molding (1) to the door (2).



Important: Push the door frame garnish moulding until the locking tab (1) locates in the door frame (2).

2. Attach the door frame garnish moulding locking tab (1) to the door frame (2).
3. Install the rear door bottom auxiliary weatherstrip. Refer to Rear Side Door Bottom Auxiliary Sealing Strip Replacement.

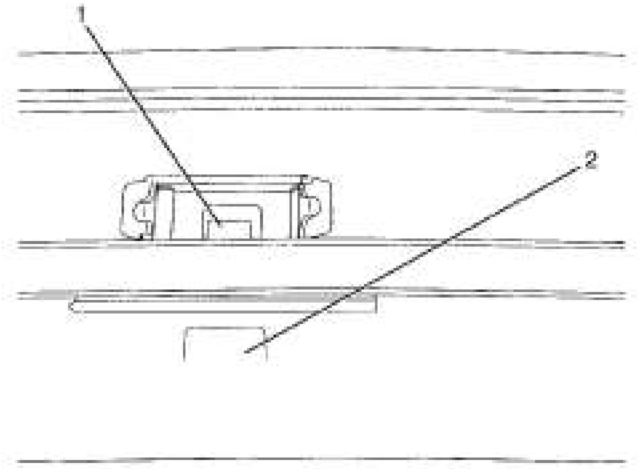
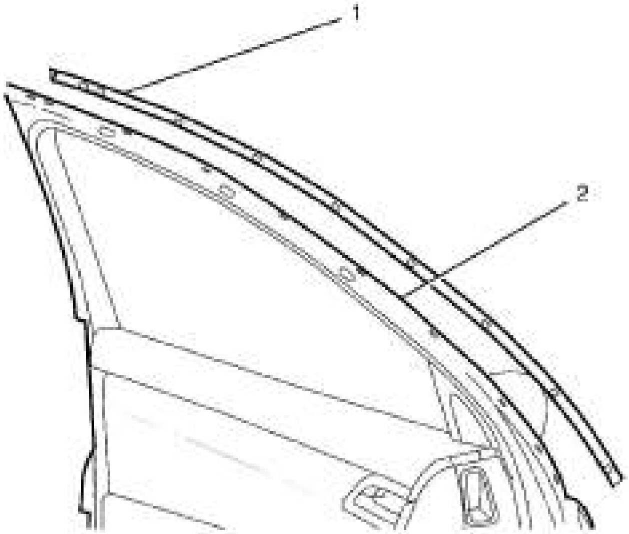
Front and Rear Side Door Window Garnish Molding Replacement (Sedan)

Removal Procedure - Front

1. Remove the front door upper auxiliary weatherstrip. Refer to Front Side Door Upper Auxiliary Weatherstrip Replacement.

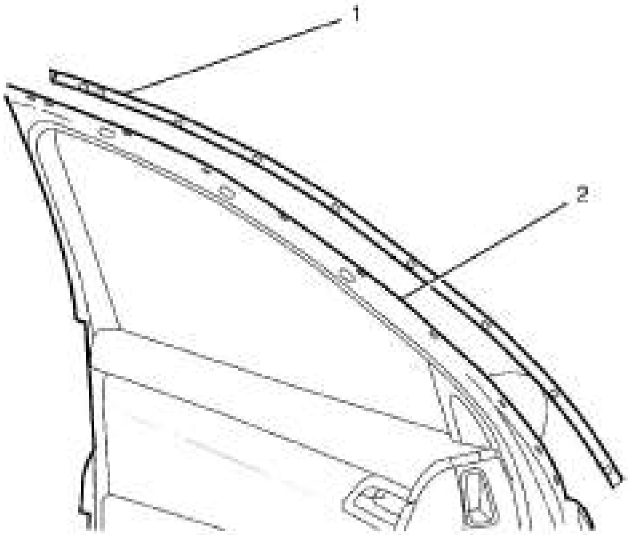


2. Detach the door frame garnish molding locking tab (1) from the door frame (2) using a suitable flat bladed tool.

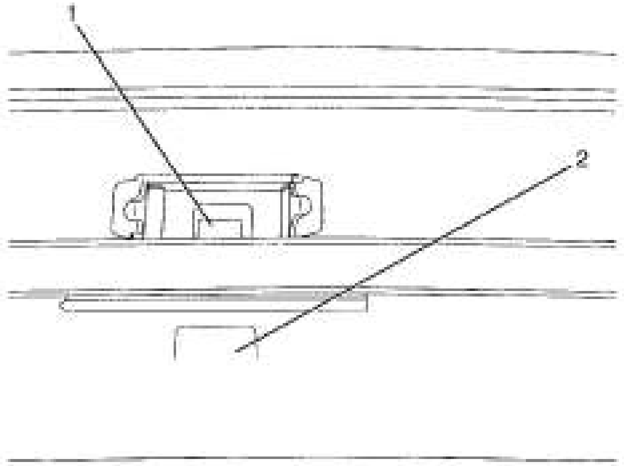


3. Remove the door frame garnish molding (1) from the door (2).

Installation Procedure - Front



1. Position the door frame garnish molding (1) to the door (2).

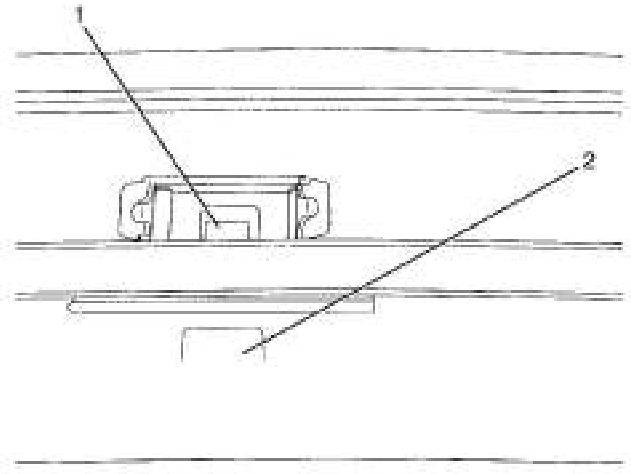


Important: Push the door frame garnish molding until the locking tab (1) locates in the door frame (2).

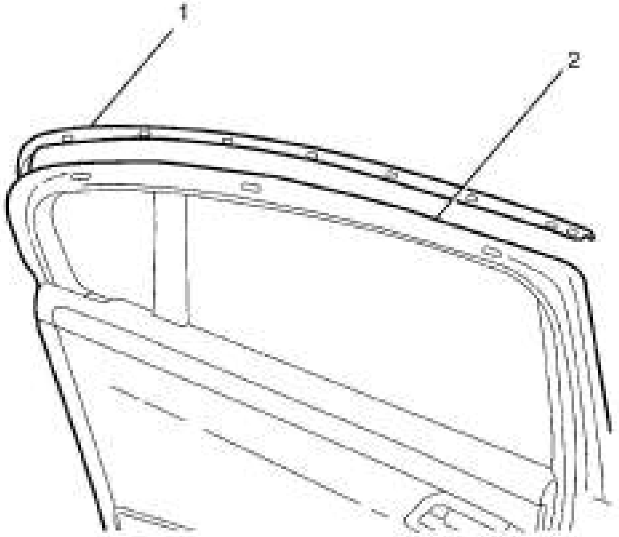
2. Attach the door frame garnish molding locking tab (1) from the door frame (2).
3. Install the front door upper auxiliary weatherstrip. Refer to Front Side Door Upper Auxiliary Weatherstrip Replacement.

Removal Procedure - Rear

1. Remove the rear door bottom auxiliary weatherstrip. Refer to Rear Side Door Bottom Auxiliary Sealing Strip Replacement.



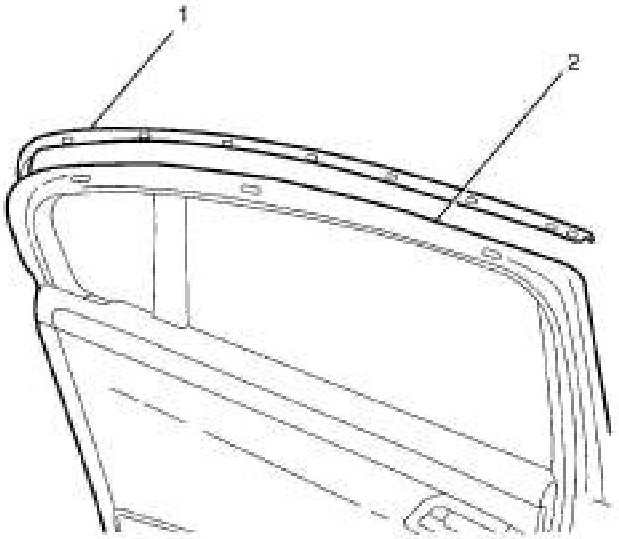
2. Detach the door frame garnish molding locking tab (1) from the door frame (2) using a suitable flat bladed tool.



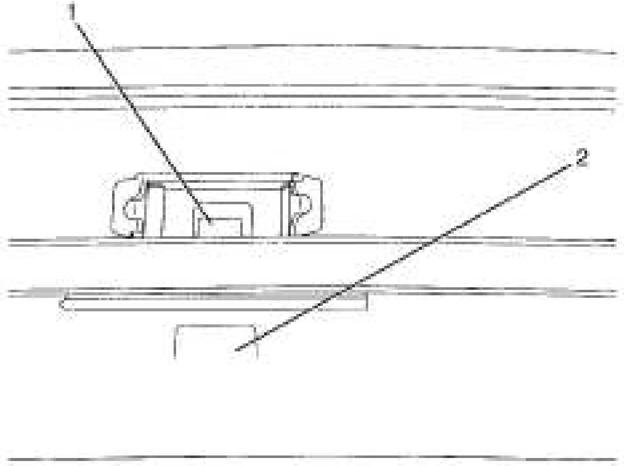
Important: Detach the clips on the door frame garnish molding (1) with a suitable flat bladed tool.

3. Remove the door frame garnish molding (1) from the door (2).

Installation Procedure - Rear



1. Install the door frame garnish molding (1) to the door (2).

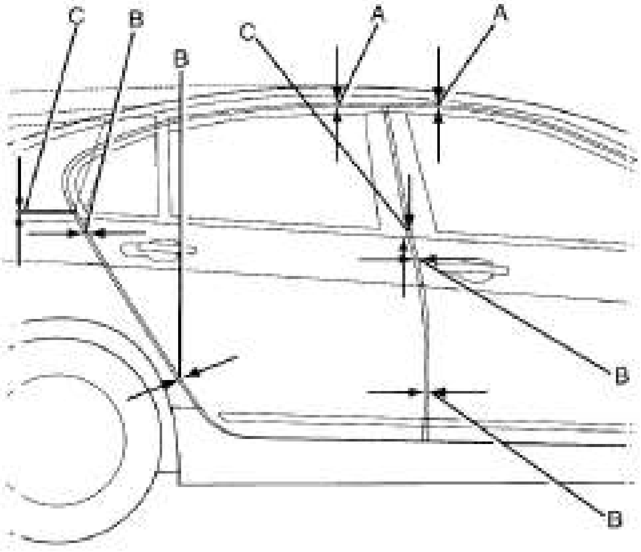


Important: Push the door frame garnish molding until the locking tab (1) locates in the door frame (2).

2. Attach the door frame garnish molding locking tab (1) from the door frame (2).
3. Install the rear door bottom auxiliary weatherstrip. Refer to Rear Side Door Bottom Auxiliary Sealing Strip Replacement.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Bolted Exterior Body Panels and Closures | Repair Instructions | **Document ID: 2159852**

Door Adjustment



1. Loosen the door hinge to pillar retaining bolts. This will allow adjustment of the door at the hinge pillar in the following directions:
    - Up or down (a), 6.5 mm equal gap.
    - Fore or aft (b), 3.5 mm equal gap.
    - Up or down (c), 5 mm upwards.
2. Reposition the door as needed.

Notice: Refer to Fastener Notice in the Preface section.

3. Position the door fore or aft at the hinge pillar attachment. Perform the following steps as needed:
    - 3.1. Loosen the bolts.
    - 3.2. Reposition the door.
    - 3.3. Tighten the bolts.

Tighten
Tighten the bolts to 28 N-m (21 lb ft).

4. Verify the doors are flush to within 3.5 mm, with a flushing magnet located in the striker area below the beltline.
5. If in or out adjustment is needed, loosen the door hinge to door retaining bolts.
6. Align the front door to the front fender first, if needed.
7. Position the door in or out. Perform the following steps as needed:
    - 7.1. Loosen the bolts.
    - 7.2. Reposition the door.

  7.3. Tighten the bolts.

Tighten
Tighten the bolts to 28 N-m (21 lb ft).

8. Align the rear door to the front door and rear quarter, if needed.
9. Position the door in or out. Perform the following steps as needed:
   9.1. Loosen the bolts.
   9.2. Reposition the door.
   9.3. Tighten the bolts.

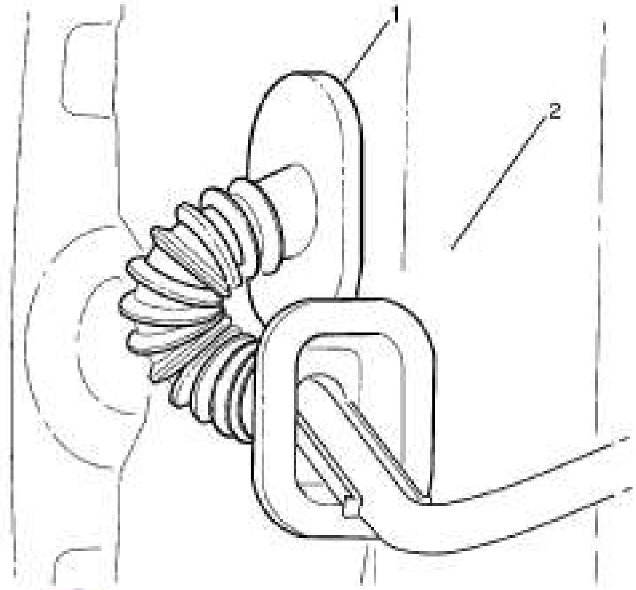
Tighten
Tighten the bolts to 28 N-m (21 lb ft).

10. Verify door header to door header at the center pillar is flush to within 3.5 mm. Adjust the door headers if necessary.
11. Verify all door gaps are within specifications.
12. Adjust the lock striker. Refer to Door Lock Striker Adjustment.

Front Side Door Replacement

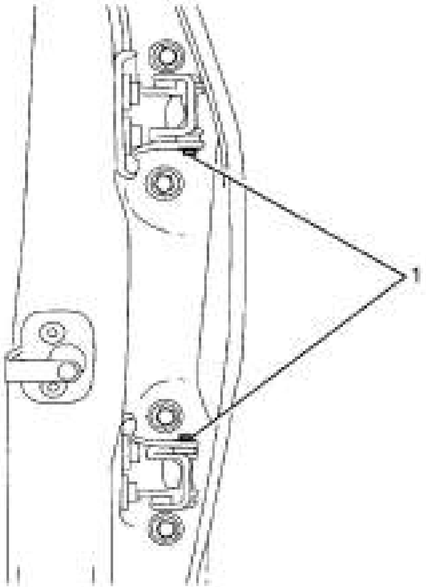
Removal Procedure - Front Door

1. Remove the check link to pillar retaining bolt. Refer to Front Side Door Check Link Replacement .

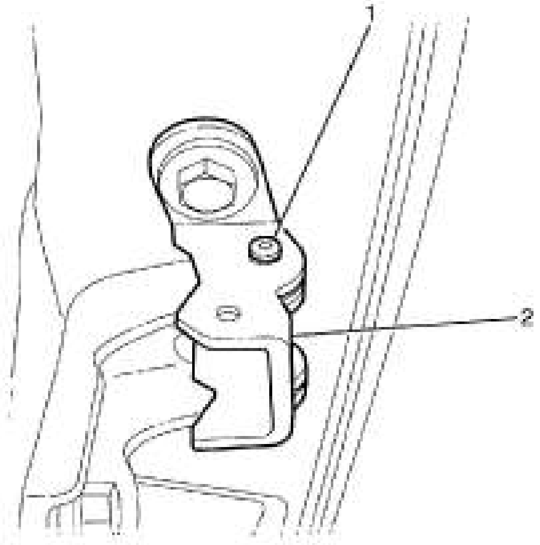


Important: Pull the rubber conduit (1) from the pillar (2) to expose the door to body wiring harness plug.

2. Remove the rubber conduit (1) from the pillar (2).
3. Disconnect the door wiring harness to body wiring harness electrical connector.



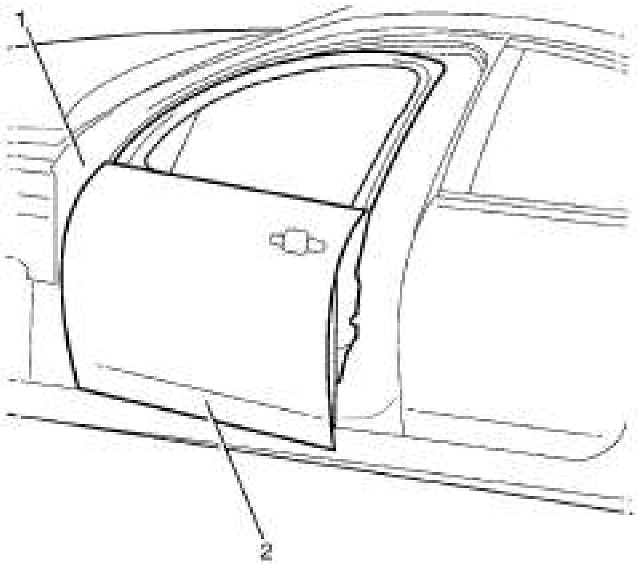
4. The keeper bolts (1) are located in the door hinges with the top door hinge keeper bolt facing downwards and the lower door hinge keeper bolt facing upwards.



Important: The keeper bolts (1) are single use parts and must be discarded after use.

5. Remove the keeper bolts (1) from the door hinges (2).

   Discard the bolts.

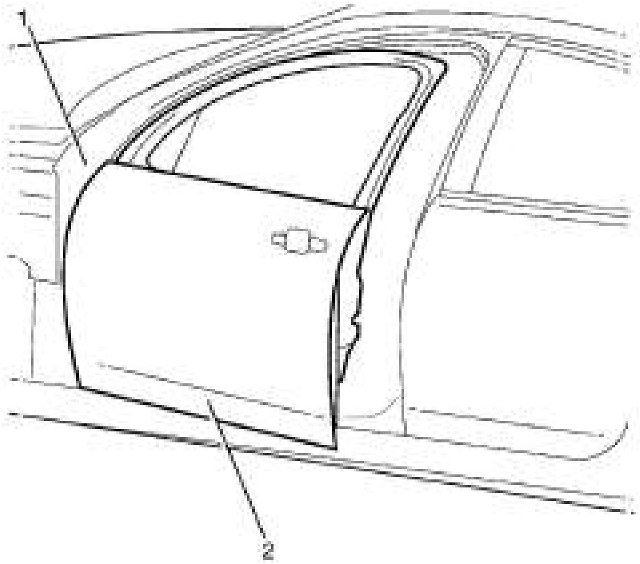


Important: The door (1) can only be removed when it is opened to 50 degrees.

Important: Lift the door (1) upwards and outwards to disengage it from the vehicle (2).

6. Remove the door (2) from the vehicle (1) with the aid of an assistant.

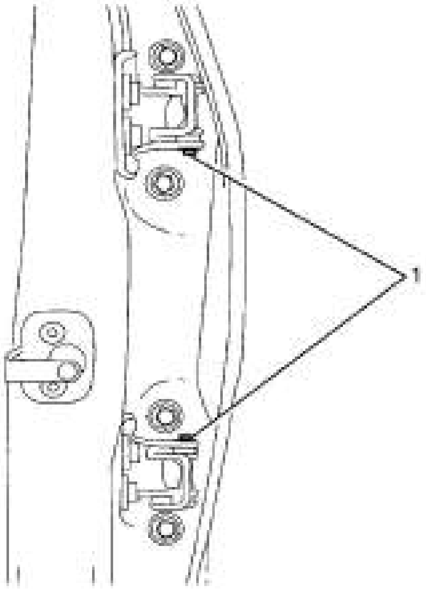
Installation Procedure - Front Door



Important: The door (1) can only be installed when it is opened to 50 degrees.

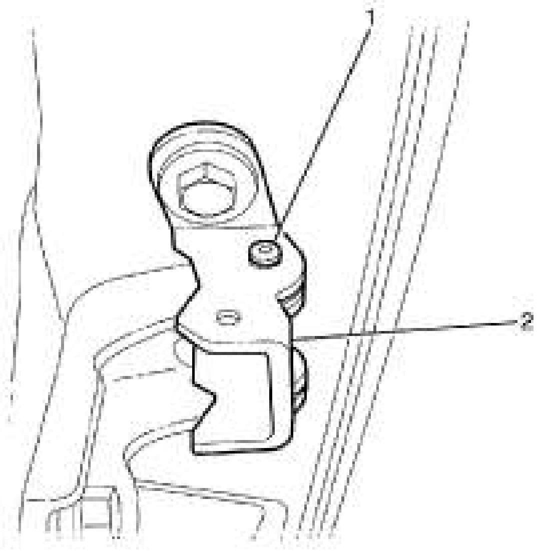
Important: Lower the door (1) downwards and inwards to engage it to the vehicle (2).

1. Install the door (2) to the vehicle (1) with the aid of an assistant.



2. The keeper bolts (1) are located in the door hinges with the top door hinge keeper bolt facing downwards and the lower door hinge keeper bolt facing upwards.

   Notice: Refer to Fastener Notice in the Preface section.

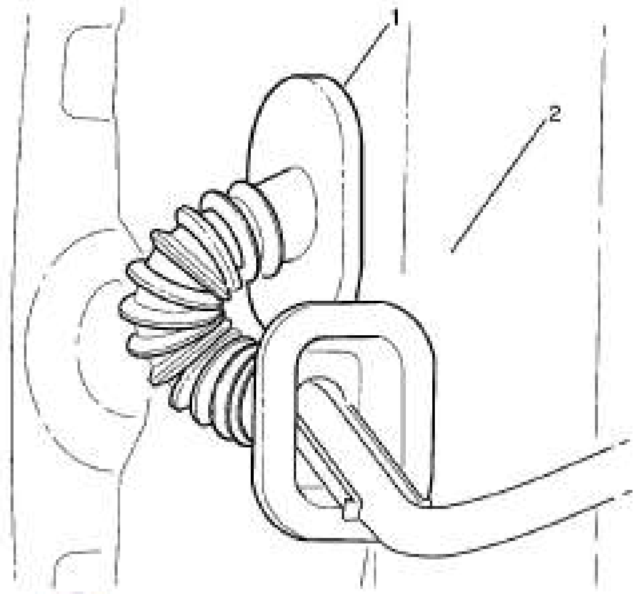


Important: Do Not over tighten the NEW keeper bolts as this will cause the door hinges to squeak.

3. Install the NEW keeper bolts (1) to the door hinges (2).

   Tighten
   Tighten the bolts to 3 N-m (27 lb in).

4. Connect the door wiring harness to body wiring harness electrical connector.



5. Install the rubber conduit (1) to the pillar (2).
6. Install the check link to pillar retaining bolt. Refer to Front Side Door Check Link Replacement .

Disassembly Procedure - Front Door

1. Remove the door trim panel. Refer to Front Side Door Trim Panel Replacement .
2. Remove the speaker. Refer to Radio Front Side Door Lower Speaker Replacement in Entertainment.
3. Remove the water deflector. Refer to Front Side Door Water Deflector Replacement .
4. Remove the outside rearview mirror. Refer to Power Mirror Replacement .
5. Remove the window inner belt sealing strip. Refer to Front Side Door Window Inner Sealing Strip Replacement in Doors.
6. Remove the window outer belt sealing strip. Refer to Front Side Door Window Belt Outer Sealing Strip Replacement in Doors.
7. Remove the window. Refer to Front Side Door Window Replacement .
8. Remove the front door upper auxiliary weatherstrip. Refer to Front Side Door Upper Auxiliary Weatherstrip Replacement .
9. Remove the front door garnish molding. Refer to Front and Rear Side Door Window Garnish Molding Replacement .
10. Remove the inner window sealing strip. Refer to Front Door Opening Weatherstrip Replacement .
11. Remove the door frame applique. Refer to Front Door Frame Applique Replacement .
12. Remove the window inner weatherstrip. Refer to Front Side Door Window Inner Weatherstrip Replacement .
13. Remove the window regulator. Refer to Front Side Door Window Regulator Replacement .
14. Remove the outside door handle. Refer to Front Side Door Outside Handle Replacement .
15. Remove the door latch. Refer to Front Side Door Latch Replacement .
16. Remove the door bottom auxiliary sealing strip. Refer to Front Side Door Bottom Auxiliary Sealing Strip Replacement .
17. Remove the door wiring harness. Refer to Front Side Door Wiring Harness Replacement .
18. Remove the door window channel. Refer to Front Side Door Window Front Channel and Rear Channel Replacement .
19. Remove the door check link. Refer to Front Side Door Check Link Replacement .

20. Remove all of the plastic nuts, grommets and retainers from the door.

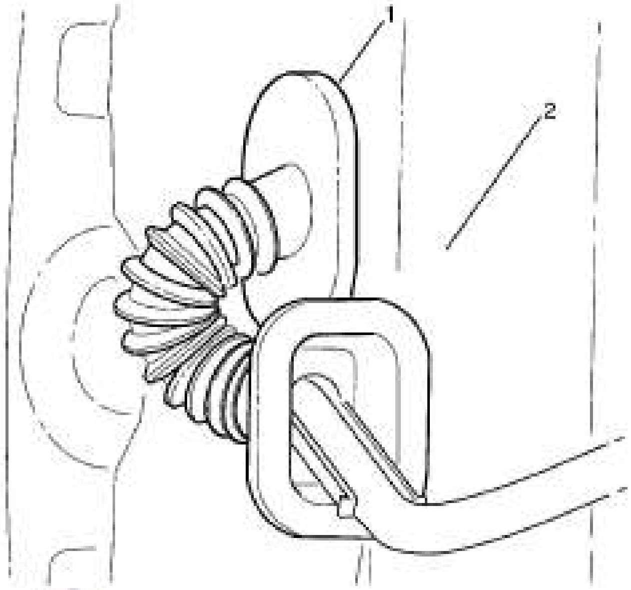
Assembly Procedure - Front Door

1. Install all the plastic nuts, grommets and retainers into the door shell that were removed during disassembly.
2. Install the door check link. Refer to Front Side Door Check Link Replacement .
3. Install the door window channel. Refer to Front Side Door Window Front Channel and Rear Channel Replacement .
4. Install the door wiring harness. Refer to Front Side Door Wiring Harness Replacement .
5. Install the door bottom auxiliary sealing strip. Refer to Front Side Door Bottom Auxiliary Sealing Strip Replacement .
6. Install the door latch. Refer to Front Side Door Latch Replacement .
7. Install the outside door handle. Refer to Front Side Door Outside Handle Replacement .
8. Install the window regulator. Refer to Front Side Door Window Regulator Replacement .
9. Install the window inner weatherstrip. Refer to Front Side Door Window Inner Weatherstrip Replacement .
10. Install the door frame applique. Refer to Front Door Frame Applique Replacement .
11. Install the window. Refer to Front Side Door Window Replacement .
12. Install the inner window sealing strip. Refer to Front Door Opening Weatherstrip Replacement .
13. Install the window outer belt seal strip.. Refer to Front Side Door Window Belt Outer Sealing Strip Replacement in Doors.
14. Install the outside rearview mirror. Refer to Power Mirror Replacement .
15. Install the window inner belt seal strip. Refer to Front Side Door Window Belt Inner Sealing Strip Replacement in Doors.
16. Install the front door garnish molding. Refer to Front and Rear Side Door Window Garnish Molding Replacement
17. Install the front door upper auxiliary weatherstrip. Refer to Front Side Door Upper Auxiliary Weatherstrip Replacement .
18. Install the water deflector. Refer to Front Side Door Water Deflector Replacement .
19. Install the speaker. Refer to Radio Front Side Door Lower Speaker Replacement in Entertainment.
20. Install the door trim panel. Refer to Front Side Door Trim Panel Replacement t in Doors.
21. Inspect for correct door adjustment. Refer to Door Adjustment .

Rear Door Replacement (SWB)

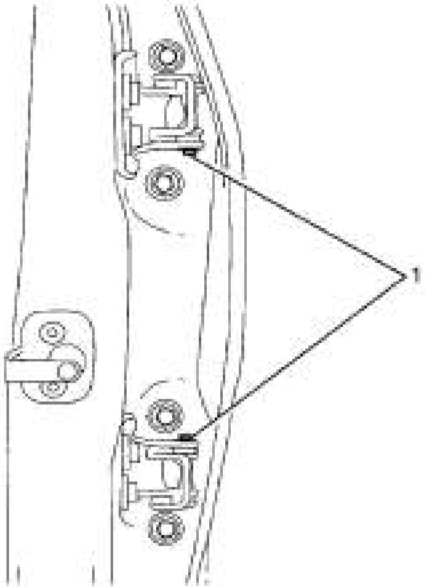
Removal Procedure - Rear Door

1. Remove the check link to pillar retaining bolt. Refer to Rear Side Door Check Link Replacement.

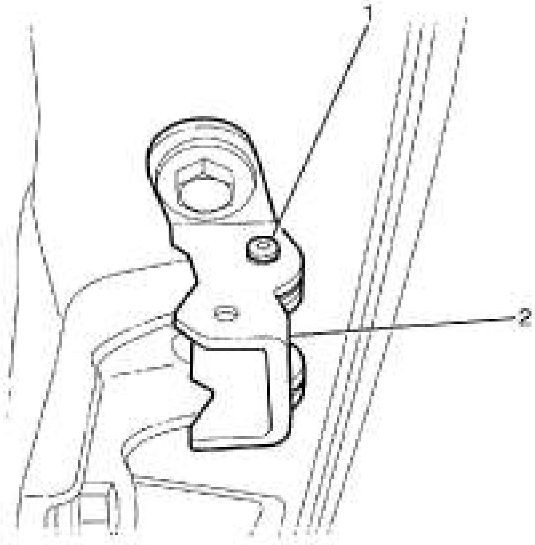


Important: Pull the rubber conduit (1) from the pillar (2) to expose the door to body wiring harness plug.

2. Remove the rubber conduit (1) from the pillar (2).
3. Disconnect the door wiring harness to body wiring harness electrical connector.



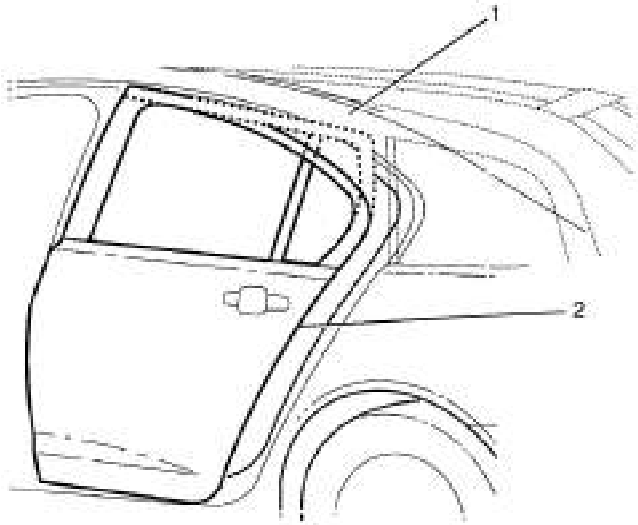
4. The keeper bolts (1) are located in the door hinges with the top door hinge keeper bolt facing downwards and the lower door hinge keeper bolt facing upwards.



Important: The keeper bolts (1) are single use parts and must be discarded after use.

5. Remove the keeper bolts (1) from the door hinges (2).

   Discard the bolts.

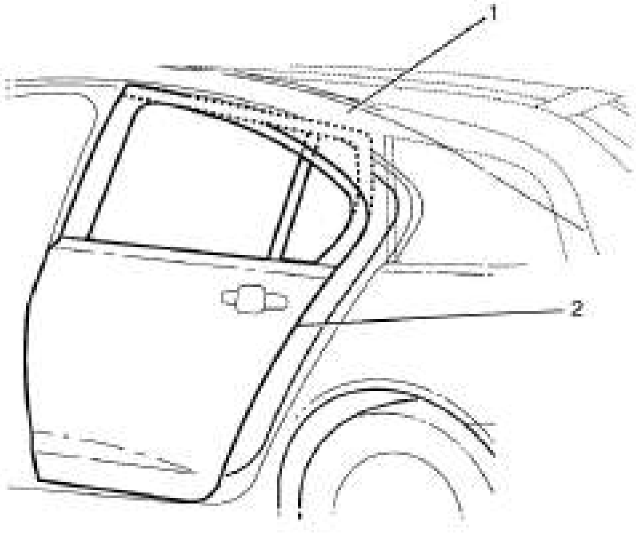


Important: The door (1) can only be removed when it is opened to 50 degrees.

Important: Lift the door (2) upwards and outwards to disengage it from the vehicle (1).

6. Remove the door (2) from the vehicle (1) with the aid of an assistant.

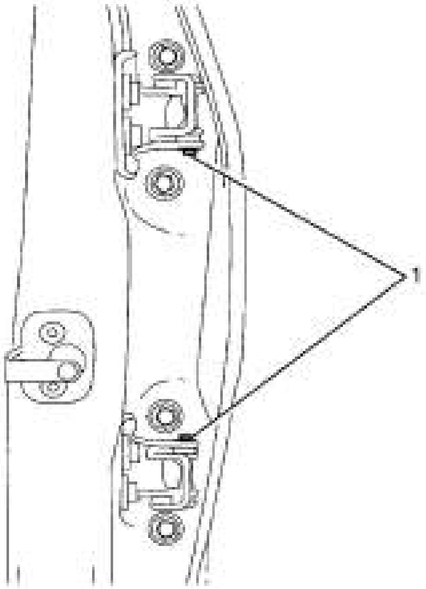
Installation Procedure - Rear Door



Important: The door (1) can only be installed when it is opened to 50 degrees.

Important: Lower the door (2) downwards and inwards to engage it to the vehicle (1).

1. Install the door (2) to the vehicle (1) with the aid of an assistant.



2. The keeper bolts (1) are located in the door hinges with the top door hinge keeper bolt facing downwards and the lower door hinge keeper bolt facing upwards.

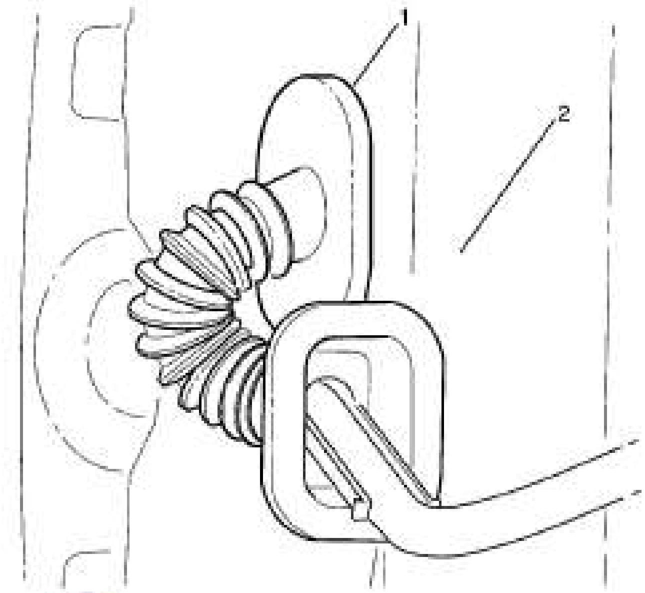
   Notice: Refer to Fastener Notice in the Preface section.

   Important: Do Not over tighten the NEW keeper bolts as this will cause the door hinges to squeak.

3. Install the NEW keeper bolts (1) to the door hinges (2).

   Tighten
   Tighten the bolts to 3 N-m (27 lb in).

4. Connect the door wiring harness to the body wiring harness electrical connector.



5. Install the rubber conduit (1) to the pillar (2).
6. Install the check link to pillar retaining bolt. Refer to Rear Side Door Check Link Replacement.

Disassembly Procedure - Rear Door

1. Remove the door trim panel. Refer to Rear Side Door Trim Panel Replacement.
2. Remove the speaker. Refer to Radio Rear Side Door Speaker Replacement in Entertainment.
3. Remove the water deflector. Refer to Rear Side Door Water Deflector Replacement.
4. Remove the window inner belt sealing strip. Refer to Rear Side Door Window Inner Sealing Strip Replacement.
5. Remove the window inner weatherstrip. Refer to Rear Side Door Window Inner Sealing Strip Replacement.
6. Remove the window outer belt sealing strip. Refer to Rear Side Door Window Outer Sealing Strip Replacement.
7. Remove the window inner sealing strip. Refer to Rear Side Door Window Inner Sealing Strip Replacement.

   Important: This step applies to VE only.

8. Remove the rear door stationary window. Refer to Rear Side Door Window Frame Rear Applique Replacement

   Important: This step applies to WM only.

9. Remove the rear door window channel. Refer to Rear Side Door Window Channel Replacement
10. Remove the door window. Refer to Rear Side Door Window Replacement.
11. Remove the window regulator. Refer to Rear Side Door Window Regulator Replacement.
12. Remove the door frame applique. Refer to Rear Door Frame Applique Replacement.
13. Remove the door bottom auxiliary sealing strip. Refer to Rear Side Door Bottom Auxiliary Sealing Strip Replacement.
14. Remove the door latch. Refer to Rear Side Door Latch Replacement.
15. Remove the outside door handle. Refer to Rear Side Door Outside Handle Replacement.

16. Remove the door wiring harness. Refer to Front Side Door Wiring Harness Replacement.
17. Remove the door check link. Refer to Rear Side Door Check Link Replacement.
18. Remove all of the plastic nuts, grommets and retainers from the door.

Assembly Procedure - Rear Door

1. Install all the plastic nuts, grommets and retainers into the door shell that were removed during disassembly.
2. Install the door check link. Refer to Rear Side Door Check Link Replacement.
3. Install the door wiring harness. Refer to Front Side Door Wiring Harness Replacement.
4. Install the outside door handle. Refer to Rear Side Door Outside Handle Replacement.
5. Install the door latch. Refer to Rear Side Door Latch Replacement.
6. Install the window inner sealing strip. Refer to Rear Side Door Window Inner Sealing Strip Replacement.

   Important: This step applies to VE only.

7. Install the rear door stationary window. Refer to Rear Side Door Window Frame Rear Applique Replacement.

   Important: This step applies to WM only.

8. Install the rear door window channel. Refer to Rear Side Door Window Channel Replacement.
9. Install the window inner sealing strip. Refer to Rear Side Door Window Inner Sealing Strip Replacement.
10. Install the window regulator. Refer to Rear Side Door Window Regulator Replacement.
11. Install the door window. Refer to Rear Side Door Window Replacement.
12. Install the door bottom auxiliary sealing strip. Refer to Rear Side Door Bottom Auxiliary Sealing Strip Replacement.
13. Install the door frame applique. Refer to Rear Door Frame Applique Replacement.
14. Install the window outer belt sealing strip. Refer to Rear Side Door Window Outer Sealing Strip Replacement.
15. Install the window inner belt sealing strip. Refer to Rear Side Door Window Inner Weatherstrip Replacement.
16. Install the water deflector. Refer to Rear Side Door Water Deflector Replacement.
17. Install the speaker. Refer to Radio Rear Side Door Speaker Replacement in Entertainment.
18. Install the door trim panel. Refer to Rear Side Door Trim Panel Replacement.
19. Inspect for correct door adjustment. Refer to Door Adjustment in Doors.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Bolted Exterior Body Panels and Closures | Repair Instructions | **Document ID: 1985263**

Front Fender Replacement

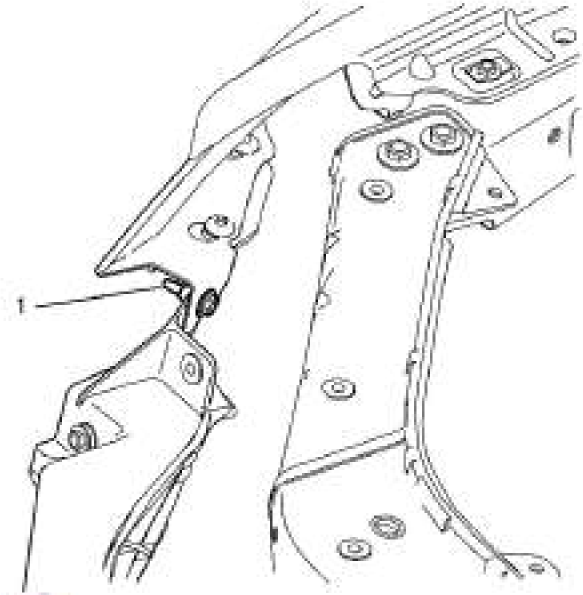
Removal Procedure

Caution: Refer to Vehicle Lifting Caution in the Preface section.

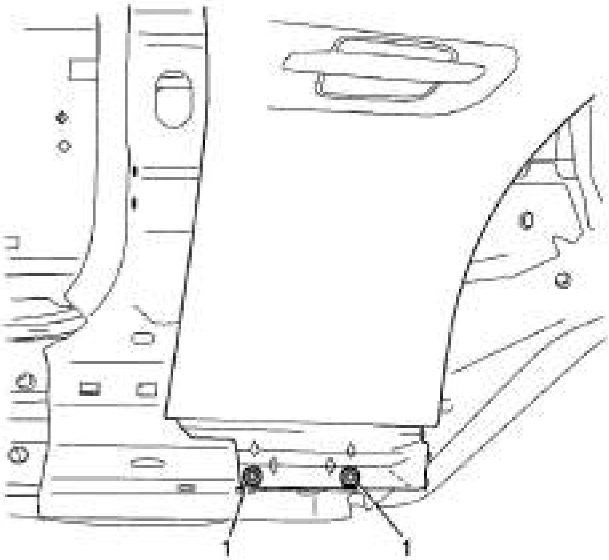
1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle .

Caution: Refer to Safety Glasses Caution in the Preface section.

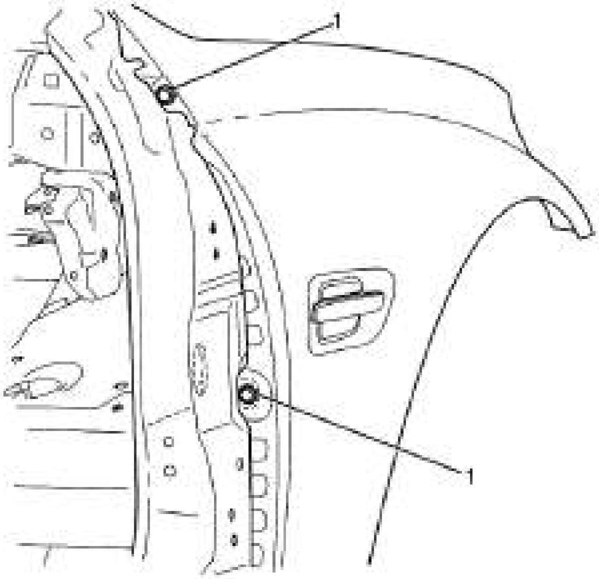
2. Apply tape to corners of panel and adjacent surfaces to help prevent paint damage.
3. Remove the hood. Refer to Hood Replacement .
4. Remove the hood hinge. Refer to Hood Hinge Replacement .
5. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle .
6. Remove the front wheel. Refer to Tire and Wheel Removal and Installation .
7. Remove the front wheelhouse liner. Refer to Front Wheelhouse Liner Replacement .
8. Remove the front fender sound insulator. Refer to Front Fender Insulator Replacement .
9. Remove the rocker panel moulding. Refer to Rocker Panel Molding Replacement .
10. Remove the front bumper fascia. Refer to Front Bumper Fascia Replacement .
11. Remove the front bumper fascia bracket. Refer to Front Bumper Impact Bar Bracket Replacement .
12. Remove the headlamp. Refer to Headlamp Replacement .
13. Remove the side indicator. Refer to Repeater Lamp Replacement .



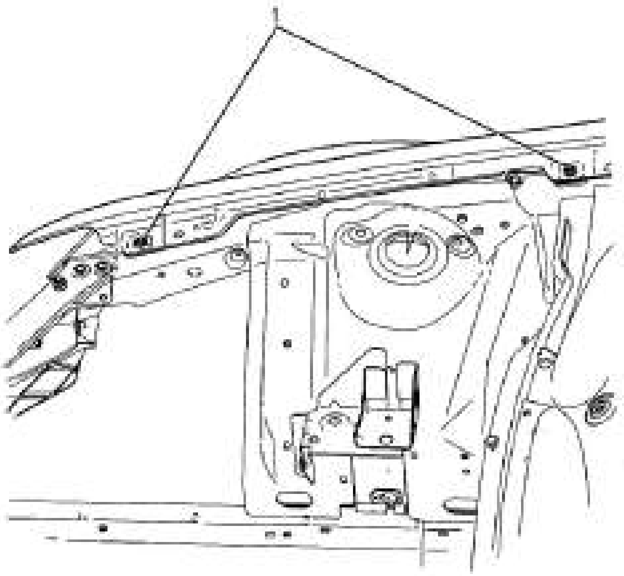
14. Remove the front fender to front end module retaining bolt (1).



15. Remove the front fender to body side retaining bolts (1).

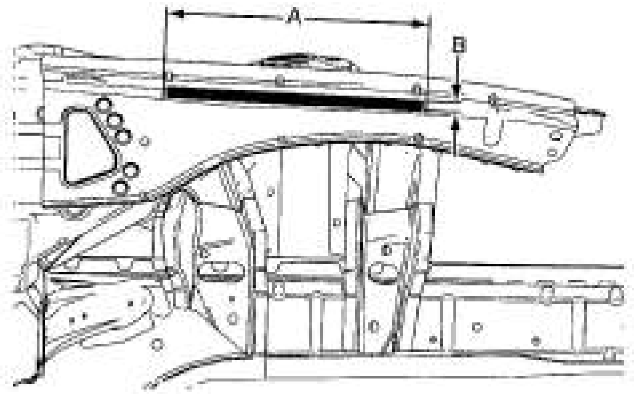


16. Remove the front fender to door pillar retaining bolts (1).



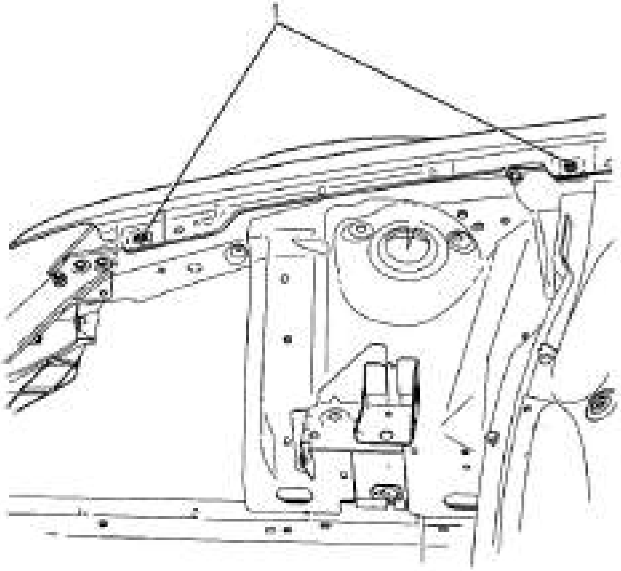
17. Remove the front fender to inner wheelhouse retaining bolts (1).
18. Remove the front fender from the vehicle.

Installation Procedure



1. Apply an even amount of urethane GMW3041 or equivalent (Between the second and fourth swage (A) and 25 mm wide (B) of the upper wheelhouse brace).
2. Position the front fender to the vehicle.

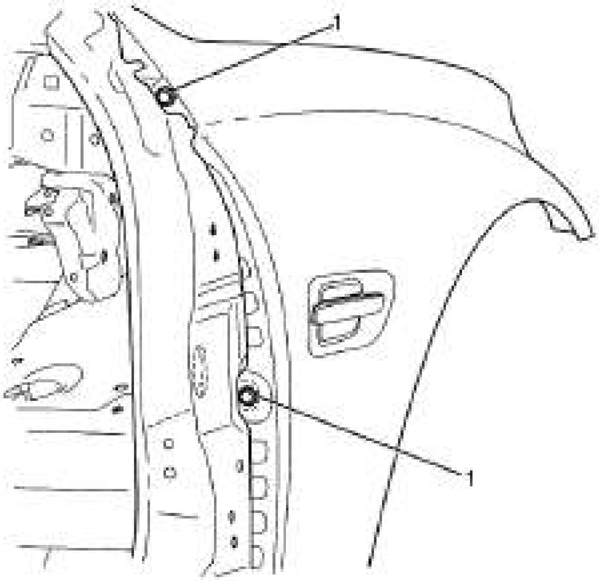
Notice: Refer to Fastener Notice in the Preface section.



Important: Do not fully tighten at this stage.

3. Install the front fender to inner wheelhouse retaining bolts (1).

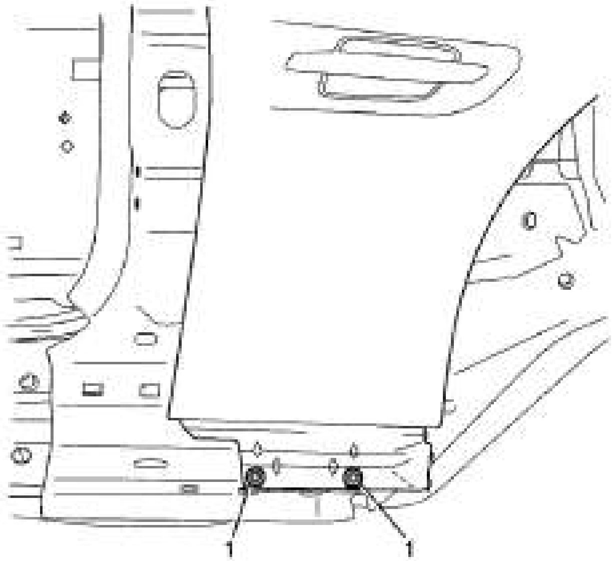
   Do not fully tighten at this stage.



Important: Do not fully tighten at this stage.

4. Install the front fender to door pillar retaining bolts (1).

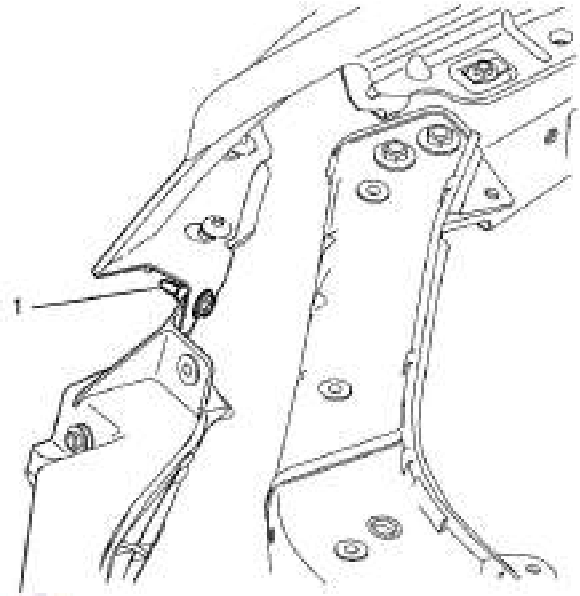
Do not fully tighten at this stage.



Important: Do not fully tighten at this stage.

5. Install the front fender to body side retaining bolts (1)

   Do not fully tighten at this stage.

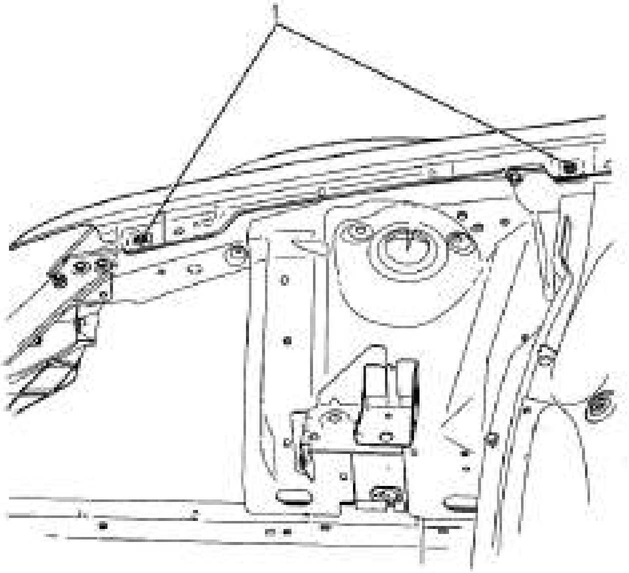


Important: Do not fully tighten at this stage.

6. Install the front fender to front end module retaining bolt (1)

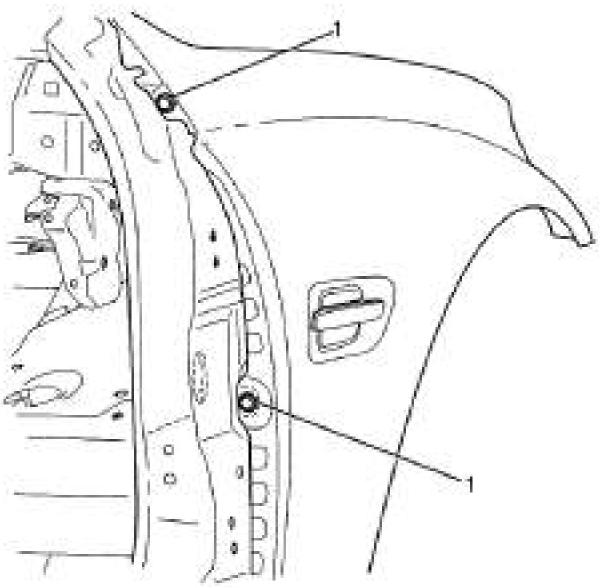
   Do not fully tighten at this stage.

7. Install the front wheel. Refer to Tire and Wheel Removal and Installation .
8. Lower the vehicle.



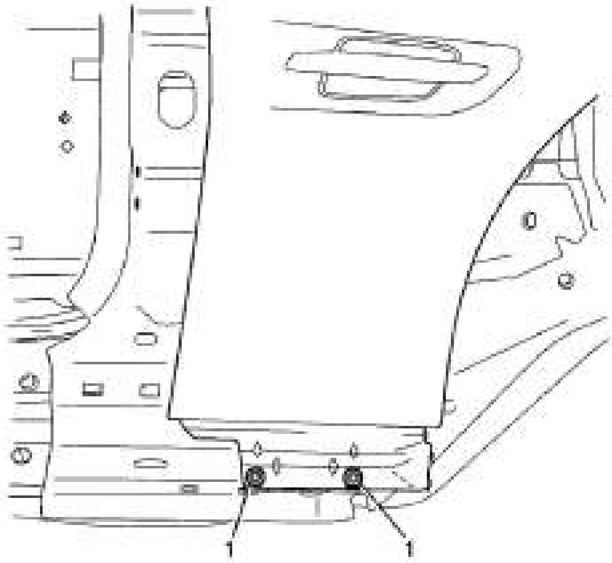
9. Tighten the front fender to inner wheelhouse retaining bolts (1)

   Tighten
   Tighten the bolts to 9 N·m (80 lb in).



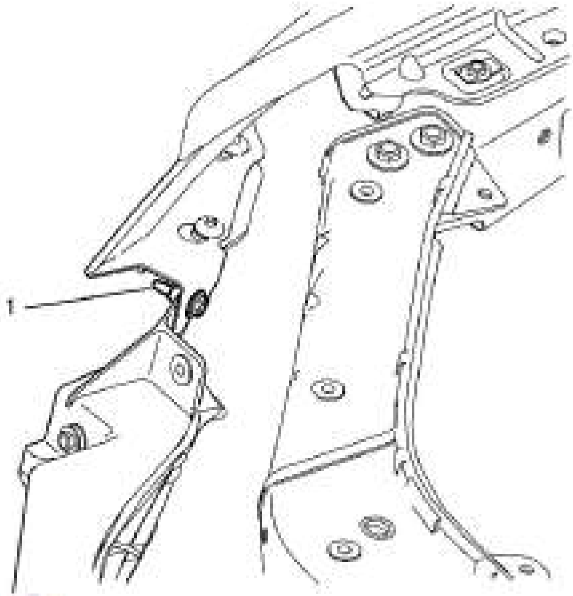
10. Tighten the front fender to door pillar retaining bolts (1).

Tighten
Tighten the bolts to 9 N·m (80 lb in).



11. Tighten the front fender to body side retaining bolts (1).

Tighten
Tighten the bolts to 9 N·m (80 lb in).



12. Tighten the front fender to front end module retaining bolt (1).

Tighten

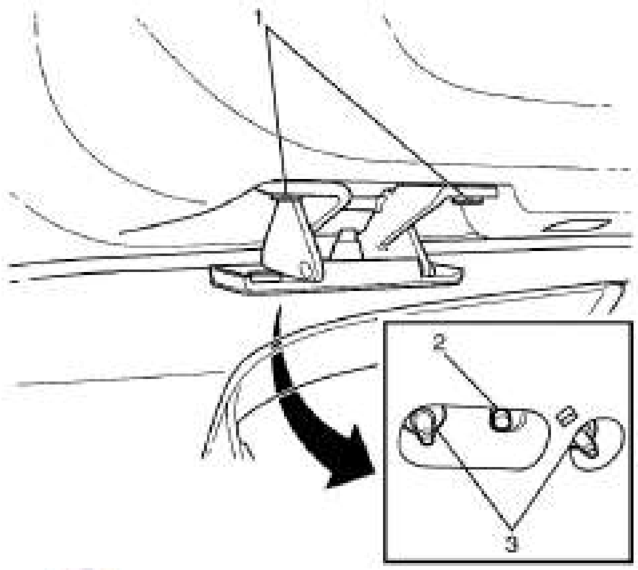
Tighten the bolts to 9 N·m (80 lb in).

13. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle .
14. Remove the front wheel. Refer to Tire and Wheel Removal and Installation .
15. Install the front fender sound insulator. Refer to Front Fender Insulator Replacement .
16. Install the side indicator. Refer to Repeater Lamp Replacement .
17. Install the rocker panel moulding. Refer to Rocker Panel Molding Replacement .
18. Install the headlamp. Refer to Headlamp Replacement .
19. Install the front bumper fascia bracket. Refer to Front Bumper Impact Bar Bracket Replacement .
20. Install the front bumper fascia. Refer to Front Bumper Fascia Replacement .
21. Install the front wheelhouse liner. Refer to Front Wheelhouse Liner Replacement .
22. Install the front wheel. Refer to Tire and Wheel Removal and Installation .
23. Lower the vehicle.
24. Install the hood hinge. Refer to Hood Hinge Replacement .
25. Install the hood. Refer to Hood Replacement .
26. Carefully remove the tape from the corners of the panels and adjacent surfaces.

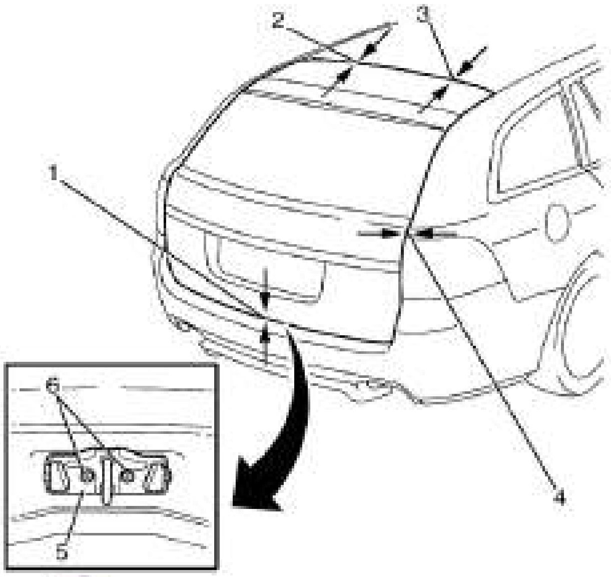
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Bolted Exterior Body Panels and Closures | Repair Instructions | Document ID: 2096407

Liftgate Adjustment

1. Remove the quarter inner trim finish panels on both sides. Refer to Quarter Inner Trim Finish Panel Replacement.
2. Remove the headlining rear trim panel retainer. Refer to Headlining Rear Trim Panel Retainer Replacement.
3. Remove the body side window rear garnish moulds on both sides. Refer to Body Side Window Rear Garnish Molding Replacement.



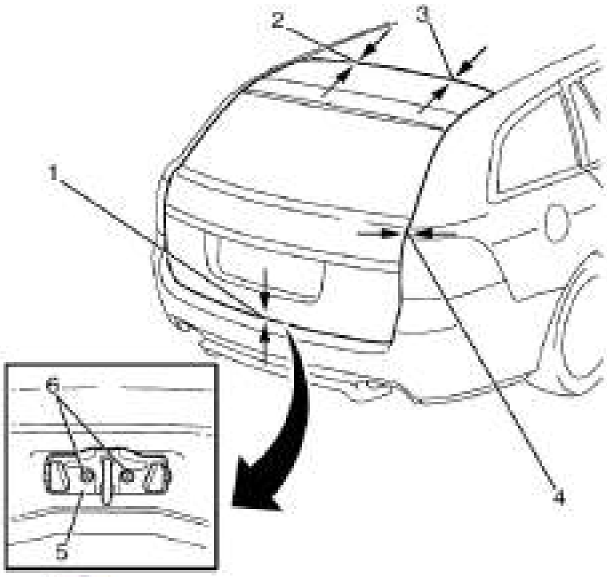
4. Loosen the liftgate hinge to liftgate bolts (1).
5. Loosen the liftgate hinge to rear header nuts (3).
6. Loosen the liftgate hinge to rear header bolt (2).



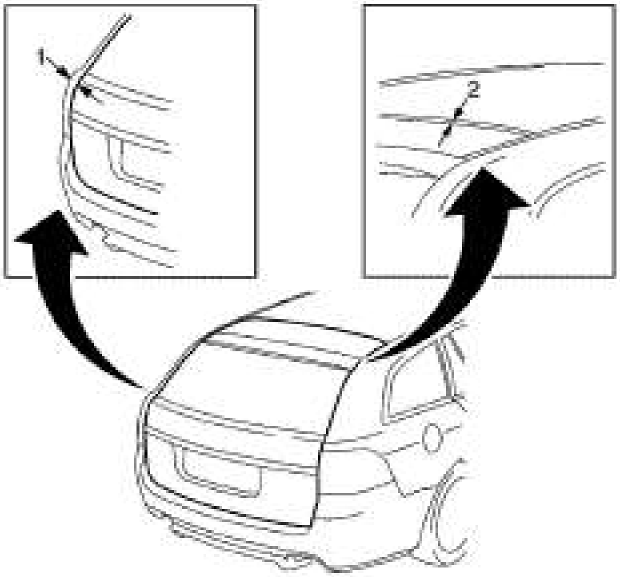
7. Mark the location of the lifgate striker (6) to the vehicle body with a wax pencil.
8. Remove the liftgate striker retaining bolts (6).
9. Remove the liftgate striker (5).
10. Remove the liftgate wedges on both sides. Refer to Liftgate Wedge Replacement.

Important: Ensure the liftgate does not contact the top and each side of the vehicle body.

11. Close the liftgate.

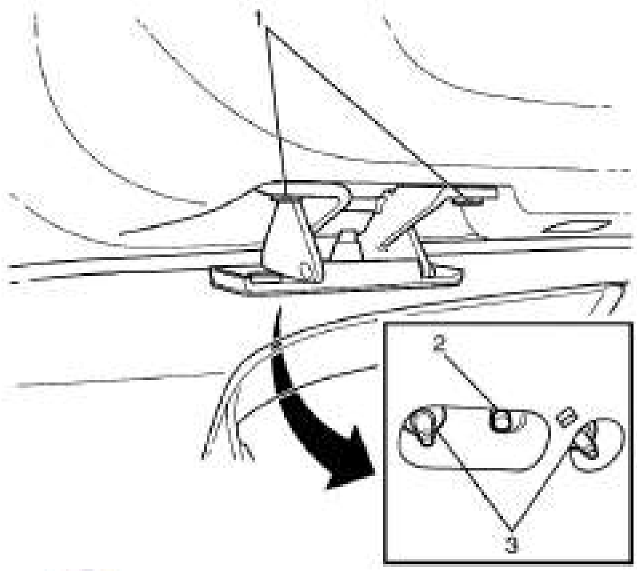


12. Align the liftgate in order to achieve an equal gap of 6.5 mm (.25 in) between the liftgate and the roof panel (2) and (3).
13. Align the liftgate in order to achieve an equal gap of 4.5 mm (.17 in) between the liftgate and the rear quarter panel on both sides (4).
14. Align the liftgate in order to achieve an equal gap of 6.7 mm (.26 in) between the liftgate and the rear bumper facia (1).



15. Align the liftgate in order to achieve a height difference of - 1.5 mm from the rear quarter panel to the liftgate (1).
16. Align the liftgate in order to achieve a height difference of - 1.0 mm from the roof panel to the liftgate (2).

Notice: Refer to Fastener Notice in the Preface section.



17. Verify the alignment of the liftgate to the vehicle body.
18. Tighten the liftgate hinge to header bolt (2).

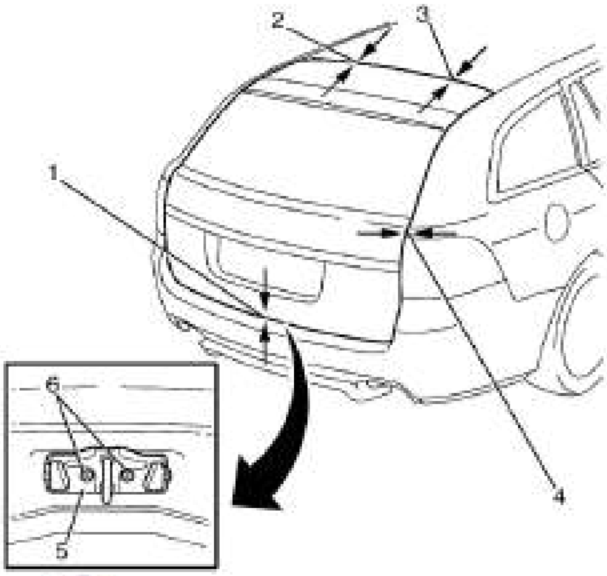
Tighten
Tighten the bolts to 58 N·m (43 lb ft).

19. Tighten the liftgate hinge to header nuts (3).

Tighten
Tighten the bolts to 25 N·m (18 lb ft).

20. Tighten the liftgate hinge to liftgate bolts (1).

Tighten
Tighten the bolts to 22 N·m (16 lb ft).



21. Install the liftgate striker (5) to the vehicle body making sure the marked location points are aligned.
22. Tighten the liftgate striker bolts (6).

    Tighten
    Tighten bolts to 20 N·m (15 lb ft).

23. Close the liftgate and ensure the liftgate striker (5) does not alter the liftgate to body alignment.
24. Adjust the liftgate striker if required.
25. Install the liftgate wedges on both sides. Refer to Liftgate Wedge Replacement.
26. Install both the body side window rear garnish moulds. Refer to Body Side Window Rear Garnish Molding Replacement.
27. Install the headlining rear trim panel retainer. Refer to Headlining Rear Trim Panel Retainer Replacement.
28. Install both the quarter inner trim finish panels. Refer to Quarter Inner Trim Finish Panel Replacement.

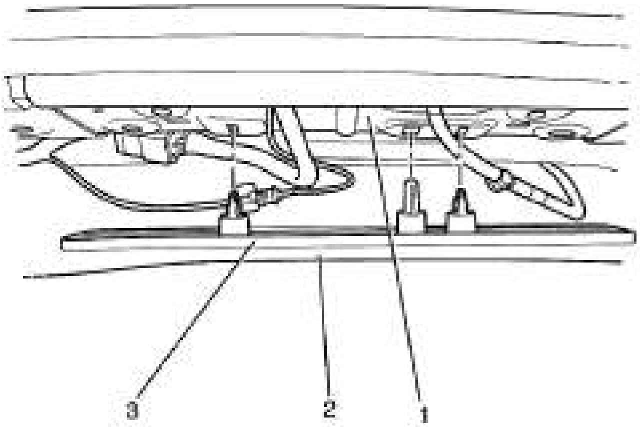
Liftgate Replacement

Removal Procedure

Caution: Refer to Battery Disconnect Caution in the Preface section.

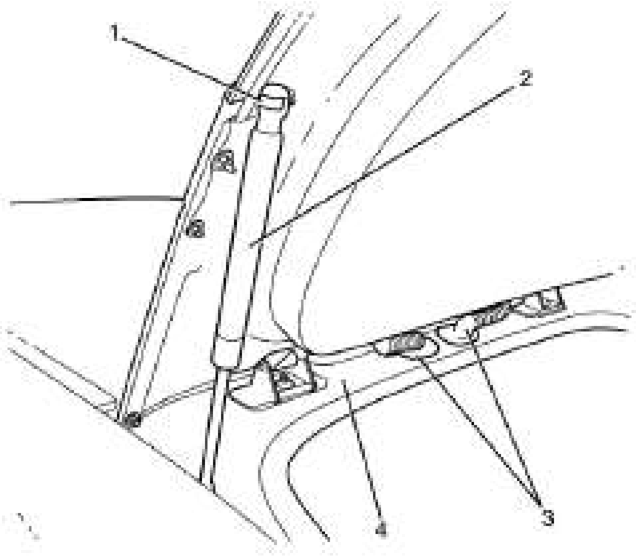
Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Open and suitably support the liftgate.
2. Remove the quarter inner trim finish panel on both sides. Refer to Quarter Inner Trim Finish Panel Replacement.
3. Remove the headlining rear trim panel retainer. Refer to Headlining Rear Trim Panel Retainer Replacement.
4. Remove the body side window rear garnish moulding on both sides. Refer to Body Side Window Rear Garnish Molding Replacement.



Important: To avoid damage to the headlining carefully pull down on the headlining rear clip assembly (3) to detach from the roof panel (1).

5. Detach and lower the headlining (2).



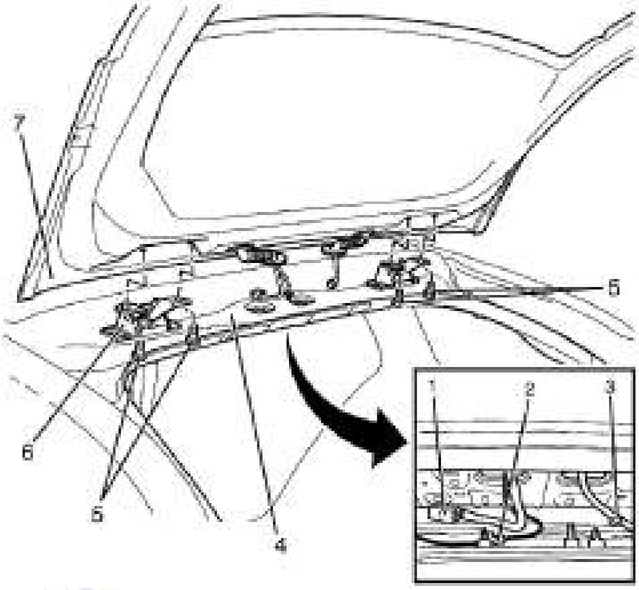
6. Pull the liftgate grommets (3) out of the rear header (4).

Important: DO NOT fully remove the liftgate upper strut retaining clip (1) as this will assist in the installation.

7. Using a suitable tool release the liftgate strut to upper strut stud retaining clip (1) on both sides.

Important: Apply pressure only at the end of the liftgate strut (2) that you are removing or attaching. DO NOT apply pressure to the middle of the strut because damage or bending will result.

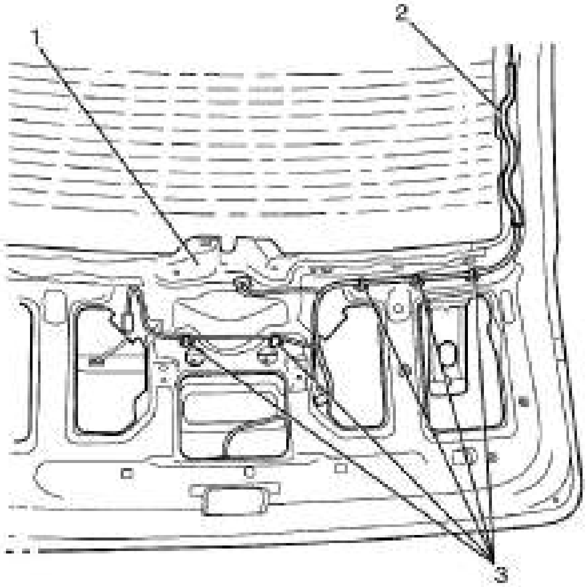
8. Detach the liftgate strut (2) on both sides.



9. Disconnect the liftgate electrical harness connector (1) and the antenna connector (2).
10. Disconnect the rear washer hose (3).
11. Mark the location of the liftgate hinge (6) to the liftgate (7) with a wax pencil.
12. Remove the liftgate hinge to liftgate retaining bolts (5).
13. With the aid of an assistant remove the liftgate from the vehicle.

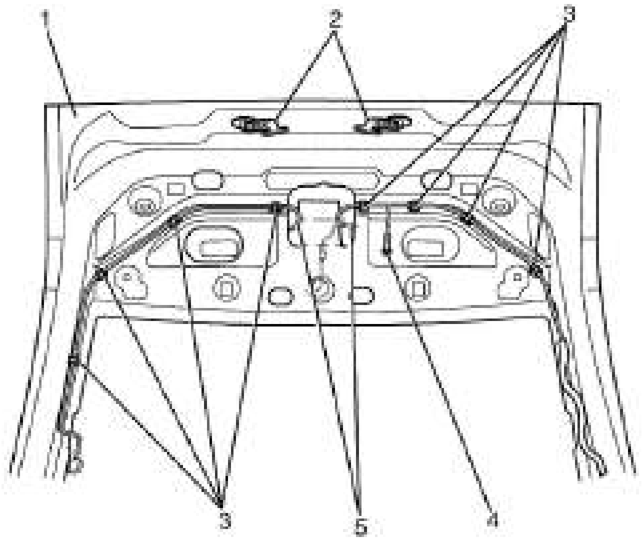
Disassembly Procedure

1. Remove the liftgate window side garnish moulding on both sides. Refer to Liftgate Window Side Garnish Molding Replacement.
2. Remove the liftgate window lower garnish moulding. Refer to Liftgate Window Lower Garnish Molding Replacement.
3. Remove the liftgate trim panel. Refer to Liftgate Trim Panel Replacement.
4. Remove the liftgate window upper garnish moulding. Refer to Liftgate Window Upper Garnish Molding Replacement.
5. Remove the liftgate emblem nameplate. Refer to Liftgate Emblem/Nameplate Replacement.
6. Remove the liftgate centre applique. Refer to Liftgate Center Applique Replacement.
7. Remove the rear window wiper arm. Refer to Rear Window Wiper Arm Replacement.
8. Remove the rear roof weld joint reveal moulding on both sides. Refer to Roof Weld Joint Reveal Molding Replacement.
9. Remove the liftgate upper moulding. Refer to Liftgate Upper Molding Replacement.
10. Remove the liftgate window. Refer to Liftgate Window Replacement.
11. Remove the liftgate latch. Refer to Liftgate Latch Replacement.
12. Remove the rear window wiper motor. Refer to Rear Window Wiper Motor Replacement.
13. Remove the liftgate wedge on both sides. Refer to Liftgate Wedge Replacement.
14. Remove the liftgate strut stud on both sides. Refer to Liftgate Strut Stud Replacement.



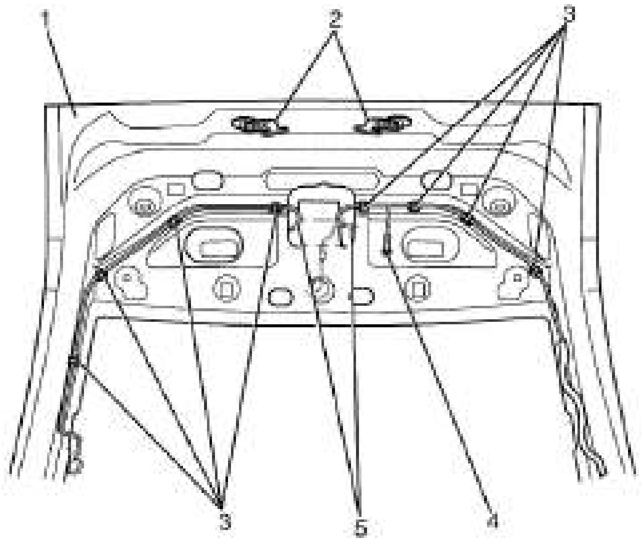
Important : A suitable tool must be used to avoid damaging the wiring harness retaining clips (3) when removing them from the liftgate (1).

15. Remove the liftgate wiring harness retaining clips (3) from the liftgate (1).
16. Remove the liftgate wiring harness former (2) from the liftgate (1).

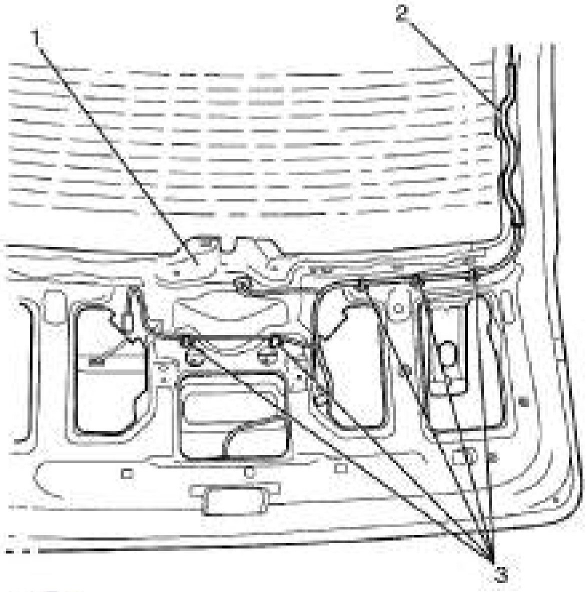


17. Remove the ground bolt (4) from the liftgate (1).
18. Remove the liftgate wiring harness retaining clips (3) from the liftgate (1).
19. Pull the liftgate grommets (2) out of the liftgate (1).
20. Remove the liftgate wiring harness (5) from the liftgate (1).

Assembly Procedure

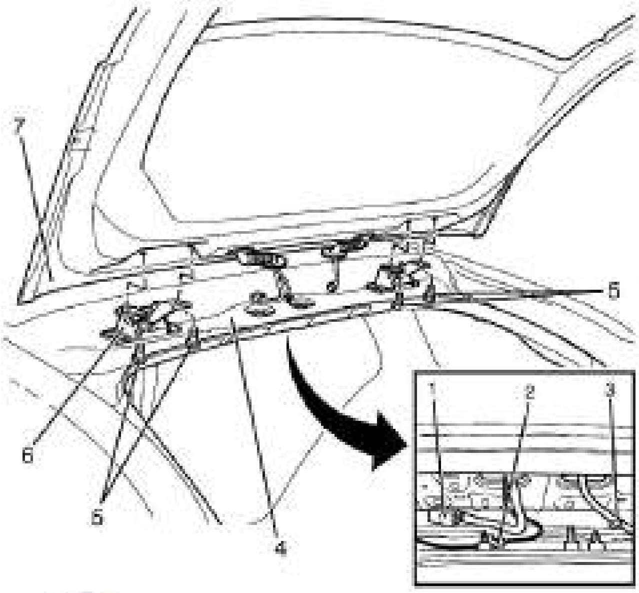


1. Install the liftgate wiring harness (5) to the liftgate (1).
2. Install the liftgate grommets (2) to the liftgate (1).
3. Install the liftgate wiring harness retaining clips (3) to the liftgate (1).
4. Install the ground bolt (4) to the liftgate (1).



5. Install the liftgate wiring harness former (2) to the liftgate (1).
6. Install the liftgate wiring harness retaining clips (3) to the liftgate (1).
7. Install the liftgate strut stud on both sides. Refer to Liftgate Strut Stud Replacement.
8. Install the liftgate wedge on both sides. Refer to Liftgate Wedge Replacement.
9. Install the rear window wiper motor. Refer to Rear Window Wiper Motor Replacement.
10. Install the lftgate latch. Refer to Liftgate Latch Replacement.
11. Install the liftgate window. Refer to Liftgate Window Replacement.
12. Install the liftgate upper moulding. Refer to Liftgate Upper Molding Replacement.
13. Install the rear roof weld joint reveal moulding on both sides. Refer to Roof Weld Joint Reveal Molding Replacement.
14. Install the rear window wiper arm. Refer to Rear Window Wiper Arm Replacement.
15. Install the lftgate centre applique. Refer to Liftgate Center Applique Replacement.
16. Install the liftgate emblem nameplate. Refer to Liftgate Emblem/Nameplate Replacement.
17. Install the liftgate window upper garnish moulding. Refer to Liftgate Window Upper Garnish Molding Replacement.
18. Install the liftgate trim panel. Refer to Liftgate Trim Panel Replacement.
19. Install the liftgate window lower garnish moulding. Refer to Liftgate Window Lower Garnish Molding Replacement.
20. Install the liftgate window side garnish moulding on both sides. Refer to Liftgate Window Side Garnish Molding Replacement.

Installation Procedure

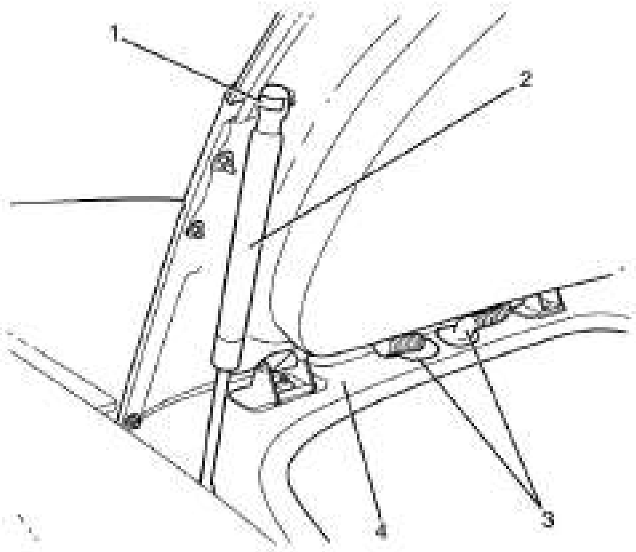


Important: DO NOT fully tighten at this stage.

1. With the aid of an assistant, position the liftgate (7) to the liftgate hinge (6) making sure the marked location points are aligned.
2. Install the liftgate hinge to liftgate retaining bolts (5).
3. Connect the rear washer hose (3).

Important : Make sure the liftgate harness connector (1) seats into the headlining electrical connector with an audible click, failure to do so could disable the liftgate release.

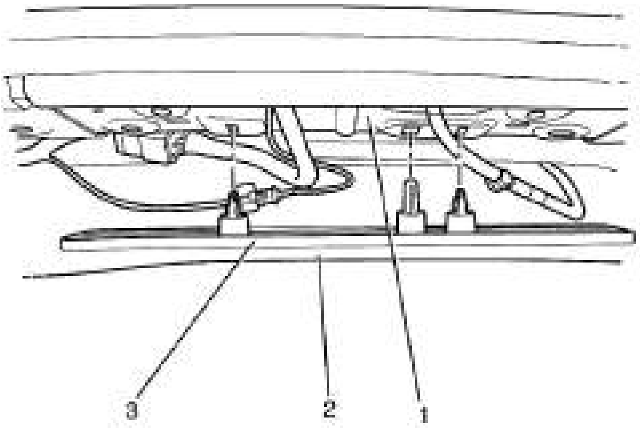
4. Connect the liftgate electrical harness connector (1) and the antenna connector (2).



5. Press the liftgate strut (2) onto the liftgate ball stud and listen for an audible click to confirm

fitting.

6. Make sure that the liftgate upper strut stud retaining clip (1) is fully seated on the liftgate strut (2).
7. Install the liftgate grommets (3) into the rear header (4).



8. Locate the headlining clip assembly (3) and attach the headlining (2) to the roof panel (1).
9. Install the body side window rear garnish moulding on both sides. Refer to Body Side Window Rear Garnish Molding Replacement.
10. Install the headlining rear trim panel retainer. Refer to Headlining Rear Trim Panel Retainer Replacement.
11. Install the quarter inner trim finish panel on both sides. Refer to Quarter Inner Trim Finish Panel Replacement.

Important: Make sure the liftgate does not contact the top and each side of the vehicle body.

12. Close the liftgate.
13. Verify the alignment of the liftgate to the body and adjust as necessary. Refer to Liftgate Adjustment.

Notice: Refer to Fastener Notice in the Preface section.

14. Tighten the liftgate hinge to liftgate retaining bolts (5).

Tighten
Tighten the bolts to 22 N·m (16 lb ft).

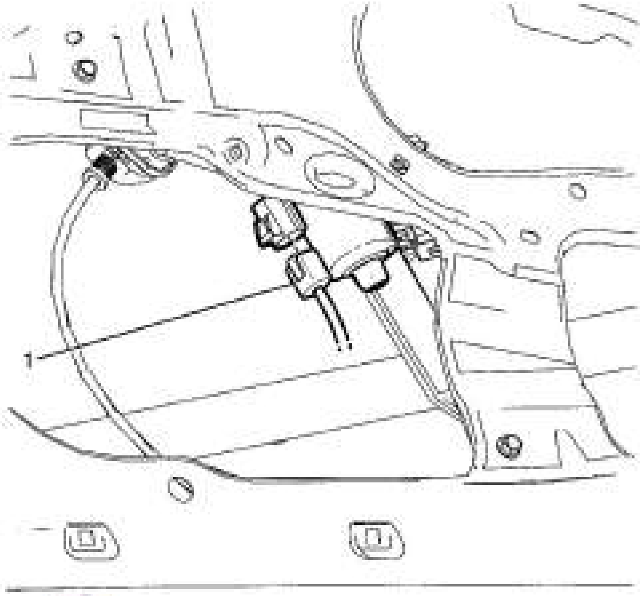
15. Install the liftgate wedge on both sides. Refer to Liftgate Wedge Replacement.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Bolted Exterior Body Panels and Closures | Repair Instructions | **Document ID: 1993048**

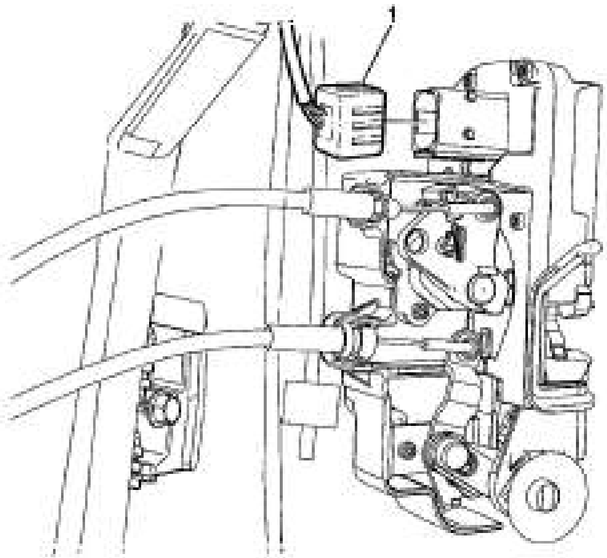
Front Side Door Wiring Harness Replacement

Removal Procedure

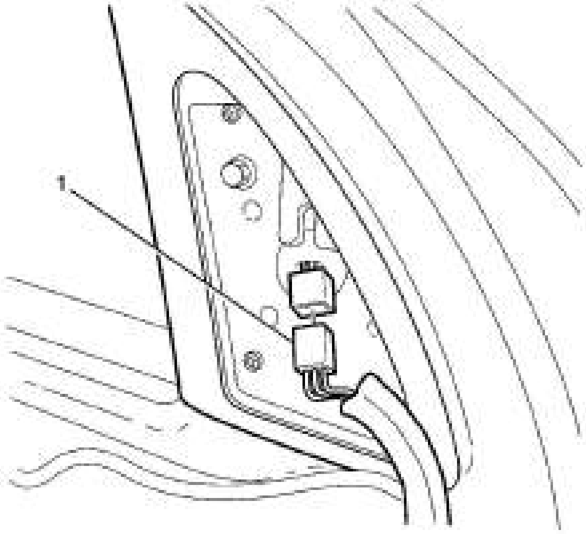
1. Remove the door trim panel. Refer to Front Side Door Trim Panel Replacement .
2. Remove the speaker. Refer to Radio Front Side Door Lower Speaker Replacement .
3. Remove the water deflector. Refer to Front Side Door Water Deflector Replacement .



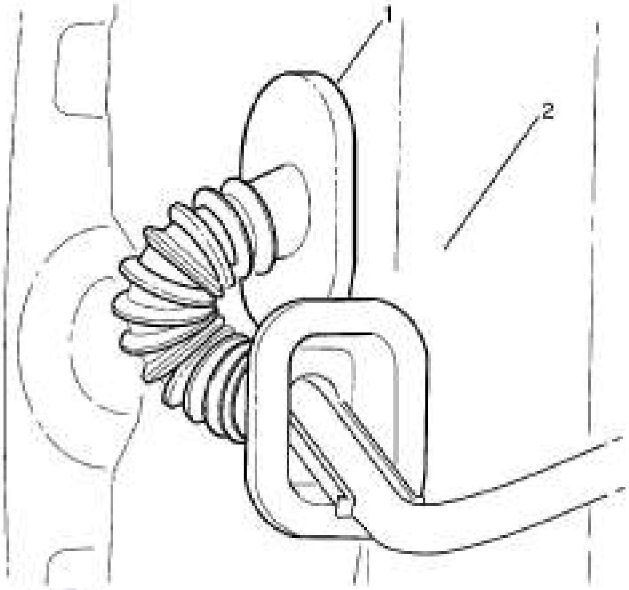
4. Disconnect the window regulator electrical connector (1).



5. Disconnect the door latch electrical connector (1).

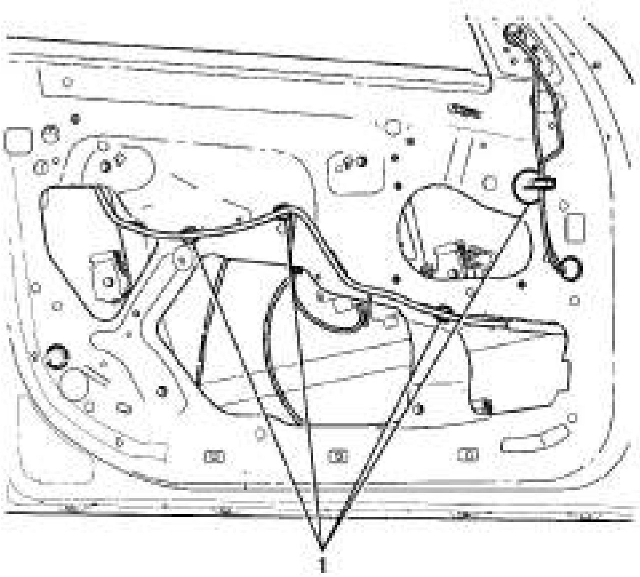


6. Disconnect the outside rearview mirror electrical connector (1).



Important: Pull the rubber conduit (1) from the pillar (2) to expose the door to body wiring harness plug.

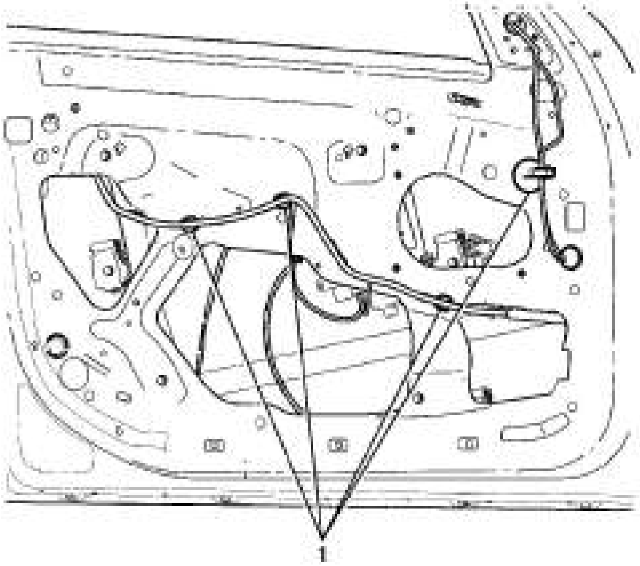
7. Remove the rubber conduit (1) from the from the pillar (2).
8. Disconnect the door wiring harness from the body wiring harness.
9. Push the wiring harness grommet and connector into the door cavity.



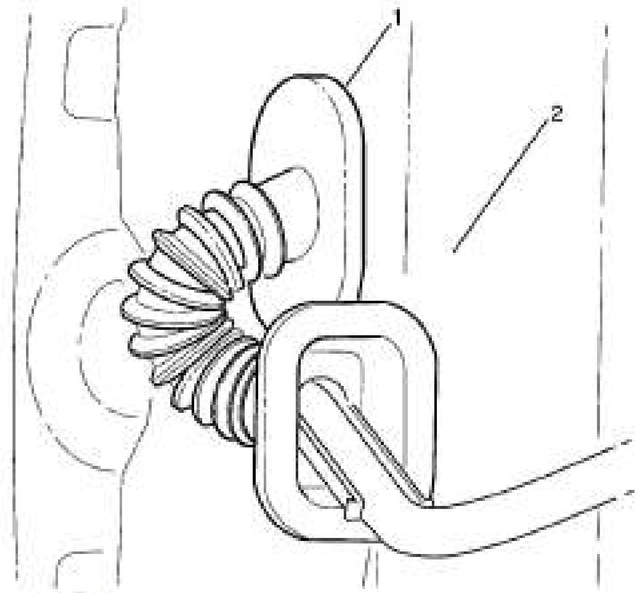
10. Disconnect the retainers securing the wiring harness to the door (1).
11. Remove the wiring harness from the door.

Installation Procedure

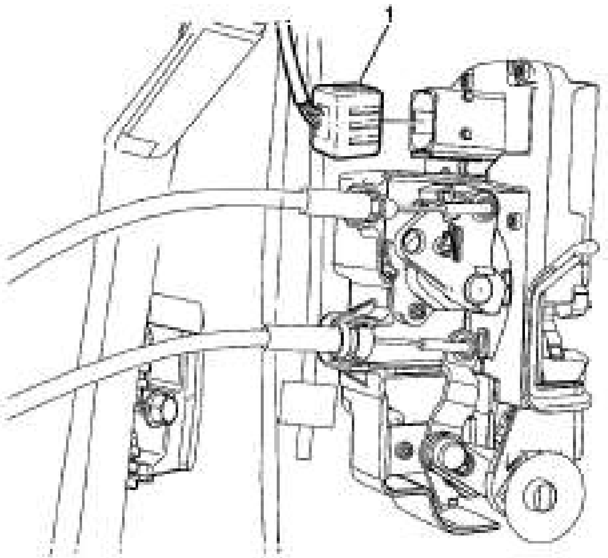
1. Position the door wiring harness into the door cavity.



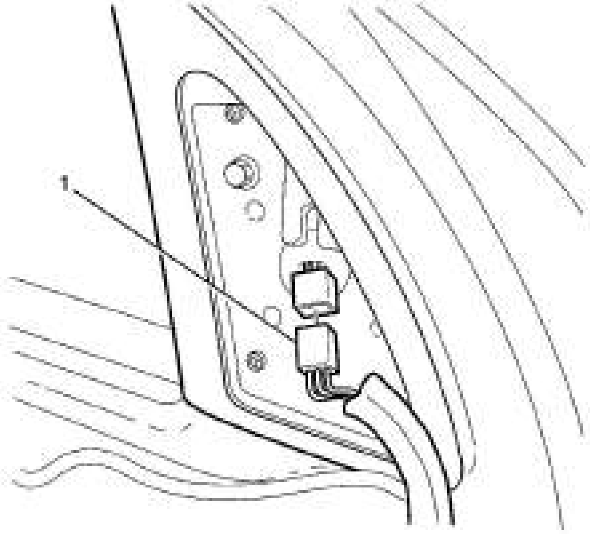
2. Connect the wiring harness retainers to the door (1).
3. Feed the trim panel connectors through the door .
4. Connect the door wiring harness to body wiring harness electrical connector.



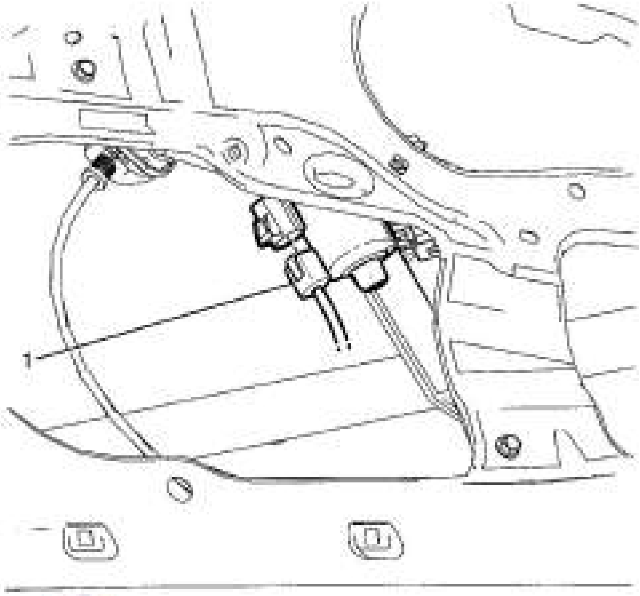
5. Install the rubber conduit (1) to the pillar (2).



6. Connect the door latch electrical connector (1).



7. Connect the outside rearview mirror electrical connector (1).

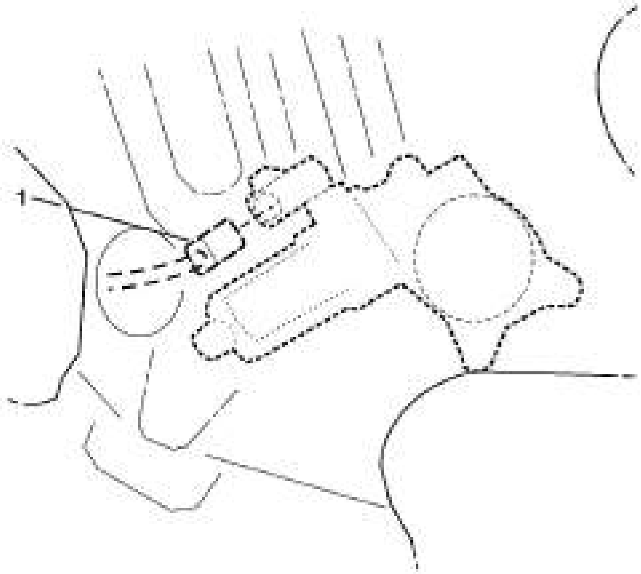


8. Connect the window regulator electrical connector (1).
9. Install the water deflector. Refer to Front Side Door Water Deflector Replacement .
10. Install the speaker. Refer to Radio Front Side Door Lower Speaker Replacement .
11. Install the door trim panel. Refer to Front Side Door Trim Panel Replacement .

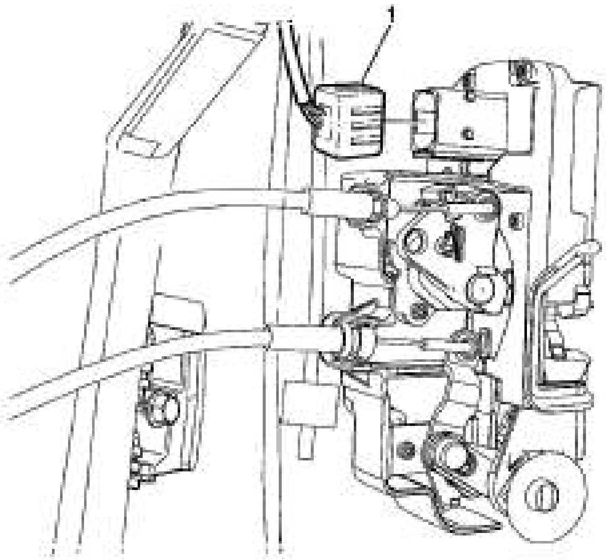
Rear Side Door Wiring Harness Replacement

Removal Procedure

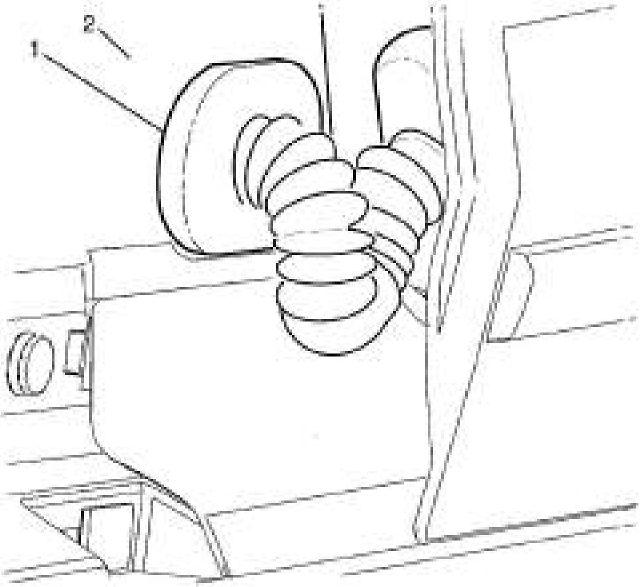
1. Remove the door trim panel. Refer to Rear Side Door Trim Panel Replacement.
2. Remove the speaker. Refer to Radio Rear Side Door Speaker Replacement in Entertainment.
3. Remove the water deflector. Refer to Rear Side Door Water Deflector Replacement.



4. Disconnect the window regulator electrical connector (1).

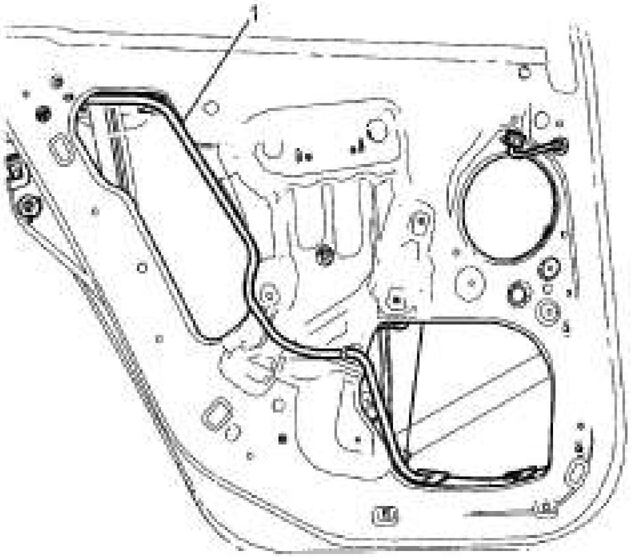


5. Disconnect the door latch electrical connector (1).



Important: Pull the rubber conduit (1) from the pillar (2) to expose the door to body wiring harness plug.

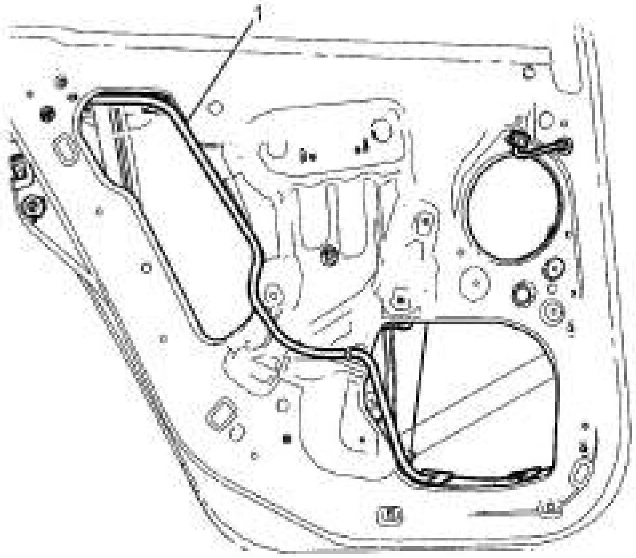
6. Remove the rubber conduit (1) from the from the pillar (2).
7. Disconnect the door wiring harness from the body wiring harness.
8. Push the wiring harness grommet and connector into the door cavity.



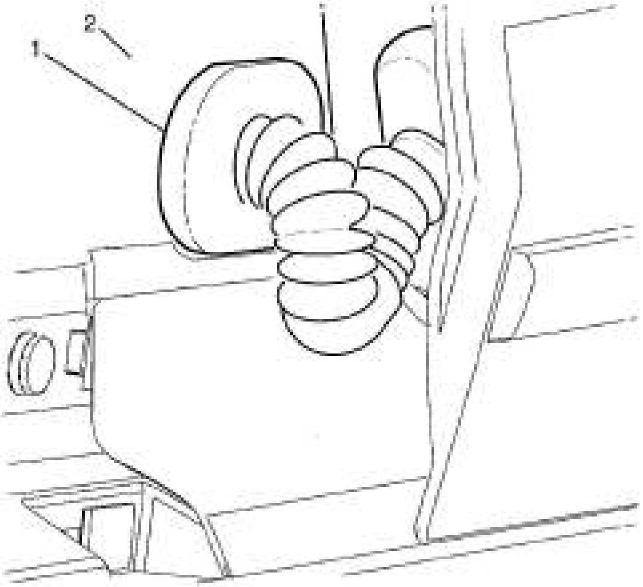
9. Disconnect the retainers securing the wiring harness (1) to the door.
10. Remove the wiring harness (1) from the door.

Installation Procedure

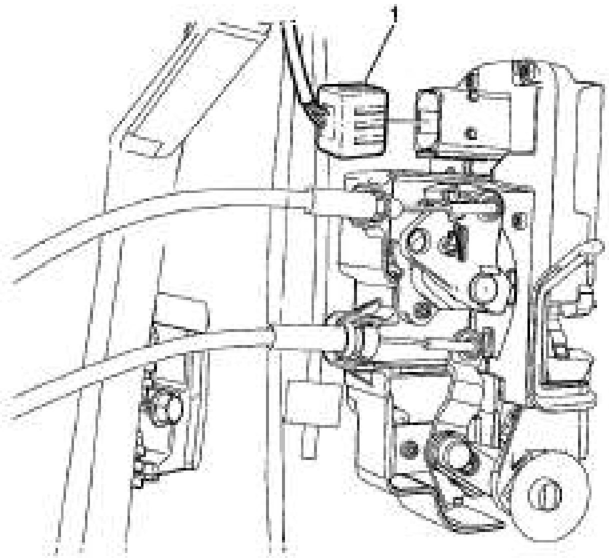
1. Position the door wiring harness into the door cavity.



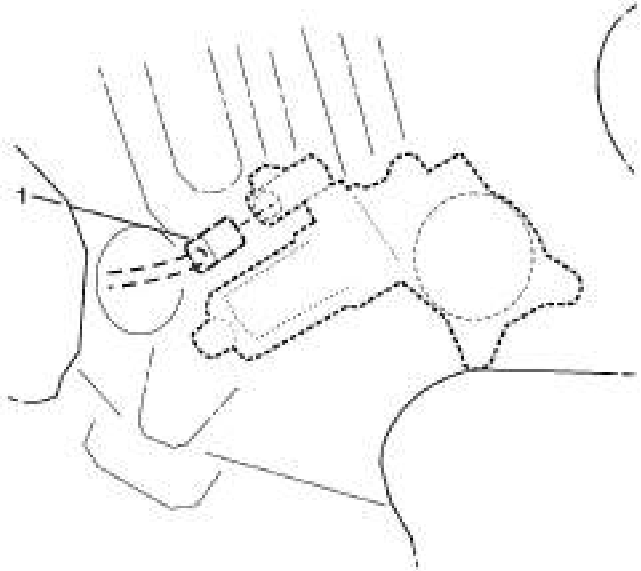
2. Connect the wiring harness (1) retainers to the door.
3. Feed the door trim panel connectors through the door.
4. Connect the door wiring harness to body wiring harness electrical connector.



5. Install the rubber conduit (1) to the pillar (2).



6. Connect the door latch electrical connector (1).



7. Connect the window regulator electrical connector (1).
8. Install the water deflector. Refer to Rear Side Door Water Deflector Replacement.
9. Install the speaker. Refer to Radio Rear Side Door Speaker Replacement in Entertainment.
10. Install the door trim panel. Refer to Rear Side Door Trim Panel Replacement.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Bolted Exterior Body Panels and Closures | Repair Instructions | **Document ID: 1977690**

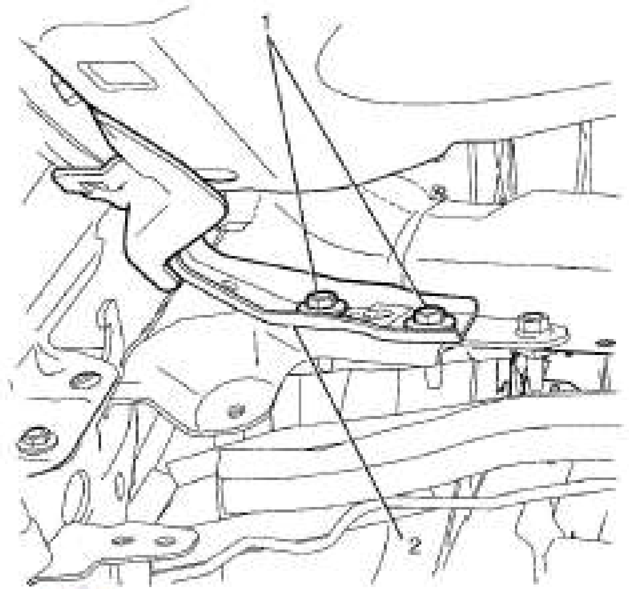
Hood Hinge Replacement

Removal Procedure

1. Apply tape to the corners of the panels and adjacent surfaces.

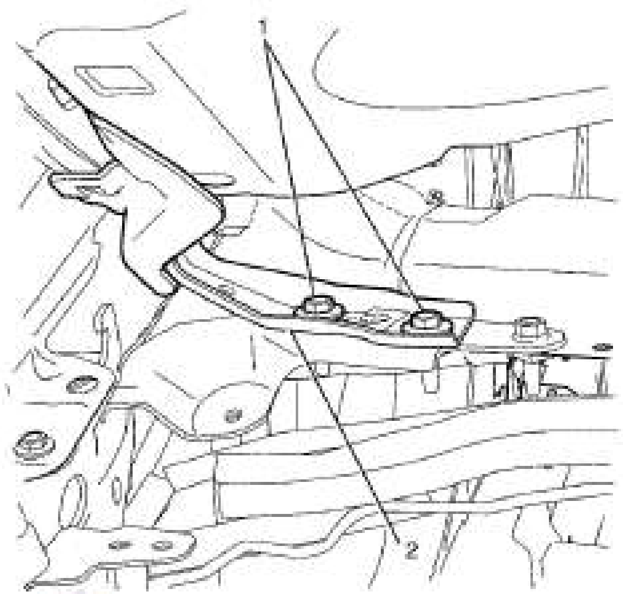
   Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

2. Remove the hood. Refer to Hood Replacement .
3. Remove the air inlet grille panel. Refer to Air Inlet Grille Panel Replacement .



4. Remove the hood hinge to dash and cowl panel brace retaining bolts (1).
5. Remove the hood hinge (2) from the vehicle.

Installation Procedure



1. Install the hood hinge (2) to the vehicle.

   Notice: Refer to Fastener Notice in the Preface section.

2. Install the hood hinge to dash and cowl panel brace retaining bolts (1).

   Tighten
   Tighten the bolts to 20 N·m (15 lb ft).

3. Install the air inlet grille panel. Refer to Air Inlet Grille Panel Replacement .
4. Install the hood. Refer to Hood Replacement .
5. Adjust the hood as necessary. Refer to Hood Adjustment .
6. Carefully remove the tape from the corners of the panels and adjacent surfaces.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Bolted Exterior Body Panels and Closures | Repair Instructions | **Document ID: 2067493**

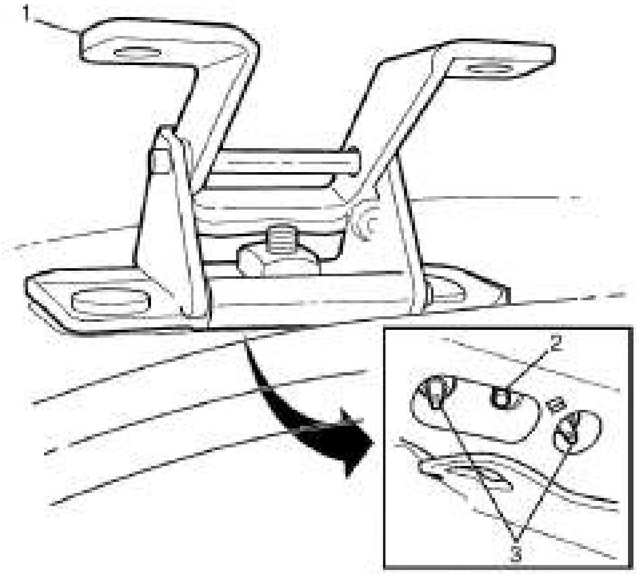
Liftgate Hinge Replacement

Removal Procedure

1. Open the liftgate.

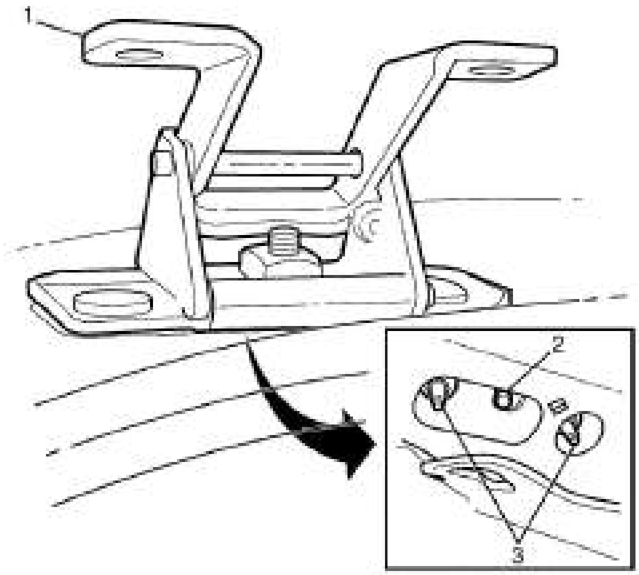
   Important: Apply pressure only at the end of the liftgate strut that you are removing or attaching. DO NOT apply pressure to the middle of the strut because damage or bending will result.

2. Install a suitable liftgate brace to the vehicle.
3. Remove the liftgate strut. Refer to Liftgate Strut Replacement.
4. Using a wax pencil, mark the location of the liftgate hinge to the liftgate and the rear quarter panel.
5. Remove the liftgate. Refer to Liftgate Replacement.
6. Remove the headlining rear trim panel retainer. Refer to Headlining Rear Trim Panel Retainer Replacement.
7. Remove the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
8. Remove the body side window rear garnish moulding. Refer to Body Side Window Rear Garnish Molding Replacement.



9. Remove the liftgate hinge to the rear quarter panel retaining nuts (3) and retaining bolt (2).
10. Remove the liftgate hinge (1) from the rear quarter panel.

Installation Procedure



1. Install the liftgate hinge (1) to the rear quarter panel.
2. Install the liftgate hinge to the rear quarter panel retaining nuts (3) and retaining bolt (2).

   Do not fully tighten at this stage.

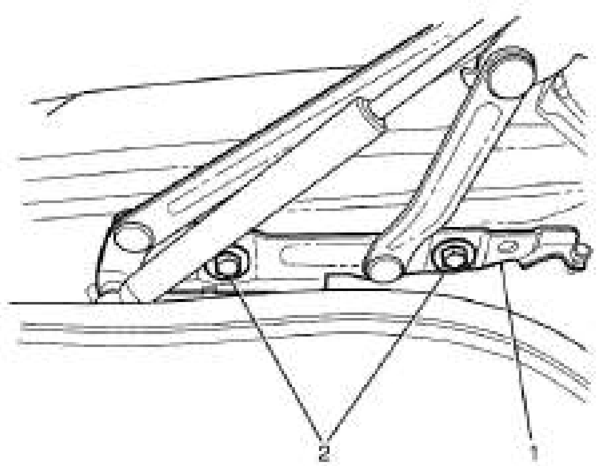
3. Install the body side window rear garnish moulding. Refer to Body Side Window Rear Garnish Molding Replacement.
4. Install the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
5. Install the headlining rear trim panel retainer. Refer to Headlining Rear Trim Panel Retainer Replacement.
6. Install the liftgate. Refer to Liftgate Replacement.
7. Install the liftgate strut. Refer to Liftgate Strut Replacement.
8. Check and adjust the liftgate as necessary. Refer to Liftgate Adjustment.
9. Remove the suitable liftgate brace from the vehicle.
10. Close the liftgate.

Rear Compartment Lid Hinge Replacement

Removal Procedure

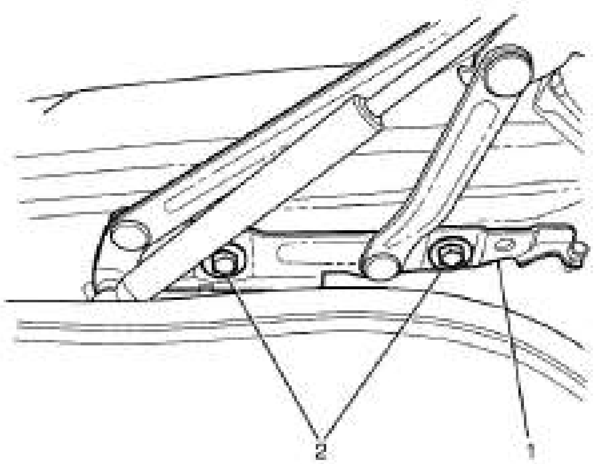
> **Important:** When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Remove the rear compartment lid strut. Refer to Rear Compartment Lid Strut Replacement.
2. Using a wax pencil, mark the retaining nut and bolt locations on both the rear compartment lid and the rear quarter panel of the hinge being replaced.
3. Remove the rear compartment lid. Refer to Rear Compartment Lid Replacement.



4. Remove the rear compartment lid hinge to rear quarter panel retaining bolts (2).
5. Remove the rear compartment lid hinge (1) from the rear quarter panel.

Installation Procedure



1. Install the rear compartment lid hinge (1) to the rear quarter panel.
2. Install the rear compartment lid hinge to rear quarter panel retaining bolts (2).

   Important: Do not fully tighten the rear compartment lid hinge retaining bolts (2) at this stage.

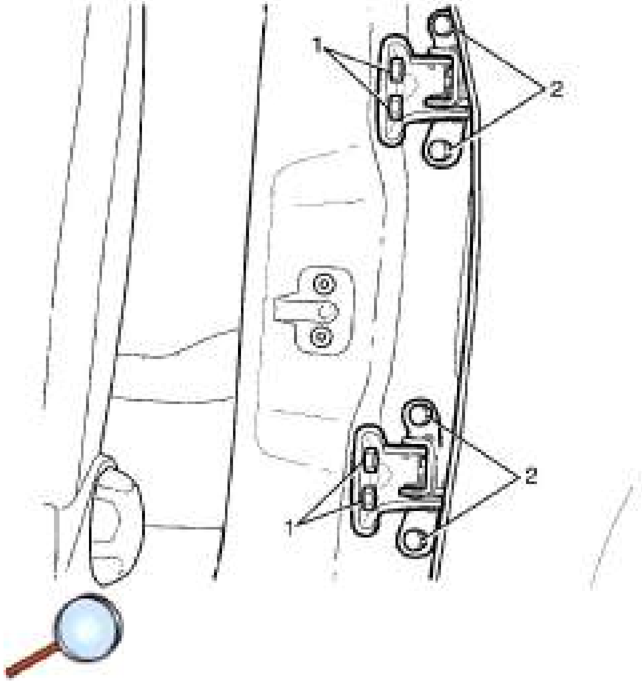
   Do not fully tighten at this stage.

3. Install the rear compartment lid. Refer to Rear Compartment Lid Replacement.
4. Install the rear compartment lid strut. Refer to Rear Compartment Lid Strut Replacement.
5. Check and adjust the rear compartment lid as necessary. Refer to Rear Compartment Lid Adjustment.

Rear Side Door Upper Hinge and Lower Hinge Replacement

Removal Procedure

1. Open front doors.
2. Mark the hinge to pillar and hinge to door location for installation alignment purposes.

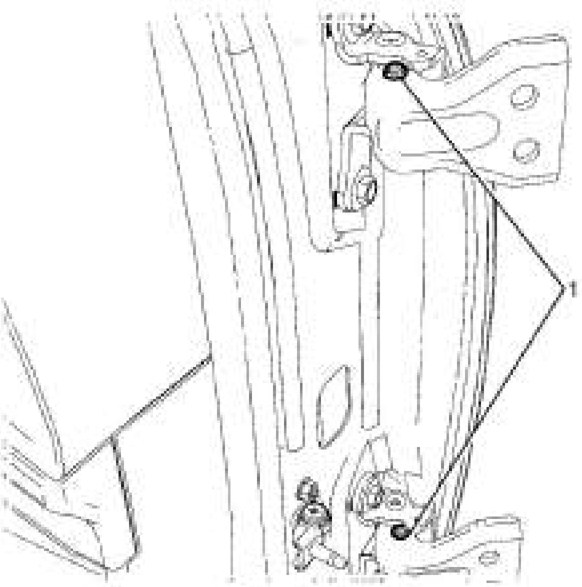


Important: Replace one hinge at a time then repeat procedure for the second hinge if needed.

Important: Remove the door hinge with the door fully latched on the striker.

3. Remove the hinge to door retaining bolts (2).
4. Remove the hinge to pillar retaining bolts (1) and remove the hinges one at a time.

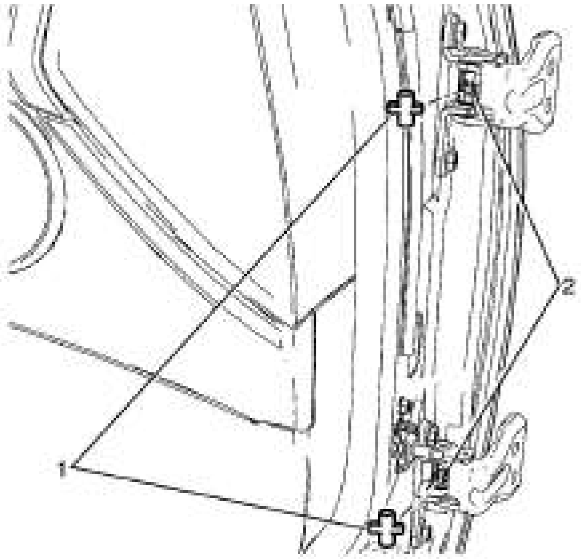
Installation Procedure



Important: Paint pins (1) are installed in NEW hinges and must be removed when fitted.

Important: Use a suitable tool to pry the paint pins (1) from the door hinges.

1. Remove the paint pins (1) from the NEW door hinges.

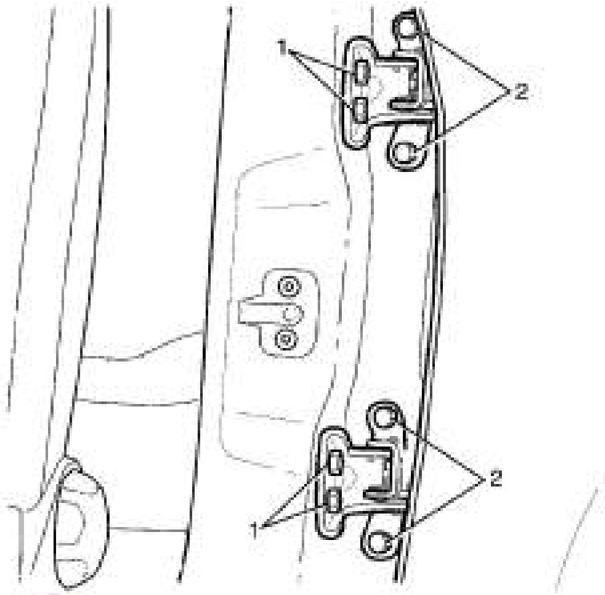


Important: The shipping clips (1) are only to hold the NEW door hinges (2) together in transit and must be removed when fitted.

Important: Use a suitable tool to remove the shipping clips (1) from the NEW door hinges (2).

2. Remove the shipping clips (1) from the NEW door hinges (2).
3. Align the hinge to pillar and hinge to door marks made prior to removal.

   Notice: Refer to Fastener Notice in the Preface section.



4. Install the hinge to pillar retaining bolts (1).

   Tighten
   Tighten the bolts to 28 N-m (21 lb ft).

5. Install the hinge to door retaining bolts (2).

   Tighten
   Tighten the bolts to 28 N-m (21 lb ft).

6. Close the front doors.

   Notice: Striker alignment is a crucial part of door latch operation. Do not use the door striker to adjust the door to the vehicle. Failure to properly adjust the striker can result in damage to the door latch and the striker.

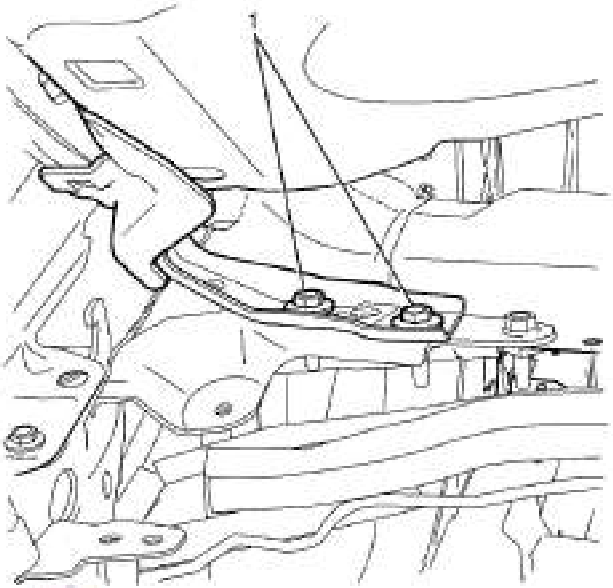
7. Adjust the door. Refer to Door Adjustment .

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Bolted Exterior Body Panels and Closures | Repair Instructions | **Document ID: 1977686**

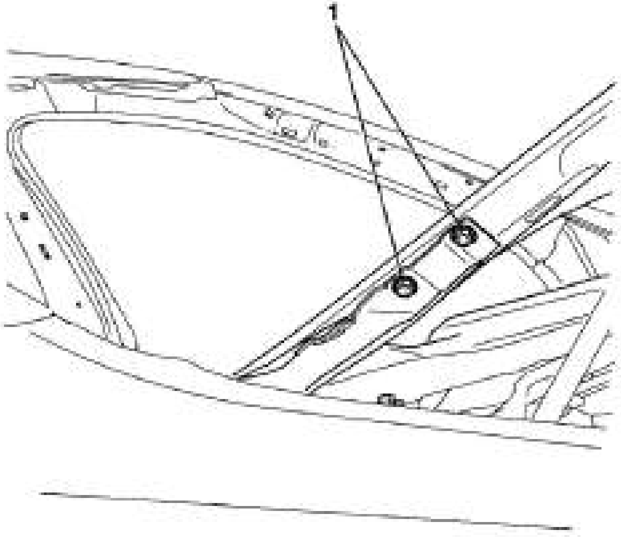
Hood Adjustment

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Install a suitable hood brace to the vehicle.



2. Loosen the hood hinge to dash and cowl panel brace retaining bolts (1).



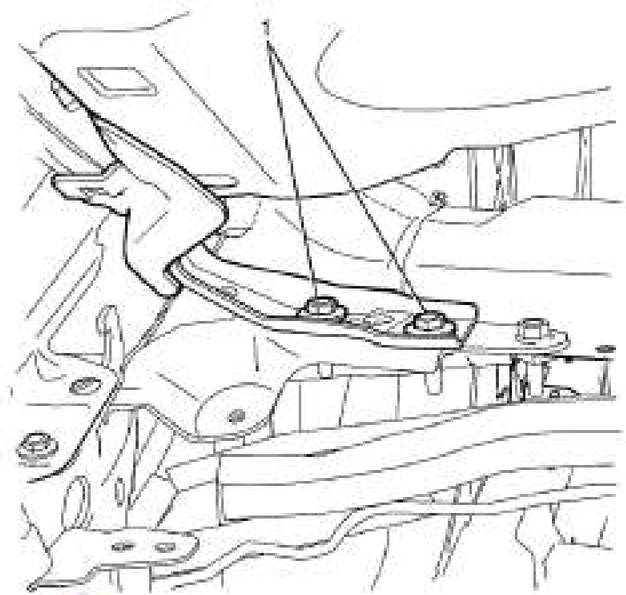
3. Loosen the hood hinge to hood retaining bolts (1).
4. Adjust the hood to obtain an even gap between 2.25 mm to 3.75 mm on both sides between the hood and the fenders, so that the hood is flush with both fenders on the front edge.

5. Adjust the hood to obtain an even gap between 2 mm to 6 mm between the hood and the front bumper fascia so that the hood is flush with the front bumper fascia.

   Notice: Refer to Fastener Notice in the Preface section.

6. Tighten the hood hinge to hood retaining bolts (1).

   Tighten
   Tighten the bolts to 20 N·m (15 lb ft).



7. Tighten the hood hinge to dash and cowl panel brace retaining bolts (1).

   Tighten
   Tighten the bolts to 20 N·m (15 lb ft).

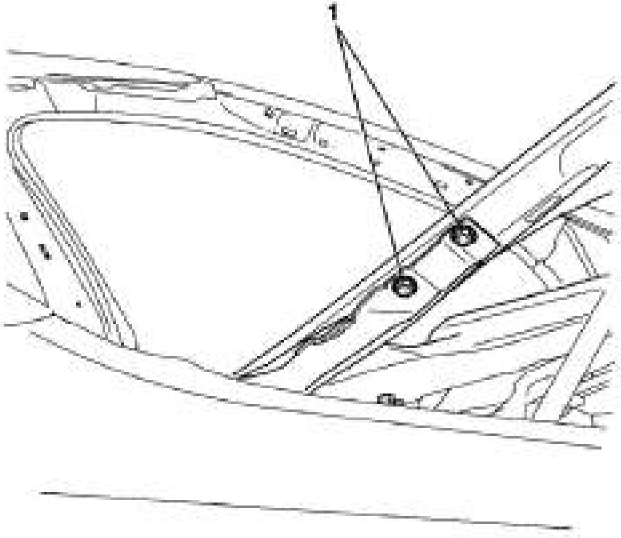
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Bolted Exterior Body Panels and Closures | Repair Instructions | Document ID: 1985250

Hood Replacement

Removal Procedure

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

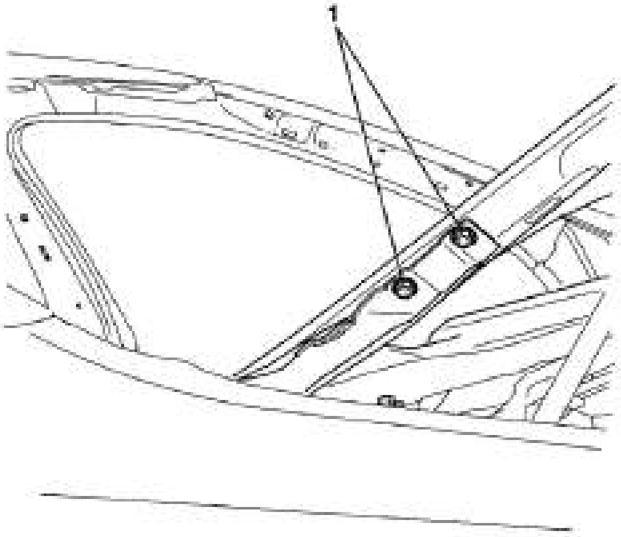
1. Install a suitable hood brace to the vehicle.
2. Apply tape to the corners of the panels and adjacent surfaces.
3. Using a grease pencil, mark the location of the hinge on the hood assembly.
4. Remove the hood bumpers from the hood. Refer to Hood Bumper Replacement .
5. Remove the hood insulator from the hood. Refer to Hood Insulator Replacement .
6. Remove the hood assist rods. Refer to Hood Open Assist Rod Replacement .



7. With the aid of an assistant, remove the hood to the hood hinge retaining bolts (1), repeat this procedure for the opposite side.
8. Remove the hood.
9. Remove the suitable hood brace from the vehicle.

Installation Procedure

1. With the aid of an assistant, install the hood to the vehicle.



2. Position the hood to the hood hinges using the grease pencil marks on the hood, repeat this procedure for the opposite side.
3. Install the suitable hood brace to the vehicle.

   Important: Do not fully tighten at this stage.

4. Install the hood to hood hinge retaining bolts (1).

   Do not fully tighten at this stage.

5. Install the hood assist rods. Refer to Hood Open Assist Rod Replacement .
6. Install the hood insulator to the hood. Refer to Hood Insulator Replacement .
7. Install the hood bumpers to the hood. Refer to Hood Bumper Replacement .
8. Adjust the hood as necessary. Refer to Hood Adjustment .

   Notice: Refer to Fastener Notice in the Preface section.

9. Tighten the hood to the hood hinge retaining bolts (1).

   Tighten
   Tighten the bolts to 20 N·m (15 lb ft).

10. Remove the suitable brace from the vehicle.
11. Carefully remove the tape from the corners of the panels and adjacent surfaces.

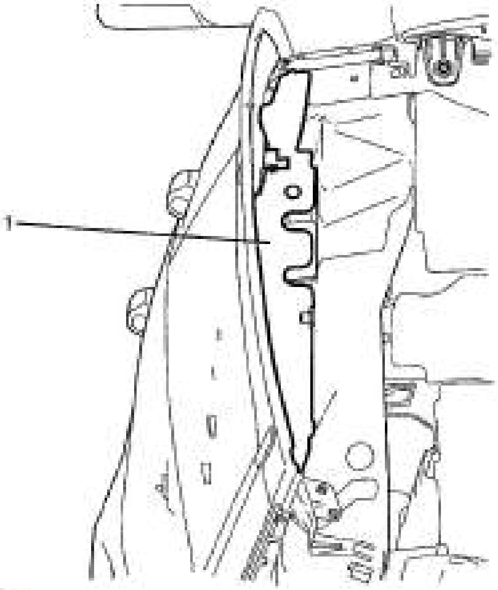
Front Fender Insulator Replacement

Removal Procedure

Caution: Refer to Vehicle Lifting Caution in the Preface section.

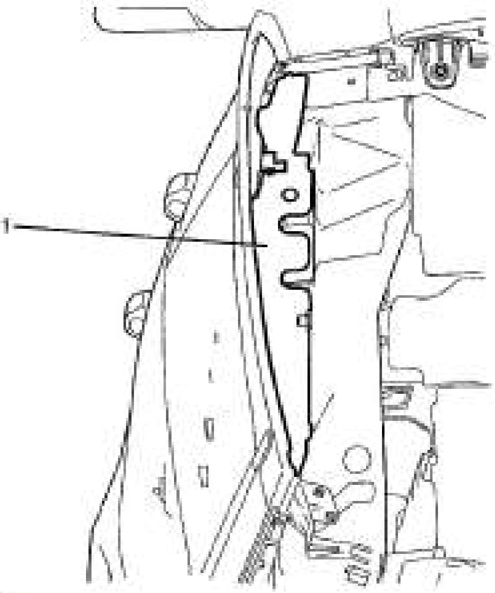
Caution: Refer to Safety Glasses Caution in the Preface section.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Remove the front wheel. Refer to Tire and Wheel Removal and Installation.
3. Remove the front wheelhouse liner. Refer to Front Wheelhouse Liner Replacement.
4. Remove the side indicator. Refer to Repeater Lamp Replacement.



5. Remove the front fender sound insulator (1) from the vehicle.

Installation Procedure



1. Install the front fender sound insulator (1) to the vehicle.
2. Install the side indicator. Refer to Repeater Lamp Replacement.
3. Install the front wheelhouse liner. Refer to Front Wheelhouse Liner Replacement.
4. Install the front wheel. Refer to Tire and Wheel Removal and Installation.
5. Lower the vehicle.

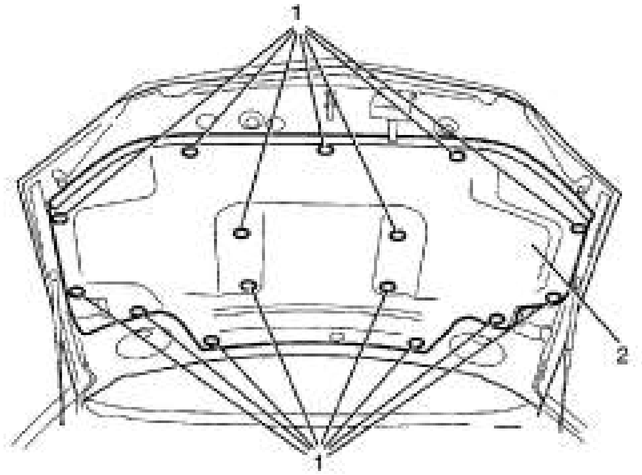
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Bolted Exterior Body Panels and Closures | Repair Instructions | **Document ID: 1995762**

Hood Insulator Replacement

Removal Procedure

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Install a suitable hood brace to the vehicle.

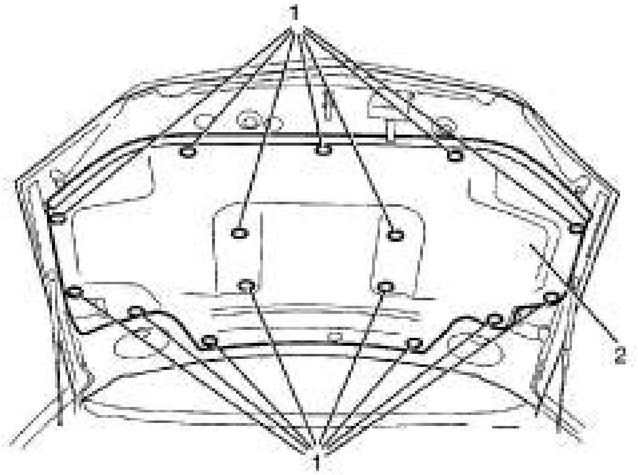


2. Remove the hood insulator to hood push-in retainers (1).

   Discard the retainers.

3. Remove the hood insulator (2) from the hood.

Installation Procedure



1. Position the hood insulator (2) to the hood.

   Important: Always use NEW push-in retainers.

2. Install the hood insulator to hood push-in retainers (1).
3. Remove the suitable hood brace from the vehicle.

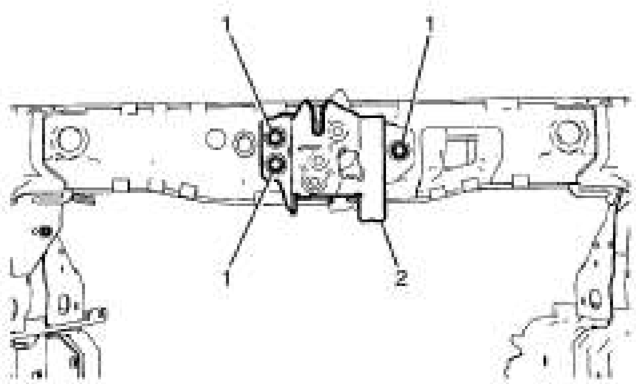
Hood Latch Adjustment

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

Important: Make sure that you have the proper alignment of the hood to the body before you tighten the hood latch retaining bolts under the following conditions:

- After removing the hood latch.
- After loosening the retaining bolts.
- After changing the hood adjustment.

1. Remove the radiator grille. Refer to Radiator Grille Replacement .



2. Loosen the hood latch to front end module retaining bolts (1).
3. With the hood latch to front end module retaining bolts loose, slowly lower the hood onto the hood latch (2) in order to achieve the proper cross vehicle adjustment of the hood latch.
4. Raise the hood.

Notice: Refer to Fastener Notice in the Preface section.

5. Tighten the hood latch to front end module retaining bolts (1).

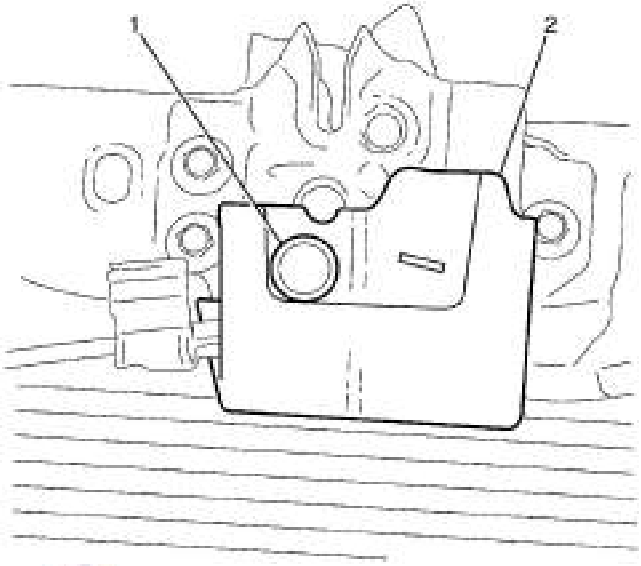
Tighten
Tighten the bolts to 9 N·m (80 lb in).

6. Install the radiator grille. Refer to Radiator Grille Replacement .
7. Close the hood and inspect for fit. Refer to Dimensions - Body .

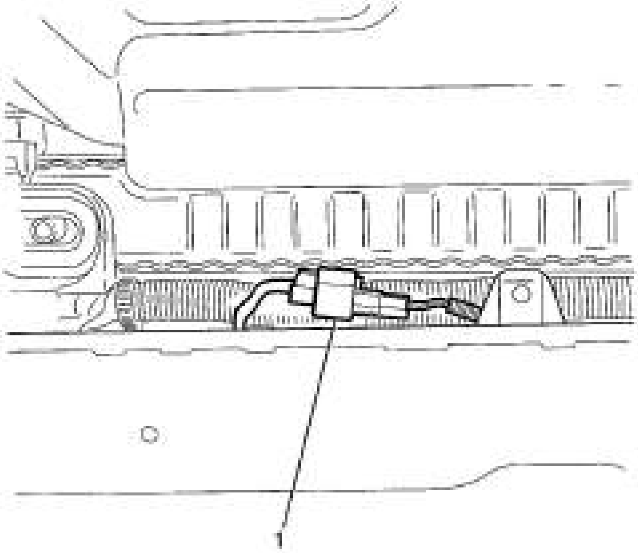
Hood Primary and Secondary Latch Replacement

Removal Procedure

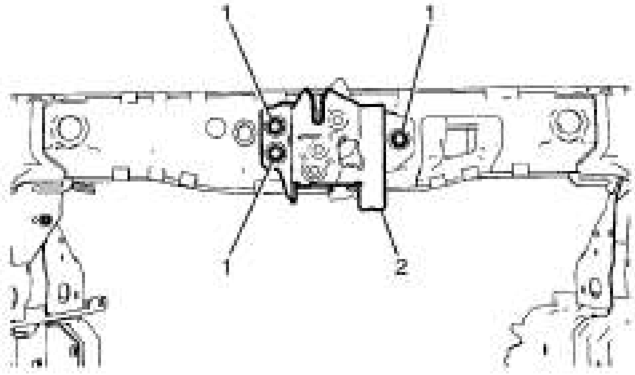
1. Remove the radiator grille. Refer to Radiator Grille Replacement .



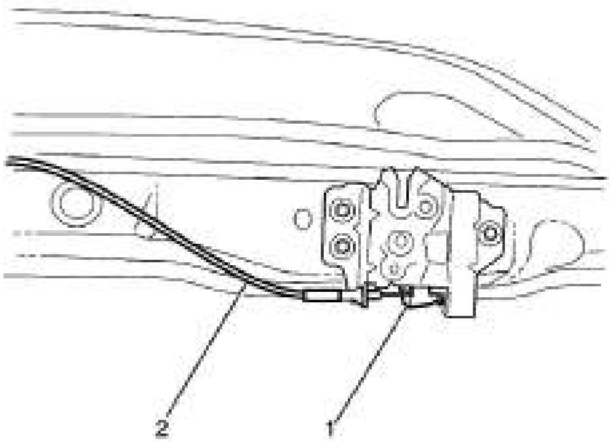
2. Remove the hood latch cover to hood latch retaining scrivet (1).
3. Remove the hood latch cover (2) from the hood latch.



4. Disconnect the hood latch wiring connector (1).

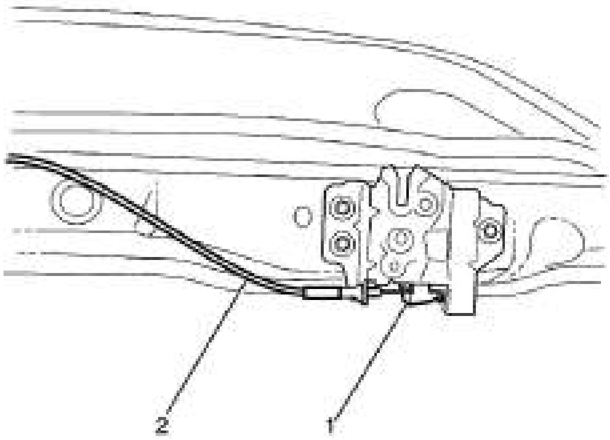


5. Remove the hood latch to front end module retaining bolts (1).
6. Detach the hood latch (2) from the front end module.

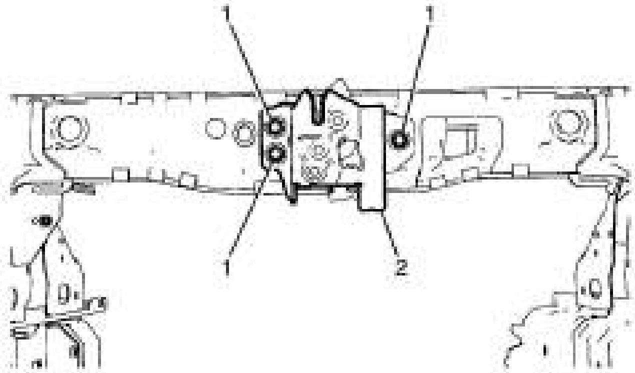


7. Disconnect the hood release cable (2) from the hood latch (1).
8. Remove the hood latch (1) from the front end module.

Installation Procedure



1. Connect the hood release cable (2) to the hood cable latch (1).



2. Position the hood latch (2) to the front end module.

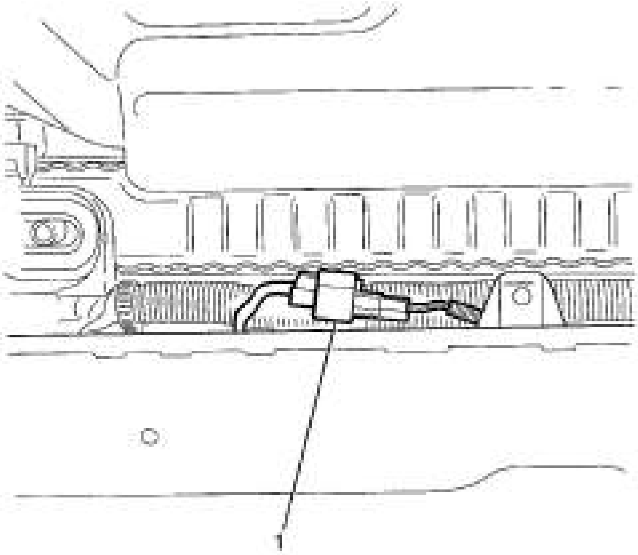
   Notice: Refer to Fastener Notice in the Preface section.

   Important: Do not fully tighten at this stage.

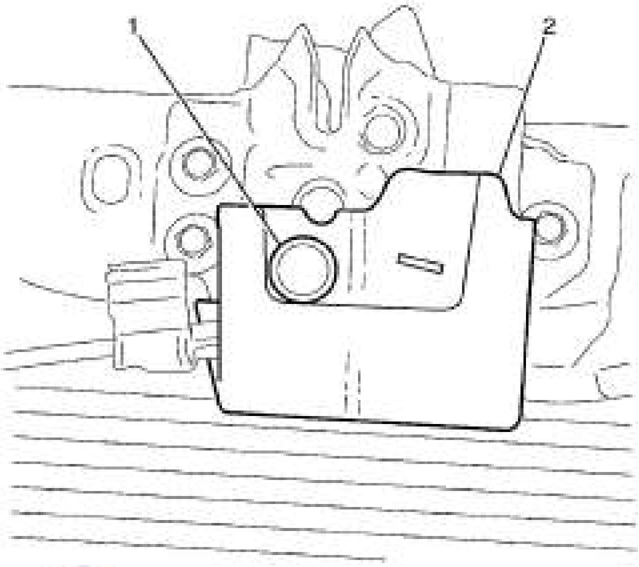
3. Install the hood latch to front end module retaining bolts (1).

   Do not fully tighten at this stage.

4. Adjust the hood latch. Refer to Hood Latch Adjustment .



5. Connect the hood latch wiring connector (1)



6. Install the hood latch cover (2) to the hood latch.
7. Install the hood latch cover to hood latch retaining scrivet (1).
8. Install the radiator grille. Refer to Radiator Grille Replacement .

Hood Primary Latch Striker Replacement

The hood latch striker is not replaceable. Refer to Hood Replacement .

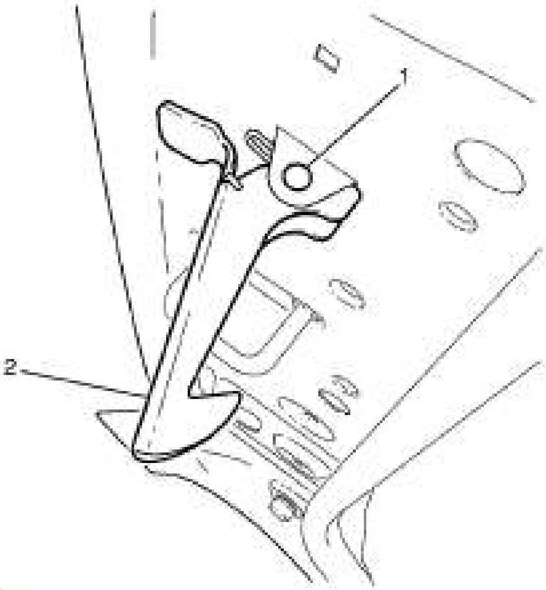
Hood Secondary Latch Replacement

Removal Procedure

Caution: Refer to Protective Goggles and Glove Caution in the Preface section.

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Install a suitable hood brace to the vehicle.



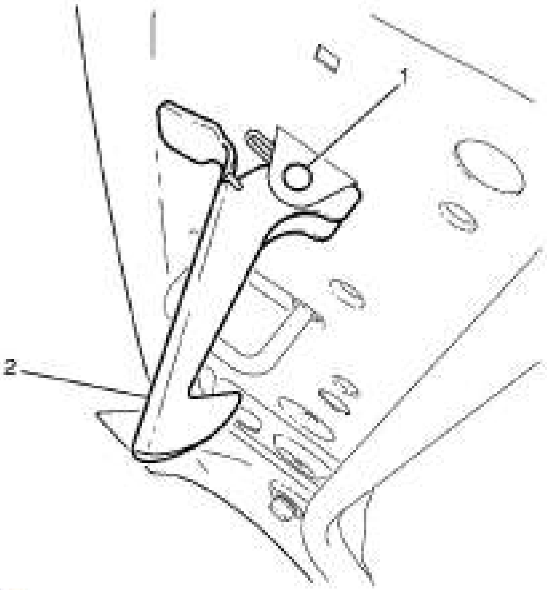
Important: The secondary hood latch retaining pin (1) is a single use part only. It must be discarded after removal.

2. Remove the secondary hood latch retaining pin (1) from the secondary hood latch (2).

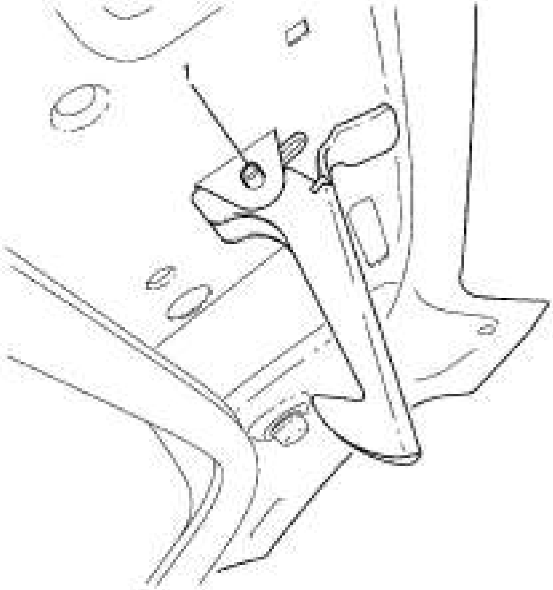
   Discard the pin.

3. Remove the secondary hood latch (2) from the vehicle.

Installation Procedure



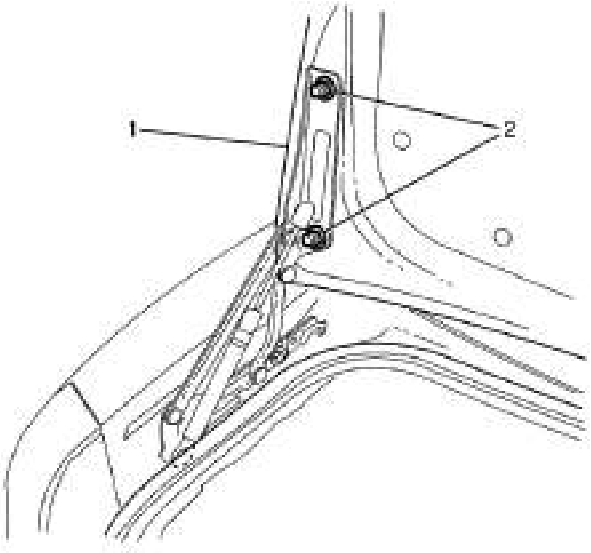
1. Install the secondary hood latch (2) to the vehicle.
2. Install a NEW secondary hood latch retaining pin (1) to the secondary hood latch.



3. Crimp the exposed end of the secondary hood latch retaining pin (1) to make sure the retaining pin is secure.

Rear Compartment Lid Adjustment

Front-to-Rear, Side-to-Side



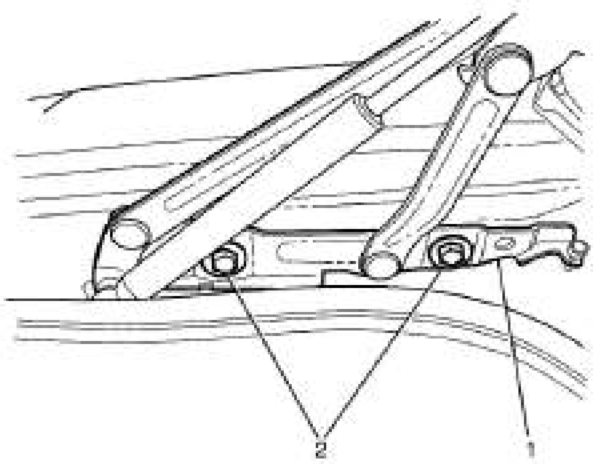
1. Loosen the rear compartment lid to rear compartment lid hinge retaining nuts (2). Repeat for opposite side.
2. Align the rear compartment lid (1) in order to achieve an equal gap of 2.25 to 3.75 mm around the rear compartment lid to the rear quarter panels.

   Notice: Refer to Fastener Notice in the Preface section.

3. Tighten the rear compartment lid to rear compartment lid hinge retaining nuts (2). Repeat for opposite side.

   Tighten
   Tighten the nuts to 22 N·m (16 lb ft).

Up and Down Adjustment



1. Loosen the rear compartment lid hinge to rear quarter panel retaining bolts (1). Repeat for opposite side.
2. Align the rear compartment lid in order to achieve an equal gap of 5 to 7 mm from the rear compartment lid to the rear bumper fascia.
3. Tighten the rear compartment lid hinge to rear quarter panel retaining bolts (2). Repeat for opposite side.

   Tighten
   Tighten the bolts to 22 N·m (16 lb ft)

4. Adjust the rear compartment overslam bumpers for flushness.

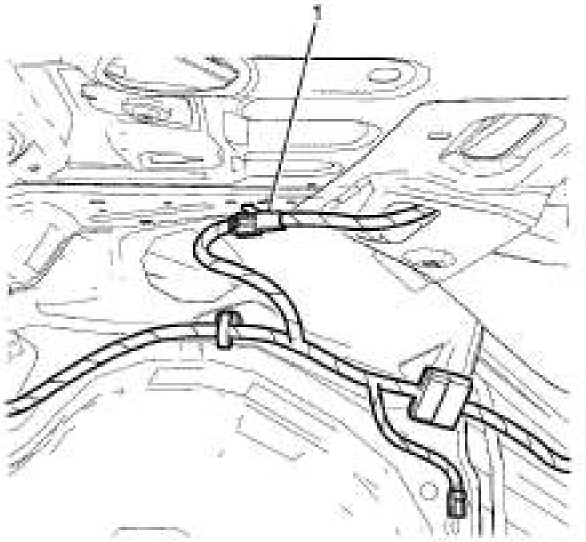
Rear Compartment Lid Replacement

Removal Procedure

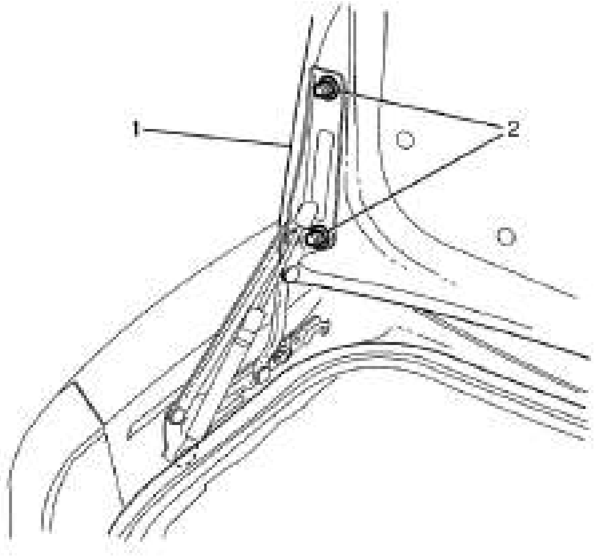
Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

Important: Insert packing foam into the corners of the rear compartment lid to the vehicle body.

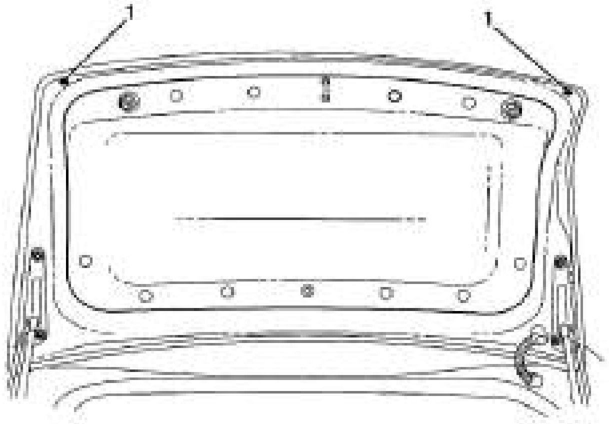
1. Support the rear compartment lid with a suitable brace.
2. Remove the rear compartment lid carpet. Refer to Rear Compartment Lid Inner Panel Trim Replacement .



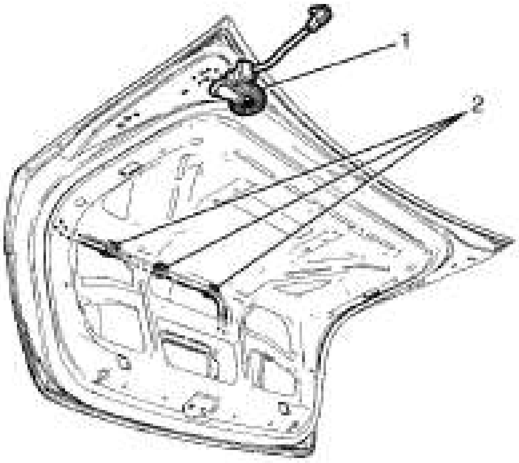
3. Disconnect the rear compartment lid wiring harness (1) from the body wiring harness.



4. With the aid of an assistant, remove the rear compartment lid to rear compartment lid hinge retaining nuts (2). Repeat for opposite side.
5. Remove the rear compartment lid (1) from the vehicle.
6. Remove the rear compartment lid applique. Refer to Rear Compartment Lid Applique Replacement .
7. Remove the rear compartment lid latch. Refer to Rear Compartment Lid Latch Replacement .
8. Remove the rear compartment lid overslam bumpers from the rear compartment lid. Refer to Rear Compartment Lid Overslam Bumper Replacement .



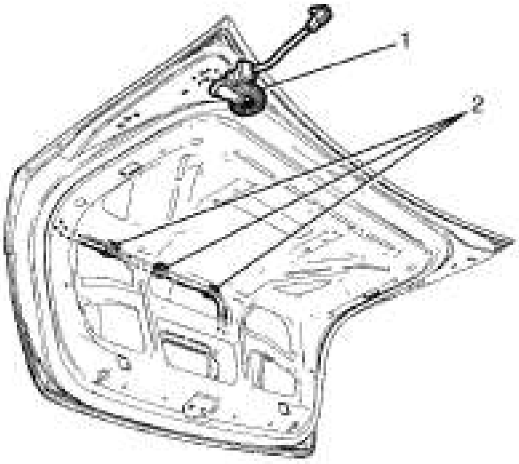
9. Remove the rear compartment lid drain plugs (1) from the rear compartment lid.



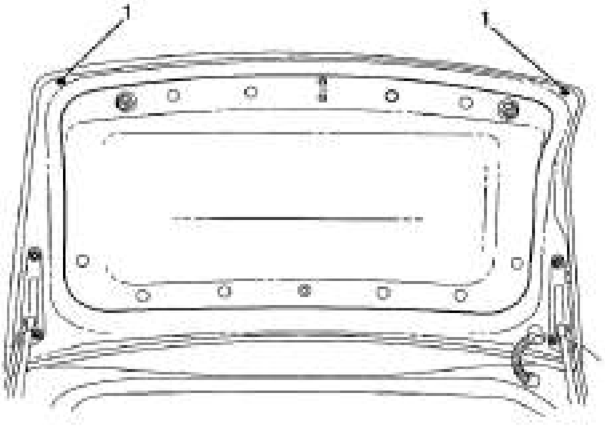
10. Remove the rear compartment lid wiring harness to rear compartment lid retaining clips (2).
11. Remove the rear compartment lid wiring harness insulator (1) from rear compartment lid.
12. Remove the rear compartment lid wiring harness from the rear compartment lid.

Installation Procedure

1. Install the rear compartment lid wiring harness to the rear compartment lid.

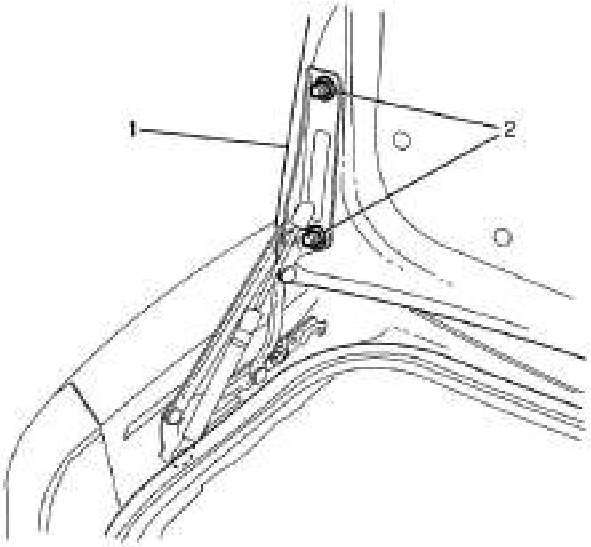


2. Install the rear compartment lid wiring harness insulator (1) to the rear compartment lid.
3. Install the rear compartment lid wiring harness to rear compartment lid retaining clips (2).



4. Install the rear compartment lid drain plugs (1) to the rear compartment lid.
5. Install the rear compartment lid overslam bumpers to the rear compartment lid. Refer to Rear Compartment Lid Overslam Bumper Replacement .
6. Install the rear compartment lid latch. Refer to Rear Compartment Lid Latch Replacement .
7. Install the rear compartment lid applique. Refer to Rear Compartment Lid Applique Replacement .

Notice: Refer to Fastener Notice in the Preface section.

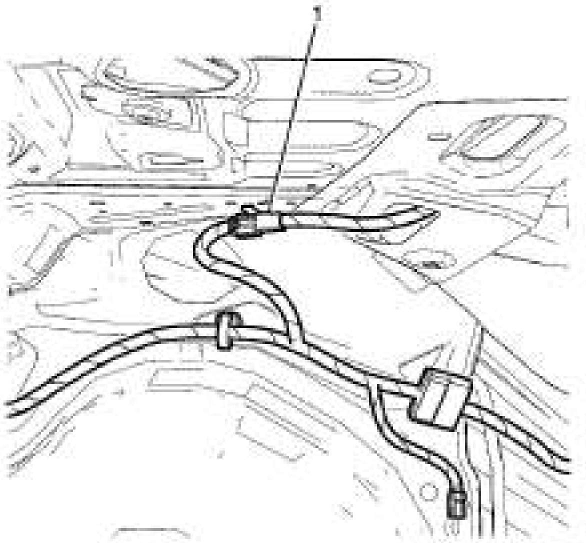


8. With the aid of an assistant, install the rear compartment lid (1) to the vehicle.
9. Support the rear compartment lid with a suitable brace.

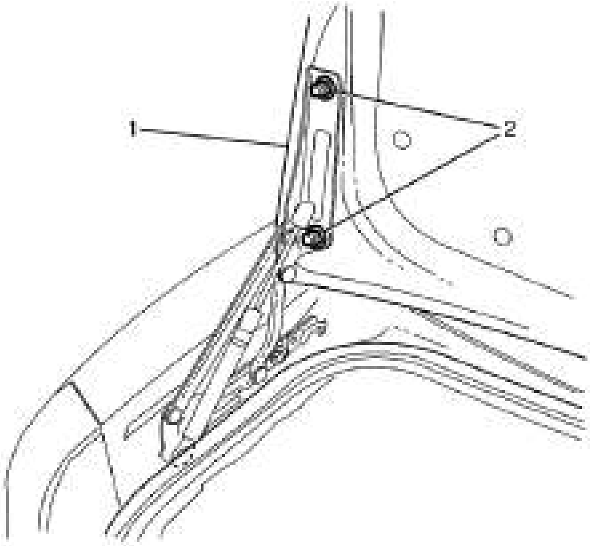
Important: Do not fully tighten the rear compartment lid retaining nuts (2) at this stage.

10. Install the rear compartment lid to rear compartment lid hinge retaining nuts (2). Repeat for opposite side.

    Do not fully tighten at this stage.



11. Connect the rear compartment lid wiring harness (1) to the body wiring harness.
12. Refer to Rear Compartment Lid Inner Panel Trim Replacement .
13. Remove the suitable brace from the vehicle.
14. Adjust the rear compartment lid as necessary. Refer to Rear Compartment Lid Adjustment .



15. Tighten the rear compartment lid to rear compartment lid hinge retaining nuts (1). Repeat

for opposite side.

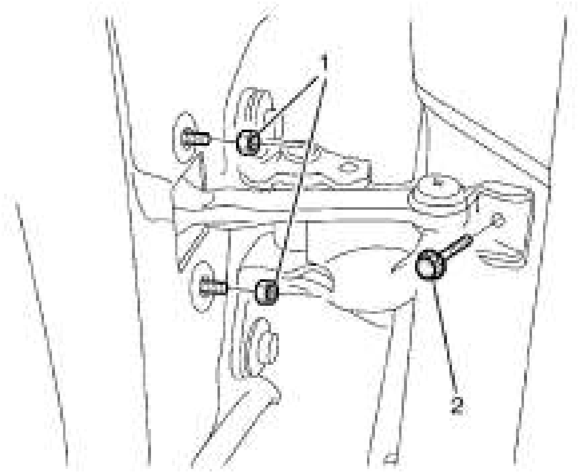
Tighten

Tighten the nuts to 22 N·m (16 lb ft).

Front Side Door Check Link Replacement

Removal Procedure

1. Remove the door trim panel. Refer to Front Side Door Trim Panel Replacement .
2. Pull back the forward half of the water deflector from the door panel to access the check link.

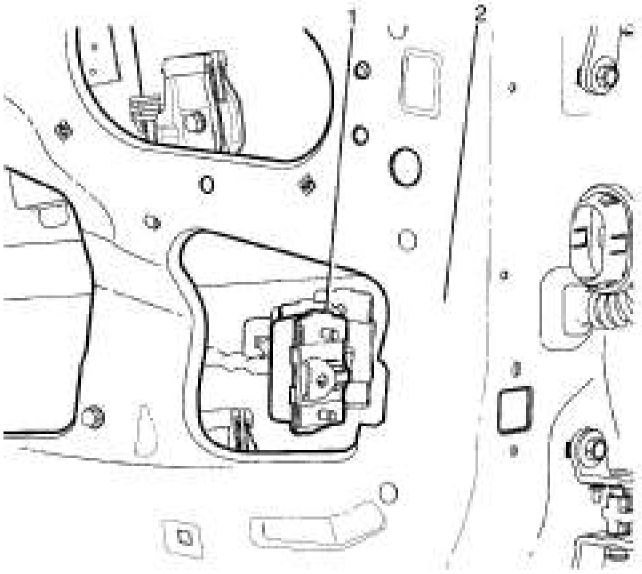


Important: The door check link to pillar retaining bolt (2) is a single use part and must be discarded after removal.

3. Remove the door check link to pillar retaining bolt (2).

   Discard the bolt.

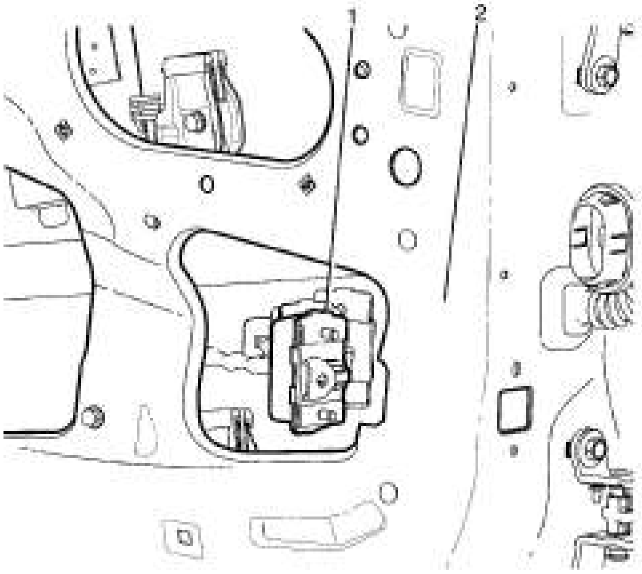
4. Remove the door check link to door retaining nuts (1).



Important: Remove the check link (1) through the front lower access hole.

5. Remove the door check link (1) from the door (2).

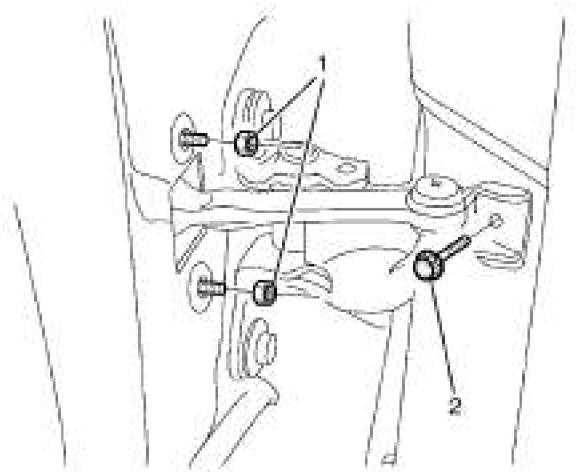
Installation Procedure



Important: Install the check link (1) through the front lower access hole.

1. Install the door check link (1) to the door (2).

Notice: Refer to Fastener Notice in the Preface section.



2. Install the NEW door check link to pillar retaining bolt (1).

   Tighten
   Tighten the bolt to 25 N-m (18 lb in).

3. Install the door check link to door retaining nuts (1).

   Tighten
   Tighten the nuts to 6 N-m (53 lb in).

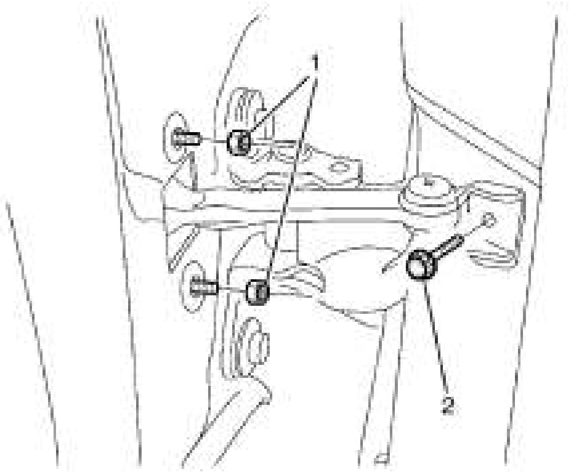
   Important: Firmly press the water deflector where adhesive is applied to make sure of a water tight bond.

4. Install the water deflector to the door.
5. Install the door trim panel. Refer to Front Side Door Trim Panel Replacement .

Rear Side Door Check Link Replacement

Removal Procedure

1. Remove the door trim panel. Refer to Rear Side Door Trim Panel Replacement.
2. Pull the forward half of the water deflector away from the door panel in order to access the check link.

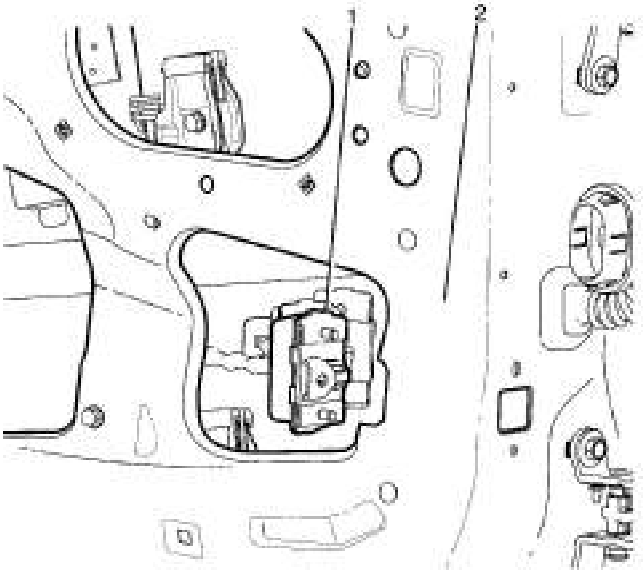


Important: The door check link to pillar retaining bolt (2) is a single use part and must be discarded after removal.

3. Remove the door check link to pillar retaining bolt (2).

   Discard the bolt.

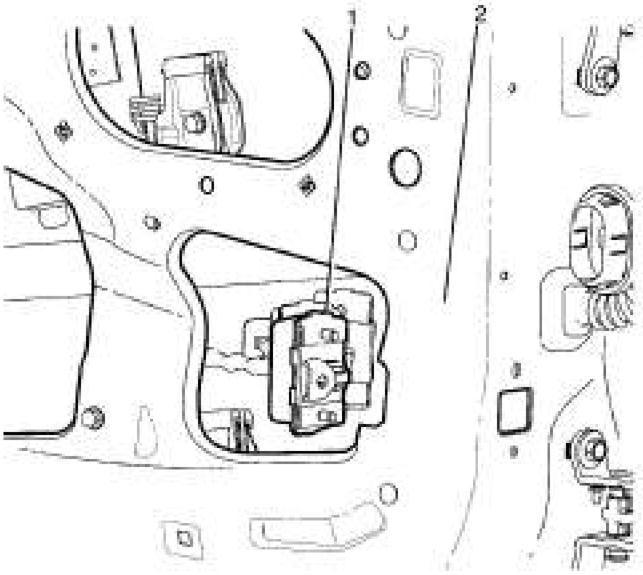
4. Remove the door check link to door retaining nuts (1).



Important: Remove the check link through the front lower access hole.

5. Remove the door check link (1) from the door (2).

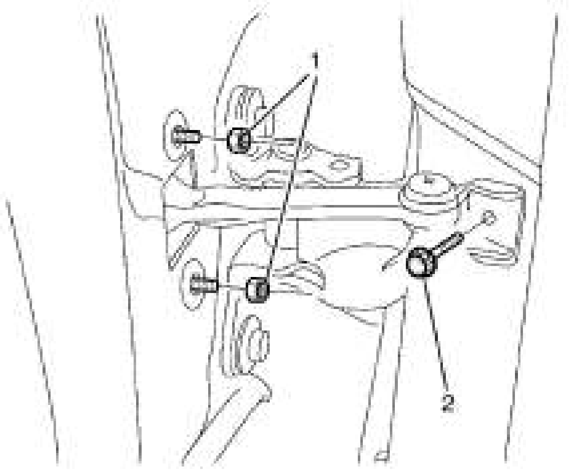
Installation Procedure



Important: Install the check link through the front lower access hole.

1. Install the door check link (1) into the door (2).

Notice: Refer to Fastener Notice in the Preface section.



2. Install the NEW door check link to pillar retaining bolt (2).

   Tighten
   Tighten the bolt to 25 N-m (18 lb in).

3. Install the door check link to door retaining nuts (1).

   Tighten
   Tighten the nuts to 6 N-m (53 lb in).

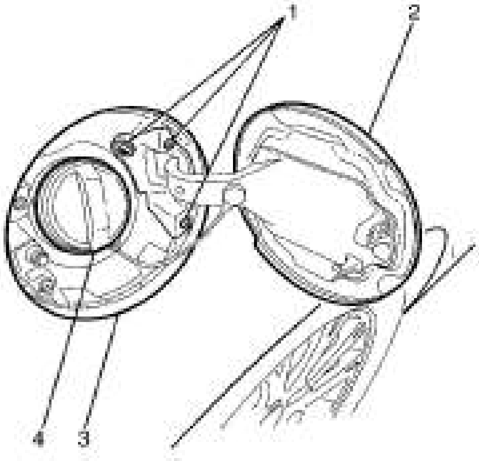
   Important: Firmly press the water deflector where adhesive is applied to make sure of a water tight bond.

4. Install the water deflector to the door.
5. Install the door trim panel. Refer to Rear Side Door Trim Panel Replacement.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Bolted Exterior Body Panels and Closures | Repair Instructions | Document ID: 1990459

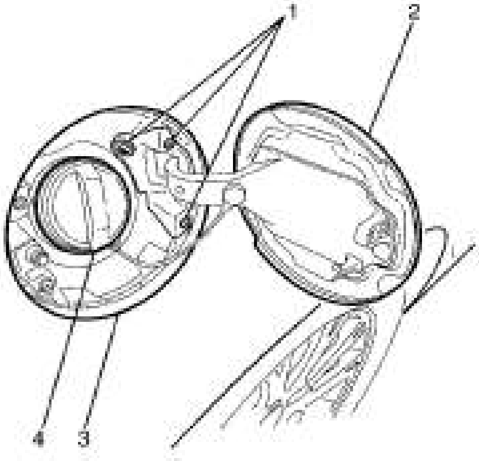
Fuel Tank Filler Door Replacement

Removal Procedure



1. Remove the fuel cap (4).
2. Remove the fuel tank filler door to rear quarter panel retaining torx screws (1).
3. Remove the fuel tank filler door (2) from the rear quarter panel (3).

Installation Procedure



1. Position the fuel tank filler door (2) to the rear quarter panel (3).
2. Install the fuel tank filler door to rear quarter panel retaining torx screws (1).
3. Align the fuel tank filler door to achieve an equal gap of 1.5 to 2.5 mm (0.06 to 0.10 in) around the fuel tank filler door (2) to the rear quarter panel (3).

   Notice: Refer to Fastener Notice in the Preface section.

4. Tighten the fuel tank filler door to rear quarter panel retaining torx screws (1).

   Tighten
   Tighten the screws to 2 N·m (18 lb in).

5. Install the fuel cap (4).

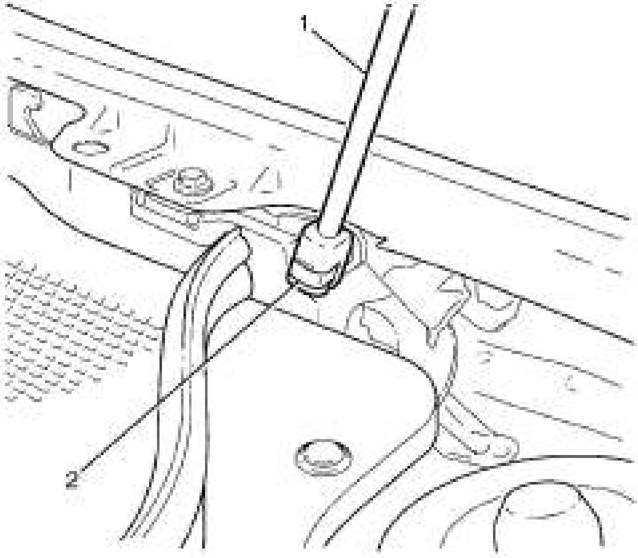
Hood Open Assist Rod Replacement

Removal Procedure

Notice: Apply pressure only at the end of the liftgate/hood assist rod that you are removing or attaching. Do NOT apply pressure to the middle of the rod because damage or bending will result.

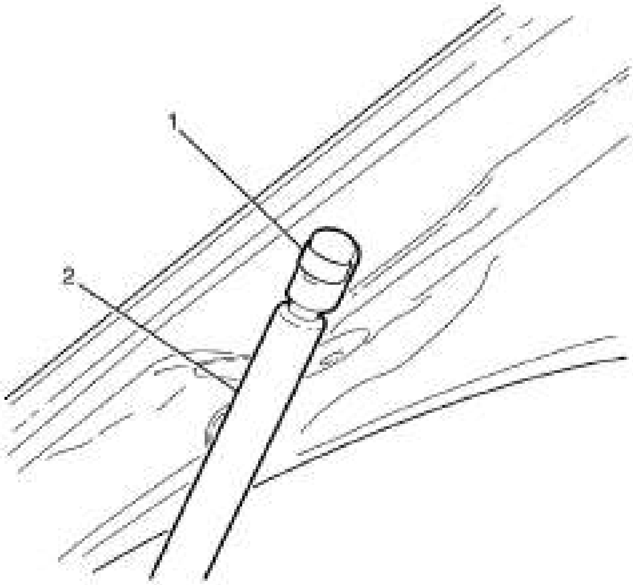
Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Install a suitable hood brace to the vehicle.



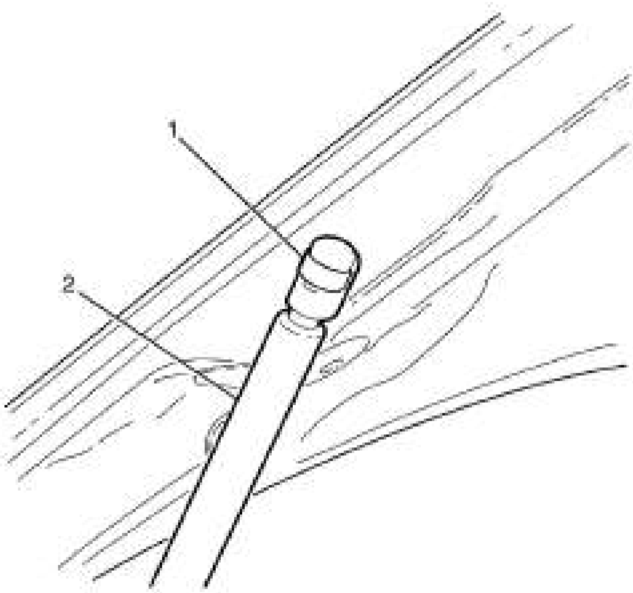
Important: Do not fully remove the hood assist rod securing clips from the hood assist rod, as this will assist in the installation.

2. Using a suitable tool, release the securing clip (2) retaining the hood assist rod (1) to the hood assist rod lower ball stud.

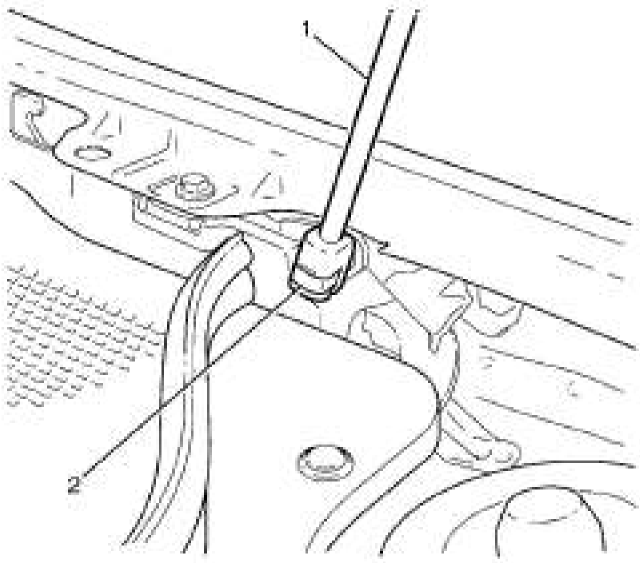


3. Using a suitable tool, release the securing clip (1) retaining the hood assist rod (2) to the hood assist rod upper ball stud.
4. Remove the hood assist rod (2) from the vehicle.

Installation Procedure



1. Press the hood assist rod (2) onto the hood assist rod upper ball stud. Listen for an audible click to confirm fitting.
2. Make sure that the hood assist rod securing clip (1) is fully seated on the hood assist rod (2).



3. Press the hood assist rod (1) onto the hood assist rod lower ball stud. Listen for an audible click to confirm fitting.
4. Make sure that the hood assist rod securing clip (2) is fully seated on the hood assist rod (1).
5. Remove the suitable hood brace from the vehicle.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Bolted Exterior Body Panels and Closures | Repair Instructions | **Document ID: 1977699**

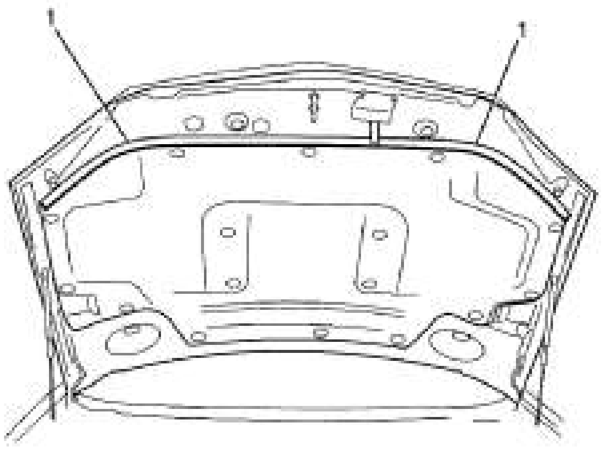
Hood Front Seal Replacement

Removal Procedure

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

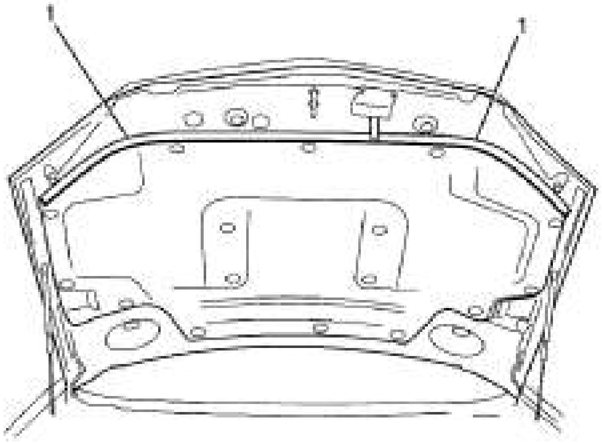
1. Install a suitable hood brace to the vehicle.

Caution: Refer to Safety Glasses Caution in the Preface section.



2. Using a suitable tool, carefully work the hood front seal (1) off the hood from side to side.
3. Remove the hood front seal (1) from the hood.

Installation Procedure



1. Position the hood front seal (1) to the hood.
2. Install the push-in retainers to secure the hood front seal (1) to the hood.
3. Remove the suitable hood brace from the vehicle.

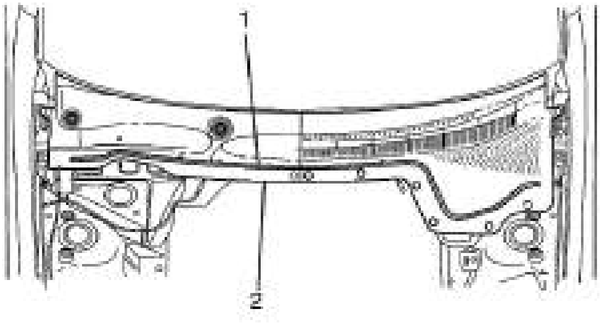
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Bolted Exterior Body Panels and Closures | Repair Instructions | **Document ID: 1977700**

Hood Rear Seal Replacement

Removal Procedure

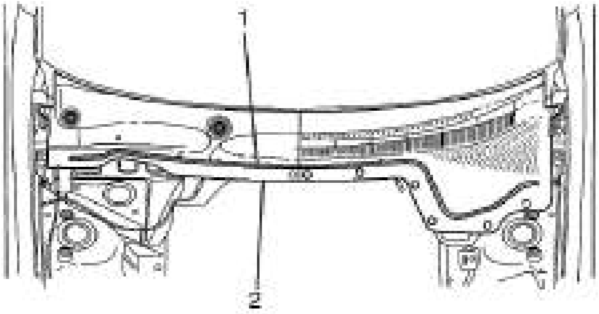
> **Important:** When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Install a suitable hood brace to the vehicle.

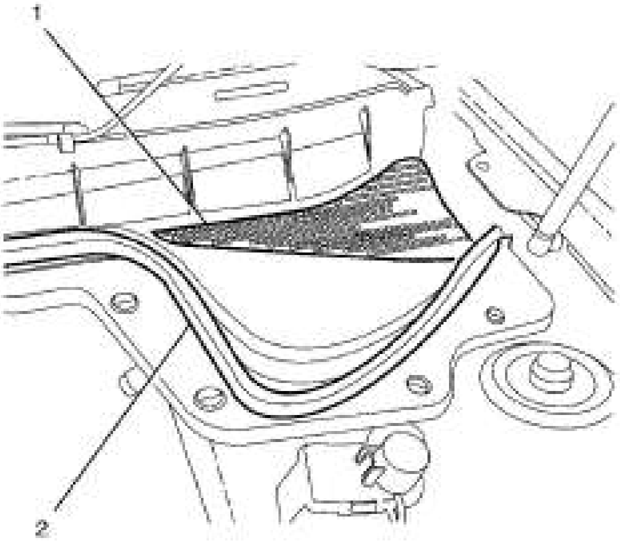


2. Remove the hood rear seal (1) from the air inlet grille panel (2) lip.

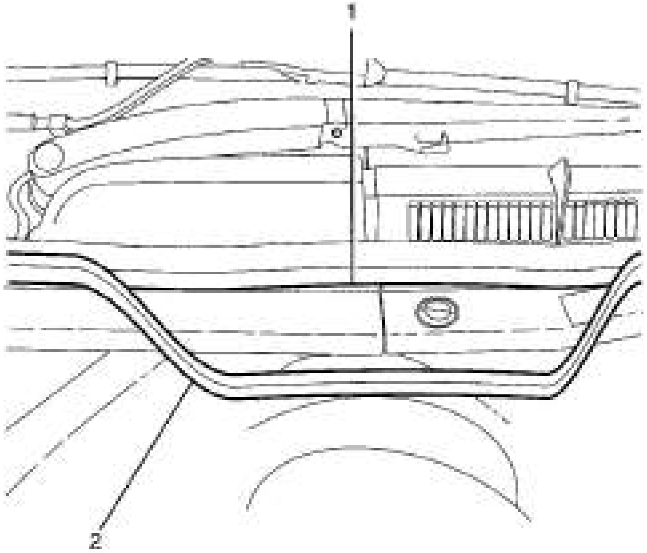
Installation Procedure



1. Install the hood rear seal (1) to the air inlet grille panel (2) lip.



2. Install the ends of the hood rear seal (2) to the ends of the air inlet grille panel (1).

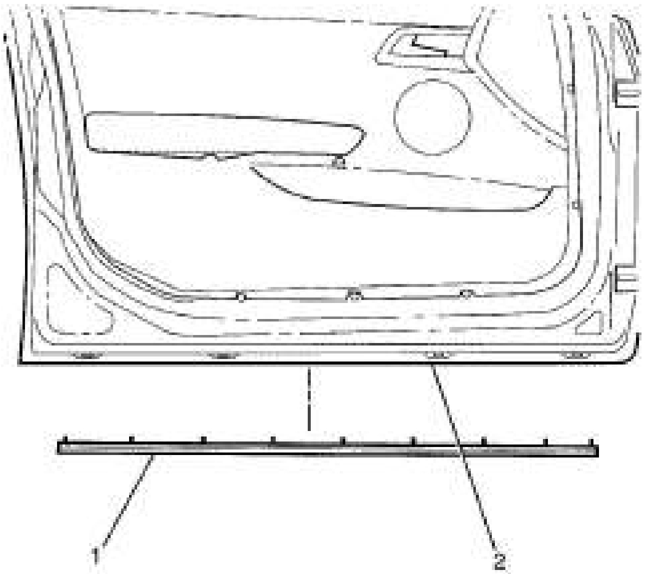


Important: The rear hood seal will stretch to fit the length across the air inlet grille panel.

3. Install the remaining portion of the hood rear seal (2) to the air inlet grille panel, working from the outer edges to the centre of the vehicle.
4. Remove the suitable hood brace from the vehicle.

Front Side Door Bottom Auxiliary Sealing Strip Replacement

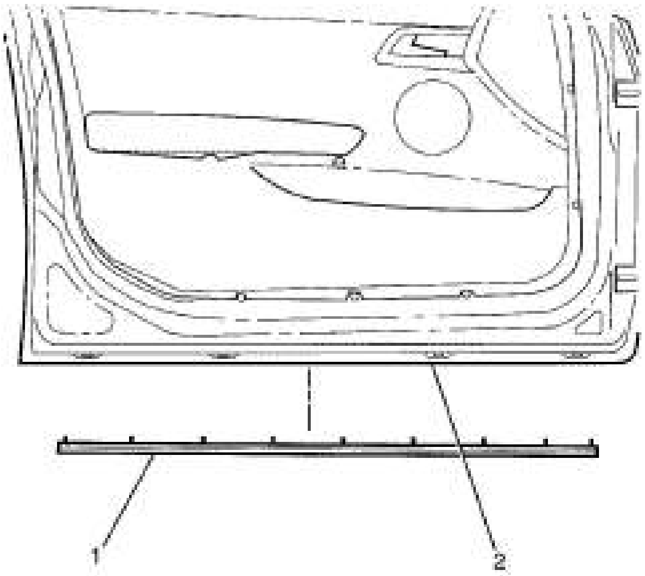
Removal Procedure



Important: Pull the front door bottom auxiliary sealing strip (1) from the door (2) to detach the retainers.

Remove the front door bottom auxiliary sealing strip (1) from the door (2).

Installation Procedure

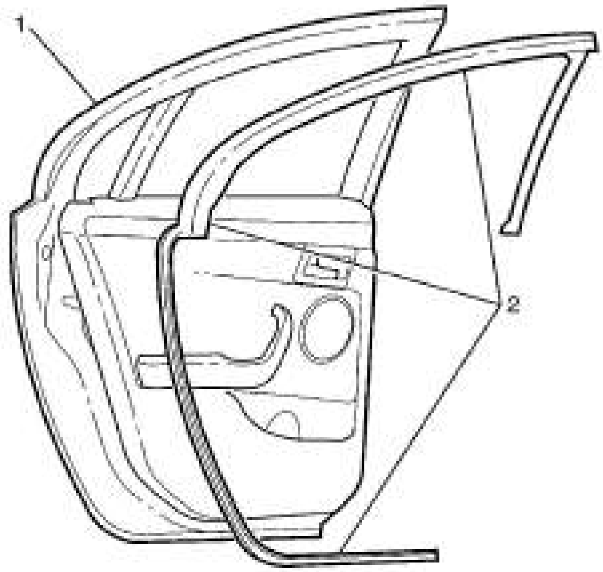


Important: Push the bottom auxiliary sealing strip (1) to the door (2) by hand to attach the retainers.

Install the front door bottom auxiliary sealing strip (1) to the door (2).

Rear Side Door Bottom Auxiliary Sealing Strip Replacement (Sedan)

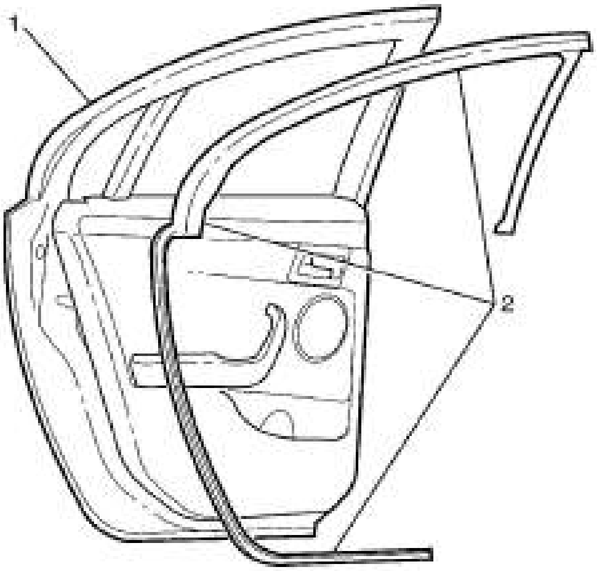
Removal Procedure



Important: Pull the sealing strip (2) from the door (1) to detach the retainers.

Remove the sealing strip (2) from the door (1).

Installation Procedure

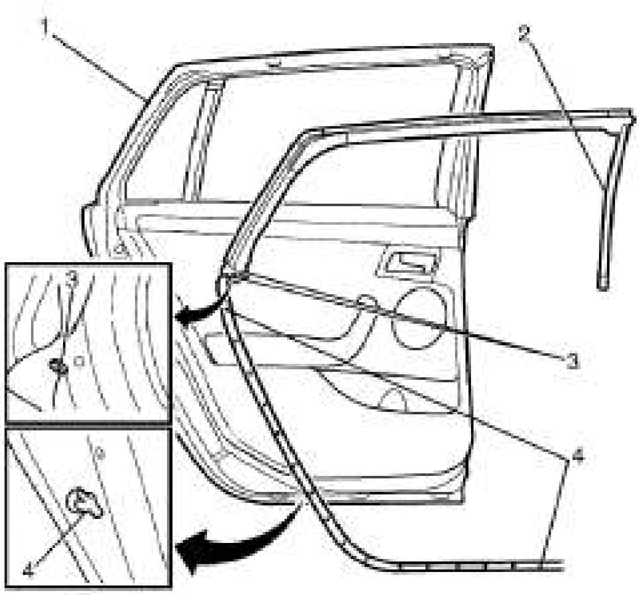


Important: Push the sealing strip (2) to the door (1) to attach the retainers.

Install the sealing strip (2) to the door (1).

Rear Side Door Bottom Auxiliary Sealing Strip Replacement (Sportwagon)

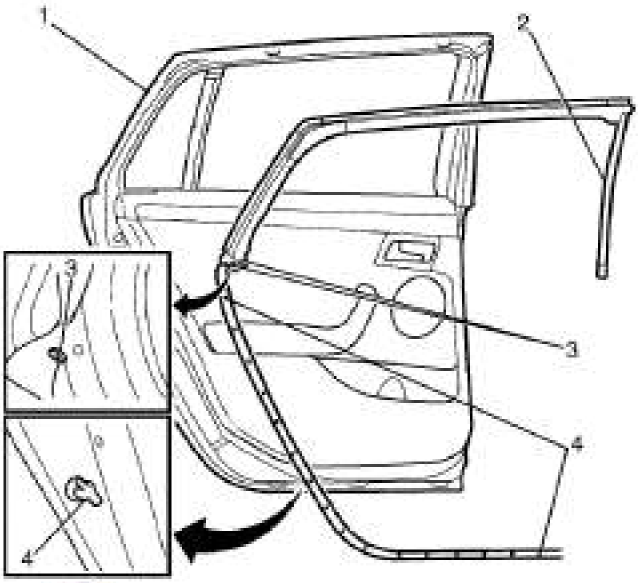
Removal Procedure



Important: Pull the sealing strip (2) from the rear door (1) to detach the retainers (3) and the lower rubber clips (4).

Detach the retaining clips all around the sealing strip (2) and remove the sealing strip (2) from the rear door (1).

Installation Procedure



Important: Push the sealing strip (2) to the rear door (1) to attach the retainers (3) and the lower rubber clips (4).

Install the sealing strip (2) to the rear door (1).

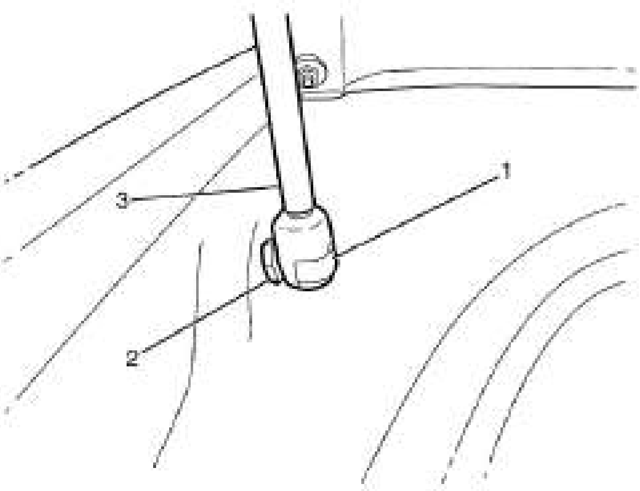
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Bolted Exterior Body Panels and Closures | Repair Instructions | Document ID: 2067497

Liftgate Strut Replacement

Removal Procedure

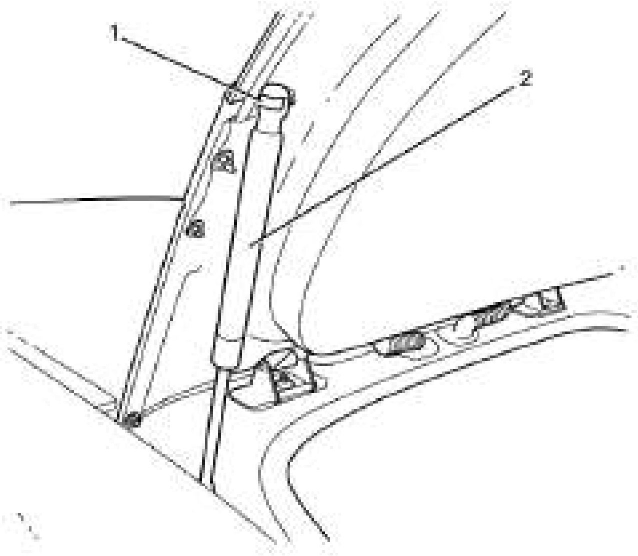
Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Install a suitable liftgate brace to the vehicle.



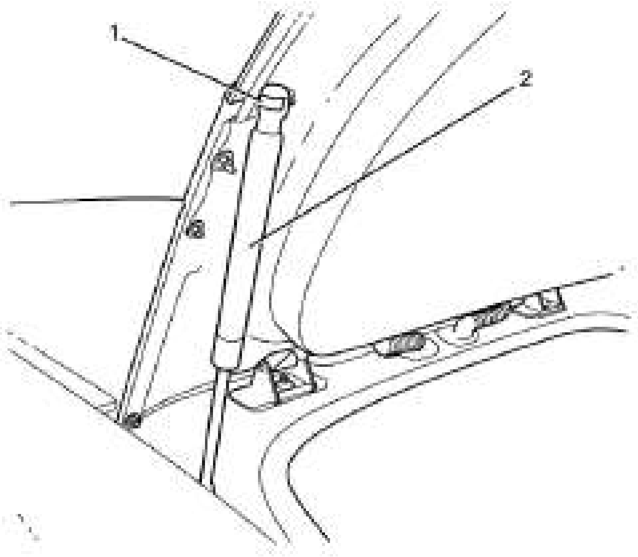
Important: Apply pressure only at the end of the liftgate strut that you are removing or attaching. DO NOT apply pressure to the middle of the strut because damage or bending will result.

2. Using a suitable tool, release the liftgate strut to lower strut stud retaining clip (1).
3. Detach the liftgate strut (3) from lower strut stud (2).



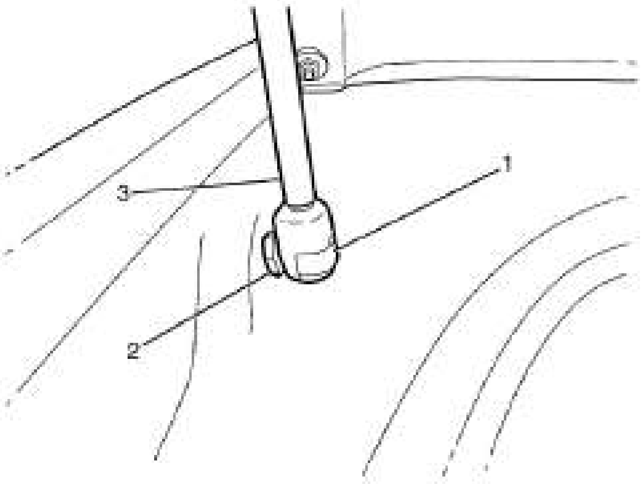
4. Using a suitable tool, release the liftgate strut to upper strut stud retaining clip (1).
5. Remove the liftgate strut (2) from the vehicle.

Installation Procedure



Important: Make sure that the liftgate strut to upper strut stud retaining clip (1) engages correctly securing the liftgate strut (2).

1. Install the liftgate strut (2) onto the upper strut stud.



Important: Apply pressure only at the end of the liftgate strut that you are removing or attaching. DO NOT apply pressure to the middle of the strut because damage or bending will result.

Important: Make sure that the liftgate strut to lower strut stud retaining clip (1) engages correctly securing the liftgate strut (2).

2. Attach the liftgate strut (3) to the lower strut stud (2).

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

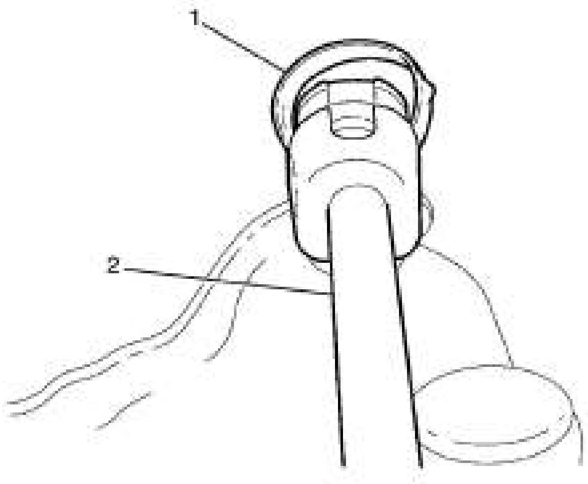
3. Remove the suitable liftgate brace from the vehicle.

Rear Compartment Lid Strut Replacement

Removal Procedure

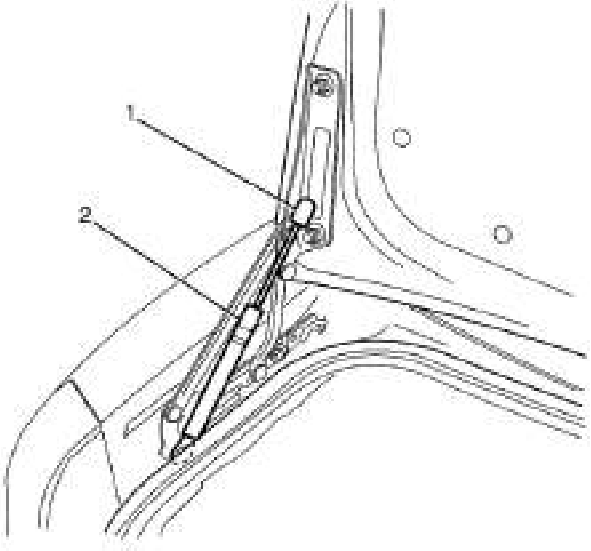
Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Support the rear compartment lid with a suitable brace.



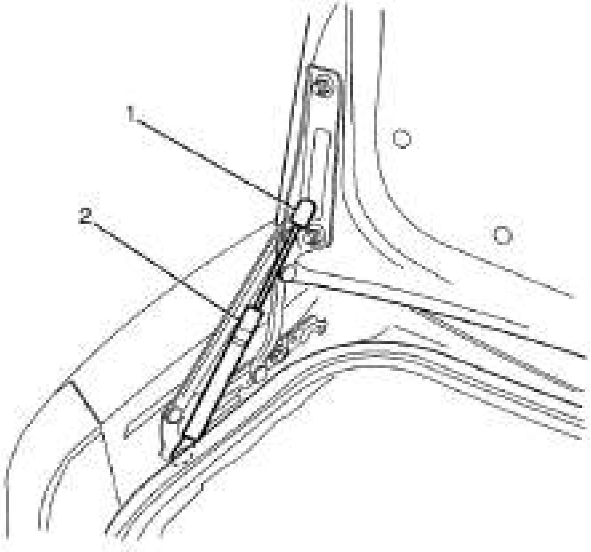
Notice: Apply pressure only at the end of the liftgate/hood assist rod that you are removing or attaching. Do NOT apply pressure to the middle of the rod because damage or bending will result.

2. Using a suitable tool, release the rear compartment lid strut to the lower strut stud retaining clip (1).

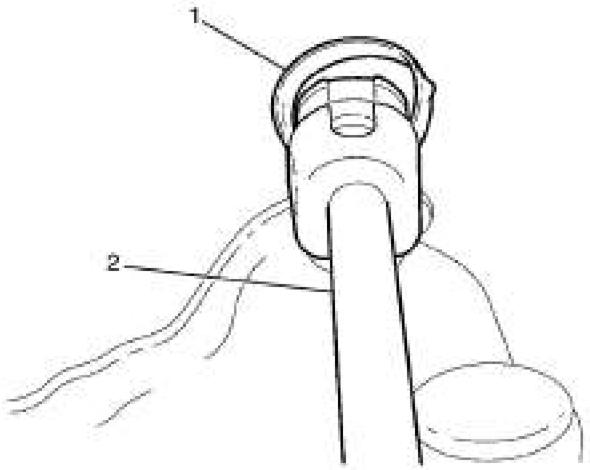


3. Using a suitable tool, release the rear compartment lid strut to the upper strut stud retaining clip (1).
4. Remove the rear compartment lid strut (2) from the vehicle.

Installation Procedure



1. Press the rear compartment lid strut (2) onto the upper strut stud.
2. Install the rear compartment lid strut stud retaining clip (1) to the rear compartment lid strut.



Notice: Apply pressure only at the end of the liftgate/hood assist rod that you are removing or attaching. Do NOT apply pressure to the middle of the rod because damage or bending will result.

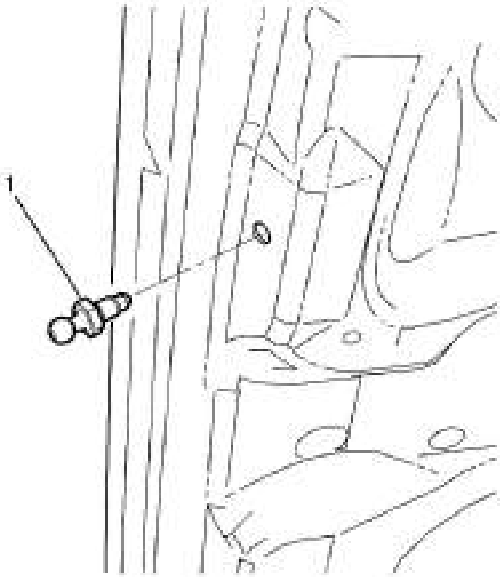
3. Press the rear compartment lid strut (2) onto the lower strut stud.
4. Install the rear compartment lid strut stud retaining clip (1) to the rear compartment lid strut.
5. Make sure that both clips are fully seated on the rear compartment lid strut.
6. Remove the suitable brace from the vehicle.

Hood Open Assist Rod Stud Replacement

Removal Procedure

> **Important:** When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

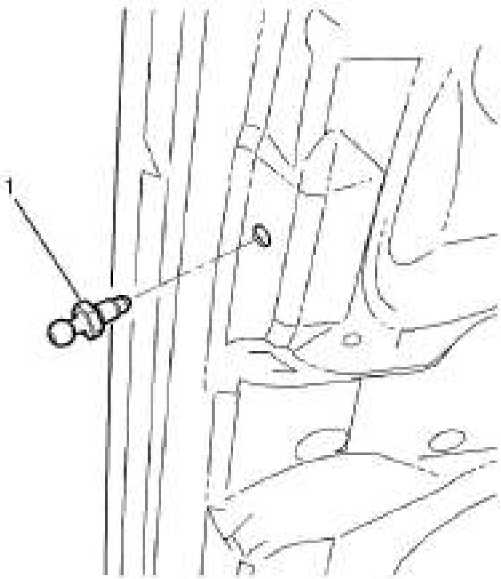
1. Install a suitable hood brace to the vehicle.
2. Remove the hood assist rod. Refer to Hood Open Assist Rod Replacement.



3. Remove the hood assist rod upper ball stud (1) from the hood.

Installation Procedure

> **Notice:** Refer to Fastener Notice in the Preface section.



1. Install the hood assist rod upper ball stud (1) to the hood.

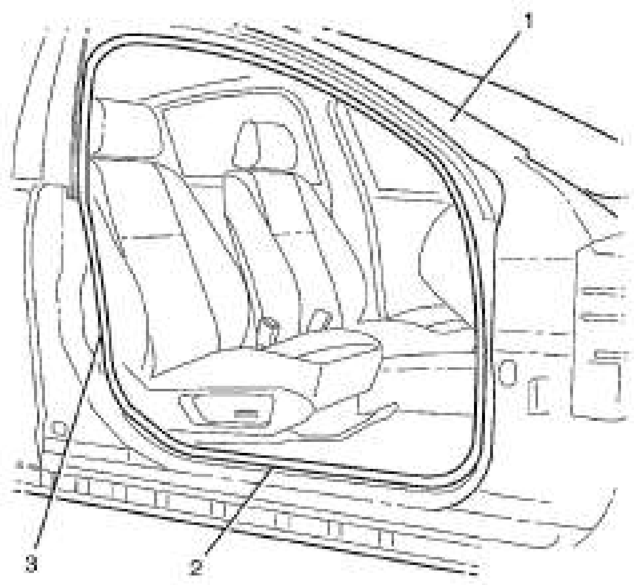
   Tighten
   Tighten the ball stud to 18 N·m (15 lb ft).

2. Install the hood assist rod. Refer to Hood Open Assist Rod Replacement.
3. Remove the suitable hood brace from the vehicle.

Front Door Opening Weatherstrip Replacement

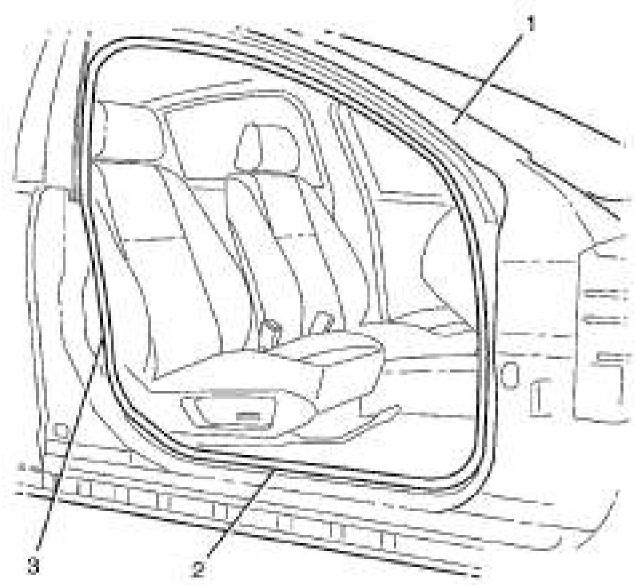
Removal Procedure

1. Remove the front sill trim panel. Refer to Door Sill Plate Replacement.
2. Remove the centre pillar lower trim. Refer to Center Pillar Lower Trim Panel Replacement.
3. Remove the trim panel - upper centre pillar, on both sides. Refer to Center Pillar Upper Trim Panel Replacement.
4. Remove the body hinge pillar trim assembly on both sides. Refer to Body Hinge Pillar Trim Panel Replacement.
5. Remove the windshield side garnish, on both sides. Refer to Windshield Garnish Molding Replacement.



6. Starting from the centre sill point (2) carefully remove the front door weatherstrip (3) from the body panel door opening (1).

Installation Procedure



Important: Make sure the lip of the weatherstrip sits over the trim panels.

Important: Make sure the weatherstrip does not short cut the corners and foul the door trim.

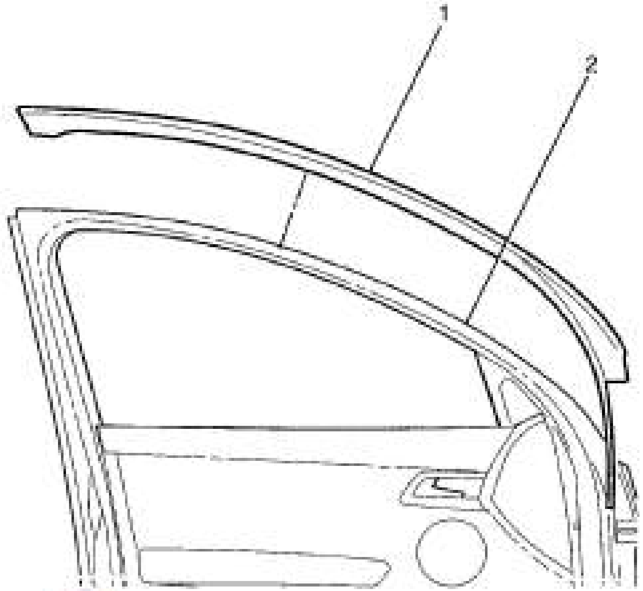
1. Starting at the centre sill point (2) install the front door weatherstrip (3) to the body panel door opening (1).
2. Install the windshield side garnish, on both sides. Refer to Windshield Garnish Molding Replacement.
3. Install the body hinge pillar trim assembly on both sides. Refer to Body Hinge Pillar Trim Panel Replacement.
4. Install the trim panel - upper centre pillar, on both sides. Refer to Center Pillar Upper Trim Panel Replacement.
5. Install the centre pillar lower trim. Refer to Center Pillar Lower Trim Panel Replacement.
6. Install the front sill trim panel. Refer to Door Sill Plate Replacement.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Bolted Exterior Body Panels and Closures | Repair Instructions | Document ID: 1986648

Front Side Door Upper Auxiliary Weatherstrip Replacement

Removal Procedure

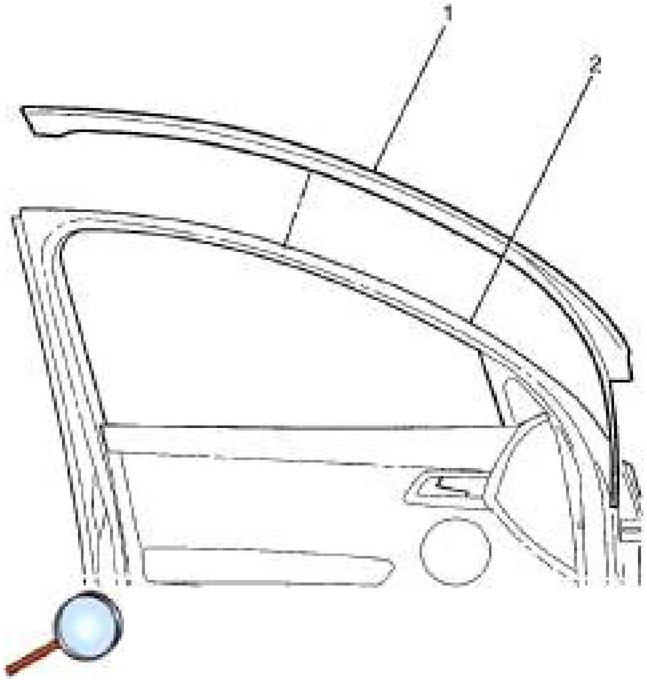
1. Remove the push-in front door upper auxiliary weatherstrip to door retaining fasteners.



Important: Remove the weatherstrip by pulling to release retaining fasteners.

2. Remove the front door upper auxiliary weatherstrip (1) from the door (2).

Installation Procedure

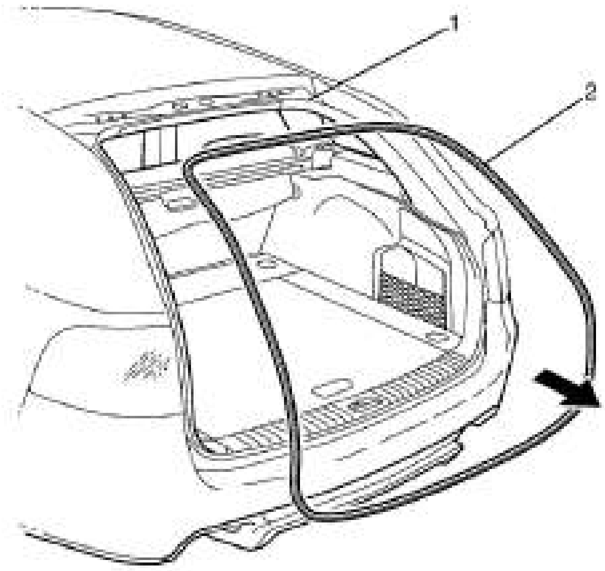


Important: Install the weatherstrip by pushing to attach retaining fasteners.

1. Install the front door upper auxiliary weatherstrip moulding (1) to the door (2).
2. Install the push-in fasteners to the door.

Liftgate Weatherstrip Replacement

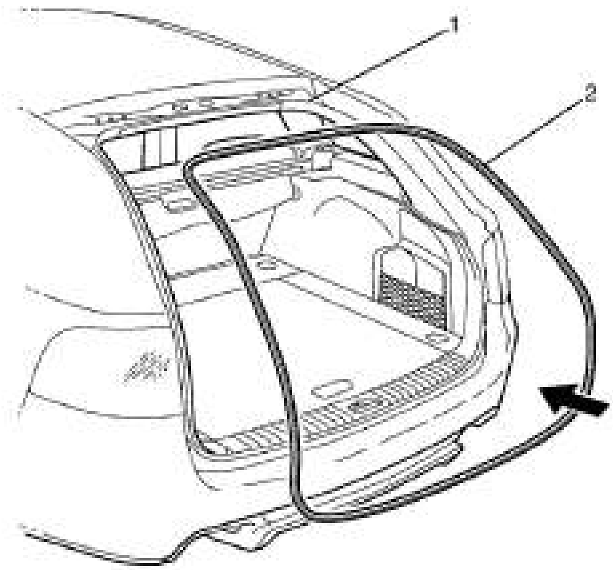
Removal Procedure



Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Install a suitable liftgate brace to the vehicle.
2. Pull the liftgate weatherstrip (2) from the liftgate opening pinch-weld flange (1).
3. Remove the liftgate weatherstrip (2) from the vehicle.

Installation Procedure



Important: Do not stretch the liftgate weatherstrip during installation.

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

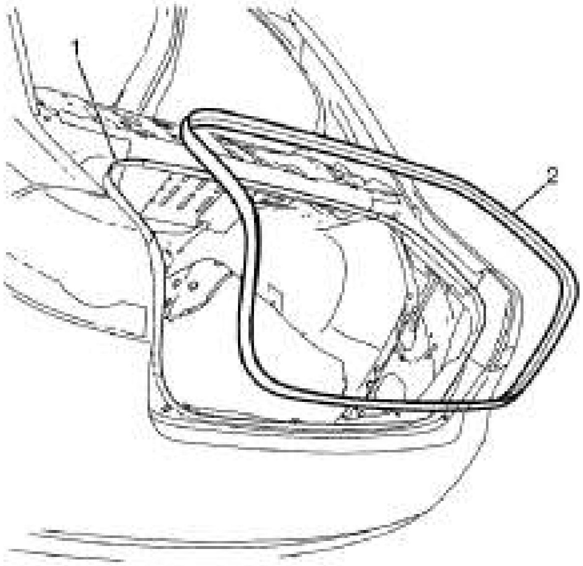
1. Position the liftgate weatherstrip (2) over the liftgate opening pinch-weld flange (1).
2. Press the liftgate weatherstrip (2) down onto the liftgate opening pinch-weld flange (1).
3. Make sure that the liftgate weatherstrip (2) is secured properly to the entire pinch-weld flange (1).
4. Remove the suitable liftgate brace from the vehicle.

Rear Compartment Lid Weatherstrip Replacement

Removal Procedure

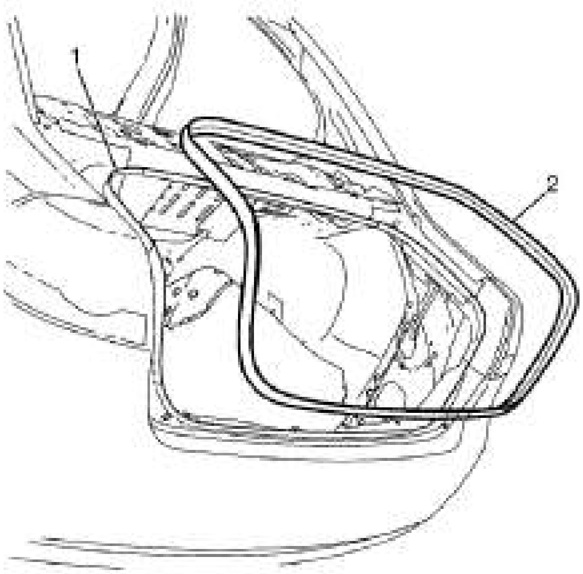
Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Support the rear compartment lid with a suitable brace.



2. Pull the rear compartment weatherstrip (2) from the rear compartment pinch-weld flange (1) on the body.
3. Remove the rear compartment weatherstrip (2) from the vehicle.

Installation Procedure

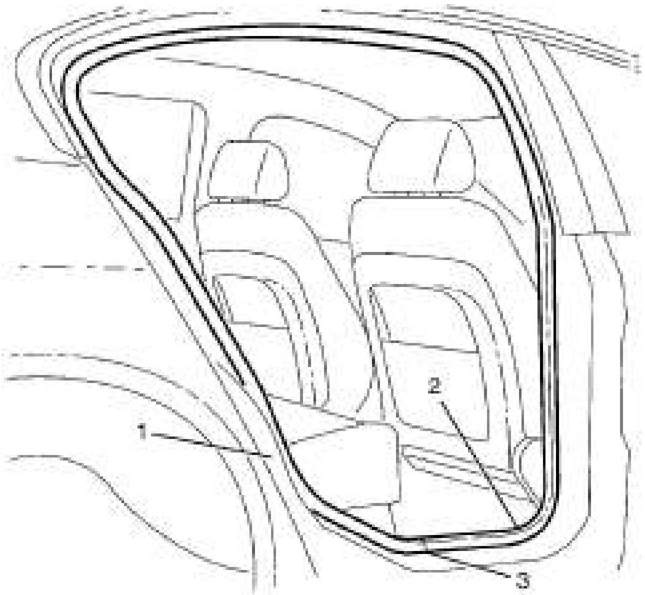


1. Position the rear compartment weatherstrip (2) over the top of the rear compartment pinch-weld flange (1).
2. Press the rear compartment weatherstrip (2) down onto the rear compartment pinch-weld flange (1).
3. Make sure that the rear compartment weatherstrip (2) is secured properly to the entire pinch-weld flange (1).
4. Remove the suitable brace from the vehicle.

Rear Door Opening Weatherstrip Replacement

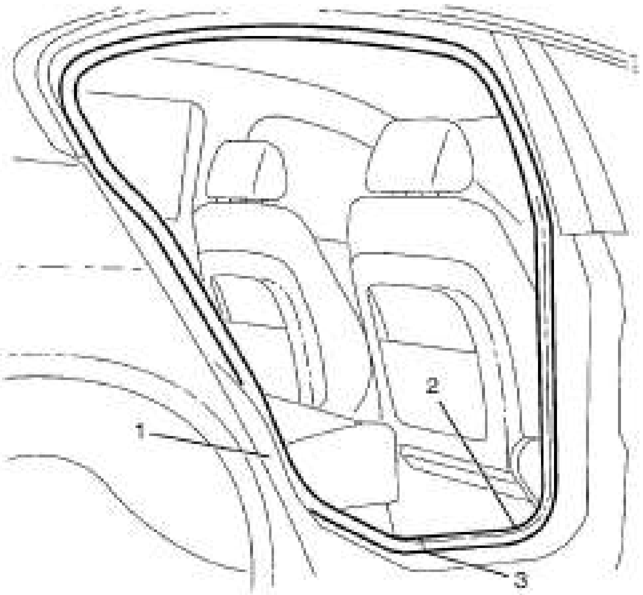
Removal Procedure

1. Remove the rear sill trim panel. Refer to Door Sill Plate Replacement.
2. Remove the centre pillar lower trim. Refer to Center Pillar Lower Trim Panel Replacement.
3. Remove the trim panel - upper centre pillar, on both sides. Refer to Center Pillar Upper Trim Panel Replacement.
4. Remove the trim panel - rear quarter lower. Refer to Quarter Lower Rear Trim Panel Replacement.
5. Remove the trim panel - rear quarter upper. Refer to Quarter Upper Trim Panel Replacement.



6. Starting from the centre sill point (3) carefully remove the rear door weatherstrip (2) from the body panel door opening (1).

Installation Procedure



Important: Make sure the lip of the weatherstrip sits over the trim panels.

Important: Make sure the weatherstrip does not short cut the corners and foul the door trim.

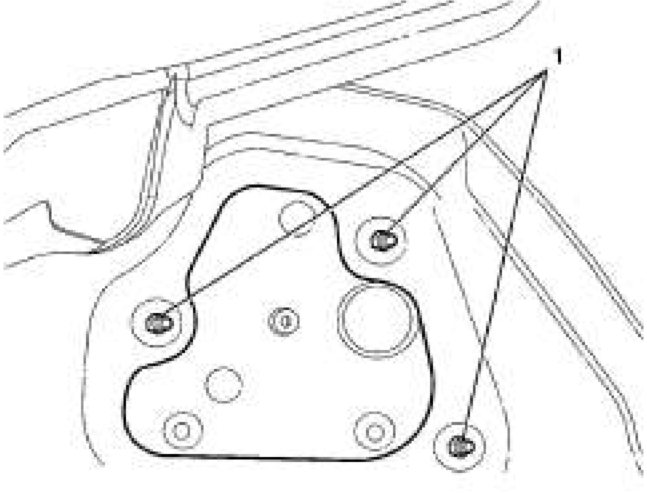
1. Starting at the centre sill point (2) install the rear door weatherstrip (3) to the body panel door opening (1).
2. Install the trim panel - rear quarter upper. Refer to Quarter Upper Trim Panel Replacement.
3. Install the trim panel - rear quarter lower. Refer to Quarter Lower Rear Trim Panel Replacement.
4. Install the trim panel - upper centre pillar, on both sides. Refer to Center Pillar Upper Trim Panel Replacement.
5. Install the centre pillar lower trim. Refer to Center Pillar Lower Trim Panel Replacement.
6. Install the rear sill trim panel. Refer to Door Sill Plate Replacement.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Bolted Exterior Body Panels and Closures | Repair Instructions | **Document ID: 2005940**

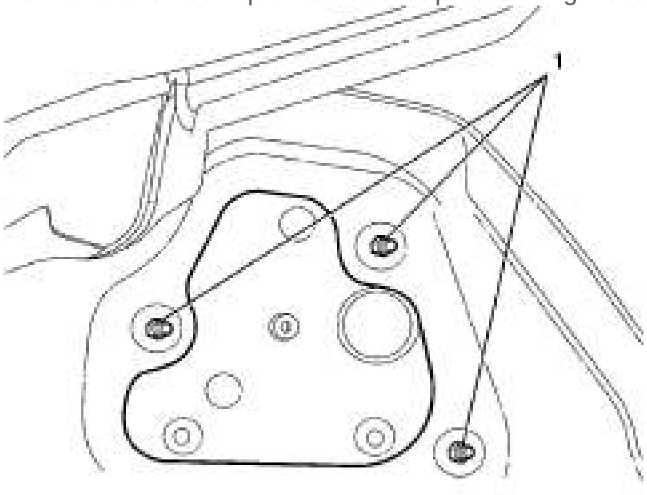
Tail Lamp Mount Panel Replacement (CSV SWBHSV VXR8)

Removal Procedure

1. Remove the tail lamp. Refer to Tail Lamp Replacement.

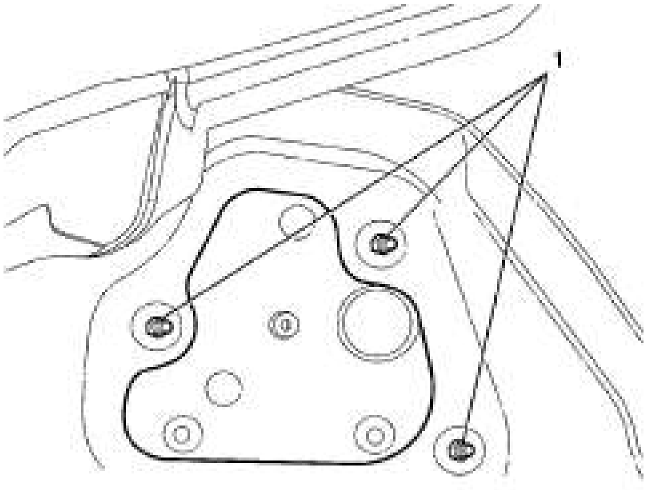


2. Remove the rear quarter end cap retaining nuts (1).



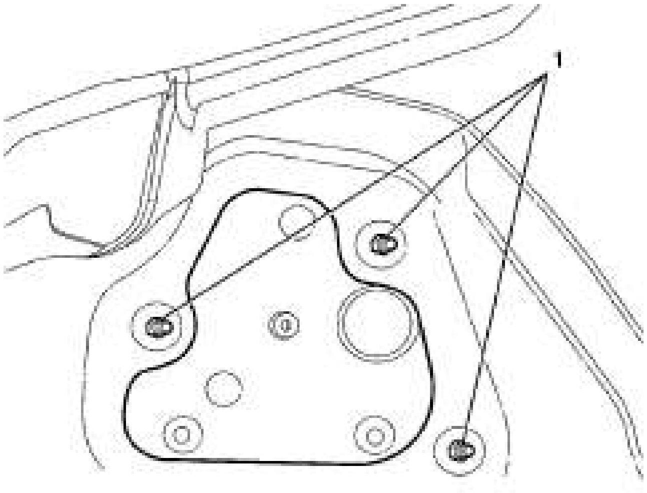
3. Remove the rear quarter end cap (1) by sliding upwards to disengage locating pins (2).

Installation Procedure



1. Install the rear quarter end cap (1) by engaging the locating pins (2) into the rear bumper fascia.

   Notice: Refer to Fastener Notice in the Preface section.



2. Install the rear quarter end cap retaining nuts (1).

   Tighten
   Tighten the nuts to 3 Nm (26.5 lb. in).

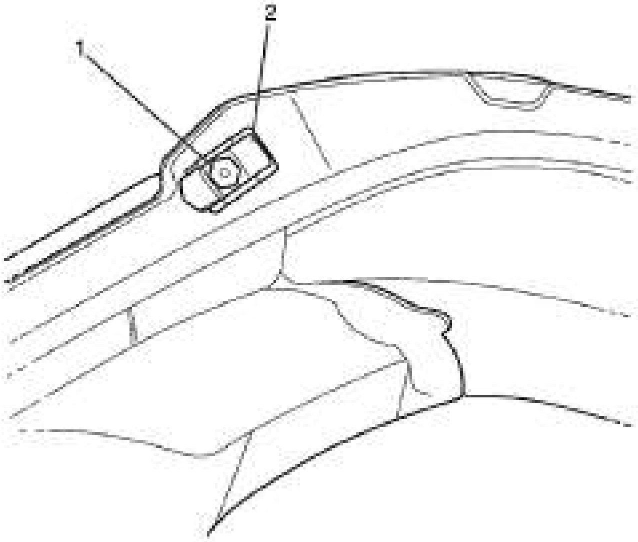
3. Install the tail lamp. Refer to Tail Lamp Replacement.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Bolted Exterior Body Panels and Closures | Repair Instructions | Document ID: 2067506

Liftgate Wedge Replacement

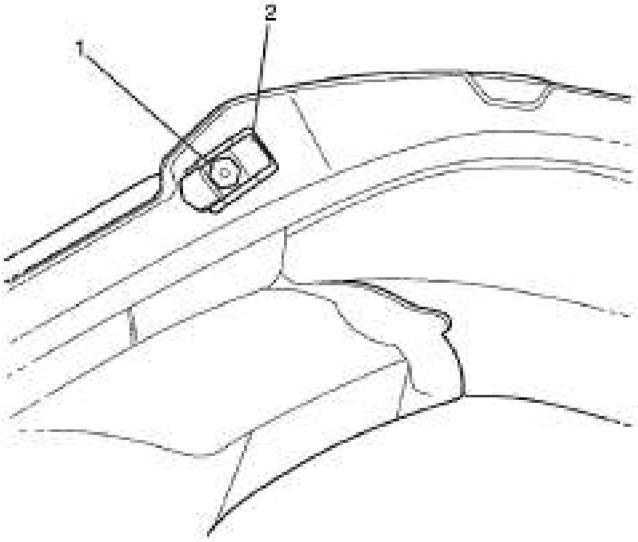
Removal Procedure

1. Open the liftgate.



2. Remove the liftgate wedge to liftgate torx retaining bolt (1).
3. Remove the liftgate wedge (2) from the vehicle.

Installation Procedure



1. Position the liftgate wedge (2) to the vehicle.
2. Close the liftgate.
3. Open the liftgate.

   Notice: Refer to Fastener Notice in the Preface section.

4. Install the liftgate wedge to liftgate torx retaining bolt (1).

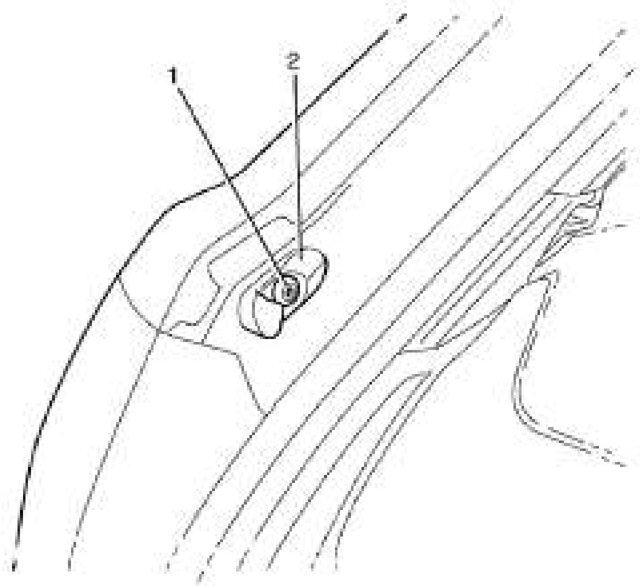
   Tighten
   Tighten the bolt to 10 N·m (89 lb in).

5. Close the liftgate.

Liftgate Wedge Replacement - Body Side

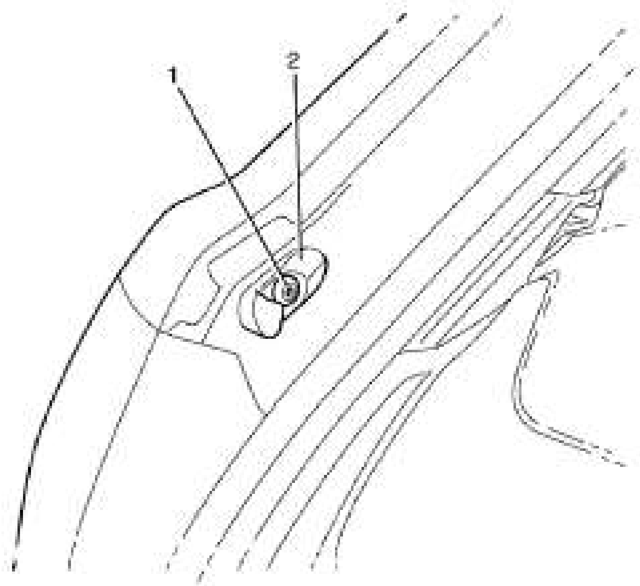
Removal Procedure

1. Open the liftgate



2. Remove the liftgate wedge to body torx retaining bolt (1).
3. Remove the liftgate wedge (2) from the vehicle.

Installation Procedure



1. Position the liftgate wedge (2) to the vehicle.

   Notice: Refer to Fastener Notice in the Preface section.

2. Install the liftgate wedge to body torx retaining bolt (1).

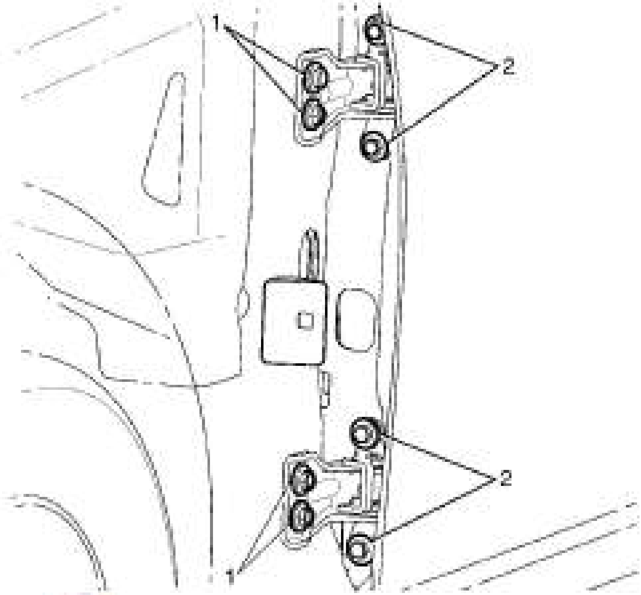
   Tighten
   Tighten the bolt to 10 N·m (89 lb in).

3. Close the liftgate.

Front Side Door Upper Hinge and Lower Hinge Replacement

Removal Procedure

1. Remove the front fender. Refer to Front Fender Replacement .
2. Mark the door hinge to pillar and door hinge to door location for installation alignment purposes.

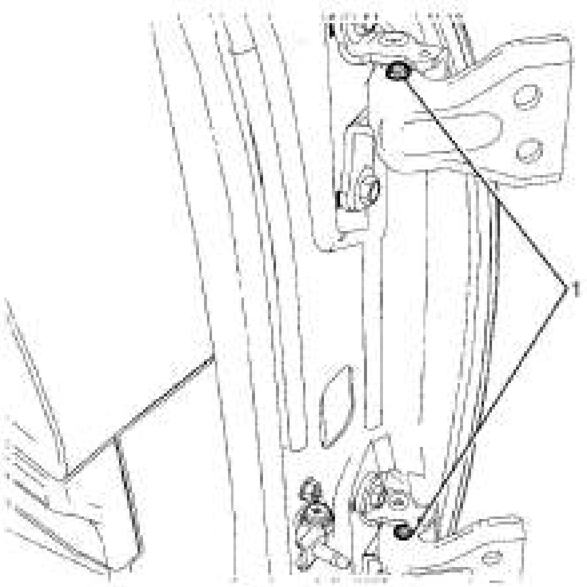


Important: Replace one hinge at a time then repeat procedure for the second hinge if needed.

Important: Remove the door hinge with the door fully latched on the striker.

3. Remove the door hinge to door retaining bolts (2).
4. Remove the door hinge to pillar retaining bolts (1) and remove the door hinges one at a time.

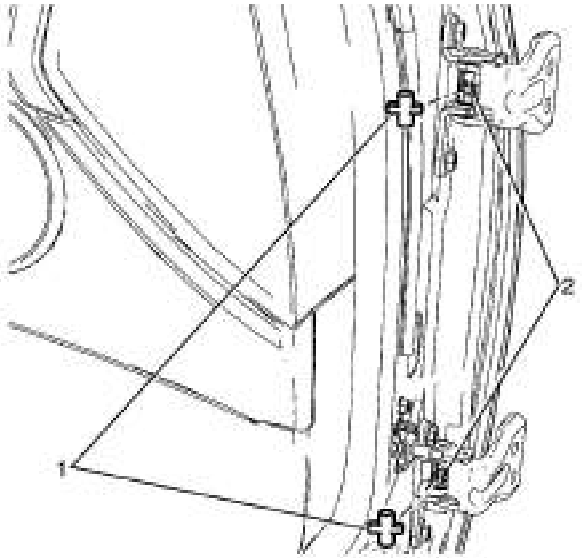
Installation Procedure



Important: Paint pins (1) are installed in NEW door hinges and must be removed when fitted.

Important: Use a suitable tool to pry the paint pins (1) from the NEW door hinges.

1. Remove the paint pins (1) from the NEW door hinges.

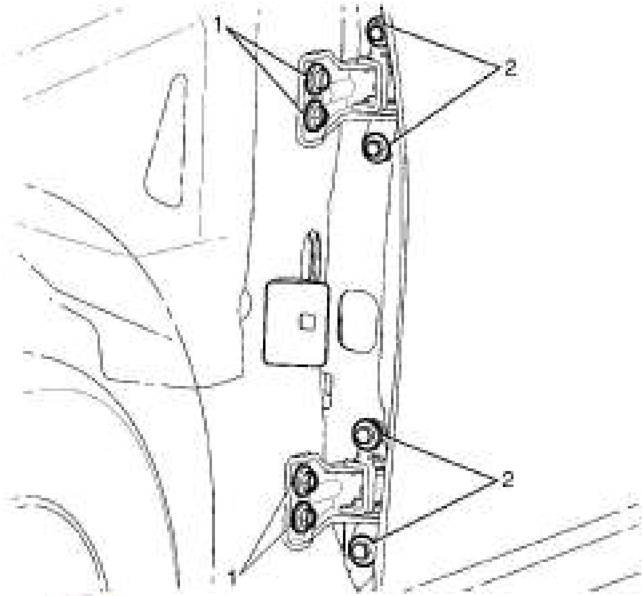


Important: The shipping clips (1) are only to hold the NEW door hinges (2) together in transit and must be removed when fitted.

Important: Use a suitable tool to remove the shipping clips (1) from the NEW door hinges (2).

2. Remove the shipping clips (1) from the NEW door hinges (2).
3. Align the door hinge to pillar and door hinge to door marks made prior to removal.

Notice: Refer to Fastener Notice in the Preface section.



4. Install the door hinge to pillar retaining bolts (1).

   Tighten
   Tighten the bolts to 28 N-m (21 lb ft).

5. Install the door hinge to door retaining bolts (2).

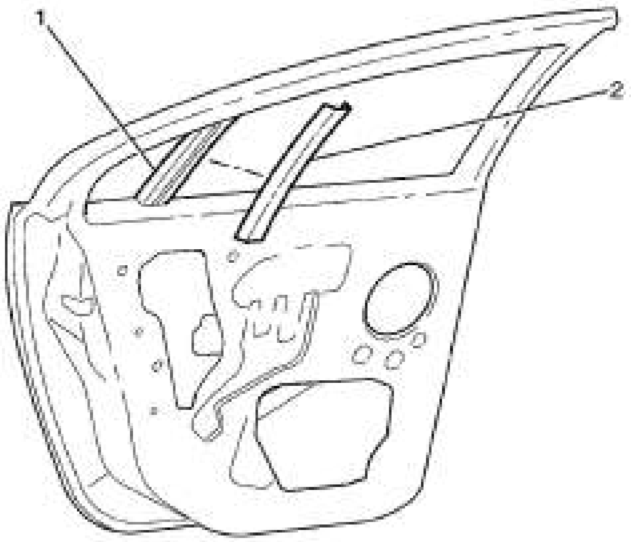
   Tighten
   Tighten the bolts to 28 N-m (21 lb ft).

6. Install the front fender. Refer to Front Fender Replacement .
7. Adjust the door. Refer to Door Adjustment .

Rear Side Door Window Frame Rear Applique Replacement

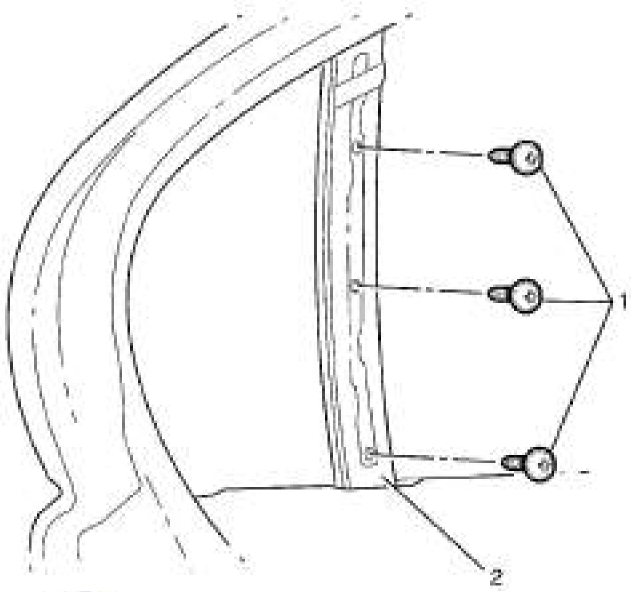
Removal Procedure

1. Lower the window to the full down position.
2. Remove the door trim panel. Refer to Rear Side Door Trim Panel Replacement.
3. Remove the window inner belt sealing strip. Refer to Rear Side Door Window Inner Sealing Strip Replacement.
4. Remove the window outer belt sealing strip. Refer to Rear Side Door Window Outer Sealing Strip Replacement.
5. Remove the window inner weatherstrip. Refer to Rear Side Door Window Inner Weatherstrip Replacement.
6. Remove the rear section of the window inner sealing strip. Refer to Rear Side Door Window Inner Sealing Strip Replacement.

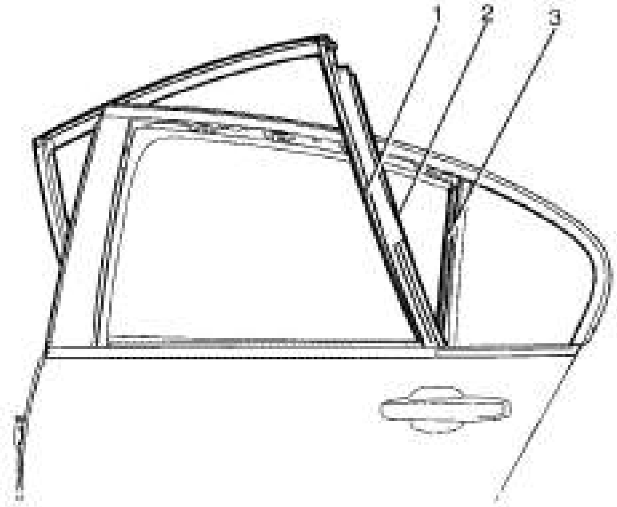


Important: Pull the rear window division channel trim to release retaining clips.

7. Remove the rear window division channel trim panel (1) from the door (2).



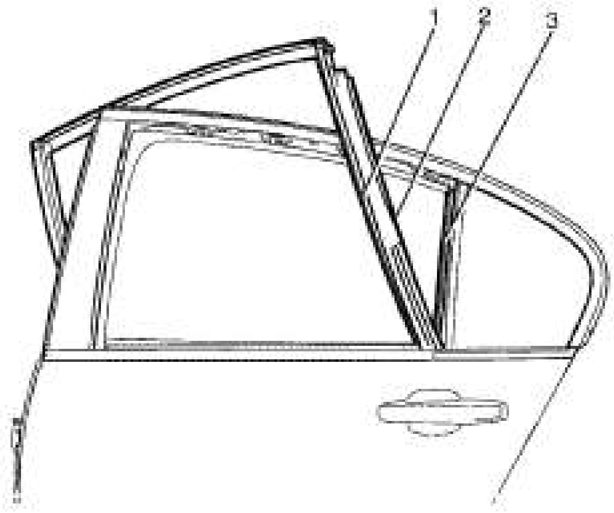
8. Remove the rear window division channel to door retaining screws (1).



Important: Remove the window/division channel (2) and inner sealing strip (1) as an assembly.

9. Remove the window/division channel (2) and inner sealing strip (1) from the door (3).

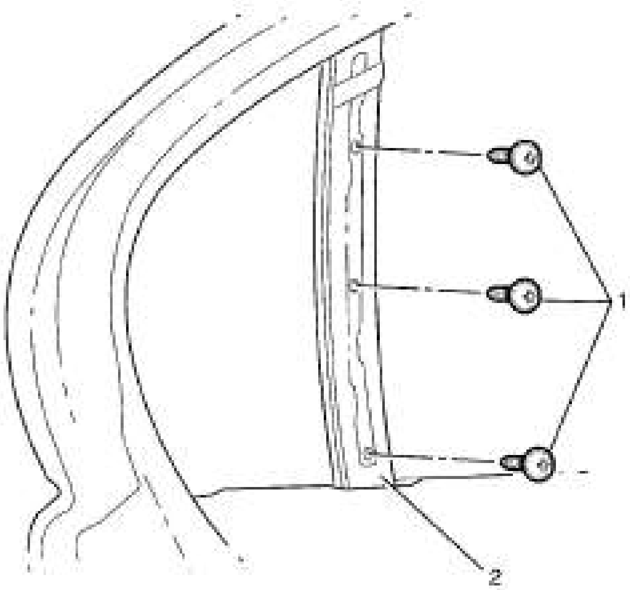
Installation Procedure



Important: Install the window/division channel (2) and inner sealing strip (1) as an assembly.

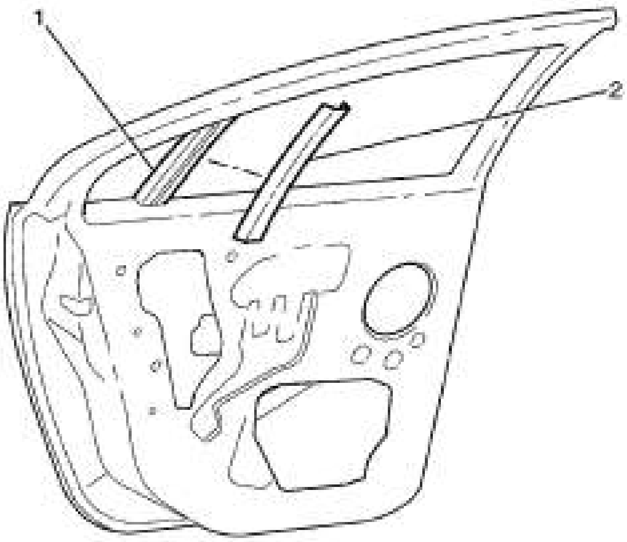
1. Install the window/division channel (2) and inner sealing strip (1) to the door (3).

   Notice: Refer to Fastener Notice in the Preface section.



2. Install the rear window division channel to door retaining screws (1).

   Tighten
   Tighten the screws to 3 N-m (27 lb in).



Important: Push the rear window division channel trim panel (1) to attach the retaining clips.

3. Install the rear window division channel trim panel (1) to the door (2).
4. Install the rear section of the window inner sealing strip. Refer to Rear Side Door Window Inner Sealing Strip Replacement.
5. Install the window inner weatherstrip. Refer to Rear Side Door Window Inner Weatherstrip Replacement.
6. Install the window outer belt sealing strip. Refer to Rear Side Door Window Outer Sealing Strip Replacement.
7. Install the window inner belt sealing strip. Refer to Rear Side Door Window Inner Sealing Strip Replacement.
8. Install the rear door trim panel. Refer to Rear Side Door Trim Panel Replacement.

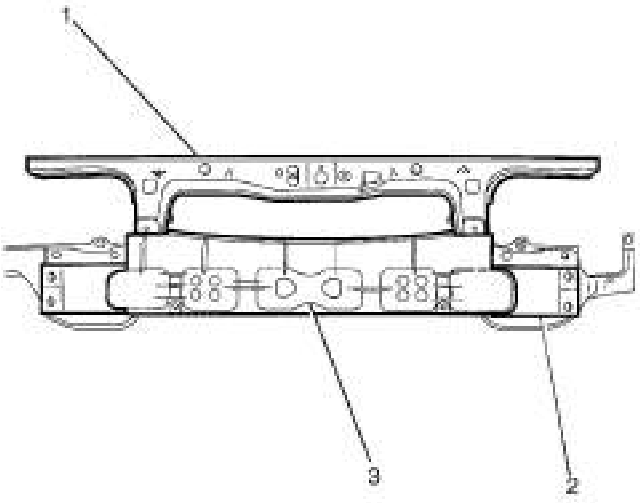
Energy Absorber Damage



Important: Take note of the following statements:

- Do not try to repair a damaged energy absorber.
- Replace the energy absorber if damaged.
- Do not apply heat to the energy absorber.
- Do not weld the energy absorber.

Important: Inspect the following components for signs of visible distortion:

- Inspect the bumper impact bar (2).
- Inspect the front end module (1).
- Inspect the energy absorber (3).
- Replace the energy absorber if damage is evident. Replace the energy absorber if a collision is so severe that the bumper impact bar does not return to its original position.

Front Bumper Fascia Energy Absorber Replacement

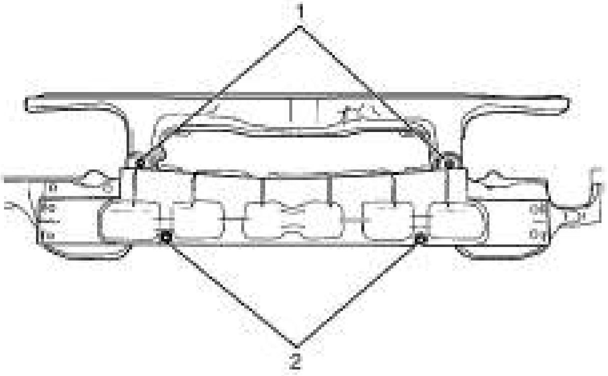
Removal Procedure

Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

> **Important:** Failure to observe the following procedure when handling energy absorbers could cause personal injury.
>
> - Do not apply heat to an energy absorber.
> - Do not weld in the area of an energy absorber.
> - Do not attempt to repair a damaged energy absorber. Always replace the damaged energy absorber with a new part.

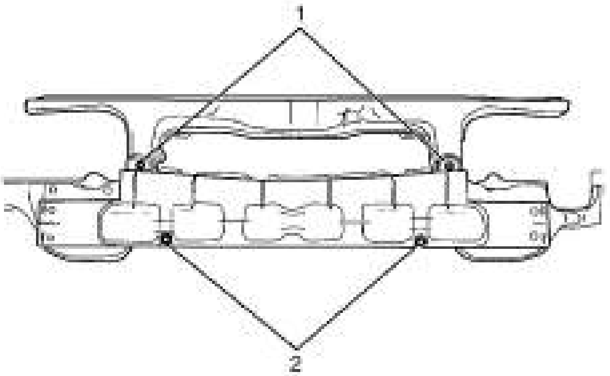
1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle .
2. Remove the front bumper fascia. Refer to Front Bumper Fascia Replacement .



3. Remove the front energy absorber to front impact bar retaining scrivets (2).
4. Remove the front energy absorber to front end module retaining bolts (1).
5. Remove the front energy absorber from the front bumper impact bar by pulling outward.

Installation Procedure

1. Install the front energy absorber to the front bumper impact bar.



2. Install the front energy absorber to front bumper impact bar retaining scrivits (2).
3. Install the front energy absorber to front end module retaining bolts (1).

   Tighten
   Tighten the bolts to 4 N·m (35 lb in).

4. Install the front bumper fascia. Refer to Front Bumper Fascia Replacement .
5. Lower the vehicle.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Bumpers and Fascias | Repair Instructions | **Document ID: 1984441**

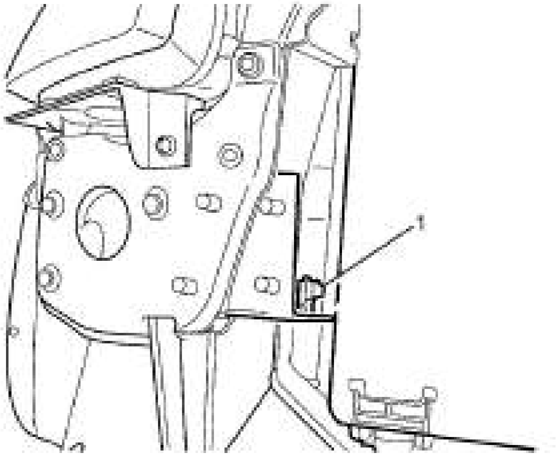
Front Bumper Impact Bar Replacement

Removal Procedure

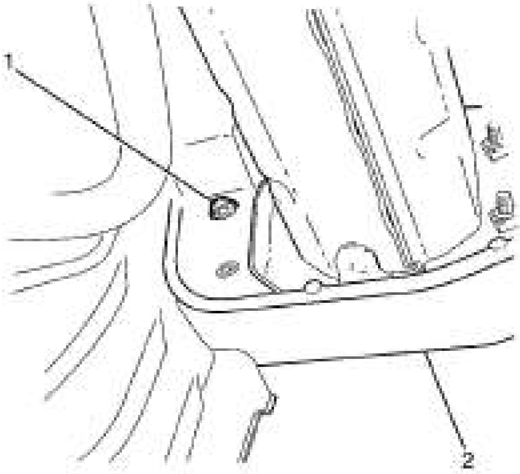
Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

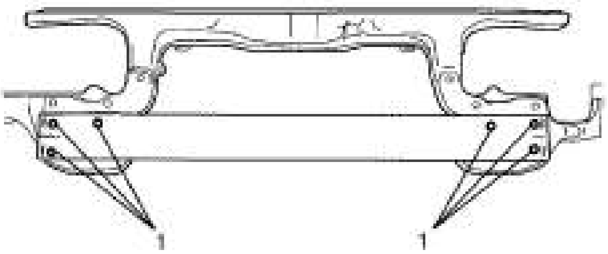
1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle .
2. Remove the radiator air baffle and deflector. Refer to Front Air Deflector Replacement .
3. Remove the front bumper fascia. Refer to Front Bumper Fascia Replacement .
4. Remove the front energy absorber. Refer to Front Bumper Fascia Energy Absorber Replacement .
5. Remove the washer solvent container. Refer to Windshield Washer Solvent Container Replacement .



6. Remove the ambient temperature sensor (1) by squeezing locking tabs and pushing sensor.



7. Remove the front bumper impact bar to front end module retaining bolt (1). Repeat for opposite side.

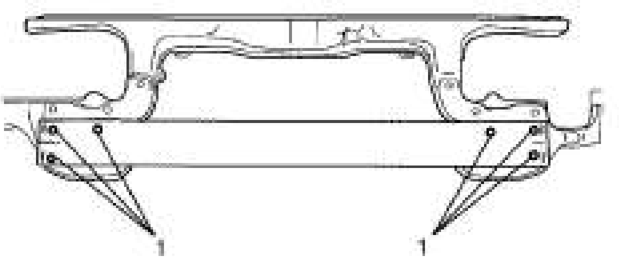


8. Remove the front bumper impact bar to front end module retaining bolts (1).
9. Remove the front bumper impact bar from the front end module.

Installation Procedure

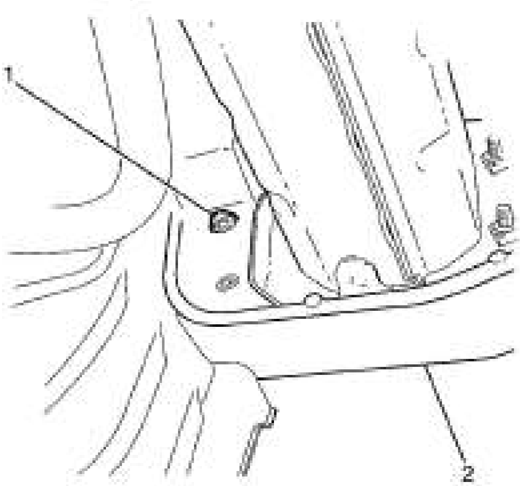
1. Install the front bumper impact bar to the front end module.

   Notice: Refer to Fastener Notice in the Preface section.



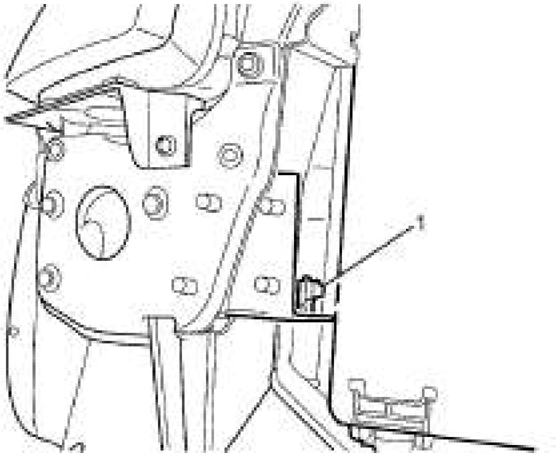
2. Install the front bumper impact bar to front end module retaining bolts (1).
   2.1. Install the inboard bolt on the right side first.
   2.2. Install the inboard bolt on the left side second.
   2.3. Install the remaining outboard bolts third.

Tighten
Tighten the bolts to 22 N·m (16 lb ft) in the above sequence.



3. Install the front bumper impact bar to front end module retaining bolt (1). Repeat for opposite side.

Tighten
Tighten the bolts to 4 N·m (35 lb in).



4. Install the ambient temperature sensor (1) by squeezing locking tabs and pushing sensor.
5. Remove the washer solvent container. Refer to Windshield Washer Solvent Container Filler Tube Replacement .
6. Install the front energy absorber. Refer to Front Bumper Fascia Energy Absorber Replacement .
7. Install the front bumper fascia. Refer to Front Bumper Fascia Replacement .
8. Install the radiator air baffle and deflector. Refer to Front Air Deflector Replacement .
9. Lower the vehicle.

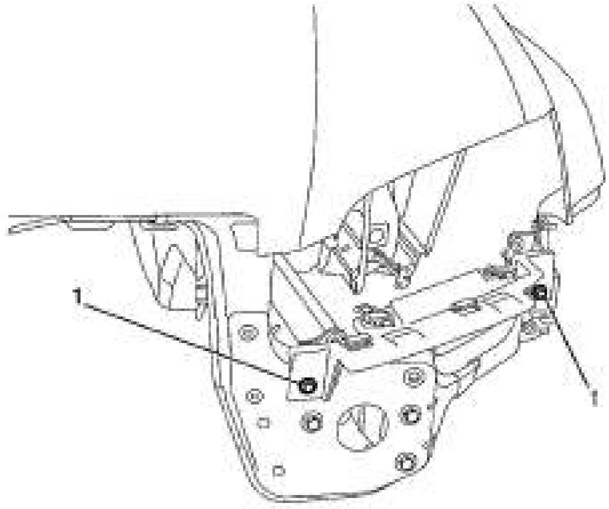
Front Bumper Impact Bar Bracket Replacement

Removal Procedure

Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

1. Remove the front bumper fascia. Refer to Front Bumper Fascia Replacement .

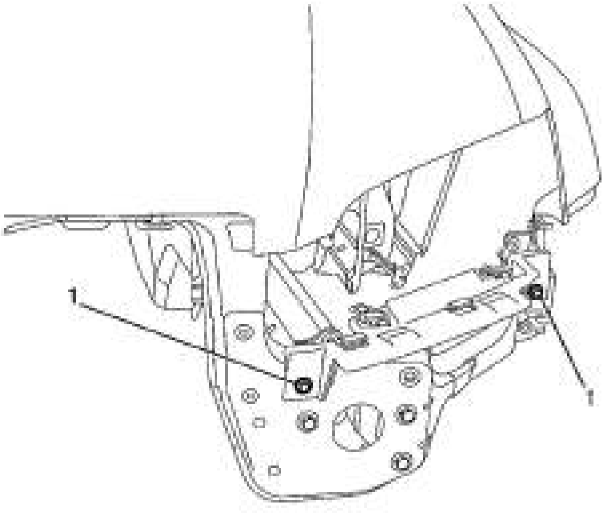


2. Remove the front bumper fascia support bracket to front end module retaining bolts (1).
3. Remove the horn wiring harness clip from the front bumper fascia support bracket.
4. Remove the front bumper fascia support bracket from the vehicle.

Installation Procedure

1. Install the front bumper fascia support bracket to the front end module.

Notice: Refer to Fastener Notice in the Preface section.



2. Install the front bumper fascia support bracket to front end module retaining bolts (1).

   Tighten
   Tighten the bolts to 4.5 N·m (39 lb in).

3. Install the horn wiring harness clip to front bumper fascia support bracket.
4. Install the front bumper fascia. Refer to Front Bumper Fascia Replacement .

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Bumpers and Fascias | Repair Instructions | Document ID: 2009604

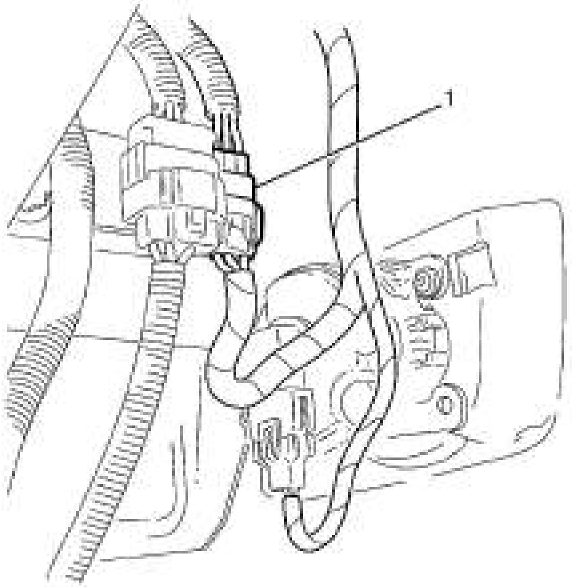
Front Bumper Fascia Replacement (SWB)

Removal Procedure

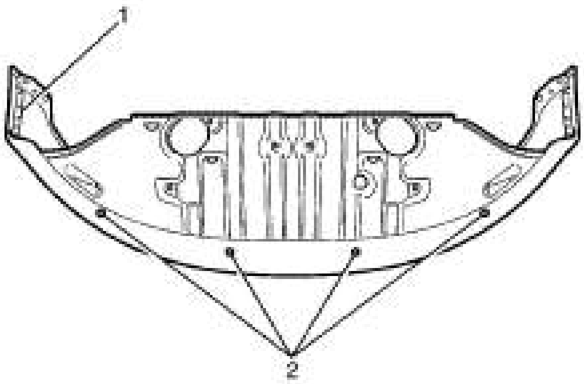
Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

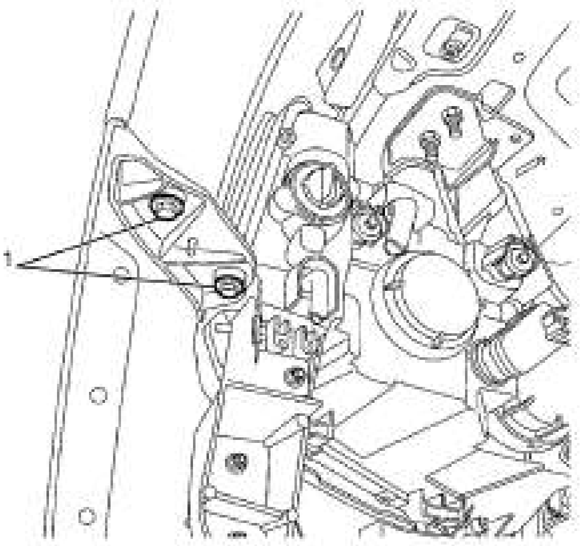
1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Remove the front wheelhouse liner. Refer to Front Wheelhouse Liner Replacement.



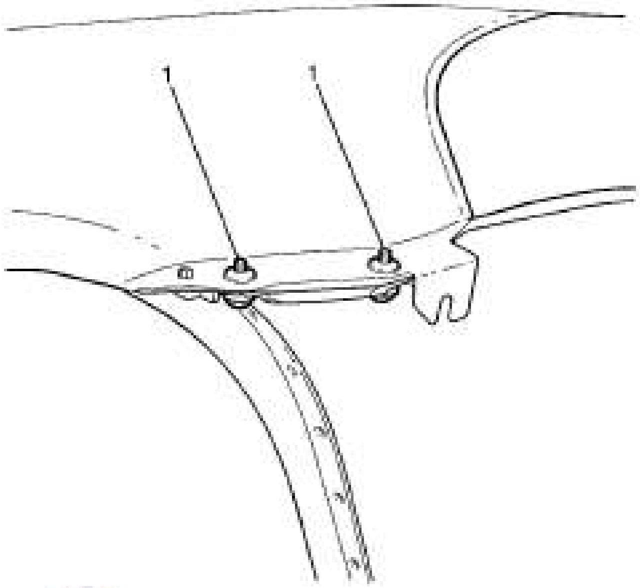
3. Disconnect the front end module to front bumper fascia wiring harness (1).



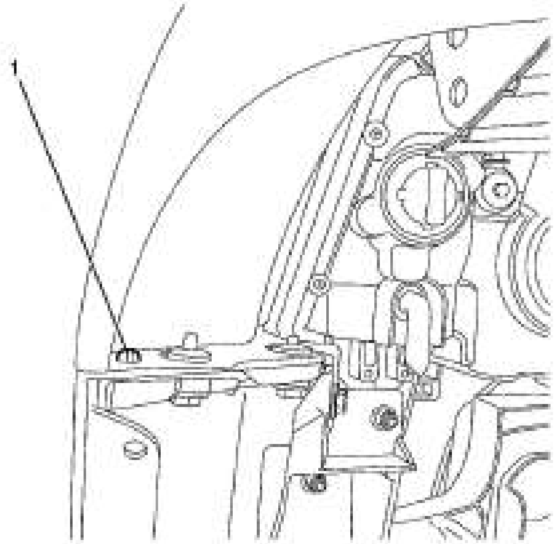
4. Remove the front bumper fascia (1) to front air deflector retaining screws (2).



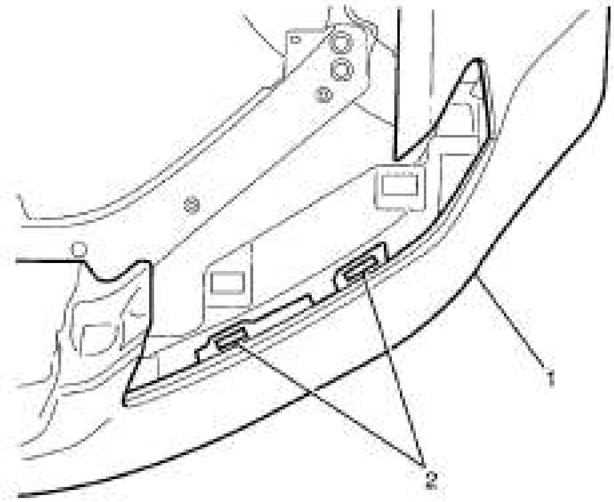
5. Loosen the front bumper fascia to fender retaining bolts (1) approximately 4 turns. Repeat for opposite side.
6. Push the front bumper fascia to fender retaining bolts (1) upwards to disengage from the fender.



7. Loosen the front bumper fascia from the key slots (1) at the fender attachments.
8. Lower the vehicle.
9. Remove the radiator grille. Refer to Radiator Grille Replacement.



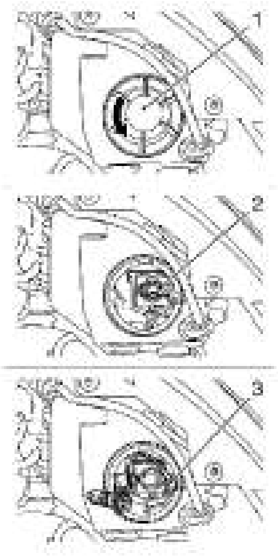
10. With the aid of an assistant, disengage the locating pin (1) from the fender. Repeat for opposite side.



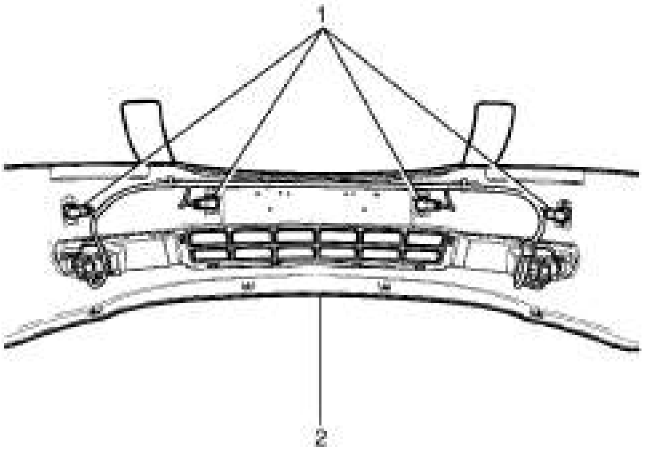
11. Disengage the front bumper fascia (1) from the front bumper fascia support bracket retaining tabs (2).
12. Remove the front bumper fascia from the vehicle.

Disassembly Procedure

1. Remove the front bumper fascia lower grille. Refer to Front Bumper Lower Fascia Grille Replacement.



2. Disconnect the front bumper fascia wiring loom retaining clips (1) to the front bumper fascia (2).
3. Disconnect the front fog lamp wiring connectors (3) to the front fog lamps.



4. Disconnect the front object alarm sensor wiring connectors (1) from the front bumper fascia (2).
5. Remove the front fog lamp covers. Refer to Front Fog Lamp Cover Replacement.
6. Remove the front fog lamps. Refer to Front Fog Lamp Replacement.

Assembly Procedure

Important: Prior to drilling the bumper fascia it is essential that the object detection bracket templates are aligned to their correct corresponding location within the bumper fascia. The location of the object detection bracket templates to the bumper fascia is alpha numeric, make sure that the letters correspond between the object detection bracket templates and the bumper fascia.

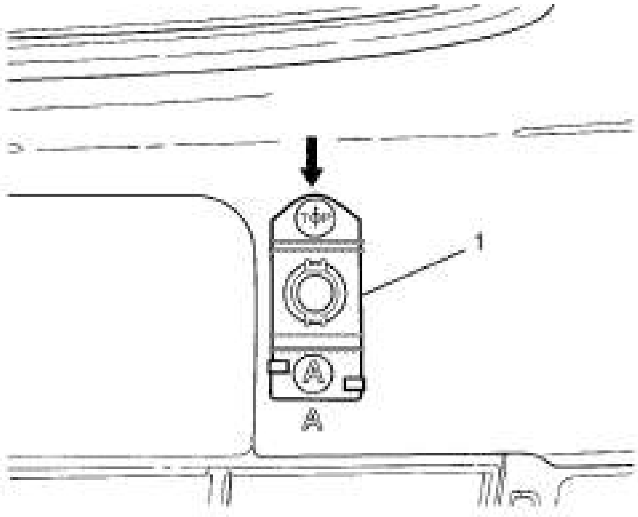
Important: Each object detection bracket template has a tolerance of 0.5 mm and must be taken into consideration.

1. Check each object detection bracket template.
2. It is essential that the object detection bracket templates are aligned to their correct corresponding location within the bumper fascia.

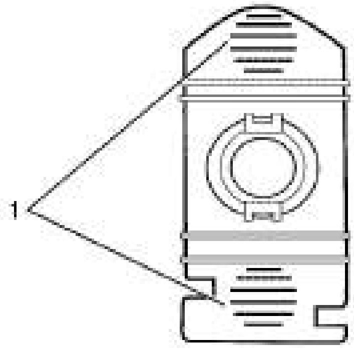
Important: The Object Detection Bracket Template, normally found in the service manual has been removed. A review of its accuracy due to the new delivery system, and different printing methods available from the web site is currently in progress. Please reference the Holden Service Information disc, Version 4.01 for a current template.

Important: This graphic is used as an example only and must not be used as a template, it displays one of the varying object detection bracket templates for reference.

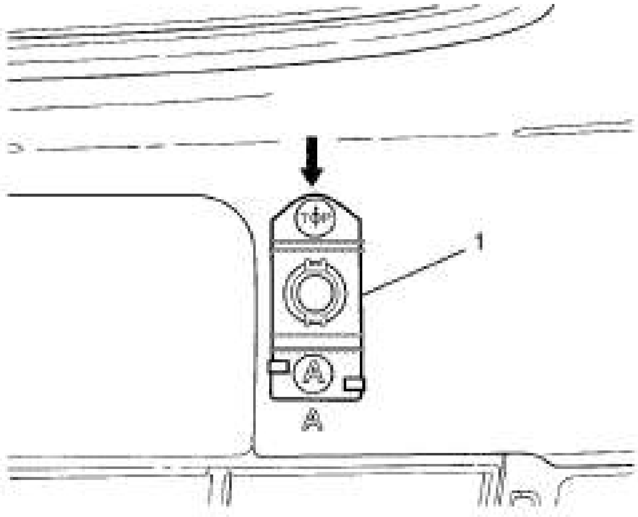
Important: When aligning the object detection bracket template make sure that the locating tags align correctly and there is little or no movement, prior to drilling.



1. Install the object detection bracket templates (1) to the front bumper fascia.
2. Mark out the sensor hole from the object detection bracket templates (1) to the front bumper fascia.
3. Remove the object detection bracket templates (1) from the front bumper fascia.
4. Drill the holes in the front bumper fascia 24.5 mm (0.96 in).
5. Remove any swarf from the front bumper fascia.
6. Clean the front bumper fascia with a suitable wax and grease remover.
7. Remove the object detection bracket templates (1) from the front bumper fascia.



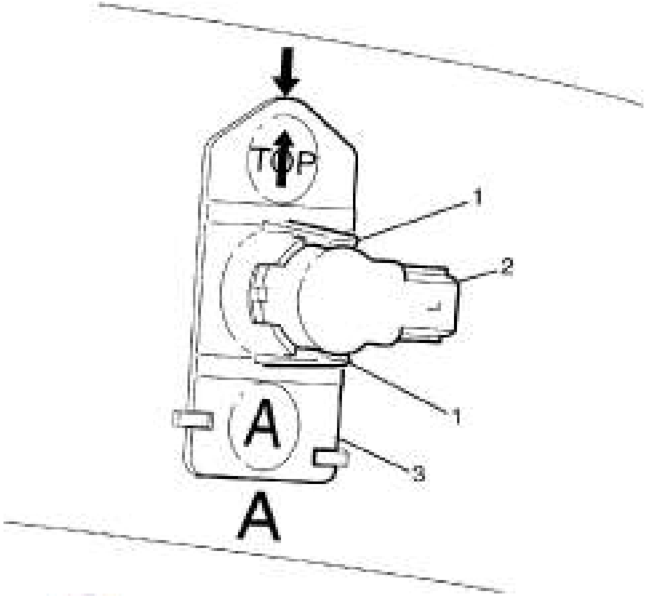
8. Apply the GM Specification 9982247 (Fusor 152-153) adhesive or equivalent to the ribs of the object detection bracket (1).



Important: This graphic is used as an example only and must not be used as a template, it displays one of the varying object detection bracket templates for reference.

Important: The location of the object detection brackets to the bumper fascia is alpha numeric, make sure that the letters correspond between the object detection brackets and the bumper fascia.

9. Install the object detection bracket (1) to the front bumper fascia.

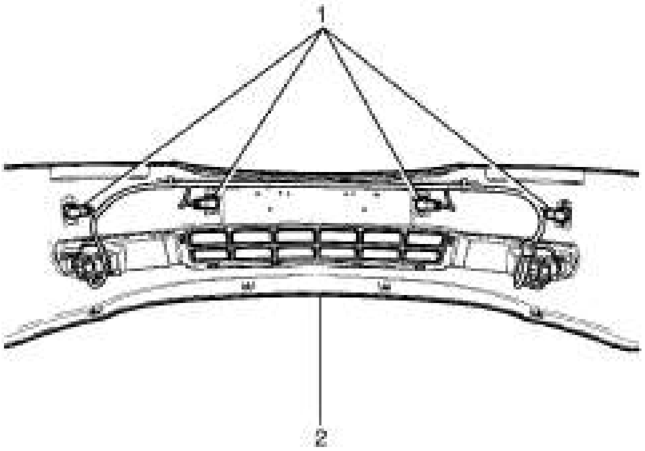


Important: Allow 20 minutes for the adhesive to cure to the front bumper fascia.

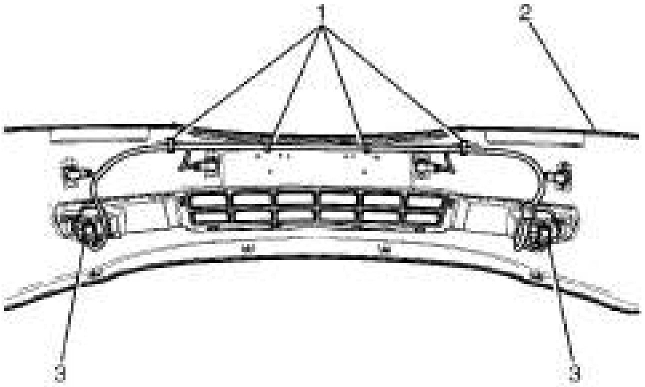
Important: Replacement front object alarm sensors (2) are not pre-painted, they will require painting before installation is carried out.

Important: Ensure that the front object alarm sensor (2) is installed correctly.

10. Locate the top and bottom housing tabs (1) to install the front object alarm sensor (2) to the front object alarm sensor housing (3).
11. Press the front object sensor bezel flush to the fascia.
12. Install the front fog lamps. Refer to Front Fog Lamp Replacement.
13. Install the front fog lamp covers. Refer to Front Fog Lamp Cover Replacement.



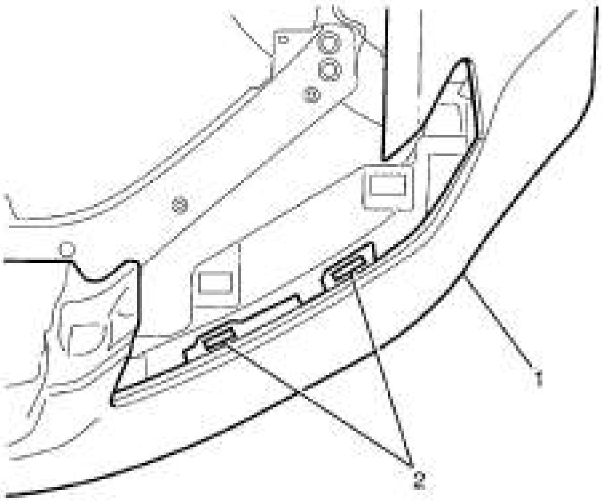
14. Connect the front object alarm sensor wiring connectors (1) to the front bumper fascia (2).



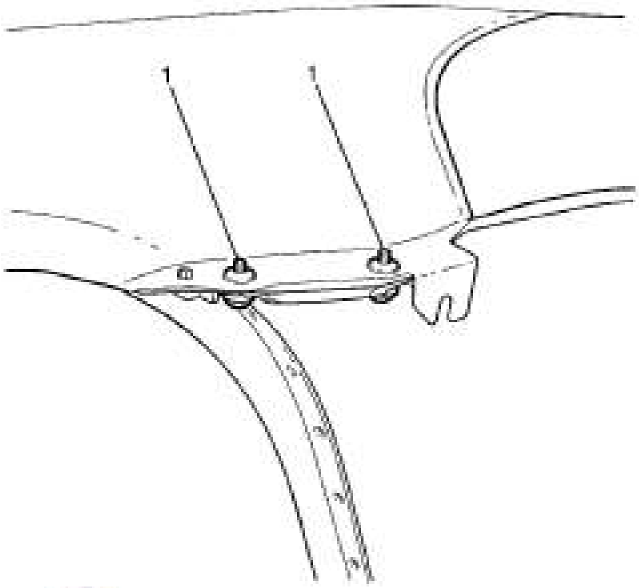
15. Connect the front bumper fascia wiring loom retaining clips (1) to the front bumper fascia (2).
16. Connect the front fog lamp wiring connectors (3) to the front fog lamps.
17. Install the front bumper fascia lower grille. Refer to Front Bumper Lower Fascia Grille Replacement.

Installation Procedure

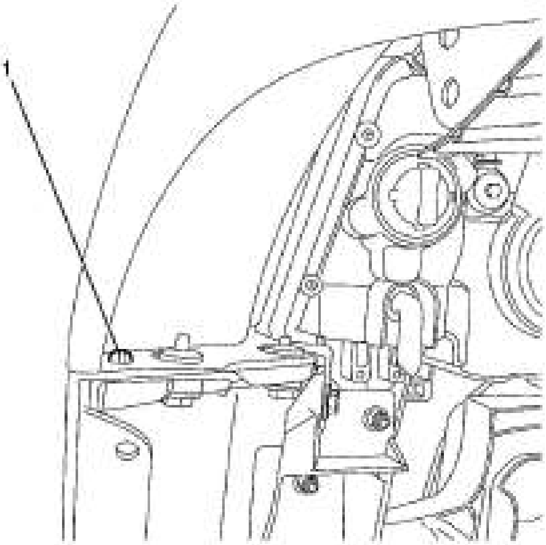
1. With the aid of an assistant, position the front bumper fascia to the vehicle.



2. Firmly press the front bumper fascia support bracket retaining tabs (2) to front bumper fascia (1).
3. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.

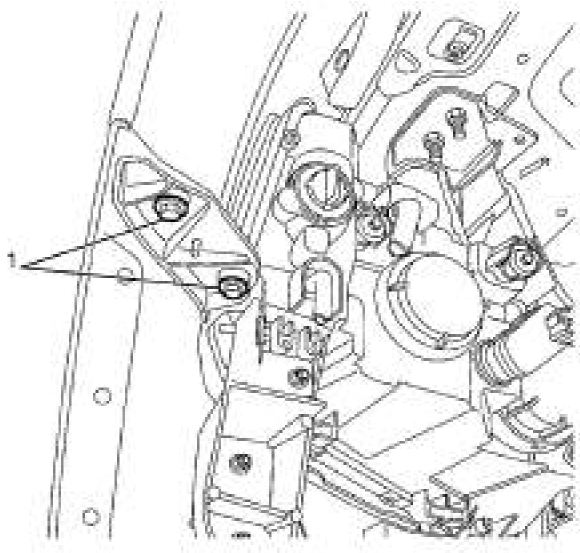


4. Position the front bumper fascia to the key slots (1) in the fender.



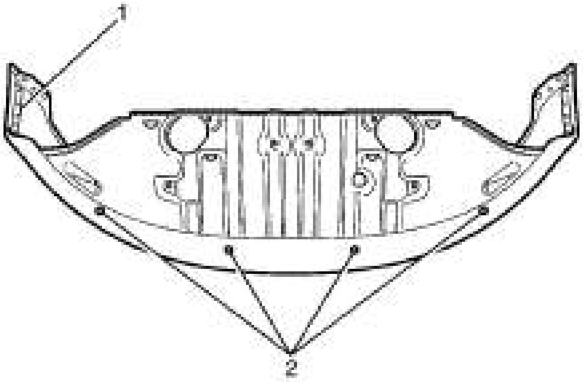
5. Align the locating pin (1) to the locating hole in the fender.
6. Push the front bumper fascia rearward in order to adjust.

Notice: Refer to Fastener Notice in the Preface section.



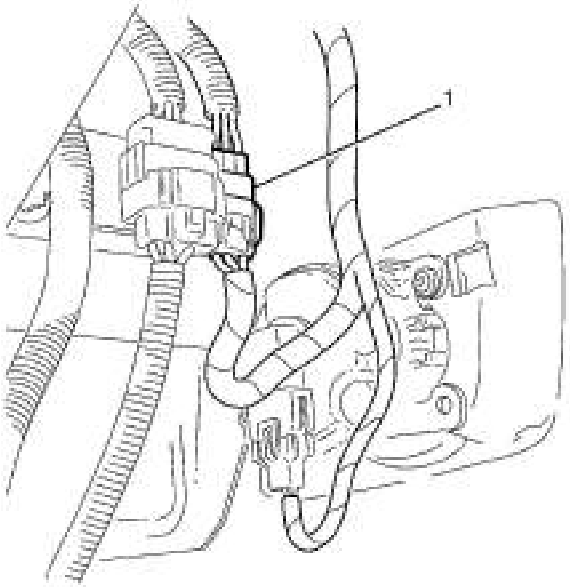
7. Tighten the front bumper fascia to fender retaining bolts (1).

   Tighten
   Tighten the bolts to 10 N·m (89 lb in).



8. Install the front bumper fascia (1) to front air deflector retaining screws (2).

   Tighten
   Tighten the screws to 3 N·m (27 lb in).



9. Connect the front end module to front bumper fascia wiring harness (1).
10. Install the front wheelhouse liner. Refer to Front Wheelhouse Liner Replacement.
11. Lower the vehicle.
12. Install the radiator grille. Refer to Radiator Grille Replacement.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Bumpers and Fascias | Repair Instructions | **Document ID: 1984444**

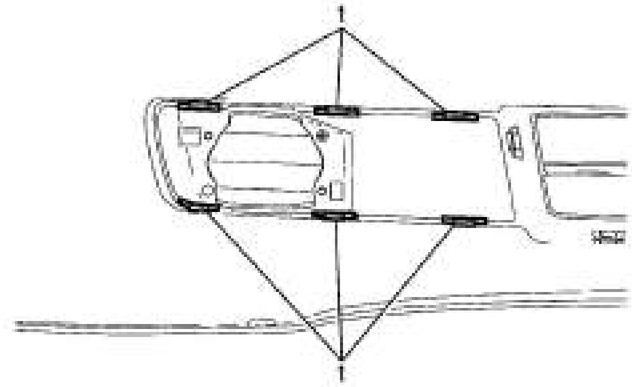
Front Bumper Fascia Insert Replacement (LWB SWB)

Removal Procedure

Caution: Refer to Safety Glasses Caution in the Preface section.

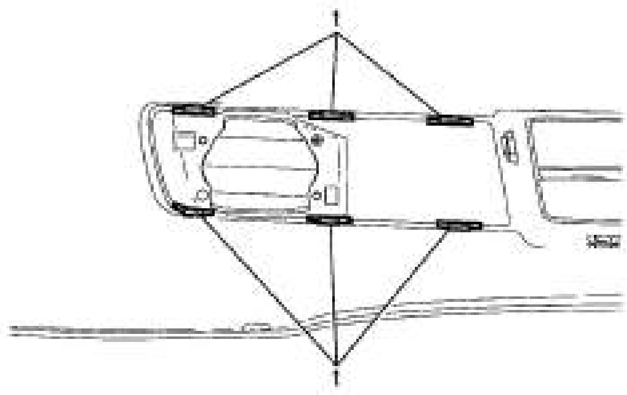
Caution: Refer to Vehicle Lifting Caution in the Preface section.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Remove the front air deflector. Refer to Front Air Deflector Replacement.



3. Carefully pry the front bumper fascia insert retaining tabs (1) from the front bumper fascia.
4. Remove the front bumper fascia insert from the front bumper fascia.

Installation Procedure



1. Install the front bumper fascia insert to the front bumper fascia.
2. Firmly press the front bumper fascia insert retaining tabs (1) into the front bumper fascia.
3. Install the front air deflector. Refer to Front Air Deflector Replacement.
4. Lower the vehicle.

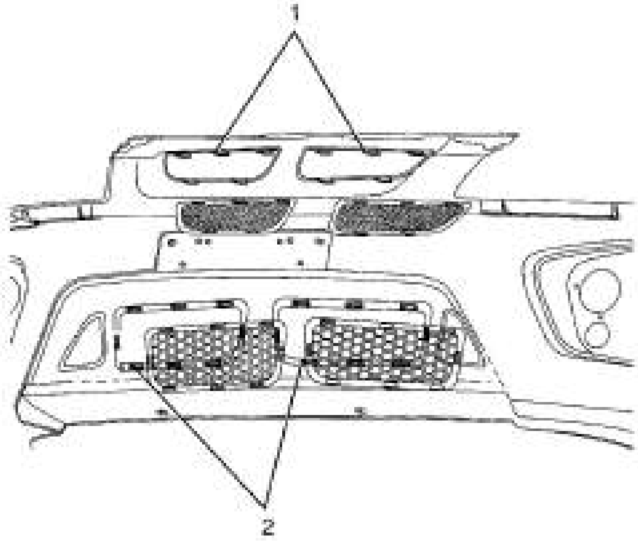
Front Bumper Fascia Insert Replacement (CSV SWBHSV VXR8)

Removal Procedure (Type C)

Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

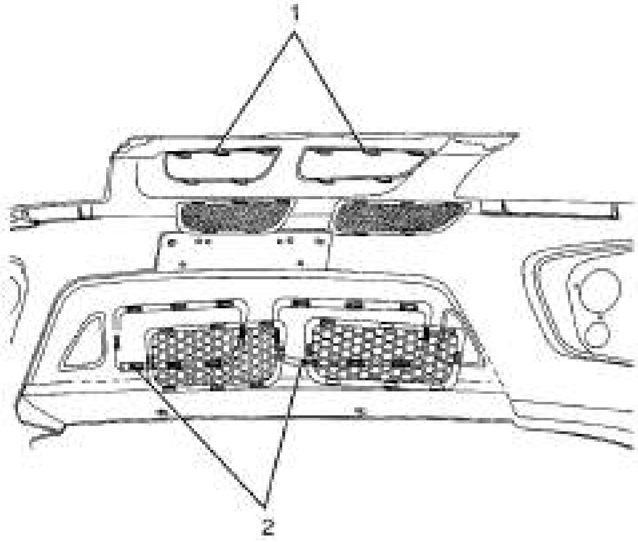
1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Remove the front bumper fascia. Refer to Front Bumper Fascia Replacement.



3. Carefully prise the upper grille from the front bumper fascia retaining tabs (1).
4. Carefully prise the lower grille from the front bumper fascia retaining tabs (2).
5. Remove the front bumper fascia upper and lower grilles from the front bumper fascia.

Installation Procedure (Type C)

1. Install the front bumper fascia upper and lower grilles to the front bumper fascia.



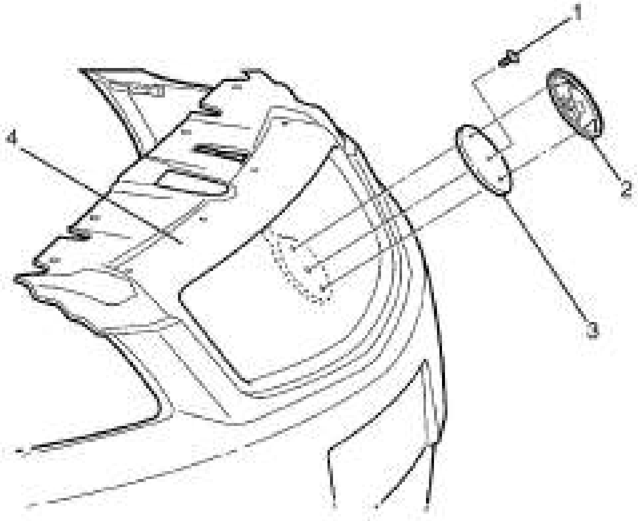
2. Firmly press the upper grille into the front bumper fascia retaining tabs (1).
3. Firmly press the lower grille into the front bumper fascia retaining tabs (2).
4. Install the front bumper fascia. Refer to Front Bumper Fascia Replacement.
5. Lower the vehicle.

Removal Procedure (Type D)

Caution: Refer to Safety Glasses Caution in the Preface section.

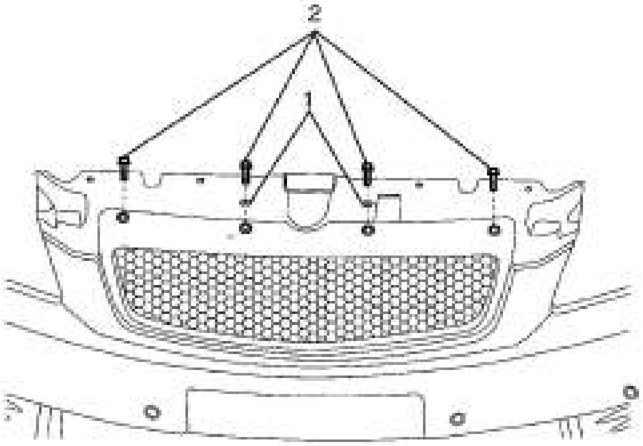
Caution: Refer to Vehicle Lifting Caution in the Preface section.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Remove the front bumper fascia. Refer to Front Bumper Fascia Replacement.

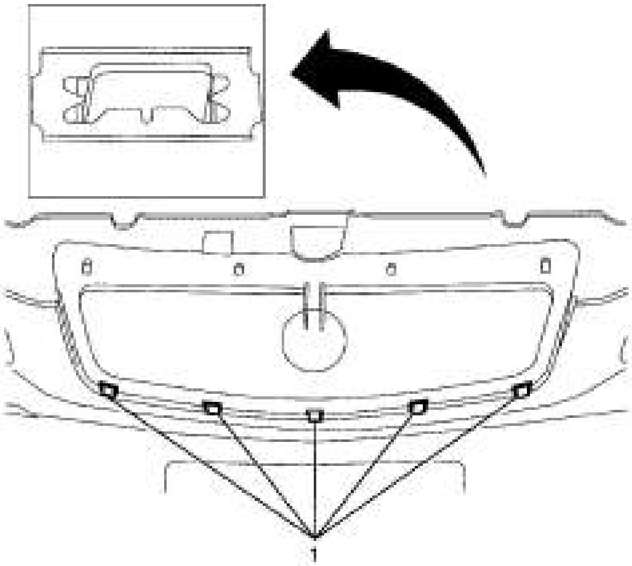


3. Remove the grille emblem (2) from the grill emblem boss (3) using a suitable tool.
4. Remove the grille emblem boss retaining screw (1) from the grille emblem boss (3).
5. Remove grille emblem boss (3) using a suitable tool.

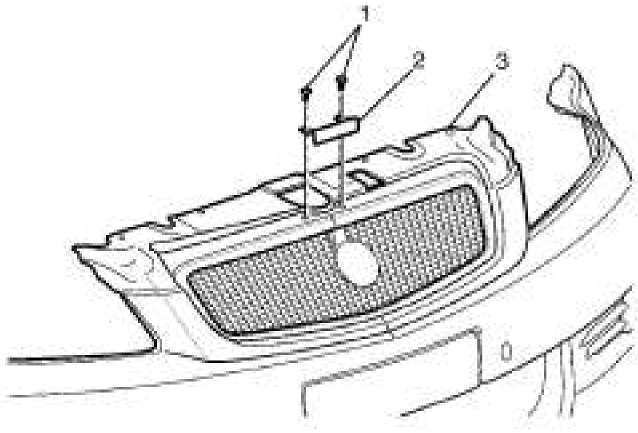
Important: Foam spacers are used in the two centre screw points. Upon removal of the front bumper fascia upper grille make sure they are retained.



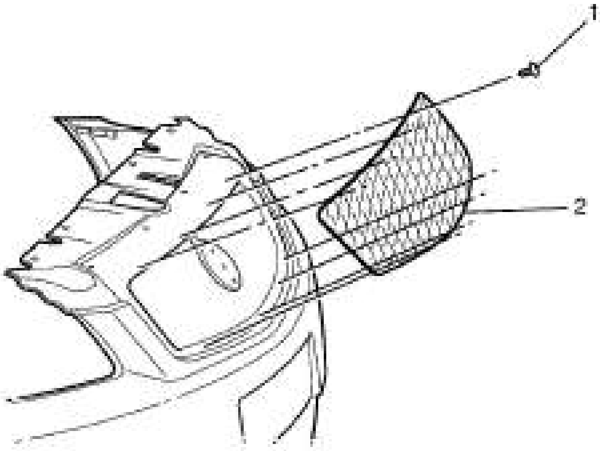
6. Remove the front bumper fascia upper grille retaining screws (1).



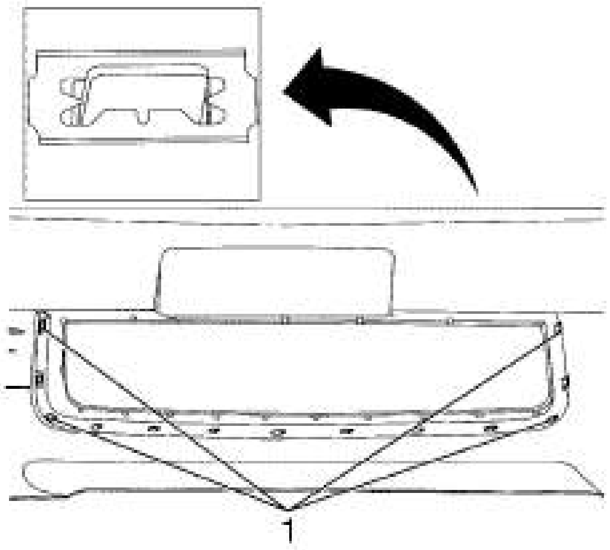
7. Carefully prise the five front bumper fascia upper grille retaining clips (1) from the front bumper fascia.
8. Remove the front bumper fascia upper grille.



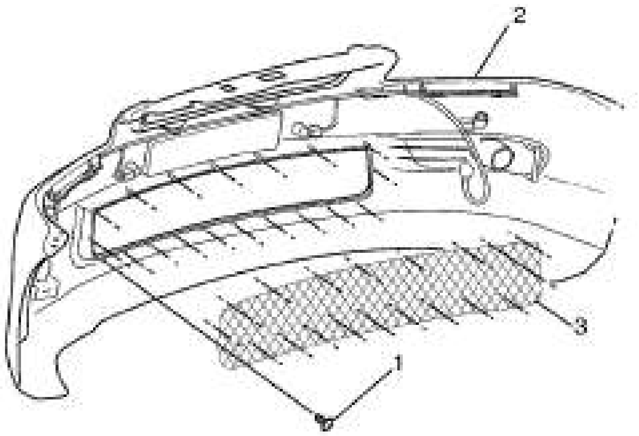
9. Remove the upper grille mesh alignment bracket retaining screws (1) and the upper grille mesh alignment bracket (2) from the fascia assembly (3).



10. Remove the eight upper grille mesh retaining screws (1) and the upper grille mesh (2).

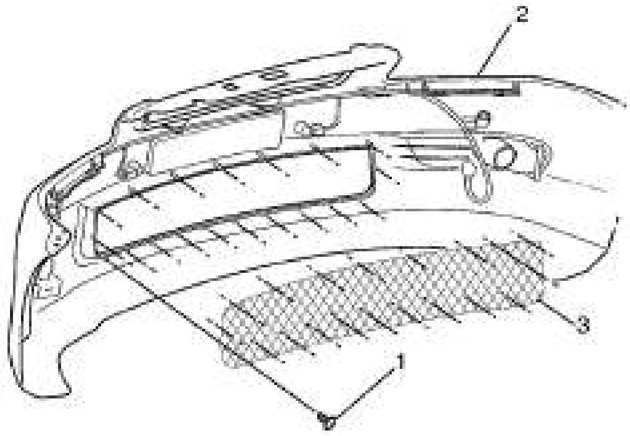


11. Carefully prise the thirteen front bumper fascia decor strip retaining clips (1) from the front bumper fascia.
12. Remove the decor strip.



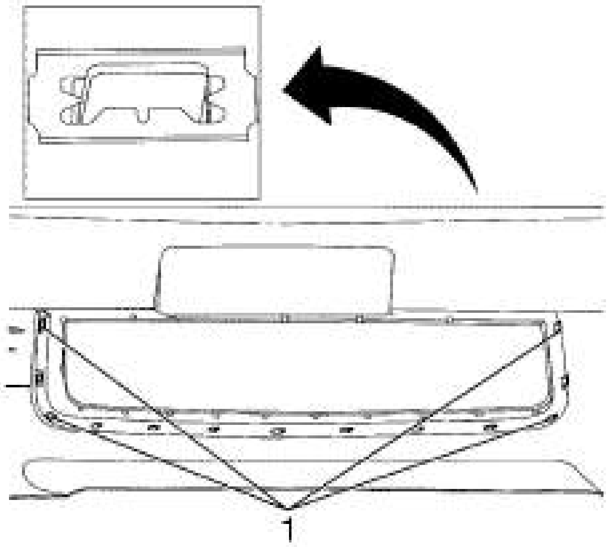
13. Remove the nineteen front bumper fascia lower grille mesh retaining screws (1) from the front bumper fascia (2).
14. Remove the lower grille mesh (3) from the front fascia assembly (2).
15. Replace components as required.

Installation Procedure (Type D)

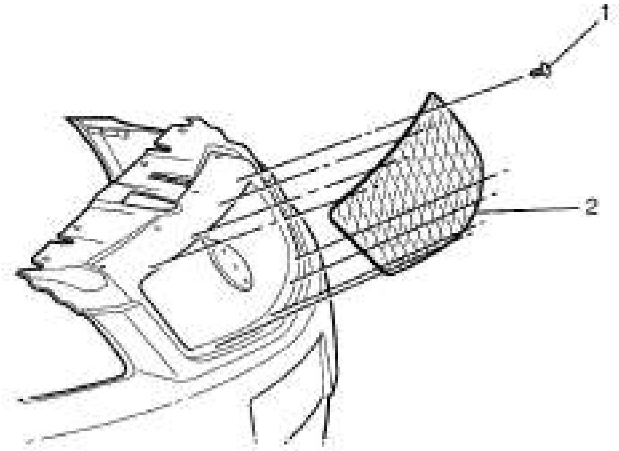


1. Install the lower grille mesh (3) to the front fascia assembly (2).
2. Install the nineteen lower grille mesh retaining screws (1) into the front bumper fascia (2).

   Tighten
   Tighten the screws to 2 Nm (18 lb. in).

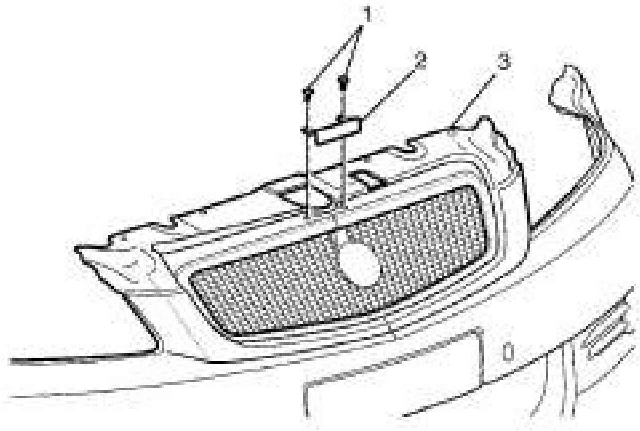


3. Install the decor strip into the front bumper fascia.
4. Carefully install the thirteen front bumper fascia decor strip retaining clips (1) onto the decor strip tangs.



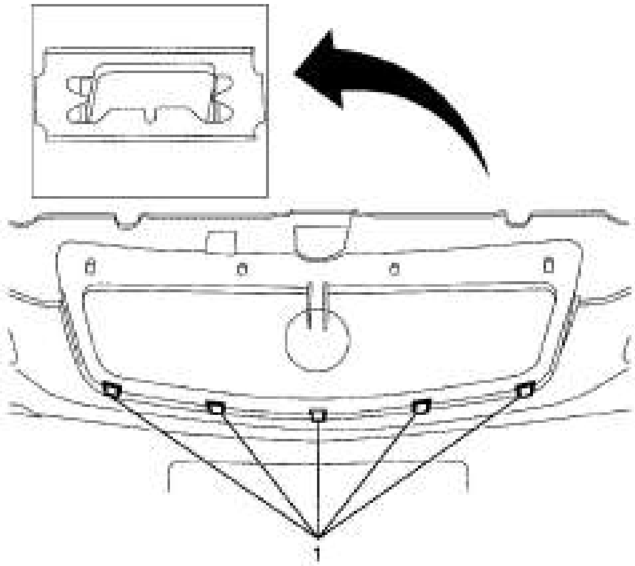
5. Install the eight upper grille mesh retaining screws (1) and upper grille mesh (2).

   Tighten
   Tighten the screws to 2 Nm (18 lb. in).



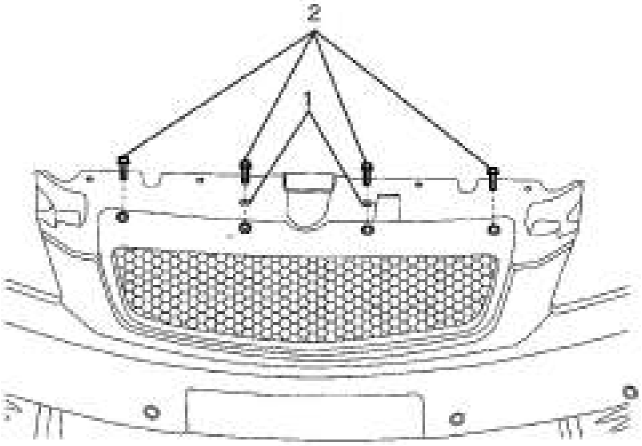
6. Install the upper grille mesh alignment bracket (2) and the upper grille mesh alignment bracket retaining screws (1) into the fascia assembly (3).

   Tighten
   Tighten the screws to 2 Nm (18 lb. in).



7. Install the front bumper fascia upper grille onto the front bumper fascia.
8. Carefully install the five front bumper fascia upper grille retaining clips (1) onto the retaining tangs.

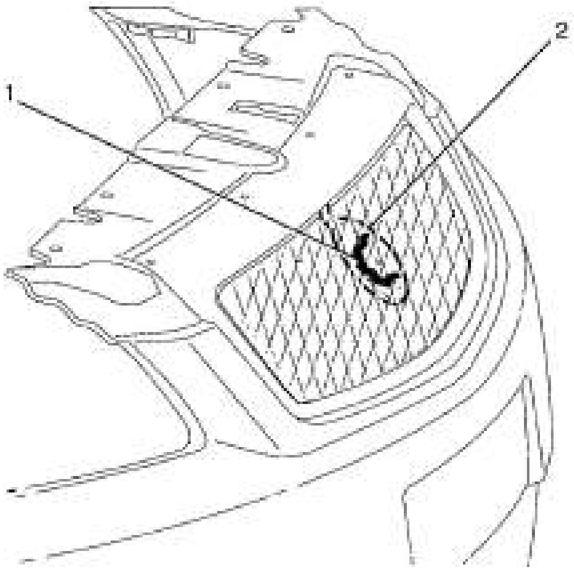
Important: Make sure spacers (1) are used between the upper grille mesh and the upper grille in the two centre screw points. The spacers will require the use of a suitable adhesive tape to hold the spacers (1) in position during the front bumper fascia upper grille retaining screw (2) installation.



9. Install spacers (1) on the inner two screw points. Retain the spacers in position with a suitable adhesive tape.
10. Install the front bumper fascia upper grille retaining screws (2).

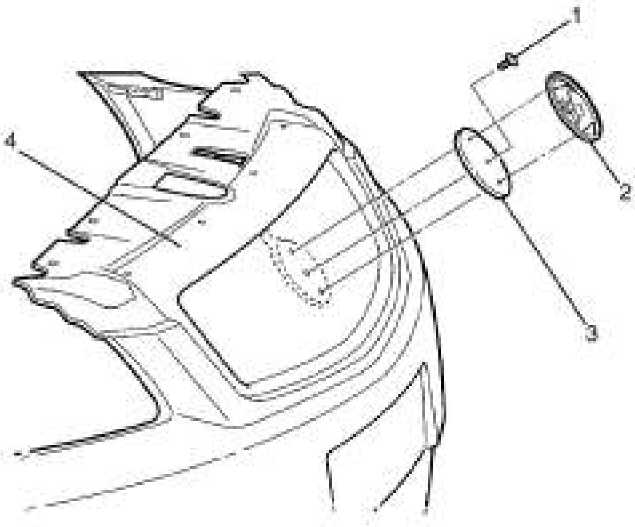
Tighten
Tighten the screws to 4 Nm (36 lb. in).

Important: Urethane adhesive should under no circumstances be visible after boss and emblem installation.



11. Apply a smear of suitable urethane adhesive (1) on the boss attachment surface of the fascia upper grille mesh assembly (2).

Important: Urethane adhesive should under no circumstances be visible after boss and emblem installation.



12. Install the grille emblem boss (3) onto the upper grille assembly (4) and install the grille emblem boss retaining screw (1).

    Tighten
    Tighten the screw to 2 Nm (18 lb. in).

13. Install the grille emblem (2) onto the grill emblem boss (3).
14. Lower the vehicle. Refer to Lifting and Jacking the Vehicle.
15. Install the front bumper fascia. Refer to Front Bumper Fascia Replacement.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Bumpers and Fascias | Repair Instructions | **Document ID: 2025925**

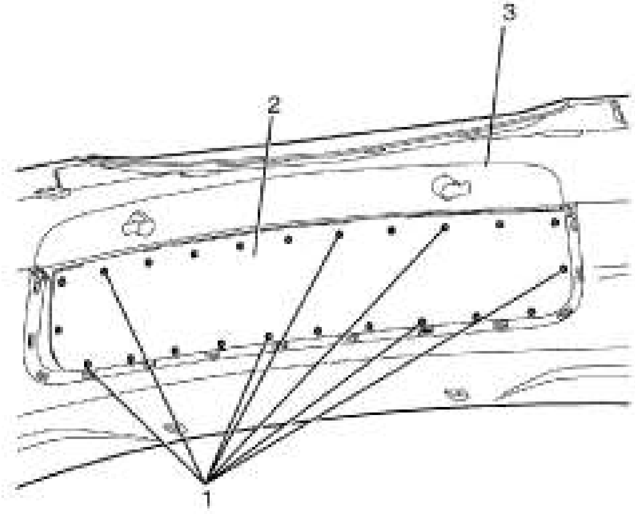
Front Bumper Fascia Insert Replacement (LWBHSV)

Removal Procedure

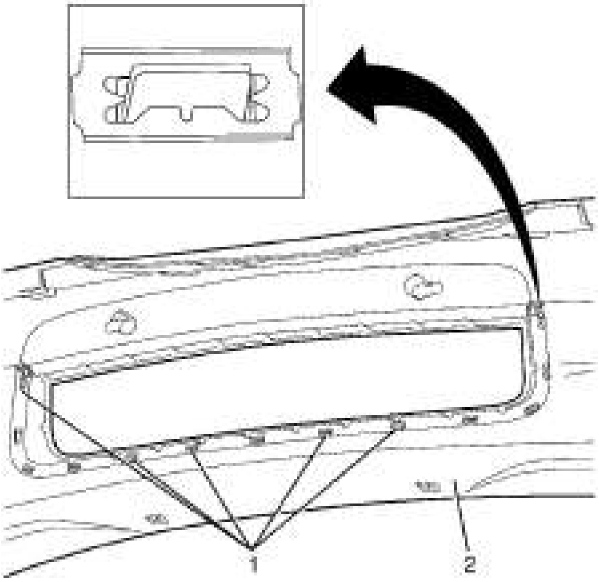
Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle in General Information.
2. Remove the front bumper fascia. Refer to Front Bumper Fascia Replacement in Bumpers.

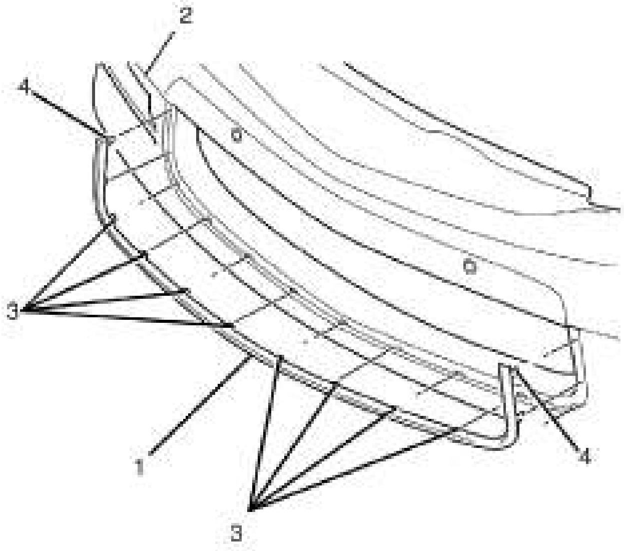


3. Remove the fourteen front bumper fascia grille retaining screws (1) and carefully remove the front bumper fascia grille (2) from the front bumper fascia (3).



4. Carefully prise the thirteen grille surround retaining clips (1) from the tabs protruding through the front bumper fascia (2).

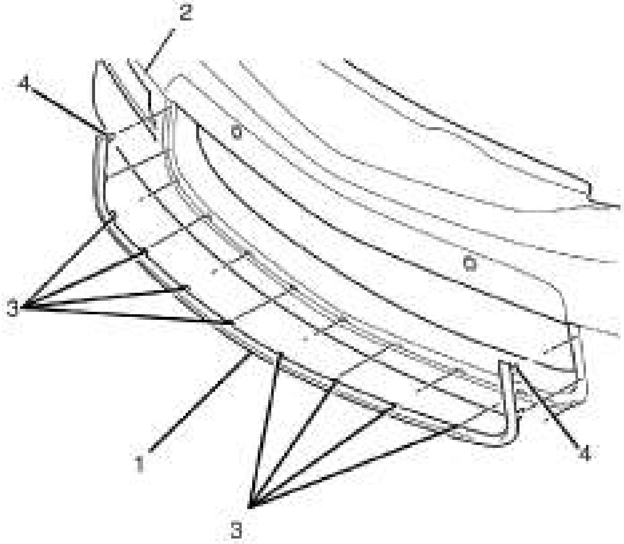
   Important: The grille surround (1) must be removed by releasing the lower grille surround tabs (3) outwards from the front bumper fascia (2) prior to the upper grille surround tabs (4).



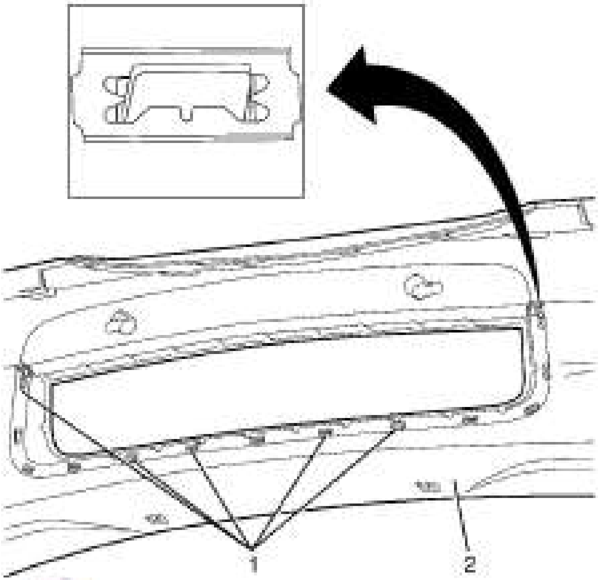
5. Carefully remove the grille surround (1) from the front bumper fascia (2) by rotating the lower grille surround tabs (3) outwards from the front bumper fascia (2) followed by releasing the upper grille surround tabs (4).

Installation Procedure

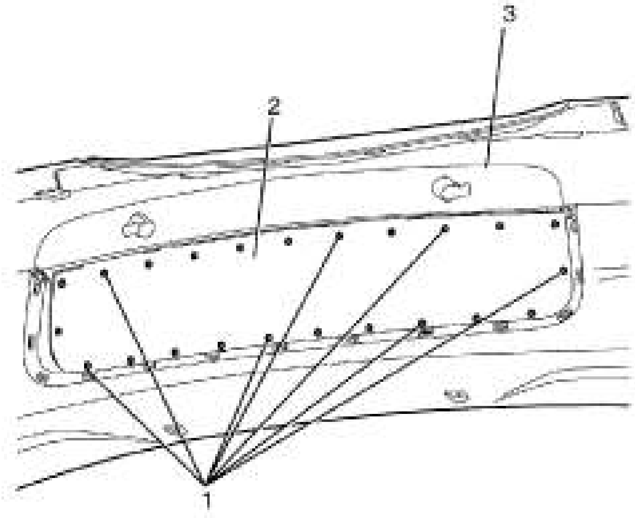
Important: The grille surround (1) must be installed by locating the upper grille surround tabs (4) prior to rotating the grille surround (1) inwards to locate the lower grille surround tabs (3) into the front bumper fascia (2).



1. Locate the upper grille surround tabs (4) into the front bumper fascia (2).
2. Rotate the grille surround inwards to locate the lower grille surround tabs (3) into the front bumper fascia (2).



3. Install the thirteen front bumper fascia grille surround retaining clips (1) onto the tabs protruding through the front bumper fascia (2).



4. Install the front bumper fascia grille (2) onto the front bumper fascia (3).

   Notice: Refer to Fastener Notice in the Preface section.

5. Install the front bumper fascia grille retaining screws (1)

   Tighten
   Tighten the screws to 2 Nm (18 lb in).

6. Install the front bumper fascia. Refer to Front Bumper Fascia Replacement in Bumpers.
7. Lower the vehicle. Refer to Lifting and Jacking the Vehicle in General Information.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Bumpers and Fascias | Repair Instructions | **Document ID: 1990428**

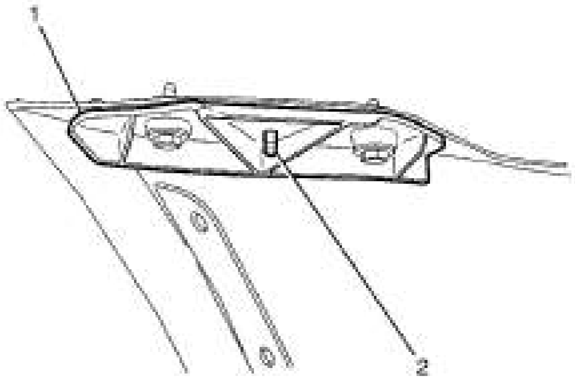
Front Bumper Fascia Reinforcement Replacement

Removal Procedure

Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

1. Remove the front bumper fascia. Refer to Front Bumper Fascia Replacement .

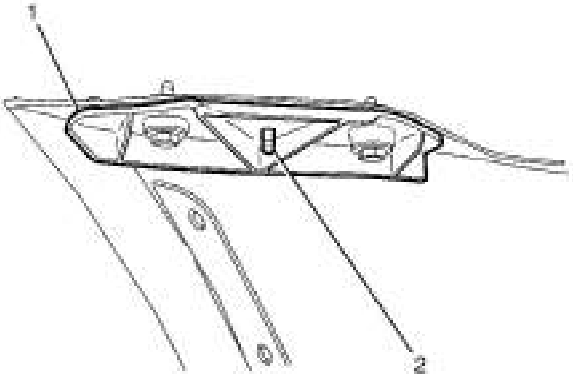


2. Remove the rivet (2) that secures the front bumper fascia reinforcement (1) to the front bumper fascia. The rivet must be discarded after removal.

   Discard the rivet.

3. Remove the front bumper fascia reinforcement (1) from the front bumper fascia.

Installation Procedure



1. Position the front bumper fascia reinforcement (1) to the front bumper fascia.
2. Install the NEW rivet (2) to secure the front bumper fascia reinforcement to the front bumper fascia.
3. Install the front bumper fascia. Refer to Front Bumper Fascia Replacement .

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Bumpers and Fascias | Repair Instructions | **Document ID: 1984446**

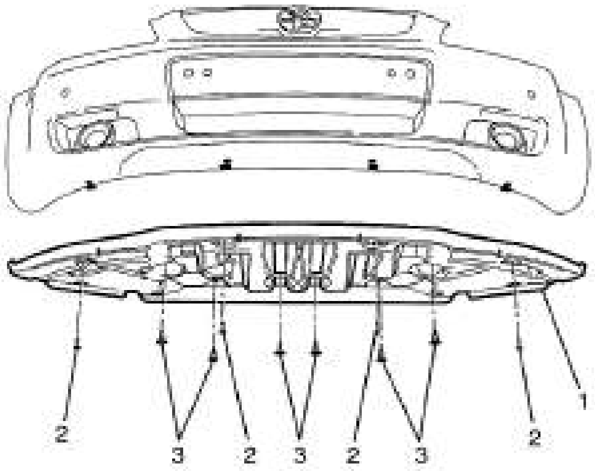
Front Air Deflector Replacement

Removal Procedure

Caution: Refer to Vehicle Lifting Caution in the Preface section.

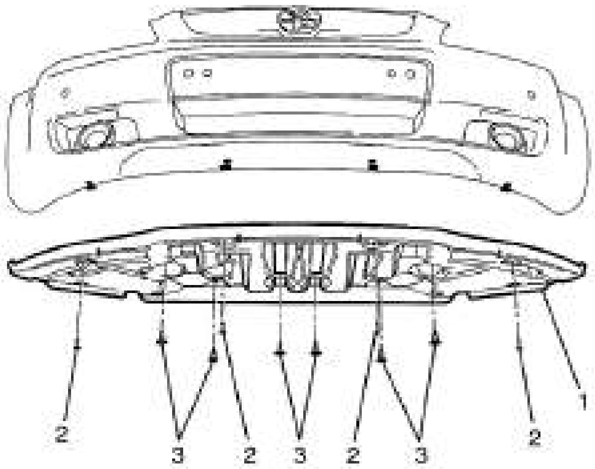
Caution: Refer to Safety Glasses Caution in the Preface section.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Remove the front wheelhouse liners. Refer to Front Wheelhouse Liner Replacement.



3. Remove the front air deflector to front bumper fascia retaining screws (2).
4. Remove the front bumper fascia. Refer to Front Bumper Fascia Replacement.
5. Remove the front air deflector to front frame push-in retainers (3).
6. Remove the front air deflector (1).

Installation Procedure



1. Position the front air deflector (1) to the vehicle.
2. Install the front air deflector to front frame push-in retainers (3).
3. Install the front bumper fascia. Refer to Front Bumper Fascia Replacement.
4. Install the front air deflector to front bumper fascia retaining screws (2)

Tighten
Tighten the screws to 3 N·m (27 lb in).

5. Install the front wheelhouse liners. Refer to Front Wheelhouse Liner Replacement.
6. Lower the vehicle.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Bumpers and Fascias | Repair Instructions | **Document ID: 2069381**

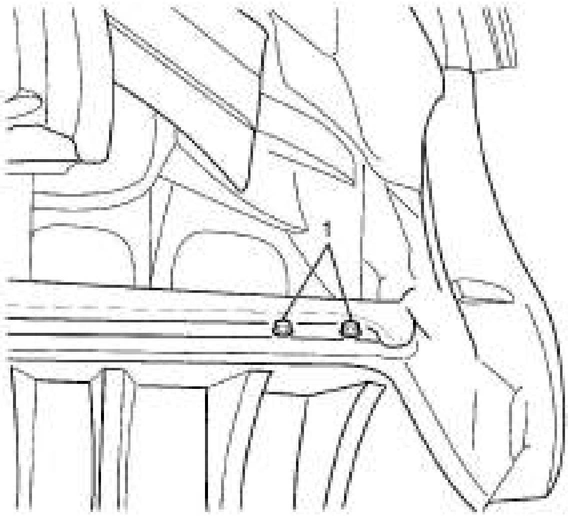
Rear Bumper Bracket Replacement (Sedan)

Removal Procedure

Caution: Refer to Safety Glasses Caution in the Preface section.

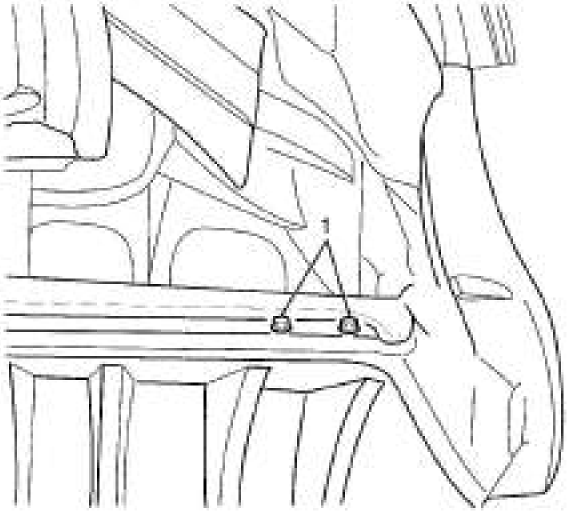
Caution: Refer to Vehicle Lifting Caution in the Preface section.

1. Open the rear compartment lid.
2. Install a suitable brace to the rear compartment lid.
3. Remove the rear compartment floor carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
4. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
5. Remove the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
6. Remove the rear bumper impact bar. Refer to Rear Bumper Impact Bar Replacement.
7. Remove the rear muffler. Refer to Exhaust Muffler Replacement - Left Side and Exhaust Muffler Replacement - Right Side.
8. Remove the exhaust muffler heat shields. Refer to Exhaust Muffler Heat Shield Replacement - Left Side and Exhaust Muffler Heat Shield Replacement - Right Side.



9. Remove the rear bumper bracket to rear compartment floor retaining bolts (1).
10. Remove the rear bumper bracket.

Installation Procedure



1. Verify that the plastic retainers are secure to the rear quarter panel.
2. Install the rear bumper bracket to rear compartment floor.

   Notice: Refer to Fastener Notice in the Preface section.

3. Install the rear bumper bracket to rear compartment floor retaining bolts (1).

   Tighten
   Tighten the bolts to 58 N·m (43 lb ft).

4. Install the exhaust muffler heat shields. Refer to Exhaust Muffler Heat Shield Replacement - Left Side and Exhaust Muffler Heat Shield Replacement - Right Side.
5. Install the rear muffler. Refer to Exhaust Muffler Replacement - Left Side and Exhaust Muffler Replacement - Right Side.
6. Install the rear bumper impact bar. Refer to Rear Bumper Impact Bar Replacement.
7. Install the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
8. Lower the vehicle.
9. Install the rear compartment floor carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
10. Remove the suitable brace from the rear compartment lid.
11. Close the rear compartment lid.

Rear Bumper Bracket Replacement (Sportwagon)

Removal Procedure

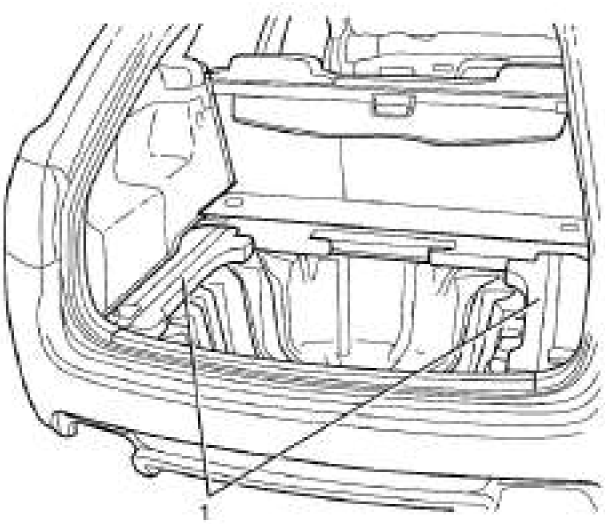
Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

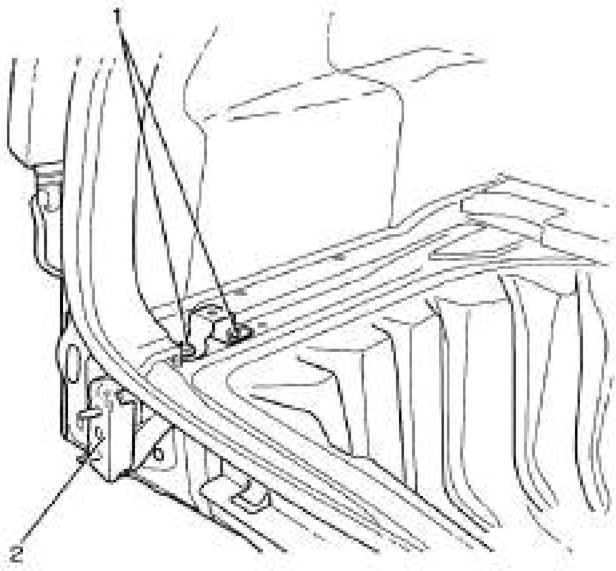
1. Open the liftgate

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

2. Install a suitable liftgate brace to the vehicle.
3. Remove the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
4. Remove the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.

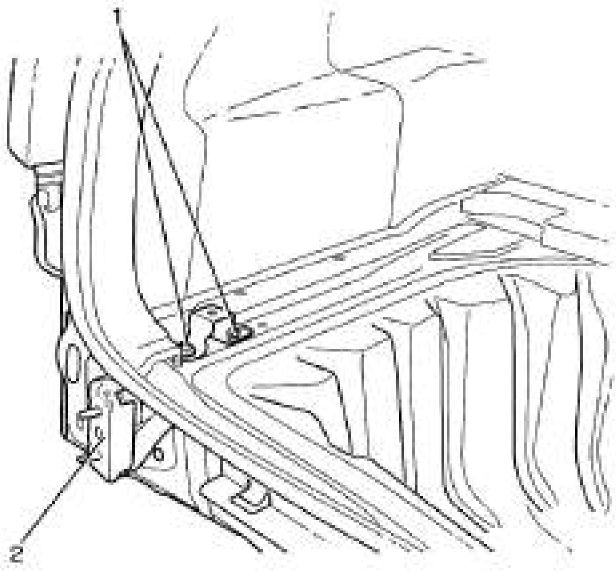


5. Remove the rear compartment floor panel carpet exterior support foams (1).
6. Remove the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
7. Remove the rear bumper impact bar. Refer to Rear Bumper Impact Bar Replacement.



8. Remove the rear bumper bracket to rear compartment floor retaining bolts (1).
9. Remove the rear bumper bracket (2) from the vehicle.

Installation Procedure



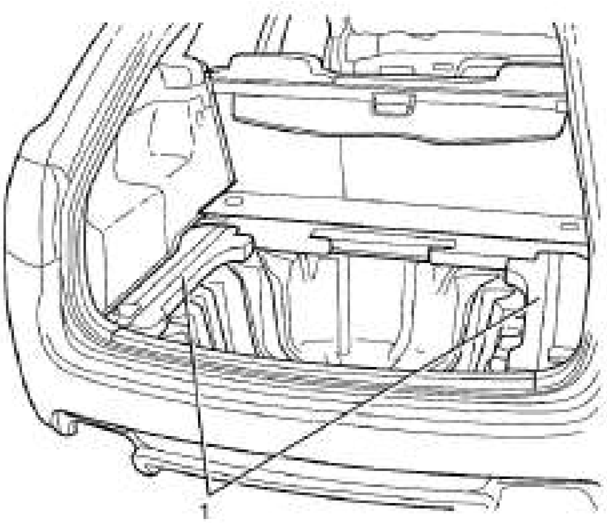
1. Position the rear bumper bracket (2) to the vehicle.

   Notice: Refer to Fastener Notice in the Preface section.

2. Install rear bumper bracket to rear compartment floor retaining bolts (1).

Tighten
Tighten the bolts to 58 N·m (43 lb ft).

3. Install the rear bumper impact bar. Refer to Rear Bumper Impact Bar Replacement.
4. Install the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.



5. Install the rear compartment floor panel carpet exterior support foams (1).
6. Install the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
7. Install the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
8. Remove the liftgate suitable brace from the vehicle.

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

9. Close the liftgate.

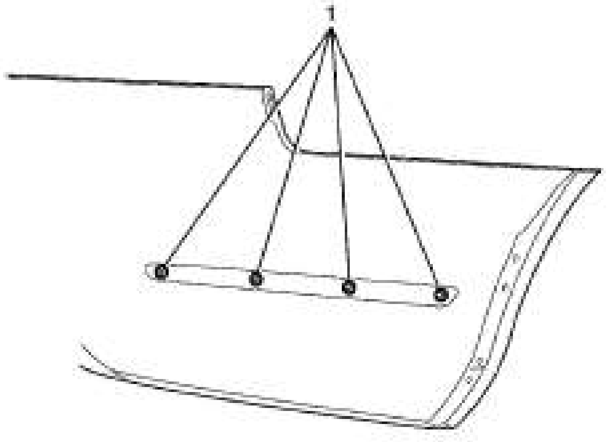
Rear Bumper Fascia Molding Replacement (SWB)

Removal Procedure

Caution: Refer to Safety Glasses Caution in the Preface section.

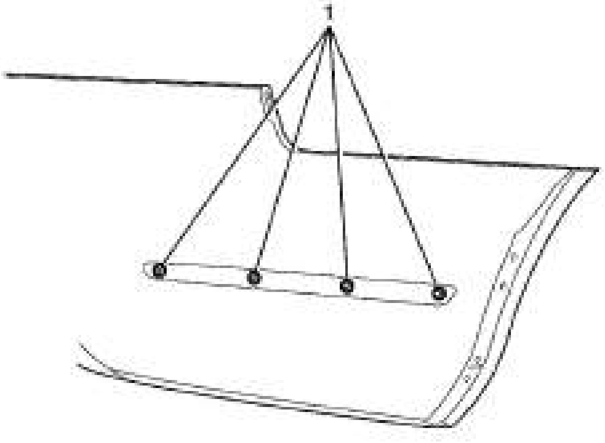
Caution: Refer to Vehicle Lifting Caution in the Preface section.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Remove the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.



3. Remove the rear bumper fascia rub-strip to rear bumper fascia retaining clips (1).
4. Remove the rear bumper fascia rub-strip from the rear bumper fascia.

Installation Procedure



1. Install the rear bumper fascia rub-strip to rear bumper fascia.
2. Install the rear bumper fascia rub-strip to rear bumper fascia retaining clips (1).
3. Install the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
4. Lower the vehicle.

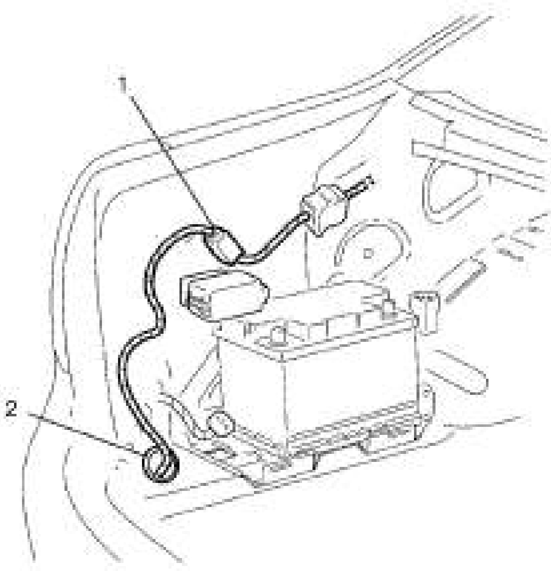
Rear Bumper Fascia Replacement (SWB)

Removal Procedure

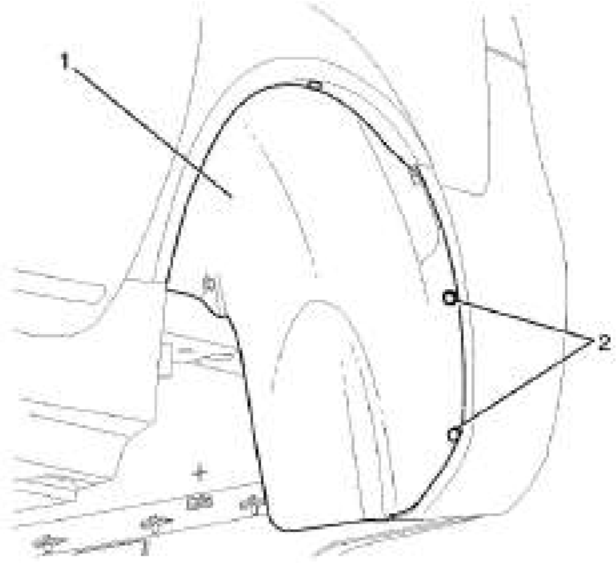
Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

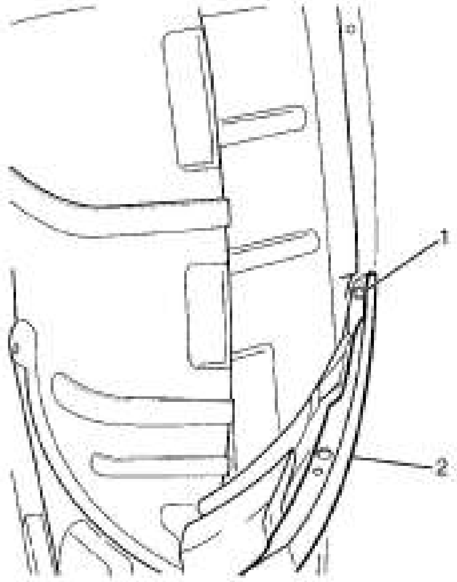
Important: Steps 1 and 2 are for the object detection assembly if fitted.



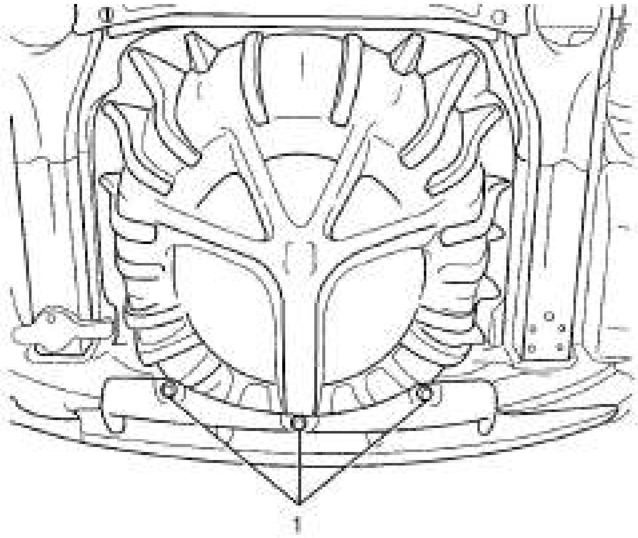
1. Disconnect the object detection electrical connector (1) from the wiring harness.
2. Feed the licence lamp wiring harness through the access hole (2).
3. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.



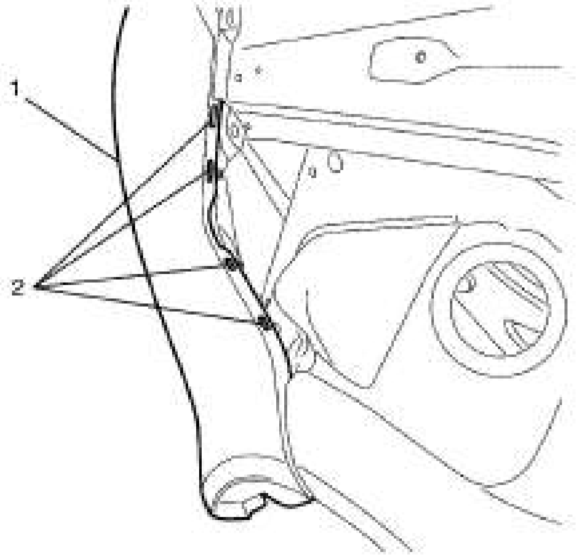
4. Remove the rear wheelhouse liner (1) to rear bumper fascia retaining scrivets (2). Repeat for opposite side.



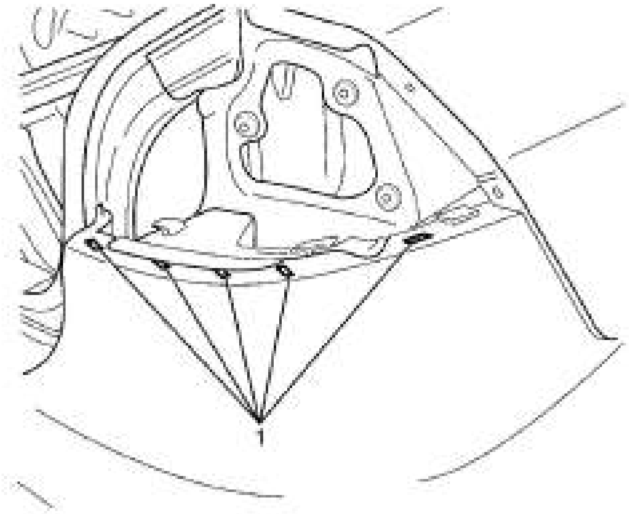
5. Remove the rear bumper fascia (2) to rear quarter panel retaining screw (1). Repeat for opposite side.



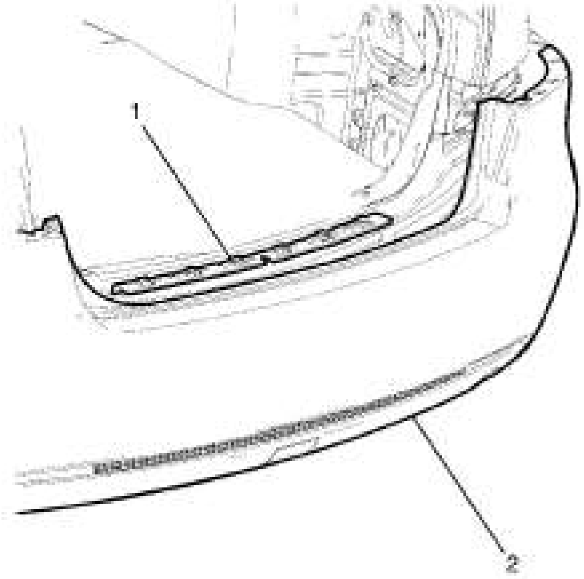
6. Remove the rear bumper fascia to spare wheel carrier retaining scrivets (1).



7. Disengage the rear bumper fascia (1) to rear bumper fascia guide rail retaining tabs (2).



8. Disengage the rear bumper fascia to rear bumper fascia outer support retaining tabs (1).



9. With the aid of an assistant, remove the rear bumper fascia by sliding rearward to disengage the rear bumper fascia (2) from the rear bumper fascia centre support (1).

Disassembly Procedure

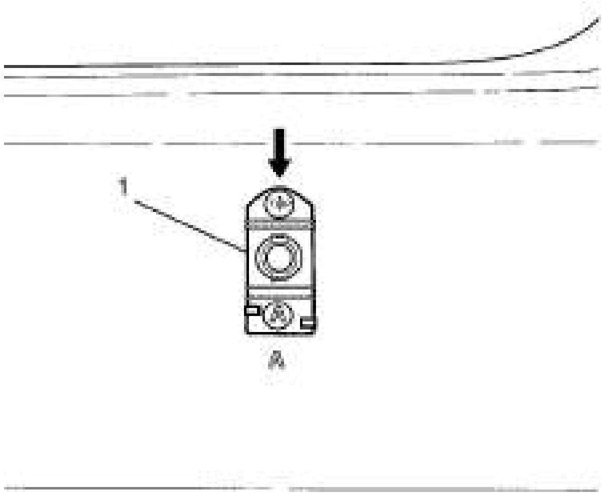
1. Remove the rear bumper fascia reflector. Refer to Rear Bumper Fascia Reflector Replacement.
2. Remove the rear bumper fascia extension. Refer to Rear Bumper Fascia Extension Replacement.

Assembly Procedure

Important: Prior to drilling the bumper fascia it is essential that the object detection bracket templates are aligned to their correct corresponding location within the bumper fascia. The location of the object detection bracket templates to the bumper fascia is alpha numeric, make sure that the letters correspond between the object detection bracket templates and the bumper fascia.

Important: Each object detection bracket template has a tolerance of 0.5 mm and must be taken into consideration.

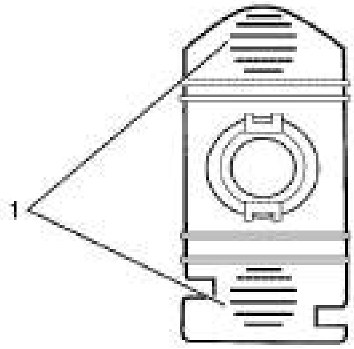
Important: The Object Detection Bracket Template, normally found in the service manual has been removed. A review of its accuracy due to the new delivery system, and different printing methods available from the web site is currently in progress. Please reference the Holden Service Information disc, Version 4.01 for a current template.



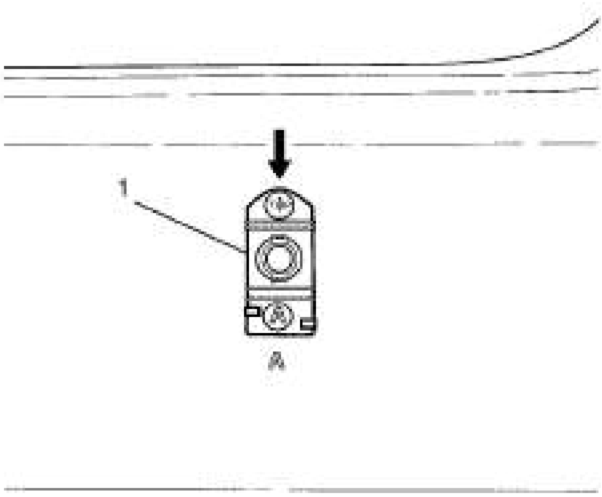
Important: This graphic is used as an example only and must not be used as a template, it displays one of the varying object detection bracket templates for reference.

Important: When aligning the object detection bracket template make sure that the locating tags align correctly and there is little or no movement, prior to drilling.

1. Install the object detection bracket templates (1) to the rear bumper fascia.
2. Mark out the sensor hole from the object detection bracket templates (1) to the rear bumper fascia.
3. Remove the object detection bracket templates (1) from the rear bumper fascia.
4. Drill the holes in the rear bumper fascia 24.5 mm (0.96 in).
5. Remove any swarf from the rear bumper fascia.
6. Clean the rear bumper fascia with a suitable wax and grease remover.
7. Remove the object detection bracket templates (1) from the rear bumper fascia.



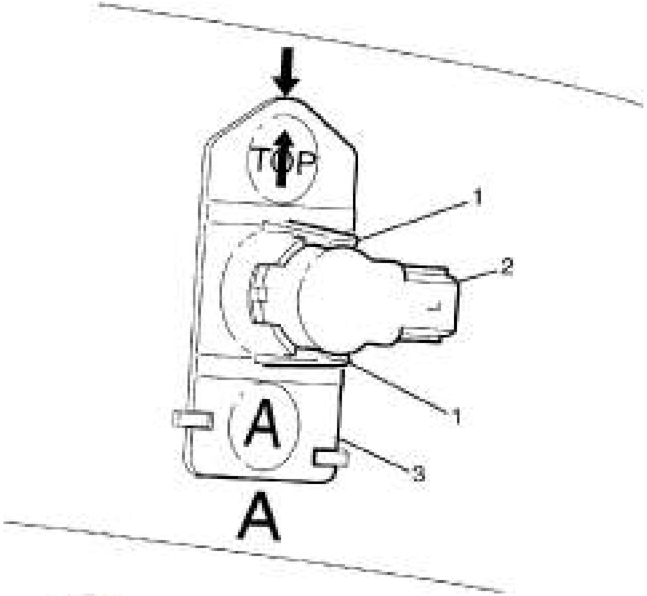
8. Apply the GM Specification 9982247 (Fusor 152-153) adhesive or equivalent to the ribs of the object detection bracket (1).



Important: This graphic is used as an example only and must not be used as a template, it displays one of the varying object detection bracket templates for reference.

Important: The location of the object detection brackets to the bumper fascia is alpha numeric, make sure that the letters correspond between the object detection brackets and the bumper fascia.

9. Install the object detection bracket (1) to the rear bumper fascia.



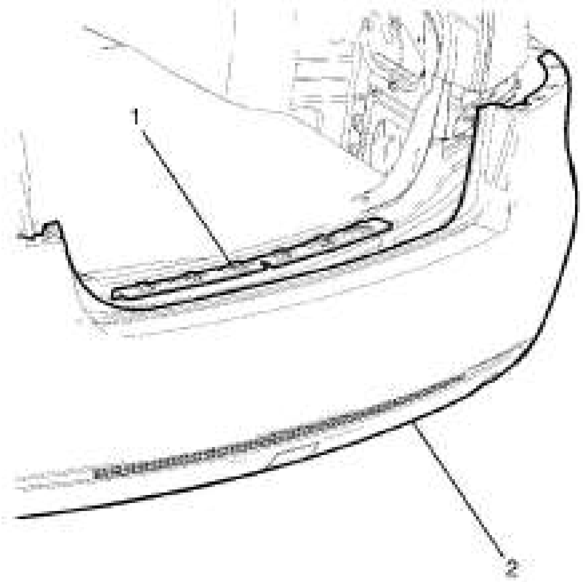
Important: Allow 20 minutes for the adhesive to cure to the rear bumper fascia.

Important: Replacement front object alarm sensors (2) are not pre-painted, they will require painting before installation is carried out.

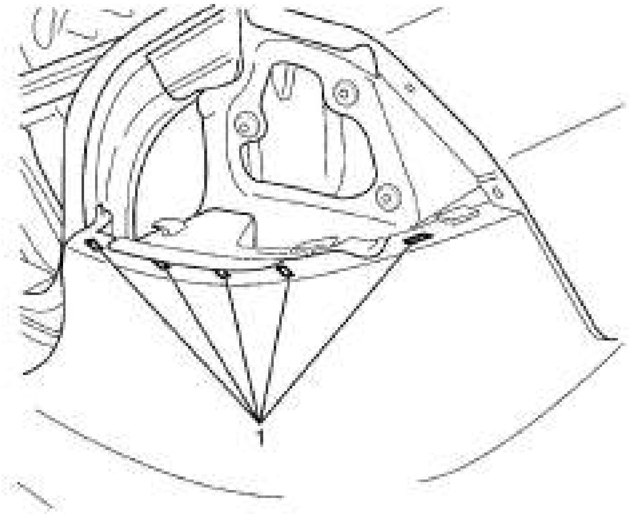
Important: Ensure that the rear object alarm sensor (2) is installed correctly.

10. Locate the top and bottom housing tabs (1) to install the rear object alarm sensor (2) to the rear object alarm sensor housing (3).
11. Press the rear object sensor bezel flush to the fascia.
12. Install the rear bumper fascia extension. Refer to Rear Bumper Fascia Extension Replacement.
13. Install the rear bumper fascia reflector. Refer to Rear Bumper Fascia Reflector Replacement.

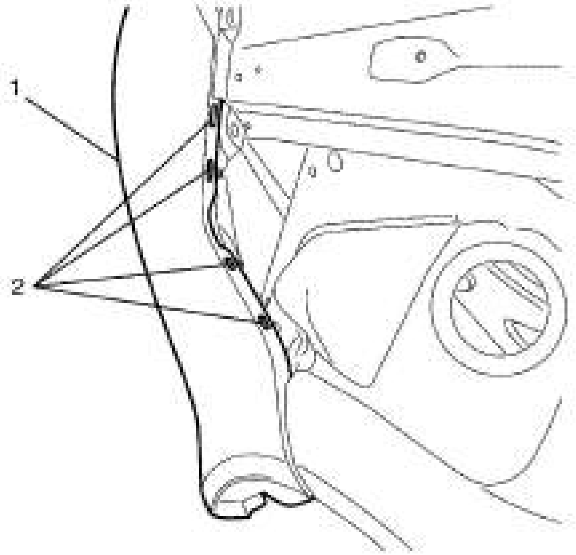
Installation Procedure



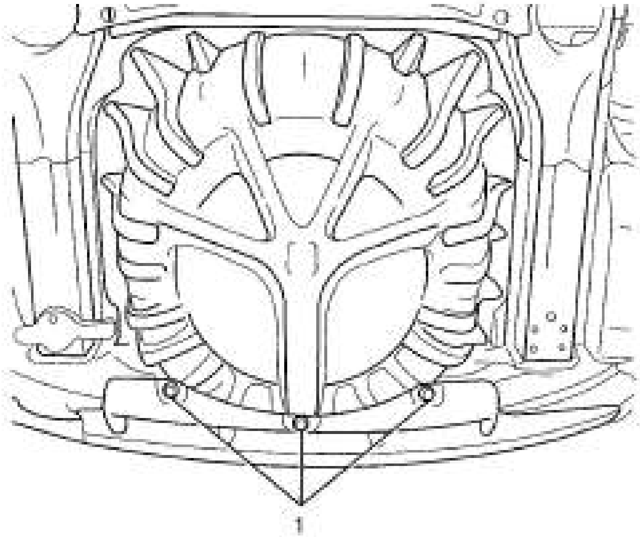
1. With the aid of an assistant, install the rear bumper fascia by sliding forward to engage the rear bumper fascia (2) to the rear bumper fascia centre support (1).



2. Engage the rear bumper fascia to rear bumper fascia outer support retaining tabs (1).

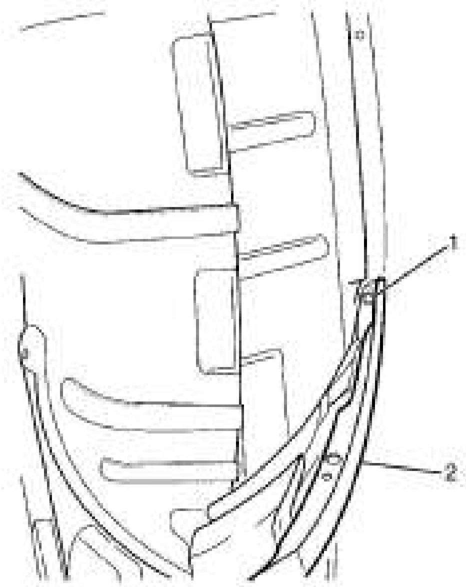


3. Engage the rear bumper fascia (1) to rear bumper fascia guide rail retaining tabs (2).
4. Make sure the rear bumper fascia is secured to the rear bumper fascia centre, outer and lower supports by hearing an audible click.



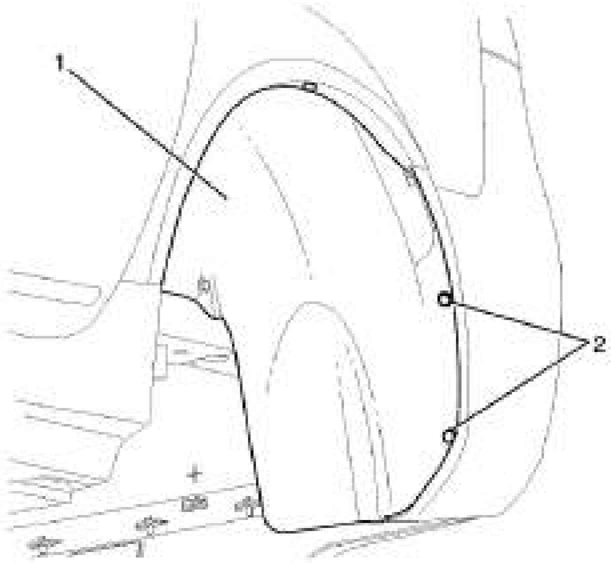
5. Install the rear bumper fascia to spare wheel carrier retaining scrivets (1).

Notice: Refer to Fastener Notice in the Preface section.



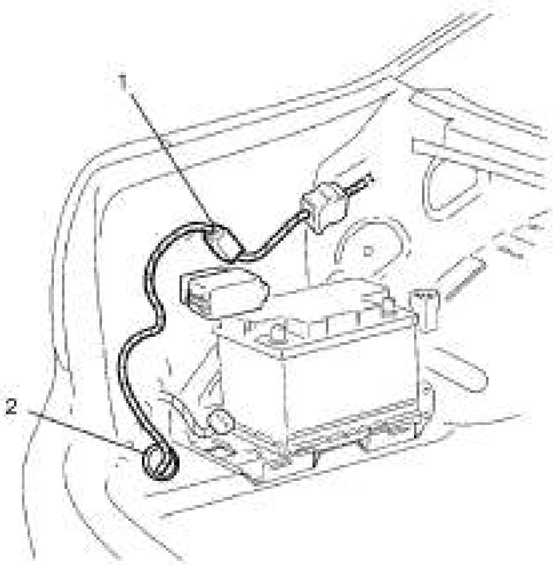
6. Install the rear bumper fascia (2) to rear quarter panel retaining screws (1). Repeat for opposite side.

   Tighten
   Tighten the screws to 2 N·m (18 lb in).



7. Install the rear wheelhouse liner (1) to rear bumper fascia retaining scrivets (2). Repeat for opposite side.
8. Lower the vehicle.

Important: The following steps are for the object detection assembly if fitted



9. Feed the licence lamp wiring harness through the access hole (2).
10. Connect the object detection electrical connector (1) to the wiring harness.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Bumpers and Fascias | Repair Instructions | **Document ID: 2069386**

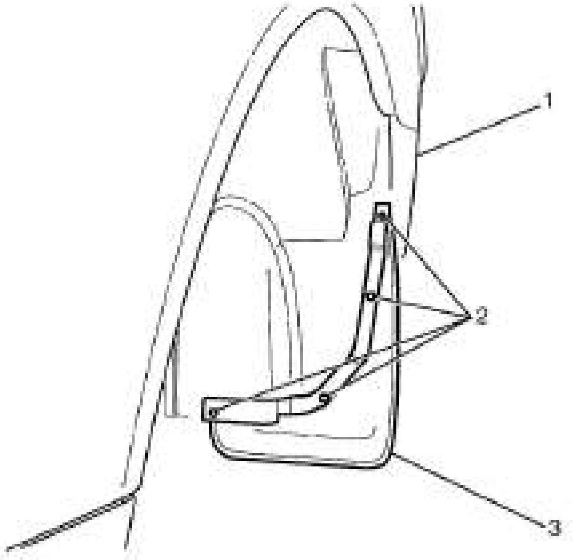
Rear Bumper Fascia Replacement (Sportwagon)

Removal Procedure

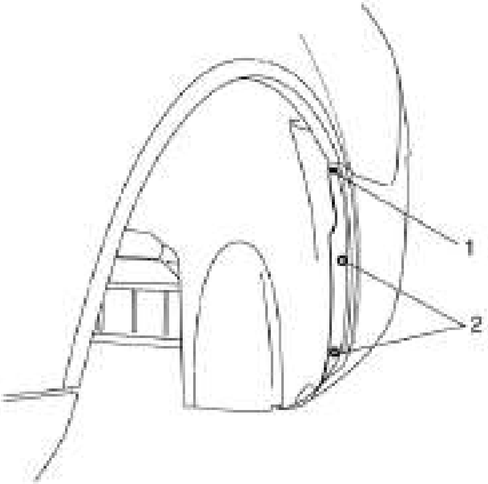
Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

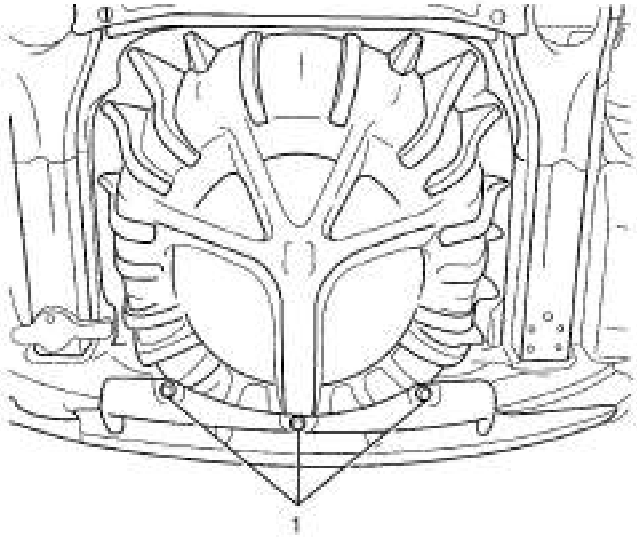
1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle
2. Remove the rear wheels. Refer to Tire and Wheel Removal and Installation



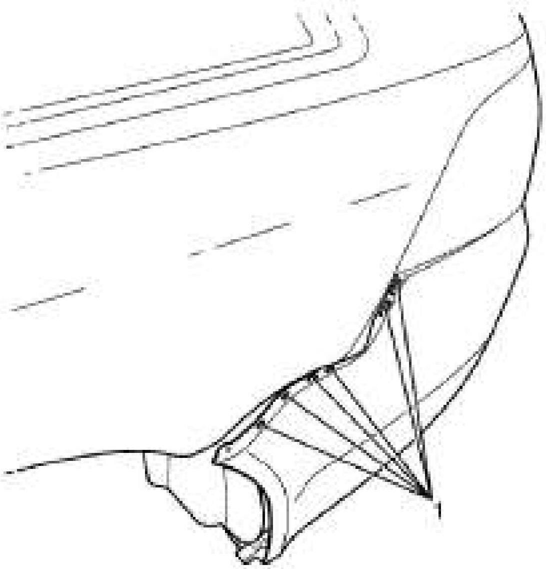
3. Where fitted, remove the rear mud flap (3) to the rear bumper fascia retaining screws (2). Repeat for the opposite side.
4. Where fitted, remove the rear mud flap (3) from the rear bumper fascia (1). Repeat for the opposite side.



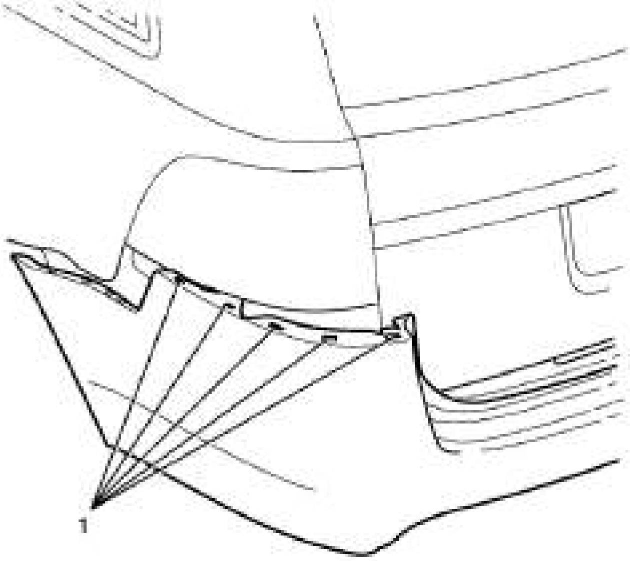
5. Remove the rear bumper fascia to rear wheelhouse liner retaining scrivets (2). Repeat for the opposite side.
6. Remove the rear bumper fascia to rear quarter panel retaining screw (1). Repeat for the opposite side.



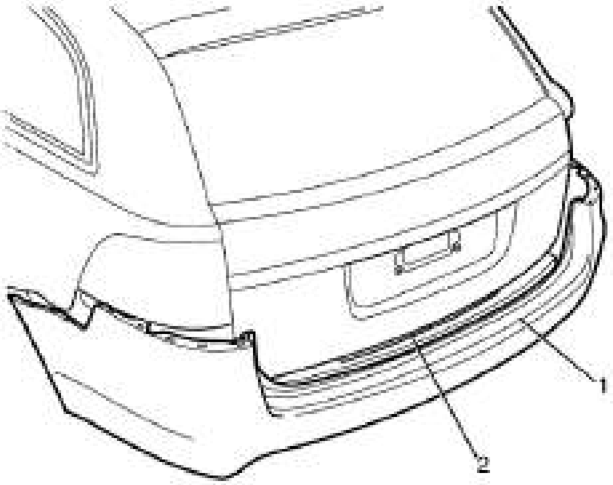
7. Remove the rear bumper fascia to spare wheel carrier retaining scrivets (1).



8. Disengage the rear bumper fascia to rear bumper fascia guide rail retaining tabs (1). Repeat for the opposite side.



9. Disengage the rear bumper fascia to rear bumper fascia outer support retaining tabs (1). Repeat for the opposite side.



Important: With the aid of an assistant, remove the rear bumper fascia by sliding rearward to disengage the rear bumper fascia (1) from the rear bumper fascia centre support (2).

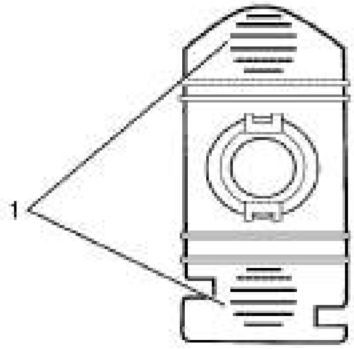
10. Remove the rear bumper fascia (1) from the rear bumper fascia centre support (2).
11. Disconnect the rear parking sensors electrical connector.
12. Remove the rear bumper fascia (1) from the vehicle.

Disassembly

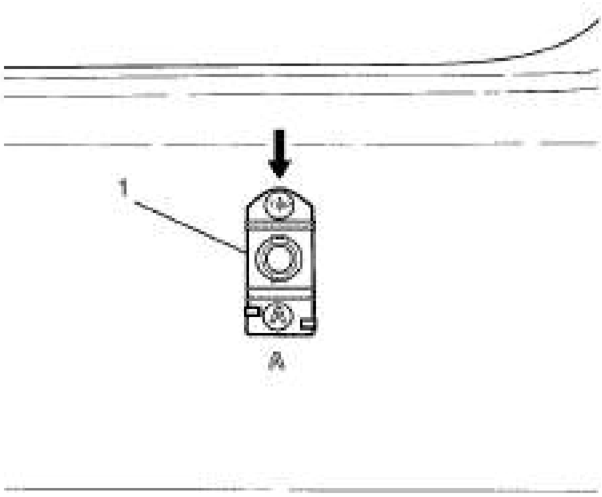
1. Remove the rear bumper fascia reflector. Refer to Rear Bumper Fascia Reflector Replacement.
2. Remove the rear bumper fascia extension. Refer to Rear Bumper Fascia Extension Replacement.

Assembly

1. Clean the rear bumper fascia with a suitable wax and grease remover.



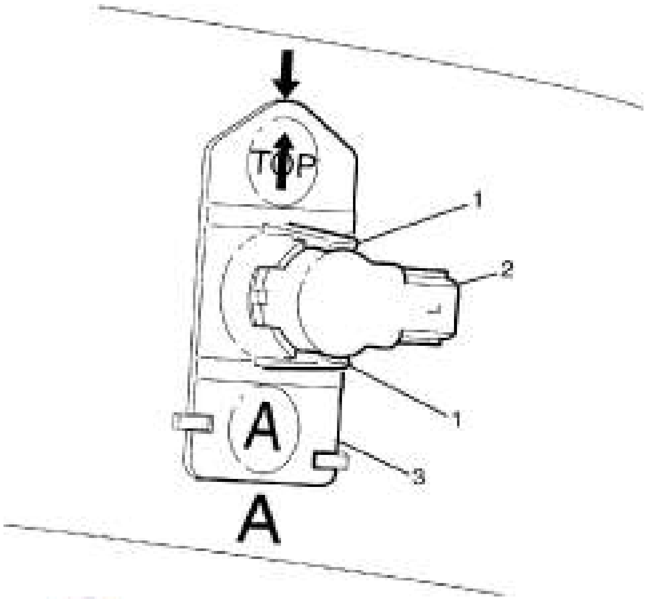
2. Apply the GM Specification 9982247 adhesive or equivalent to the ribs of the object detection bracket (1).



Important: This graphic is used as an example only and must not be used as a template, it displays one of the varying object detection bracket templates for reference.

Important: The location of the object detection brackets to the bumper fascia is alpha numeric, make sure that the letters correspond between the object detection brackets and the bumper fascia.

3. Install the object detection bracket (1) to the rear bumper fascia.



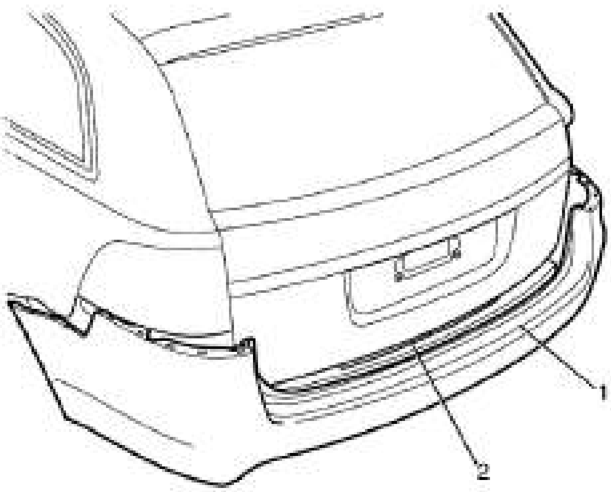
Important: Allow 20 minutes for the adhesive to cure to the rear bumper fascia.

Important: Replacement rear object alarm sensors (2) are not pre-painted, they will require painting before installation is carried out.

Important: Ensure that the rear object alarm sensor (2) is installed correctly.

4. Locate the top and bottom housing tabs (1) to install the rear object alarm sensor (2) to the rear object alarm sensor housing (3).
5. Press the rear object sensor bezel flush to the rear bumper fascia.
6. Install the rear bumper fascia extension. Refer to Rear Bumper Fascia Extension Replacement.
7. Install the rear bumper fascia reflector. Refer to Rear Bumper Fascia Reflector Replacement.

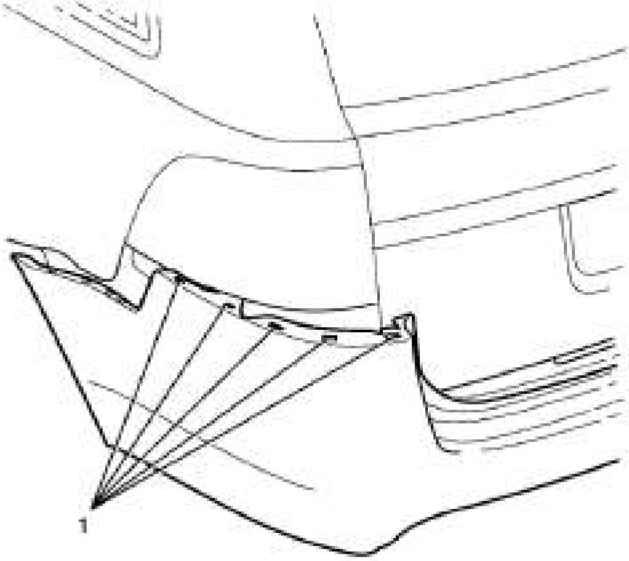
Installation Procedure



Important: With the aid of an assistant, install the rear bumper fascia (1) by sliding forward to correctly attach the rear bumper fascia (1) to the rear bumper fascia centre support (2).

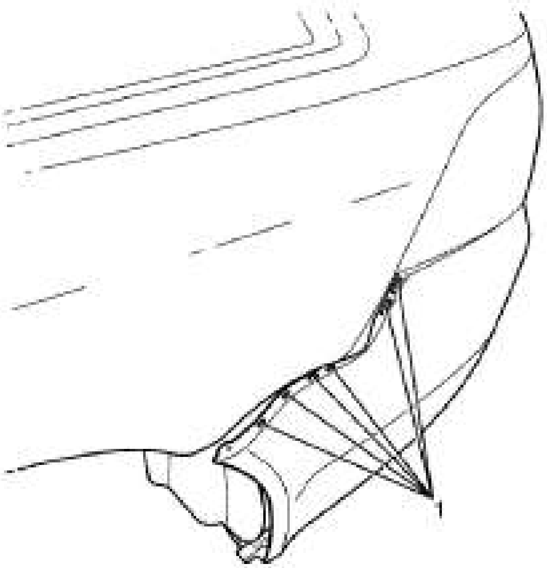
Important: Listen for an audible click when attaching the rear bumper fascia to the rear bumper fascia centre support to confirm correct fitment.

1. Connect the rear parking sensors electrical connector.
2. Install the rear bumper fascia (1) to the rear bumper fascia centre support (2).



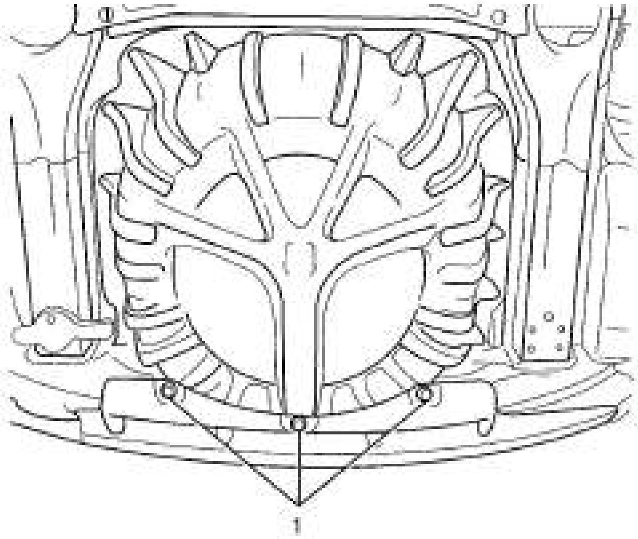
Important: Listen for an audible click when attaching the rear bumper fascia to the rear bumper fascia centre support to confirm correct fitment.

3. Engage the rear bumper fascia to rear bumper fascia support retaining tabs (1). Repeat for the opposite side.



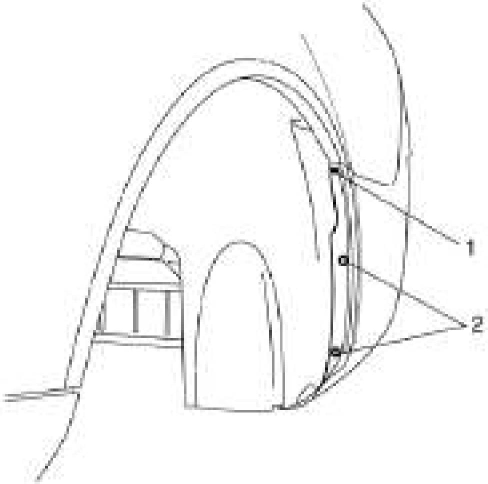
Important: Listen for an audible click when attaching the rear bumper fascia to the rear bumper fascia centre support to confirm correct fitment.

4. Engage the rear bumper fascia to rear bumper fascia guide rail retaining tabs (1). Repeat for the opposite side.



5. Install the rear bumper fascia to spare wheel carrier retaining scrivets (1).

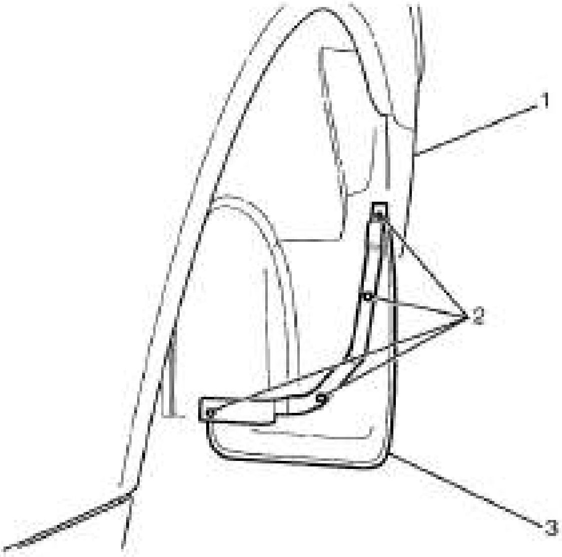
Notice: Refer to Fastener Notice in the Preface section.



6. Install the rear bumper fascia to rear quarter panel retaining screws (1). Repeat for the opposite side.

   Tighten
   Tighten the screws to 2 N·m (18 lb in).

7. Install the rear bumper fascia to rear wheelhouse liner retaining scrivets (2). Repeat for the opposite side.



8. Where fitted, position the rear mud flap (3) to the rear bumper fascia (1). Repeat for the opposite side.

   Notice: Refer to Fastener Notice in the Preface section.

9. Where fitted, install the rear mud flap to the rear bumper fascia retaining screws (2). Repeat for the opposite side.

   Tighten
   Tighten the screws to 4 N·m (35 lb in).

10. Install the rear wheels. Refer to Tire and Wheel Removal and Installation.
11. Lower the vehicle.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Bumpers and Fascias | Repair Instructions | **Document ID: 1990431**

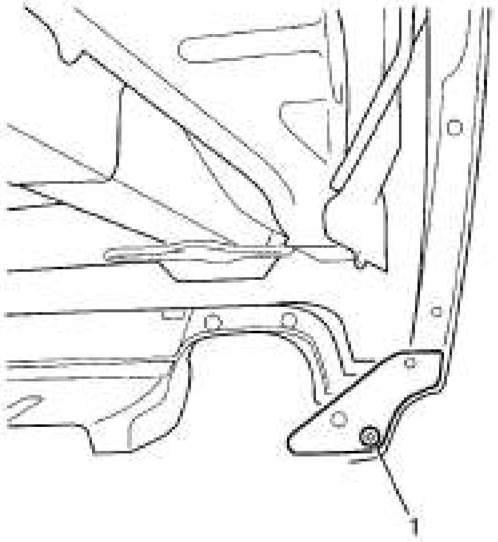
Rear Bumper Fascia Extension Replacement (SWBLWB)

Removal Procedure

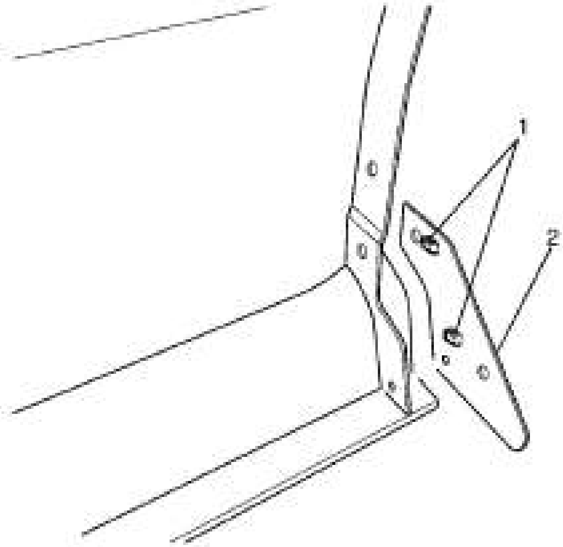
Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Remove the rear wheelhouse liner. Refer to Rear Inner Wheelhouse Replacement.

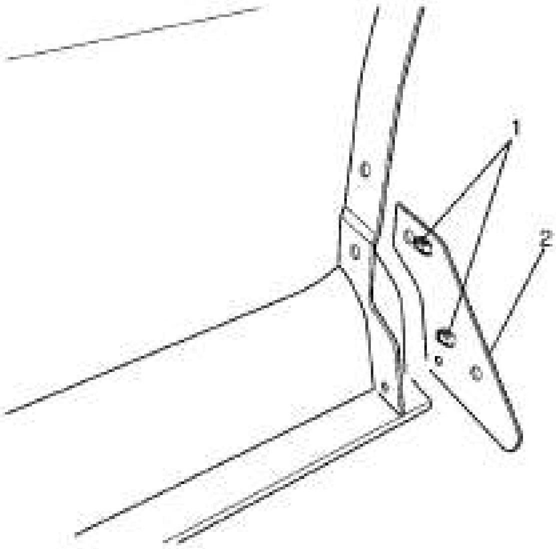


3. Remove the rear bumper fascia extension to rear bumper fascia retaining screw (1).



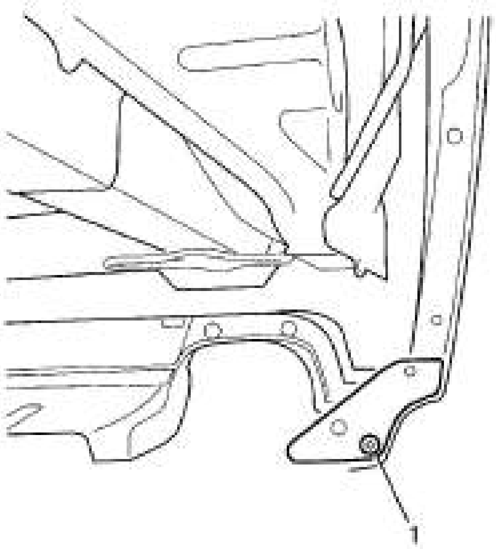
4. Disengage the rear bumper fascia extension retaining clips (1) from the rear bumper fascia.
5. Remove the rear bumper fascia extension (2) from the vehicle.

Installation Procedure



1. Position the rear bumper fascia extension (2) to the vehicle.
2. Engage the rear bumper fascia extension retaining clips (1) to the rear bumper fascia.

Notice: Refer to Fastener Notice in the Preface section.



3. Install the rear bumper fascia extension to rear bumper fascia retaining screw (1).

   Tighten
   Tighten the screw to 2 N·m (18 lb in).

4. Install the rear wheelhouse liner. Refer to Rear Inner Wheelhouse Replacement.
5. Lower the vehicle.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Bumpers and Fascias | Repair Instructions | **Document ID: 2133654**

Rear Bumper Fascia Center Support Replacement (Sportwagon)

Removal Procedure

Caution: Refer to Approved Equipment for Collision Repair Caution in the Preface section.

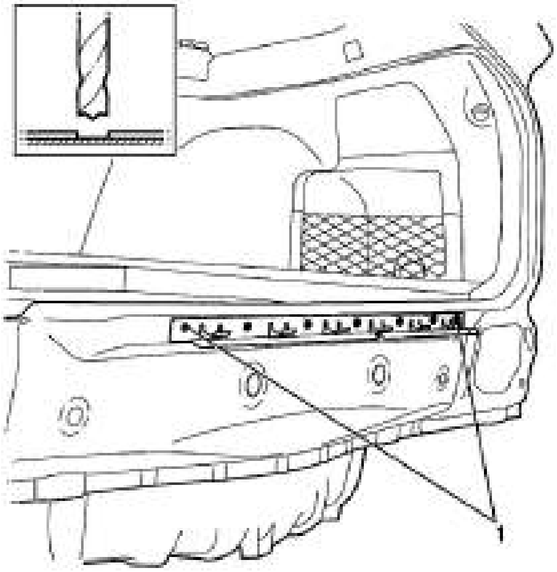
Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Foam Sound Deadeners Caution in the Preface section.

1. Disable the SIR system. Refer to SIR Disabling and Enabling.

   Caution: Refer to Battery Disconnect Caution in the Preface section.

2. Disconnect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
3. Remove the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement
4. Remove the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement
5. Remove the liftgate weatherstrip. Refer to Liftgate Weatherstrip Replacement.
6. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
7. Remove the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
8. Remove the rear bumper impact bar. Refer to Rear Bumper Impact Bar Replacement.
9. Remove the sealers and anti-corrosion materials from the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.



10. Locate, mark and drill out the spot welds in the rear bumper fascia centre support to the rear end panel assembly (1).

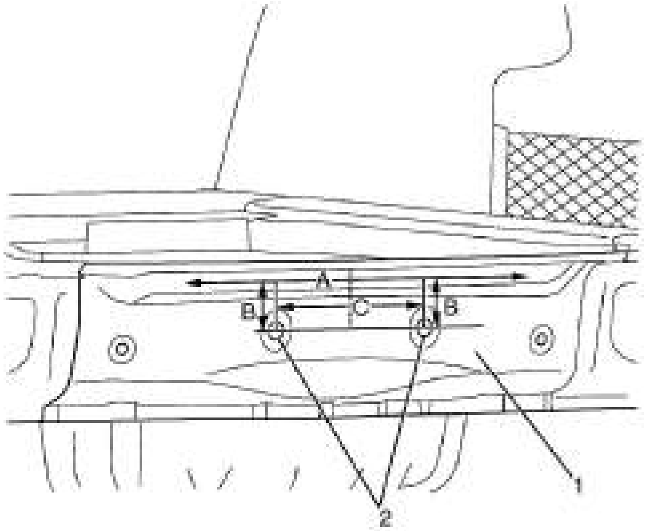
Installation Procedure

Important: Spot welding is the preferred method for attaching panels and should be used whenever possible. A plug weld should only be performed where spot welding is not possible.

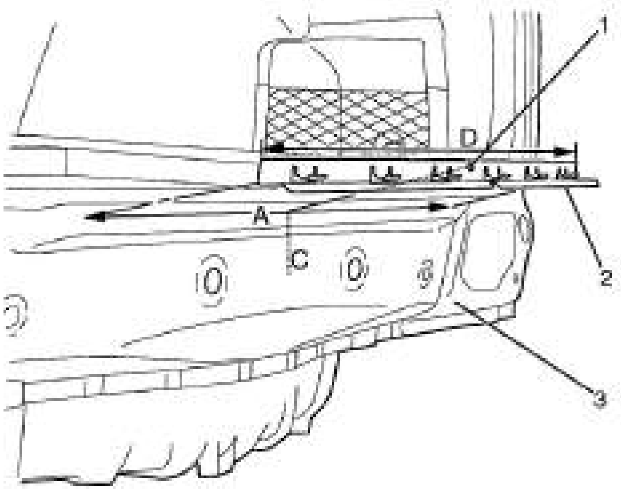
Important: If the location of the original spot weld holes cannot be determined, or if structural weld-thru adhesive is present, space the puddle weld holes every 32 mm (1¼ in).

Important: Follow the adhesive manufacturer's instructions during the assembly process. Heat must be applied as per the manufacturer's specifications to cure the adhesives and to expand the sealing baffles.

1. Drill 8 mm (5/16 in) plug weld holes as necessary in the locations noted when disassembling.
2. Clean and prepare the mating surfaces of both parts of the panel.



3. Utilising the two holes in the rear end panel assembly (2) as a reference point, mark the centre line of the vehicle (C) onto the rear end panel assembly (1).
4. Utilising the two holes in the rear end panel assembly (2) as a reference point, measure 57.5 mm (B) above each hole onto the rear end panel assembly (1) to establish the rear bumper fascia centre support location alignment mark (A).



5. Measure and mark the centre point on the bumper facia centre support assembly (D).
6. Align the centre point mark on the rear bumper facia centre support assembly (1) with the centre line mark on the rear end panel assembly (C).
7. Align the lower edge of the rear bumper facia centre support assembly (2) with the alignment marks (A) on the rear end panel assembly (3).

Important: Secondary sealer must be applied to the perimeter of all flanges. Secondary sealer must be applied to all welds/joints that were originally covered by secondary sealer.

8. Weld the centre support assembly (2) to the rear end panel assembly (3).
9. Apply the sealers and anti-corrosion materials to the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.
10. Paint the repaired area. Refer to Basecoat/Clearcoat Paint Systems.
11. Install the rear bumper impact bar. Refer to Rear Bumper Impact Bar Replacement.
12. Install the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
13. Lower the vehicle.
14. Install the liftgate weatherstrip. Refer to Liftgate Weatherstrip Replacement.
15. Install the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement
16. Install the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement
17. Connect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
18. Enable the SIR system. Refer to SIR Disabling and Enabling.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Bumpers and Fascias | Repair Instructions | **Document ID: 1990446**

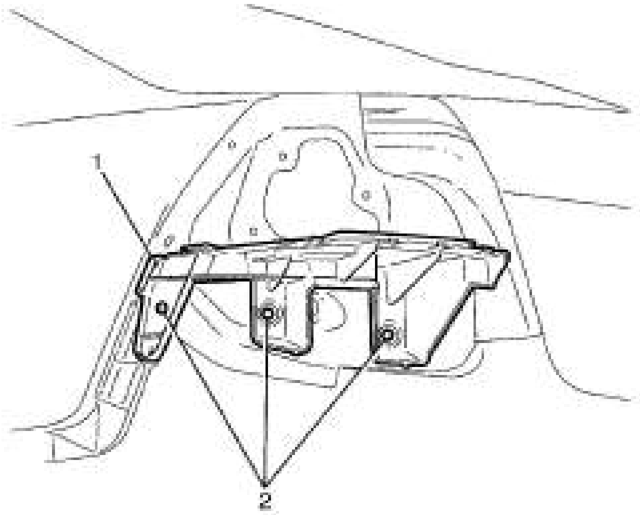
Rear Bumper Fascia Outer Support Replacement (LWB SWB)

Removal Procedure

Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Remove the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.



Important: The rear bumper fascia outer support retaining rivets are signal use parts. They must be discarded after removal.

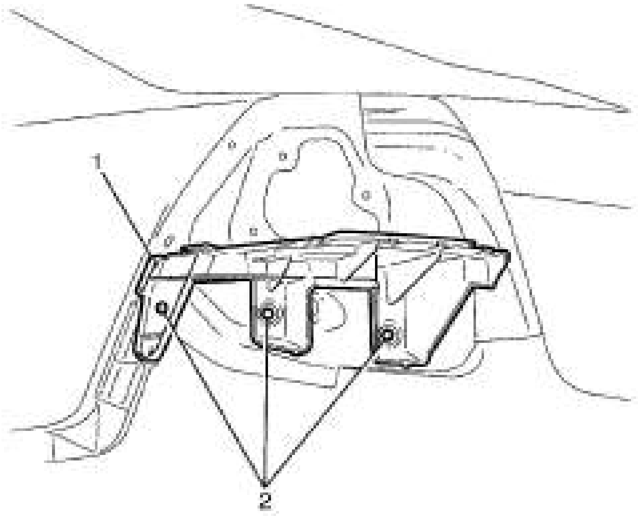
3. Drill out the rear bumper fascia guide rail retaining rivets (2).

   Discard the rivets.

4. Remove the rear bumper fascia guide rail (1) from the vehicle.

Installation Procedure

1. Position the rear bumper fascia guide rail (1) to the vehicle.



2. Install NEW rear bumper fascia outer support retaining rivets (2).
3. Install the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
4. Lower the vehicle.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Bumpers and Fascias | Repair Instructions | **Document ID: 2067517**

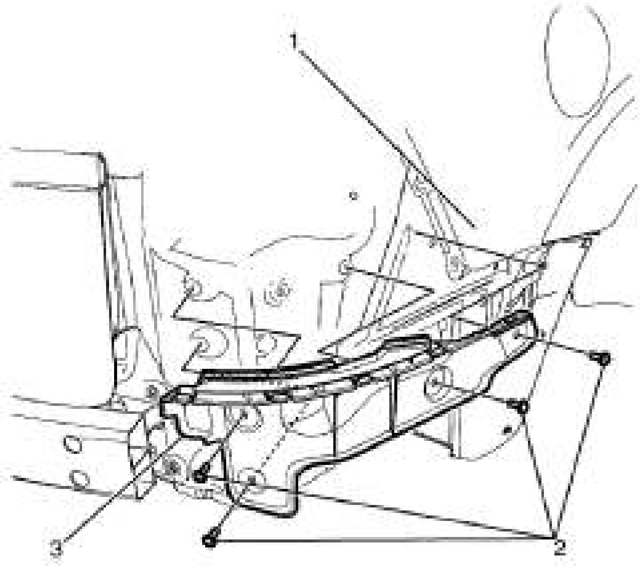
Rear Bumper Fascia Outer Support Replacement (Sportwagon)

Removal Procedure

Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Remove the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
3. Remove the rear tail lamp assembly. Refer to Tail Lamp Assembly and /or Backup, Sidemarker, Stop, Turn Signal Bulb Replacement.



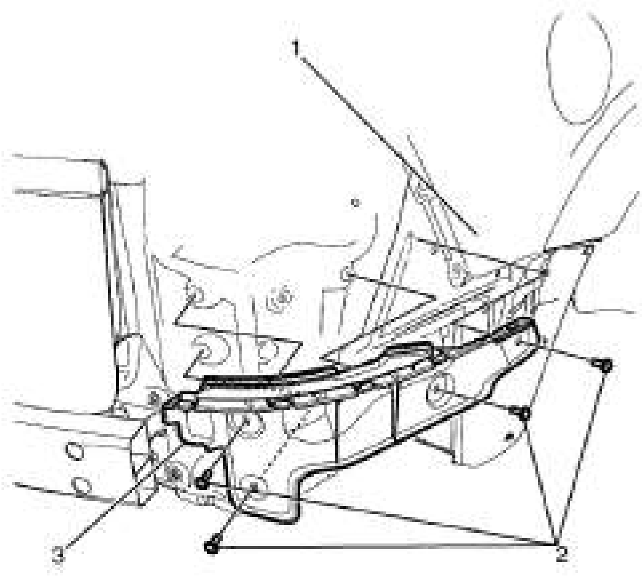
Important: The rear bumper fascia outer support retaining rivets are signal use parts. They must be discarded after removal.

4. Drill out the rear bumper fascia outer support retaining rivets (2).

   Discard the rivets.

5. Remove the rear bumper fascia outer support (3) from the quarter panel (1).

Installation Procedure



1. Position the rear bumper fascia outer support (3) to the quarter panel (1).
2. Install NEW rear bumper fascia outer support retaining rivets (2).
3. Install the rear tail lamp assembly. Refer to Tail Lamp Assembly and /or Backup, Sidemarker, Stop, Turn Signal Bulb Replacement.
4. Install the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
5. Lower the vehicle.

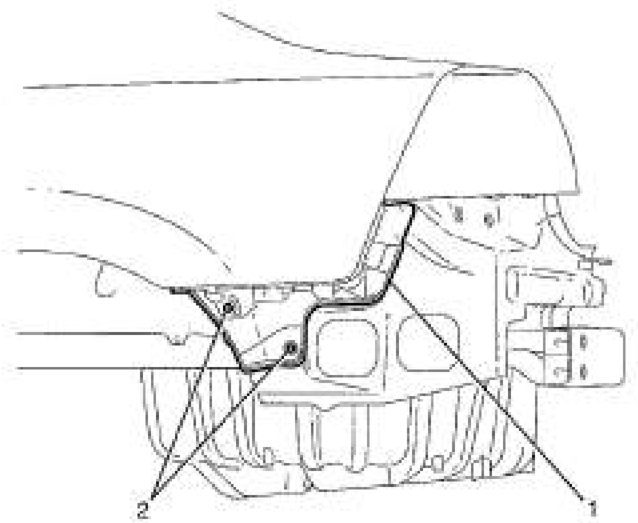
Rear Bumper Fascia Bracket Replacement (LWB SWB)

Removal Procedure

Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Remove the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
3. Remove the rear bumper fascia guide rail. Refer to Rear Bumper Fascia Outer Support Replacement.



Important: The rear bumper fascia lower support retaining rivets are single use parts. They must be discarded after removal.

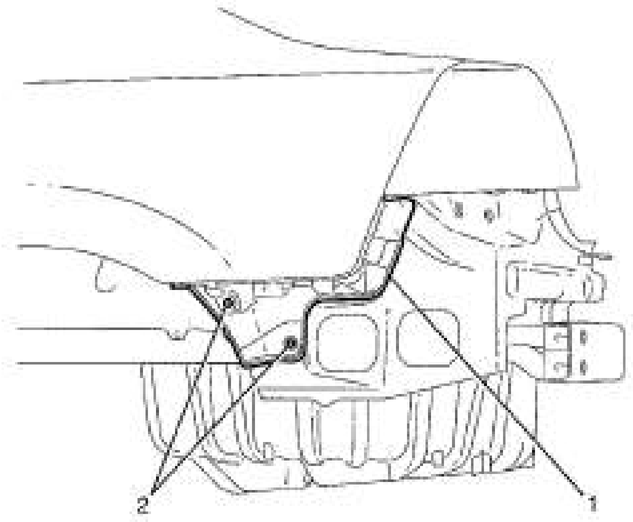
4. Drill out the rear bumper fascia guide rail retaining rivets (2).

   Discard the rivets.

5. Remove the rear bumper fascia guide rail (1) from the vehicle.

Installation Procedure

1. Position the rear bumper fascia guide rail (1) to the vehicle.



2. Install NEW rear bumper fascia guide rail retaining rivets (2)
3. Install the rear bumper fascia guide rail. Refer to Rear Bumper Fascia Outer Support Replacement.
4. Install the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
5. Lower the vehicle.

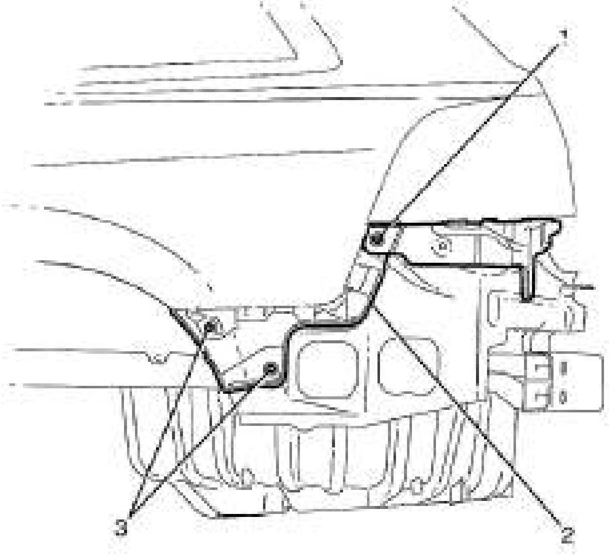
Rear Bumper Fascia Bracket Replacement (Sportwagon)

Removal Procedure

Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Remove the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.



Important: The rear bumper fascia support to quarter panel retaining rivet (1) is a single use part and must be discarded after removal.

3. Drill out and remove the rear bumper fascia support to quarter panel retaining rivet (1).

   Discard the rivet.

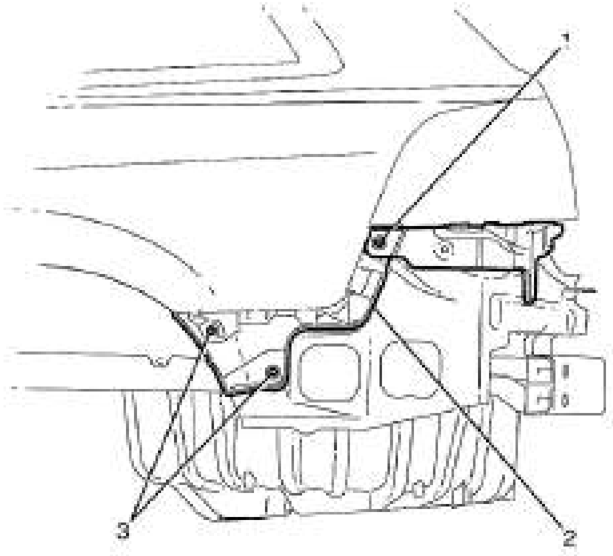
   Important: The rear bumper fascia bracket to quarter panel retaining rivets (3) are single use parts and must be discarded after removal.

4. Drill out and remove the rear bumper fascia bracket to quarter panel retaining rivets (3).

   Discard the rivets.

5. Remove the rear bumper fascia bracket (2) from the vehicle.

Installation Procedure



1. Position a NEW rear bumper fascia bracket (2) to the vehicle by sliding under the rear bumper fascia support.
2. Install NEW rear bumper fascia bracket to quarter panel retaining rivets (3).
3. Install a NEW rear bumper fascia support to quarter panel retaining rivet (1).
4. Install the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
5. Lower the vehicle.

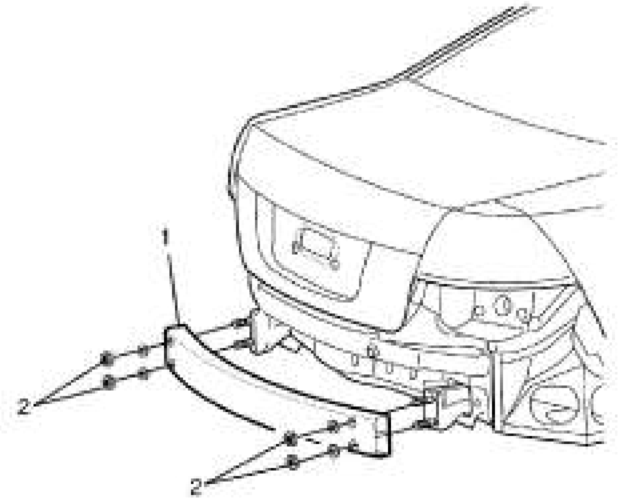
Rear Bumper Impact Bar Replacement (Sedan)

Removal Procedure

Caution: Refer to Safety Glasses Caution in the Preface section.

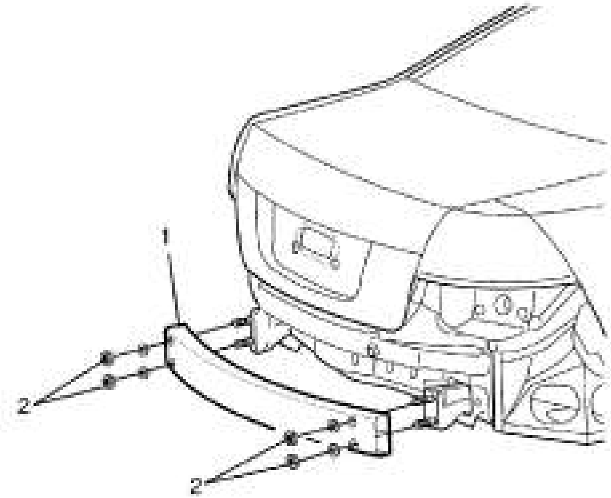
Caution: Refer to Vehicle Lifting Caution in the Preface section.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Remove the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.



3. Remove the rear bumper impact bar to rear bumper impact bar bracket retaining nuts (2).
4. Remove the rear bumper impact bar (1).

Installation Procedure



1. Install the rear bumper impact bar (1) to the rear impact bar brackets.

   Notice: Refer to Fastener Notice in the Preface section.

2. Install the rear bumper impact bar to rear bumper impact bar bracket retaining nuts (2).
   2.1. Install the upper retaining nuts first.
   2.2. Install the lower retaining nuts second.

   Tighten
   Tighten the nuts to 22 N·m (16 lb ft).

3. Install the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
4. Lower the vehicle.

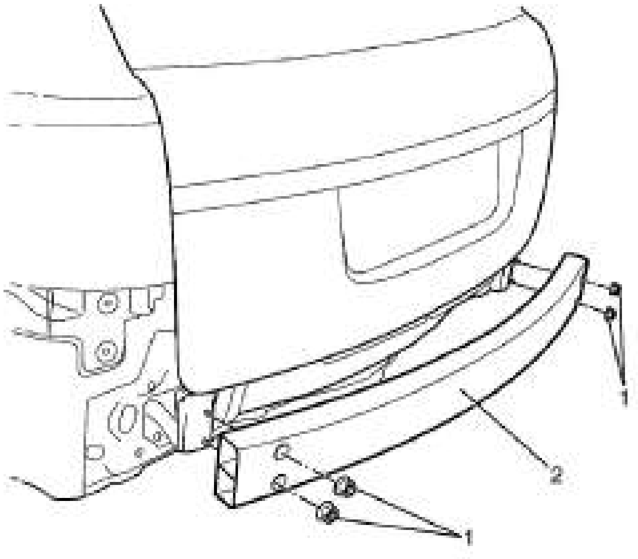
Rear Bumper Impact Bar Replacement (Sportwagon)

Removal Procedure

Caution: Refer to Safety Glasses Caution in the Preface section.

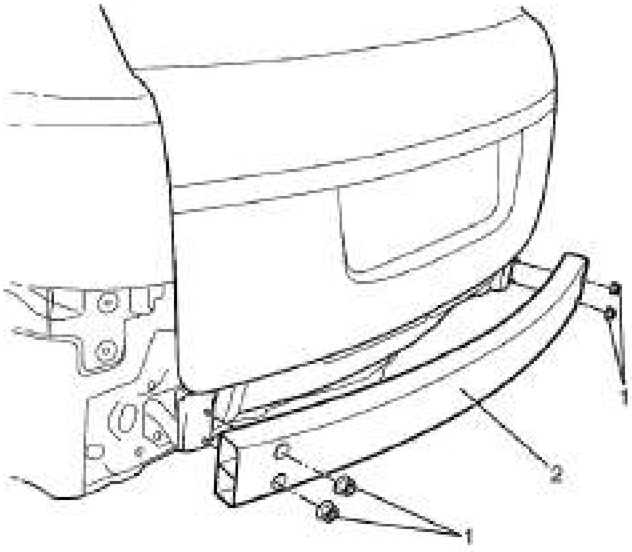
Caution: Refer to Vehicle Lifting Caution in the Preface section.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Remove the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.



3. Remove the rear bumper impact bar (2) to rear bumper impact bar bracket retaining nuts (1).
4. Remove the rear bumper impact bar (2).

Installation Procedure



1. Install the rear bumper impact bar (2) to the rear impact bar brackets.

   Notice: Refer to Fastener Notice in the Preface section.

   Important: Install the upper rear bumper impact bar to rear bumper impact bar bracket retaining studs first.

2. Install the rear bumper impact bar to rear bumper impact bar bracket retaining nuts (1).

   Tighten
   Tighten the nuts to 22 N·m (16 lb ft).

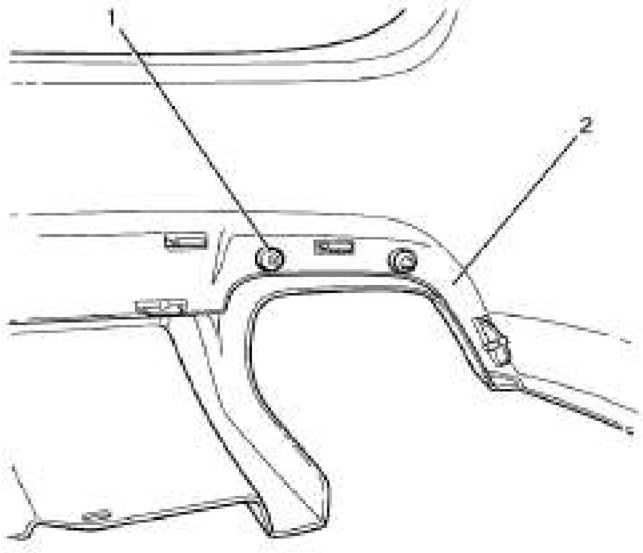
3. Install the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
4. Lower the vehicle.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Bumpers and Fascias | Repair Instructions | **Document ID: 2067513**

Rear Bumper Fascia Reflector Replacement

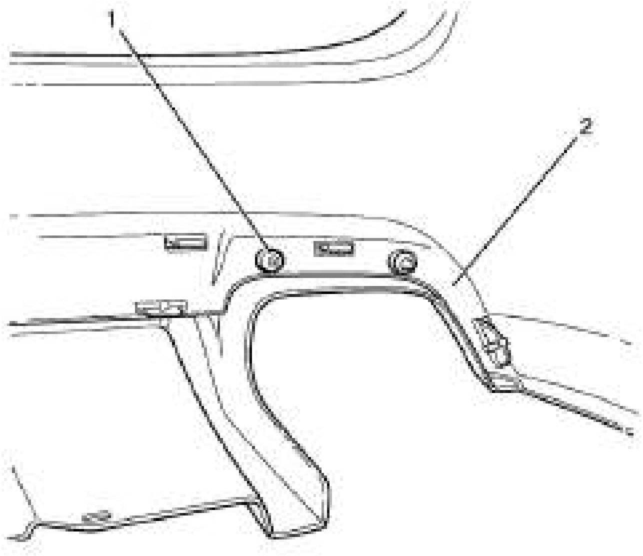
Removal Procedure

1. Remove the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.



2. Remove the rear bumper fascia reflector retaining screw (1) from behind the rear bumper fascia (2).
3. Slide the rear bumper fascia reflector towards the centre of the rear bumper fascia, disengaging clip.
4. Remove the rear bumper fascia reflector from the rear bumper fascia.

Installation Procedure



1. Install the rear bumper fascia reflector by sliding into position in the rear bumper fascia (2).

   Notice: Refer to Fastener Notice in the Preface section.

2. Install the rear bumper fascia reflector retaining screw (1).

   Tighten
   Tighten the screws (1) to 2 N·m (18 lb in).

3. Install the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.

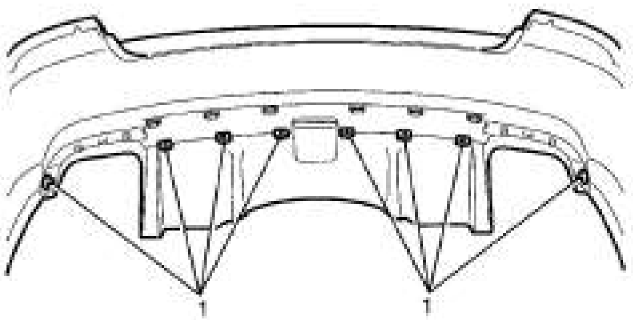
Rear Bumper Fascia Insert Replacement (SWB)

Removal Procedure

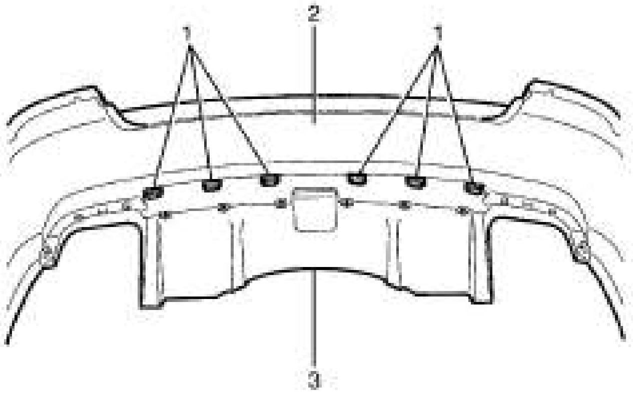
Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Remove the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.

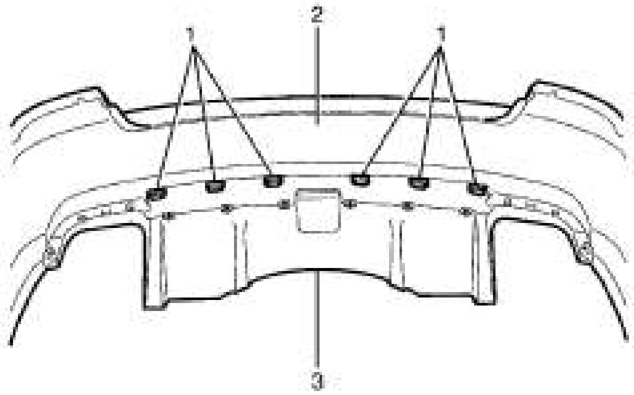


3. Remove the rear bumper fascia moulding to rear bumper fascia retaining scrivets (1).

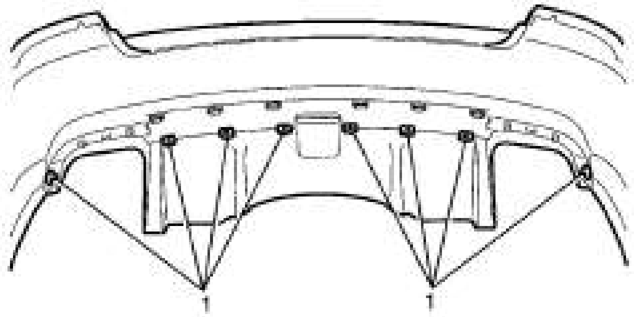


4. Disengage the retaining tabs (1) from the rear bumper fascia (2).
5. Remove the rear bumper fascia moulding (3) from the rear bumper fascia (2).

Installation Procedure



1. Install the rear bumper fascia moulding (3) to the rear bumper fascia (2).
2. Firmly press the retaining tabs (1) into the rear bumper fascia (2).



3. Install the rear bumper fascia moulding to rear bumper fascia retaining scrivets (1).
4. Install the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.

5. Lower the vehicle.

Bumper and Fascia Description

Passenger vehicle bumpers are designed to withstand a collision into a fixed barrier at 8 km/h (5 m.p.h.). After absorbing the energy of the collision, the bumper energy absorbers rebound to 80-90 percent of their original position. The bumper energy absorbing capability of the front and the rear bumper systems are achieved through one of the following components in each bumper:

- A honeycomb type energy absorbing structure.
- A foam type energy absorbing structure.
- An impact bar bracket energy absorbing structure.

The front and the rear bumper fascias are made of urethane. Urethane withstands minor impact and returns to the original shape.

For repair or refinishing information on the bumper fascia, rear to General Plastic Repair .

Fastener Tightening Specifications

Application	Specification	
	Metric	English
Liftgate Strut To Liftgate Stud	22 N·m	16 lb ft
Liftgate Strut To Rear Quarter Panel Stud	15 N·m	11 lb ft
Rear Wheelhouse Liner To Rocker Moulding Retaining Screws	2 N·m	18 lb in

Collision Repair Specifications

Product Type	Specification	Product Name (or Equivalent)
Primary Sealer	GM6449G	3M Automix 8115
Secondary Sealer	GM9984532	3M Automix 8115
Urethane	GMW3041	Betaseal 15685
Plastic Adhesive	GM9982247	Fusor 142/143
Expanding Foam	GM9982296	Betafoam 87100/87124

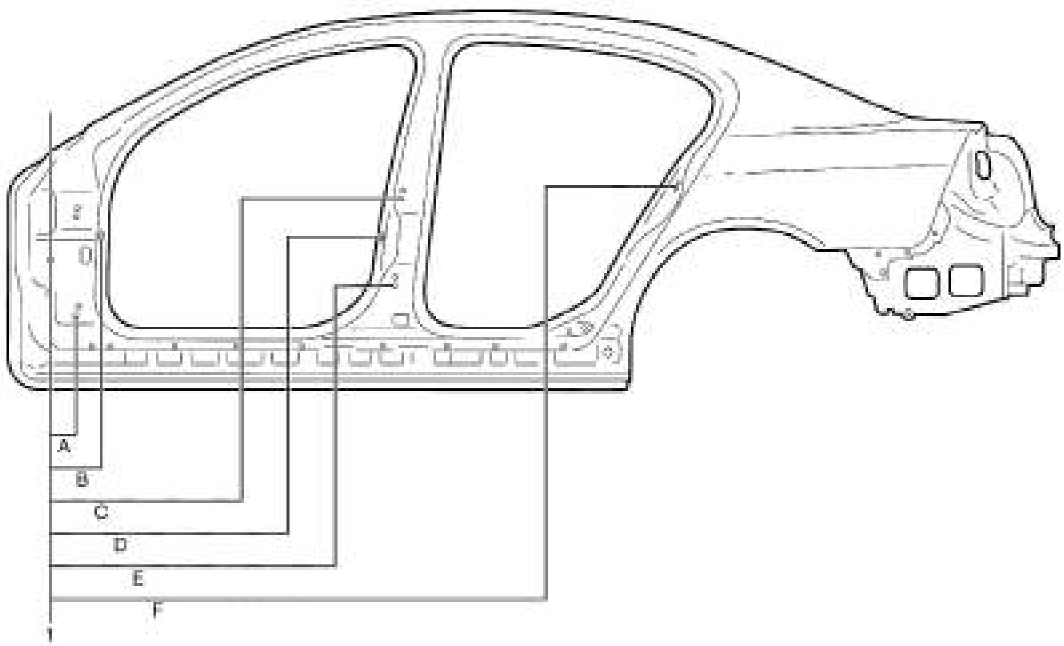
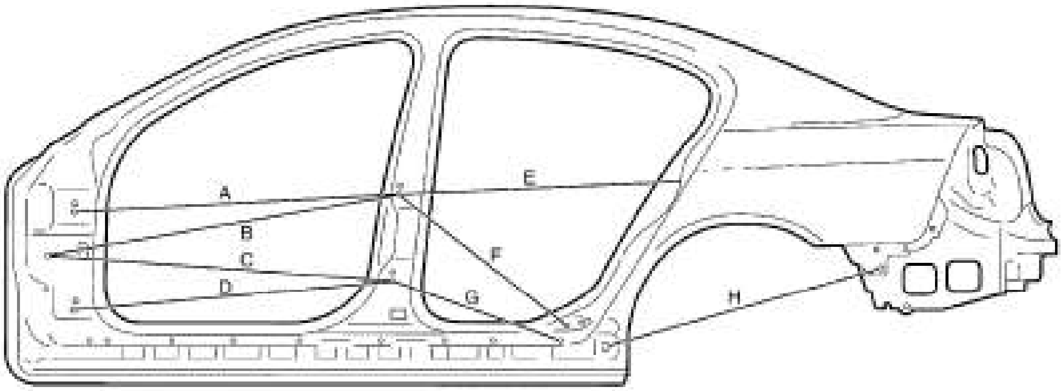
Dimensions - Body (SWB)



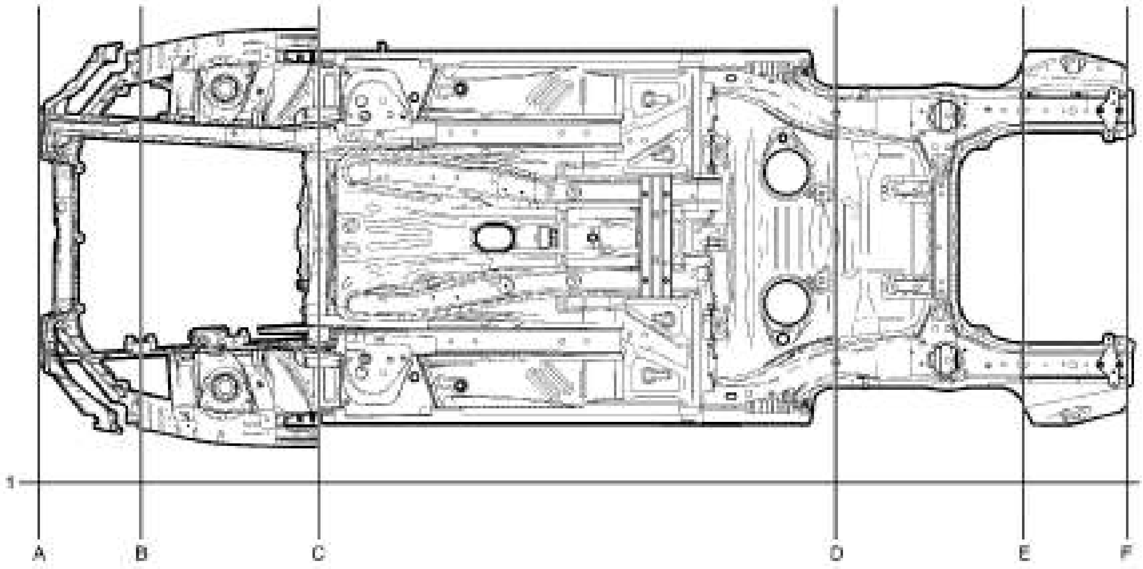
Location	Description	Length	Width	Height
1	Zero Line 25 mm Gage Hole	0	1660 mm (65.35 in)	550 mm (21.65 in)
A	Door Hinge Attach	76 mm (2.99 in)	1687 mm (66.42 in)	363 mm (14.29 in)
B	Door Hinge Attach	155 mm (6.1 in)	1592 mm (62.68 in)	452 mm (17.8 in)
C	Door Hinge Attach	1186 mm (46.69 in)	1704 mm (67.09 in)	756 mm (29.76 in)
D	Door Lock Striker Attach	1170 mm (46.06 in)	1633 mm (64.29 in)	581 mm (22.87 in)
E	Door Hinge Attach	1166 mm (45.91 in)	1702 mm (67.01 in)	461 mm (18.15 in)
F	Upper Door Lock Striker Attach	2131 mm (83.9 in)	1640 mm (64.57 in)	795 mm (31.3 in)
All dimensions are measured from a zero line, a center line, and a common datum. All dimensions are symmetrical unless otherwise specified.				

Point-to-Point Measurements



Location	Description	Length
A	Lower Top Front Door Hinge Hole to Lower Top Rear Door Hinge Hole	1103 mm (43.43 in)
B	Hinge Pillar Datum Hole to Lower Top Rear Door Hinge Hole	1205 mm (47.44 in)
C	Hinge Pillar Datum Hole to Lower Bottom Rear Door Hinge Hole	1170 mm (46.06 in)
D	Lower Bottom Front Door Hinge Hole to Lower Bottom Rear Door Hinge Hole	1086 mm (42.76 in)
E	Lower Top Rear Door Hinge Hole to Upper Rear Door Striker Hole	948 mm (37.32 in)
F	Lower Top Rear Door Hinge Hole to Lower Body Side Datum Hole	880 mm (34.65 in)
G	Lower Bottom Front Door Hinge Hole to Lower Body Side Datum Hole	763 mm (30.04 in)
H	Lower Body Side Datum Hole to Rear Body Side Datum Hole	961 mm (37.83 in)
All dimensions are symmetrical unless otherwise specified.		

Dimensions - Underbody



Location	Description	Length	Width	Height
1	Zero Line 18 mm Hole	1535 mm (60.43 in)	810 mm (31.89 in)	128 mm (5.04 in)
A	20 mm Hole	805 mm (31.69 in)	886 mm (34.88 in)	328 mm (12.91 in)
B	10 mm Bumper Mounting	1136 mm (44.72 in)	0	0
C	16 mm Hole	2140 mm (84.25 in)	1024 mm (40.31 in)	200 mm (7.87 in)
D	25.1 mm x 39.7 mm Gage Hole	2910 mm (114.57 in)	1048 mm (41.26 in)	434 mm (17.09 in)
E	25.1 mm x 39.7 mm Gage Hole	3114 mm (122.60 in)	1048 mm (41.26 in)	434 mm (17.09 in)
F	18 mm Bumper Mounting	3335 mm (131.30 in)	0	0
All dimensions are measured from a zero line, a center line, and a common datum. All dimensions are symmetrical unless otherwise specified.

Dimensions - Body (Sportwagon)

Vehicle Dimensions - Main

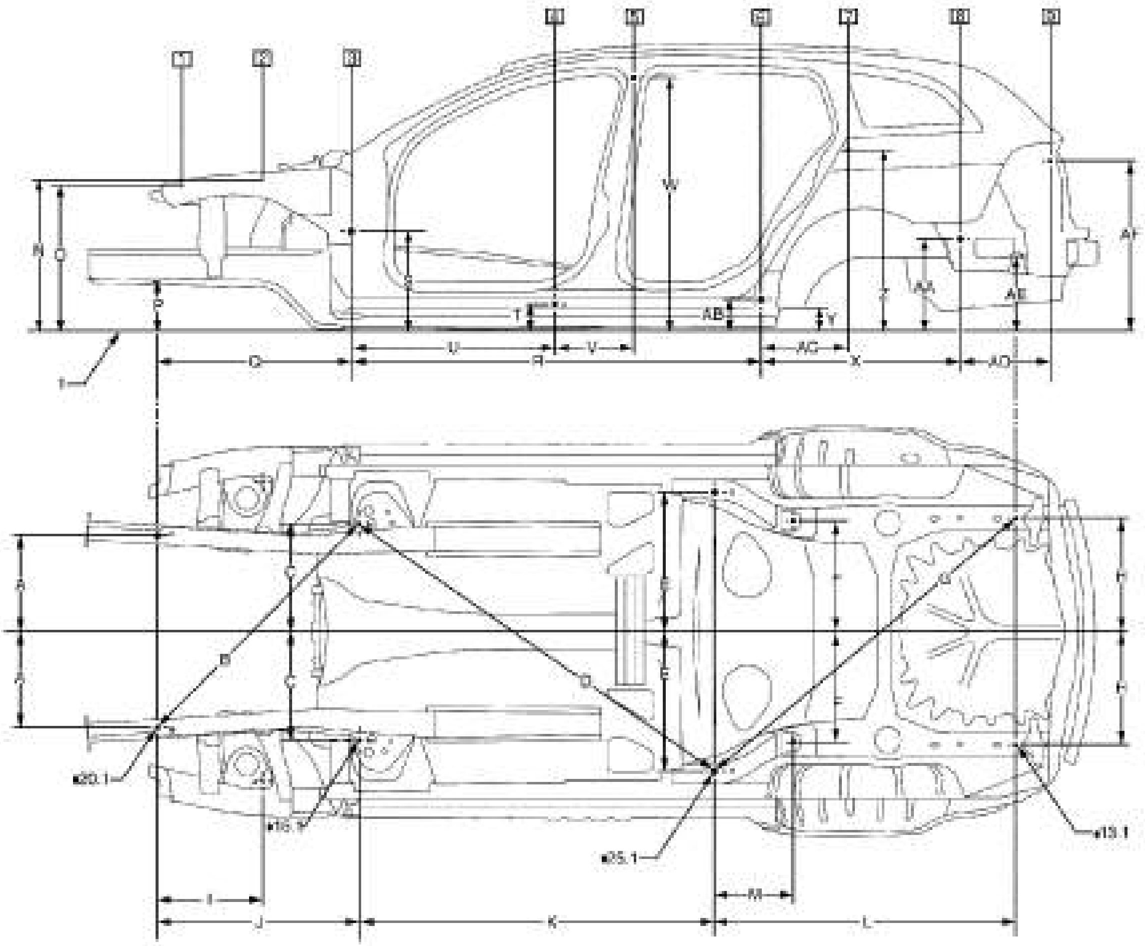
Important:: Dimensions are measured from the centre of holes, on the outer side of the metal surface.

Important:: The main datum surface (1) is the underside of each outrigger at the 16.1mm dia datum hole. The main datum surface (1) is parallel with the bottom of each rocker assembly inboard of the pinch weld flange.

Important:: All dimensions are projected to be either parallel with or at 90 degrees to the main datum surface (1).

Important:: The plan view is shown as viewed from beneath the vehicle.

Important:: For location details of measurement points 1 -- 9, refer to Vehicle Dimensions - Measuring Points.



Location	Description	Length
A	Centreline of vehicle to centre of 20.1mm dia datum hole	444 mm (17.48 in)
B	Centre of 20.1mm dia datum hole to centre of 16.1mm dia datum hole	1329 mm (52.31 in)
C	Centreline of vehicle to centre of 16.1mm datum dia hole	500 mm (19.69 in)
D	Centre of 16.1mm dia datum hole to centre of 25.1mm dia datum hole	2004 mm (78.91 in)
E	Centreline of vehicle to centre of 25.1mm datum dia hole	645 mm (25.39 in)
F	Centreline of vehicle to centre of rear frame mounting hole	512 mm (20.16 in)
G	Centre of 25.1mm dia datum hole to centre of 13.1mm dia datum hole	1820 mm (71.66 in)
H	Centreline of vehicle to centre of 13.1mm datum dia hole	524 mm (20.63 in)
I	Centre of 20.1mm dia datum hole to centre of 10.1mm dia datum hole	481 mm (18.92 in)
J	Centre of 20.1mm dia datum hole to centre of 16.1mm dia datum hole	935 mm (36.81 in)
K	Centre of 16.1mm dia datum hole to centre of 25.1mm dia datum hole	1645 mm (64.76 in)
L	Centre of 25.1mm dia datum hole to centre of 13.1mm dia datum hole	1395 mm (54.92 in)
M	Centre of 25.1mm dia datum hole to centre of rear frame mounting hole	365 mm (14.37 in)
N	Datum surface 1 to centre of 10.1mm dia datum hole	693 mm (27.27 in)
O	Datum surface 1 to centre of 9.9mm dia hole	661 mm (26.01 in)
P	Datum surface 1 to centre of 20.1mm dia datum hole	232 mm (9.14 in)
Q	Centre of 20.1mm dia datum hole to centre of 25.1mm dia datum hole	900 mm (35.43 in)
R	Centre of 25.1mm dia datum hole to centre of 25.1mm dia datum hole	1895 mm (74.61 in)
S	Datum surface 1 to centre of 25.1mm dia datum hole	455 mm (17.93 in)
T	Datum surface 1 to centre of 16.1mm dia datum hole	140 mm (5.53 in)
U	Centre of 25.1mm dia datum hole to centre of 16.1mm dia datum hole	940 mm (37.01 in)
V	Centre of 25.1mm dia datum hole to centre of 13.1mm dia datum hole	524 mm (20.63 in)
		1165 mm

W	Datum surface 1 to centre of 13.1mm dia datum hole	(45.88 in)
X	Centre of 25.1mm dia datum hole to centre of 20.1mm dia datum hole	920 mm (36.20 in)
Y	Datum surface 1 to centre of rear frame mounting hole	103 mm (4.07 in)
Z	Datum surface 1 to centre of 8.2mm dia hole	809 mm (31.83 in)
AA	Datum surface 1 to centre of 20.1mm dia datum hole	420 mm (16.54 in)
AB	Datum surface 1 to centre of 25.1mm dia datum hole	140 mm (5.52 in)
AC	Centre of 25.1mm dia datum hole to centre of 8.2mm dia hole	379 mm (15.65 in)
AD	Centre of 20.1mm dia datum hole to centre of 16.1mm dia datum hole	418 mm (16.47 in)
AE	Datum surface 1 to centre of 13.1mm dia datum hole	338 mm (13.31 in)
AF	Datum surface 1 to centre of 16.1mm dia datum hole	786 mm (30.93 in)

Vehicle Dimensions - Engine Compartment

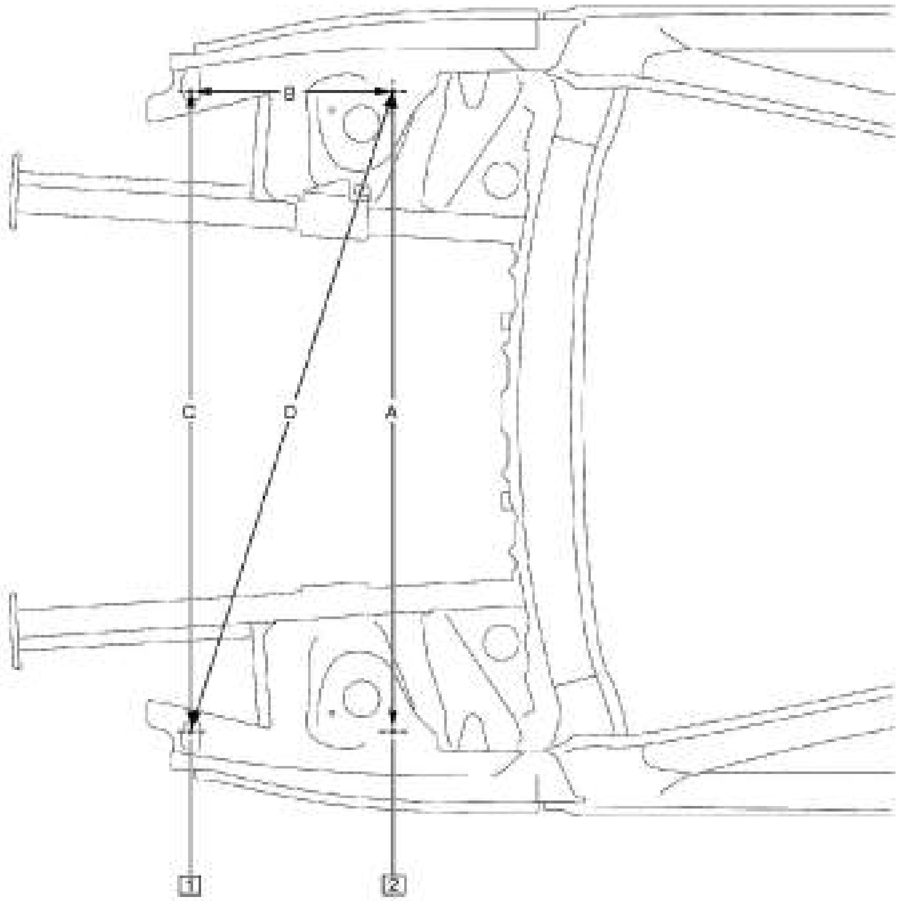
Important:: Dimensions are measured from the centre of holes, on the outer side of the metal surface.

Important:: The main datum surface (1) is the underside of each outrigger at the 16.1mm dia datum hole. The main datum surface (1) is parallel with the bottom of each rocker assembly inboard of the pinch weld flange.

Important:: All dimensions are projected to be either parallel with the main datum surface (1). Refer to Vehicle Dimensions - Main.

Important:: The plan view is shown as viewed from above the vehicle.

Important:: For location details of measurement points 1 -- 2, refer to Vehicle Dimensions - Measuring Points.



Location	Description	Length
A	Centre of 10.1mm dia datum hole to centre of 10.1mm dia datum hole	1574 mm (61.99 in)
B	Centre of 10.1mm dia datum hole to centre of 9.9mm dia hole	427 mm (16.82 in)
C	Centre of 9.9mm dia hole to centre of 9.9mm dia hole	1511 mm (59.47 in)
D	Centre of 9.9mm dia hole to centre of 10.1mm dia datum hole	1600 mm (63.00 in)

Vehicle Dimensions - Measuring Points

Important: Dimensions are measured from the centre of holes, on the outer side of the metal surface.

Front Compartment Side Rail Bracket Replacement

Removal Procedure

Caution: Refer to Approved Equipment for Collision Repair Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

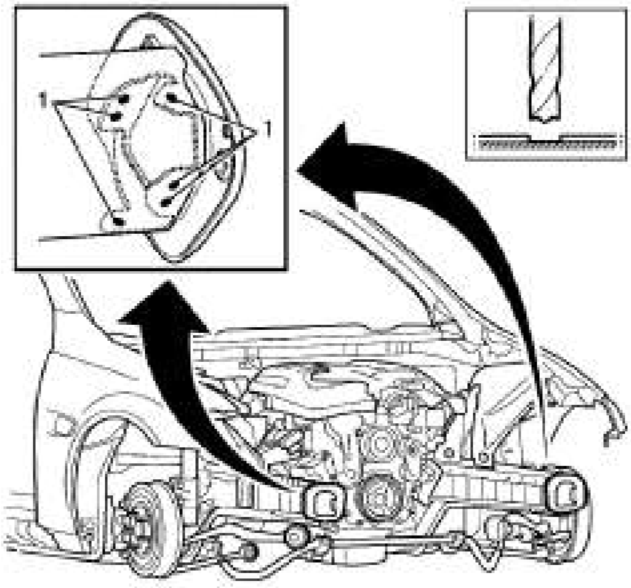
Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Foam Sound Deadeners Caution in the Preface section.

Caution: Refer to Battery Disconnect Caution in the Preface section.

Important: Disable the SIR system. Refer to SIR Disabling and Enabling.

1. Disconnect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
2. Remove the front fascia. Refer to Front Bumper Fascia Replacement.
3. Remove the front end module. Refer to Front End Panel Module Carrier Assembly Replacement.
4. Remove the coolant reservoir. Refer to Coolant Recovery Reservoir Replacement.
5. Remove the washer solvent container. Refer to Windshield Wiper and Washer Switch Replacement.
6. Remove the cooling fan and shroud. Refer to Cooling Fan and Shroud Replacement.
7. Remove the radiator. Refer to Radiator Replacement.
8. Remove the front bumper impact bar bracket. Refer to Front Bumper Impact Bar Replacement.
9. Note the location and remove the sealers and anti-corrosion materials from the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.



Important: Note the orientation of the front rail end crush cap for installation.

10. Locate, mark and drill out all factory welds attaching the front rail end crush cap to the front rail assembly (1).

Installation Procedure

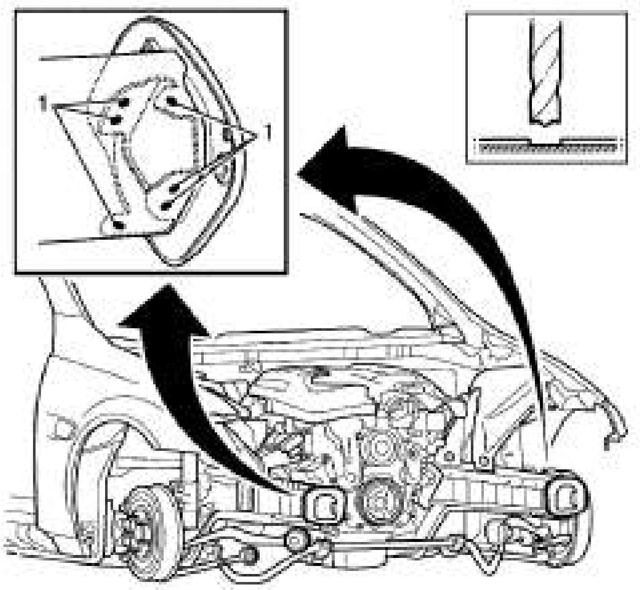
Important: If the front rail is damaged, the front rail must be replaced.

Important: Spot welding is the preferred method for attaching panels and should be used whenever possible. A plug weld should only be performed where spot welding is not possible.

Important: If the location of the original spot weld holes cannot be determined, or if structural weld-thru adhesive is present, space the puddle weld holes every 32 mm (1¼ in).

1. Drill 8 mm (5/16 in) plug weld holes as necessary in the locations noted from the original assembly.
2. Clean and prepare the mating surfaces of both the front rail and the front rail end crush cap.

Important: Secondary sealer must be applied to the perimeter of all flanges. Secondary sealer must be applied to all welds/joints that were originally covered by secondary sealer.



3. Align the new front rail end crush cap to the weld points marked during the removal from the front rail assembly and weld the front end crush cap to the front rail assembly (1).
4. Install the front bumper impact bar bracket. Refer to Front Bumper Impact Bar Replacement.
5. Install the radiator. Refer to Radiator Replacement.
6. Install the cooling fan and shroud. Refer to Cooling Fan and Shroud Replacement.
7. Install the washer solvent container. Refer to Windshield Wiper and Washer Switch Replacement.
8. Install the coolant reservoir. Refer to Coolant Recovery Reservoir Replacement.
9. Install the front end module. Refer to Front End Panel Module Carrier Assembly Replacement.
10. Install the front fascia. Refer to Front Bumper Fascia Replacement.

11. Install the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
12. Enable the SIR system. Refer to SIR Disabling and Enabling.

Front Wheelhouse Replacement

Removal Procedure - After xx/xx

Caution: Refer to Approved Equipment for Collision Repair Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

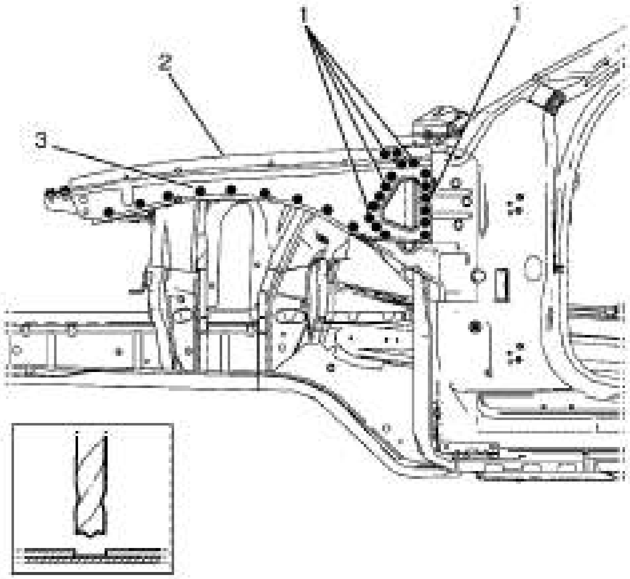
Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Battery Disconnect Caution in the Preface section.

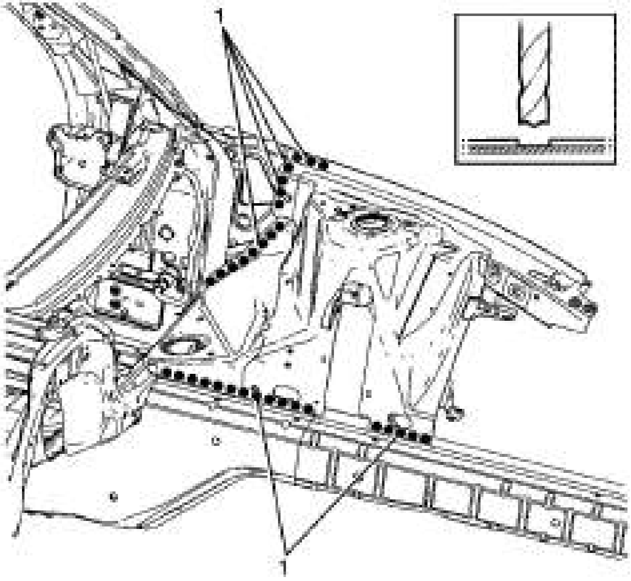
1. Disable the SIR system. Refer to SIR Disabling and Enabling.
2. Disconnect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection .
3. Remove the engine assembly. Refer to Engine Replacement or Engine Replacement.
4. Remove the negative cable from the engine bay. Refer to Battery Negative Cable Replacement .
5. Remove the positive cable from the engine bay. Refer to Battery Positive Cable Replacement .
6. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle .
7. Remove the front wheelhouse liner. Refer to Front Wheelhouse Liner Replacement .
8. Remove the front wheel hub assembly. Refer to Front Wheel Bearing and Hub Replacement .
9. Remove the front strut assembly. Refer to Strut Assembly Replacement .
10. Lower the vehicle.
11. Remove the brake lines. Refer to Brake Pipe Replacement.
12. Remove the fender assembly. Refer to Front Fender Replacement.
13. Remove the front fascia. Refer to Front Bumper Fascia Replacement.
14. Remove the coolant reservoir. Refer to Coolant Recovery Reservoir Replacement.
15. Remove the front end module. Refer to Front End Panel Module Carrier Assembly Replacement.
16. Remove the air inlet grille. Refer to Air Inlet Grille Panel Replacement.
17. Remove the plenum chamber. Refer to Air Inlet Assembly Replacement.
18. Remove the relay box. Refer to Underhood Electrical Center or Junction Block Replacement.
19. Remove the ABS unit. Refer to Brake Pressure Modulator Valve Assembly Replacement.
20. Remove the brake master cylinder. Refer to Master Cylinder Replacement .
21. Remove the instrument panel. Refer to Instrument Panel Carrier Replacement.
22. Remove the HVAC. Refer to HVAC Module Assembly Replacement.
23. Remove the front floor carpet. Refer to Front Floor Panel Carpet Replacement .

Caution: Refer to Foam Sound Deadeners Caution in the Preface section.

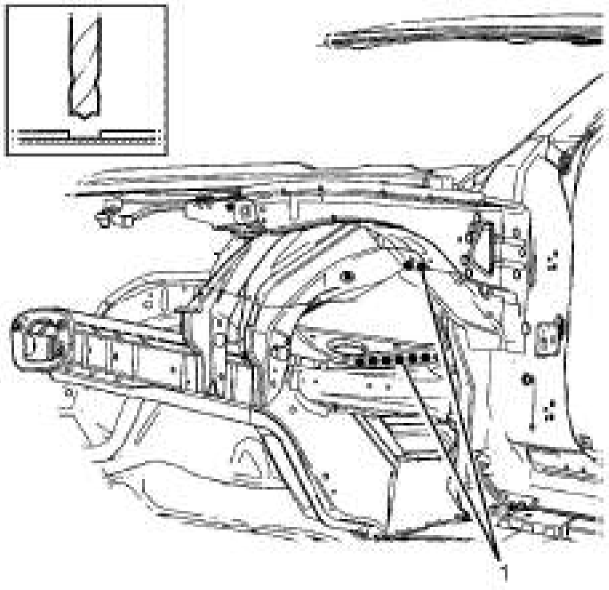
24. Note the location and remove the sealers and anti-corrosion materials from the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.



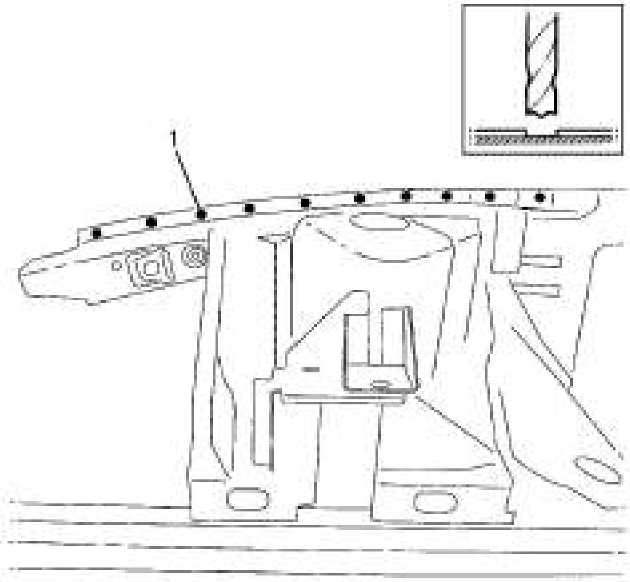
25. Locate, mark and drill out the inner factory welds (1) attaching the upper wheelhouse brace (2) to the wheelhouse assembly.
26. Locate, mark and drill out the inner factory welds (3) attaching the upper wheelhouse brace (2) to the wheelhouse assembly.



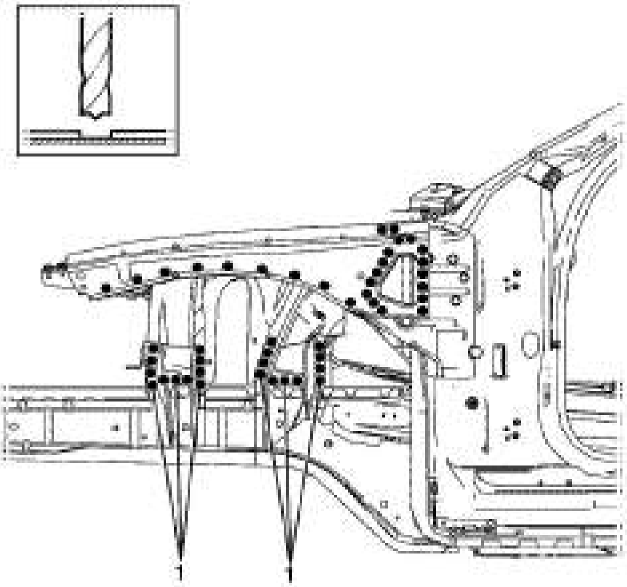
27. Locate, mark and drill out the inner factory welds (1) attaching the wheelhouse assembly to the vehicle.



28. Locate, mark and drill out the factory welds (1) attaching the wheelhouse assembly to the cowl panel.



29. Locate, mark and drill out the factory welds (1) attaching the wheelhouse assembly to the upper wheelhouse brace.



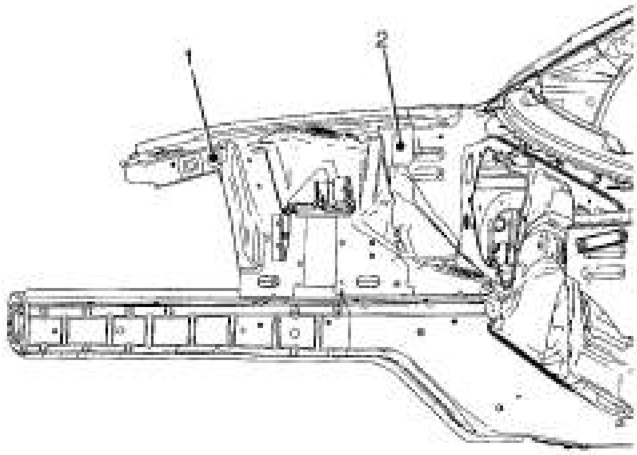
30. Locate, mark and drill out the factory welds (1) attaching the wheelhouse assembly to the front chassis rail.

Installation Procedure - After xx/xx

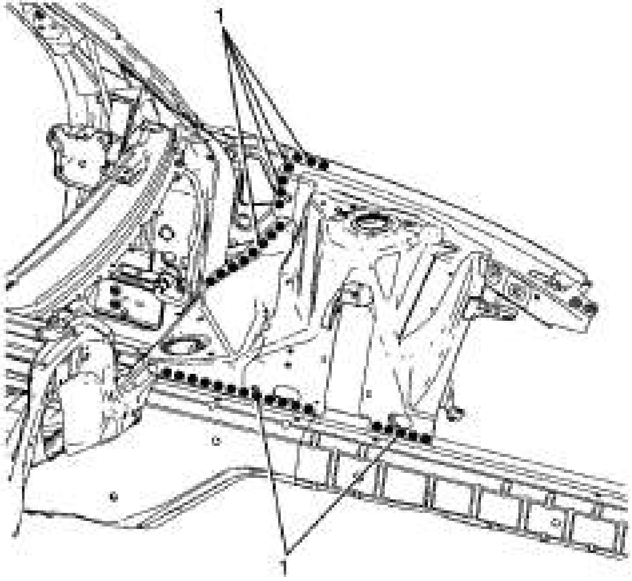
1. Clean and prepare the mating surfaces of both parts of the front chassis rail.
2. Drill 8 mm (5/16 in) plug weld holes as necessary in the locations noted from the original assembly.

   Important: If the location of the original plug weld holes can not be determined, or if structural weld-thru adhesive is present, space the plug weld holes every 32 mm (1¼ in).

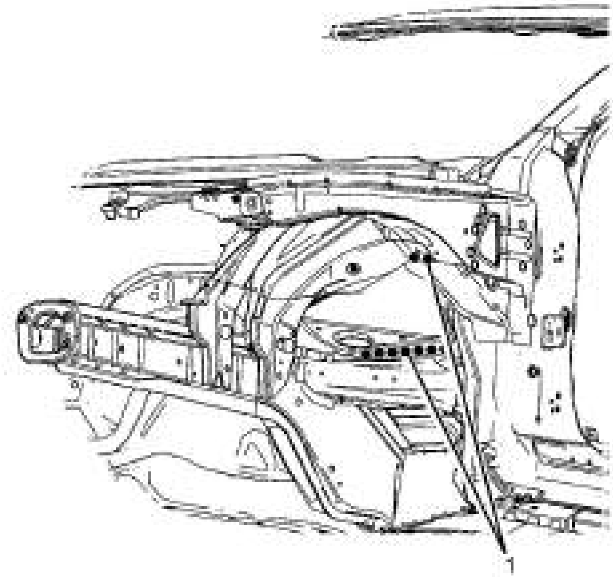
3. Position the body side on the vehicle. Verify correct alignment and position using three-dimensional measuring equipment.



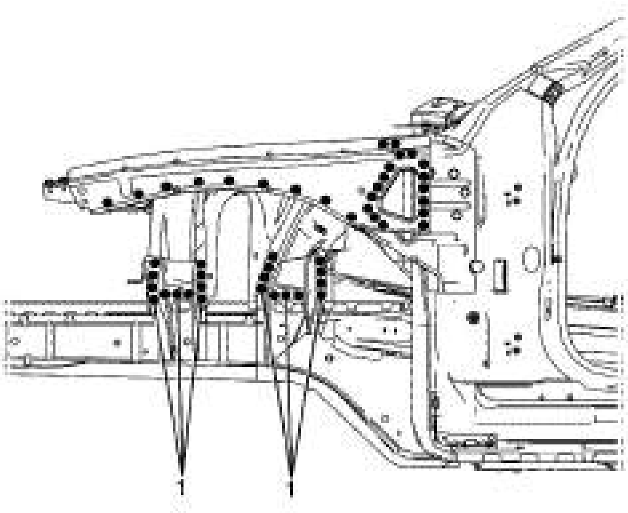
4. Align the datum points (1) and (2) to the vehicle.



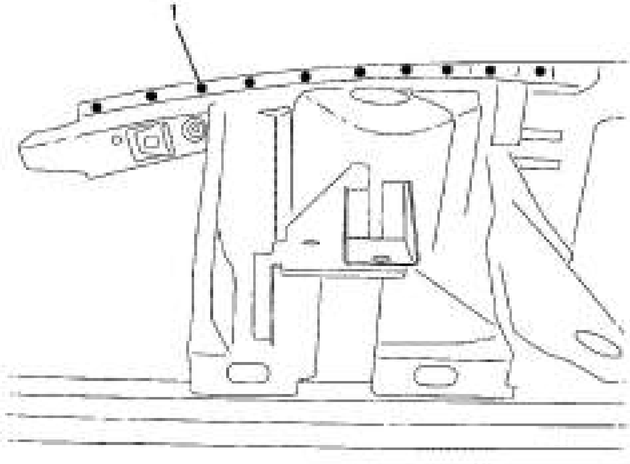
5. Weld (1) the wheelhouse assembly to the vehicle starting from the front chassis rail.



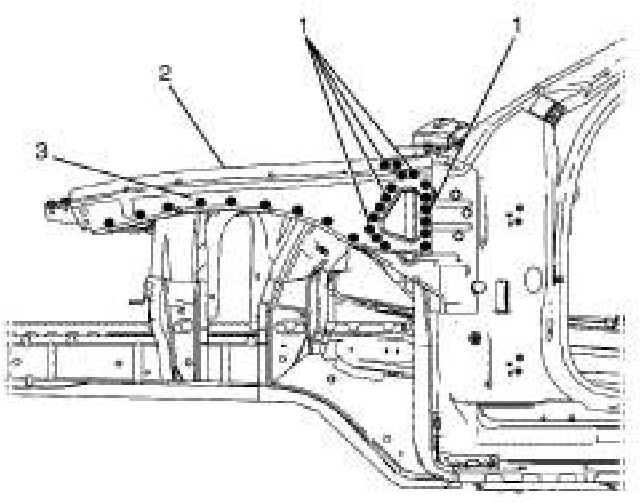
6. Weld (1) the wheelhouse assembly to the vehicle starting from the cowl panel.



7. Weld (2) the wheelhouse assembly to the vehicle starting from the front chassis rail.



8. Weld (1) the wheelhouse assembly to the upper wheelhouse brace.



9. Weld (1) the upper wheelhouse brace (2) to the wheelhouse assembly.
10. Weld (3) the upper wheelhouse brace (2) to the wheelhouse assembly.
11. Clean and prepare all welded surfaces.
12. Apply the sealers and anti-corrosion materials to the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.
13. Install the front floor carpet. Refer to Front Floor Panel Carpet Replacement .
14. Install the HVAC. Refer to HVAC Module Assembly Replacement.
15. If re-programming is required. Refer to Control Module References .
16. Install the instrument panel. Refer to Instrument Panel Carrier Replacement .
17. If re-programming is required. Refer to Control Module References .
18. Paint the repaired area. Refer to Basecoat/Clearcoat Paint Systems.
19. Install the brake master cylinder. Refer to Master Cylinder Replacement .
20. Install the ABS unit. Refer to Brake Pressure Modulator Valve Assembly Replacement.
21. If re-programming is required. Refer to Control Module References .
22. Install the relay box. Refer to Underhood Electrical Center or Junction Block Replacement.
23. Install the plenum chamber. Refer to Air Inlet Assembly Replacement.
24. Install the air inlet grille. Refer to Air Inlet Grille Panel Replacement .
25. Install the front end module. Refer to Front End Panel Module Carrier Assembly Replacement .
26. Install the coolant reservoir. Refer to Coolant Recovery Reservoir Replacement .
27. Install the front fascia. Refer to Front Bumper Fascia Replacement.
28. Install the fender assembly. Refer to Front Fender Replacement.
29. Install the brake lines. Refer to Brake Pipe Replacement.
30. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle .
31. Install the front strut assembly. Refer to Strut Assembly Replacement .
32. Install the front wheel hub assembly. Refer to Front Wheel Bearing and Hub Replacement .
33. Install the front wheelhouse liner. Refer to Front Wheelhouse Liner Replacement .
34. Install the front wheels. Refer to Tire and Wheel Removal and Installation.
35. Lower the vehicle.
36. Install the engine assembly. Refer to Engine Replacement or Engine Replacement.
37. Install the positive cable to the engine bay. Refer to Battery Positive Cable Replacement .
38. Install the negative cable to the engine bay. Refer to Battery Negative Cable Replacement .
39. Connect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection .
40. Enable the SIR system. Refer to SIR Disabling and Enabling.

41. If re-programming is required. Refer to Control Module References .

Removal Procedure - Upto xx/xx

Caution: Refer to Approved Equipment for Collision Repair Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

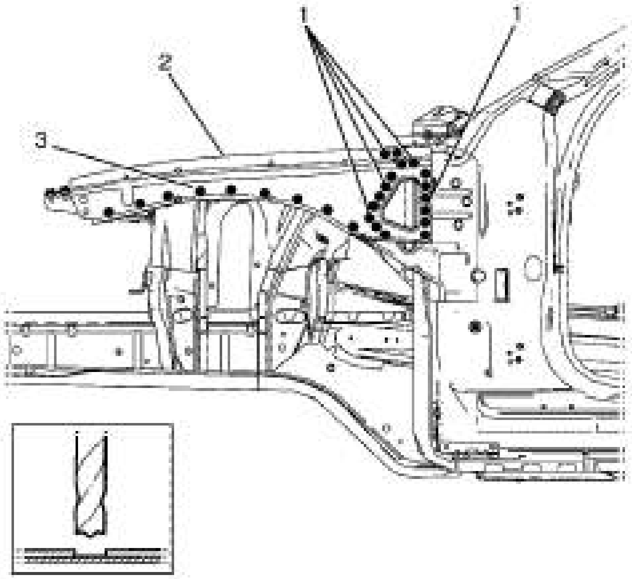
Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Battery Disconnect Caution in the Preface section.

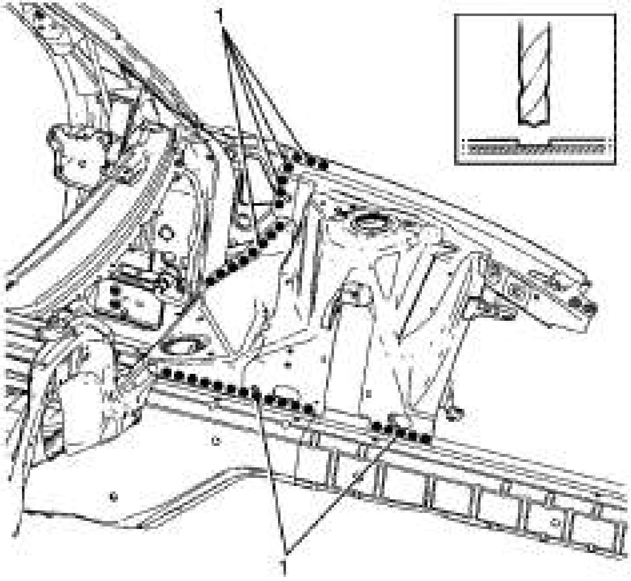
1. Disable the SIR system. Refer to SIR Disabling and Enabling.
2. Disconnect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection .
3. Remove the engine assembly. Refer to Engine Replacement or Engine Replacement.
4. Remove the negative cable from the engine bay. Refer to Battery Negative Cable Replacement .
5. Remove the positive cable from the engine bay. Refer to Battery Positive Cable Replacement .
6. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle .
7. Remove the front wheelhouse liner. Refer to Front Wheelhouse Liner Replacement .
8. Remove the front wheel hub assembly. Refer to Front Wheel Bearing and Hub Replacement .
9. Remove the front strut assembly. Refer to Strut Assembly Replacement .
10. Lower the vehicle.
11. Remove the brake lines. Refer to Brake Pipe Replacement.
12. Remove the fender assembly. Refer to Front Fender Replacement.
13. Remove the front fascia. Refer to Front Bumper Fascia Replacement.
14. Remove the coolant reservoir. Refer to Coolant Recovery Reservoir Replacement.
15. Remove the front end module. Refer to Front End Panel Module Carrier Assembly Replacement.
16. Remove the air inlet grille. Refer to Air Inlet Grille Panel Replacement.
17. Remove the plenum chamber. Refer to Air Inlet Assembly Replacement.
18. Remove the relay box. Refer to Underhood Electrical Center or Junction Block Replacement.
19. Remove the ABS unit. Refer to Brake Pressure Modulator Valve Assembly Replacement.
20. Remove the brake master cylinder. Refer to Master Cylinder Replacement .
21. Remove the instrument panel. Refer to Instrument Panel Carrier Replacement.
22. Remove the HVAC. Refer to HVAC Module Assembly Replacement.
23. Remove the front floor carpet. Refer to Front Floor Panel Carpet Replacement .

Caution: Refer to Foam Sound Deadeners Caution in the Preface section.

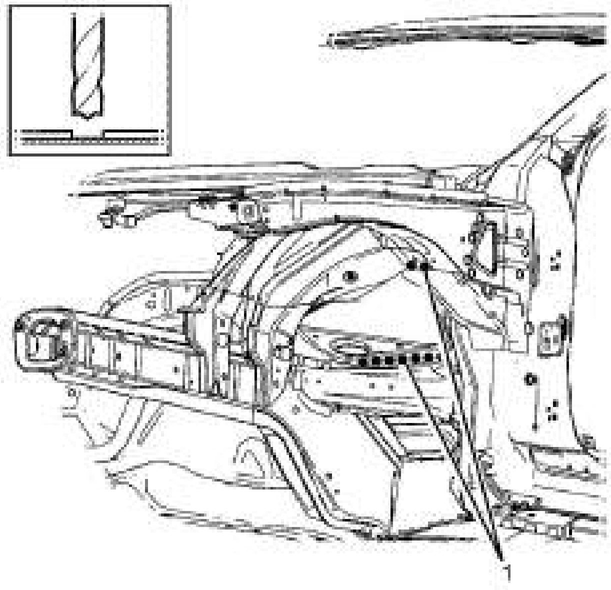
24. Note the location and remove the sealers and anti-corrosion materials from the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.



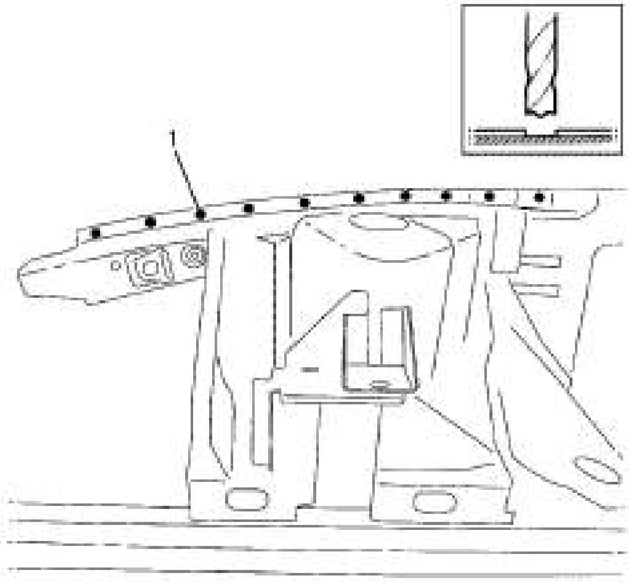
25. Locate, mark and drill out the inner factory welds (1) attaching the upper wheelhouse brace (2) to the wheelhouse assembly.
26. Locate, mark and drill out the inner factory welds (3) attaching the upper wheelhouse brace (2) to the wheelhouse assembly.



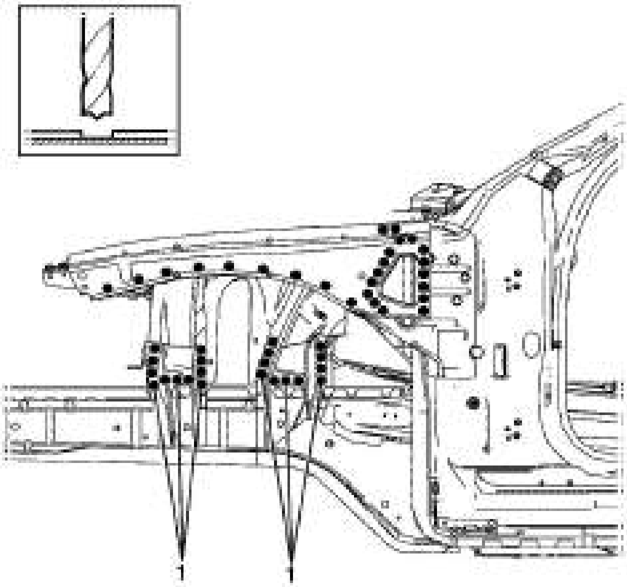
27. Locate, mark and drill out the inner factory welds (1) attaching the wheelhouse assembly to the vehicle.



28. Locate, mark and drill out the factory welds (1) attaching the wheelhouse assembly to the cowl panel.



29. Locate, mark and drill out the factory welds (1) attaching the wheelhouse assembly to the upper wheelhouse brace.



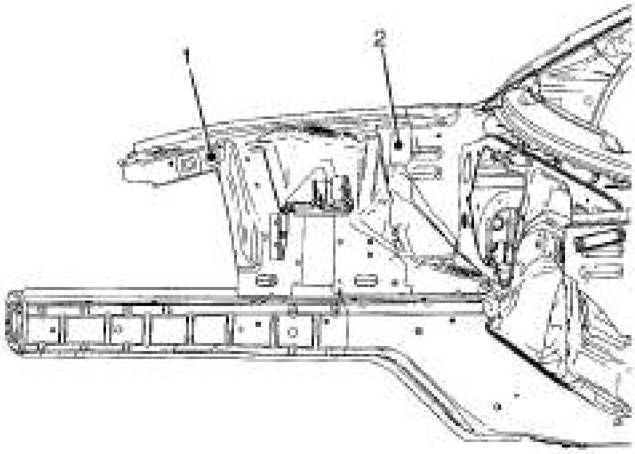
30. Locate, mark and drill out the factory welds (1) attaching the wheelhouse assembly to the front chassis rail.

Installation Procedure - After xx/xx

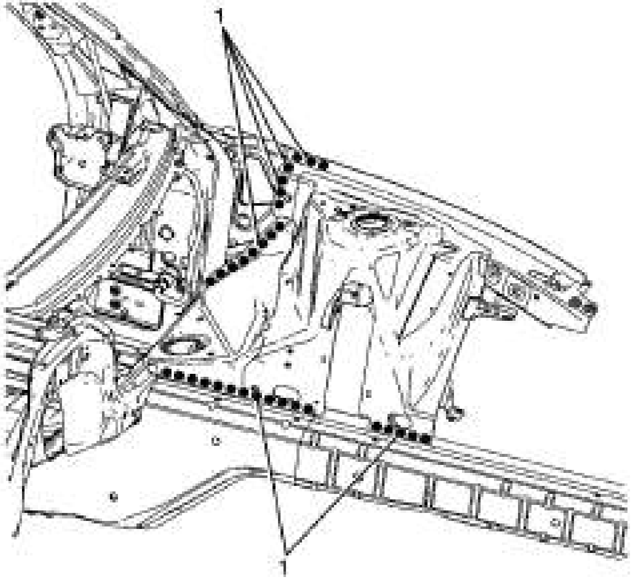
1. Clean and prepare the mating surfaces of both parts of the front chassis rail.
2. Drill 8 mm (5/16 in) plug weld holes as necessary in the locations noted from the original assembly.

   Important: If the location of the original plug weld holes can not be determined, or if structural weld-thru adhesive is present, space the plug weld holes every 32 mm (1¼ in).

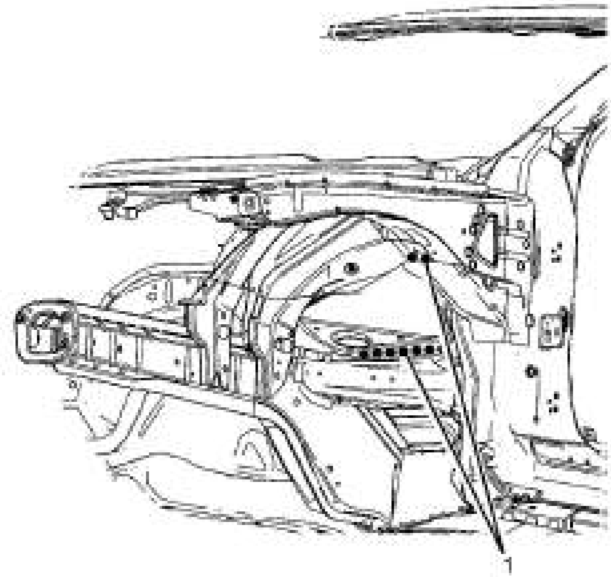
3. Position the body side on the vehicle. Verify correct alignment and position using three-dimensional measuring equipment.



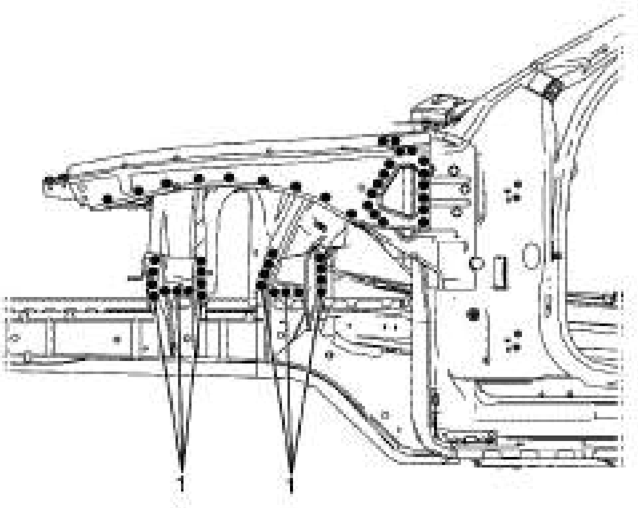
4. Align the datum points (1) and (2) to the vehicle.



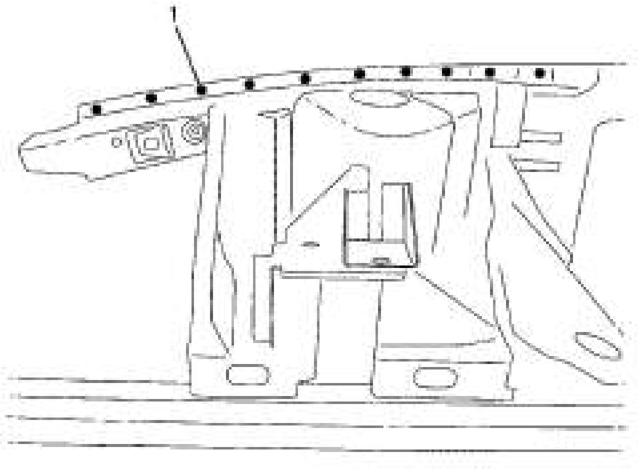
5. Weld (1) the wheelhouse assembly to the vehicle starting from the front chassis rail.



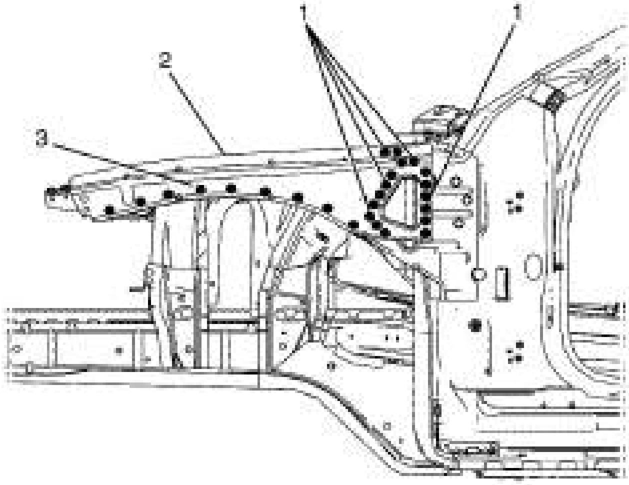
6. Weld (1) the wheelhouse assembly to the vehicle starting from the cowl panel.



7. Weld (2) the wheelhouse assembly to the vehicle starting from the front chassis rail.



8. Weld (1) the wheelhouse assembly to the upper wheelhouse brace.



9. Weld (1) the upper wheelhouse brace (2) to the wheelhouse assembly.
10. Weld (3) the upper wheelhouse brace (2) to the wheelhouse assembly.

Important: Before attaching fender, apply a film of erurethane approximately 300mm x 25mm wide to the upper wheel house brace (2).

11. Clean and prepare all welded surfaces.
12. Apply the sealers and anti-corrosion materials to the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.
13. Install the front floor carpet. Refer to Front Floor Panel Carpet Replacement .
14. Install the HVAC. Refer to HVAC Module Assembly Replacement.
15. If re-programming is required. Refer to Control Module References .
16. Install the instrument panel. Refer to Instrument Panel Carrier Replacement .
17. If re-programming is required. Refer to Control Module References .
18. Paint the repaired area. Refer to Basecoat/Clearcoat Paint Systems.
19. Install the brake master cylinder. Refer to Master Cylinder Replacement .
20. Install the ABS unit. Refer to Brake Pressure Modulator Valve Assembly Replacement.
21. If re-programming is required. Refer to Control Module References .
22. Install the relay box. Refer to Underhood Electrical Center or Junction Block Replacement.
23. Install the plenum chamber. Refer to Air Inlet Assembly Replacement.
24. Install the air inlet grille. Refer to Air Inlet Grille Panel Replacement .
25. Install the front end module. Refer to Front End Panel Module Carrier Assembly Replacement .
26. Install the coolant reservoir. Refer to Coolant Recovery Reservoir Replacement .
27. Install the front fascia. Refer to Front Bumper Fascia Replacement.
28. Install the fender assembly. Refer to Front Fender Replacement.
29. Install the brake lines. Refer to Brake Pipe Replacement.
30. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle .
31. Install the front strut assembly. Refer to Strut Assembly Replacement .
32. Install the front wheel hub assembly. Refer to Front Wheel Bearing and Hub Replacement .
33. Install the front wheelhouse liner. Refer to Front Wheelhouse Liner Replacement .
34. Install the front wheels. Refer to Tire and Wheel Removal and Installation.
35. Lower the vehicle.
36. Install the engine assembly. Refer to Engine Replacement or Engine Replacement.

37. Install the positive cable to the engine bay. Refer to Battery Positive Cable Replacement .
38. Install the negative cable to the engine bay. Refer to Battery Negative Cable Replacement .
39. Connect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection .
40. Enable the SIR system. Refer to SIR Disabling and Enabling.
41. If re-programming is required. Refer to Control Module References .

Front Compartment Front Rail Sectioning

Removal Procedure

Caution: Refer to Approved Equipment for Collision Repair Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

Caution: Refer to Safety Glasses Caution in the Preface section.

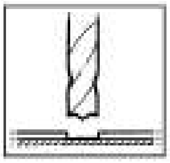
Caution: Refer to Foam Sound Deadeners Caution in the Preface section.

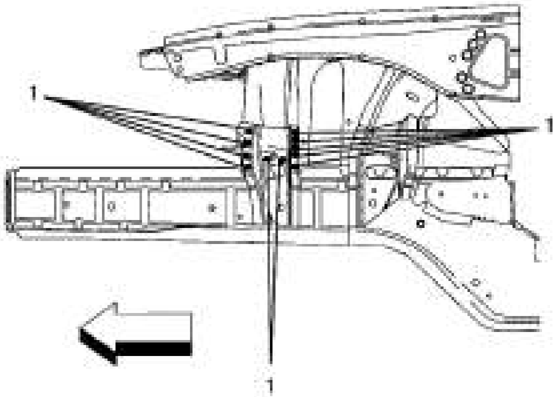
Caution: Refer to Battery Disconnect Caution in the Preface section.

Important:

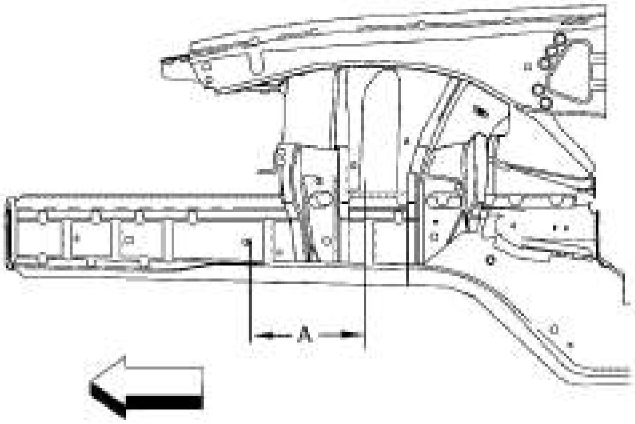
- Sectioning procedures have been developed to simplify the repair of the lower rails, as long as the damage rearward of the sectioning location can be repaired to factory specifications.
- Failure to follow the instructions may lead to improper rail sectioning, which may compromise the structural integrity of the vehicle.

1. Disable the SIR system. Refer to SIR Disabling and Enabling in SIR.
2. Disconnect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection .
3. Remove the engine assembly. Refer to Engine Replacement or Engine Replacement.
4. Remove the negative cable from the engine bay. Refer to Battery Negative Cable Replacement .
5. Remove the positive cable from the engine bay. Refer to Battery Positive Cable Replacement .
6. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle .
7. Remove the front wheels. Refer to Tire and Wheel Removal and Installation.
8. Remove the front wheelhouse liner. Refer to Front Wheelhouse Liner Replacement .
9. Remove the front wheel hub assembly. Refer to Front Wheel Bearing and Hub Replacement .
10. Remove the front strut assembly. Refer to Strut Assembly Replacement .
11. Lower the vehicle.
12. Remove the brake lines. Refer to Brake Pipe Replacement.
13. Remove the front fascia. Refer to Front Bumper Fascia Replacement.
14. Remove the fender assembly. Refer to Front Fender Replacement.
15. Remove the coolant reservoir. Refer to Coolant Recovery Reservoir Replacement.
16. Remove the front end module. Refer to Front End Panel Module Carrier Assembly Replacement.
17. Remove the air inlet grille. Refer to Air Inlet Grille Panel Replacement.
18. Remove the plenum chamber. Refer to Air Inlet Assembly Replacement.
19. Remove the relay box. Refer to Underhood Electrical Center or Junction Block Replacement.
20. Remove the ABS unit. Refer to Brake Pressure Modulator Valve Assembly Replacement.
21. Remove the brake master cylinder. Refer to Master Cylinder Replacement .
22. Note the location and remove the sealers and anti-corrosion materials from the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.



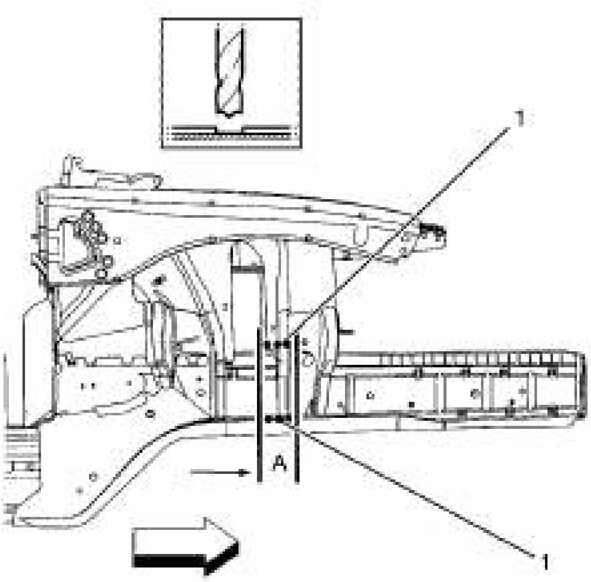


23. Locate, mark and drill out the front wheelhouse brace to front wheelhouse assembly spot welds (1).



24. Measure rearward from the datum hole to cut point 210 mm (8.27 in) (A).
25. Using a suitable tool cut through the inner and outer rail at the measurement point.
26. Remove the front section of the front chassis rail and discard.

    Discard the front section of the front chassis rail.



27. Measure rearward from the first cut point 50 mm (1.97 in) (A).
28. Locate, mark and drill out the spot welds (1) from the outer front chassis rail to the inner front chassis rail within the measurement made.

Important: Only cut the inner part of the front chassis rail to stagger the front chassis rail.

29. Using a suitable tool cut along the second cut point (A) on the inner front chassis rail and discard.

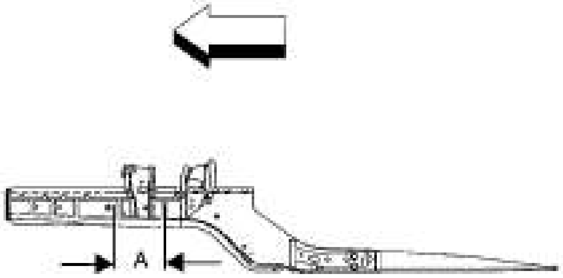
Discard the inner section of the front chassis rail.

Installation Procedure

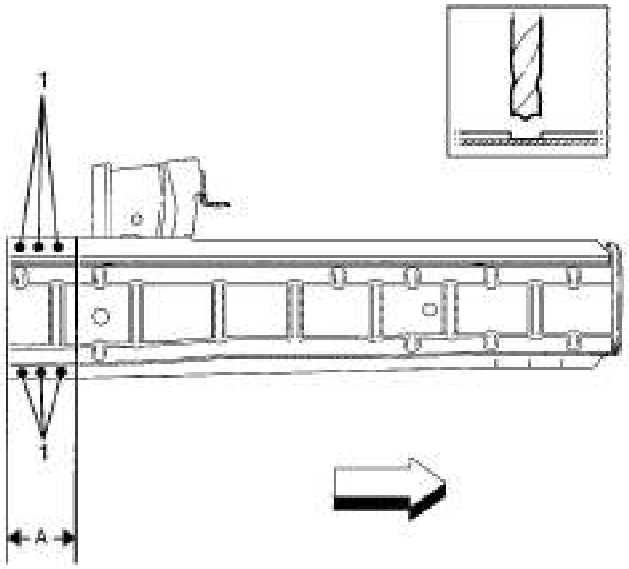
Important: Spot welding is the preferred method for attaching panels and should be used wherever possible. A plug weld should be performed where your spot welder is unable reach.

Important: If the location of the original plug weld holes can not be determined, or if structural weld-thru adhesive is present, space the plug weld holes every 32 mm (1¼ in).

1. Drill 8 mm (5/16 in) plug weld holes as necessary in the locations noted from the original assembly.
2. Clean and prepare the mating surfaces of both parts of the front chassis rail.



3. In order to create the rail section service part, cut the full rail service part at 260 mm (10.24 in) (A) rearward from the datum hole.



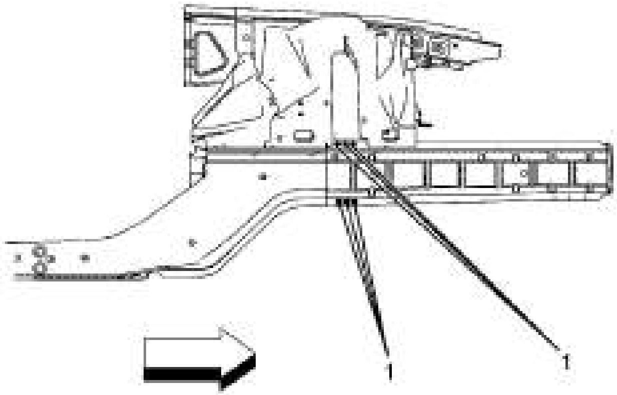
4. Measure forward from the first cut point 50 mm (1.97 in) (A) on the outer front chassis rail.
5. Locate, mark and drill out the spot welds (1) from the outer front chassis rail to the inner front chassis rail within the measurement made.

Important: Only cut the outer part of the front chassis rail to stagger the front chassis rail.

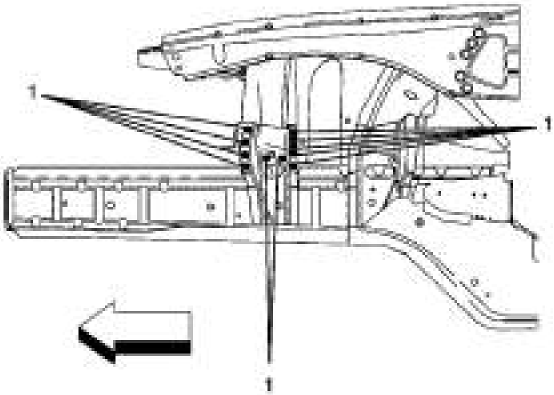
6. Cut along the second cut point (A) on the outer front chassis rail and discard.

   Discard the outer section of the front chassis rail.

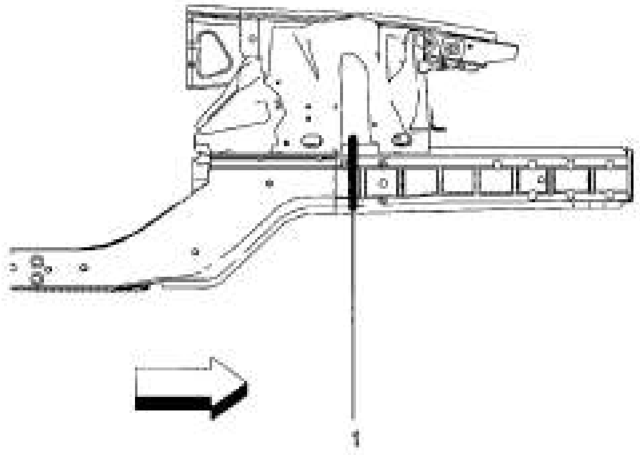
7. Clean and prepare the mating surfaces of both parts of the front chassis rail.



8. Position the front section of the front chassis rail to the remaining front chassis rail.
9. Weld the top and bottom (1) edges of the front chassis rail.

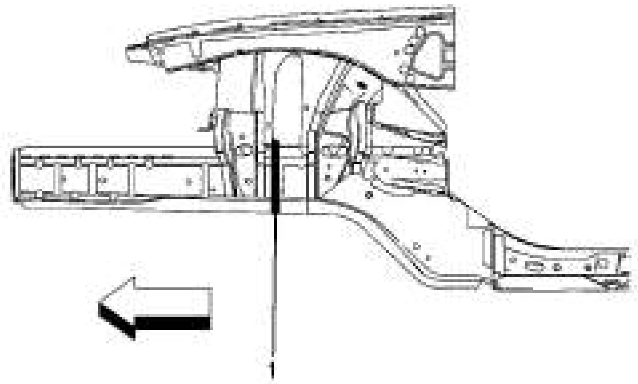


10. Weld (1) the front wheelhouse brace to front wheelhouse assembly.



Important: Care must be taken to minimise the heat absorbed by the panel which could lead to panel distortion.

11. Seam weld (1) the inner front portion of the chassis rail to the remaining front chassis rail.



12. Seam weld (1) the outer front portion of the chassis rail to the remaining front chassis rail.
13. Clean and prepare all of the welded surfaces.
14. Apply the sealers and anti-corrosion materials to the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.
15. Paint the repaired area. Refer to Basecoat/Clearcoat Paint Systems.
16. Install the brake master cylinder. Refer to Master Cylinder Replacement .
17. Install the ABS unit. Refer to Brake Pressure Modulator Valve Assembly Replacement.
18. If re-programming is required. Refer to Control Module References .

19. Install the relay box. Refer to Underhood Electrical Center or Junction Block Replacement.
20. Install the plenum chamber. Refer to Air Inlet Assembly Replacement.
21. Remove the air inlet grille. Refer to Air Inlet Grille Panel Replacement.
22. Install the front end module. Refer to Front End Panel Module Carrier Assembly Replacement .
23. Install the coolant reservoir. Refer to Coolant Recovery Reservoir Replacement .
24. Install the fender assembly. Refer to Front Fender Replacement.
25. Install the front fascia. Refer to Front Bumper Fascia Replacement.
26. Install the brake lines. Refer to Brake Pipe Replacement.
27. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle .
28. Install the front strut assembly. Refer to Strut Assembly Replacement .
29. Install the front wheel hub assembly. Refer to Front Wheel Bearing and Hub Replacement .
30. Install the front wheel house liner. Refer to Front Wheelhouse Liner Replacement .
31. Install the front wheels. Refer to Tire and Wheel Removal and Installation.
32. Lower the vehicle.
33. Install the negative cable from the engine bay. Refer to Battery Negative Cable Replacement .
34. Install the positive cable from the engine bay. Refer to Battery Positive Cable Replacement .
35. Install the engine assembly. Refer to Engine Replacement or Engine Replacement
36. Connect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection .
37. Enable the SIR system. Refer to SIR Disabling and Enabling.
38. If re-programming is required. Refer to Control Module References .

Roof Front Header Panel Replacement

Removal Procedure

Caution: Refer to Approved Equipment for Collision Repair Caution in the Preface section.

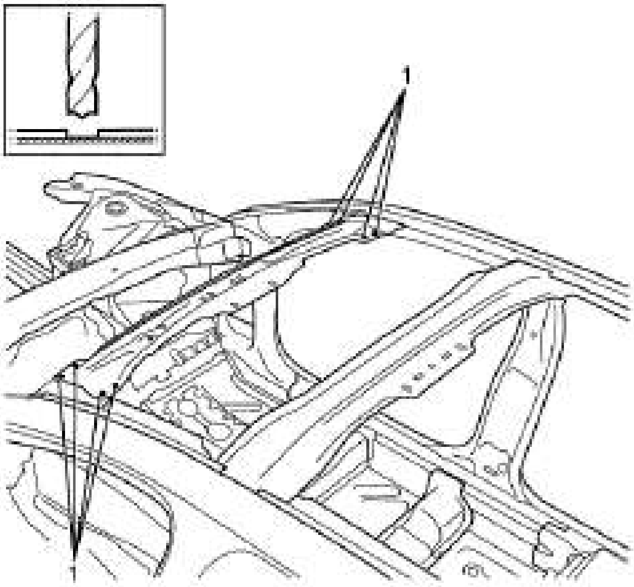
Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Foam Sound Deadeners Caution in the Preface section.

1. Disable the SIR system. Refer to SIR Disabling and Enabling.

   Caution: Refer to Battery Disconnect Caution in the Preface section.

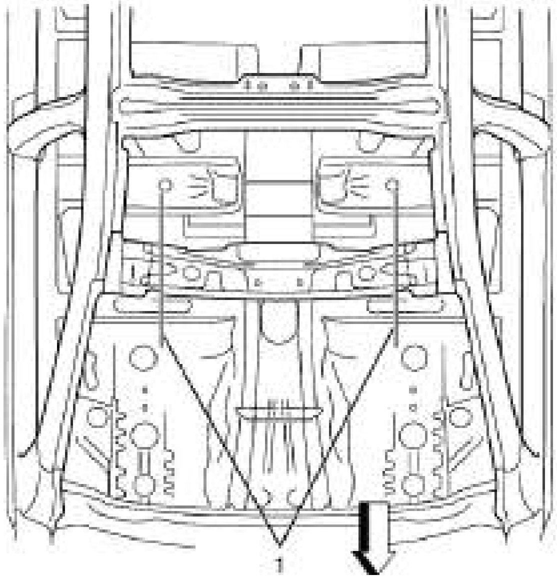
2. Disconnect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
3. Remove the front doors. Refer to Front Side Door Replacement.
4. Remove the front seats. Refer to Front Seat Replacement - Bucket.
5. Remove the front seat belts. Refer to Front Seat Belt Replacement.
6. Remove the rear doors. Refer to Rear Door Replacement.
7. Remove the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.
8. Remove the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
9. Remove the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
10. Remove the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
11. Remove the liftgate weatherstrip. Refer to Liftgate Weatherstrip Replacement.
12. Remove the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
13. Remove the headlining rear trim panel retainer. Refer to Headlining Rear Trim Panel Retainer Replacement.
14. Remove the body side window rear garnish moulding. Refer to Body Side Window Rear Garnish Molding Replacement.
15. Remove the rear seat cushion. Refer to Rear Seat Cushion Replacement.
16. Remove the rear seat back. Refer to Rear Split Folding Seat Back Replacement.
17. Remove the headliner. Refer to Headlining Trim Panel Replacement.
18. Remove the roof weld joint reveal moulding. Refer to Roof Weld Joint Reveal Molding Replacement.
19. Remove the windshield pillar garnish moulding. Refer to Windshield Pillar Garnish Molding Replacement.
20. Remove the windshield. Refer to Windshield Replacement.
21. Remove the liftgate. Refer to Liftgate Replacement.
22. Remove the liftgate hinges. Refer to Liftgate Hinge Replacement.
23. Remove the body side roof drip moulding. Refer to Body Side Roof Drip Molding Replacement.
24. Remove the roof panel. Refer to Roof Outer Replacement.
25. Note the location and remove the sealers and anti-corrosion materials from the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.



Important: The roof front header panel is attached to the upper body sides with beads of adhesive and spot-welds at each end.

Important: Note the number and location of factory welds (1) for installation of the new roof front header panel.

26. Locate, mark and drill out the factory welds (1) attaching the roof front header panel to the upper body side.



27. Mark a cut line (1) on the front roof bow panel inboard of the body side assembly.

Important: Cut through the roof header panel only. Do not damage any other panels or reinforcements.

28. Using a suitable tool, cut through the roof front header panel (1) inboard of the upper body side. Remove the centre portion of the roof front header panel from the vehicle.
29. Using a suitable tool remove the remaining end portions of the front roof header panel from the upper body side. Ensure all traces of old adhesive are removed.

Installation Procedure

Important: Spot welding is the preferred method for attaching panels and should be used whenever possible. A plug weld should only be performed where spot welding is not possible.

Important: Ensure that all factory welds are replaced in their original locations.

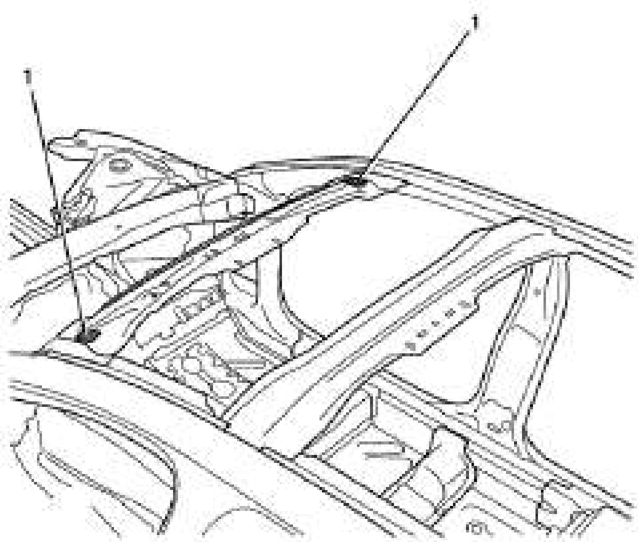
Important: Ensure that all structural adhesives and sealers are replaced in their original locations.

Important: If the location of the original plug weld holes cannot be determined, or if structural weld-thru adhesive is present, space the plug weld holes every 32 mm (1¼ in).

Important: Follow the adhesive manufacturer's instructions during the assembly process. Heat must be applied as per the manufacturer's specifications to cure the adhesives and to expand the sealing baffles.

Important: Secondary sealer must be applied to the perimeter of all flanges and over all joints.

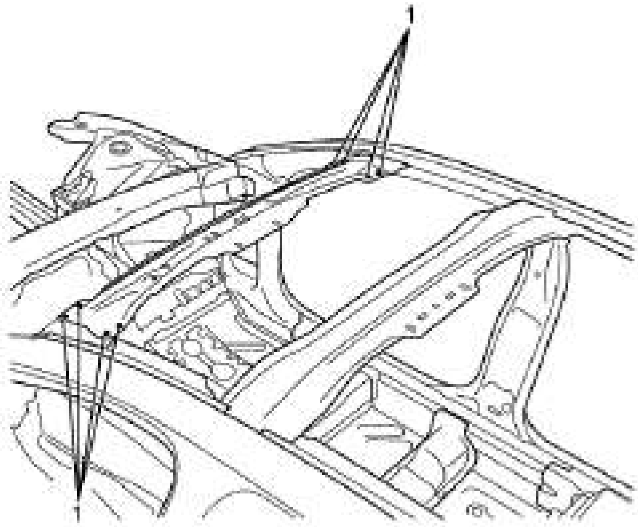
1. Drill 8 mm (5/16 in) plug weld holes as necessary in the locations noted when dissembling.
2. Clean and prepare the mating surfaces of the body side and the roof front header panel. Ensure all traces of old adhesive are removed.
3. Verify that the vehicle body structure alignment is correct. Refer to Dimensions - Body.



4. Apply of approved structural adhesive (1) (GM6449G or equivalent) to the roof front header panel lower surface.

Important: As the front roof header panel is installed to the vehicle, structural adhesive should be visible on the outside edges of both surfaces (squeezed out when pushed together).

5. Position the roof front header panel to the body sides.
6. Align the front roof header panel using three dimensional measuring equipment. Refer to Dimensions - Body.



7. Weld the front roof header panel to the body sides (1).
8. Apply any sealers and anti-corrosion materials to the repair area noted on disassembly. Refer to Anti-Corrosion Treatment and Repair.
9. Paint the repaired area. Refer to Basecoat/Clearcoat Paint Systems.
10. Install the roof outer panel. Refer to Roof Outer Replacement.
11. Install the body side roof drip moulding. Refer to Body Side Roof Drip Molding Replacement.
12. Install the liftgate hinges. Refer to Liftgate Hinge Replacement.
13. Install the liftgate. Refer to Liftgate Replacement.
14. Install the windshield. Refer to Windshield Replacement.
15. Install the windshield pillar garnish moulding. Refer to Windshield Pillar Garnish Molding Replacement.
16. Install the roof weld joint reveal moulding. Refer to Roof Weld Joint Reveal Molding Replacement.
17. Install the headliner. Refer to Headlining Trim Panel Replacement.
18. Install the rear seat back. Refer to Rear Split Folding Seat Back Replacement.
19. Install the rear seat cushion. Refer to Rear Seat Cushion Replacement.
20. Install the body side window rear garnish moulding. Refer to Body Side Window Rear Garnish Molding Replacement.
21. Install the headlining rear trim panel retainer. Refer to Headlining Rear Trim Panel Retainer Replacement.
22. Install the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
23. Install the liftgate weatherstrip. Refer to Liftgate Weatherstrip Replacement.
24. Install the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
25. Install the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
26. Install the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
27. Install the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.

28. Install the rear doors. Refer to Rear Door Replacement.
29. Install the front seat belts. Refer to Front Seat Belt Replacement.
30. Install the front seats. Refer to Front Seat Replacement - Bucket.
31. Install the front doors. Refer to Front Side Door Replacement.
32. Connect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
33. Enable the SIR system. Refer to SIR Disabling and Enabling.

Roof Panel Bow Replacement (Front - Sportwagon)

Removal Procedure

Caution: Refer to Approved Equipment for Collision Repair Caution in the Preface section.

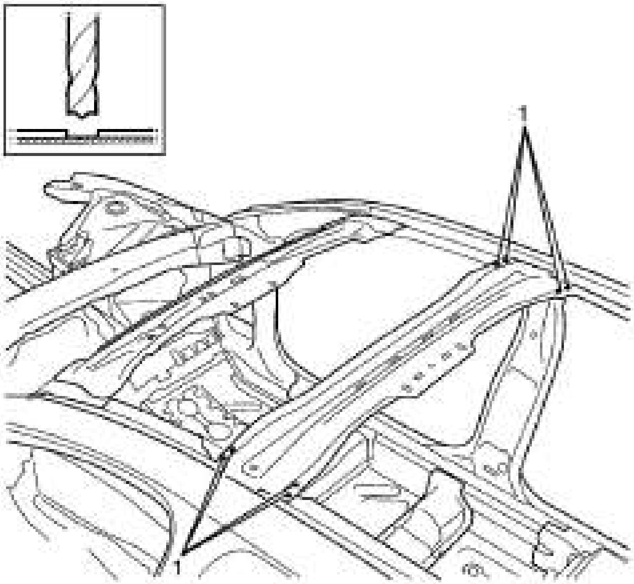
Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Foam Sound Deadeners Caution in the Preface section.

1. Disable the SIR system. Refer to SIR Disabling and Enabling.

   Caution: Refer to Battery Disconnect Caution in the Preface section.

2. Disconnect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
3. Remove the front doors. Refer to Front Side Door Replacement.
4. Remove the front seats. Refer to Front Seat Replacement - Bucket.
5. Remove the front seat belts. Refer to Front Seat Belt Replacement.
6. Remove the rear doors. Refer to Rear Door Replacement.
7. Remove the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.
8. Remove the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
9. Remove the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
10. Remove the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
11. Remove the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
12. Remove the headlining rear trim panel retainer. Refer to Headlining Rear Trim Panel Retainer Replacement.
13. Remove the body side window rear garnish moulding. Refer to Body Side Window Rear Garnish Molding Replacement.
14. Remove the rear seat cushion. Refer to Rear Seat Cushion Replacement.
15. Remove the rear seat back. Refer to Rear Split Folding Seat Back Replacement.
16. Remove the headliner. Refer to Headlining Trim Panel Replacement.
17. Remove the roof weld joint reveal moulding. Refer to Roof Weld Joint Reveal Molding Replacement.
18. Remove the windshield pillar garnish moulding. Refer to Windshield Pillar Garnish Molding Replacement.
19. Remove the windshield. Refer to Windshield Replacement.
20. Remove the liftgate. Refer to Liftgate Replacement.
21. Remove the liftgate hinges. Refer to Liftgate Hinge Replacement.
22. Remove the body side roof drip moulding. Refer to Body Side Roof Drip Molding Replacement.
23. Remove the roof panel. Refer to Roof Outer Replacement.
24. Note the location and remove the sealers and anti-corrosion materials from the repair area, as necessary. Refer to Approved Equipment for Collision Repair Caution.

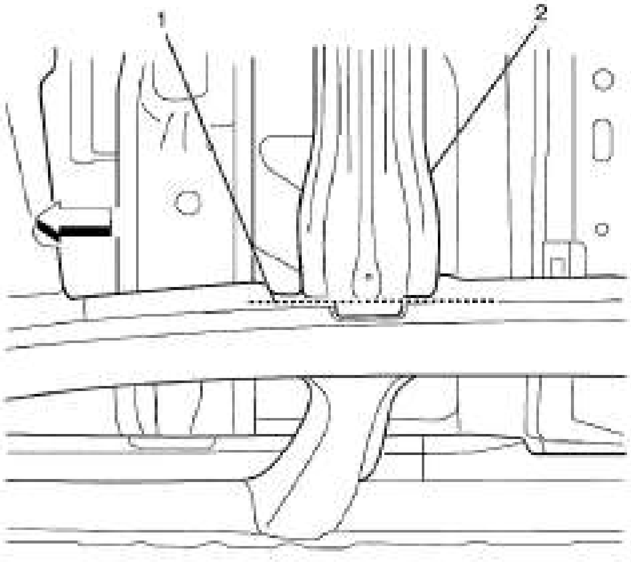


Important: Do nor damage any inner panels or reinforcements.

Important: The front roof bow panel is attached to the upper body sides with beads of adhesive and spot-welds at each end.

Important: Note the number and location of factory welds for installation of the new front roof panel bow.

25. Locate, mark and drill out the factory welds (1) attaching the front roof panel bow to the body side.



26. Mark a cut line (1) on the front roof bow panel (2) inboard of the body side assembly.

Important: Cut through the front roof bow panel only. Do not damage any other panels or reinforcements.

27. Using a suitable tool, cut along the cut line (1) on the front roof bow panel (2).
28. Remove the centre portion of the front roof bow panel (2) from the vehicle.
29. Using a suitable tool, remove the remaining portions of the front roof bow panel from the vehicle. Ensure all traces of old adhesive are removed.

Installation Procedure

Important: Spot welding is the preferred method for attaching panels and should be used whenever possible. A plug weld should only be performed where spot welding is not possible.

Important: If the location of the original plug weld holes cannot be determined, or if structural weld-thru adhesive is present, space the plug weld holes every 32 mm (1¼ in).

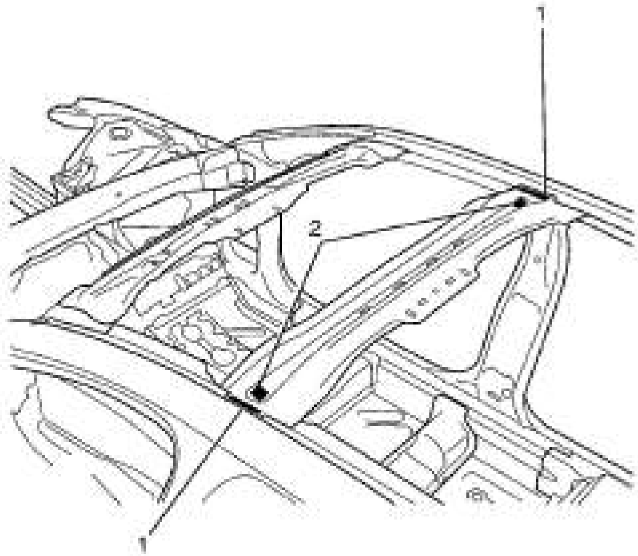
Important: Ensure that all factory welds are replaced in their original locations.

Important: Ensure that all structural adhesives and sealers are replaced in their original locations.

Important: Follow the adhesive manufacturer's instructions during the assembly process. Heat must be applied as per the manufacturer's specifications to cure the adhesives and to expand the sealing baffles.

Important: Secondary sealer must be applied to the perimeter of all flanges and over all joints.

1. Drill 8 mm (5/16 in) plug weld holes as necessary in the locations noted when dissembling.
2. Clean and prepare the mating surfaces of the body side and the front roof bow panel. Ensure all traces of old adhesive are removed.
3. Verify that the vehicle body structure alignment is correct. Refer to Dimensions - Body.



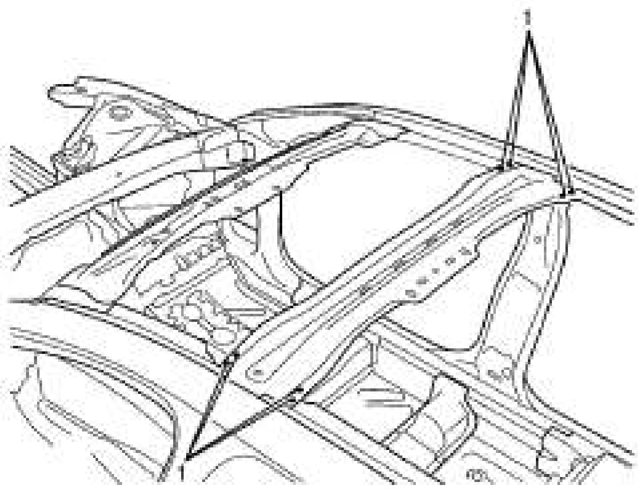
4. Apply a 13mm wide bead of approved structural adhesive (1) (GM6449G or equivalent)

between the front roof bow and body side outer panel.

5. Apply approved structural adhesive (2) (GM6449G or equivalent) between the front roof bow and the centre pillar upper reinforcement.

   Important: As the front roof bow panel is installed to the vehicle, structural adhesive should be visible on the outside edges of both surfaces (squeezed out when pushed together).

6. Install the front roof bow panel (1) to the body side.



7. Weld the front roof bow panel (1) to the body side.
8. Apply any sealers and anti-corrosion materials to the repair area noted on disassembly. Refer to Anti-Corrosion Treatment and Repair.
9. Paint the repaired area. Refer to Basecoat/Clearcoat Paint Systems.
10. Install the roof outer panel. Refer to Roof Outer Replacement.
11. Install the body side roof drip moulding. Refer to Body Side Roof Drip Molding Replacement.
12. Install the liftgate hinges. Refer to Liftgate Hinge Replacement.
13. Install the liftgate. Refer to Liftgate Replacement.
14. Install the windshield. Refer to Windshield Replacement.
15. Install the windshield pillar garnish moulding. Refer to Windshield Pillar Garnish Molding Replacement.
16. Install the roof weld joint reveal moulding. Refer to Roof Weld Joint Reveal Molding Replacement.
17. Install the headliner. Refer to Headlining Trim Panel Replacement.
18. Install the rear seat back. Refer to Rear Split Folding Seat Back Replacement.
19. Install the rear seat cushion. Refer to Rear Seat Cushion Replacement.
20. Install the body side window rear garnish moulding. Refer to Body Side Window Rear Garnish Molding Replacement.
21. Install the headlining rear trim panel retainer. Refer to Headlining Rear Trim Panel Retainer Replacement.
22. Install the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
23. Install the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
24. Install the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
25. Install the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel

Carpet Replacement.

26. Install the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.
27. Install the rear doors. Refer to Rear Door Replacement.
28. Install the front seat belts. Refer to Front Seat Belt Replacement.
29. Install the front seats. Refer to Front Seat Replacement - Bucket.
30. Install the front doors. Refer to Front Side Door Replacement.
31. Connect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
32. Enable the SIR system. Refer to SIR Disabling and Enabling.

Roof Panel Bow Replacement (Rear - Sportwagon)

Removal Procedure

Caution: Refer to Approved Equipment for Collision Repair Caution in the Preface section.

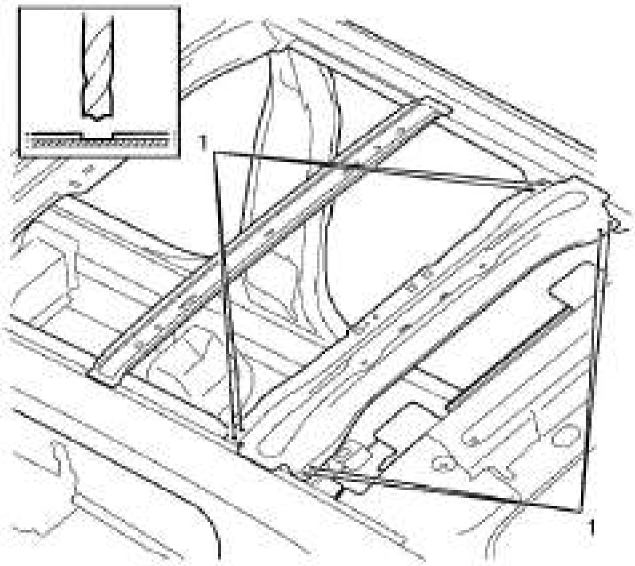
Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Foam Sound Deadeners Caution in the Preface section.

1. Disable the SIR system. Refer to SIR Disabling and Enabling.

   Caution: Refer to Battery Disconnect Caution in the Preface section.

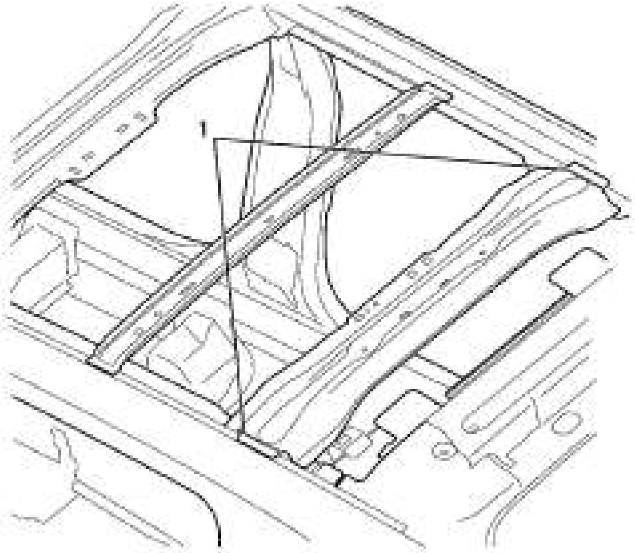
2. Disconnect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
3. Remove the front doors. Refer to Front Side Door Replacement.
4. Remove the front seats. Refer to Front Seat Replacement - Bucket.
5. Remove the front seat belts. Refer to Front Seat Belt Replacement.
6. Remove the rear doors. Refer to Rear Door Replacement.
7. Remove the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.
8. Remove the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
9. Remove the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
10. Remove the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
11. Remove the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
12. Remove the headlining rear trim panel retainer. Refer to Headlining Rear Trim Panel Retainer Replacement.
13. Remove the body side window rear garnish moulding. Refer to Body Side Window Rear Garnish Molding Replacement.
14. Remove the rear seat cushion. Refer to Rear Seat Cushion Replacement.
15. Remove the rear seat back. Refer to Rear Split Folding Seat Back Replacement.
16. Remove the headliner. Refer to Headlining Trim Panel Replacement.
17. Remove the roof weld joint reveal moulding. Refer to Roof Weld Joint Reveal Molding Replacement.
18. Remove the windshield pillar garnish moulding. Refer to Windshield Pillar Garnish Molding Replacement.
19. Remove the windshield. Refer to Windshield Replacement.
20. Remove the liftgate. Refer to Liftgate Replacement.
21. Remove the liftgate hinges. Refer to Liftgate Hinge Replacement.
22. Remove the body side roof drip moulding. Refer to Body Side Roof Drip Molding Replacement.
23. Remove the roof panel. Refer to Roof Outer Replacement.
24. Note the location and remove the sealers and anti-corrosion materials from the repair area, as necessary. Refer to Approved Equipment for Collision Repair Caution.



Important: The rear roof bow panel is attached to the upper body sides with beads of adhesive and spot-welds at each end.

Important: Note the number and location of factory welds for installation of the new rear roof bow panel.

25. Locate, mark and drill out the factory welds (1) attaching the rear roof panel bow to the body side.



Important: Cut through the rear roof bow panel only. Do not damage any other panels or reinforcements.

26. Mark a cut line (1) on the rear roof bow panel (2) inboard of the body side assembly.
27. Cut along the cut line (1) on the rear roof bow panel (2) with a suitable cutting tool.
28. Remove the centre portion of the rear roof bow panel (2) from the vehicle.
29. Using a suitable tool, remove the remaining portions of the rear roof bow panel from the vehicle. Ensure all traces of old adhesive are removed.

Installation Procedure

Important: Spot welding is the preferred method for attaching panels and should be used whenever possible. A plug weld should only be performed where spot welding is not possible.

Important: Ensure that all factory welds are replaced in their original locations.

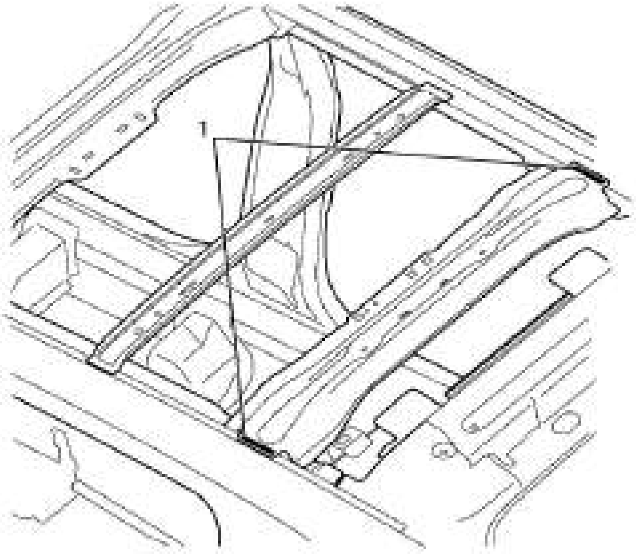
Important: Ensure that all structural adhesives and sealers are replaced in their original locations.

Important: If the location of the original plug weld holes cannot be determined, or if structural weld-thru adhesive is present, space the plug weld holes every 32 mm (1¼ in).

Important: Follow the adhesive manufacturer's instructions during the assembly process. Heat must be applied as per the manufacturer's specifications to cure the adhesives and to expand the sealing baffles.

Important: Secondary sealer must be applied to the perimeter of all flanges and over all joints.

1. Drill 8 mm (5/16 in) plug weld holes as necessary in the locations noted when dissembling.
2. Clean and prepare the mating surfaces of the body side and the rear roof bow panel. Ensure all traces of old adhesive are removed.
3. Verify that the vehicle body structure alignment is correct. Refer to Dimensions - Body.

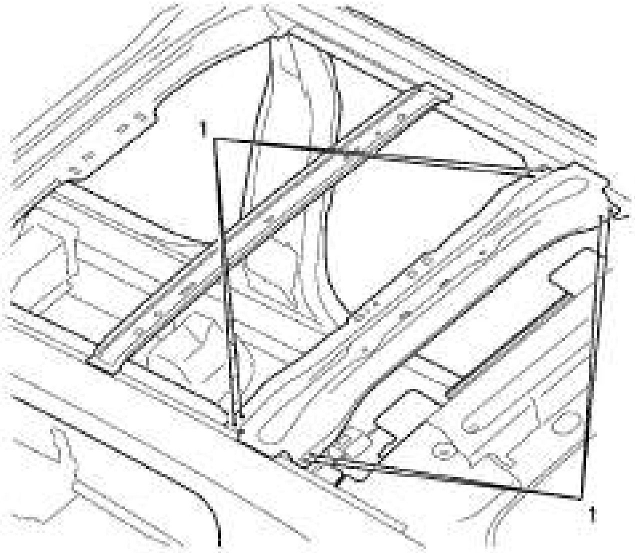


Important: Clean all the adhesives mating surfaces in accordance with the adhesive manufacturer's specifications.

4. Apply a 13mm wide bead of approved structural adhesive (1) (GM6449G or equivalent) to the rear roof bow panel lower surface. On assembly, the adhesive should be between the rear roof bow panel and the body side outer panel.

   Important: As the rear roof bow panel is installed to the vehicle, structural adhesive should be visible on the outside edges of both surfaces (squeezed out when pushed together).

5. Install the rear roof bow panel (1) to the body side.



6. Weld the rear roof bow panel (1) to the body side.
7. Apply any sealers and anti-corrosion materials to the repair area noted on disassembly. Refer to Anti-Corrosion Treatment and Repair.
8. Paint the repaired area. Refer to Basecoat/Clearcoat Paint Systems.
9. Install the roof panel. Refer to Roof Outer Replacement.
10. Install the body side roof drip moulding. Refer to Body Side Roof Drip Molding Replacement.
11. Install the liftgate hinges. Refer to Liftgate Hinge Replacement.
12. Install the liftgate. Refer to Liftgate Replacement.
13. Install the windshield. Refer to Windshield Replacement.
14. Install the windshield pillar garnish moulding. Refer to Windshield Pillar Garnish Molding Replacement.
15. Install the roof weld joint reveal moulding. Refer to Roof Weld Joint Reveal Molding Replacement.
16. Install the headliner. Refer to Headlining Trim Panel Replacement.
17. Install the rear seat back. Refer to Rear Split Folding Seat Back Replacement.
18. Install the rear seat cushion. Refer to Rear Seat Cushion Replacement.
19. Install the body side window rear garnish moulding. Refer to Body Side Window Rear Garnish Molding Replacement.
20. Install the headlining rear trim panel retainer. Refer to Headlining Rear Trim Panel Retainer Replacement.
21. Install the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
22. Install the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
23. Install the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
24. Install the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel

Carpet Replacement.

25. Install the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.
26. Install the rear doors. Refer to Rear Door Replacement.
27. Install the front seat belts. Refer to Front Seat Belt Replacement.
28. Install the front seats. Refer to Front Seat Replacement - Bucket.
29. Install the front doors. Refer to Front Side Door Replacement.
30. Connect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
31. Enable the SIR system. Refer to SIR Disabling and Enabling.

Roof Rear Header Panel Replacement (Sportwagon)

Removal Procedure

Caution: Refer to Approved Equipment for Collision Repair Caution in the Preface section.

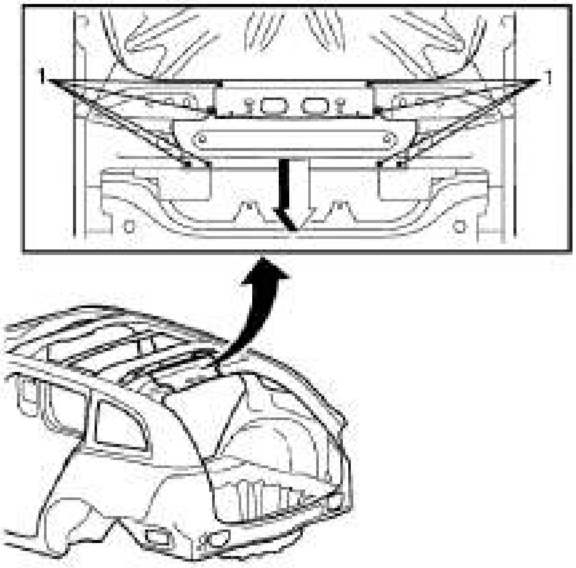
Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Foam Sound Deadeners Caution in the Preface section.

1. Disable the SIR system. Refer to SIR Disabling and Enabling.

   Caution: Refer to Battery Disconnect Caution in the Preface section.

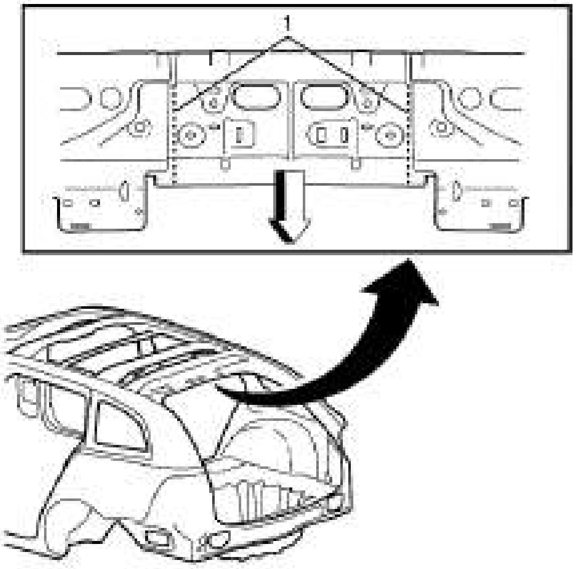
2. Disconnect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
3. Remove the front doors. Refer to Front Side Door Replacement.
4. Remove the front seats. Refer to Front Seat Replacement - Bucket.
5. Remove the front seat belts. Refer to Front Seat Belt Replacement.
6. Remove the rear doors. Refer to Rear Door Replacement.
7. Remove the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.
8. Remove the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
9. Remove the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
10. Remove the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
11. Remove the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
12. Remove the headlining rear trim panel retainer. Refer to Headlining Rear Trim Panel Retainer Replacement.
13. Remove the body side window rear garnish moulding. Refer to Body Side Window Rear Garnish Molding Replacement.
14. Remove the rear seat cushion. Refer to Rear Seat Cushion Replacement.
15. Remove the rear seat back. Refer to Rear Split Folding Seat Back Replacement.
16. Remove the headliner. Refer to Headlining Trim Panel Replacement.
17. Remove the roof weld joint reveal moulding. Refer to Roof Weld Joint Reveal Molding Replacement.
18. Remove the windshield pillar garnish moulding. Refer to Windshield Pillar Garnish Molding Replacement.
19. Remove the windshield. Refer to Windshield Replacement.
20. Remove the liftgate. Refer to Liftgate Replacement.
21. Remove the liftgate hinges. Refer to Liftgate Hinge Replacement.
22. Remove the body side roof drip moulding. Refer to Body Side Roof Drip Molding Replacement.
23. Remove the roof panel. Refer to Roof Outer Replacement.
24. Note the location and remove the sealers and anti-corrosion materials from the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.



Important: Do not damage any other panels or reinforcements.

Important: The roof rear header panel asm consists of an inner and outer panel which are joined to the body structure with both spotwelds and adhesive.

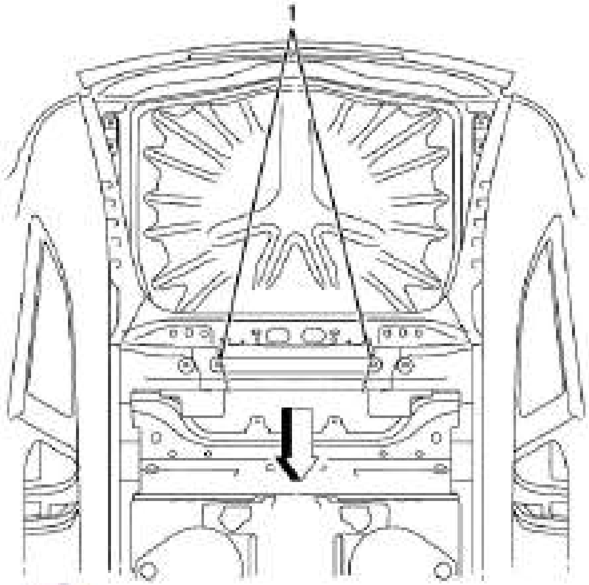
25. Locate, mark and drill out the factory welds (1) attaching the roof rear header panel asm to the body side assembly.



26. Mark cut lines (1) on the inner roof rear header panel inboard of the body side assembly.

Important: Only cut through the inner roof rear header panel. Do not damage any other panels or reinforcements.

27. Cut along the cut lines (1) on the inner roof rear header panel.



28. Mark cut lines (1) along the outer roof rear header panel inboard of the body side assembly.

Important: Use a suitable device to support the roof rear header panel assembly.

Important: Only cut through the outer roof rear header panel. Do not damage any other panels or reinforcements.

29. Cut along the cut lines (1) on the outer roof rear header panel.
30. Remove the centre section of the roof rear header panel assembly from the vehicle.

Important: Only remove the remaining portions of the roof rear header panel. Do not damage any other panels or reinforcements.

31. Using a suitable tool, remove the remaining outer portions of both the inner and outer roof rear header panel from the vehicle. Ensure that all traces of old adhesive are removed.

Installation Procedure

Important: Spot welding is the preferred method for attaching panels and should be used whenever possible. A plug weld should only be performed where spot welding is not possible.

Important: If the location of the original plug weld holes cannot be determined, or if structural weld-thru adhesive is present, space the plug weld holes every 32 mm (1¼ in).

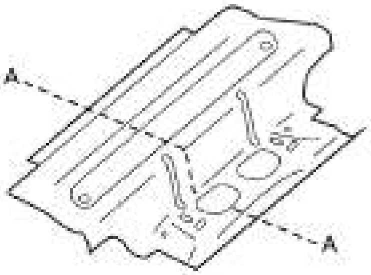
Important: Ensure that all factory welds are replaced in their original locations.

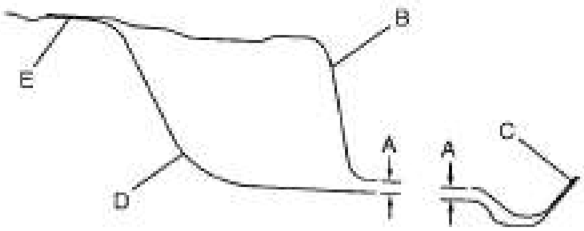
Important: Ensure that all structural adhesives and sealers are replaced in their original locations.

Important: Follow the adhesive manufacturer's instructions during the assembly process. Heat must be applied as per the manufacturer's specifications to cure the adhesives and to expand the sealing baffles.

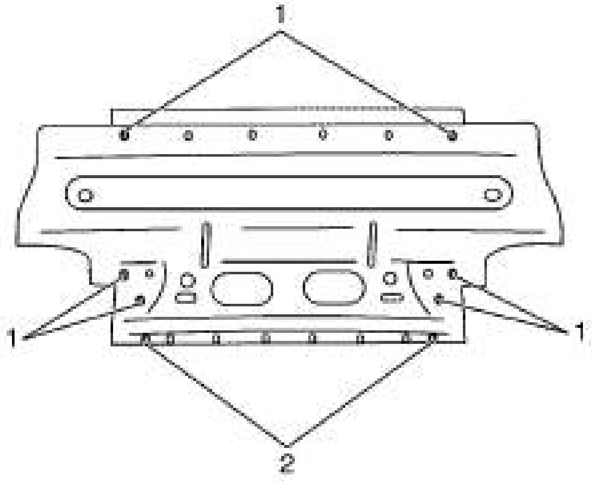
Important: Secondary sealer must be applied to the perimeter of all flanges and over all joints.

1. Drill 8 mm (5/16 in) plug weld holes as necessary in the locations noted when dissembling.
2. Clean and prepare the mating surfaces of the body side and the roof rear header panel assembly.



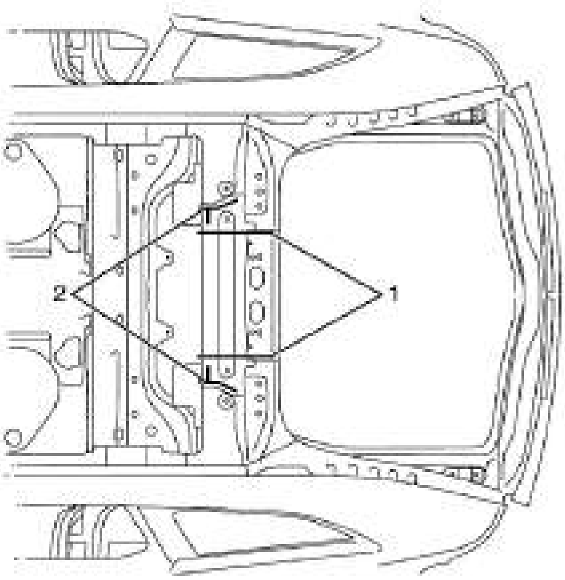


3. The roof rear header panel is supplied as separate inner and outer panels which must be welded together by the repairer. Align the inner and outer panels as shown in the diagram. Align the inner roof rear header panel, D, and the outer roof rear header panel, B, hard up against each other at locations C and E. The panels must be aligned to achieve the required gap where dimension A = 4.56mm (0.180in). This gap must be achieved symmetrically across the assembly.



Important: For weld locations, refer to the damaged rear roof header panel.

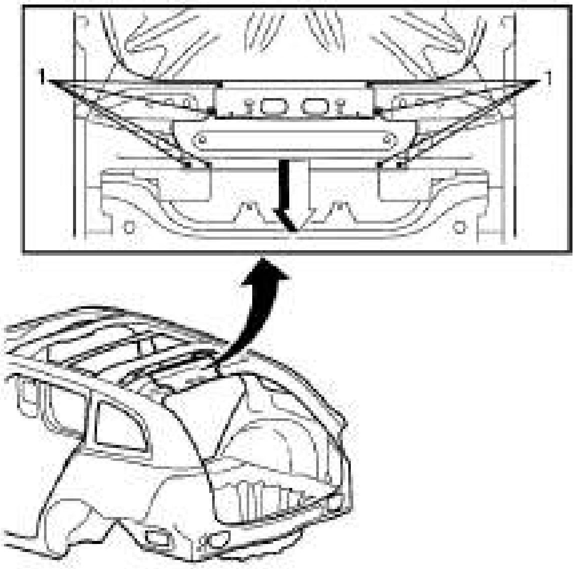
4. Weld (1) the roof rear header inner and outer panels together prior to installation to the vehicle. The welds (2) should be done when the outer roof panel is replaced. Refer to Roof Outer Replacement



5. Apply an approved structural adhesive (1) GM6449G or equivalent to the mating surface between the inner roof rear header panel and the body side assembly.
6. Apply an approved structural adhesive (2) GM6449G or equivalent to the mating surface between the outer roof rear header panel and the body side assembly.

Important: As the roof rear header panel is installed to the vehicle, structural adhesive should be visible on the outside edges of both surfaces (squeezed out when pushed together).

7. Install the roof rear header panel (1) to the body side.



8. Weld the roof rear header panel to the body side (1).
9. Install the roof panel. Refer to Roof Outer Replacement.
10. Install the body side roof drip moulding. Refer to Body Side Roof Drip Molding Replacement.
11. Install the liftgate hinges. Refer to Liftgate Hinge Replacement.
12. Install the liftgate. Refer to Liftgate Replacement.
13. Install the windshield. Refer to Windshield Replacement.
14. Install the windshield pillar garnish moulding. Refer to Windshield Pillar Garnish Molding Replacement.
15. Install the roof weld joint reveal moulding. Refer to Roof Weld Joint Reveal Molding Replacement.
16. Install the headliner. Refer to Headlining Trim Panel Replacement.
17. Install the rear seat back. Refer to Rear Split Folding Seat Back Replacement.
18. Install the rear seat cushion. Refer to Rear Seat Cushion Replacement.
19. Install the body side window rear garnish moulding. Refer to Body Side Window Rear Garnish Molding Replacement.
20. Install the headlining rear trim panel retainer. Refer to Headlining Rear Trim Panel Retainer Replacement.
21. Install the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
22. Install the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
23. Install the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
24. Install the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
25. Install the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.
26. Install the rear doors. Refer to Rear Door Replacement.
27. Install the front seat belts. Refer to Front Seat Belt Replacement.
28. Install the front seats. Refer to Front Seat Replacement - Bucket.
29. Install the front doors. Refer to Front Side Door Replacement.
30. Connect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
31. Enable the SIR system. Refer to SIR Disabling and Enabling.

Rear Compartment Lid Strut Stud Replacement

Important: The rear compartment lid strut stud is not replaceable.

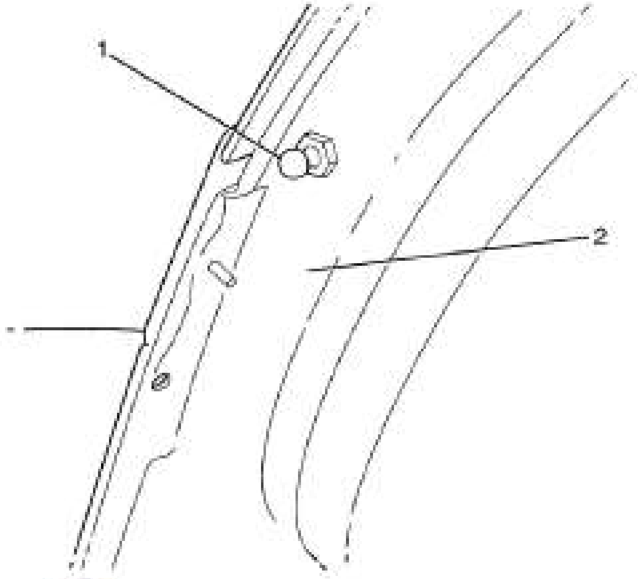
Replace the rear compartment lid hinge. Refer to Rear Compartment Lid Hinge Replacement.

Liftgate Strut Stud Replacement (Liftgate Side)

Removal Procedure

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

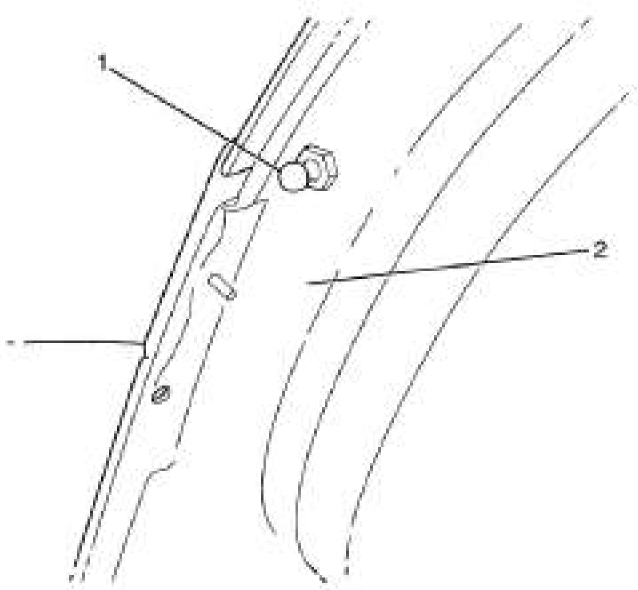
1. Install a suitable liftgate brace to the vehicle.
2. Remove the liftgate strut. Refer to Liftgate Strut Replacement.



3. Remove the liftgate strut stud (1) from the liftgate (2).

Installation Procedure

Notice: Refer to Fastener Notice in the Preface section.



1. Install the liftgate strut stud (1) to the liftgate (2).

   Tighten
   Tighten the stud to 22 N·m (16 lb ft).

2. Install the liftgate strut. Refer to Liftgate Strut Replacement.

   Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

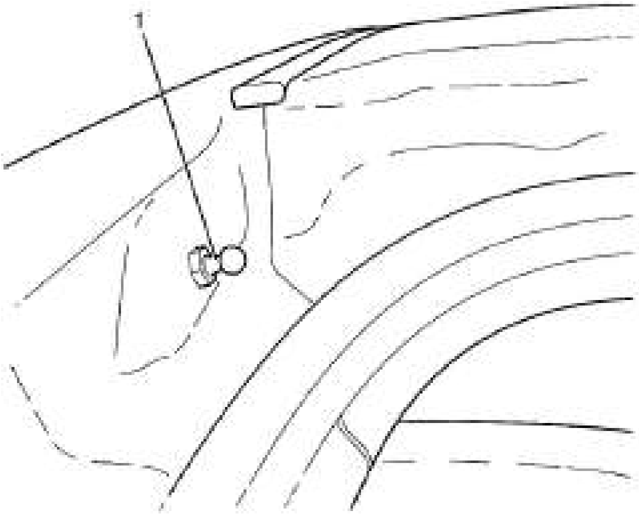
3. Remove the suitable liftgate brace from the vehicle.

Liftgate Strut Stud Replacement (Body Side)

Removal Procedure

> **Important:** When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

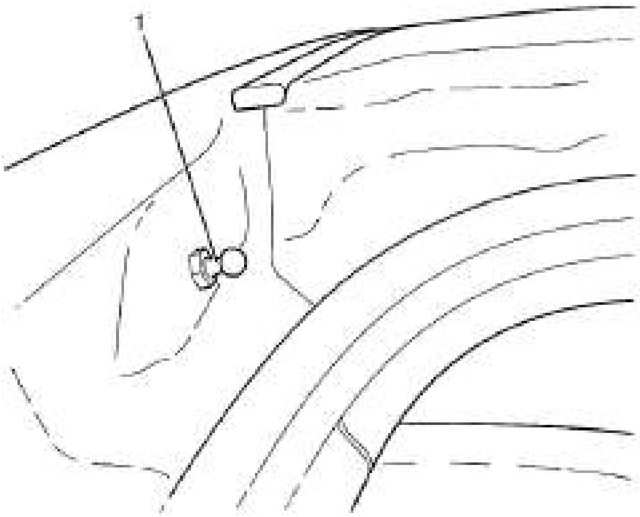
1. Install a suitable liftgate brace to the vehicle.
2. Remove the liftgate strut. Refer to Liftgate Strut Replacement.



3. Remove the liftgate strut stud (1) from the rear quarter panel.

Installation Procedure

> **Notice:** Refer to Fastener Notice in the Preface section.



1. Install the liftgate strut stud (1) to the rear quarter panel.

   Tighten
   Tighten the stud to 15 N·m (11 lb ft).

2. Install the liftgate strut. Refer to Liftgate Strut Replacement.

   Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

3. Remove the suitable liftgate brace from the vehicle.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Collision Repair | Repair Instructions | **Document ID: 1996894**

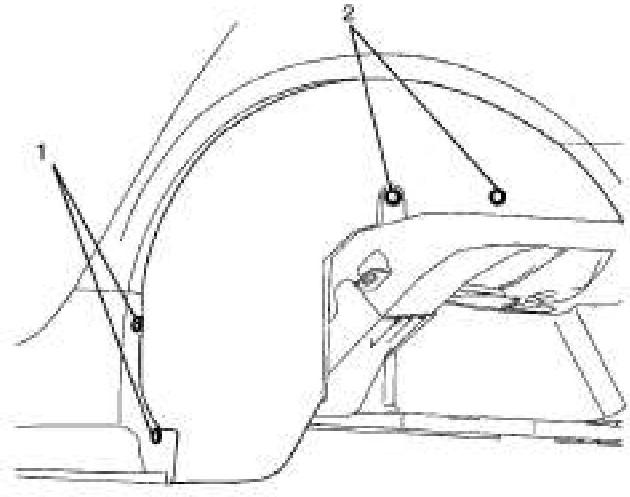
Rear Inner Wheelhouse Replacement

Removal Procedure

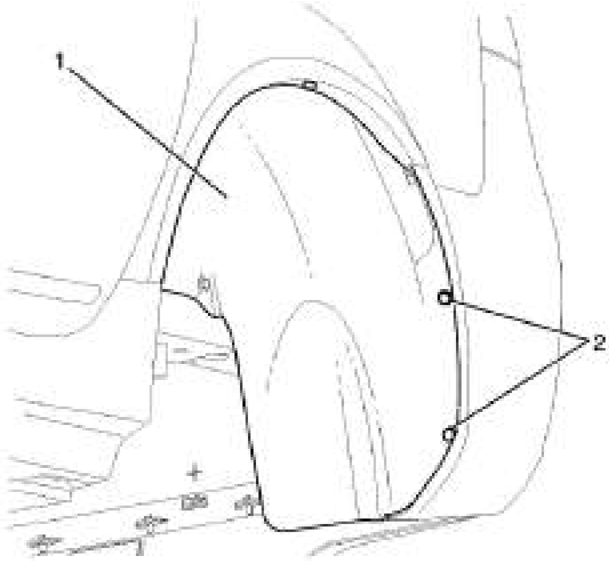
Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Remove the rear wheel. Refer to Tire and Wheel Removal and Installation.



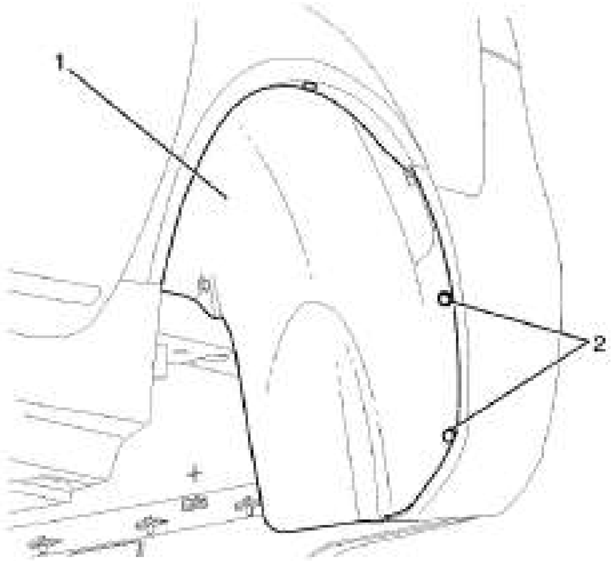
3. Remove the rear wheelhouse liner to rocker moulding retaining screws (1).
4. Remove the rear wheelhouse liner to vehicle push-in retainers (2).



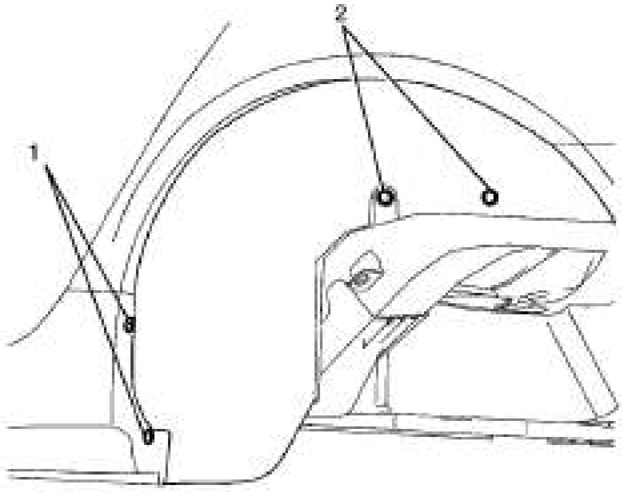
5. Remove the rear wheelhouse liner to rear bumper fascia push-in retainers (2).
6. Carefully pry the rear wheelhouse liner from the vehicle using a suitable tool.
7. Remove the rear wheelhouse liner (1) from the vehicle.

Installation Procedure

1. Position the rear wheelhouse liner (1) to the vehicle.



2. Install the rear wheelhouse liner to rear bumper fascia push-in retainers (2).



3. Install the rear wheelhouse liner to rocker moulding retaining screws (1).

Notice: Refer to Fastener Notice in the Preface section.

4. Tighten the rear wheelhouse liner to rocker moulding retaining screws (1).

   Tighten
   Tighten the screws to 2 N·m (18 lb in).

5. install the rear wheelhouse liner to vehicle push-in retainers (2).
6. Install the rear wheel. Refer to Tire and Wheel Removal and Installation.
7. Lower the vehicle.

Back Body Pillar Inner Upper Panel Assembly Replacement (SWB)

Removal Procedure

Caution: Refer to Approved Equipment for Collision Repair Caution in the Preface section.

Caution: Refer to Foam Sound Deadeners Caution in the Preface section.

Caution: Refer to Glass and Sheet Metal Handling Caution in the Preface section.

Caution: Refer to Battery Disconnect Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

Important: When replacing panels that involve servicing of stationary glass, refer to Rear Window Replacement and Windshield Replacement, before performing any priming or refinishing. Sectioning should be performed only in the recommended areas. Failure to do so may compromise the structural integrity of the vehicle.

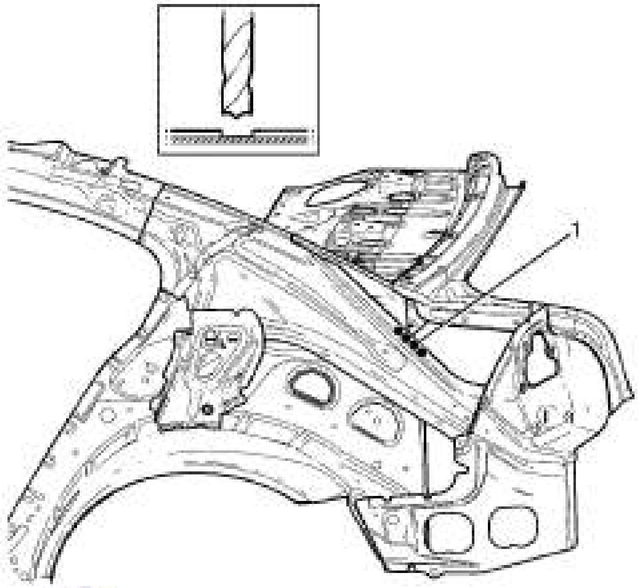
Important: The full body-side outer panel comes as a complete assembly and can be replaced after the removal of the fixed glass and roof. Any one of these service procedures can be performed separately or in any combination, dependent upon the extent of damage to the vehicle. Sectioning must take place in specified areas only.

1. Disable the SIR system. Refer to SIR Disabling and Enabling.
2. Disconnect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
3. Remove the battery. Refer to Battery Replacement.
4. Remove the battery tray. Refer to Battery Tray Replacement.
5. Remove the deck lid. Refer to Rear Compartment Lid Replacement.
6. Remove the front doors. Refer to Front Side Door Replacement.
7. Remove the rear doors. Refer to Rear Door Replacement.
8. Remove the rear door seals. Refer to Rear Door Opening Weatherstrip Replacement.
9. Remove the inner rear quarter trims. Refer to Quarter Upper Trim Panel Replacement.
10. Remove the roof lining. Refer to Headlining Trim Panel Replacement.
11. Remove the rear seat back. Refer to Rear Seat Back Replacement.
12. Remove the rear seats. Refer to Rear Seat Cushion Cover and Pad Replacement.
13. Remove the rear parcel shelf. Refer to Rear Window Shelf Trim Panel Replacement.
14. Remove the deck lid release cable. Refer to Rear Compartment Lid Latch Release Cable Replacement.
15. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
16. Remove the rear wheels. Refer to Tire and Wheel Removal and Installation.
17. Remove the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
18. Remove the rear pressure relief valves. Refer to Pressure Relief Valve Replacement.
19. Remove the rocker panel moulds. Refer to Rocker Panel Molding Replacement.
20. Remove the rear wheelhouse liners. Refer to Rear Inner Wheelhouse Replacement.
21. Remove the rear exhaust assembly. Refer to Exhaust Muffler Replacement - Left Side or Exhaust Muffler Replacement - Right Side.

22. Remove the rear exhaust muffler heat shields. Refer to Exhaust Muffler Heat Shield Replacement - Left Side or Exhaust Muffler Heat Shield Replacement - Right Side.
23. Remove the rear frame. Refer to Rear Frame Replacement.
24. Remove the rear brake lines. Refer to Brake Pipe Replacement.
25. Remove the fuel tank. Refer to Fuel Tank Replacement or Fuel Tank Replacement.
26. Remove the fuel lines. Refer to Filler Tube Replacement or Filler Tube Replacement.
27. Lower the vehicle.
28. Remove the roof moulding. Refer to Body Side Roof Drip Molding Replacement.
29. Remove the rear windshield. Refer to Rear Window Replacement.

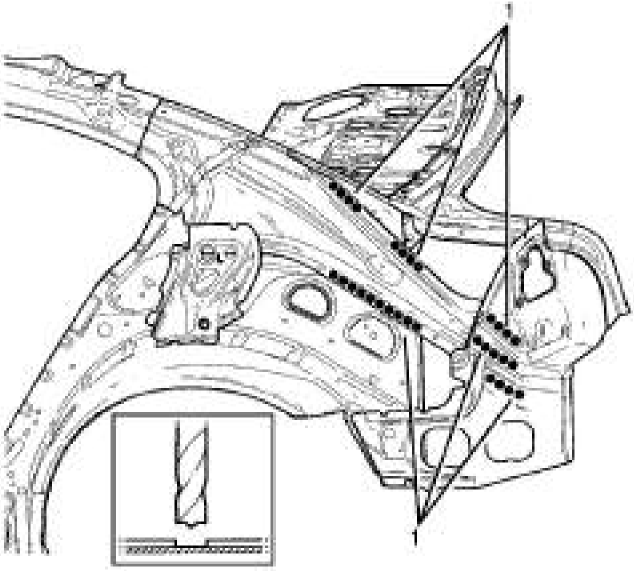
Important: This step is unique to the sunroof module.

30. Remove the rear roof drain tubes. Refer to Sunroof Housing Rear Drain Hose Replacementand Sunroof Housing Rear Drain Hose Replacement.
31. Remove the tail lights. Refer to Parking and Turn Signal Lamp Replacement.
32. Remove the quarter panel. Refer to Quarter Panel Replacement.
33. Repair as much of the damage as possible.
34. Remove sound deadeners as necessary and note their location.
35. Remove the sealers and anti-corrosion materials from the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.

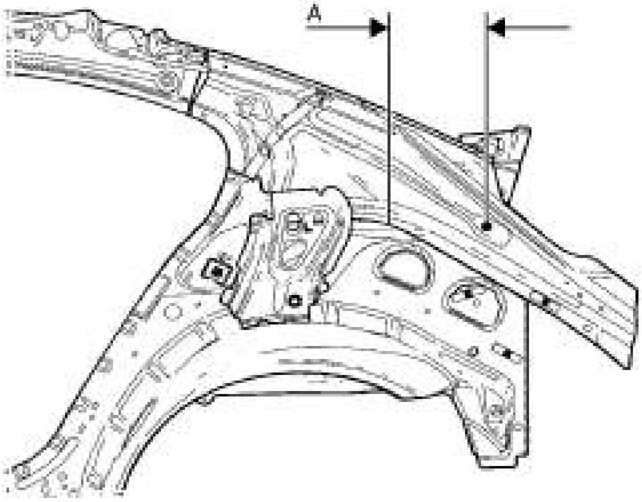


Important: Take care not to damage the rear window panel.

36. Locate, mark and carefully drill out the rear lower panel extension to rear window panel spot welds (1).



37. Locate, mark and drill out the rear lower panel extension to body ring spot welds.



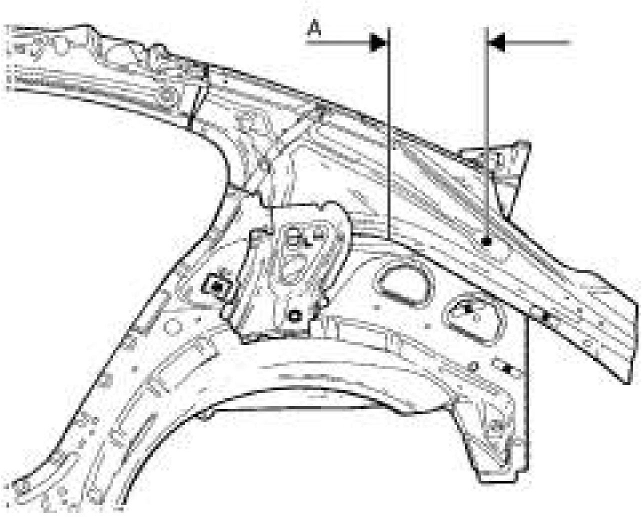
38. Measure forward from the datum hole to cut point 250 mm (9.84 in) (A).
39. Using a suitable tool cut through the rear lower panel extension at the measurement point.
40. Remove the rear lower panel extension from the vehicle.

    Discard the rear lower panel extension.

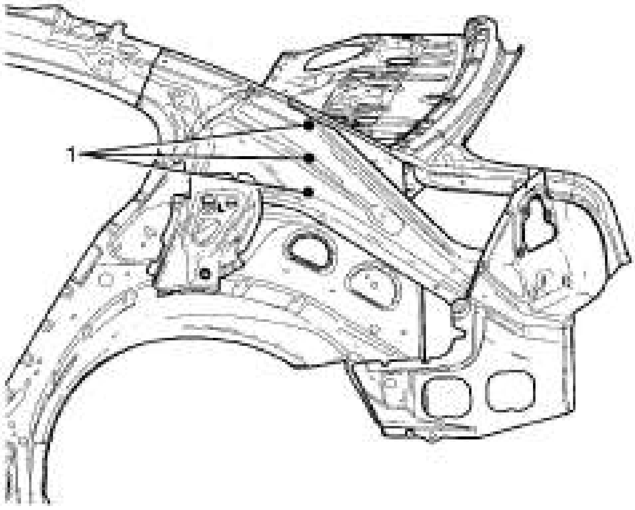
Installation Procedure

Important: If the location of the original plug weld holes can not be determined, or if structural weld-thru adhesive is present, space the plug weld holes every 32 millimetres (1¼ in).

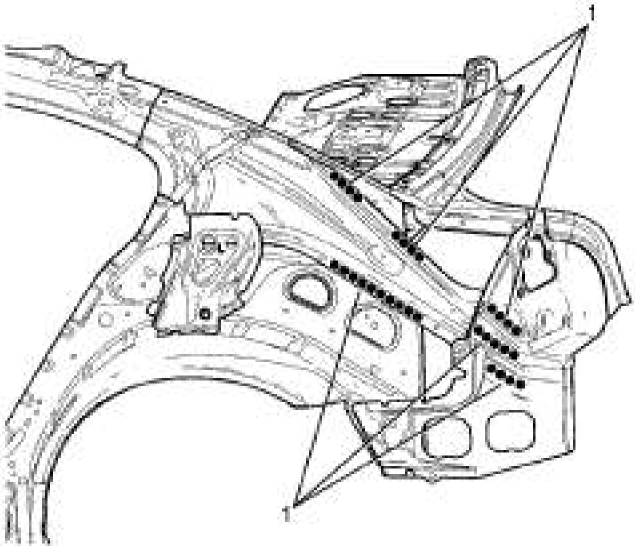
1. Drill 8 millimetres (5/16 in) plug weld holes as necessary in the locations noted from the original assembly.
2. Clean and prepare the mating surfaces of both parts of the front chassis rail.



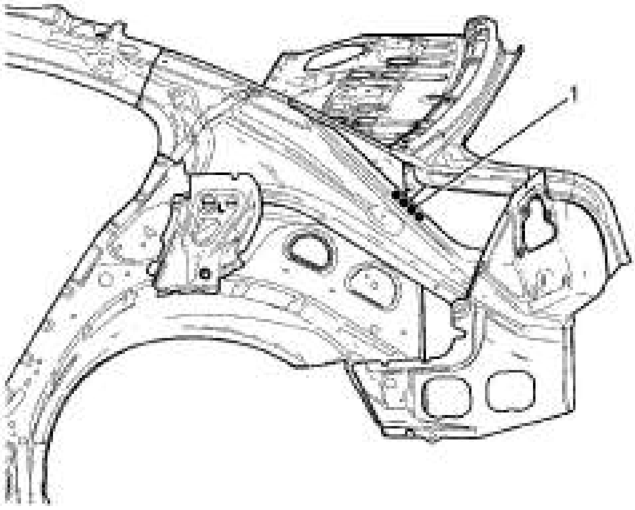
3. Measure forward from the datum hole to cut point 250 mm (9.84 in) (A) on the replacement panel.
4. Position the rear lower panel extension to the vehicle.



5. Temporarily tack weld (1) the rear lower extension panel to the remaining part of the rear lower extension panel



6. Weld the rear lower extension panel to the vehicle.



7. Weld the rear lower panel extension to rear window panel spot welds (1).
8. Apply the sealers and anti-corrosion materials to the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.
9. Paint the repaired area. Refer to Basecoat/Clearcoat Paint Systems.
10. Install the quarter panel. Refer to Quarter Panel Replacement.
11. Install the tail lights. Refer to Parking and Turn Signal Lamp Replacement.

Important: This step is unique to the sunroof module.

12. Install the rear roof drain tubes. Refer to Sunroof Housing Rear Drain Hose Replacement.
13. Install the rear windshield. Refer to Rear Window Replacement.
14. Install the roof moulding. Refer to Body Side Roof Drip Molding Replacement.

15. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
16. Install the fuel lines. Refer to Filler Tube Replacement or Filler Tube Replacement.
17. Install the fuel tank. Refer to Fuel Tank Replacement or Fuel Tank Replacement.
18. Install the rear brake lines. Refer to Brake Pipe Replacement.
19. Install the rear frame. Refer to Rear Frame Replacement.
20. Install the rear exhaust muffler heat shields. Refer to Exhaust Muffler Heat Shield Replacement - Left Side and Exhaust Muffler Heat Shield Replacement - Right Side.
21. Install the rear exhaust assembly. Refer to Exhaust Muffler Replacement - Left Side and Exhaust Muffler Replacement - Right Side.
22. Install the rear wheel house liners. Refer to Rear Inner Wheelhouse Replacement.
23. Install the rocker panel moulds. Refer to Rocker Panel Molding Replacement.
24. Install the rear pressure relief valves. Refer to Pressure Relief Valve Replacement.
25. Install the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
26. Install the rear wheels. Refer to Tire and Wheel Removal and Installation.
27. Lower the vehicle.
28. Install the deck lid release cable. Refer to Rear Compartment Lid Latch Release Cable Replacement.
29. Install the rear parcel shelf. Refer to Rear Window Shelf Trim Panel Replacement.
30. Install the rear seats. Refer to Rear Seat Cushion Cover and Pad Replacement.
31. Install the rear seat back. Refer to Rear Seat Back Replacement.
32. Install the roof lining. Refer to Headlining Trim Panel Replacement.
33. Install the rear interior trims. Refer to Quarter Upper Trim Panel Replacement.
34. Install the rear door seals. Refer to Rear Door Opening Weatherstrip Replacement.
35. Install the deck lid. Refer to Rear Compartment Lid Replacement.
36. Install the front doors. Refer to Front Side Door Replacement.
37. Install the rear doors. Refer to Rear Door Replacement.
38. Install the battery tray. Refer to Battery Tray Replacement
39. Install the battery. Refer to Battery Replacement.
40. Connect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
41. Enable the SIR system. Refer to SIR Disabling and Enabling.
42. If re-programming is required. Refer to Control Module References.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Collision Repair | Repair Instructions | Document ID: 2069465

Body Side Inner Panel Extension Replacement (Sedan)

Removal Procedure

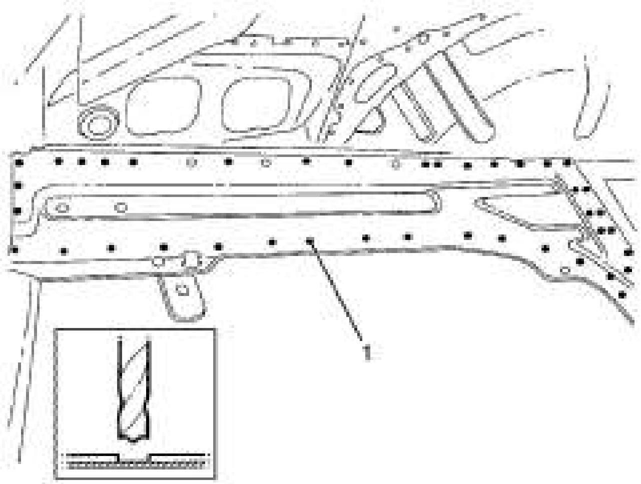
Caution: Refer to Approved Equipment for Collision Repair Caution in the Preface section.

Caution: Refer to Foam Sound Deadeners Caution in the Preface section.

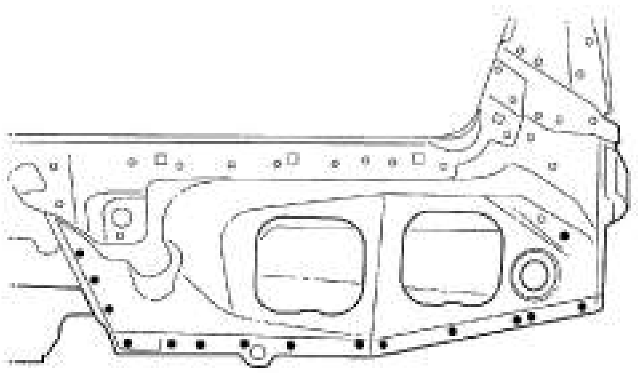
1. Disable the SIR system. Refer to SIR Disabling and Enabling .

Caution: Refer to Battery Disconnect Caution in the Preface section.

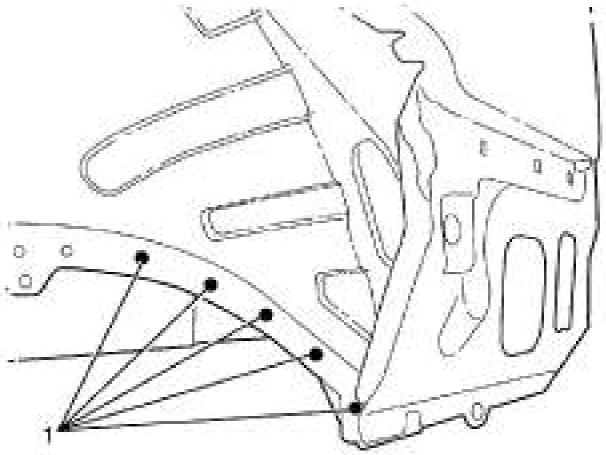
2. Disconnect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection .
3. Remove the rear bumper fascia. Refer to Rear Bumper Fascia Replacement .
4. Remove the rear impact bar. Refer to Rear Bumper Impact Bar Replacement .
5. Remove the tail lights. Refer to Parking and Turn Signal Lamp Replacement .
6. Remove the spare wheel and emergency kit from the rear compartment.
7. Remove the spare wheel and tyre carrier. Refer to Spare Wheel Carrier Replacement .



8. Locate, mark and drill out the spot welds (1)in the side extension panel to the rear chassis rail.



9. Locate, mark and drill out the spot welds (1) in the side extension panel to the rear extension panel.

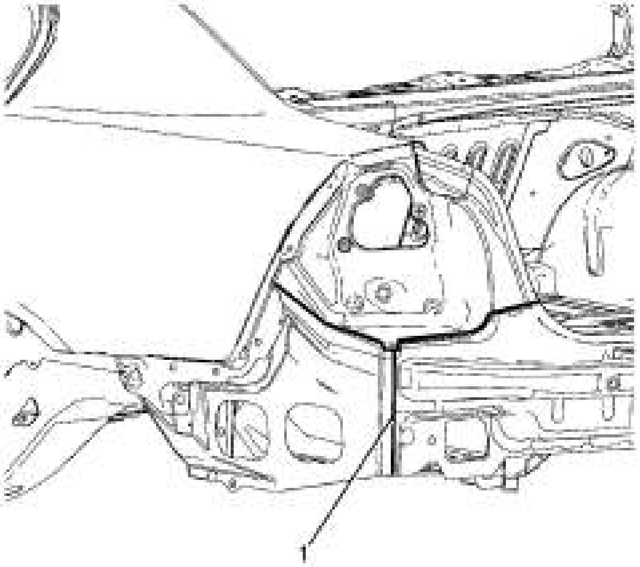


10. Locate, mark and drill out the spot welds (1) in the side extension panel to the rear extension panel.

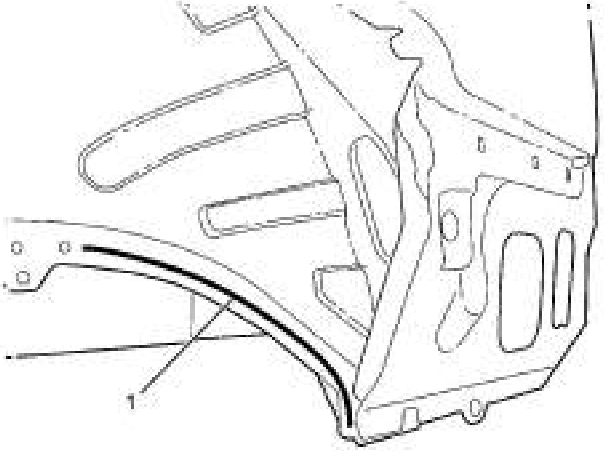
Installation Procedure

Important: If the location of the original spot weld holes can not be determined, or if structural weld-thru adhesive is present, space the puddle weld holes every 32 mm (1¼ in).

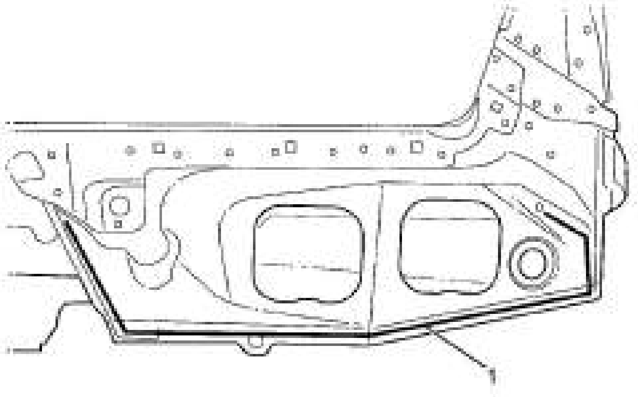
Important: Spot welding is the preferred method for attaching panels and should be used wherever possible. A puddle weld should be performed where your spot welder is unable to reach.



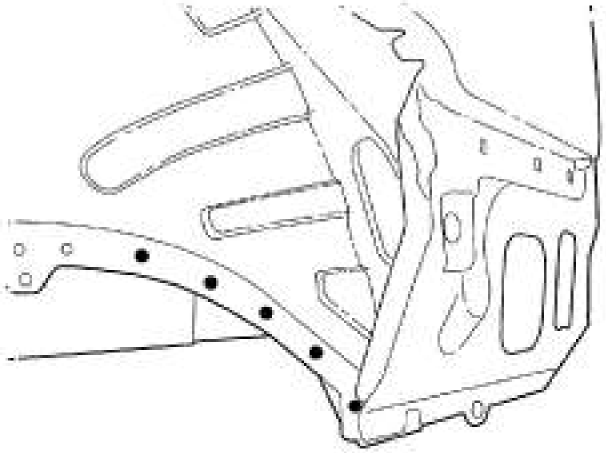
1. Apply the primary sealer (1) GM6449G or equivalent along the tail lamp filler panel and rear extension panel to the rear quarter panel.



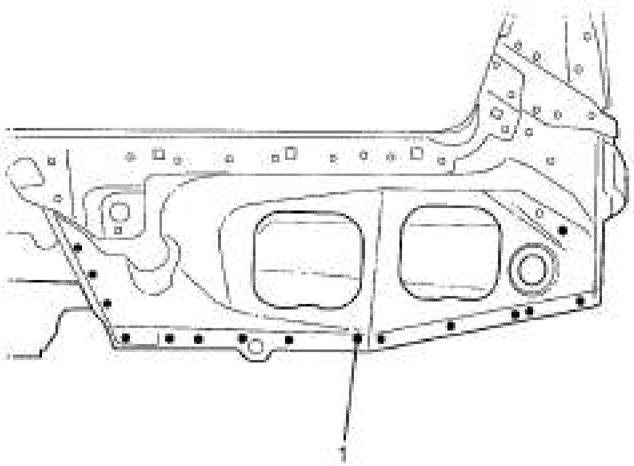
2. Apply the primary sealer (1) GM6449G or equivalent along the inner side extension panel.



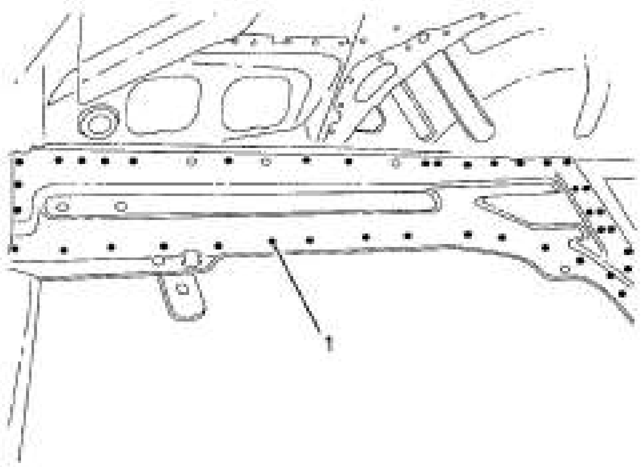
3. Apply the primary sealer (1) GM6449G or equivalent along the outer side extension panel.



4. Weld (1) the rear extension panel to the side extension panel.



5. Weld (1) the rear extension panel to the side extension panel.



6. Weld (1) the side extension panel to the rear chassis rail.
7. Apply the sealers and anti-corrosion materials to the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair .
8. Paint the repaired area. Refer to Basecoat/Clearcoat Paint Systems .
9. Install the spare wheel and tyre carrier. Refer to Spare Wheel Carrier Replacement .
10. Install the tail lights. Refer to Parking and Turn Signal Lamp Replacement .
11. Install the rear impact bar. Refer to Rear Bumper Fascia Insert Replacement .
12. Install the rear bumper fascia. Refer to Rear Bumper Fascia Replacement .
13. Install the spare wheel and emergency kit from the rear compartment.

Caution: Refer to Battery Disconnect Caution in the Preface section.

14. Connect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection .
15. Enable the SIR system. Refer to SIR Disabling and Enabling .
16. If re-programming is required. Refer to Control Module References .

Body Side Inner Panel Extension Replacement (Sportwagon)

Removal Procedure

Caution: Refer to Approved Equipment for Collision Repair Caution in the Preface section.

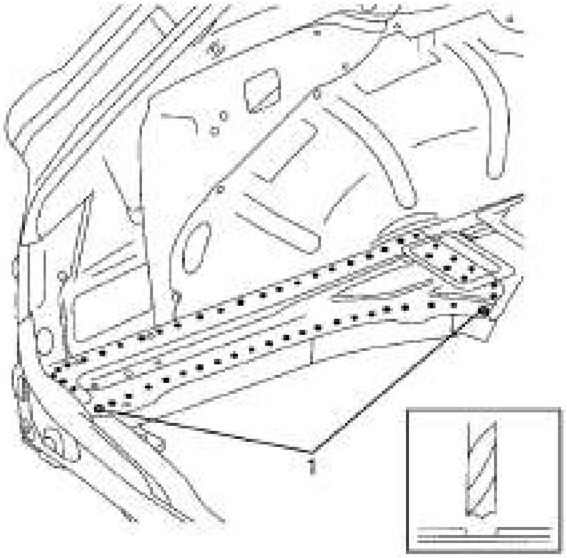
Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Foam Sound Deadeners Caution in the Preface section.

1. Disable the SIR system. Refer to SIR Disabling and Enabling.

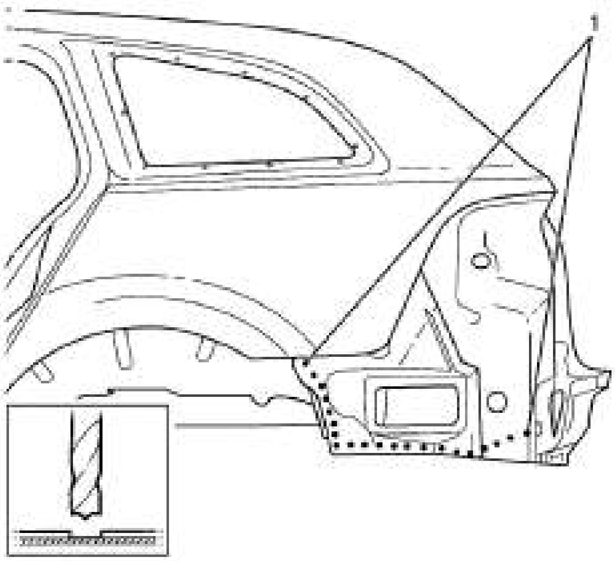
   Caution: Refer to Battery Disconnect Caution in the Preface section.

2. Disconnect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
3. Remove the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
4. Remove the rear impact bar. Refer to Rear Bumper Impact Bar Replacement.
5. Remove the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.
6. Remove the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
7. Remove the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
8. Remove the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
9. Remove the rear bumper bracket. Refer to Rear Bumper Bracket Replacement.
10. Remove the liftgate weatherstrip. Refer to Liftgate Weatherstrip Replacement.
11. Remove the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
12. Remove the battery. Refer to Battery Replacement.
13. Remove the battery tray. Refer to Battery Tray Replacement.
14. Remove the pressure relief valve. Refer to Pressure Relief Valve Replacement.
15. Remove the tail lights. Refer to Tail Lamp Assembly and /or Backup, Sidemarker, Stop, Turn Signal Bulb Replacement.
16. Remove the liftgate. Refer to Liftgate Replacement.
17. Remove the spare wheel and emergency kit from the rear compartment.
18. Remove the spare wheel carrier. Refer to Spare Wheel Carrier Replacement.
19. Remove the rear end filler panel. Refer to Rear End Panel Filler Replacement
20. Remove the sealers and anti-corrosion materials from the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.



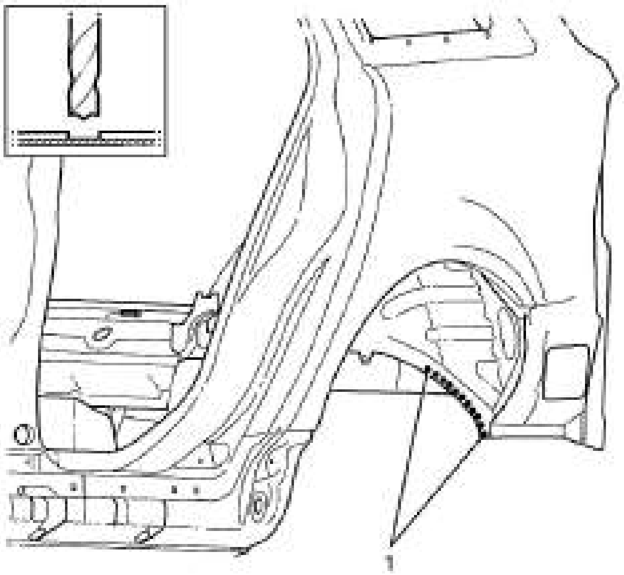
Important: Note the number and location of welds for installation on the new body side inner panel extension.

21. Locate, mark and drill out the spot welds (1) in the body side inner panel extension to the rear chassis rail.



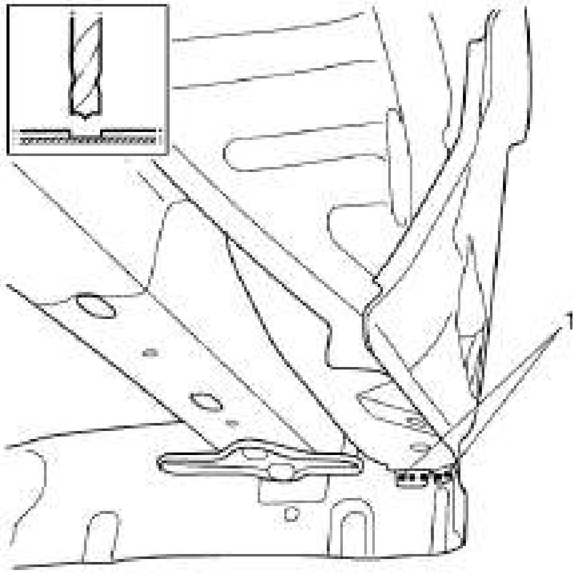
Important: Note the number and location of welds for installation on the new body side inner panel extension.

22. Locate, mark and drill out the spot welds (1) in the body side inner panel extension to the body side panel assembly.



Important: Note the number and location of welds for installation on the new body side inner panel extension.

23. Locate, mark and drill out the spot welds (1) in the body side inner panel extension to the body side panel assembly.



Important: Note the number and location of welds for installation on the new body side inner panel extension.

24. Locate, mark and drill out the spot welds (1) in the body side inner panel extension to the rear end panel assembly.
25. Remove the body side inner panel extension from the vehicle.

Installation Procedure

Important: Spot welding is the preferred method for attaching panels and should be used whenever possible. A plug weld should only be performed where spot welding is not possible.

Important: Ensure that all factory welds are replaced in their original locations.

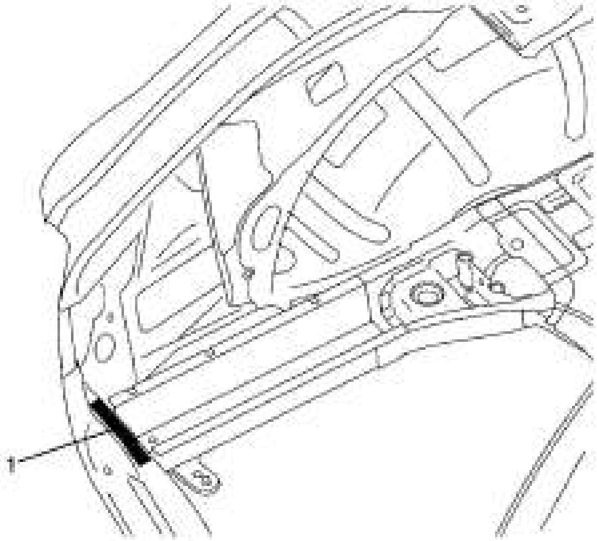
Important: Ensure that all structural adhesives are replaced in their original locations.

Important: If the location of the original plug weld holes cannot be determined, or if structural weld-thru adhesive is present, space the plug weld holes every 32 mm (1¼ in).

Important: Follow the adhesive manufacturer's instructions during the assembly process. Heat must be applied as per the manufacturer's specifications to cure the adhesives and to expand the sealing baffles.

1. Drill 8 mm (5/16 in) plug weld holes as necessary in the locations noted when disassembling.
2. Clean and prepare the mating surfaces of both parts of the body side panel assembly.

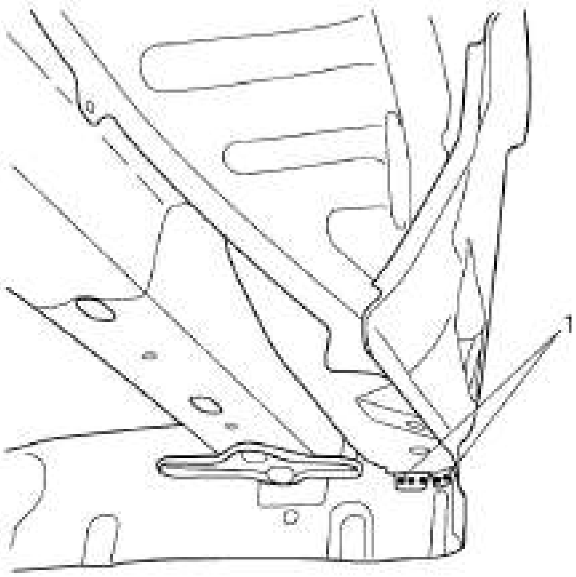
Important: Secondary sealer must be applied to the perimeter of all flanges. Secondary sealer must be applied to all welds/joints that were originally covered by secondary sealer.



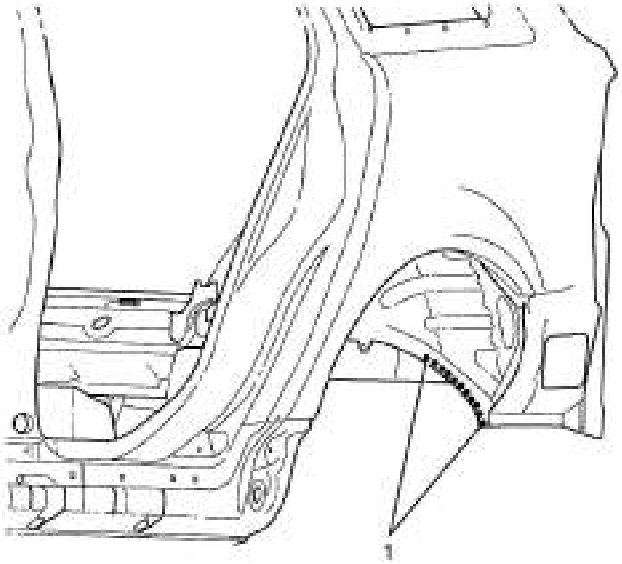
3. Apply structural adhesive (1) GM6449G or equivalent to the mating surfaces of the body side inner panel extension and rear end panel assembly.

Important: As the new body side inner panel extension is installed to the vehicle, structural adhesive should be visible on the outside edges of both surfaces (squeezed out when pushed together).

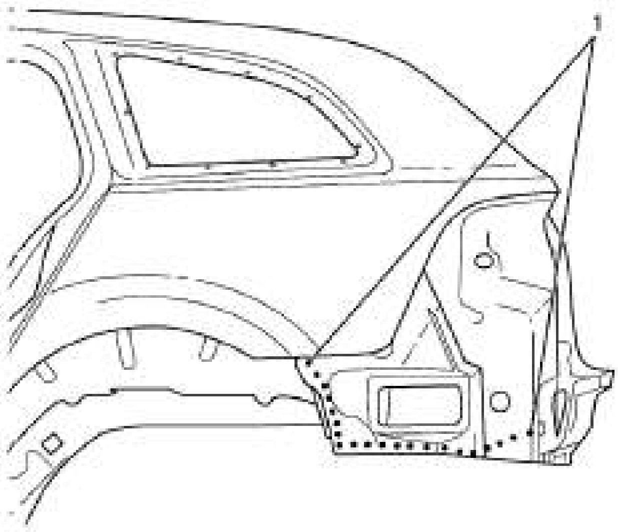
4. Position the new body side inner panel extension to the vehicle.



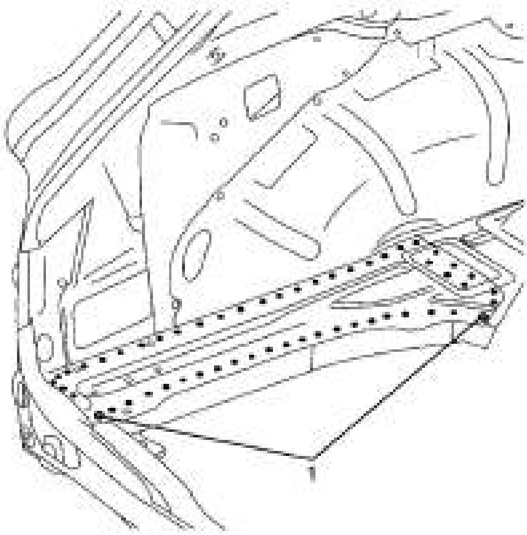
5. Weld (1) the body side inner panel extension to the rear end panel assembly.



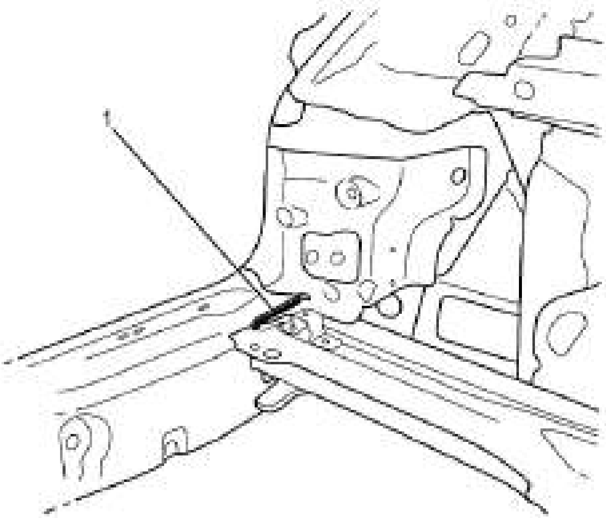
6. Weld (1) the body side inner panel extension to the body side panel assembly.



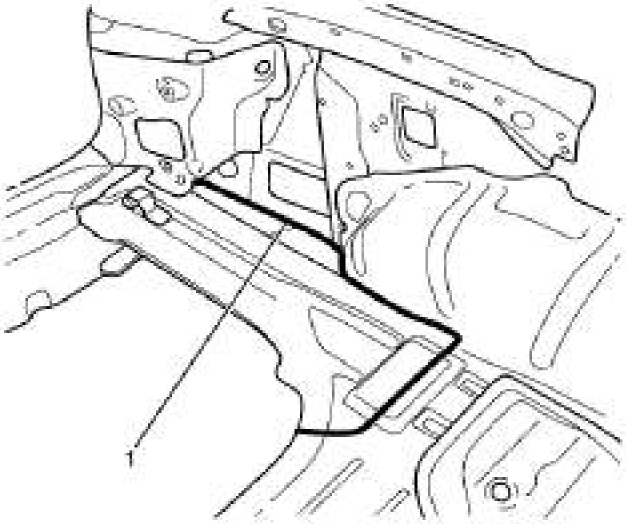
7. Weld (1) the body side inner panel extension to the body side panel assembly.



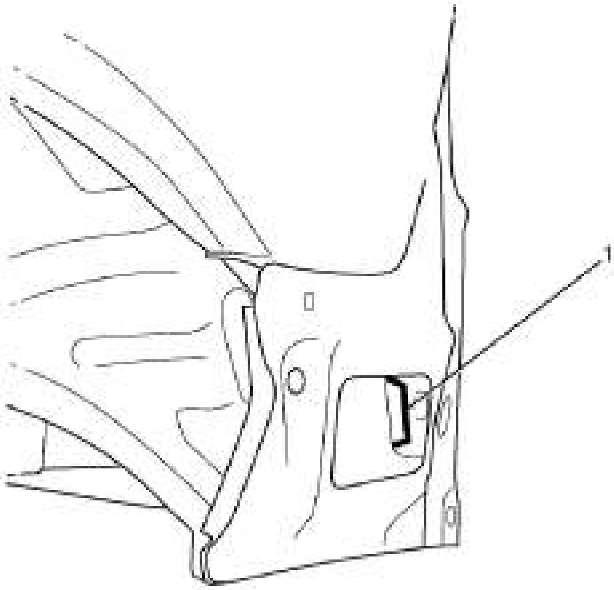
8. Weld (1) the body side inner panel extension to the rear chassis rail.



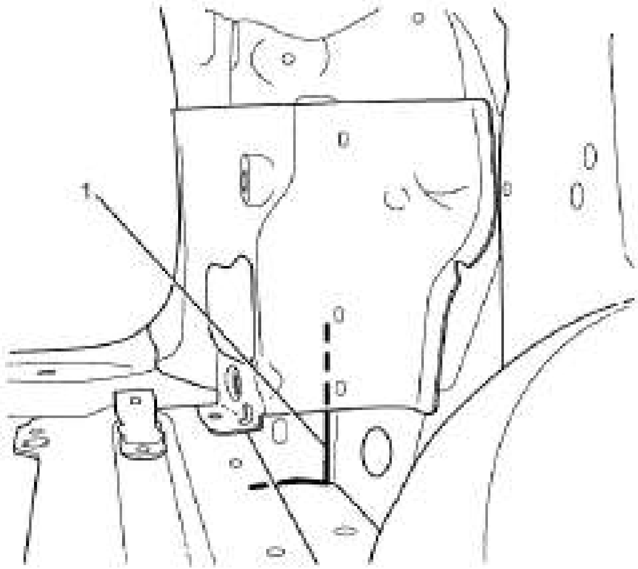
9. Apply secondary sealer (1) GM9984532 or equivalent along the rear edge of the body side inner panel extension.



10. Apply secondary sealer (1) GM9984532 or equivalent along the edge of the body side inner panel extension.



11. Apply secondary sealer (1) GM9984532 or equivalent to the rear compartment floor panel rail.



12. Apply secondary sealer (1) GM9984532 or equivalent to the body tail-lamp filler panel.
13. Install the rear end filler panel. Refer to Rear End Panel Filler Replacement
14. Apply any sealers and anti-corrosion materials to the repair area noted on disassembly. Refer to Anti-Corrosion Treatment and Repair.
15. Paint the repaired area. Refer to Basecoat/Clearcoat Paint Systems.
16. Install the spare wheel carrier. Refer to Spare Wheel Carrier Replacement.
17. Install the spare wheel and emergency kit from the rear compartment.
18. Install the liftgate. Refer to Liftgate Replacement.
19. Install the tail lights. Refer to Tail Lamp Assembly and /or Backup, Sidemarker, Stop, Turn Signal Bulb Replacement.
20. Install the pressure relief valve. Refer to Pressure Relief Valve Replacement.
21. Install the battery tray. Refer to Battery Tray Replacement.

22. Install the battery. Refer to Battery Replacement.
23. Install the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
24. Install the liftgate weatherstrip. Refer to Liftgate Weatherstrip Replacement.
25. Install the rear bumper bracket. Refer to Rear Bumper Bracket Replacement.
26. Install the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
27. Install the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
28. Install the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
29. Install the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.
30. Install the rear impact bar. Refer to Rear Bumper Impact Bar Replacement.
31. Install the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
32. Connect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
33. Enable the SIR system. Refer to SIR Disabling and Enabling.

Upper Rail Replacement

Removal Procedure

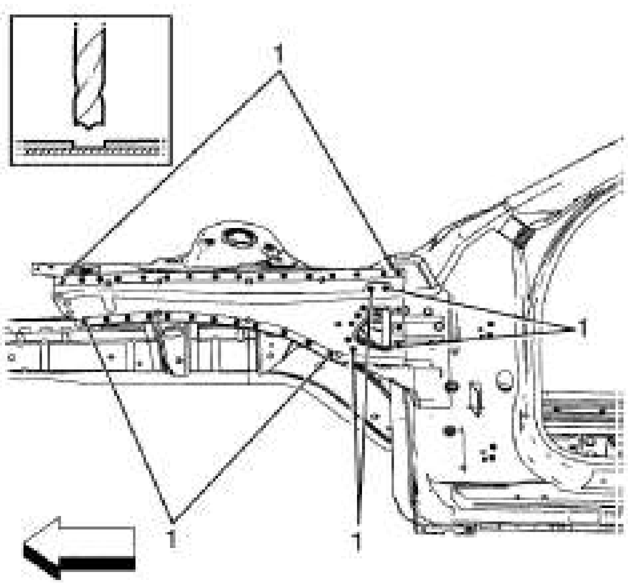
Caution: Refer to Approved Equipment for Collision Repair Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Foam Sound Deadeners Caution in the Preface section.

1. Disable the SIR system. Refer to SIR Disabling and Enabling.
2. Disconnect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
3. Remove the engine assembly. Refer to Engine Replacement or Engine Replacement.
4. Remove the negative cable from the engine bay. Refer to Battery Negative Cable Replacement.
5. Remove the positive cable from the engine bay. Refer to Battery Positive Cable Replacement.
6. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
7. Remove the front wheels. Refer to Tire and Wheel Removal and Installation.
8. Remove the front wheelhouse liner. Refer to Front Wheelhouse Liner Replacement.
9. Remove the front wheel hub assembly. Refer to Front Wheel Bearing and Hub Replacement.
10. Remove the front strut assembly. Refer to Strut Assembly Replacement.
11. Lower the vehicle.
12. Remove the brake lines. Refer to Brake Pipe Replacement.
13. Remove the fender assembly. Refer to Front Fender Replacement.
14. Remove the front fascia. Refer to Front Bumper Fascia Replacement.
15. Remove the coolant reservoir. Refer to Coolant Recovery Reservoir Replacement.
16. Remove the front end module. Refer to Front End Panel Module Carrier Assembly Replacement.
17. Remove the air inlet grille. Refer to Air Inlet Grille Panel Replacement.
18. Remove the plenum chamber. Refer to Air Inlet Assembly Replacement.
19. Remove the relay box. Refer to Underhood Electrical Center or Junction Block Replacement.
20. Remove the ABS unit. Refer to Brake Pressure Modulator Valve Assembly Replacement.
21. Remove the brake master cylinder. Refer to Master Cylinder Replacement.
22. Note the location and remove the sealers and anti-corrosion materials from the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.



23. Locate, mark and drill out the factory welds (1) attaching the upper wheelhouse brace to the front wheelhouse assembly.
24. Remove the upper wheelhouse brace from the front wheelhouse assembly and discard.

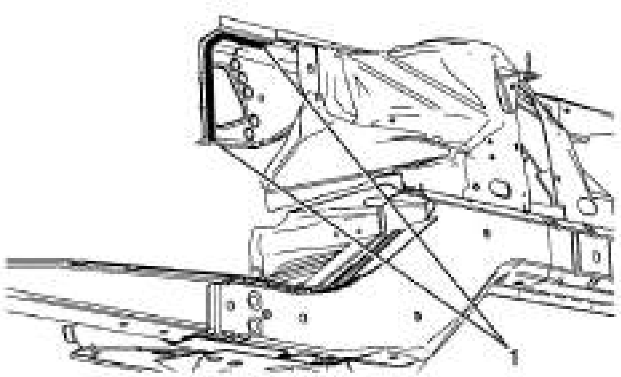
    Discard the upper wheelhouse brace.

Installation Procedure

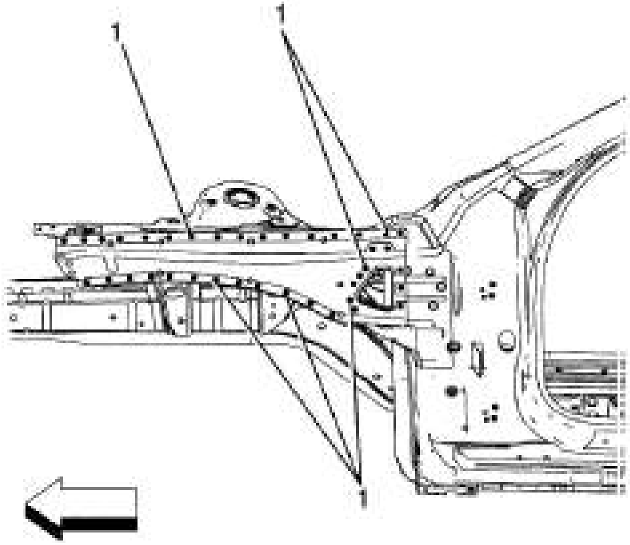
Important: Spot welding is the preferred method for attaching panels and should be used wherever possible. A plug weld should be performed where your spot welder is unable reach.

Important: If the location of the original plug weld holes can not be determined, or if structural weld-thru adhesive is present, space the plug weld holes every 32 mm (1¼ in).

1. Drill 8 mm (5/16 in) plug weld holes as necessary in the locations noted from the original assembly.
2. Clean and prepare the mating surfaces of the front wheelhouse assembly and the upper wheelhouse brace.



3. Apply the primary sealer (1) HN2484 along the rear edge of the upper wheelhouse brace.
4. Position the upper wheelhouse brace on the vehicle. Verify correct alignment and position using three-dimensional measuring equipment.



5. Puddle weld (1) the front wheelhouse assembly to the upper wheelhouse brace.
6. Apply the sealers and anti-corrosion materials to the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.
7. Paint the repaired area. Refer to Basecoat/Clearcoat Paint Systems.
8. Install the brake master cylinder. Refer to Master Cylinder Replacement.
9. Install the ABS unit. Refer to Brake Pressure Modulator Valve Assembly Replacement.
10. If re-programming is required. Refer to Control Module References.
11. Install the relay box. Refer to Underhood Electrical Center or Junction Block Replacement.
12. Install the plenum chamber. Refer to Air Inlet Assembly Replacement.
13. Remove the air inlet grille. Refer to Air Inlet Grille Panel Replacement.
14. Install the relay box. Refer to Underhood Electrical Center or Junction Block Replacement.

15. Install the plenum chamber. Refer to Air Inlet Assembly Replacement.
16. Remove the air inlet grille. Refer to Air Inlet Grille Panel Replacement.
17. Install the front end module. Refer to Front End Panel Module Carrier Assembly Replacement.
18. Install the brake lines. Refer to Brake Pipe Replacement.
19. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
20. Install the coolant reservoir. Refer to Coolant Recovery Reservoir Replacement.
21. Install the front fascia. Refer to Front Bumper Fascia Replacement.
22. Install the front strut assembly. Refer to Strut Assembly Replacement.
23. Install the front wheel hub assembly. Refer to Front Wheel Bearing and Hub Replacement.
24. Install the front wheel house liner. Refer to Front Wheelhouse Liner Replacement.
25. Install the front wheels. Refer to Tire and Wheel Removal and Installation.
26. Lower the vehicle.
27. Install the fender assembly. Refer to Front Fender Replacement.
28. Install the engine assembly. Refer to Engine Replacement or Engine Replacement.
29. Connect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
30. Enable the SIR system. Refer to SIR Disabling and Enabling.
31. If re-programming is required. Refer to Control Module References.

Side Door Opening Frame Replacement (Sportwagon)

Removal Procedure

Caution: Refer to Approved Equipment for Collision Repair Caution in the Preface section.

Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Foam Sound Deadeners Caution in the Preface section.

1. Disable the SIR system. Refer to SIR Disabling and Enabling.

   Caution: Refer to Battery Disconnect Caution in the Preface section.

2. Disconnect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
3. Remove the engine assembly. Refer to Engine Replacement for the 3.6L Engine or Engine Replacement for the 6.0L Engine.
4. Remove the ABS unit. Refer to Brake Pressure Modulator Valve Assembly Replacement.
5. Remove the brake master cylinder. Refer to Master Cylinder Replacement.
6. Remove the vacuum brake booster. Refer to Power Vacuum Brake Booster Replacement.
7. Remove the engine control module. Refer to Engine Control Module Replacement for the 3.6L Engine or Engine Control Module Replacement for the 6.0L Engine.
8. Remove the underhood electrical centre. Refer to Underhood Electrical Center or Junction Block Replacement.
9. Remove the negative battery cable. Refer to Battery Negative Cable Replacement.
10. Remove the positive battery cable from the engine bay. Refer to Battery Positive Cable Replacement.
11. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
12. Remove the air inlet grille. Refer to Air Inlet Grille Panel Replacement.
13. Remove the front wheelhouse liner. Refer to Front Wheelhouse Liner Replacement.
14. Remove the coolant reservoir. Refer to Coolant Recovery Reservoir Replacement.
15. Remove the front bumper fascia. Refer to Front Bumper Fascia Replacement.
16. Remove the front end module. Refer to Front End Panel Module Carrier Assembly Replacement.
17. Remove the front fender assembly. Refer to Front Fender Replacement.
18. Remove the front wheel hub assembly. Refer to Front Wheel Bearing and Hub Replacement.
19. Remove the front strut assembly. Refer to Strut Assembly Replacement.
20. Remove the rear wheelhouse liner. Refer to Rear Inner Wheelhouse Replacement.
21. Remove the rear frame assembly. Refer to Rear Frame Replacement.

    Important: This step is unique to the right side body ring.

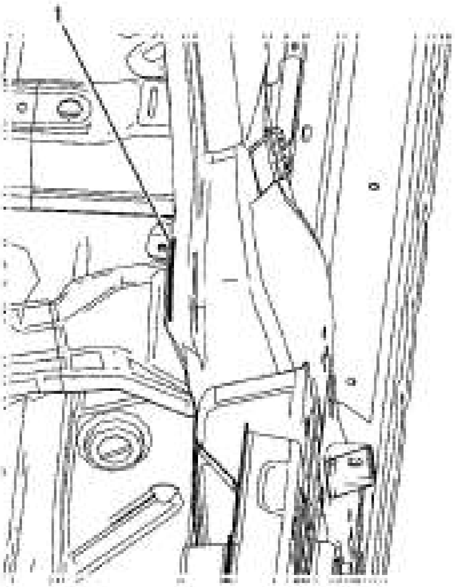
22. Remove the filler tube. Refer to Filler Tube Replacement for the 3.6L Engine or Filler Tube Replacement for the 6.0L Engine.

    Important: This step is unique to the right side body ring.

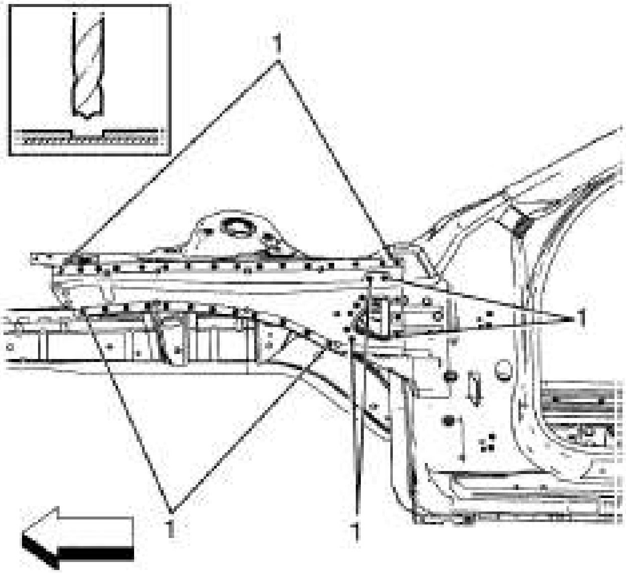
23. Remove the fuel filler door. Refer to Fuel Tank Filler Door Replacement.

Important: This step is unique to the right side body ring.

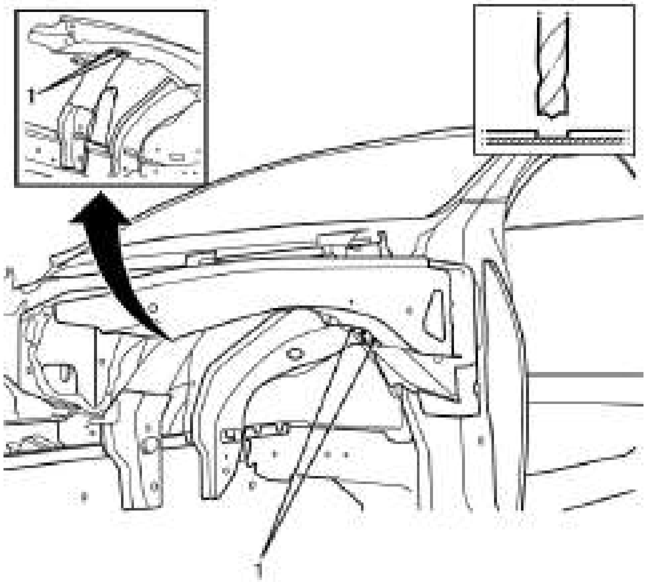
24. Remove the fuel filler door release actuator. Refer to Fuel Tank Filler Door Lock Actuator Replacement.
25. Remove the fuel lines. Refer to Fuel Hose/Pipes Replacement - Chassis for the 3.6L Engine or Fuel Hose/Pipes Replacement - Chassis for the 6.0L Engine.
26. Remove the fuel tank. Refer to Fuel Tank Replacement for the 3.6L Engine or Fuel Tank Replacement for the 6.0L Engine.
27. Remove the brake lines. Refer to Brake Pipe Replacement.
28. Remove the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
29. Remove the plenum chamber. Refer to Air Inlet Assembly Replacement.
30. Remove the front doors. Refer to Front Side Door Replacement.
31. Remove the rear doors. Refer to Rear Door Replacement.
32. Remove the front seats. Refer to Front Seat Replacement - Bucket.
33. Remove the rear seat cushion. Refer to Rear Seat Cushion Replacement.
34. Remove the rear seat back. Refer to Rear Split Folding Seat Back Replacement.
35. Remove the front seat belts. Refer to Front Seat Belt Replacement.
36. Remove the rear seat belts. Refer to Rear Seat Belt Replacement.
37. Remove the instrument panel carrier. Refer to Instrument Panel Carrier Replacement.
38. Remove the HVAC module assembly. Refer to HVAC Module Assembly Replacement.
39. Remove the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
40. Remove the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
41. Remove the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
42. Remove the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
43. Remove the headlining rear trim panel retainer. Refer to Headlining Rear Trim Panel Retainer Replacement.
44. Remove the body side window rear garnish moulding. Refer to Body Side Window Rear Garnish Molding Replacement.
45. Remove the headliner. Refer to Headlining Trim Panel Replacement.
46. Remove the body side stationary window. Refer to Body Side Window Replacement.
47. Remove the remote function actuator. Refer to Remote Control Door Lock Receiver and Theft Deterrent Module Replacement.
48. Remove the positive battery cable from the vehicle. Refer to Battery Positive Cable Replacement.
49. Remove roof weld joint reveal moulding. Refer to Roof Weld Joint Reveal Molding Replacement.
50. Remove the rocker panel moulding. Refer to Rocker Panel Molding Replacement.
51. Remove the windshield pillar garnish moulding. Refer to Windshield Pillar Garnish Molding Replacement.
52. Remove the body side roof drip moulding. Refer to Body Side Roof Drip Molding Replacement.
53. Remove the liftgate. Refer to Liftgate Replacement.
54. Remove the rear header panel. Refer to Customer Concern Verification Sheets.
55. Note the location and remove sealers and anti-corrosion materials from the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.



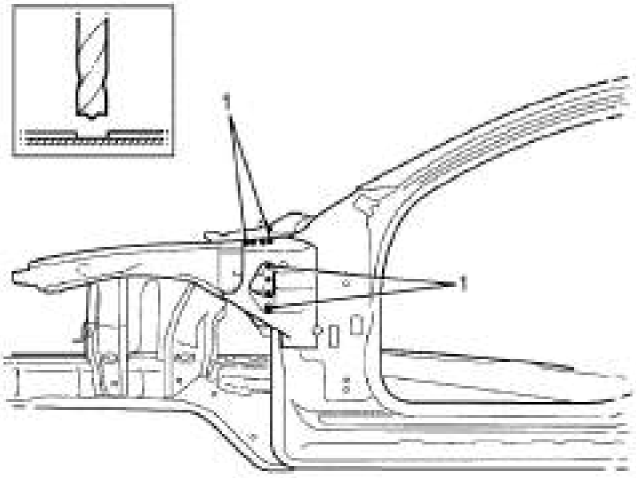
56. Remove the body side panel to upper dash panel body sealer (1).



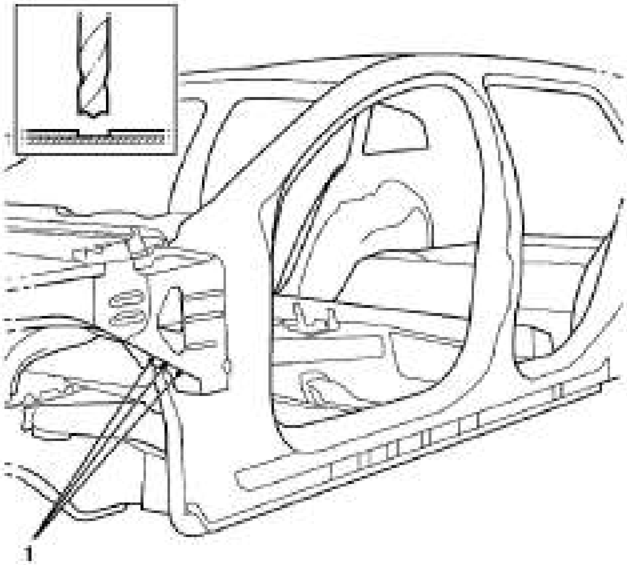
57. Locate, mark and drill out the factory welds attaching the upper wheel house brace to the front wheelhouse assembly (1).



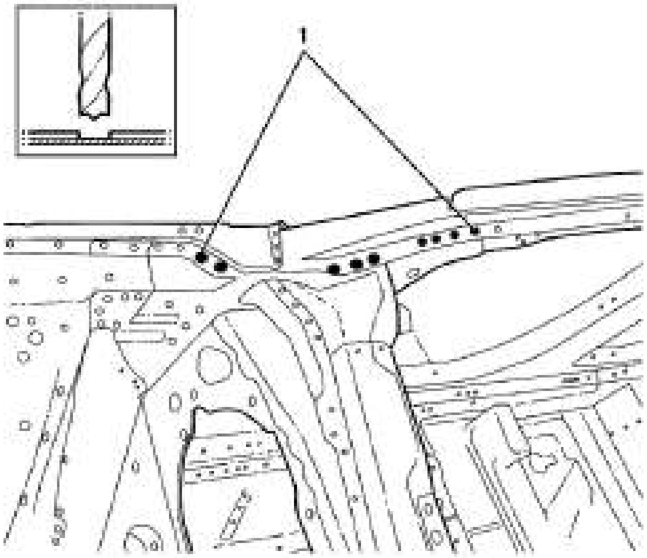
58. Locate, mark and drill out the factory welds attaching the upper wheelhouse brace to the front hinge pillar (1).



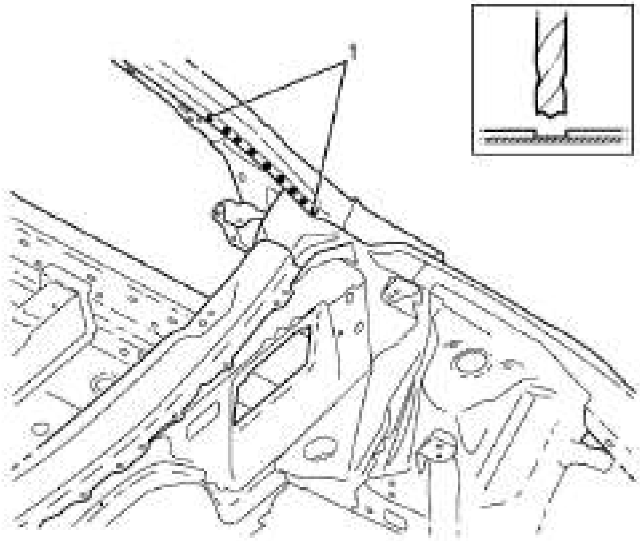
59. Locate, mark and remove the factory seam welds attaching the body side panel assembly to the front hinge pillar (1).
60. Remove the upper wheelhouse brace from the front wheelhouse assembly.



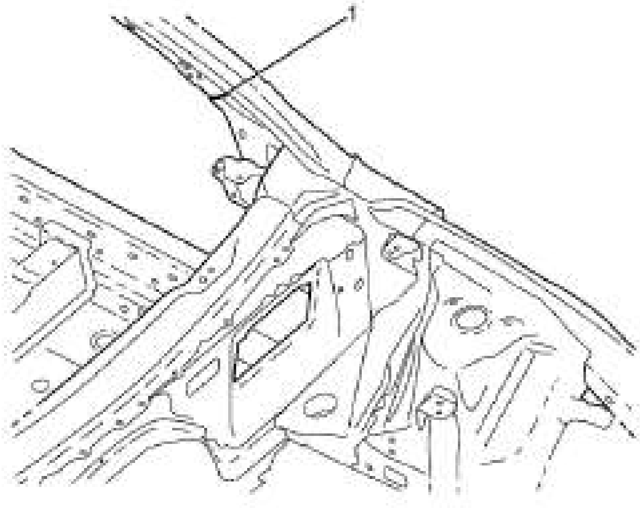
61. Locate, mark and drill out the factory welds attaching the upper wheelhouse brace to the front hinge pillar (1).



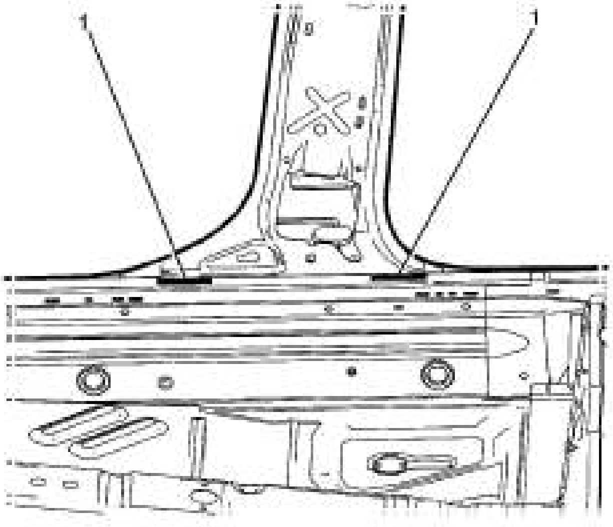
62. Locate, mark and drill out the factory welds attaching the body side panel assembly to the front hinge pillar (1).



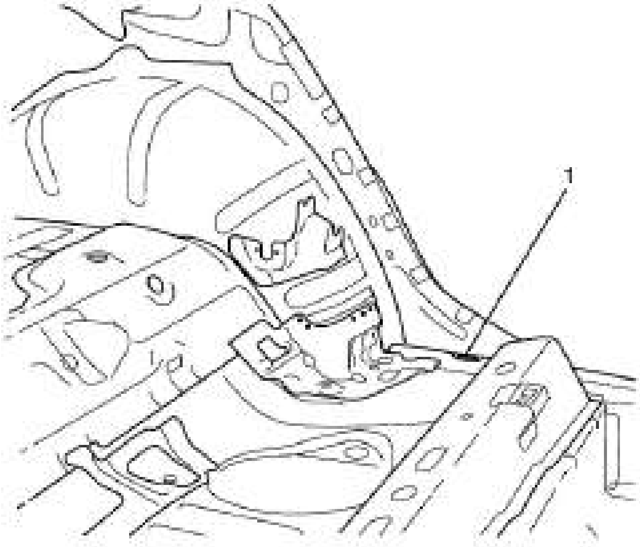
63. Locate, mark and drill out the factory welds attaching the body side panel assembly to the vehicle (1).



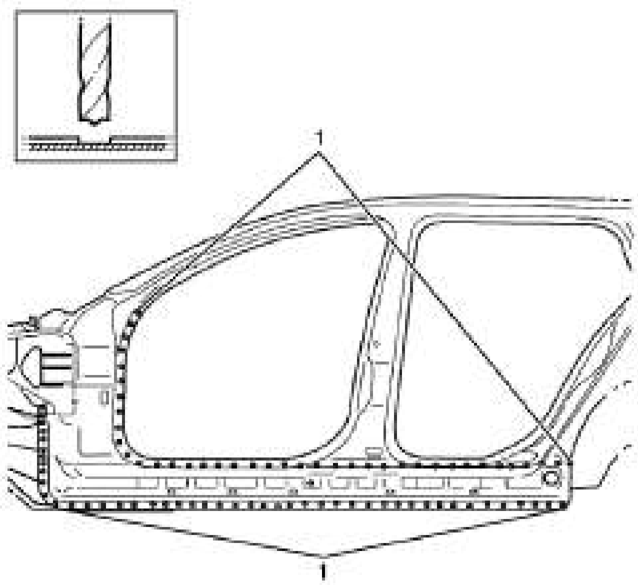
64. Locate, mark and remove the factory welds attaching the body side panel assembly to the vehicle (1).
65. Remove the Roof Rear Header Panel. Refer to Roof Rear Header Panel Replacement.
66. Remove the Roof Front Header Panel. Refer to Roof Front Header Panel Replacement.
67. Remove the Front Roof Panel Bow. Refer to Roof Panel Bow Replacement.
68. Remove the Rear Roof Panel Bow. Refer to Roof Panel Bow Replacement.



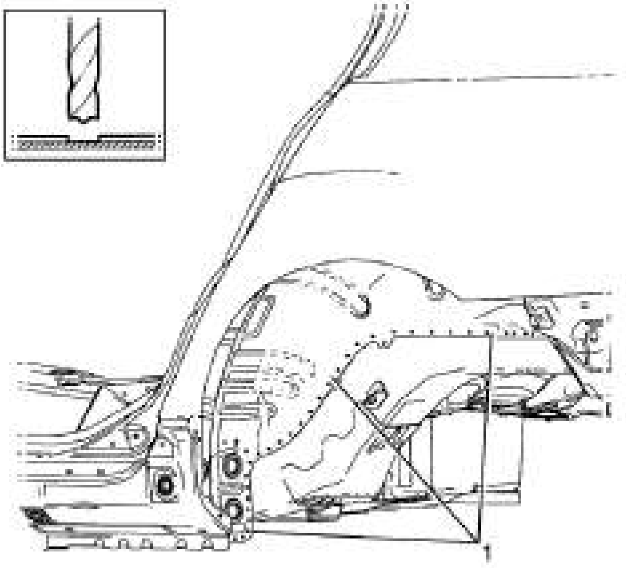
69. Locate, mark and remove the factor seam welds (1) attaching the body side panel assembly to the inner rocker panel.



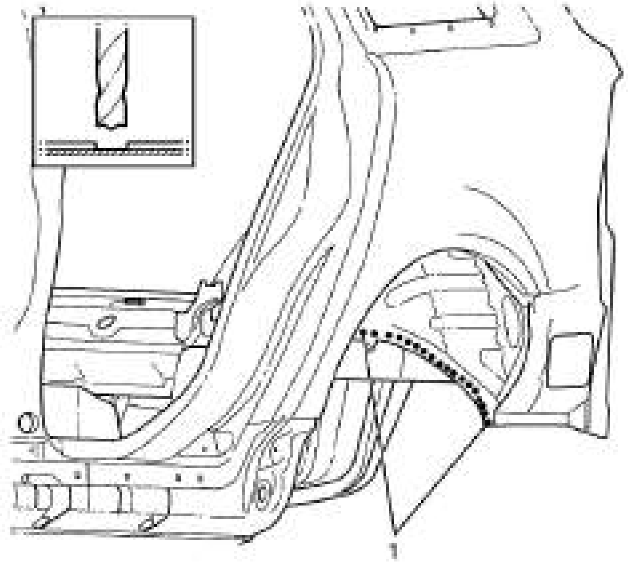
70. Locate, mark and remove the factory seam welds (1) attaching the body side panel assembly to the rear inner wheelhouse.



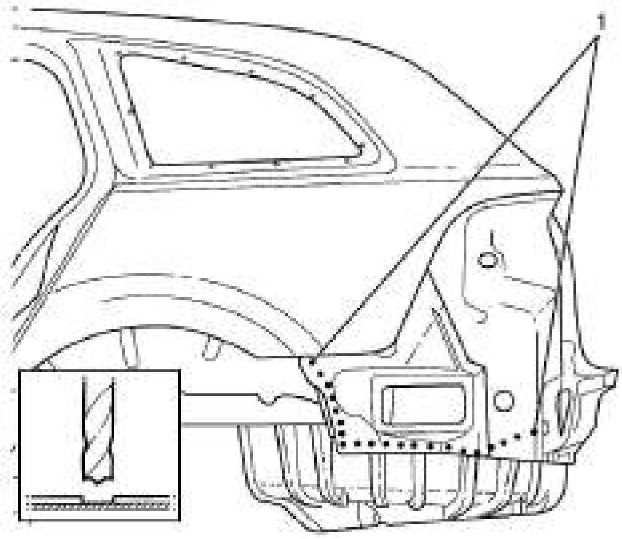
71. Locate, Mark and drill out the factory welds (1) attaching the body side panel assembly to the vehicle.



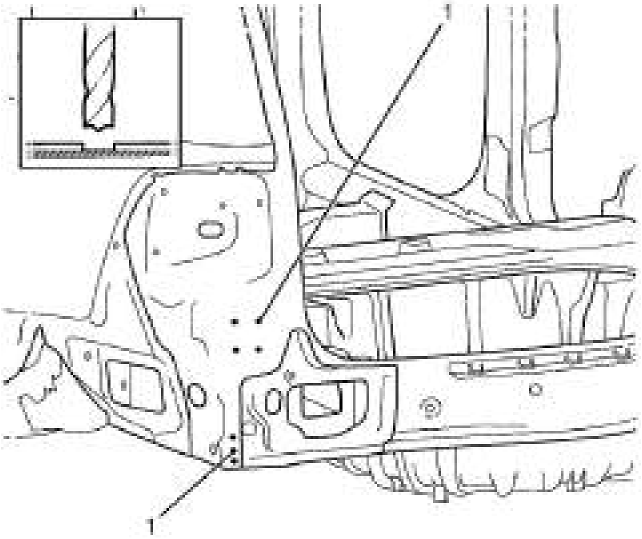
72. Locate, mark and drill out the factory welds (1) attaching the body side panel assembly to the rear floor panels.



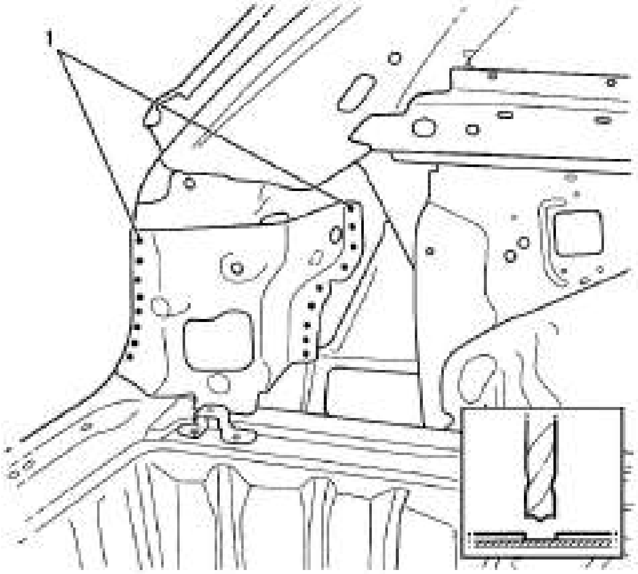
73. Locate, mark and drill out the factory welds (1) attaching the body side panel assembly to the rear floor panels.



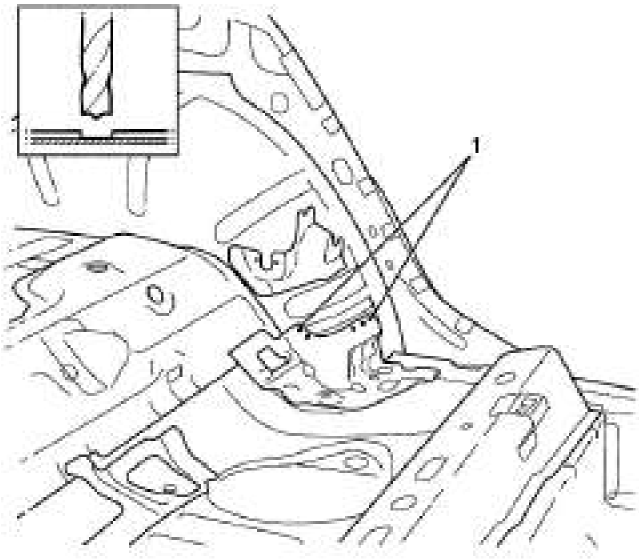
74. Locate, mark and drill out the factory welds (1) attaching the body side panel assembly to the rear floor panels.



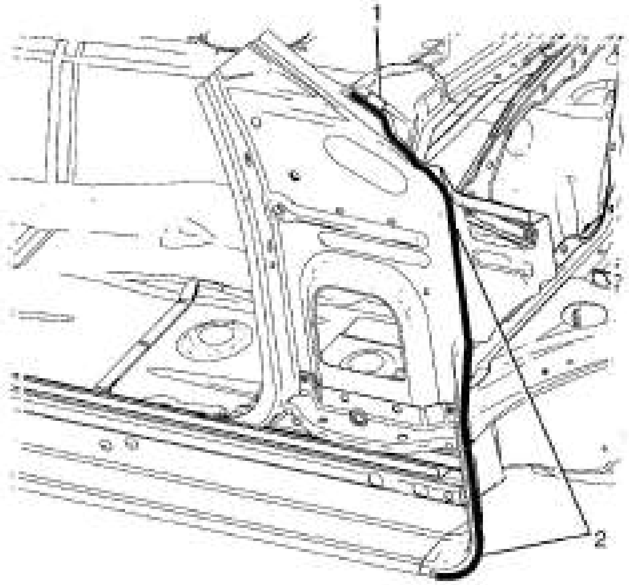
75. Locate, mark and drill out the factory welds (1) attaching the body side panel assembly to the rear floor panels.



76. Locate, mark and drill out the factory welds (1) attaching the body side panel to the back body pillar inner lower panel.

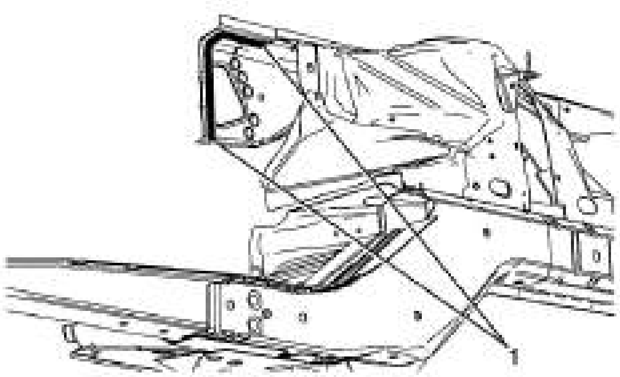


77. Locate, mark and drill out the factory welds (1) attaching the body side panel assembly to the rear wheelhouse inner panel front reinforcement.
78. Remove the body side panel assembly from the vehicle.



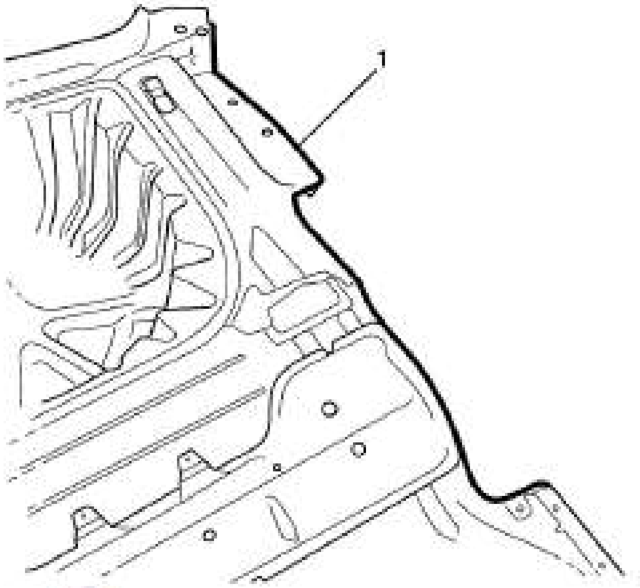
Important: Clean all adhesive mating surfaces in accordance with the adhesive manufacturer's specifications.

79. Remove the sealer (1) from the front plenum panel.
80. Remove the seam sealer (2) from the body side.



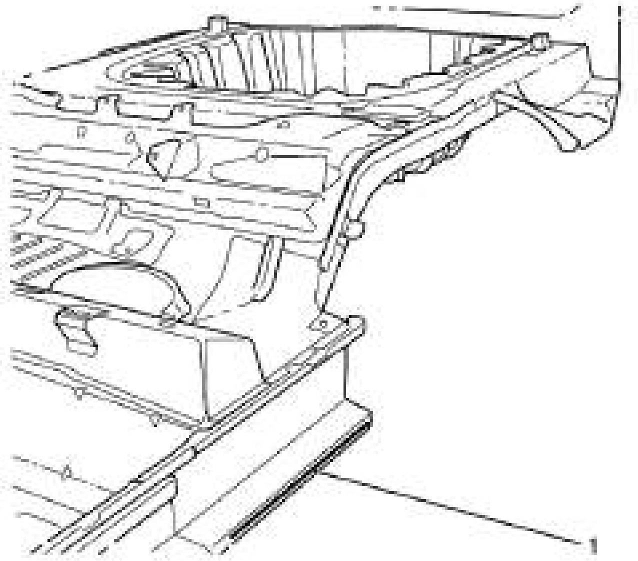
Important: Clean all adhesive mating surfaces in accordance with the adhesive manufacturer's specifications.

81. Remove the sealer (1) from the rear edge of the upper wheelhouse brace.



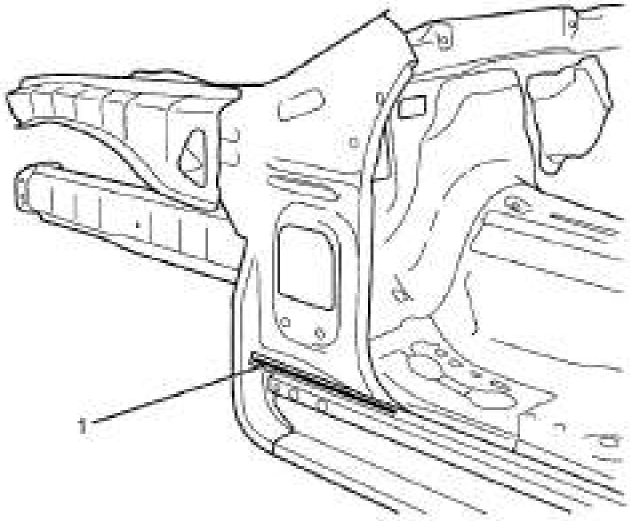
Important: Clean all adhesive mating surfaces in accordance with the adhesive manufacturer's specifications.

82. Remove the sealer (1) from the rear floor pan assembly.



Important: Clean all adhesive mating surfaces in accordance with the adhesive manufacturer's specifications.

83. Remove the sealer (1) from the inner quarter panel.



Important: Clean all adhesive mating surfaces in accordance with the adhesive manufacturer's specifications.

84. Remove the sealer (1) from the top edge of the inner hinge pillar.

Installation Procedure

Important: Spot welding is the preferred method for attaching panels and should be used whenever possible. A plug weld should only be performed where spot welding is not possible.

Important: Ensure that all factory welds are replaced in their original locations.

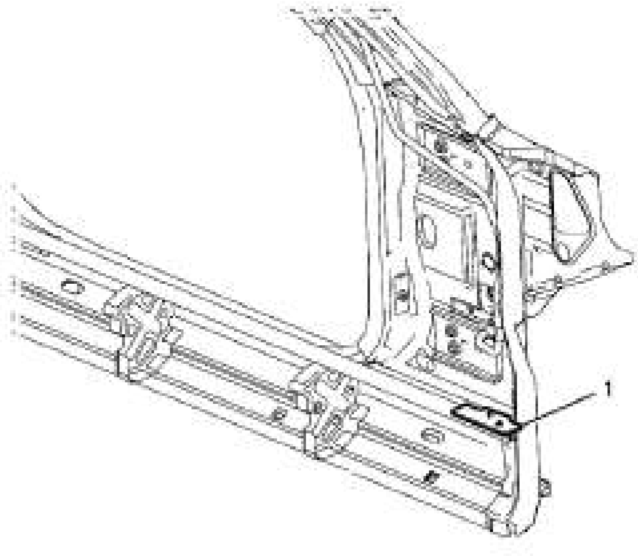
Important: Ensure that all structural adhesives and sealers are replaced in their original locations.

Important: If the location of the original plug weld holes cannot be determined, or if structural weld-thru adhesive is present, space the plug weld holes every 32 mm (1¼ in).

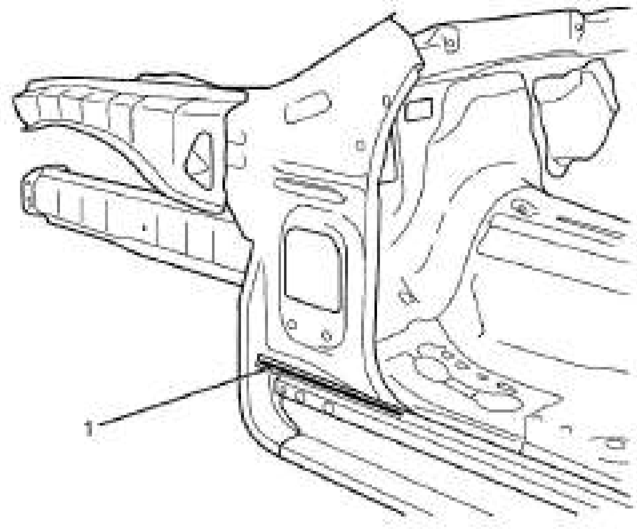
Important: Follow the adhesive manufacturer's instructions during the assembly process. Heat must be applied as per the manufacturer's specifications to cure the adhesives and to expand the sealing baffles.

1. Drill 8 mm (5/16 in) plug weld holes as necessary in the locations noted when disassembling.
2. Clean and prepare the mating surfaces of both parts of the body side panel assembly.

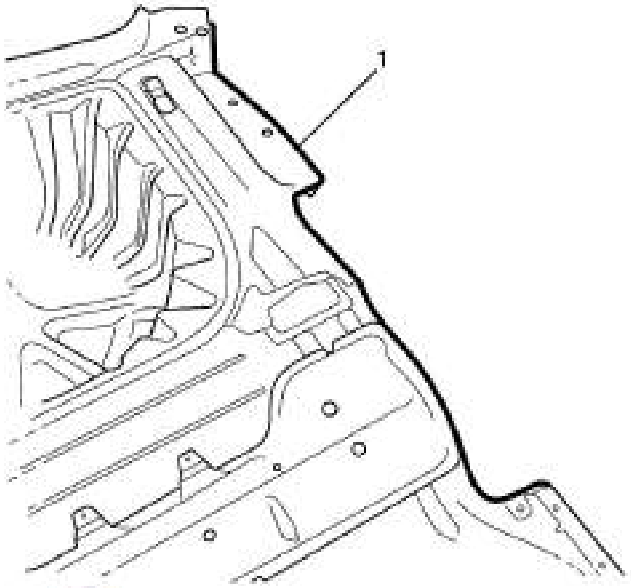
Important: Secondary sealer must be applied to the perimeter of all flanges. Secondary sealer must be applied to all welds/joints that were originally covered by secondary sealer.



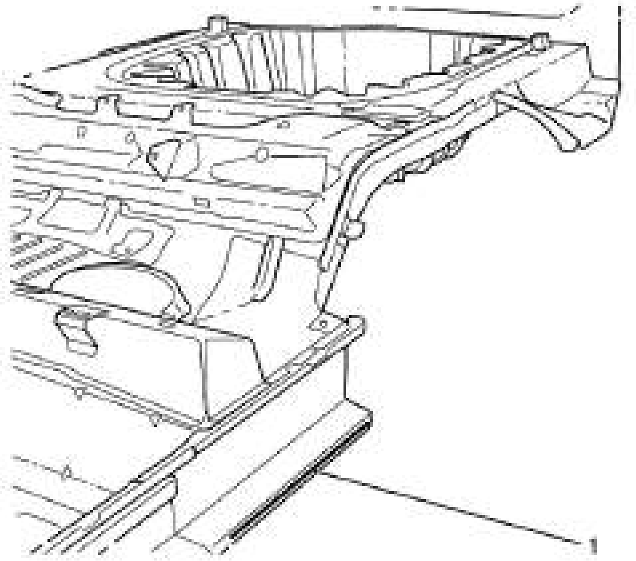
3. Install the un-expanded noise baffle (1) to the body side panel assembly.



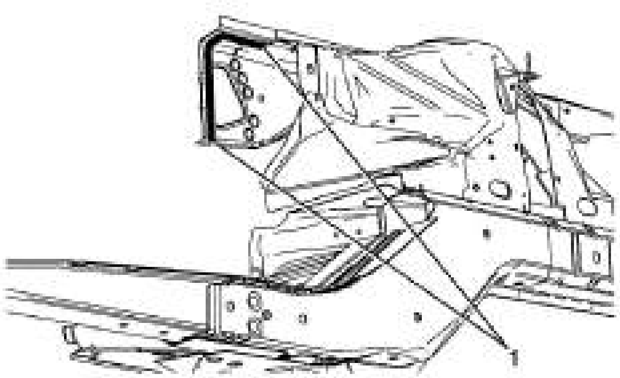
4. Apply the primary sealer to the top edge of the inner hinge pillar (1).



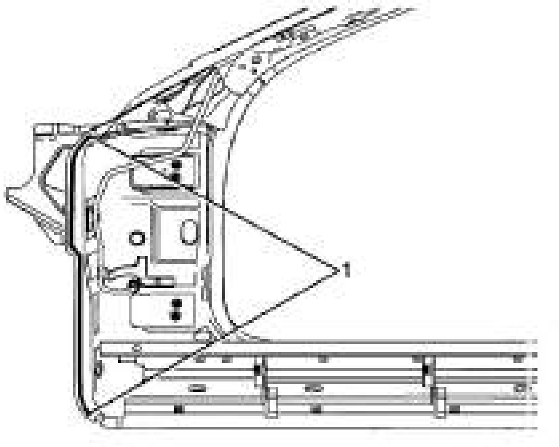
5. Apply the secondary sealer along the rear floor pan assembly (1).



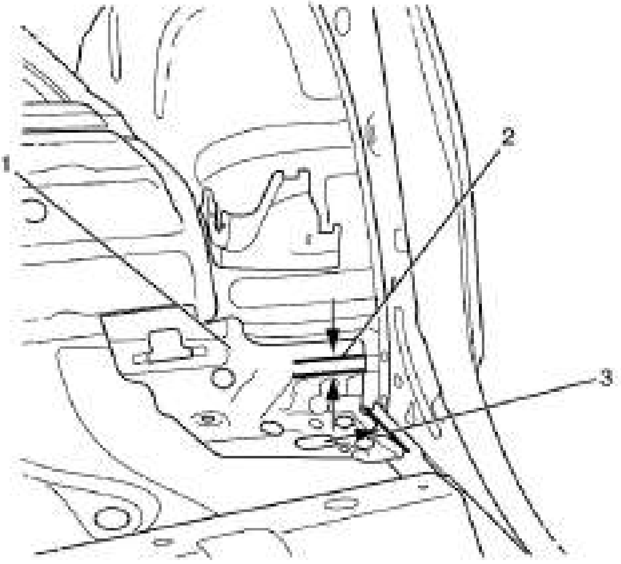
6. Apply the primary sealer (1) between the inner rocker panel and the inner quarter panel.



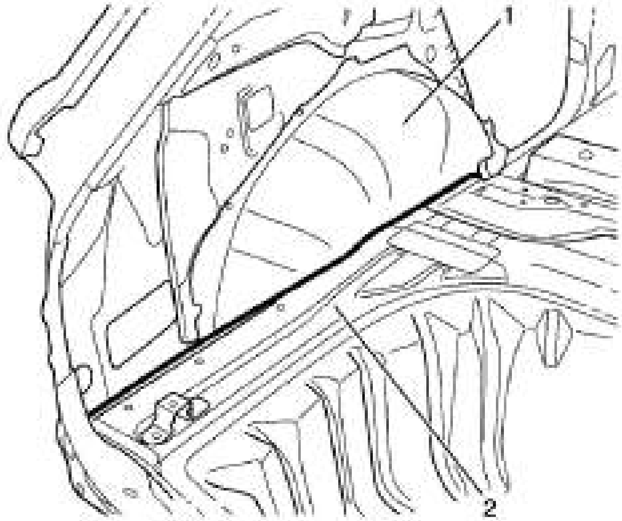
7. Apply the primary sealer along the rear edge of the upper wheelhouse brace (1).



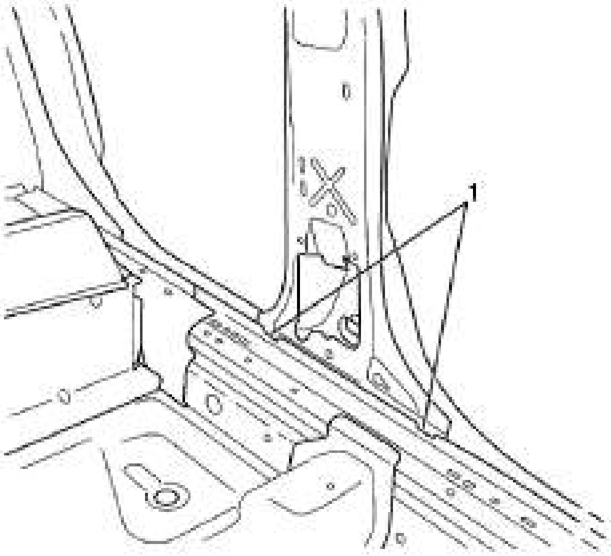
8. Apply the primary sealer along the lower hinge pillar (1).



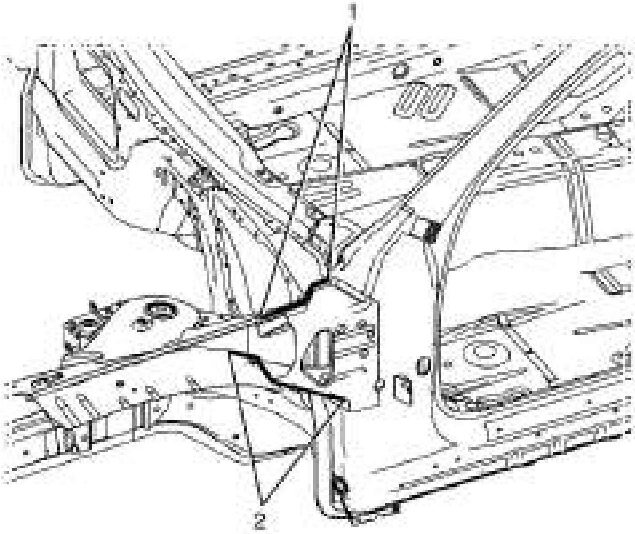
9. Align the body side panel assembly by positioning the rear wheelhouse inner panel front reinforcement flange (1) up against the inner rocker panel flange (3).
10. Align the body side panel assembly by positioning the rib in the rear wheelhouse inner panel front reinforcement (1) with the corresponding rib (2) in the rear wheelhouse inner panel.



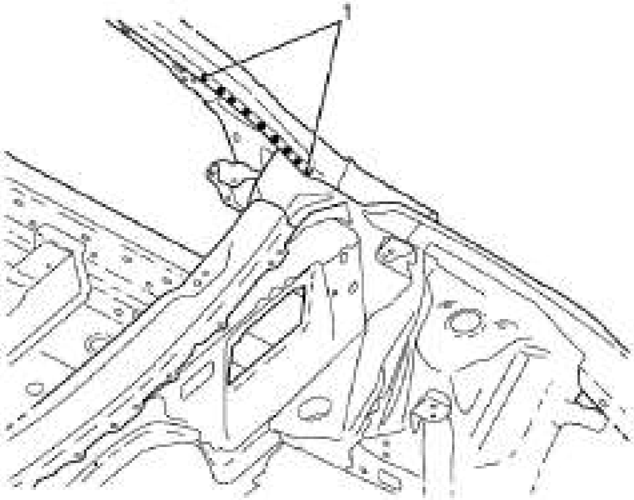
11. Align the body side panel assembly by positioning the inner wheelhouse panel (1) up against the rear floor panel (2).



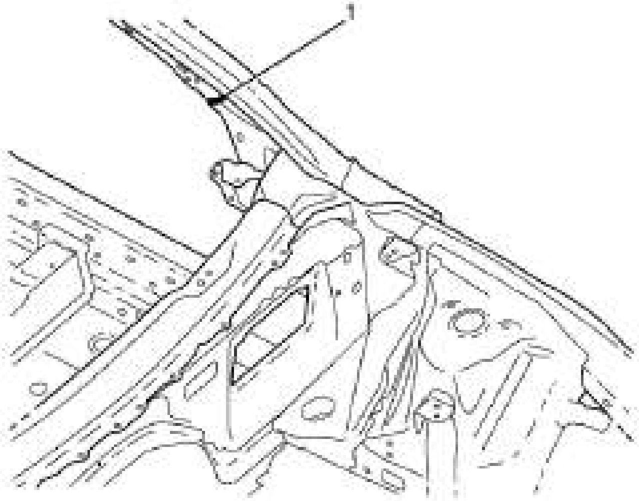
12. Align the body side panel assembly centre pillar to the indented flange on the inner rocker panel (1).



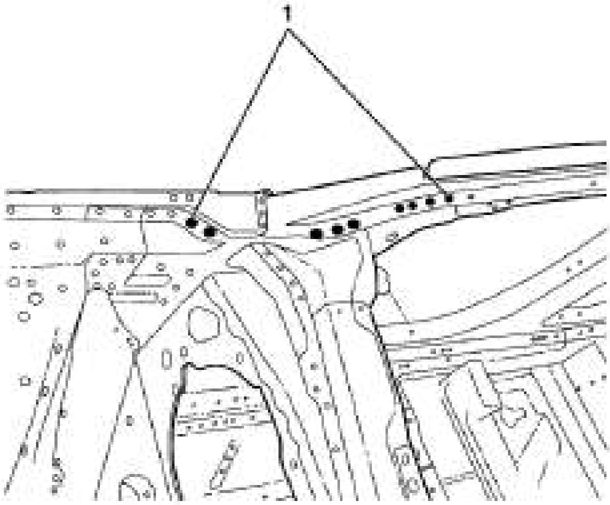
13. Align the body side panel hinge pillar (1) to the inner lower hinge pillar (2).



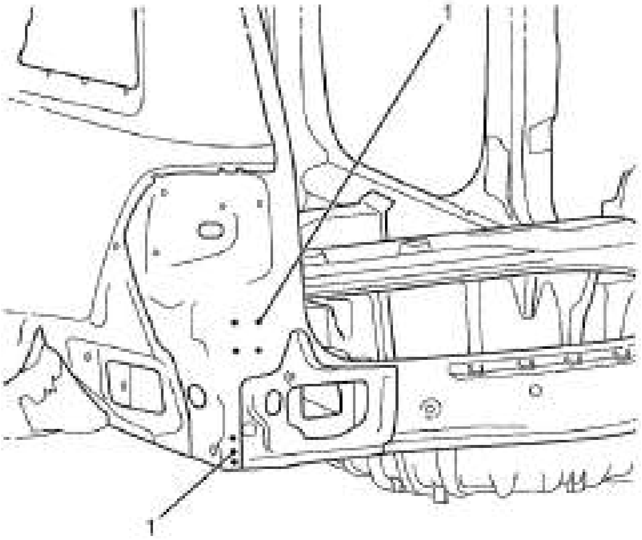
14. Weld the body side panel assembly to the front hinge pillar (1).



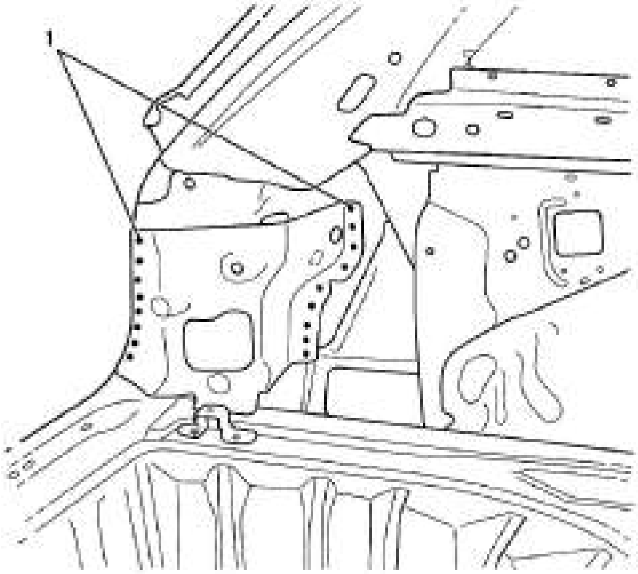
15. Seam weld the inner lower hinge pillar to inner upper hinge pillar (1) 60 mm (2.36 in) using a metal inert gas (MIG) welder.



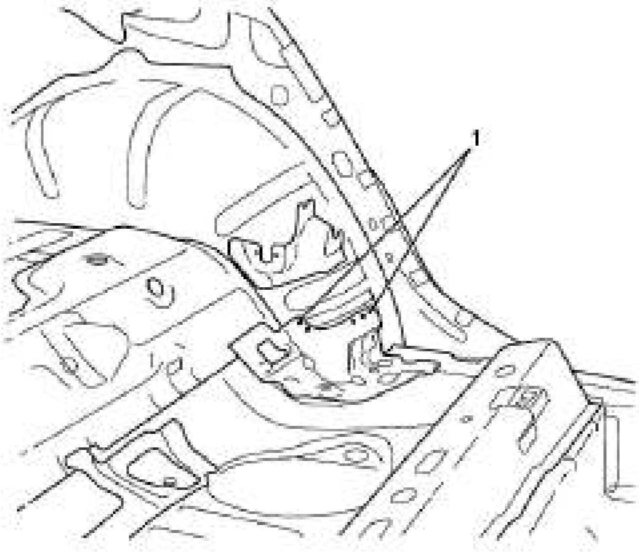
16. Weld the body side panel assembly to the front hinge pillar (1).



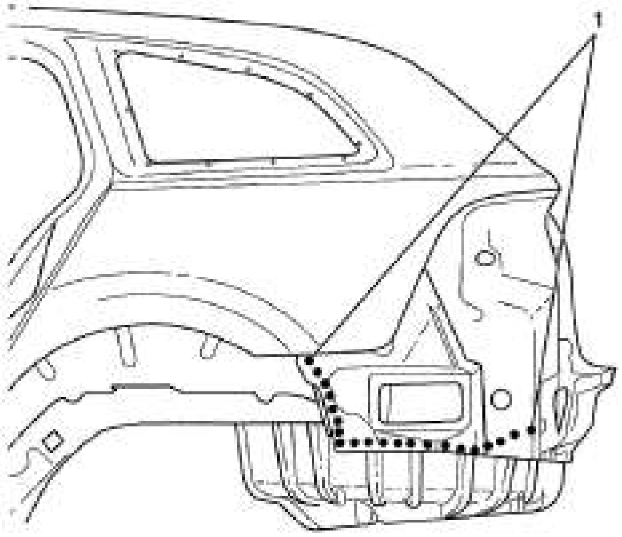
17. Weld the body side panel assembly to the rear floor panels (1).



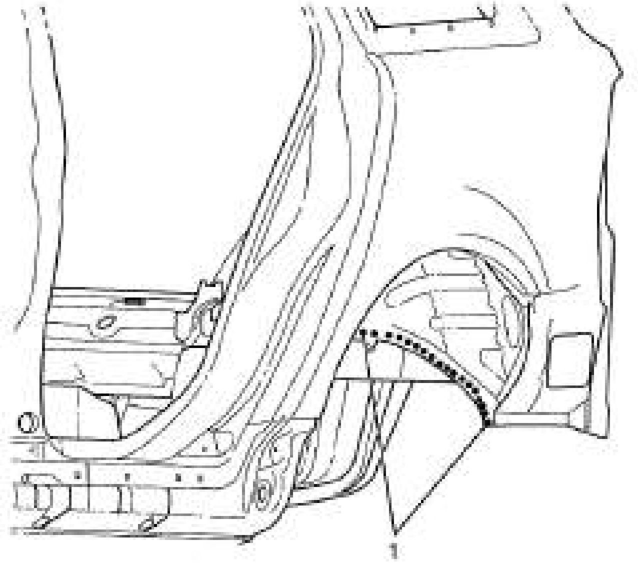
18. Weld the body side panel to the back body pillar inner lower panel (1).



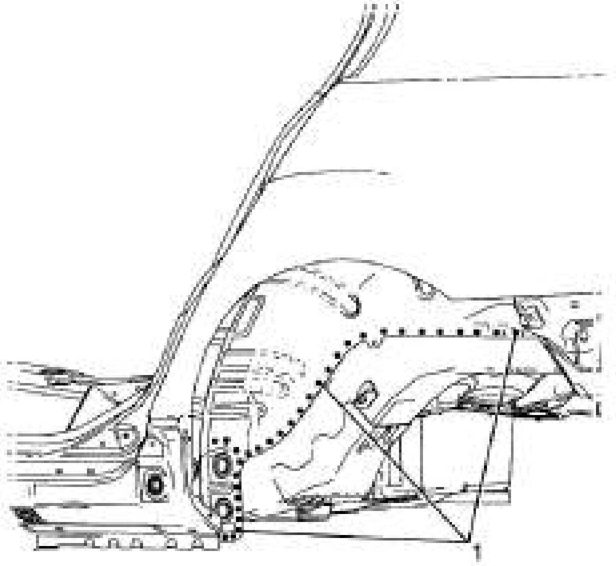
19. Weld the body side panel assembly to the rear wheelhouse inner panel front reinforcement (1).



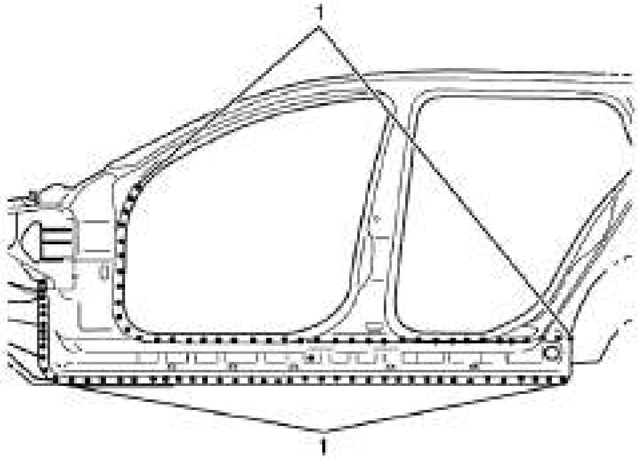
20. Weld the body side panel assembly to the rear floor panels (1).



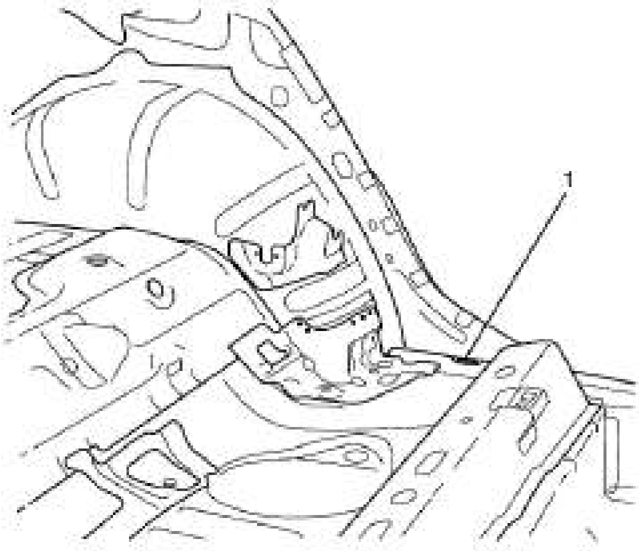
21. Weld the body side panel assembly to the rear floor panels (1).



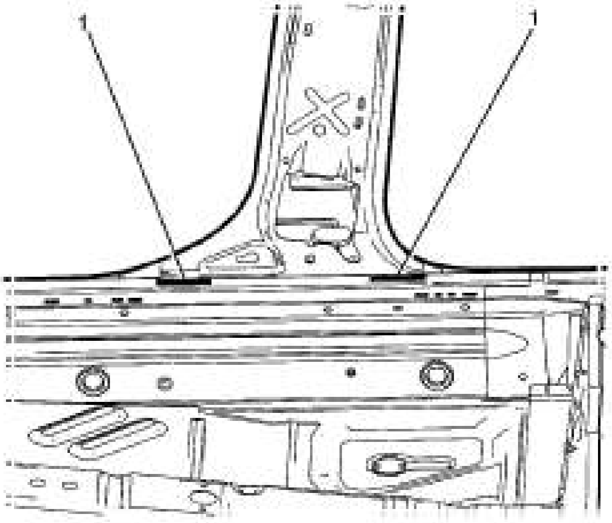
22. Weld the body side panel assembly to the rear floor panels (1).



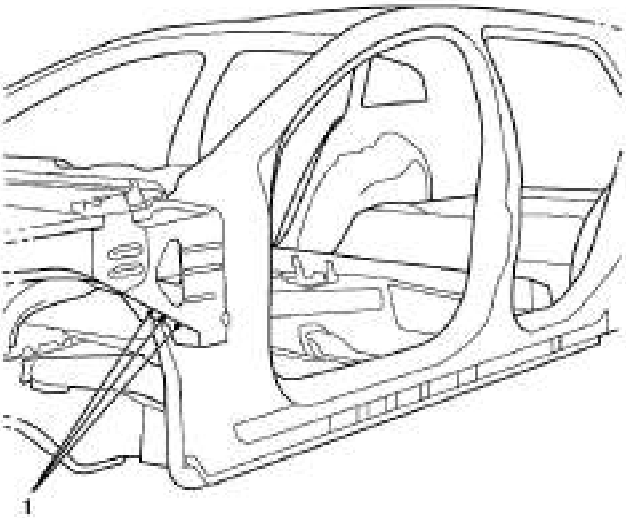
23. Weld the body side panel assembly to the vehicle (1).



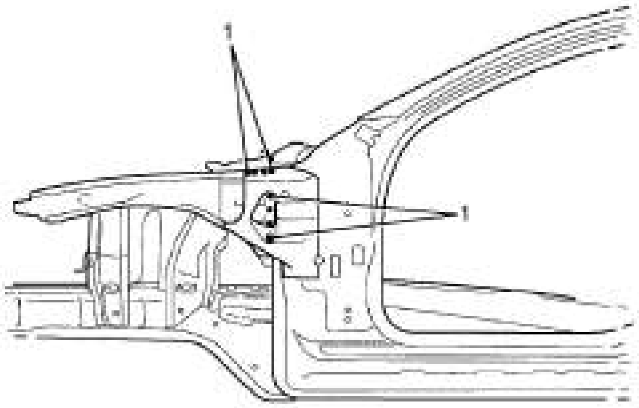
24. Seam weld the body side panel assembly to the rear inner wheelhouse (1).



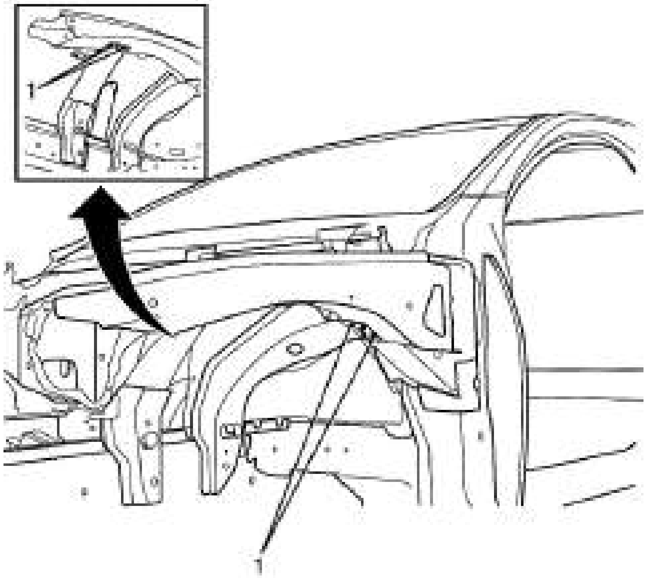
25. Seam weld the body side panel assembly to the inner rocker panel (1).
26. Install the Roof Rear Header Panel. Refer to Roof Rear Header Panel Replacement.
27. Install the Roof Front Header Panel. Refer to Roof Front Header Panel Replacement.
28. Install the Front Roof Panel Bow. Refer to Roof Panel Bow Replacement.
29. Install the Rear Roof Panel Bow. Refer to Roof Panel Bow Replacement.



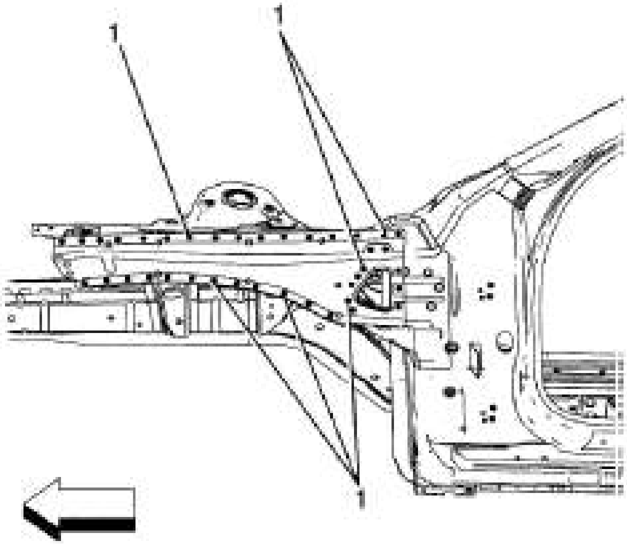
30. Weld the upper wheelhouse brace to the front hinge pillar (1).



31. Position the upper wheelhouse brace to the front wheelhouse assembly.
32. Seam weld the body side panel assembly to the front hinge pillar (1).



33. Weld the upper wheelhouse brace to the front hinge pillar (1).



34. Weld the upper wheel house brace to the front wheelhouse assembly (1).

Important: All joints and welds must be checked for water leaks before the vehicle is fully reassembled.

35. Paint the repair area. Refer to Basecoat/Clearcoat Paint Systems.
36. Install the roof outer panel. Refer to Roof Outer Replacement.
37. Install the liftgate. Refer to Liftgate Replacement.
38. Install the body side roof drip moulding. Refer to Body Side Roof Drip Molding Replacement.
39. Install the windshield pillar garnish moulding. Refer to Windshield Pillar Garnish Molding Replacement.
40. Install the rocker panel moulding. Refer to Rocker Panel Molding Replacement.
41. Install the roof weld joint reveal moulding. Refer to Roof Weld Joint Reveal Molding Replacement.
42. Install the positive battery cable from the vehicle. Refer to Battery Positive Cable Replacement.
43. Install the remote function actuator. Refer to Remote Control Door Lock Receiver and Theft Deterrent Module Replacement.
44. Install the body side stationary window. Refer to Body Side Window Replacement.
45. Install the headliner. Refer to Headlining Trim Panel Replacement.
46. Install the body side window rear garnish moulding. Refer to Body Side Window Rear Garnish Molding Replacement.
47. Install the headlining rear trim panel retainer. Refer to Headlining Rear Trim Panel Retainer Replacement.
48. Install the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
49. Install the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
50. Install the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
51. Install the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
52. Install the HVAC module assembly. Refer to HVAC Module Assembly Replacement.
53. Install the Instrument panel carrier. Refer to Instrument Panel Carrier Replacement.
54. Install the rear seat belts. Refer to Rear Seat Belt Replacement.

55. Install the front seat belts. Refer to Front Seat Belt Replacement.
56. Install the rear seat back. Refer to Rear Split Folding Seat Back Replacement.
57. Install the rear seat cushion. Refer to Rear Seat Cushion Replacement.
58. Install the front seats. Refer to Front Seat Replacement - Bucket.
59. Install the rear doors. Refer to Rear Door Replacement.
60. Install the front doors. Refer to Front Side Door Replacement.
61. Install the plenum chamber. Refer to Air Inlet Assembly Replacement.
62. Install the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
63. Install the brake lines. Refer to Brake Pipe Replacement.
64. Install the fuel tank. Refer to Fuel Tank Replacement for the 3.6L Engine or Fuel Tank Replacement for the 6.0L Engine.
65. Install the fuel lines. Refer to Fuel Hose/Pipes Replacement - Chassis for the 3.6L Engine or Fuel Hose/Pipes Replacement - Chassis for the 6.0L Engine.

    Important: This step is unique to the right side body ring.

66. Install the fuel filler door release actuator. Refer to Fuel Tank Filler Door Lock Actuator Replacement.

    Important: This step is unique to the right side body ring.

67. Install the fuel filler door. Refer to Fuel Tank Filler Door Replacement.

    Important: This step is unique to the right side body ring.

68. Install the filler tube. Refer to Filler Tube Replacement for the 3.6L Engine or Filler Tube Replacement for the 6.0L Engine.
69. Install the rear frame assembly. Refer to Rear Frame Replacement.
70. Install the rear wheelhouse liner. Refer to Rear Inner Wheelhouse Replacement.
71. Install the front strut assembly. Refer to Strut Assembly Replacement.
72. Install the front wheel hub assembly. Refer to Front Wheel Bearing and Hub Replacement.
73. Install the front fender assembly. Refer to Front Fender Replacement.
74. Install the front end module. Refer to Front End Panel Module Carrier Assembly Replacement.
75. Install the front bumper fascia. Refer to Front Bumper Fascia Replacement.
76. Install the coolant reservoir. Refer to Coolant Recovery Reservoir Replacement.
77. Install the front wheelhouse liner. Refer to Front Wheelhouse Liner Replacement.
78. Install the air inlet grille. Refer to Air Inlet Grille Panel Replacement.
79. Install the positive battery cable from the engine bay. Refer to Battery Positive Cable Replacement.
80. Install the negative battery cable. Refer to Battery Negative Cable Replacement.
81. Install the underhood electrical centre. Refer to Underhood Electrical Center or Junction Block Replacement.
82. Install the engine control module. Refer to Engine Control Module Replacement for the 3.6L Engine or Engine Control Module Replacement for the 6.0L Engine.
83. Install the vacuum brake booster. Refer to Power Vacuum Brake Booster Replacement.
84. Install the brake master cylinder. Refer to Master Cylinder Replacement.
85. Install the ABS unit. Refer to Brake Pressure Modulator Valve Assembly Replacement.
86. Install the engine assembly. Refer to Engine Replacement for the 3.6L Engine or Engine Replacement for the 6.0L Engine.
87. Connect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
88. Enable the SIR system. Refer to SIR Disabling and Enabling.
89. If reprogramming is required. Refer to Control Module References.

Side Door Opening Frame Replacement (SWB)

Removal Procedure

Caution: Refer to Approved Equipment for Collision Repair Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Foam Sound Deadeners Caution in the Preface section.

Caution: Refer to Battery Disconnect Caution in the Preface section.

1. Disable the SIR system. Refer to SIR Disabling and Enabling.
2. Disconnect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
3. Remove the front doors. Refer to Front Side Door Replacement.
4. Remove the rear doors. Refer to Rear Door Replacement.
5. Remove the engine assembly. Refer to Engine Replacement or Engine Replacement.
6. Remove the negative cable from the engine bay. Refer to Battery Negative Cable Replacement.
7. Remove the positive cable from the engine bay. Refer to Battery Positive Cable Replacement.
8. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.

Important: This step is unique to the right body side ring.

9. Remove the Filler Tube. Refer to Filler Tube Replacement or Filler Tube Replacement.

Important: This step is unique to the right body side ring.

10. Remove the fuel filler door. Refer to Fuel Tank Filler Door Lock Actuator Replacement.

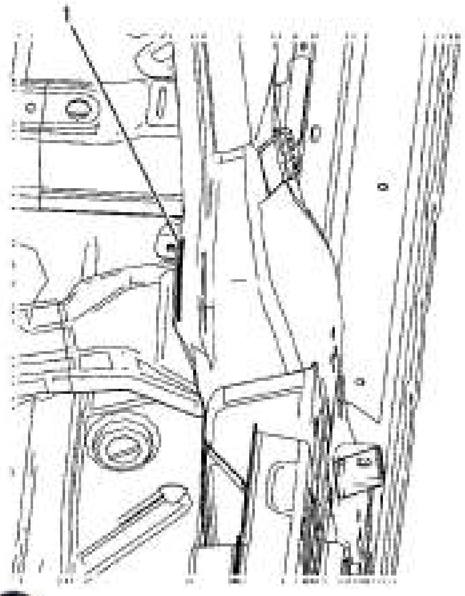
Important: This step is unique to the right body side ring.

11. Remove the fuel filler actuator. Refer to Fuel Tank Filler Door Lock Actuator Replacement.
12. Remove the fuel lines. Refer to Fuel Hose/Pipes Replacement - Chassis or Fuel Hose/Pipes Replacement - Chassis.
13. Remove the front wheelhouse liner. Refer to Front Wheelhouse Liner Replacement.
14. Remove the rear wheelhouse liner. Refer to Rear Inner Wheelhouse Replacement.
15. Remove the rear frame assembly. Refer to Rear Frame Replacement.
16. Remove the fuel tank. Refer to Fuel Tank Replacement or Fuel Tank Replacement.
17. Remove the front wheel hub assembly. Refer to Front Wheel Bearing and Hub Replacement.
18. Remove the front strut assembly. Refer to Strut Assembly Replacement.
19. Lower the vehicle.
20. Remove the brake lines. Refer to Brake Pipe Replacement.
21. Remove the fender assembly. Refer to Front Fender Replacement.
22. Remove the front fascia. Refer to Front Bumper Fascia Replacement.
23. Remove the rear fascia. Refer to Rear Bumper Fascia Replacement.
24. Remove the coolant reservoir. Refer to Coolant Recovery Reservoir Replacement.

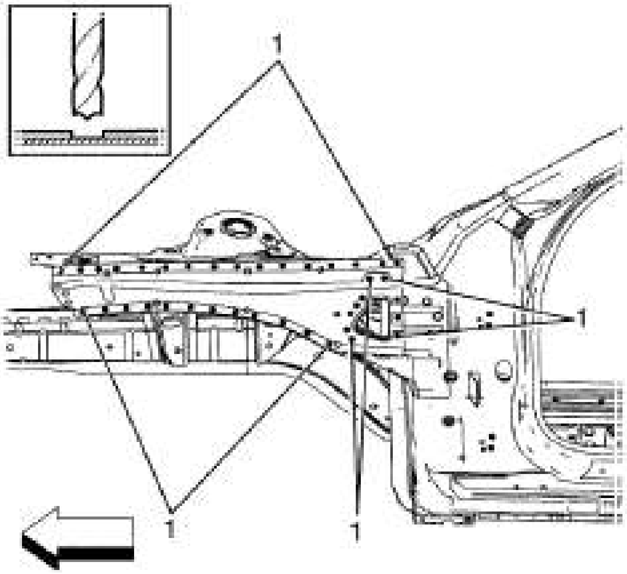
25. Remove the front end module. Refer to Front End Panel Module Carrier Assembly Replacement.
26. Remove the air inlet grille. Refer to Air Inlet Grille Panel Replacement.
27. Remove the plenum chamber. Refer to Air Inlet Assembly Replacement.
28. Remove the relay box. Refer to Underhood Electrical Center or Junction Block Replacement.
29. Remove the ABS unit. Refer to Brake Pressure Modulator Valve Assembly Replacement.
30. Remove the brake master cylinder. Refer to Master Cylinder Replacement.
31. Remove the instrument panel. Refer to Instrument Panel Carrier Replacement.
32. Remove the HVAC. Refer to HVAC Module Assembly Replacement.
33. Remove the front seats. Refer to Front Seat Replacement - Bucket.
34. Remove the rear seat back. Refer to Rear Seat Back Replacement.
35. Remove the rear seat cushion. Refer to Rear Seat Cushion Replacement.
36. Remove the rear window shelf trim. Refer to Rear Window Shelf Trim Panel Replacement.
37. Remove the front seat belts. Refer to Front Seat Belt Replacement.
38. Remove the rear seat belts. Refer to Rear Seat Belt Replacement.
39. Remove the roof rail module. Refer to Inflatable Restraint Roof Side Rail Module Replacement - Front.
40. Remove the spare wheel and emergency kit from the rear compartment.
41. Remove the rear compartment floor carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
42. Remove the battery tray. Refer to Battery Tray Replacement.
43. Remove the positive cable from the vehicle. Refer to Battery Positive Cable Replacement.

Important: This step is unique to the sunroof.

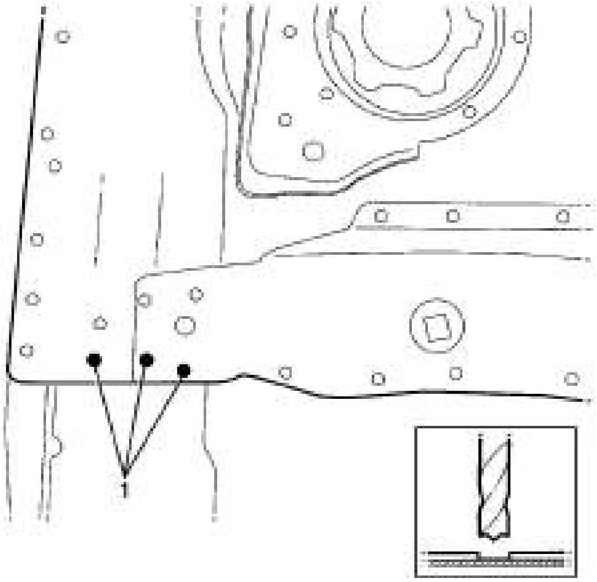
44. Remove the sunroof module. Refer to Sunroof Module Assembly Replacement
45. Remove the roof. Refer to Roof Outer Replacement.
46. Note the location and remove the sealers and anti-corrosion materials from the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.



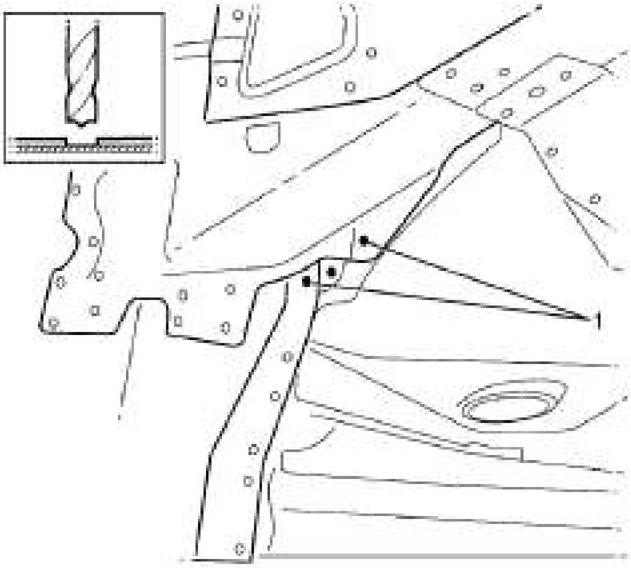
47. Remove the body side ring to upper dash panel body sealer (1)



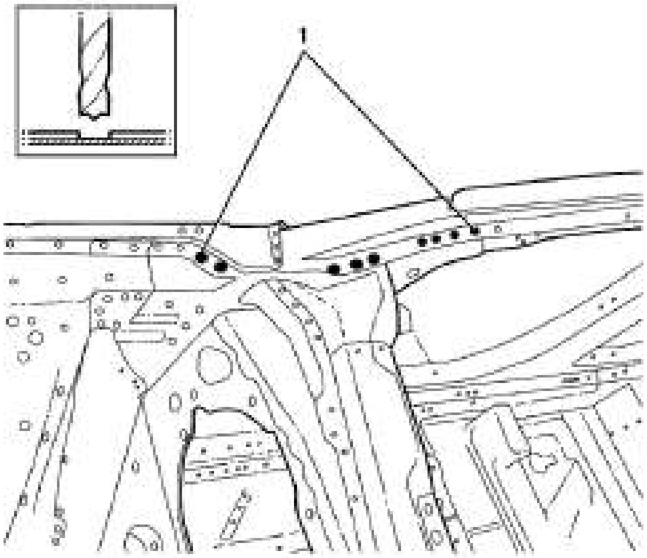
48. Locate, mark and drill out the factory welds (1) attaching the upper wheelhouse brace to the front wheelhouse assembly.
49. Remove the upper wheelhouse brace from the front wheelhouse assembly.



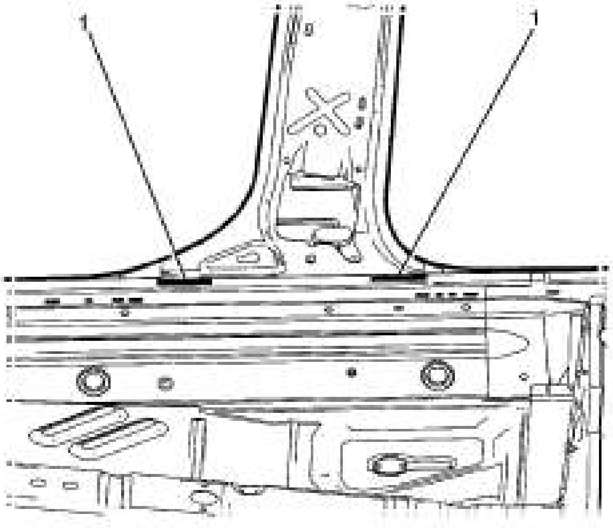
50. Locate, mark and drill out the factory welds (1) attaching the upper wheelhouse brace to the front hinge pillar.



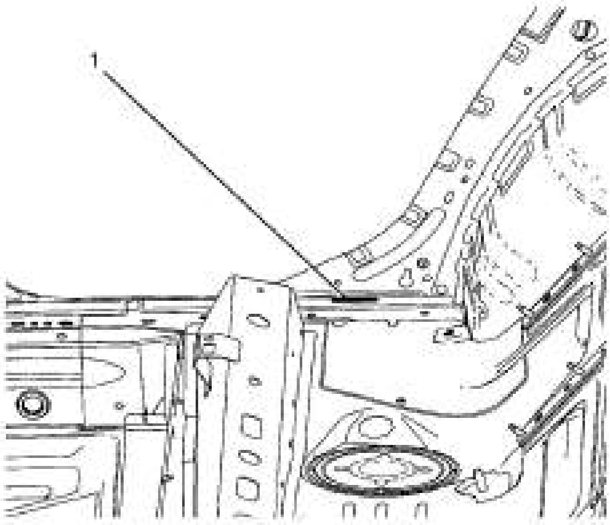
51. Locate, mark and drill out the factory welds (1) attaching the upper wheelhouse brace to the front hinge pillar.



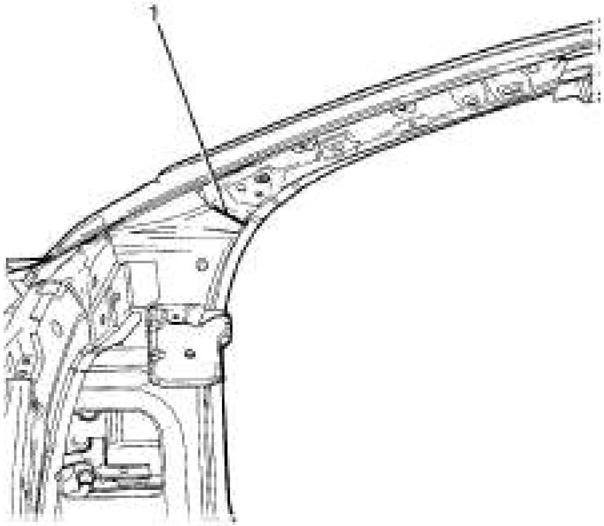
52. Locate, mark and drill out the factory welds (1) attaching the body side ring to the front hinge pillar.



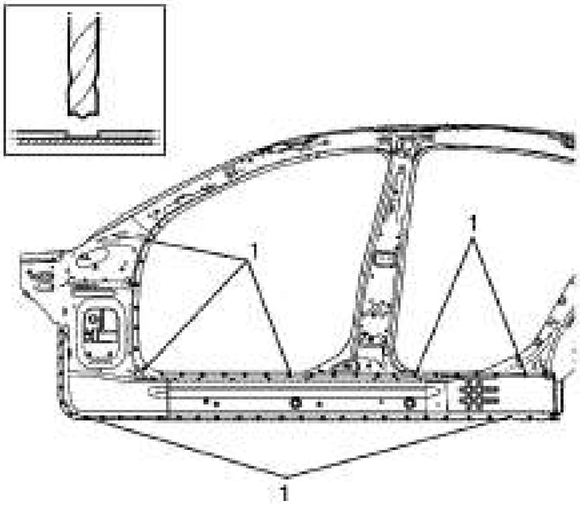
53. Locate, mark and remove the factory seam welds (1) attaching the body side ring centre pillar to the inner rocker panel.



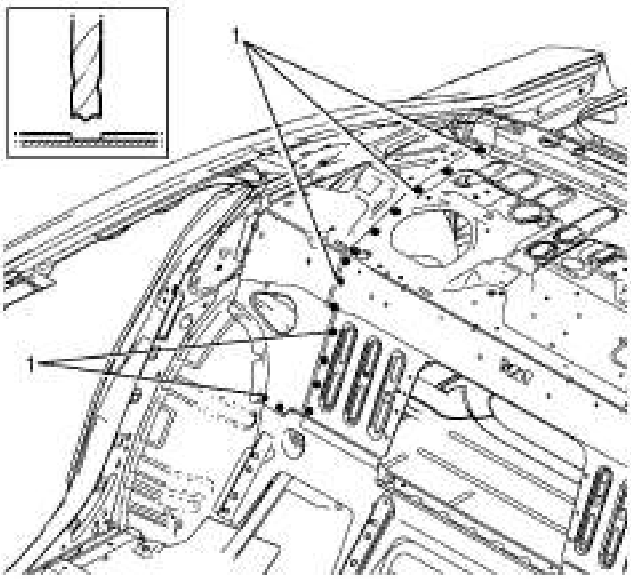
54. Locate, mark and remove the factory seam welds (1) attaching the body side ring to the rear inner wheelhouse.



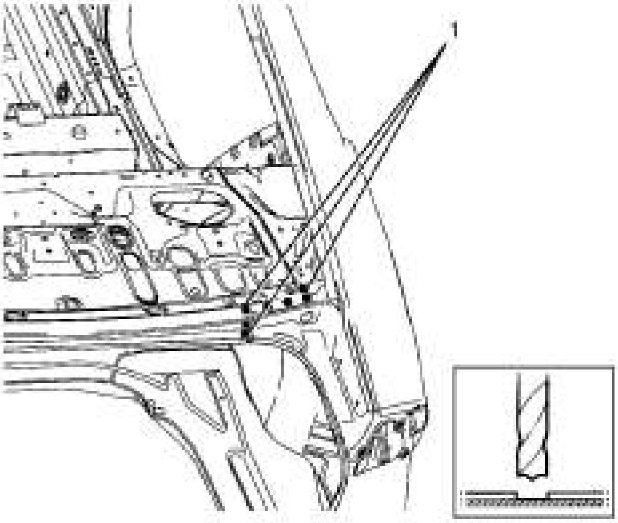
55. Locate, mark and remove the factory seam welds (1) attaching the body side ring to the front hinge pillar.



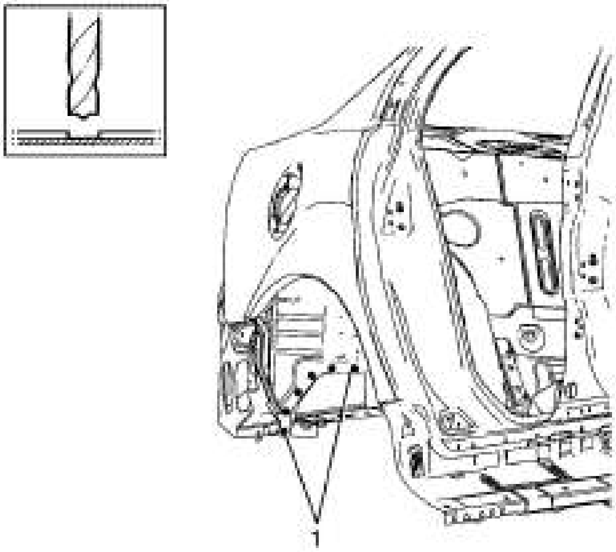
56. Locate, mark and drill out the factory welds (1) attaching the body side ring to the vehicle.



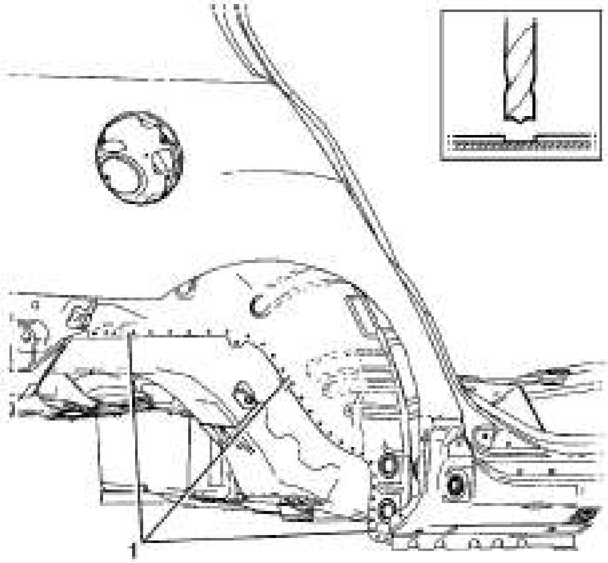
57. Locate, mark and drill out the factory welds (1) attaching the body side ring assembly to the parcel shelf assembly.



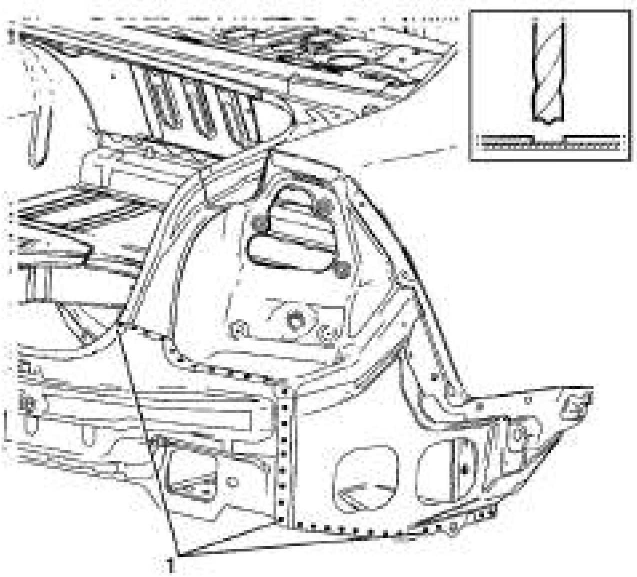
58. Locate, mark and drill out the factory welds (1) attaching the body side ring assembly to the upper parcel shelf assembly.



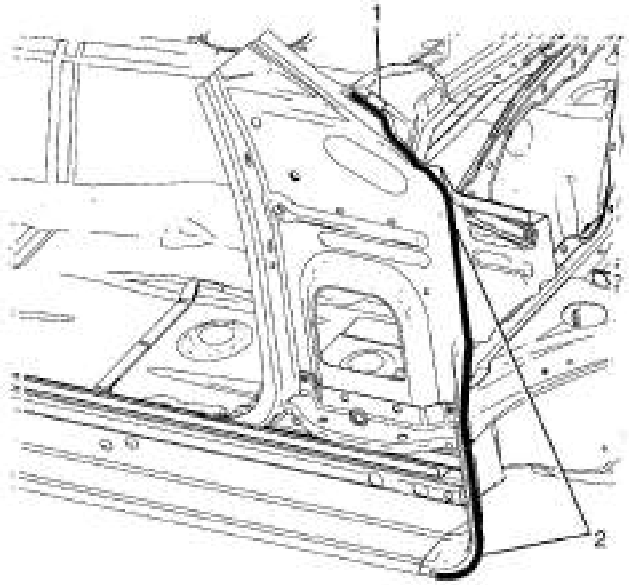
59. Locate, mark and drill out the factory welds (1) attaching the body side ring assembly to the inner rear wheelhouse.



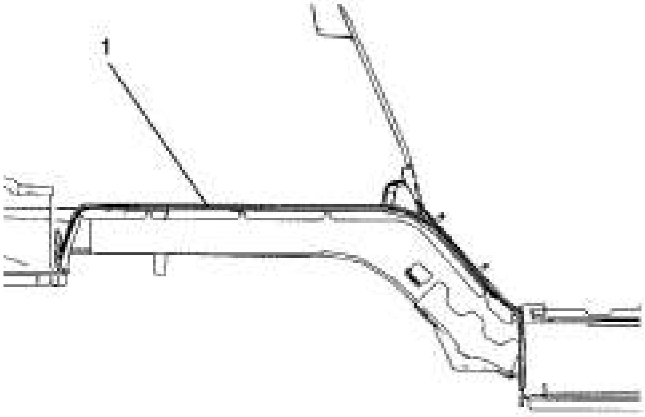
60. Locate, mark and drill out the factory welds (1) attaching the body side ring assembly to the inner rear wheelhouse.



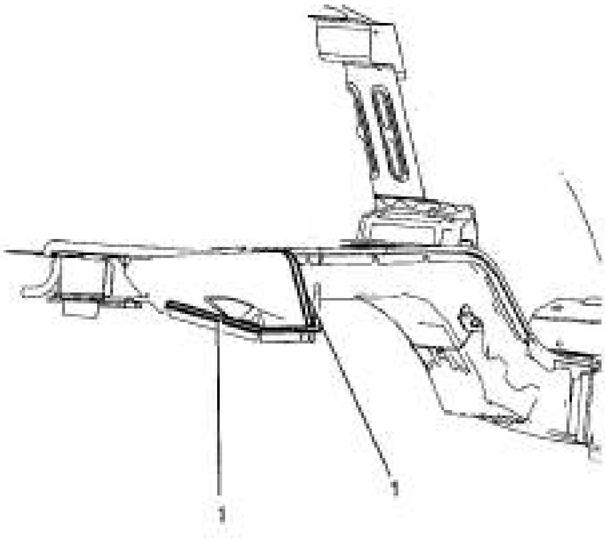
61. Locate, mark and drill out the factory welds (1) attaching the body side ring assembly to the rear end panel.
62. Remove the body side ring from the vehicle.



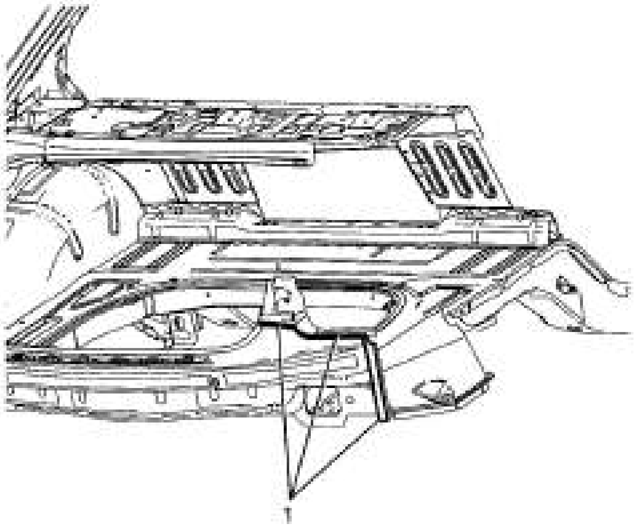
63. Remove the sealer (1) from the front plenum panel.
64. Remove the seam sealer (2) from the lower hinge pillar.



65. Remove the seam sealer (1) from the rear floor pan assembly.



66. Remove the seam sealer (1) from the inner side extension panel.



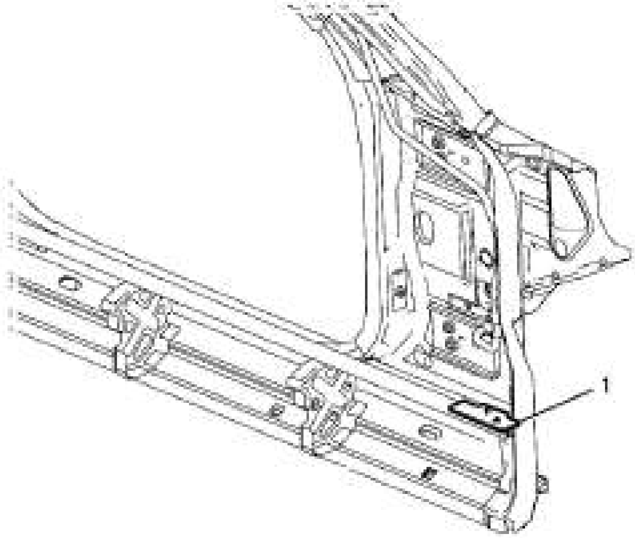
67. Remove the seam sealer (1) from the rear end panel.

Installation Procedure

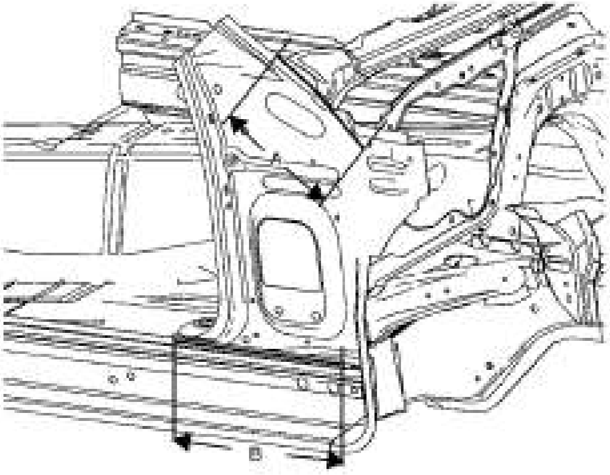
Important: If the location of the original plug weld holes can not be determined, or if structural weld-thru adhesive is present, space the plug weld holes every 32 mm (1¼ in).

Important: Spot welding is the preferred method for attaching panels and should be used wherever possible. A plug weld should be performed where your spot welder is unable reach.

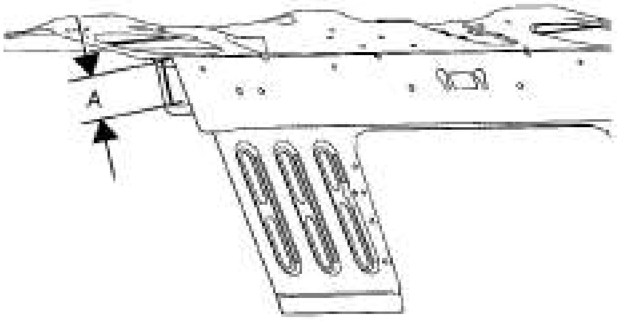
1. Drill 8 mm (5/16 in) plug weld holes as necessary in the locations noted from the original assembly.
2. Clean and prepare the mating surfaces of both parts of the body side ring.



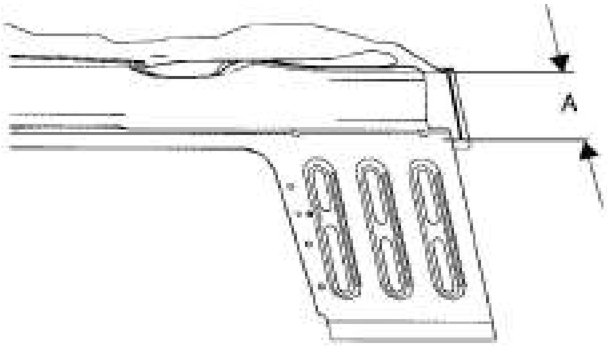
3. Remove the unexpanded noise baffle (1) from the body side ring.



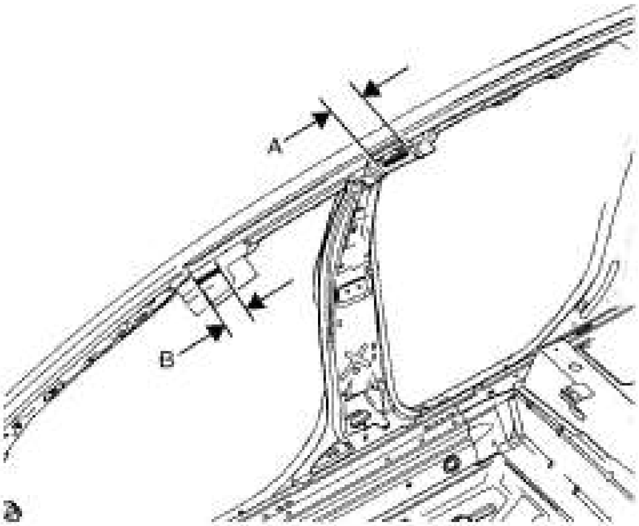
4. Apply structural adhesive GM6449G or equivalent 260 mm (10.24 in) (A) to the top edge of the inner hinge pillar.
5. Apply structural adhesive GM6449G or equivalent 400 mm (15.75 in) (B) to the inner rocker panel.



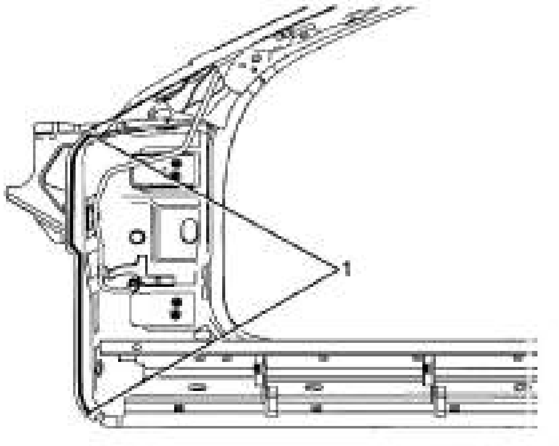
6. Apply structural adhesive GM6449G or equivalent 50 mm (1.97 in) (A) to the rear seat back on the forward facing surface.



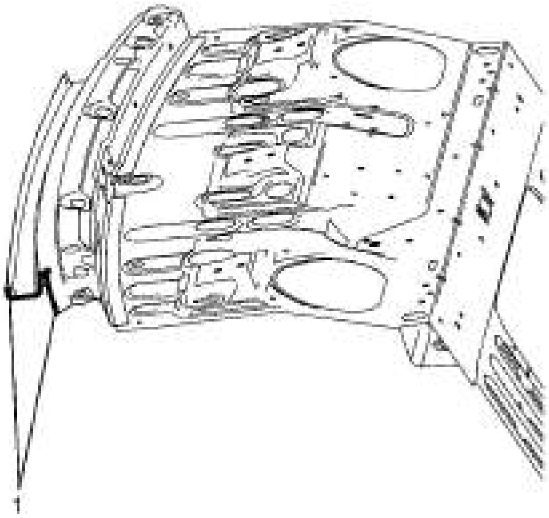
7. Apply structural adhesive GM6449G or equivalent 110 mm (4.33 in) (A) to the parcel shelf.



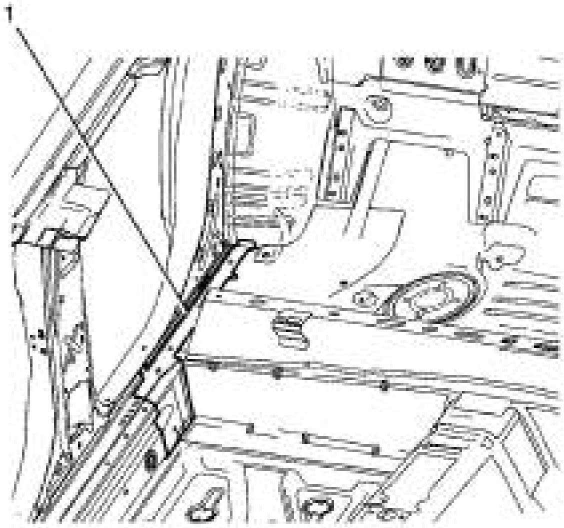
8. Apply structural adhesive GM6449G or equivalent 40 mm (1.57 in) (A) to the body side centre roof bow.
9. Apply structural adhesive GM6449G or equivalent 60 mm (2.36 (B) to the body side front roof bow.



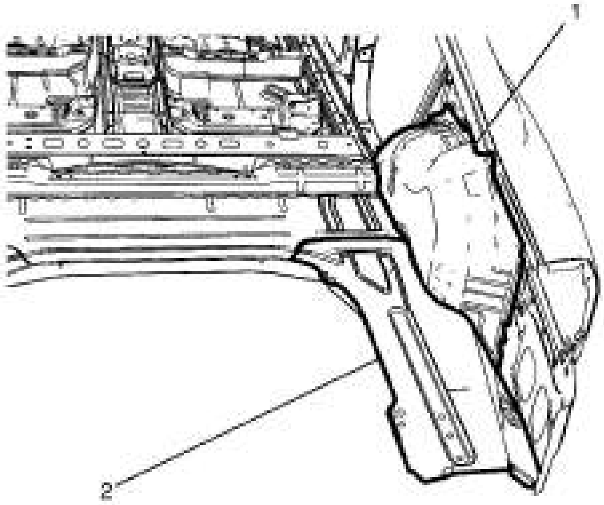
10. Apply the primary sealer (1) GM6449G or equivalent along the lower hinge pillar.



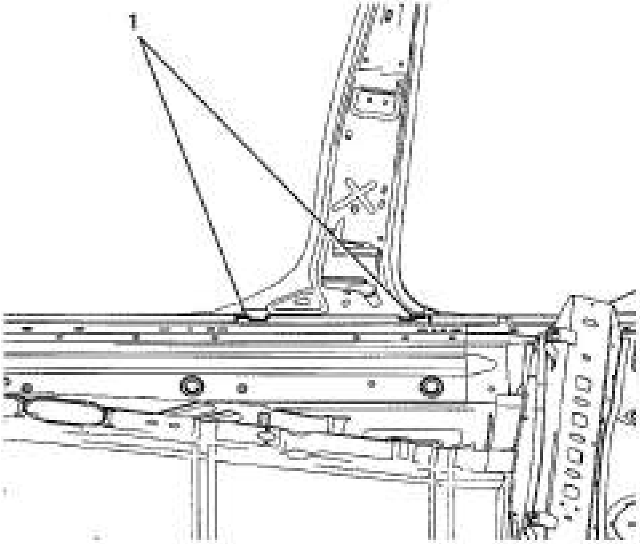
11. Apply the primary sealer (1) GM6449G or equivalent along the rear edge of the parcel shelf panel.
12. Position the body side on the vehicle. Verify correct alignment and position using three-dimensional measuring equipment.



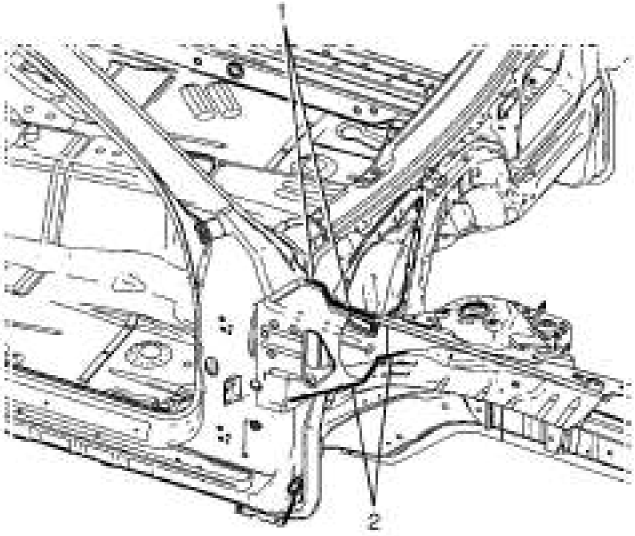
13. Align the body side ring to the inner rocker flange tab (1).



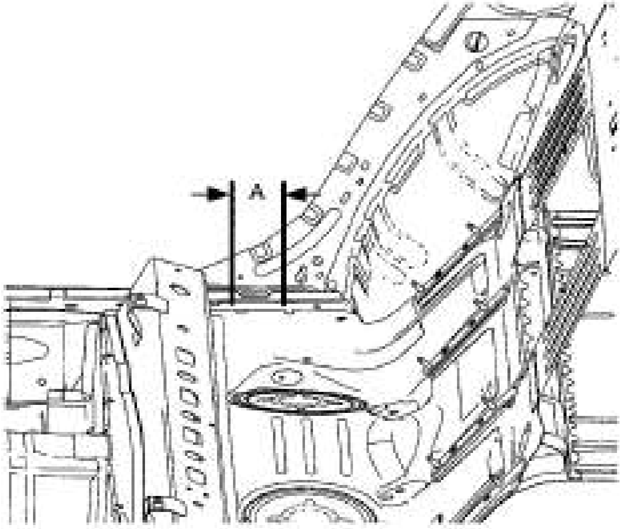
14. Align the inner rear wheelhouse (1) to side extension panel (2).



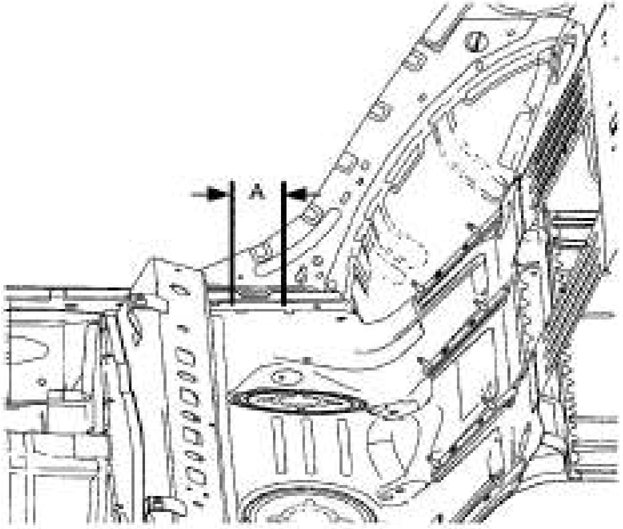
15. Align the body side ring centre pillar to the indented flange (1) on the inner rocker panel.



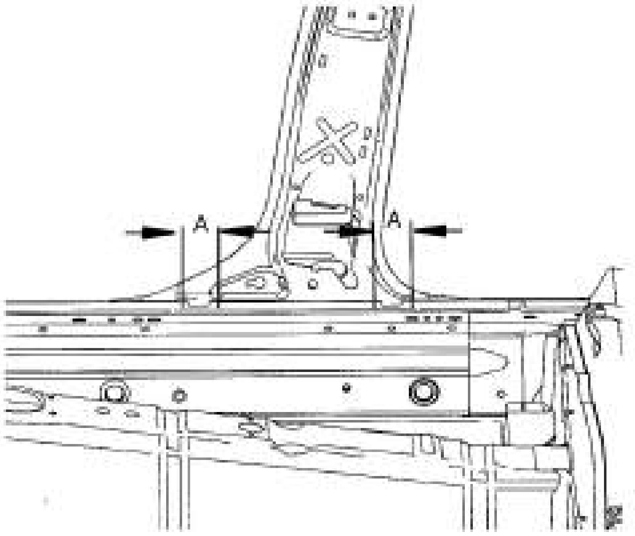
16. Align the body side ring hinge pillar (2) to the wheelhouse assembly.
17. Align the body side ring hinge pillar (1) to the inner lower hinge pillar.



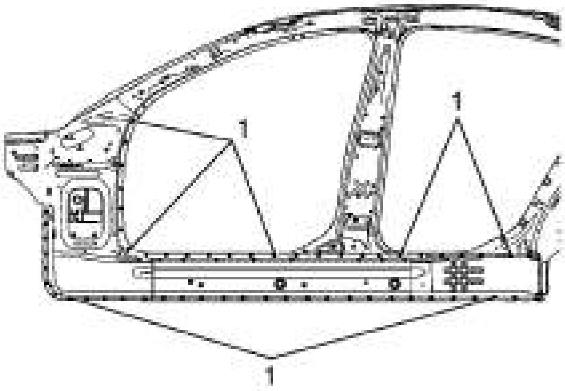
18. Seam weld the inner lower hinge pillar to inner upper hinge pillar 60 mm (2.36 in) (A) using a (Metal Inert Gas) MIG welder.



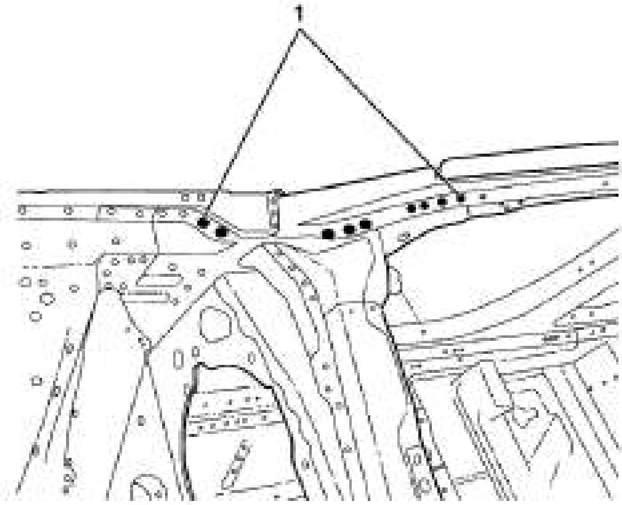
19. Seam weld the inner quarter panel to rear floor assembly 60 mm (2.36 in) (A) across the locating tag using a MIG welder.



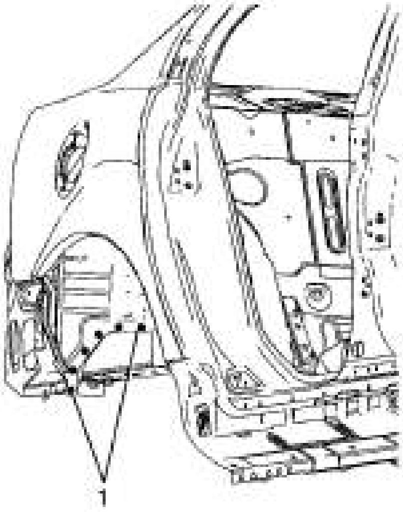
20. Seam weld the centre pillar to inner rocker panel in two places 50 mm (1.97 in) (A) across the locating tags using a MIG welder.
21. Install the roof. Refer to Roof Outer Replacement.



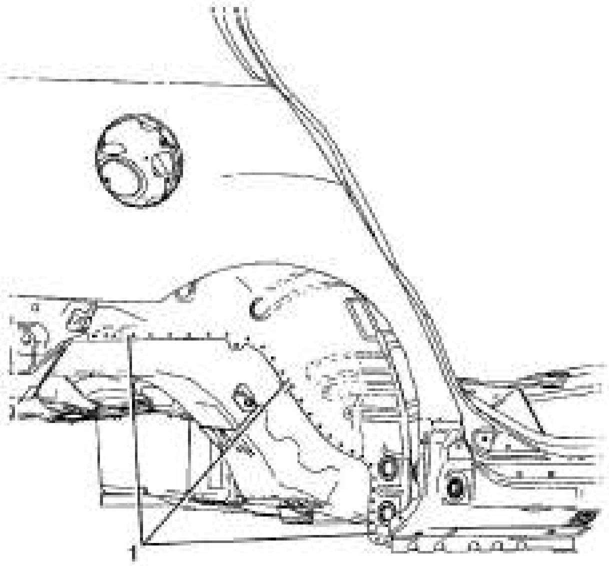
22. Weld (1) the body side ring to the vehicle.



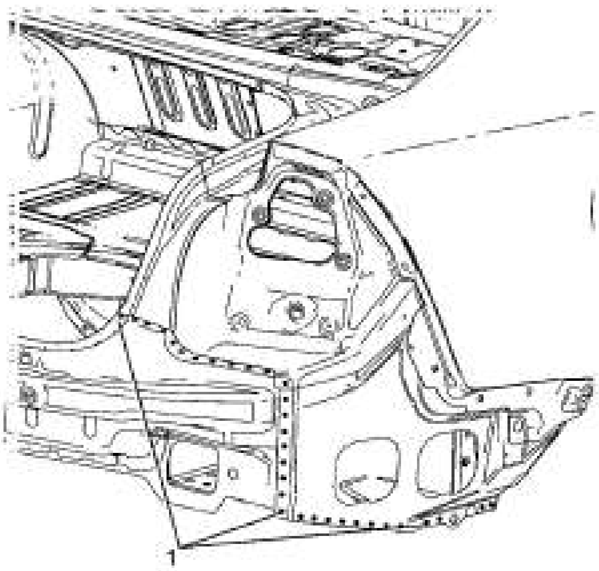
23. Weld (1) the body side ring to the front hinge pillar.



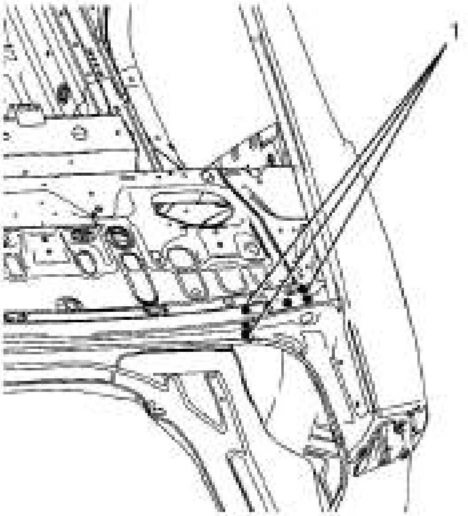
24. Weld (1) the body side ring assembly to the inner rear side extension panel.



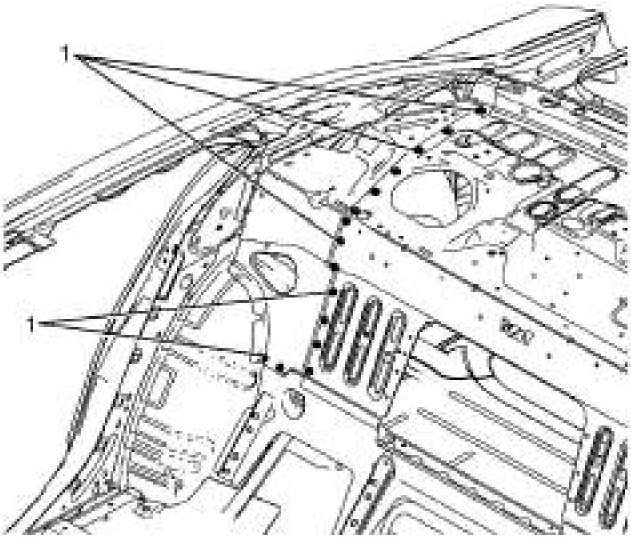
25. Weld (1) the body side ring assembly to the inner rear wheelhouse.



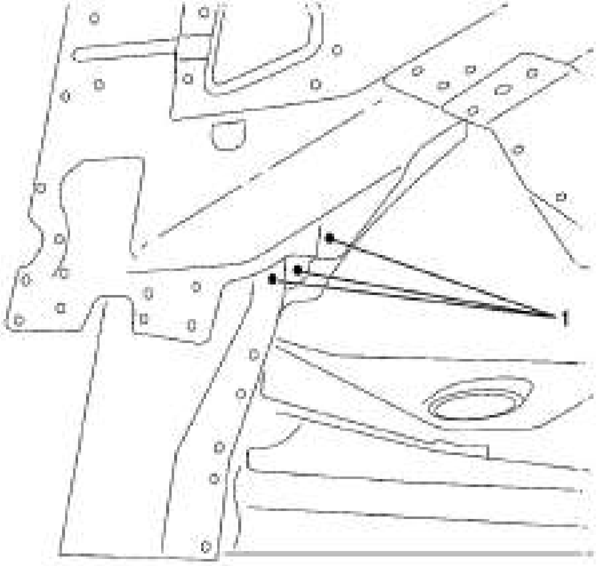
26. Puddle weld (1) the body side ring assembly to the rear end panel.



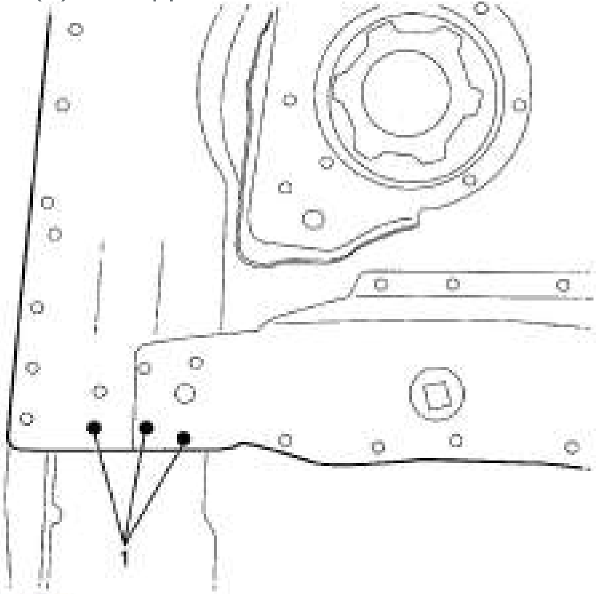
27. Weld (1) the body side ring assembly to the upper parcel shelf assembly.



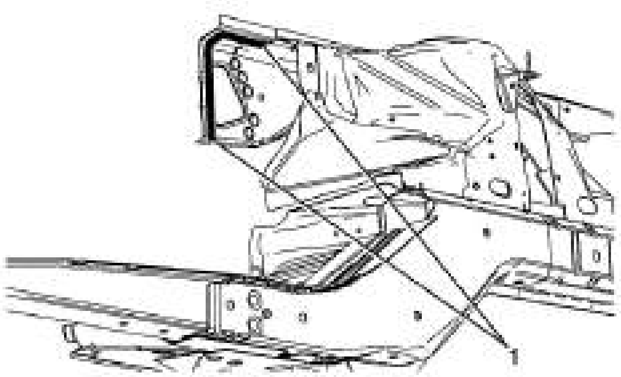
28. Weld (1) the body side ring assembly to the parcel shelf assembly.



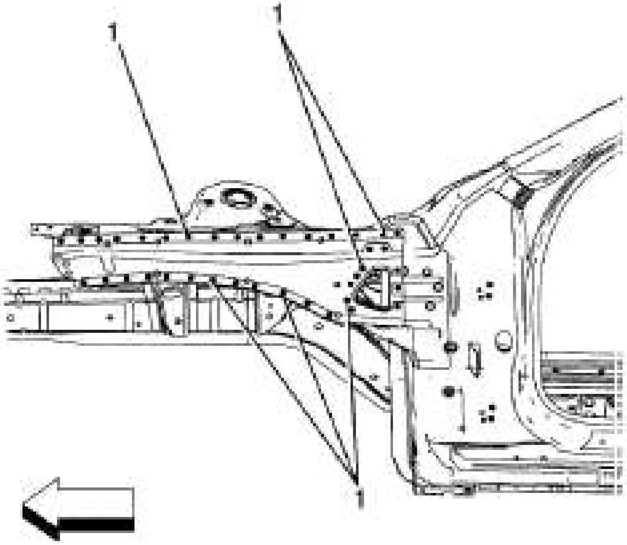
29. Weld (1) the upper wheelhouse brace to the front hinge pillar.



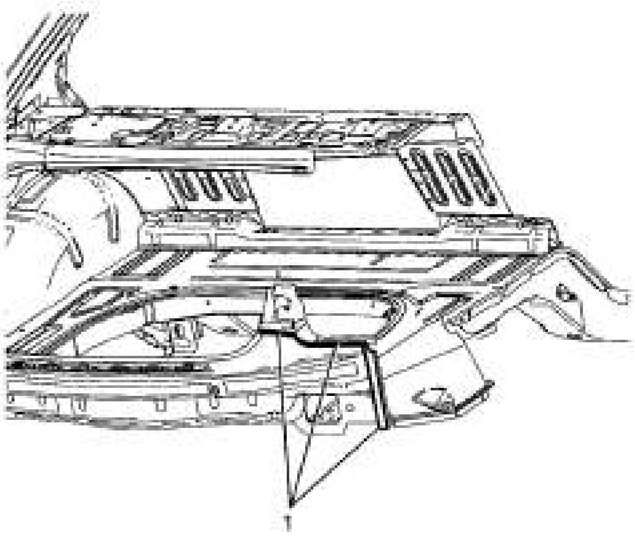
30. Weld (1) the upper wheelhouse brace to the front hinge pillar.



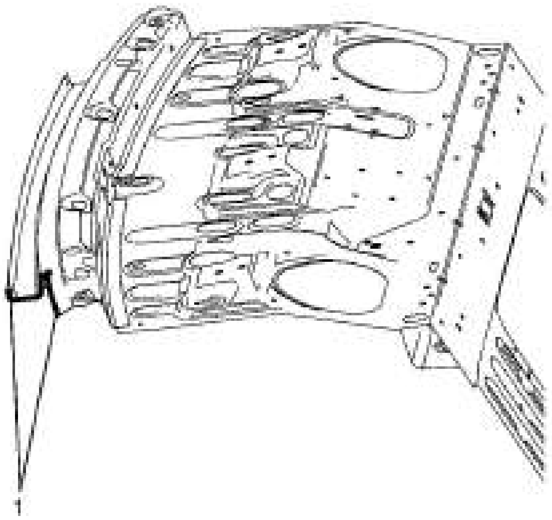
31. Apply the primary sealer (1) GM6449G or equivalent along the rear edge of the upper wheelhouse brace.



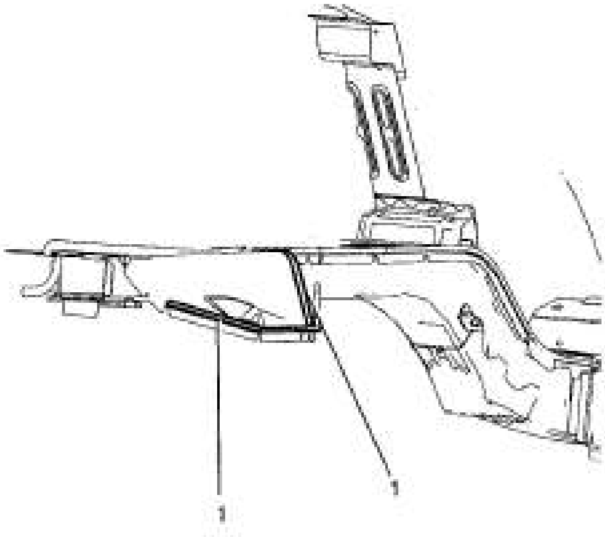
32. Weld (1) the upper wheelhouse brace to the front wheelhouse assembly.



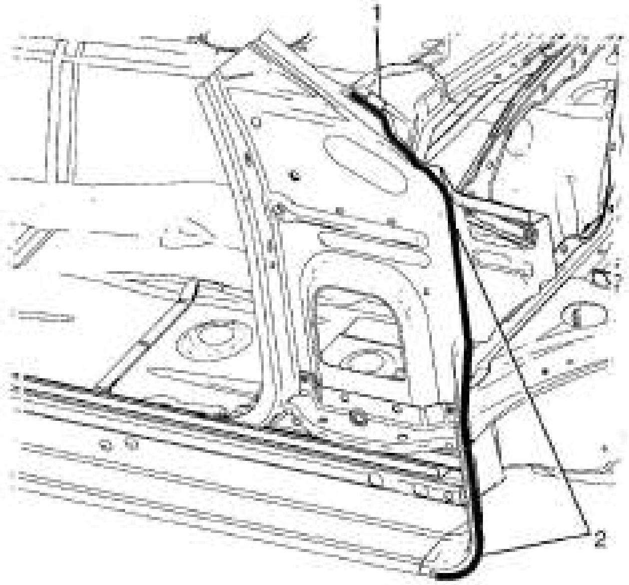
33. Apply the secondary sealer (1) GM specification 9984532 or equivalent to the tail lamp and the quarter panel extension.



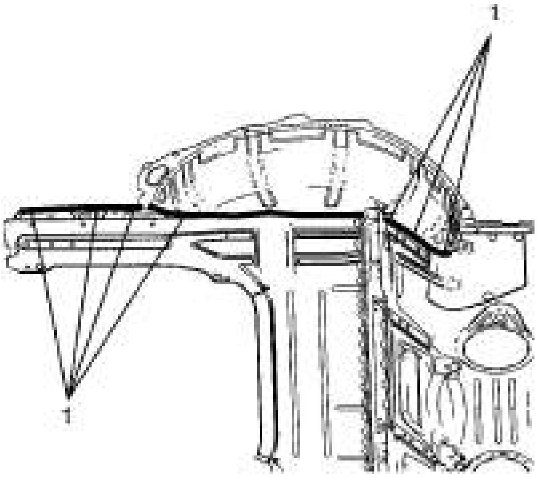
34. Apply the secondary sealer (1) GM specification 9984532 or equivalent along the rear edge of the parcel shelf panel.



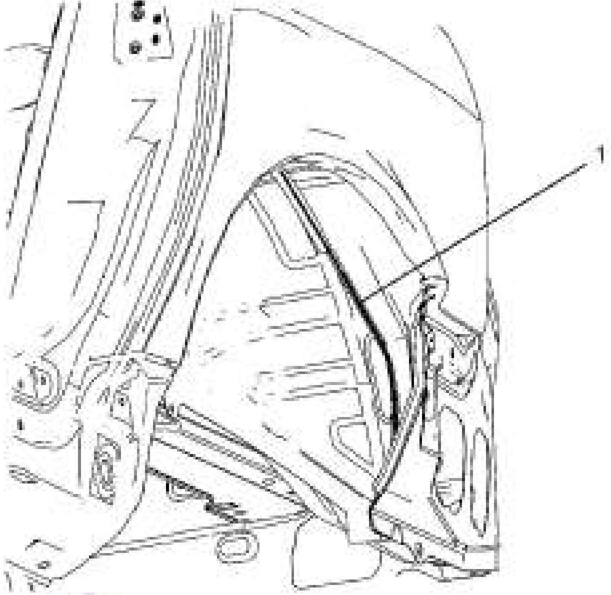
35. Apply the secondary sealer (1) GM specification 9984532 or equivalent to the quarter panel extension.



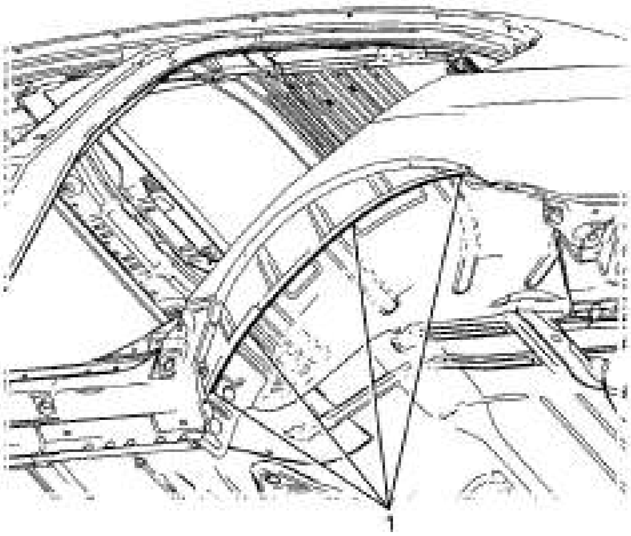
36. Apply the secondary sealer (1)GM specification 9984532 or equivalent to the front plenum panel.
37. Apply the secondary sealer (2) GM specification 9984532 or equivalent to the lower hinge pillar.



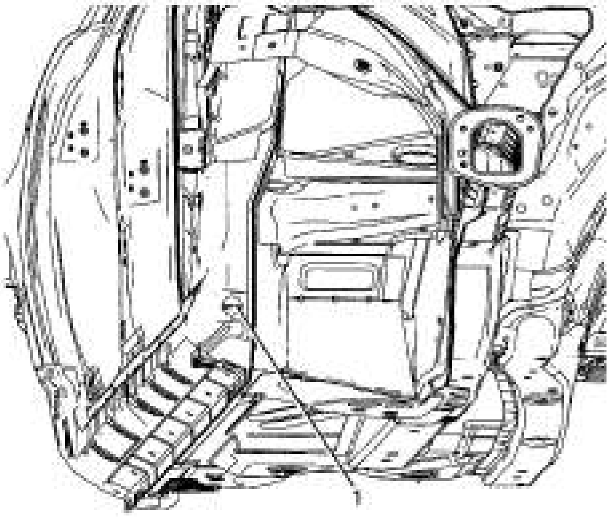
38. Apply the secondary sealer (1) GM specification 9984532 or equivalent to the inner rear wheelhouse assembly.



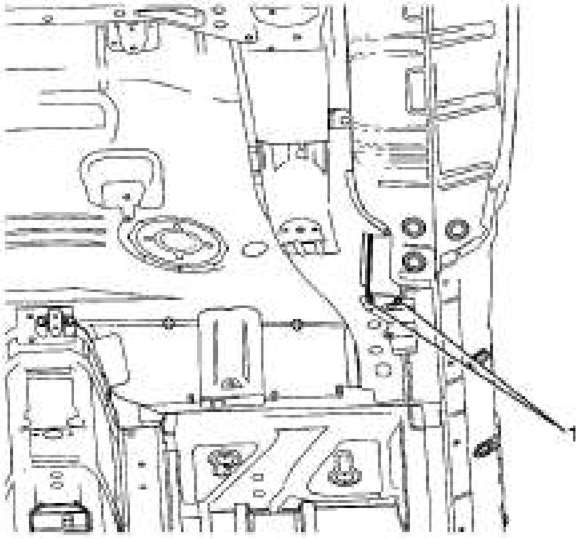
39. Apply the secondary sealer (1) GM specification 9984532 or equivalent between the outer rear wheelhouse assembly and the inner rear wheelhouse assembly.



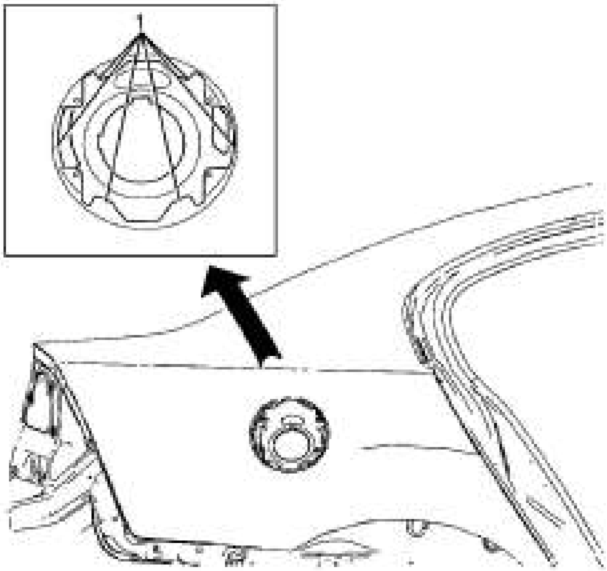
40. Apply the secondary sealer (1) GM specification 9984532 or equivalent between the outer rear wheelhouse assembly and the inner rear wheelhouse assembly.



41. Apply expanding foam sealer GM9982296 or equivalent to the front lower hinge pillar through the access hole (1).



42. Apply expanding foam sealer GM9982296 or equivalent through the two access holes (1) in the rear wheelhouse assembly.



Important: This step is unique to the right body side ring.

43. Apply the secondary sealer (1) GM specification 9984532 or equivalent to the fuel filler pocket.
44. Install the positive cable to the vehicle. Refer to Battery Positive Cable Replacement.
45. Install the battery tray. Refer to Battery Tray Replacement.
46. Install the rear compartment floor carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
47. Install the spare wheel and emergency kit from the rear compartment.
48. Install the roof rail module. Refer to Inflatable Restraint Roof Side Rail Module Replacement -

Front.

49. Install the rear seat belts. Refer to Rear Seat Belt Replacement.
50. Install the front seat belts. Refer to Front Seat Belt Replacement.
51. Install the rear window shelf trim. Refer to Rear Window Shelf Trim Panel Replacement.
52. Install the rear seat back. Refer to Rear Seat Back Replacement.
53. Install the rear seat cushion. Refer to Rear Seat Cushion Replacement.
54. Install the front seats. Refer to Front Seat Replacement - Bucket.
55. Install the HVAC. Refer to HVAC Module Assembly Replacement.
56. If re-programming is required. Refer to Control Module References.
57. Install the instrument panel. Refer to Instrument Panel Carrier Replacement.
58. If re-programming is required. Refer to Control Module References.
59. Install the brake master cylinder. Refer to Master Cylinder Replacement.
60. Install the ABS unit. Refer to Brake Pressure Modulator Valve Assembly Replacement.
61. If re-programming is required. Refer to Control Module References.
62. Install the relay box. Refer to Underhood Electrical Center or Junction Block Replacement.
63. Install the plenum chamber. Refer to Air Inlet Assembly Replacement.
64. Install the air inlet grille. Refer to Air Inlet Grille Panel Replacement.
65. Install the front end module. Refer to Front End Panel Module Carrier Assembly Replacement.
66. Install the coolant reservoir. Refer to Coolant Recovery Reservoir Replacement.
67. Install the fender assembly. Refer to Front Fender Replacement.
68. Install the front fascia. Refer to Front Bumper Fascia Replacement.
69. Install the rear fascia. Refer to Rear Bumper Fascia Replacement.
70. Install the brake lines. Refer to.
71. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
72. Install the front strut assembly. Refer to Strut Assembly Replacement.
73. Install the front wheel hub assembly. Refer to Front Wheel Bearing and Hub Replacement.
74. Install the fuel tank. Refer to Fuel Tank Replacement or Fuel Tank Replacement.

    Important: This step is unique to the right body side ring.

75. Install the fuel lines. Refer to Fuel Hose/Pipes Replacement - Chassis or Fuel Hose/Pipes Replacement - Chassis.

    Important: This step is unique to the right body side ring.

76. Install the fuel filler actuator. Refer to Fuel Tank Filler Door Lock Actuator Replacement.

    Important: This step is unique to the right body side ring.

77. Install the fuel filler door. Refer to Fuel Tank Filler Door Lock Actuator Replacement.

    Important: This step is unique to the right body side ring.

78. Install the Filler Tube. Refer to Filler Tube Replacement or Filler Tube Replacement.
79. Install the rear frame assembly. Refer to Rear Frame Replacement.
80. Install the rear wheelhouse liner. Refer to Rear Inner Wheelhouse Replacement.
81. Install the front wheelhouse liner. Refer to Front Wheelhouse Liner Replacement.
82. Lower the vehicle.
83. Install the front doors. Refer to Front Side Door Replacement.
84. Install the rear doors. Refer to Rear Door Replacement.
85. Install the positive cable to the engine bay. Refer to Battery Positive Cable Replacement.
86. Install the negative cable to the engine bay. Refer to Battery Negative Cable Replacement.
87. Install the engine assembly. Refer to Engine Replacement or Engine Replacement.
88. Connect the negative battery cable. Refer to Battery Negative Cable Disconnection and

Connection.

89. Enable the SIR system. Refer to SIR Disabling and Enabling.
90. If re-programming is required. Refer to Control Module References.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Collision Repair | Repair Instructions | Document ID: 2069458

Roof Panel Replacement (Sedan)

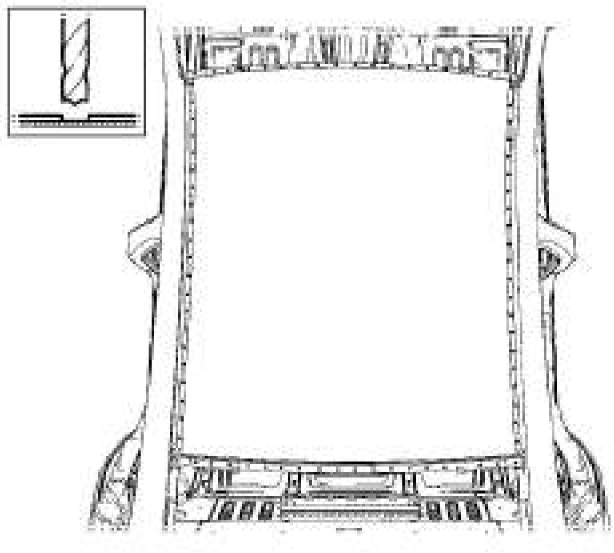
Removal Procedure

Caution: Refer to Approved Equipment for Collision Repair Caution in the Preface section.

Caution: Refer to Foam Sound Deadeners Caution in the Preface section.

Caution: Refer to Battery Disconnect Caution in the Preface section.

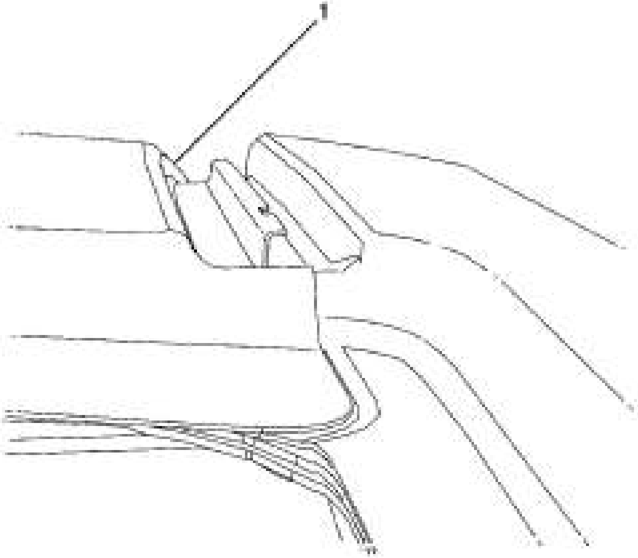
1. Disable the SIR system. Refer to SIR Disabling and Enabling in SIR.
2. Disconnect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
3. Remove the windshield garnish moulding. Refer to Windshield Garnish Molding Replacement.
4. Remove the inner rear quarter trim. Refer to Quarter Upper Trim Panel Replacement.
5. Remove the inner upper centre trim. Refer to Body Hinge Pillar Trim Panel Replacement.
6. Remove the overhead lighting panel. Refer to Dome Lamp Replacement.
7. Remove the headliner. Refer to Headlining Trim Panel Replacement in Interior Trim.
8. Remove the windshield. Refer to Windshield Replacement.
9. Remove the rear window. Refer to Rear Window Replacement.
10. Remove the roof weld moulding. Refer to Roof Weld Joint Reveal Molding Replacement.
11. Visually inspect the damage. Repair as much of the damage as possible.
12. Apply tape to the corners of the panels and adjacent surfaces.
13. Remove the sealers and anti-corrosion materials from the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.



Important: The roof panel is attached to the steel roof structure with beads of adhesive on the sides and spot-welds on the side rail, windshield and back-glass flanges. Replacement of the roof panel can be performed using conventional procedures, however, the windshield and back glass must be removed.

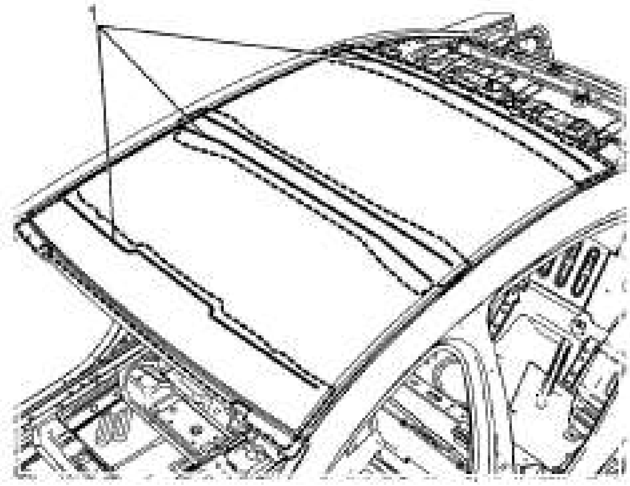
Important: The roof outer panel is secured to the body side panel with adhesive and spot welds, it cannot be removed by cutting the spot welds alone.

14. Locate, mark and drill all factory welds. Note the number and location of welds for installation of the service assembly.



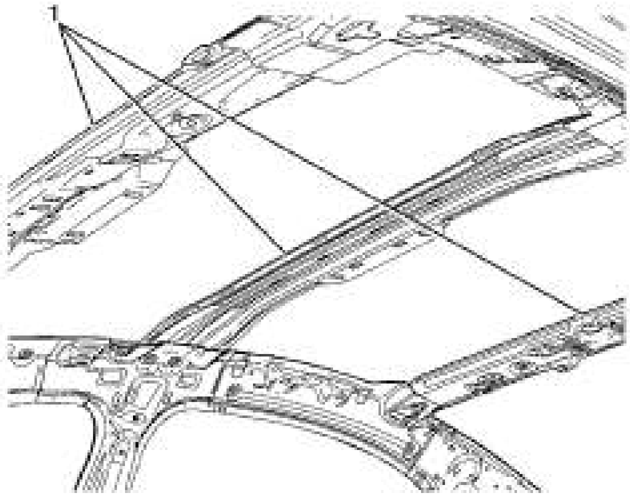
Important: Take care when cutting to protect adjacent panels. Cut inboard of the roof structure.

15. Using a suitable tool, cut through the roof outer panel along the inner side of the roof channel (1). Repeat for opposite side.



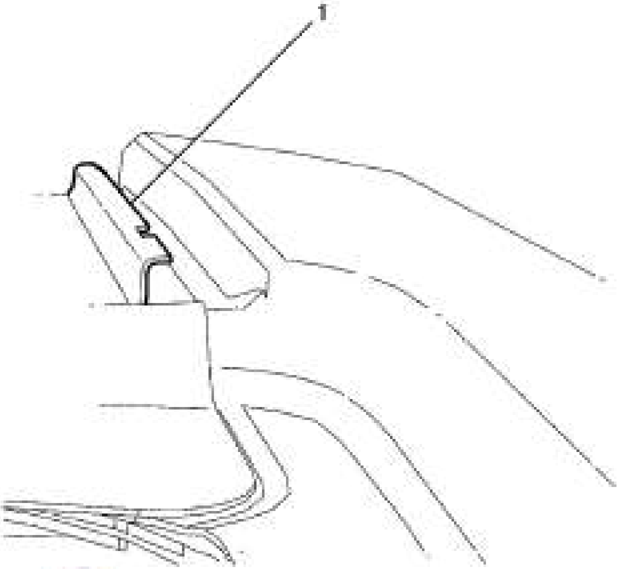
Important: Heating the 'anti-flutter' adhesive softens it making it easier to cut through.

16. Heat the 'anti-flutter' adhesive between the roof panel and the roof bows (1).



Important: The 'anti-flutter' adhesive (1) is between the roof bows and the roof outer panel.

17. Cut the 'anti-flutter' adhesive (1) with a suitable tool.
18. Remove the roof outer panel from the vehicle.



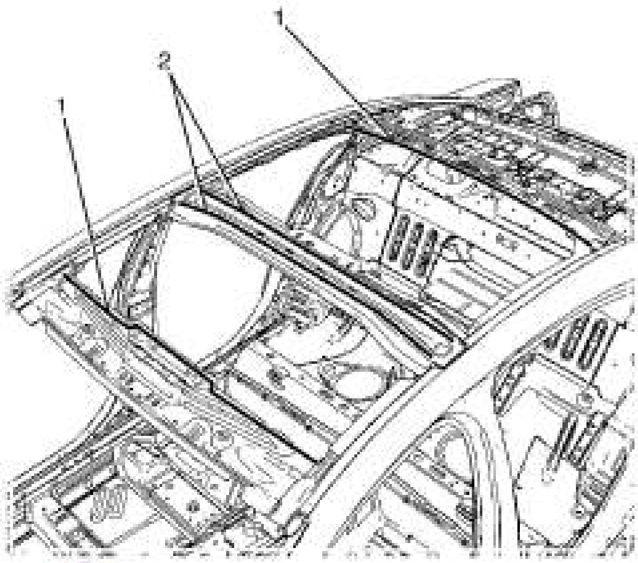
19. Using a suitable tool remove the remaining strip of roof panel (1) from the body side ring. repeat for opposite side.

Installation Procedure

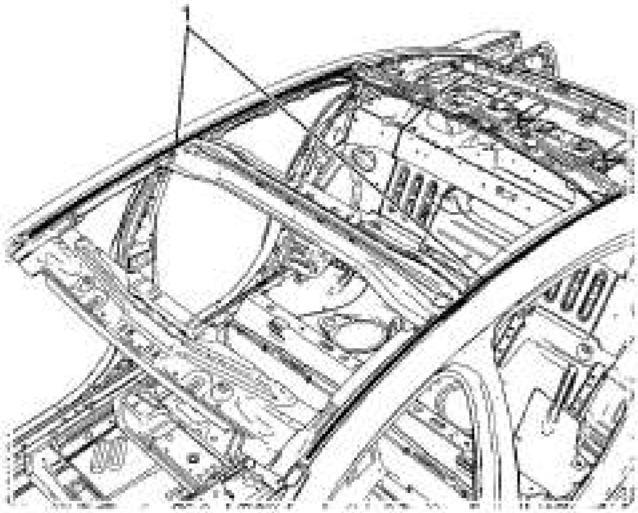
Important: If the location of the original spot weld holes can not be determined, or if structural weld-thru adhesive is present, space the puddle weld holes every 32 mm (1¼ in).

Important: Spot welding is the preferred method for attaching panels and should be used wherever possible. A puddle weld should be performed where your spot welder is unable to reach.

1. Clean and prepare the attaching surfaces for welding.
2. Clean the remaining anti-flutter adhesive from the front, centre and rear bow surfaces.
3. Drill 8 mm (5/16 in) puddle weld holes in the NEW roof outer panel in the locations to be puddle welded.

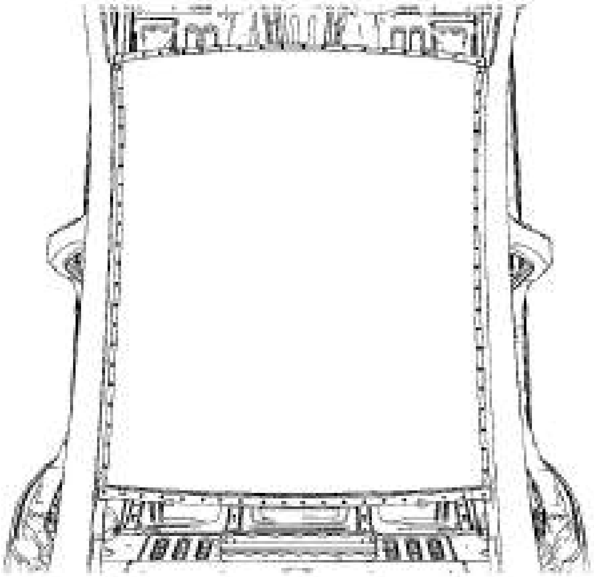


4. Apply two full beads of structural adhesive GM6449G or equivalent to the center bow (2).
5. Apply a full bead of structural adhesive GM6449G or equivalent to the front and rear bows (1).



6. Apply structural adhesive GM6449G or equivalent to the mating surfaces of the roof panel and body side panel (1).
7. Position the NEW roof outer panel to the vehicle.

8. Inspect the fit.
9. Clamp roof outer panel into correct position.



Important: Care must be taken to minimise the heat absorbed by the panel which could lead to panel distortion.

10. Spot weld or puddle weld the roof outer panel on both sides using the same number of welds as per original build.
11. Apply the sealers and anti-corrosion materials to the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.
12. Paint the repaired area. Refer to Basecoat/Clearcoat Paint Systems.
13. Install the roof weld moulding. Refer to Roof Weld Joint Reveal Molding Replacement.
14. Install the rear window. Refer to Rear Window Replacement.
15. Install the windshield. Refer to Windshield Replacement.
16. Install the headliner. Refer to Headlining Trim Panel Replacement in Interior Trim.
17. Install the overhead lighting panel. Refer to Dome Lamp Replacement.
18. Install the inner upper centre trim. Refer to Body Hinge Pillar Trim Panel Replacement.
19. Install the inner rear quarter trim. Refer to Quarter Upper Trim Panel Replacement.
20. Install the windshield pillar moulding. Refer to Windshield Garnish Molding Replacement.
21. Remove the tape to the corners of the panels and adjacent surfaces.
22. Connect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
23. Enable the SIR system. Refer to SIR Disabling and Enabling in SIR.
24. If re-programming is required. Refer to Control Module References.

Roof Outer Replacement (With Sunroof) Removal Procedure

Caution: Refer to Approved Equipment for Collision Repair Caution in the Preface section.

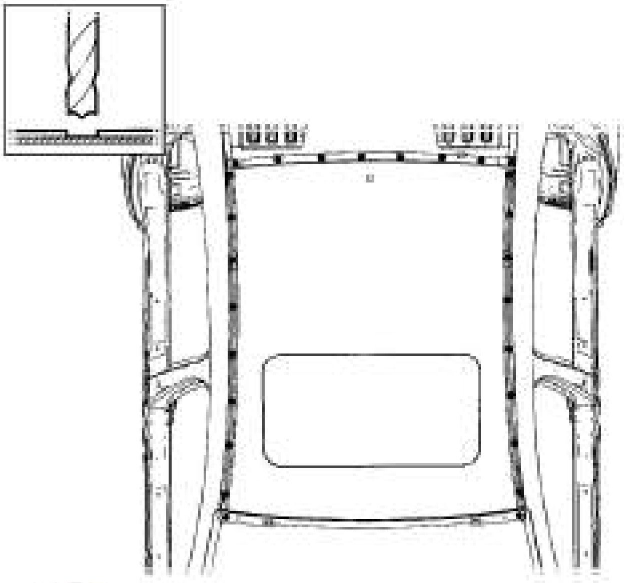
Caution: Refer to Foam Sound Deadeners Caution in the Preface section.

Caution: Refer to Battery Disconnect Caution in the Preface section.

Important: Use care when cutting to protect adjacent panels. Cut inboard of the roof structure.

Important: The roof panel is attached to the steel roof structure with beads of adhesive on the sides and spot-welds on the side rail, windshield and back-glass flanges. Replacement of the roof panel can be performed using conventional procedures, however, the windshield and back glass must be removed.

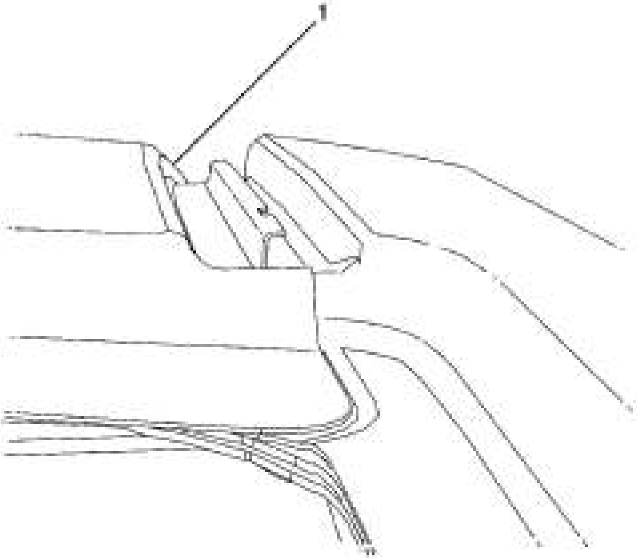
1. Disable the SIR system. Refer to SIR Disabling and Enabling in SIR.
2. Disconnect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
3. Apply tape to the corners of the panels and adjacent surfaces.
4. Remove the interior windshield garnish moulding. Refer to Windshield Garnish Molding Replacement.
5. Remove the inner rear quarter trim. Refer to Quarter Upper Trim Panel Replacement.
6. Remove the inner upper centre trim. Refer to Body Hinge Pillar Trim Panel Replacement.
7. Remove the over head lighting panel. Refer to Dome Lamp Replacement.
8. Remove the headliner. Refer to Headlining Trim Panel Replacement in Interior Trim.
9. Remove the windshield. Refer to Windshield Replacement.
10. Remove the rear window. Refer to Rear Window Replacement.
11. Remove the roof weld moulding. Refer to Roof Weld Joint Reveal Molding Replacement.
12. Remove the sunroof module. Refer to Sunroof Module Assembly Replacement.
13. Remove the front sunroof drain hose. Refer to Sunroof Housing Front Drain Hose Replacement.
14. Remove the rear sunroof drain hose. Refer to Sunroof Housing Rear Drain Hose Replacement.
15. Visually inspect the damage. Repair as much of the damage as possible.
16. Remove the sealers and anti-corrosion materials from the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.
17. Locate and mark all factory welds.



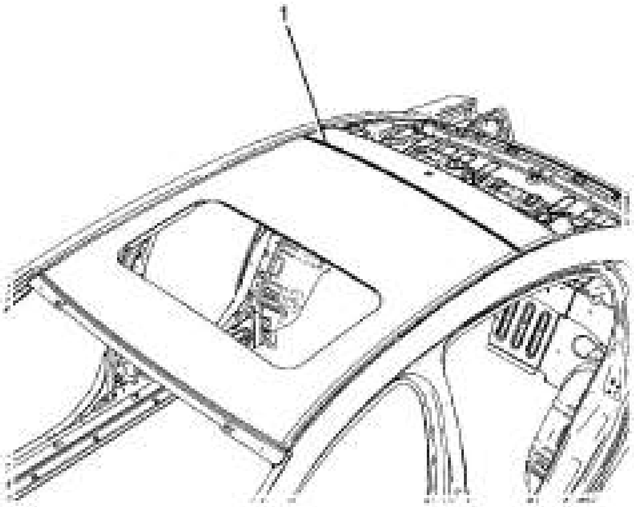
Important: The roof outer panel is secured to the body side panel with adhesive and spot welds, it cannot be removed by cutting the spot welds alone.

18. Drill all factory welds. Note the number and location of welds for installation of the service

assembly.

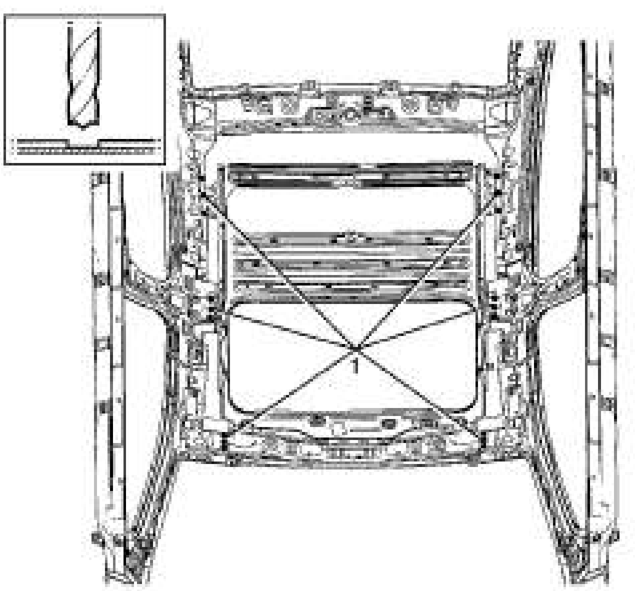


19. Using a suitable tool, cut through the roof outer panel along the side of the roof channel (1).

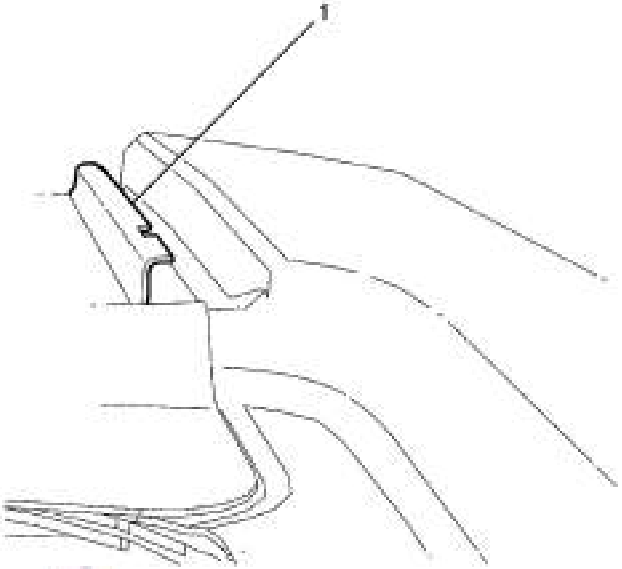


Important: Heating the 'anti-flutter' adhesive softens it making it easier to cut through.

20. Heat the 'anti-flutter' adhesive between the roof panel and the rear roof bow (1).



21. Locate, mark, and drill out the factory welds (1) attaching the roof panel assembly to the body side rings.
22. Remove the roof outer panel assembly from the vehicle.



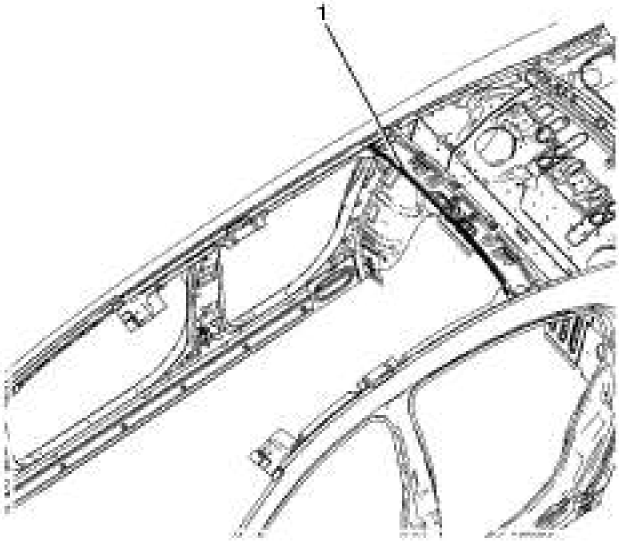
23. Using a suitable tool remove the remaining strip of roof panel (1) from the body side panel.

Roof Outer Replacement (With Sunroof) Installation Procedure

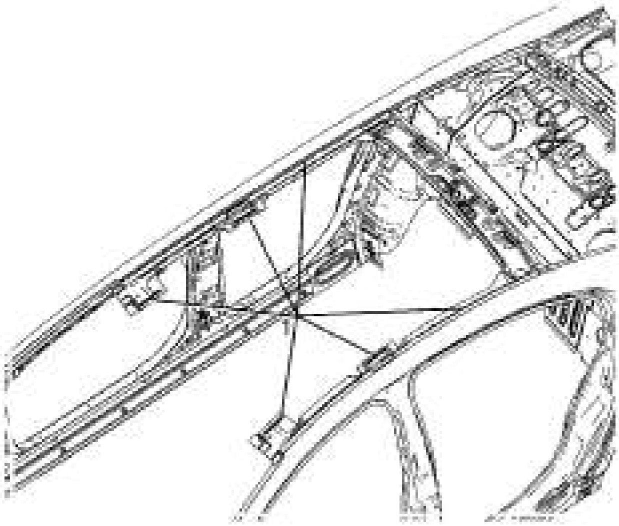
Important: If the location of the original spot weld holes can not be determined, or if structural weld-thru adhesive is present, space the puddle weld holes every 32 millimetres (1¼ in).

Important: Spot welding is the preferred method for attaching panels and should be used wherever possible. A puddle weld should be performed where your spot welder is unable to reach.

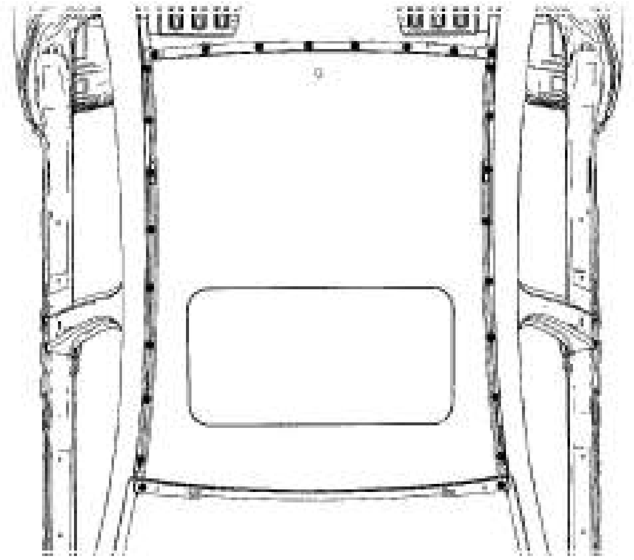
1. Clean and prepare the attaching surfaces for welding.
2. Clean the remaining anti-flutter adhesive from the front, centre and rear bow surfaces.
3. Mark the NEW roof outer panel with drilling locations, where puddle welding is necessary.
4. Drill 8 millimetres (5/16 in) puddle weld holes in the NEW roof outer panel in the locations to be puddle welded.



5. Apply a full bead of structural adhesive GM6449G or equivalent to the rear roof bow (1).



6. Apply structural adhesive GM6449G or equivalent to the mating surfaces of the roof panel and body side rings (1).
7. Position the NEW roof outer panel assembly to the vehicle.
8. Inspect for proper fitment.
9. Clamp roof outer panel into correct position.



Important: Care must be taken to minimise the heat absorbed by the panel which could lead to panel distortion.

10. Spot weld or puddle weld the roof outer panel on both sides using the same number of welds as per original build.
11. Apply the sealers and anti-corrosion materials to the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.
12. Paint the repaired area. Refer to Basecoat/Clearcoat Paint Systems.
13. Install the upper rear sunroof drain hose. Refer to Sunroof Housing Rear Drain Hose Replacement.
14. Install the front sunroof drain hose. Refer to Sunroof Housing Front Drain Hose Replacement.
15. Install the sunroof module. Refer to Sunroof Module Assembly Replacement.
16. If re-programming is required. Refer to Control Module References.
17. Install the roof weld moulding. Refer to Roof Weld Joint Reveal Molding Replacement.
18. Install the rear window. Refer to Rear Window Replacement.
19. Install the windshield. Refer to Windshield Replacement.
20. Install the headliner. Refer to Headlining Trim Panel Replacement in Interior Trim.
21. Install the over head lighting panel. Refer to Dome Lamp Replacement.
22. Install the inner upper centre trim. Refer to Body Hinge Pillar Trim Panel Replacement.
23. Install the inner rear quarter trim. Refer to Quarter Upper Trim Panel Replacement.
24. Install the interior windshield pillar moulding. Refer to Windshield Garnish Molding Replacement.
25. Remove the tape to the corners of the panels and adjacent surfaces.
26. Connect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
27. Enable the SIR system. Refer to SIR Disabling and Enabling in SIR.
28. If re-programming is required. Refer to Control Module References.

Roof Panel Replacement (Sportwagon)

Removal Procedure

Caution: Refer to Approved Equipment for Collision Repair Caution in the Preface section.

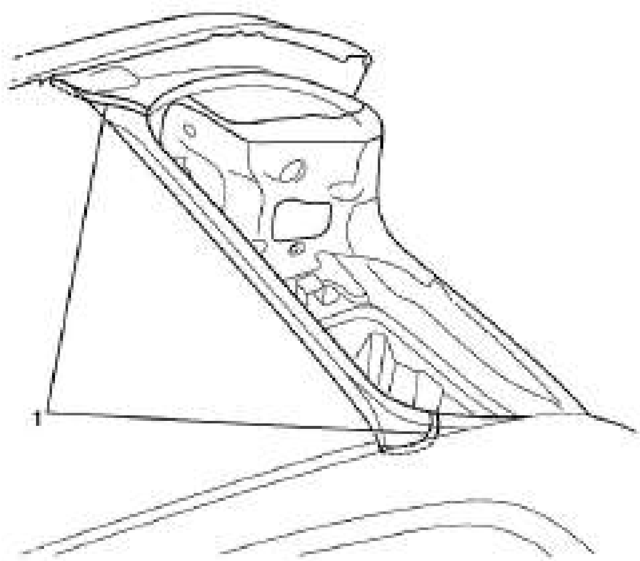
Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Foam Sound Deadeners Caution in the Preface section.

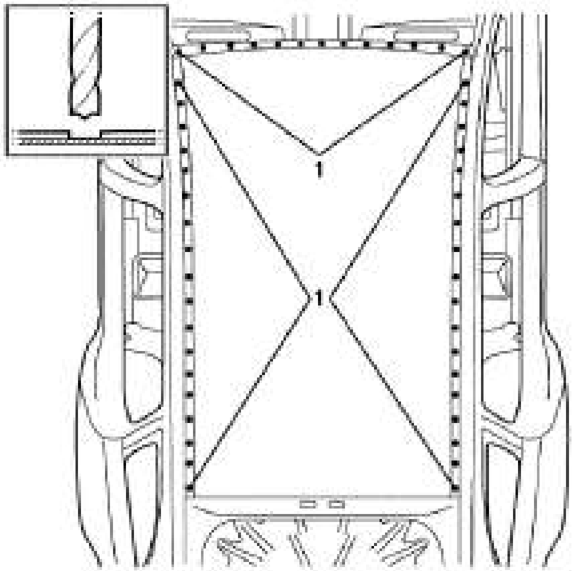
1. Disable the SIR system. Refer to SIR Disabling and Enabling.

   Caution: Refer to Battery Disconnect Caution in the Preface section.

2. Disconnect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
3. Remove the front seats. Refer to Front Seat Replacement - Bucket.
4. Remove the front seat belts. Refer to Front Seat Belt Replacement.
5. Remove the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.
6. Remove the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
7. Remove the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
8. Remove the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
9. Remove the liftgate weatherstrip. Refer to Liftgate Weatherstrip Replacement.
10. Remove the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
11. Remove the headlining rear trim panel retainer. Refer to Headlining Rear Trim Panel Retainer Replacement.
12. Remove the body side window rear garnish moulding. Refer to Body Side Window Rear Garnish Molding Replacement.
13. Remove the rear seat cushion. Refer to Rear Seat Cushion Replacement.
14. Remove the rear seat back. Refer to Rear Split Folding Seat Back Replacement.
15. Remove the headliner. Refer to Headlining Trim Panel Replacement.
16. Remove the roof weld joint reveal moulding. Refer to Roof Weld Joint Reveal Molding Replacement.
17. Remove the windshield pillar garnish moulding. Refer to Windshield Pillar Garnish Molding Replacement.
18. Remove the windshield. Refer to Windshield Replacement.
19. Remove the liftgate. Refer to Liftgate Replacement.
20. Remove the liftgate hinges. Refer to Liftgate Hinge Replacement.
21. Remove the liftgate weatherstrip. Refer to Liftgate Weatherstrip Replacement.
22. Remove the body side roof drip moulding. Refer to Body Side Roof Drip Molding Replacement.
23. Visually inspect the damage. Repair as much of the damage as possible.
24. Apply tape to the corners of the panels and adjacent surfaces.
25. Note the location and remove the sealers and anti-corrosion materials from the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.



26. Remove the sealer patches (1) from the joint between the roof panel and the gutter panel. Note the location of sealer patches for later installation.

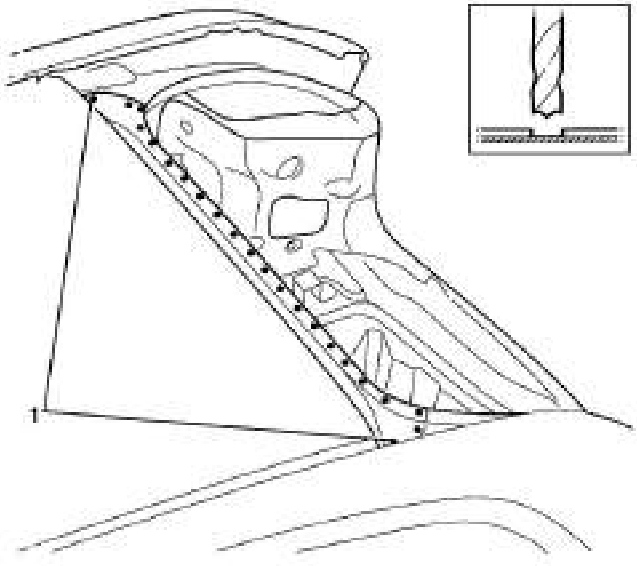


Important: The roof panel is attached to the steel roof structure with beads of adhesive on the sides and spot-welds on the side rail, windshield flange and rear roof header panel. Replacement of the roof panel can be performed using conventional procedures, however, the windshield and liftgate must be removed.

Important: The roof outer panel is secured to the body side panel with adhesive and spot welds, it cannot be removed by cutting the spot welds alone.

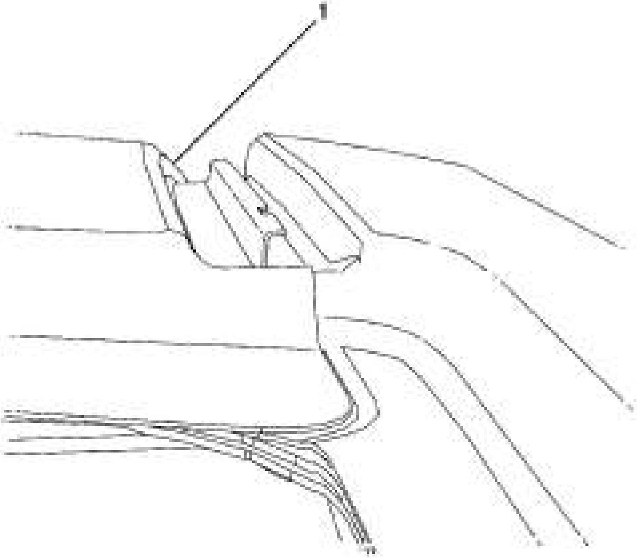
Important: Note the number and location of the factory welds for installation of the new roof outer panel assembly.

27. Locate, mark and drill out the factory welds attaching the roof outer panel to the vehicle (1). Note the number and location of welds for installation of the service assembly.



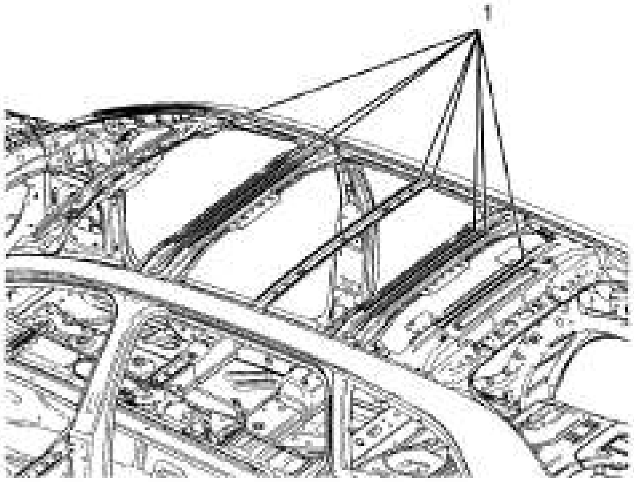
Important: Note the number and location of the factory welds for installation of the new roof outer panel assembly.

28. Locate, mark and drill out the factory welds attaching the roof outer panel to the roof rear header (1). Note the number and location of the welds for the installation of the service assembly.



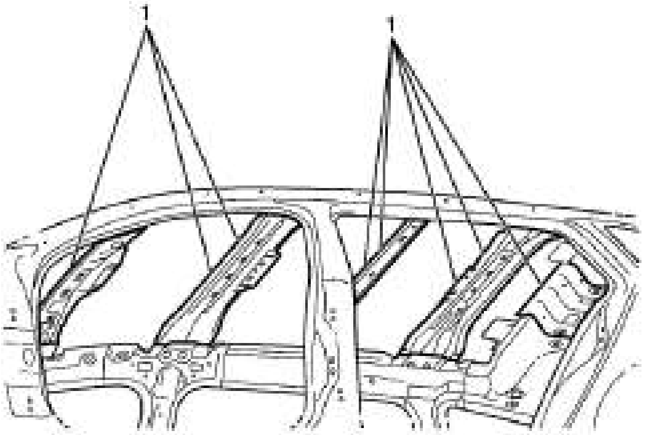
Important: Take care when cutting to protect adjacent panels. Cut inboard of the roof structure.

29. Using a suitable tool, cut through the roof outer panel along the inner side of the roof channel (1). Repeat for opposite side.



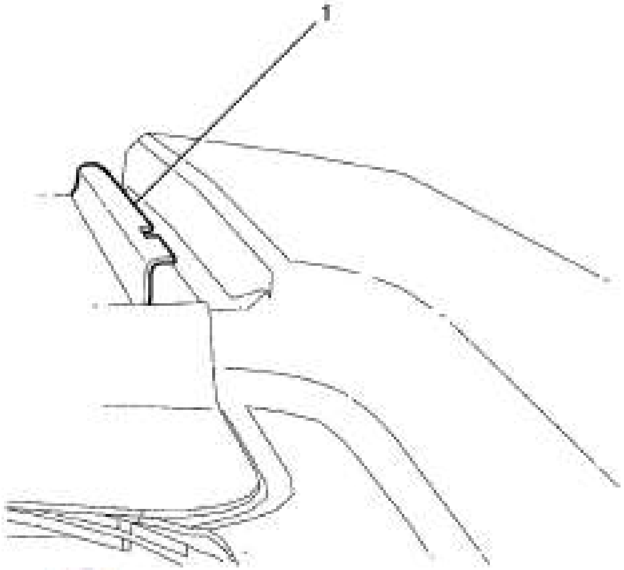
Important: Heating the 'anti-flutter' adhesive softens it making it easier to cut through.

30. Heat the 'anti-flutter' adhesive between the roof panel and the roof bows (1).

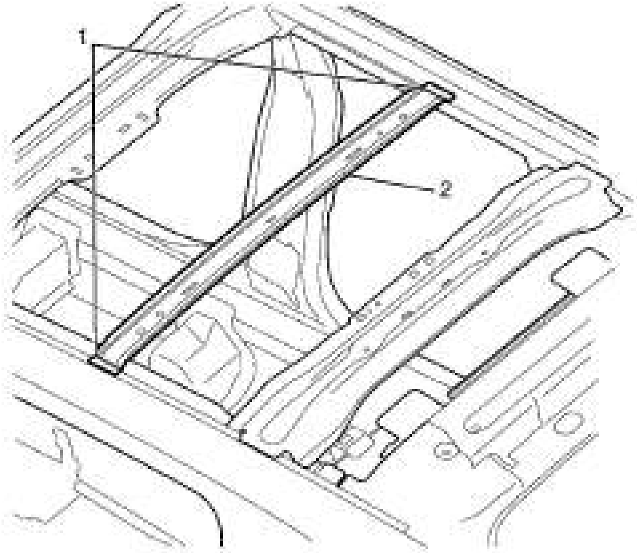


Important: The 'anti-flutter' adhesive (1) is between the roof bows and the roof outer panel.

31. Cut the 'anti-flutter' adhesive (1) with a suitable tool.
32. Remove the roof outer panel from the vehicle.



33. Using a suitable tool remove the remaining strip of roof panel (1) from the body side ring. repeat for opposite side.



Important: The centre roof bow panel is supplied welded to the roof outer panel. The centre roof bow panel is removed in this procedure as it will be replaced when the new roof outer panel is installed.

34. Mark a cut line (1) on the centre roof bow panel (2) inboard of the body side.

Important: Cut through the centre roof bow panel only. Do not damage any other panels or reinforcements.

35. Cut along the cut line (1) on the centre roof bow panel (2) with a suitable cutting tool.

36. Remove the centre portion of the centre roof bow panel (2) from the vehicle.
37. Using a suitable tool, remove the remaining outer portions of the centre roof bow panel from the vehicle. Ensure all traces of old adhesive are removed.

Installation Procedure

Important: Spot welding is the preferred method for attaching panels and should be used wherever possible. A puddle weld should be performed where your spot welder is unable to reach.

Important: Ensure that all factory welds are replaced in their original locations.

Important: Ensure that all structural adhesives are replaced in their original locations.

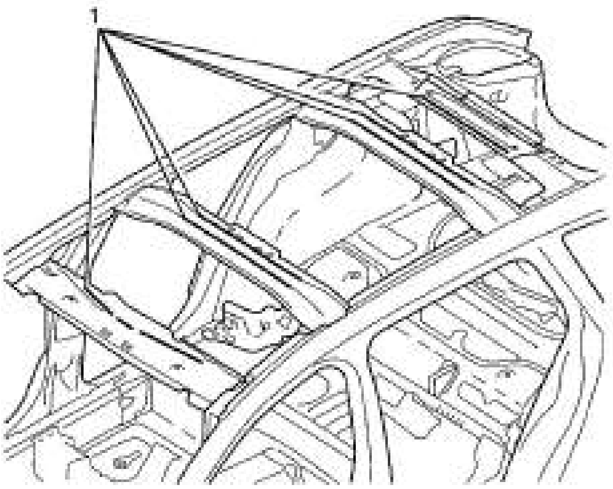
Important: If the location of the original spot weld holes can not be determined, or if structural weld-thru adhesive is present, space the puddle weld holes every 32 mm (1¼ in).

Important: Follow the adhesive manufacturer's instructions during the assembly process. Heat must be applied as per the manufacturer's specifications to cure the adhesives and to expand the sealing baffles.

1. Drill 8 mm (5/16 in) plug weld holes as necessary in the locations noted when disassembling.
2. Clean and prepare the mating surfaces of both parts of the body side panel assembly.

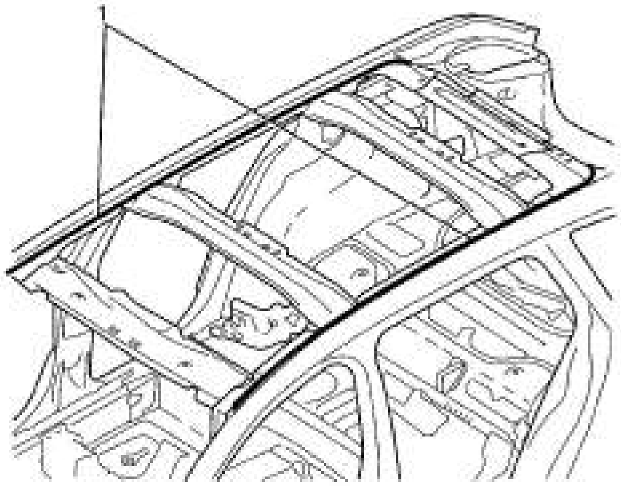
Important: Secondary sealer must be applied to the perimeter of all flanges. Secondary sealer must be applied to all welds/joints that were originally covered by secondary sealer.

3. Clean any remaining anti-flutter adhesive from the front, centre and rear roof bow and front/rear roof header surfaces.
4. Drill 8 mm (5/16 in) puddle weld holes in the NEW roof outer panel in the locations to be puddle welded.

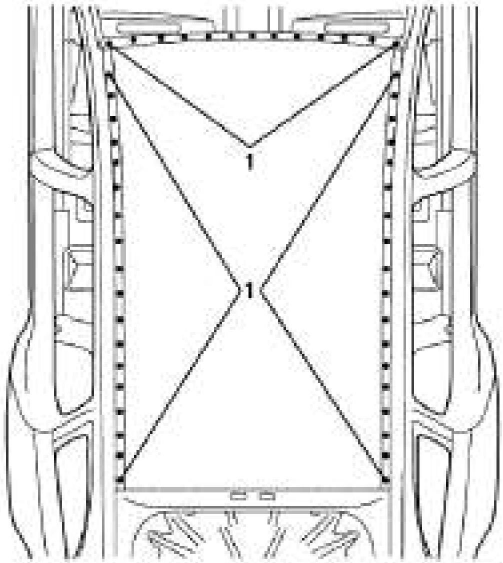


5. Apply two full beads (6mm dia) of approved anti-flutter adhesive to each of the roof bow panels (1).

6. Apply a full bead (6mm dia) of approved anti-flutter adhesive to the roof front and rear header panel (1).

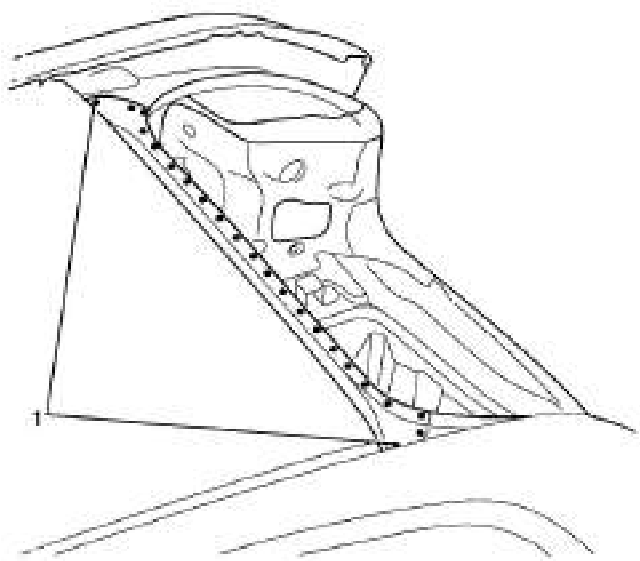


7. Apply an 8mm wide bead of structural adhesive (GM6449G or equivalent) to the mating surfaces of the Roof Outer Panel and Body Side Panel (1).
8. Position the NEW roof outer panel to the vehicle. Inspect the fit and clamp roof outer panel into correct position.



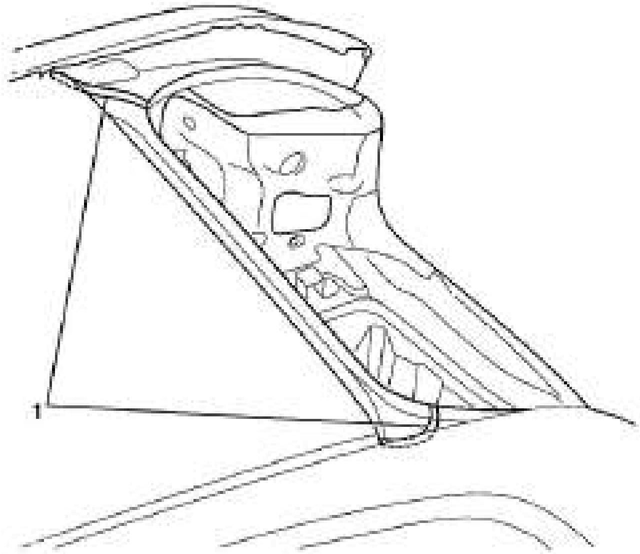
Important: Care must be taken to minimise the heat absorbed by the panel which could lead to panel distortion.

9. Weld the roof outer panel on to both sides and to the front roof header panel of the vehicle (1).



Important: Care must be taken to minimise the heat absorbed by the panel which could lead to panel distortion.

10. Weld the roof outer panel on to the rear roof header panel of the vehicle (1).



11. Apply secondary sealer (GM specification 9984532 or equivalent) (1) over the joint between the roof panel and gutter panel.
12. Apply the sealers and anti-corrosion materials to the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.
13. Paint the repaired area. Refer to Basecoat/Clearcoat Paint Systems.
14. Install the body side roof drip moulding. Refer to Body Side Roof Drip Molding Replacement.
15. Install the liftgate hinges. Refer to Liftgate Hinge Replacement.
16. Install the liftgate. Refer to Liftgate Replacement.

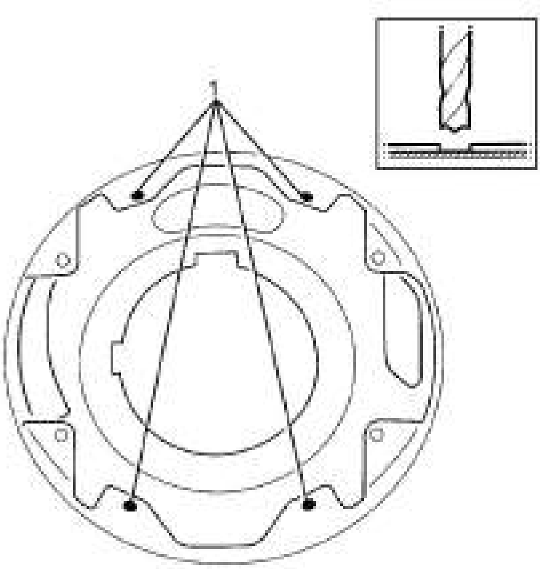
17. Install the windshield. Refer to Windshield Replacement.
18. Install the windshield pillar garnish moulding. Refer to Windshield Pillar Garnish Molding Replacement.
19. Install the roof weld joint reveal moulding. Refer to Roof Weld Joint Reveal Molding Replacement.
20. Install the headliner. Refer to Headlining Trim Panel Replacement.
21. Install the rear seat back. Refer to Rear Split Folding Seat Back Replacement.
22. Install the rear seat cushion. Refer to Rear Seat Cushion Replacement.
23. Install the body side window rear garnish moulding. Refer to Body Side Window Rear Garnish Molding Replacement.
24. Install the headlining rear trim panel retainer. Refer to Headlining Rear Trim Panel Retainer Replacement.
25. Install the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
26. Install the liftgate weatherstrip. Refer to Liftgate Weatherstrip Replacement.
27. Install the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
28. Install the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
29. Install the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
30. Install the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.
31. Install the front seat belts. Refer to Front Seat Belt Replacement.
32. Install the front seats. Refer to Front Seat Replacement - Bucket.
33. Connect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
34. Enable the SIR system. Refer to SIR Disabling and Enabling.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Collision Repair | Repair Instructions | **Document ID: 2077350**

Quarter Panel Replacement (SWB)

Removal Procedure (fuel filler pocket)

Important: When removing the right side quarter panel the petrol filler pocket will be removed with it. The petrol filler pocket has to be removed from the old right side quarter panel and assembled on the NEW right side quarter panel.



1. Locate, mark and drill out the four spot welds (1) from the body side ring.
2. Remove the petrol filler pocket from the right side quarter panel.

Installation Procedure (fuel filler pocket)

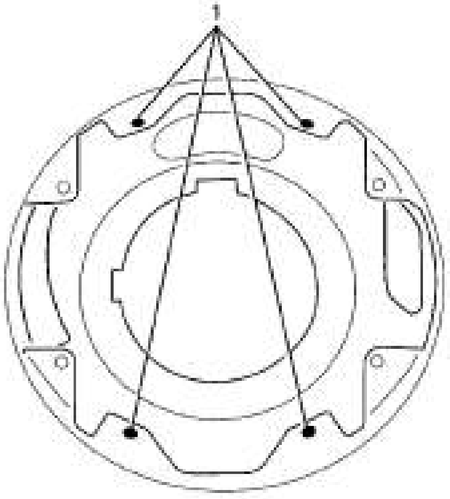
Important: If the location of the original plug weld holes can not be determined, or if structural weld-thru adhesive is present, space the plug weld holes every 32 mm (1¼ in).

Important: Spot welding is the preferred method for attaching panels and should be used wherever possible. A plug weld should be performed where your spot welder is unable reach.

1. Clean and prepare the mating surfaces of both parts of the body side ring.

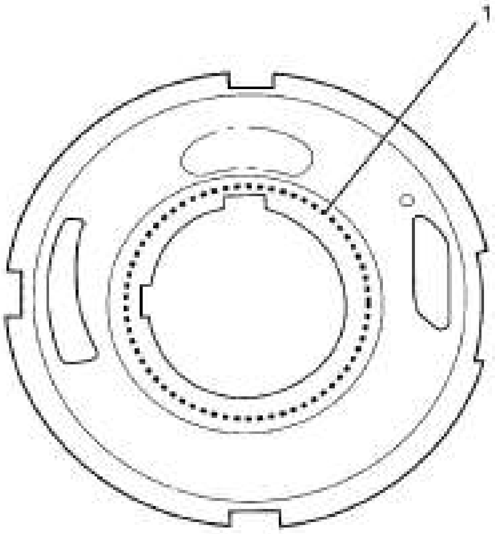
Important: Make sure that the alignment of the hinge and fuel filler door is correct.

2. Position the petrol filler pocket to the NEW right side quarter panel.

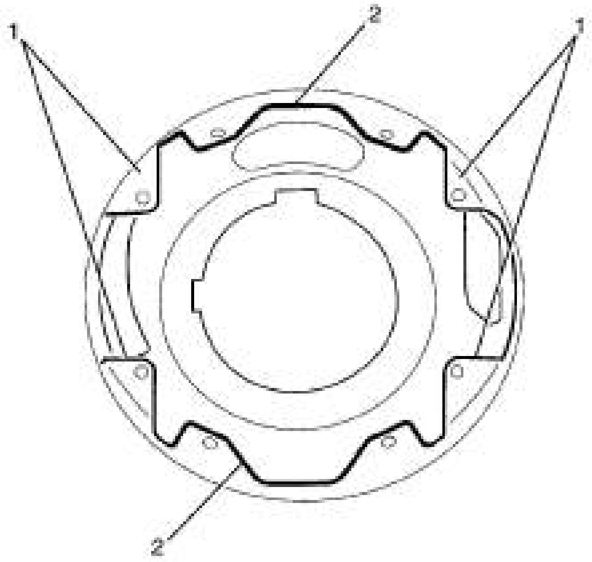


Important: Make sure that the alignment of the hinge and fuel filler door is correct.

3. Weld (1) the fuel filler pocket to the right side quarter panel.



4. Apply the primary sealer (1) GM6449G or equivalent along the fuel filler pocket and the inner panel.



Important: Seal behind the 4 tabs (1) to prevent water and fume leaks between the fuel filler pocket and the right side quarter panel.

5. Apply the secondary sealer (1) GM specification 9984532 or equivalent along the fuel filler pocket and the right side quarter panel tabs (1).

Removal Procedure

Caution: Refer to Approved Equipment for Collision Repair Caution in the Preface section.

Caution: Refer to Foam Sound Deadeners Caution in the Preface section.

Caution: Refer to Glass and Sheet Metal Handling Caution in the Preface section.

Caution: Refer to Battery Disconnect Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

Important: The full body-side outer panel comes as a complete assembly and can be replaced at factory seams after the removal of the fixed glass and roof. Any one of these service procedures can be performed separately or in any combination, dependent upon the extent of damage to the vehicle. Sectioning must take place in specified areas only.

1. Disable the SIR system. Refer to SIR Disabling and Enabling in SIR.
2. Disconnect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
3. Remove the battery. Refer to Battery Replacement.
4. Remove the battery tray. Refer to Battery Tray Replacement.
5. Remove the deck lid. Refer to Rear Compartment Lid Replacement.
6. Remove the rear door seals. Refer to Rear Door Opening Weatherstrip Replacement.
7. Remove the rear interior trims. Refer to Quarter Upper Trim Panel Replacement.
8. Remove the roof lining. Refer to Headlining Trim Panel Replacement.

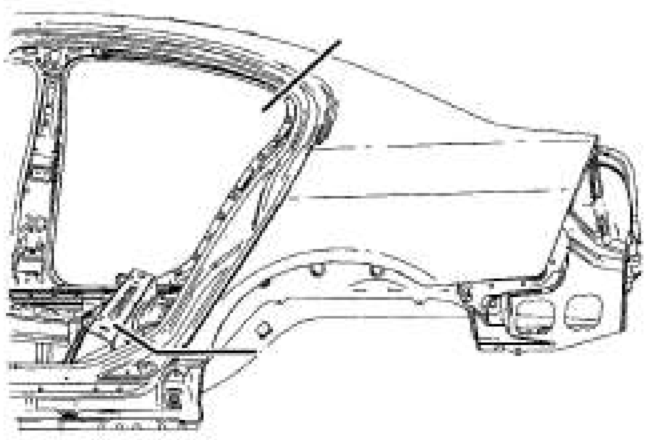
9. Remove the rear seat back. Refer to Rear Seat Back Replacement.
10. Remove the rear seats. Refer to Rear Seat Cushion Cover and Pad Replacement.
11. Remove the rear parcel shelf. Refer to Rear Window Shelf Trim Panel Replacement.
12. Remove the deck lid release cable. Refer to Rear Compartment Lid Latch Release Cable Replacement.

Important: When replacing panels that involve servicing of stationary glass, refer to Rear Window Replacement and Windshield Replacement. Sectioning should be performed only in the recommended areas. Failure to do so may compromise the structural integrity of the vehicle.

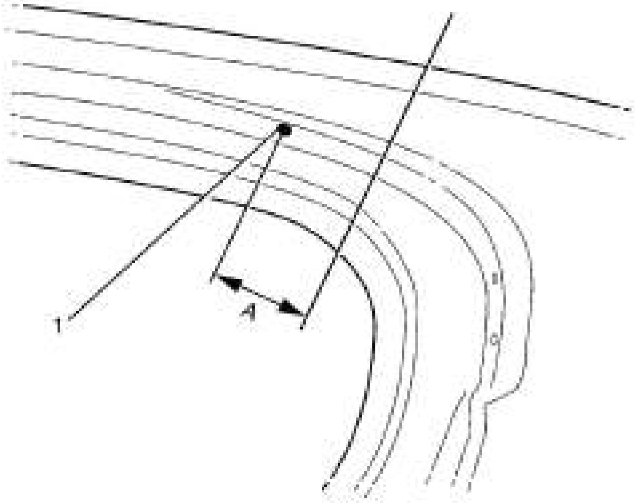
13. Remove the rear window. Refer to Rear Window Replacement.
14. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
15. Remove the rear wheels. Refer to Tire and Wheel Removal and Installation.
16. Remove the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
17. Remove the rear pressure relief valves. Refer to Pressure Relief Valve Replacement.
18. Remove the rocker panel moulds. Refer to Rocker Panel Molding Replacement.
19. Remove the rear wheelhouse liners. Refer to Rear Inner Wheelhouse Replacement.
20. Remove the rear exhaust assembly. Refer to Exhaust Muffler Replacement - Left Side and/or Exhaust Muffler Replacement - Right Side
21. Remove the rear exhaust muffler heat shields. Refer to Exhaust Muffler Heat Shield Replacement - Left Side and/or Exhaust Muffler Heat Shield Replacement - Right Side.
22. Remove the rear frame. Refer to Rear Frame Replacement.
23. Remove the rear brake lines. Refer to Brake Pipe Replacement.
24. Remove the fuel tank. Refer to Fuel Tank Replacement or Fuel Tank Replacement.
25. Remove the fuel lines. Refer to Filler Tube Replacement or Filler Tube Replacement.
26. Lower the vehicle.
27. Remove the roof moulding. Refer to Body Side Roof Drip Molding Replacement.

Important: This step is unique to the sunroof module.

28. Remove the rear sunroof drain tubes. Refer to Sunroof Housing Rear Drain Hose Replacement.
29. Remove the tail lights. Refer to Parking and Turn Signal Lamp Replacement.
30. Repair as much of the damage as possible.
31. Remove sound deadeners as necessary and note their location.
32. Remove the sealers and anti-corrosion materials from the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.

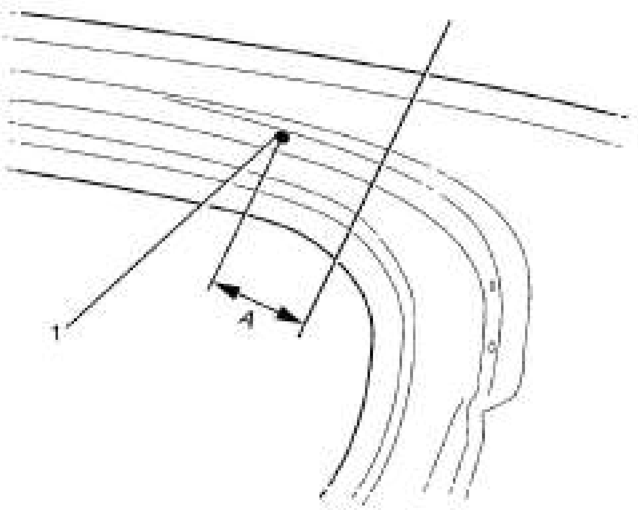


33. Create cut lines on the rocker panel and rear quarter panel within the approved sectioning locations.



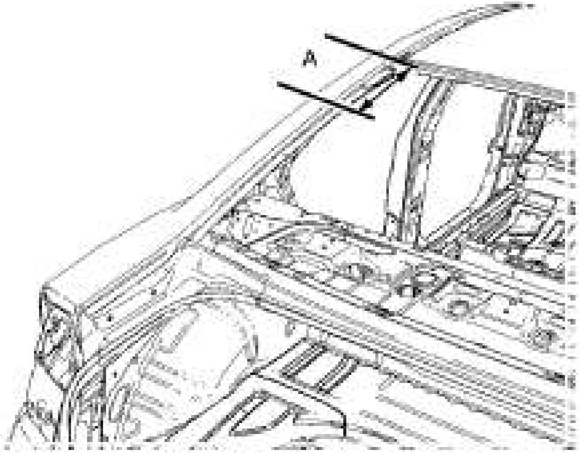
Important: Measure from the datum holes to create an accurate cut line.

34. Mark a cut line 47 mm (1.85 in) from datum point (1).
35. Mark a cut line 42 mm (1.65 in) from datum point (2).

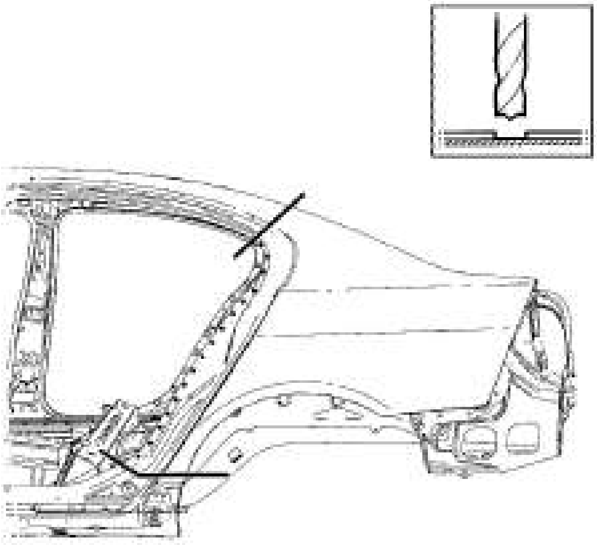


Important: Measure from the datum holes to create an accurate cut line.

36. Mark a cut line 75 mm (2.95 in) from datum point (1).

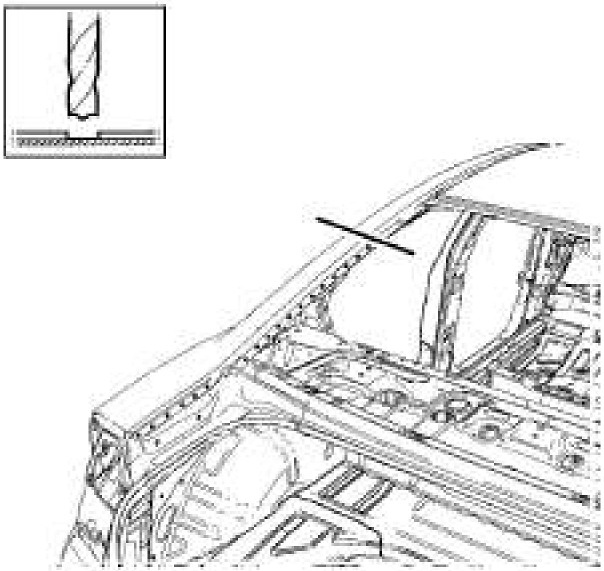


37. In the rear window opening, measure down 10 mm (0.39 in) from the rear edge of the roof (A).
38. Mark a cut line to the door opening.



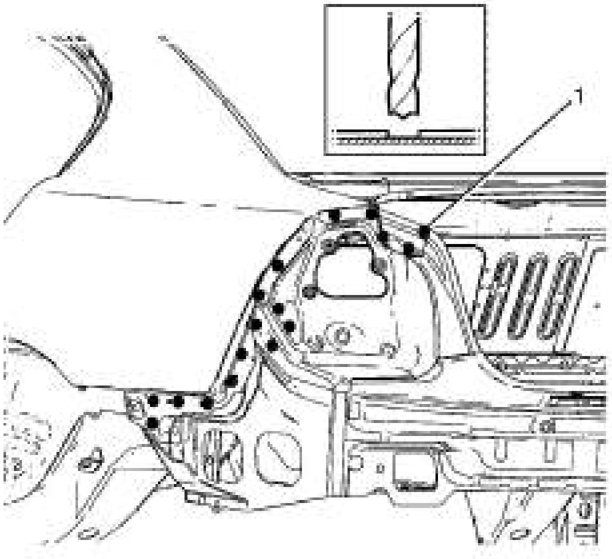
Important: Take care not damage any inner panels or reinforcements.

39. Locate, mark and drill out all the factory welds inside the cut lines on the quarter panel to body ring.



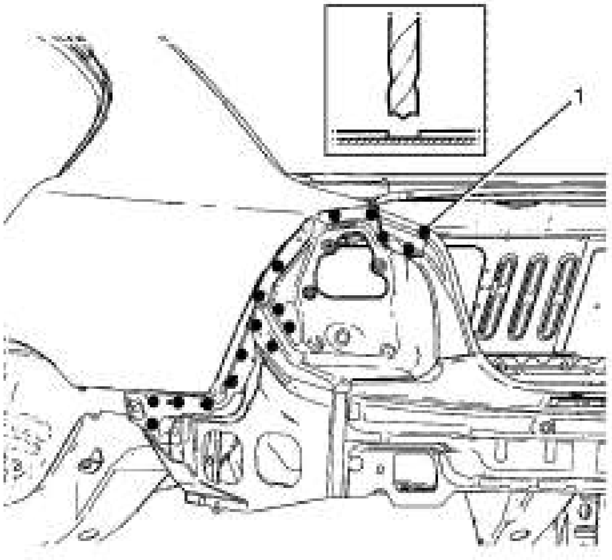
Important: Take care not damage any inner panels or reinforcements.

40. Locate, mark and drill out all the necessary factory welds inside the cut lines on the quarter panel to rear window sill.



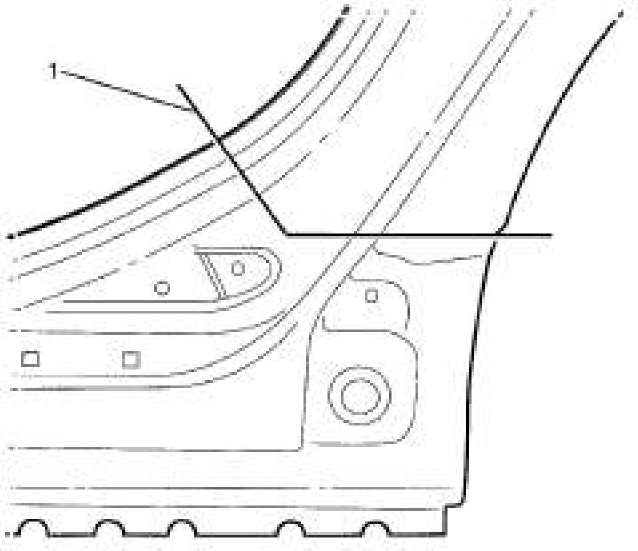
Important: Note the number and location of the factory welds for installation of the quarter panel.

41. Locate, mark, and drill out the factory welds (1) of the tail lamp and extension panel to rear quarter panel.



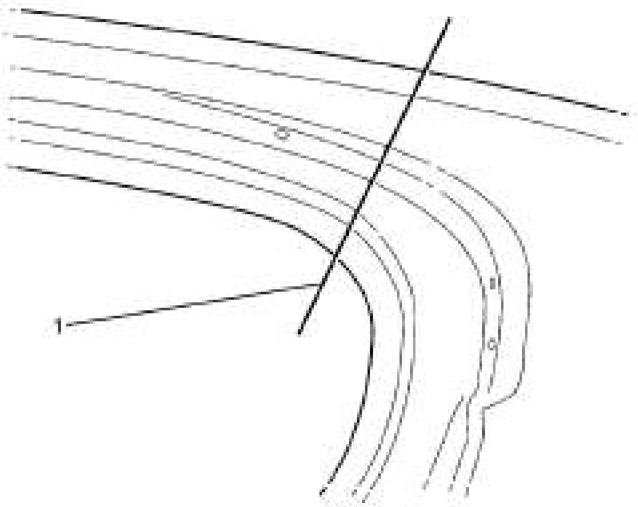
Important: Note the number and location of the factory welds for installation of the quarter panel.

42. Locate, mark and drill out factory welds (1) from the rear quarter panel to inner wheelhouse assembly.



Important: Only cut through the skin panel, outer panel. Do not damage any inner panels or reinforcements.

43. Cut along the cut line (1) on the body side outer skin panel with a suitable cutting tool.



Important: Only cut through the skin panel, outer panel. Do not damage any inner panels or reinforcements.

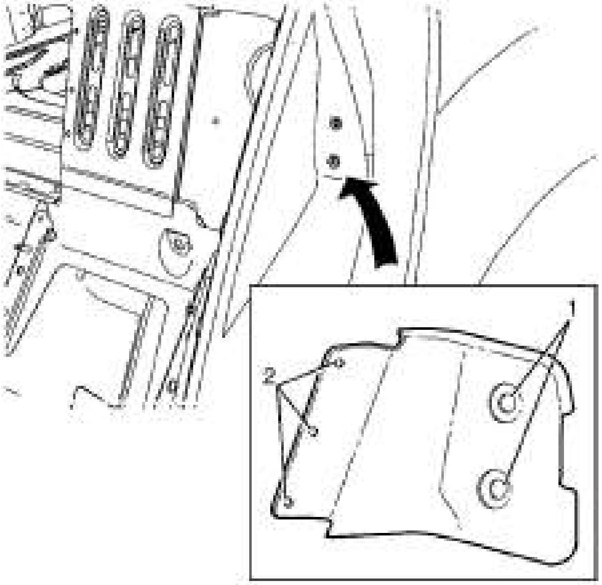
44. Cut along the cut line (1) on the body side outer skin panel with a suitable cutting tool.
45. Remove the damaged body side outer skin panel.

Installation Procedure

Important: If the location of the original spot weld holes can not be determined, or if structural weld-thru adhesive is present, space the puddle weld holes every 32 mm (1¼ in).

Important: Spot welding is the preferred method for attaching panels and should be used wherever possible. A puddle weld should be performed where your spot welder is unable to reach.

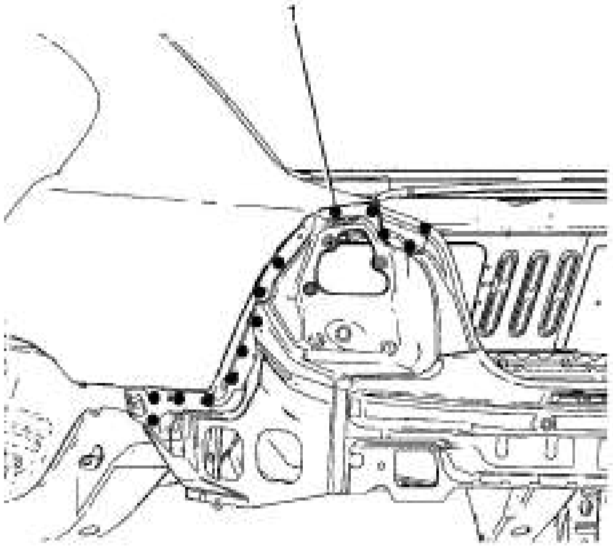
1. Cut the body side assembly in corresponding locations to fit the remaining original panel. The sectioning joint should be trimmed to allow a gap of one-and-one-half-times the metal thickness at the sectioning joint.



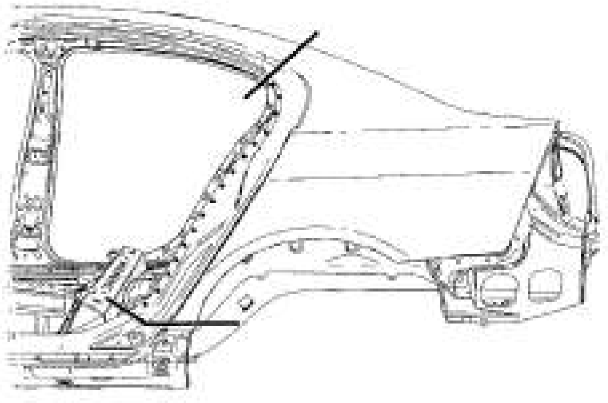
2. Align the bolt holes (1) for the rear door striker with holes in the body side outer.
3. Bolt the rear door striker into the holes (1) in the body side outer and through the reinforcement.

Important: If the location of the original spot weld holes can not be determined, or if structural weld-thru adhesive is present, space the puddle weld holes every 32 mm (1¼ in).

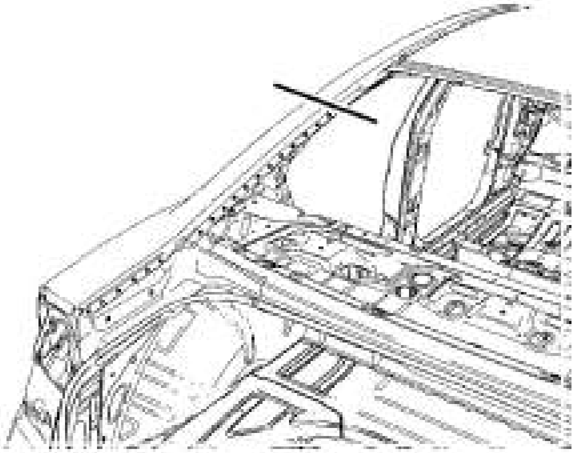
4. Drill 8 mm (5/16 in) puddle weld holes in the service part as necessary in the locations noted from the original panel.
5. Prepare all mating surfaces as necessary.
6. Position the body side outer skin panel to the vehicle.
7. Align quarter panel using three-dimensional measuring equipment.



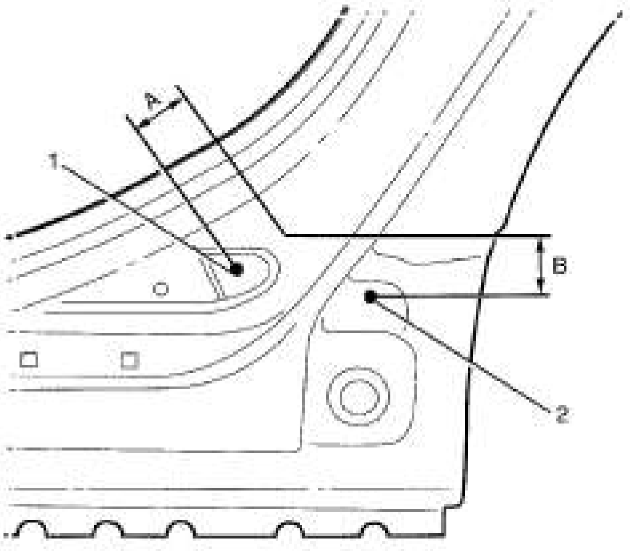
8. Weld (1) the quarter panel to the tail lamp filler panel and the inner side extension.



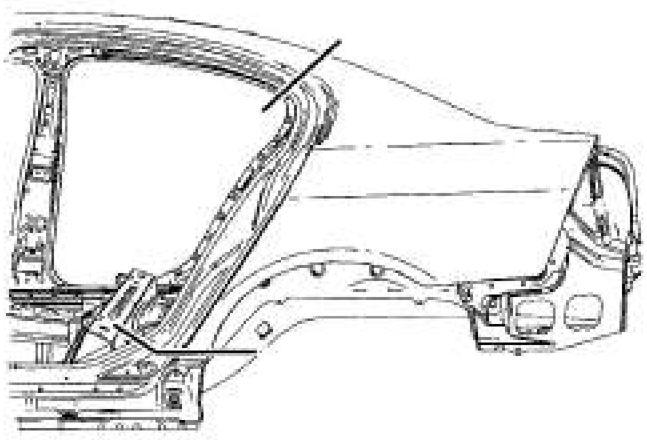
9. Weld the quarter panel to the rear door sill.
10. Weld the quarter panel to the body side ring outer panel.



11. Weld the quarter panel to the rear window sill.

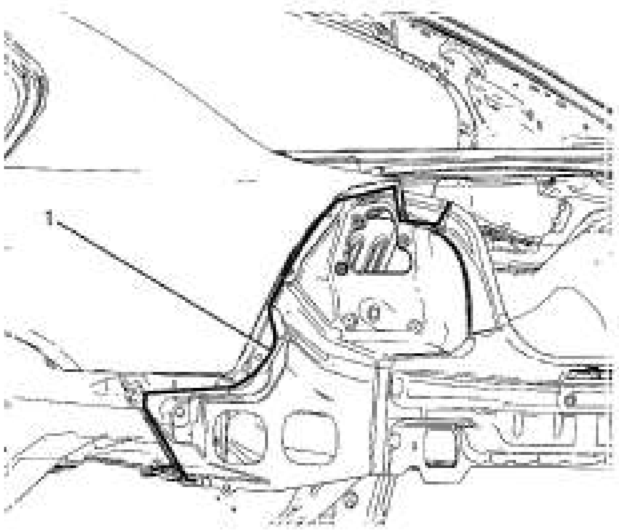


12. Weld (1) the quarter panel to the inner rear wheelhouse.

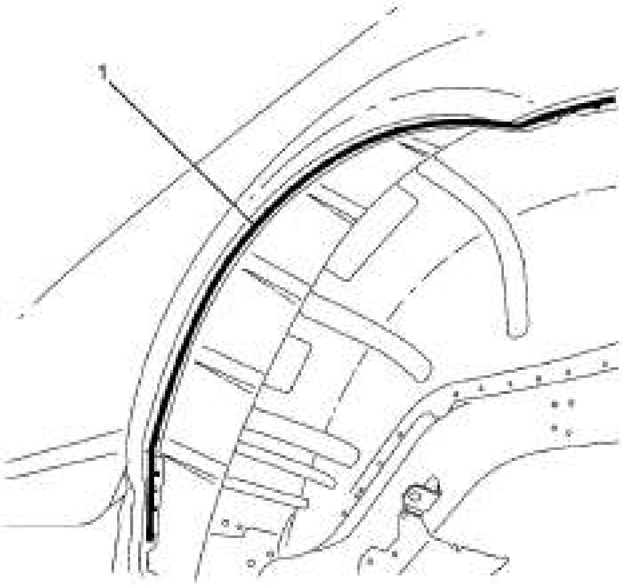


Important: To create a solid weld with minimum heat distortion, make 25 mm (1 in) stitch welds along the seam with 25 mm (1 in) gaps between them.

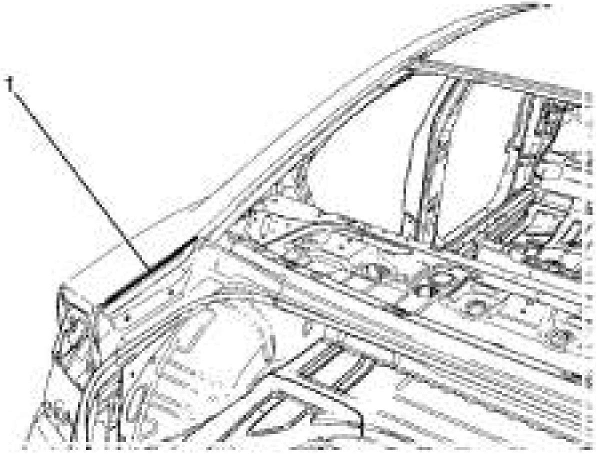
13. Stitch weld the rear quarter panel the vehicle.
14. Clean and prepare all of the welded surfaces.
15. Apply the sealers and anti-corrosion materials to the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair in Paint/Coatings.



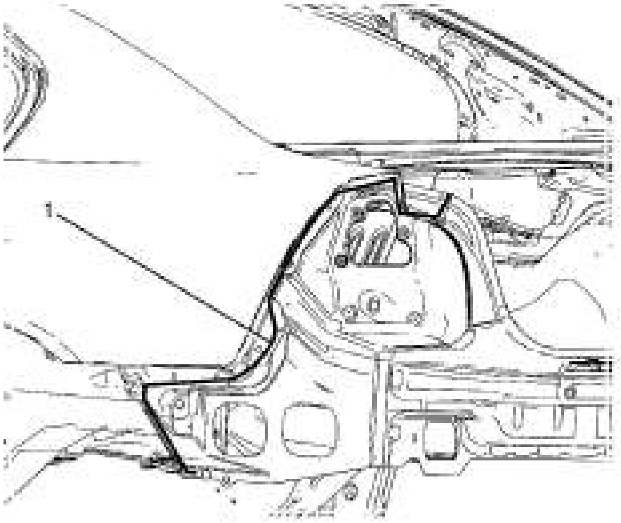
16. Apply the primary sealer (1) GM6449G or equivalent along the quarter panel to the tail lamp filler panel and side extension panel.



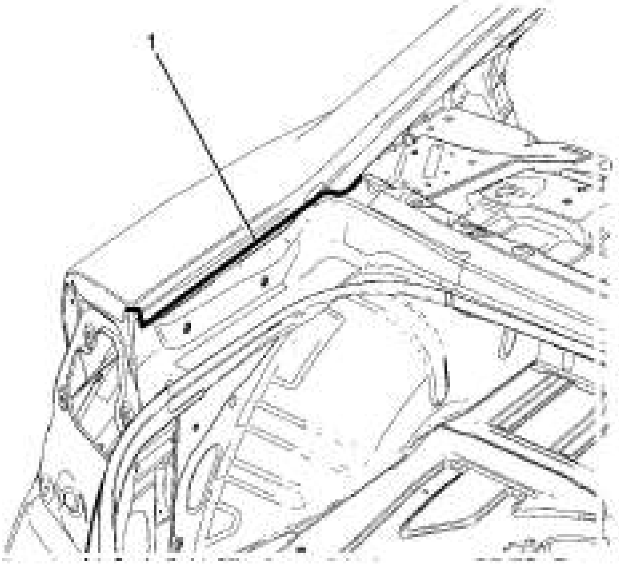
17. Apply the primary sealer (1) GM6449G or equivalent along the rear quarter panel to the rear wheel arch.



18. Apply the primary sealer (1) GM6449G or equivalent along the rear quarter panel to the body side ring outer.



19. Apply the secondary sealer (1) GM specification 9984532 or equivalent along rear quarter panel to the tail lamp filler panel and side extension panel.



20. Apply the secondary sealer (1) GM specification 9984532 or equivalent along the rear quarter panel to the body side ring outer panel.
21. Paint the repaired area. Refer to Basecoat/Clearcoat Paint Systems.
22. Install the tail lights. Refer to Parking and Turn Signal Lamp Replacement.

Important: This step is unique to the sunroof module.

23. Install the rear roof drain tubes. Refer to Sunroof Housing Rear Drain Hose Replacement.
24. Install the rear windshield. Refer to Rear Window Replacement.
25. Install the roof moulding. Refer to Body Side Roof Drip Molding Replacement.
26. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.

27. Install the fuel lines. Refer to Filler Tube Replacement or Filler Tube Replacement.
28. Install the fuel tank. Refer to Fuel Tank Replacement or Fuel Tank Replacement.
29. Install the rear brake lines. Refer to Brake Pipe Replacement.
30. Install the rear frame. Refer to Rear Frame Replacement.
31. Install the rear exhaust muffler heat shields. Refer to Exhaust Muffler Heat Shield Replacement - Left Side and Exhaust Muffler Heat Shield Replacement - Right Side.
32. Install the rear exhaust assembly. Refer to Exhaust Muffler Replacement - Left Side and Exhaust Muffler Replacement - Right Side.
33. Install the rear wheel house liners. Refer to Rear Inner Wheelhouse Replacement in Body Rear End.
34. Install the rocker panel moulds. Refer to Rocker Panel Molding Replacement.
35. Install the rear pressure relief valves. Refer to Pressure Relief Valve Replacement in Body Rear End.
36. Install the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
37. Install the rear wheels. Refer to Tire and Wheel Removal and Installation.
38. Lower the vehicle.
39. Install the deck lid release cable. Refer to Rear Compartment Lid Latch Release Cable Replacement.
40. Install the rear parcel shelf. Refer to Rear Window Shelf Trim Panel Replacement.
41. Install the rear seats. Refer to Rear Seat Cushion Cover and Pad Replacement.
42. Install the rear seat back. Refer to Rear Seat Back Replacement.
43. Install the roof lining. Refer to Headlining Trim Panel Replacement.
44. Install the rear interior trims. Refer to Quarter Upper Trim Panel Replacement.
45. Install the rear door seals. Refer to Rear Door Opening Weatherstrip Replacement.
46. Install the deck lid. Refer to Rear Compartment Lid Replacement.
47. Install the battery tray. Refer to Battery Tray Replacement.
48. Install the battery. Refer to Battery Replacement.

    Caution: Refer to Battery Disconnect Caution in the Preface section.

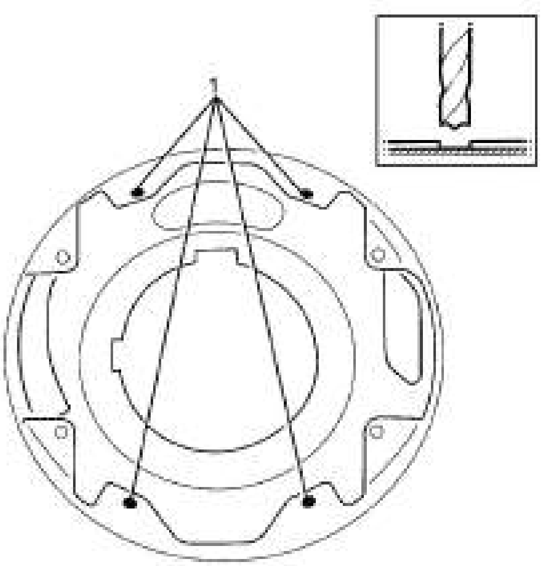
49. Connect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
50. Enable the SIR system. Refer to SIR Disabling and Enabling.
51. If re-programming is required. Refer to Control Module References.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Collision Repair | Repair Instructions | **Document ID: 2133250**

Quarter Panel Replacement (Sportwagon)

Removal Procedure (fuel filler pocket)

Important: When removing the right side quarter portion of the body side outer panel, the petrol filler pocket will be removed with it. The petrol filler pocket can be removed from the old right side quarter panel and assembled on the NEW right side quarter panel repair section.



1. Locate, mark and drill out the four spot welds (1) from the body side ring.
2. Remove the petrol filler pocket from the right side quarter panel.

Installation Procedure (fuel filler pocket)

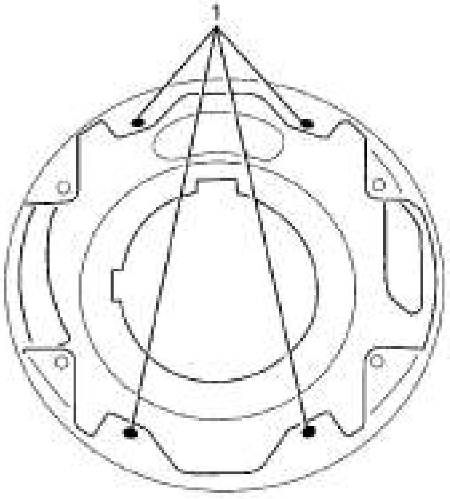
Important: If the location of the original plug weld holes can not be determined, or if structural weld-thru adhesive is present, space the plug weld holes every 32 mm (1¼ in).

Important: Spot welding is the preferred method for attaching panels and should be used wherever possible. A plug weld should be performed where your spot welder is unable reach.

1. Clean and prepare the mating surfaces of both parts of the body side ring.

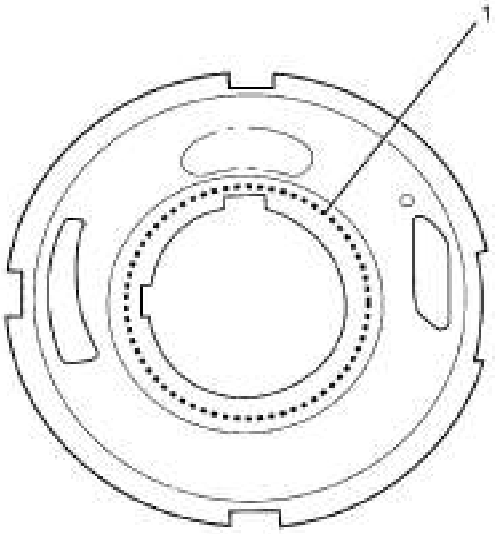
   Important: Make sure that the alignment of the hinge and fuel filler door is correct.

2. Position the petrol filler pocket to the NEW right side quarter panel.

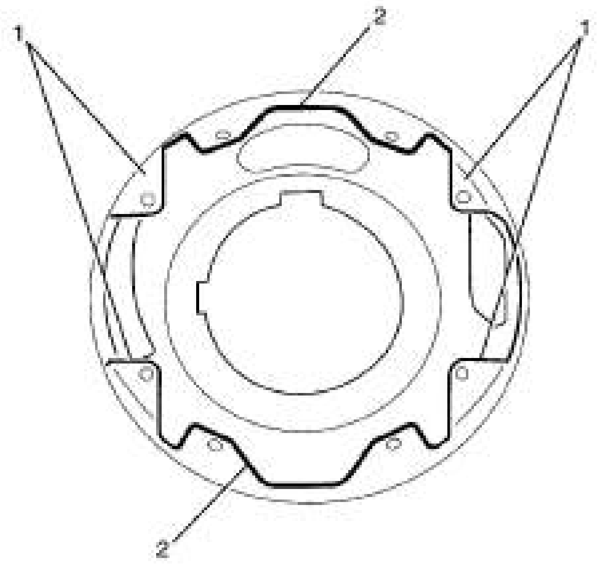


Important: Make sure that the alignment of the hinge and fuel filler door is correct.

3. Weld (1) the fuel filler pocket to the right side quarter panel.



4. Apply the primary sealer (1) GM6449G or equivalent along the fuel filler pocket and the inner panel.



Important: Seal behind the 4 tabs (1) to prevent water and fume leaks between the fuel filler pocket and the right side quarter panel.

5. Apply the secondary sealer (2) GM specification 9984532 or equivalent along the fuel filler pocket and the right side quarter panel tabs (1).

Removal Procedure

Caution: Refer to Approved Equipment for Collision Repair Caution in the Preface section.

Caution: Refer to Foam Sound Deadeners Caution in the Preface section.

Caution: Refer to Glass and Sheet Metal Handling Caution in the Preface section.

Caution: Refer to Battery Disconnect Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

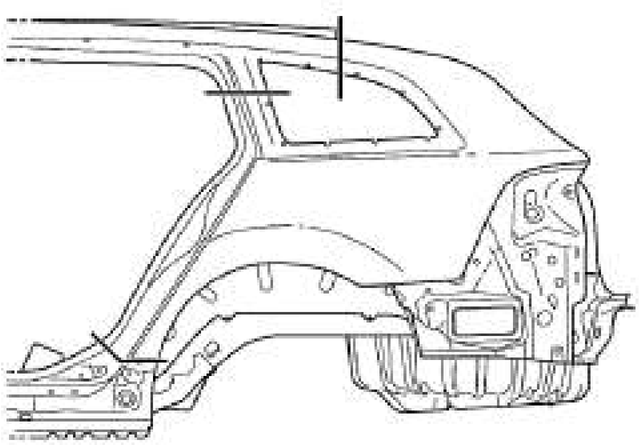
Important: The bodyside outer panel is supplied complete and must be cut to match the quarter panel repair area. Sectioning must take place in the specified areas only.

1. Disable the SIR system. Refer to SIR Disabling and Enabling in SIR.
2. Disconnect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
3. Remove the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.
4. Remove the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
5. Remove the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
6. Remove the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
7. Remove the liftgate weatherstrip. Refer to Liftgate Weatherstrip Replacement.

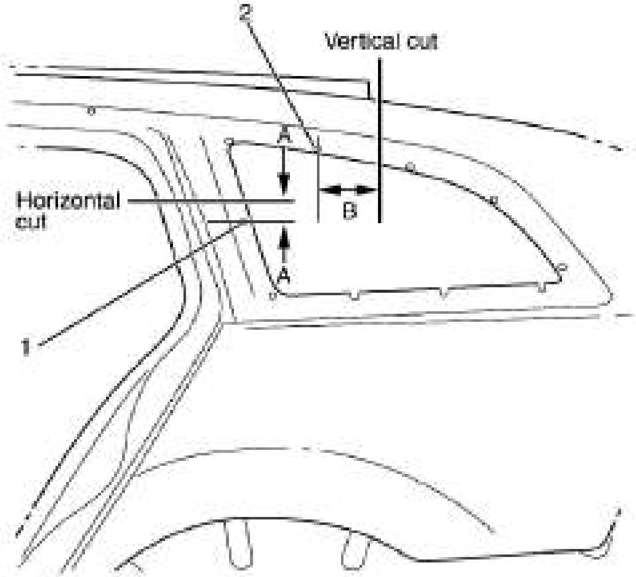
8. Remove the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
9. Remove the battery. Refer to Battery Replacement.
10. Remove the battery tray. Refer to Battery Tray Replacement.
11. Remove the liftgate. Refer to Liftgate Replacement.
12. Remove the rear door seal. Refer to Rear Door Opening Weatherstrip Replacement.
13. Remove the Body Side Roof Drip Moulding. Refer to Body Side Roof Drip Molding Replacement.
14. Remove the rear interior trims. Refer to Quarter Upper Trim Panel Replacement.
15. Remove the headliner. Refer to Headlining Trim Panel Replacement.
16. Remove the rear seat back. Refer to Rear Split Folding Seat Back Replacement.
17. Remove the rear seats. Refer to Rear Seat Cushion Cover and Pad Replacement.

Important: When replacing panels that involve servicing of stationary glass, refer to Rear Window Replacement and Windshield Replacement. Sectioning should be performed only in the recommended areas. Failure to do so may compromise the structural integrity of the vehicle.

18. Remove the rear window. Refer to Rear Window Replacement.
19. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle
20. Remove the rear wheels. Refer to Tire and Wheel Removal and Installation.
21. Remove the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
22. Remove the rear pressure relief valves. Refer to Pressure Relief Valve Replacement.
23. Remove the rocker panel moulds. Refer to Rocker Panel Molding Replacement.
24. Remove the rear wheelhouse liners. Refer to Rear Inner Wheelhouse Replacement.
25. Remove the rear exhaust assembly. Refer to Exhaust Muffler Replacement - Left Side and/or Exhaust Muffler Replacement - Right Side
26. Remove the rear exhaust muffler heat shields. Refer to Exhaust Muffler Heat Shield Replacement - Left Side and/or Exhaust Muffler Heat Shield Replacement - Right Side.
27. Remove the rear frame. Refer to Rear Frame Replacement.
28. Remove the rear brake lines. Refer to Brake Pipe Replacement.
29. Remove the fuel tank. Refer to Fuel Tank Replacement or Fuel Tank Replacement.
30. Remove the fuel lines. Refer to Filler Tube Replacement or Filler Tube Replacement.
31. Lower the vehicle.
32. Remove the roof moulding. Refer to Body Side Roof Drip Molding Replacement.
33. Remove the tail lights. Refer to Tail Lamp Assembly and /or Backup, Sidemarker, Stop, Turn Signal Bulb Replacement.
34. Repair as much of the damage as possible.
35. Remove sound deadeners as necessary and note their location.
36. Remove the sealers and anti-corrosion materials from the repair area and note their location. Refer to Anti-Corrosion Treatment and Repair.

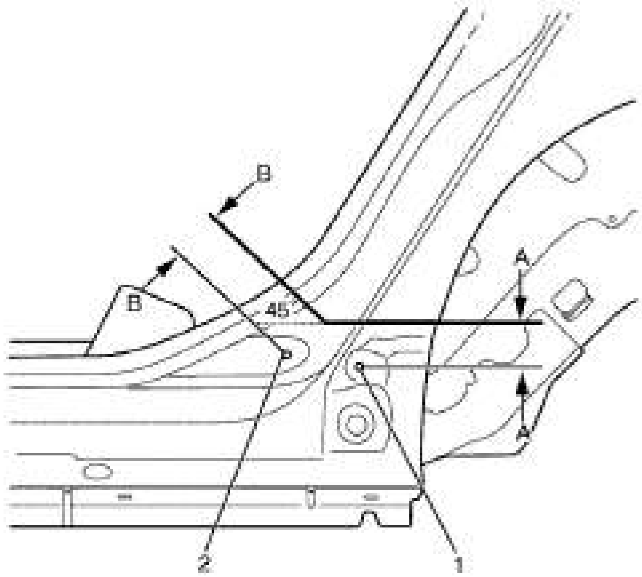


37. Create cut lines on the body side outer panel at the approved sectioning locations.



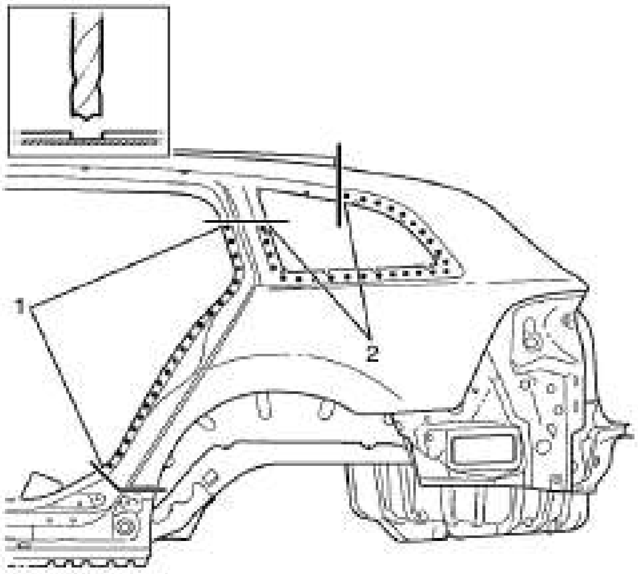
Important: Measure from the datum hole to create an accurate cut line.

38. Mark a horizontal cut line 35 mm (1.38 in) (Dimension A) above datum point (1).
39. Mark a vertical cut line 95 mm (3.74 in) (Dimension B) rearward of datum point (2).



Important: Measure from the datum holes to create an accurate cut line. Datum holes (1) and (2) are 9mm dia holes in the body side outer panel.

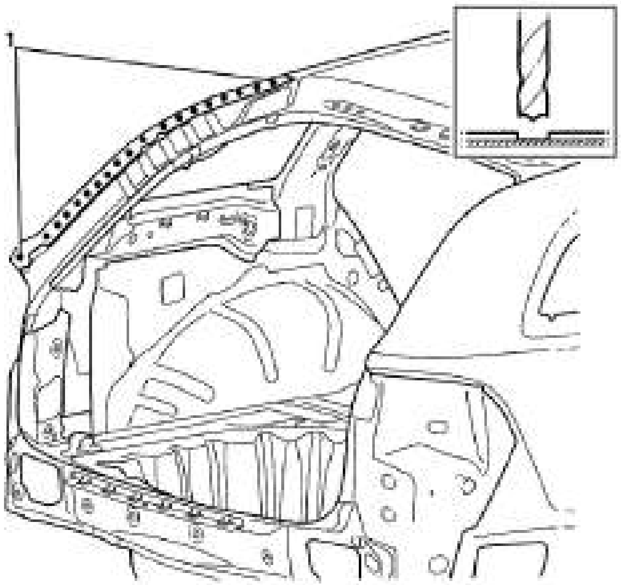
40. Mark a horizontal cut line 42 mm (1.65 in) (Dimension A) above datum point (1).
41. Mark a cut line 47 mm (1.85 in) (Dimension B) from datum point (2) measured at an angle of 45 degrees to the horizontal.



Important: Do not damage any inner panels or reinforcements.

Important: Note the number and location of the factory welds for installation of the rear quarter panel repair section.

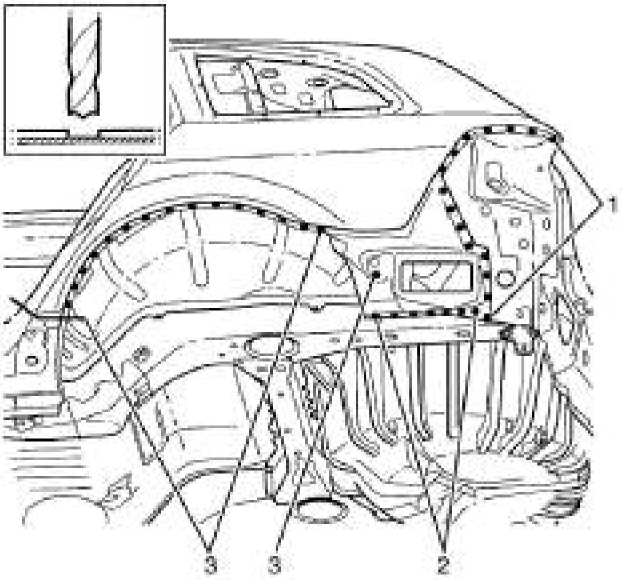
42. Locate, mark and drill out the factory welds (1) inside the cut lines on the body side outer panel to body ring.
43. Locate, mark and drill out the factory welds (2) inside the cut lines around the rear quarter window.



Important: Do not damage any inner panels or reinforcements.

Important: Note the number and location of the factory welds for installation of the rear quarter panel repair section.

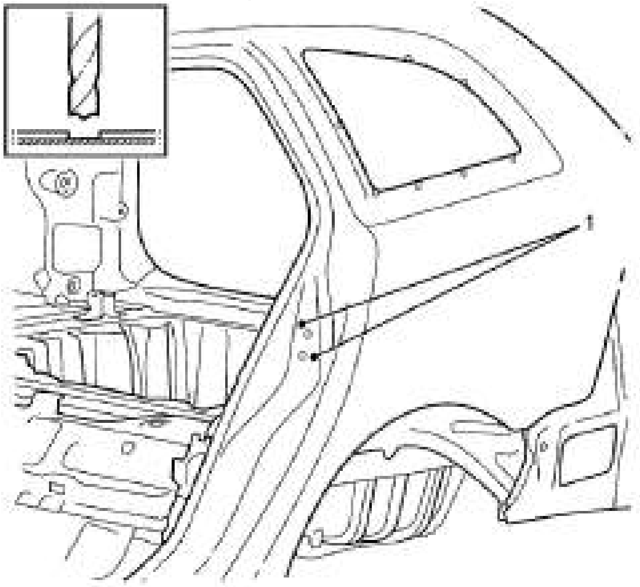
44. Locate, mark and drill out all the necessary factory welds (1) inside the cut lines on the body side outer panel to rear gutter panel.



Important: Do not damage any inner panels or reinforcements.

Important: Note the number and location of the factory welds for installation of the rear quarter panel repair section.

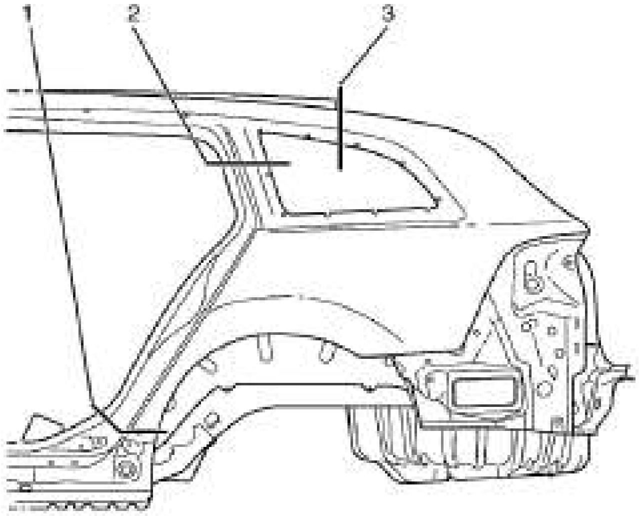
45. Locate, mark, and drill out the factory welds (1) joining the body side outer panel to the body tail lamp filler panel.
46. Locate, mark and drill out the factory welds (2) joining the body side outer panel to the body side inner panel extension.
47. Locate, mark and drill out the factory welds (3) joining the body side outer panel to the inner wheelhouse panel.



Important: Do not damage any inner panels or reinforcements.

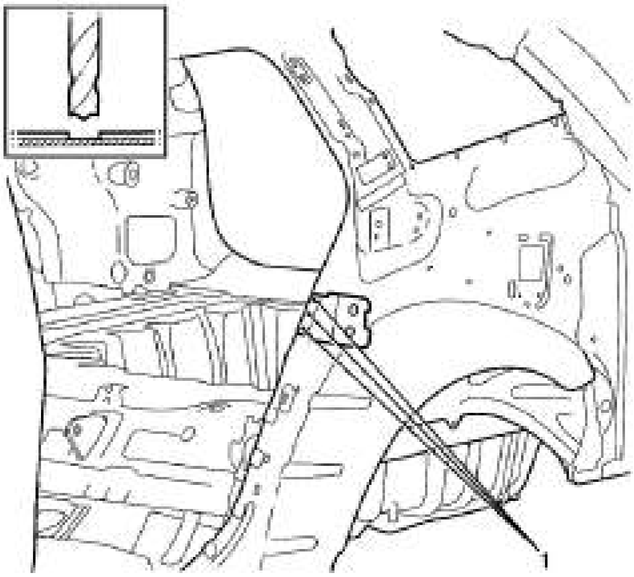
Important: Note the number and location of the factory welds for installation of the quarter panel repair section.

48. Locate, mark, and drill out the factory welds (1) joining the body side outer panel to the rear door lock striker reinforcement bracket.



Important: Only cut through the body side outer panel. Do not damage any inner panels or reinforcements.

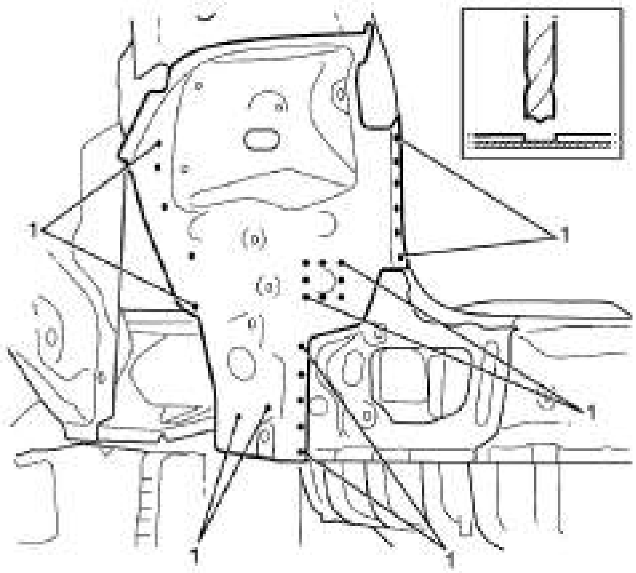
49. Cut along the cut line (1) on the body side outer panel with a suitable cutting tool.
50. Cut along the cut line (2) on the body side outer panel with a suitable cutting tool.
51. Cut along the cut line (3) on the body side outer panel with a suitable cutting tool.
52. Remove the damaged quarter portion of the body side outer panel.



Important: Note the number and location of the factory welds for installation of the quarter panel repair section.

53. Locate, mark and drill out the welds (1) joining the rear door striker reinforcement bracket

to the body ring.



Important: This step is only required if the body tail lamp filler panel is also to be replaced.

Important: Note the number and location of the factory welds for installation of the rear quarter panel repair section.

54. Locate, mark and drill out the factory welds (1) joining the body tail lamp filler panel to the vehicle.
55. Remove the damaged tail lamp filler panel from the vehicle.

Installation Procedure

Important: Spot welding is the preferred method for attaching panels and should be used wherever possible. A puddle weld should be performed where your spot welder is unable to reach.

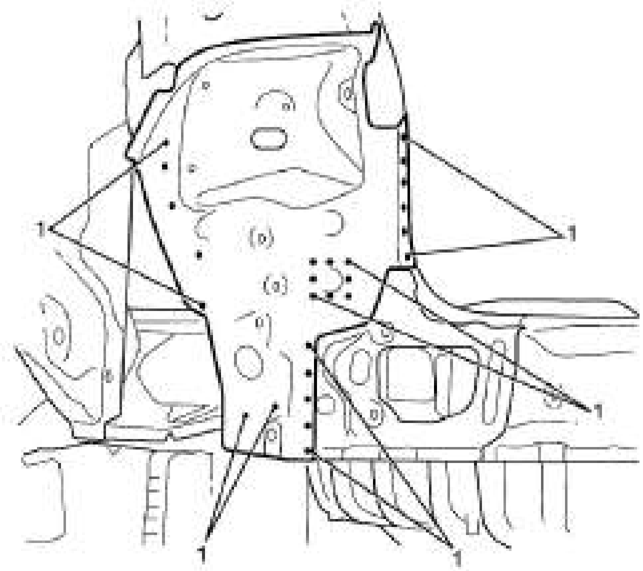
Important: Ensure that all factory welds are replaced in their original locations.

Important: Ensure that all structural adhesives and sealers are replaced in their original locations.

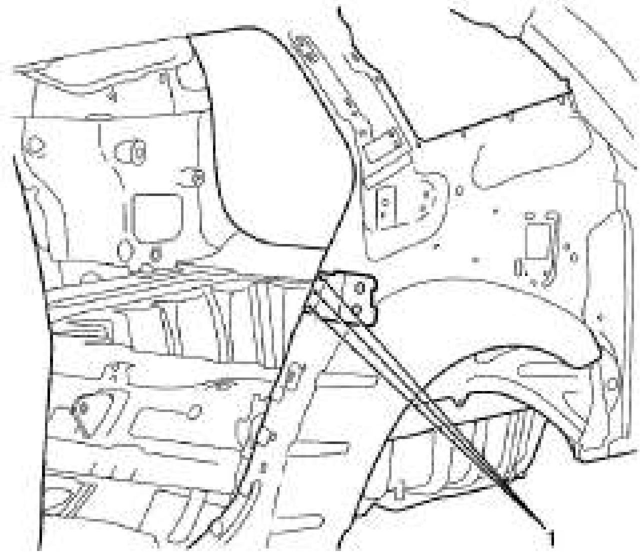
Important: If the location of the original spot weld holes can not be determined, or if structural weld-thru adhesive is present, space the puddle weld holes every 32 mm (1¼ in).

Important: This step is only required if the body tail lamp filler panel is also to be replaced.

1. Prepare all mating surfaces as necessary.
2. Drill 8 mm (5/16 in) puddle weld holes in the service part as necessary in the locations noted from the original panel.
3. Align the body tail lamp filler panel to the vehicle using three dimensional measuring equipment. Refer to Dimensions - Body



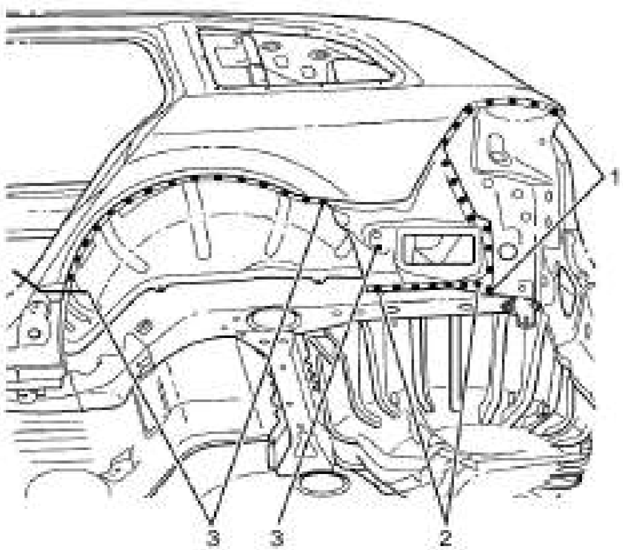
4. Weld the body tail lamp filler panel to the vehicle (1).
5. Drill 8 mm (5/16 in) puddle weld holes in the service part as necessary in the locations noted from the original panel.
6. Position and align the rear door striker reinforcement bracket to the vehicle using three dimensional measuring equipment. Refer to Dimensions - Body.



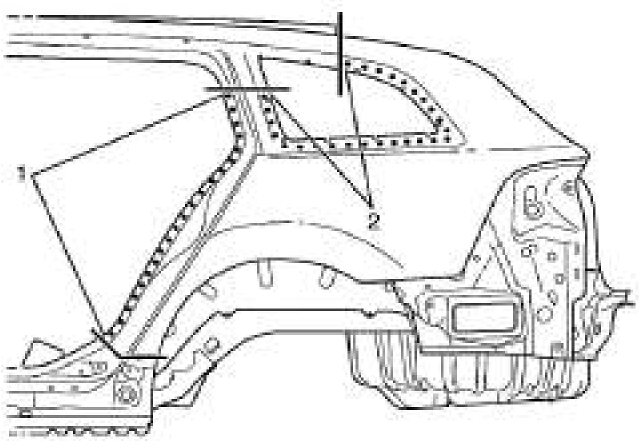
7. Weld the rear door reinforcement bracket (1) to the body ring.
8. Cut the new body side outer panel in corresponding locations to fit the remaining original body side outer panel. The sectioning joint should be trimmed to allow a gap of one-and-one-half-times the metal thickness at the sectioning joint.
9. Prepare all mating surfaces as necessary.

Important: If the location of the original plug weld holes can not be determined, or if structural weld-thru adhesive is present, space the plug weld holes every 32 mm (1¼ in).

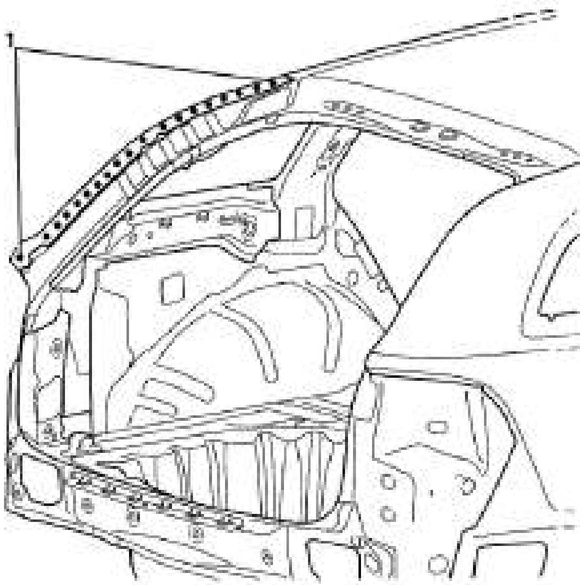
10. Drill 8 mm (5/16 in) puddle weld holes in the service part as necessary in the locations noted from the original panel.
11. Position and align the quarter panel repair section to the vehicle using three dimensional measuring equipment. Refer to Dimensions - Body.
12. Install the rear door striker into the bolt holes in the rear door striker reinforcement through the quarter panel repair section. Refer to Door Striker Replacement.



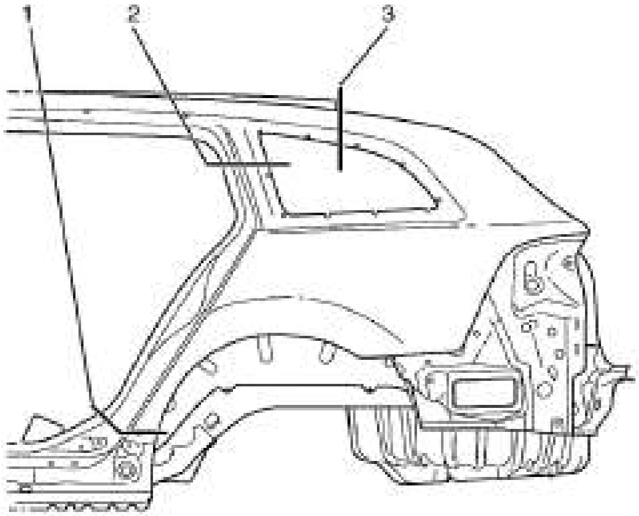
13. Weld (1) the quarter panel repair section to the body tail lamp filler panel.
14. Weld (2) the quarter panel repair section to the body side inner panel extension.
15. Weld the (3) the quarter panel repair section to the inner wheelhouse panel.



16. Weld (1) the quarter panel repair section to the body side ring outer panel.
17. Weld (2) the quarter panel repair section to the vehicle around the rear quarter window.

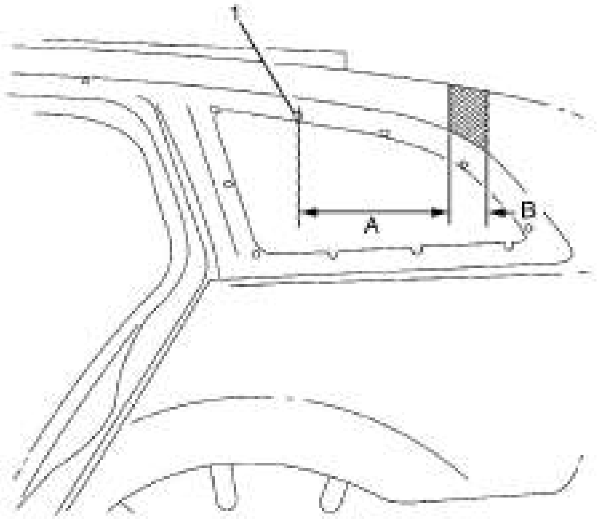


18. Weld (1) the quarter panel repair section to the rear gutter rail.

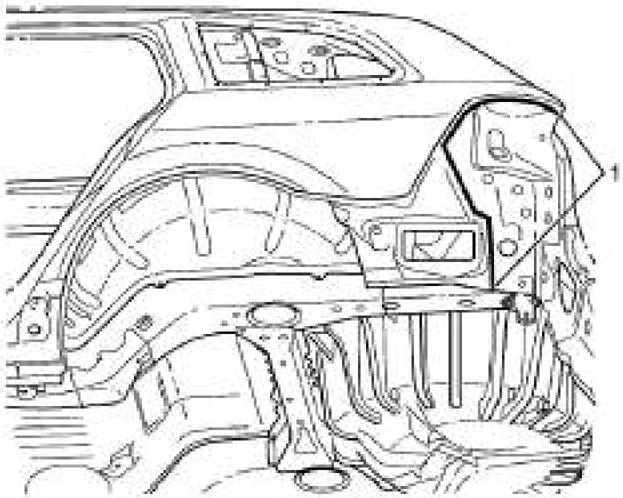


Important: To create a solid weld with minimum heat distortion, make 25 mm (1 in) stitch welds along the seam with 25 mm (1 in) gaps between them.

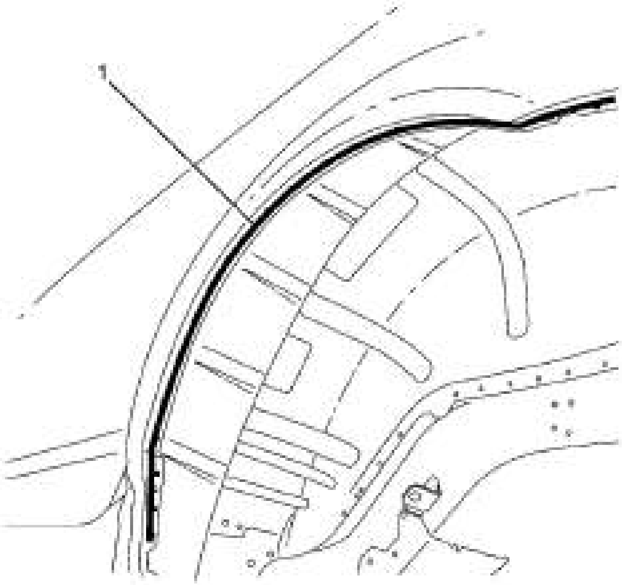
19. Stitch weld the quarter panel repair section to the body side outer panel at the three sectioning locations (1), (2) and (3).
20. Clean and prepare all of the welded surfaces.
21. Apply the sealers and anti-corrosion materials to the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair



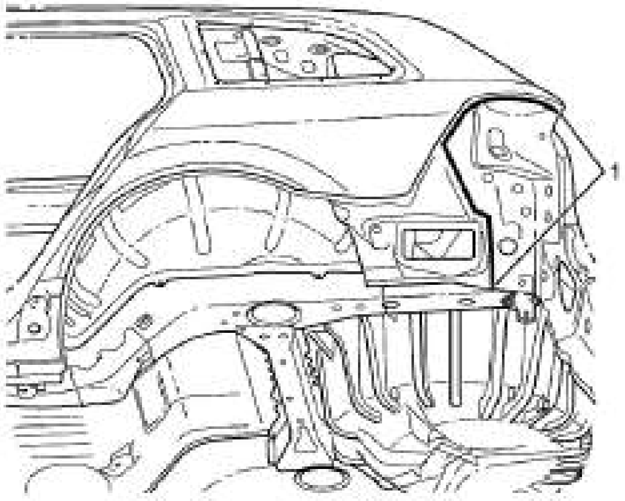
22. Apply expanding foam (GM9982296 or equivalent) to fill the space between the body side outer panel and the inner panels as shown by the shaded region in the illustration. The expanding foam is required for noise reduction. Dimension A=272 mm (10.7 in); Dimension B= 80mm (3.1 in); Measure rearward from datum point 1.



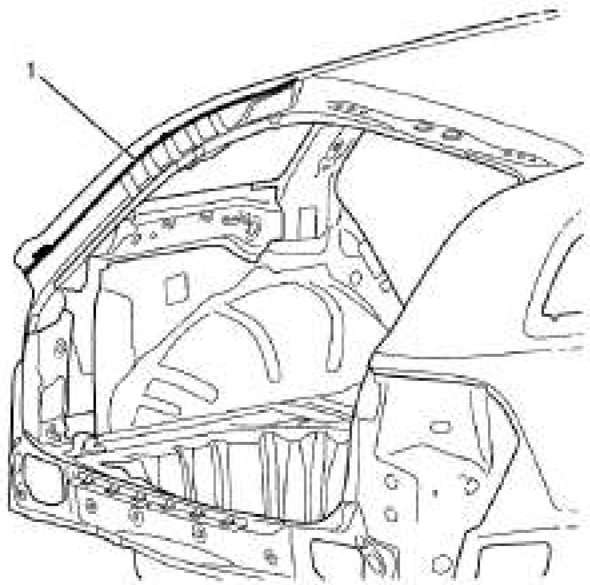
23. Apply the primary sealer (1) GM6449G or equivalent along the quarter panel to the tail lamp filler panel and side extension panel.



24. Apply the primary sealer (1) GM6449G or equivalent along the rear quarter panel to the rear wheel arch.

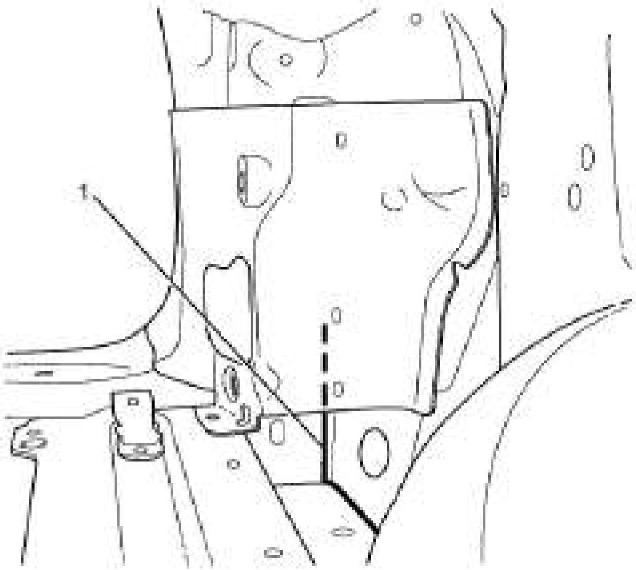


25. Apply the secondary sealer (1) GM specification 9984532 or equivalent along rear quarter panel to the tail lamp filler panel and side extension panel.



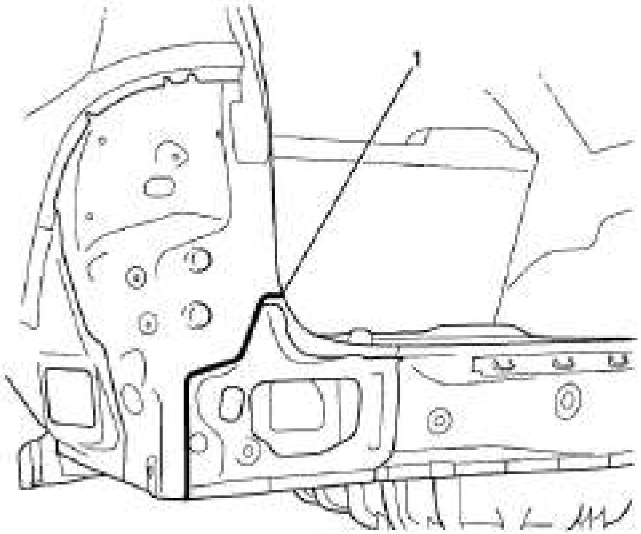
26. Apply the secondary sealer (1) GM specification 9984532 or equivalent along the rear quarter panel to the body side ring outer panel.

Important: This step is only required if the body tail lamp filler panel is also to be replaced.



27. Apply secondary sealer to the edge of the body tail lamp filler panel (1).

Important: This step is only required if the body tail lamp filler panel is also to be replaced.



28. Apply secondary sealer to the edge of the body tail lamp filler panel (1).
29. Paint the repaired area. Refer to Basecoat/Clearcoat Paint Systems.
30. Install the tail lights. Refer to Parking and Turn Signal Lamp Replacement.

Important: This step is unique to the sunroof module.

31. Install the rear roof drain tubes. Refer to Sunroof Housing Rear Drain Hose Replacement.
32. Install the rear windshield. Refer to Rear Window Replacement.
33. Install the roof moulding. Refer to Body Side Roof Drip Molding Replacement.
34. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
35. Install the fuel lines. Refer to Filler Tube Replacement or Filler Tube Replacement.
36. Install the fuel tank. Refer to Fuel Tank Replacement or Fuel Tank Replacement.
37. Install the rear brake lines. Refer to Brake Pipe Replacement.
38. Install the rear frame. Refer to Rear Frame Replacement.
39. Install the rear exhaust muffler heat shields. Refer to Exhaust Muffler Heat Shield Replacement - Left Side and Exhaust Muffler Heat Shield Replacement - Right Side.
40. Install the rear exhaust assembly. Refer to Exhaust Muffler Replacement - Left Side and Exhaust Muffler Replacement - Right Side.
41. Install the rear wheel house liners. Refer to Rear Inner Wheelhouse Replacement in Body Rear End.
42. Install the rocker panel moulds. Refer to Rocker Panel Molding Replacement.
43. Install the rear pressure relief valves. Refer to Pressure Relief Valve Replacement in Body Rear End.
44. Install the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
45. Install the rear wheels. Refer to Tire and Wheel Removal and Installation.
46. Lower the vehicle.
47. Install the deck lid release cable. Refer to Rear Compartment Lid Latch Release Cable Replacement.
48. Install the rear parcel shelf. Refer to Rear Window Shelf Trim Panel Replacement.
49. Install the rear seats. Refer to Rear Seat Cushion Cover and Pad Replacement.
50. Install the rear seat back. Refer to Rear Seat Back Replacement.
51. Install the headliner. Refer to Headlining Trim Panel Replacement.
52. Install the rear interior trims. Refer to Quarter Upper Trim Panel Replacement.
53. Install the rear door seals. Refer to Rear Door Opening Weatherstrip Replacement.

54. Install the liftgate. Refer to Liftgate Replacement.
55. Install the liftgate weatherstrip. Refer to Liftgate Weatherstrip Replacement.
56. Install the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
57. Install the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
58. Install the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
59. Install the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
60. Install the battery tray. Refer to Battery Tray Replacement.
61. Install the battery. Refer to Battery Replacement.

    Caution: Refer to Battery Disconnect Caution in the Preface section.

62. Connect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
63. Enable the SIR system. Refer to SIR Disabling and Enabling.
64. If re-programming is required. Refer to Control Module References.

Rear Rail Replacement (SWB)

Removal Procedure

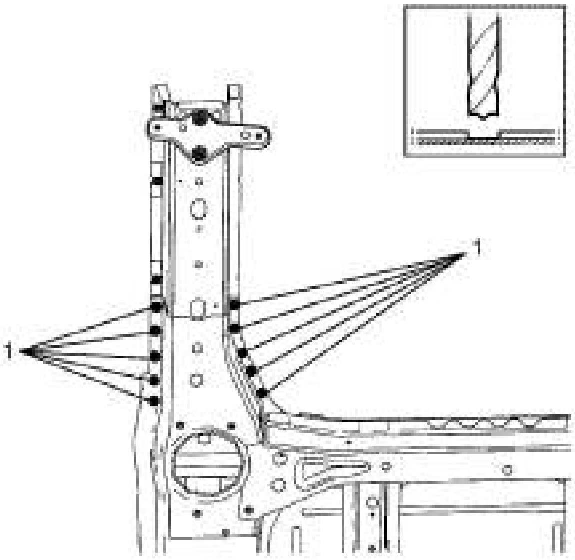
Caution: Refer to Approved Equipment for Collision Repair Caution in the Preface section.

Caution: Refer to Foam Sound Deadeners Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

Important: This procedure should be used if the damage is rearward of the factory joint in the rail assembly.

1. Disable the SIR system. Refer to SIR Disabling and Enabling in SIR.
2. Remove the rear compartment floor carpet. Refer to Rear Compartment Floor Panel Carpet Replacement in Interior Trim
3. Disconnect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection .
4. Remove the battery. Refer to Battery Replacement .
5. Remove the battery tray. Refer to Battery Tray Replacement .
6. Remove the spare wheel carrier. Refer to Spare Wheel Carrier Replacement .
7. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle .
8. Remove the rear wheels. Refer to Tire and Wheel Removal and Installation .
9. Remove the rear wheel liners. Refer to Rear Inner Wheelhouse Replacement in Body Rear End.
10. Remove the rear bumper fascia. Refer to Rear Bumper Fascia Replacement .
11. Remove the rear muffler assembly. Refer to Exhaust Muffler Replacement - Left Side and Exhaust Muffler Replacement - Right Side .
12. Remove the rear muffler heat shields. Refer to Exhaust Muffler Heat Shield Replacement - Left Side and Exhaust Muffler Heat Shield Replacement - Right Side .
13. Remove the rear muffler hanger bracket. Refer to Exhaust Hanger Mounting Bracket Replacement .
14. Remove the rear frame. Refer to Rear Frame Replacement .
15. Remove and note the location of any sound deadening materials.
16. Remove and note the location of the sealers and anti-corrosion materials from the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair .
17. Remove the rear end panel. Refer to Rear End Panel Replacement .
18. Remove the side extension panel assembly. Refer to Body Side Inner Panel Extension Replacement .
19. Repair as much of the damage as possible.



Important: Do not damage any inner panels or reinforcements.

Important: Note the number and location of welds for installation of the service assembly.

20. Locate, mark and drill out all factory welds (1).
21. Remove the damaged rail section from the vehicle.

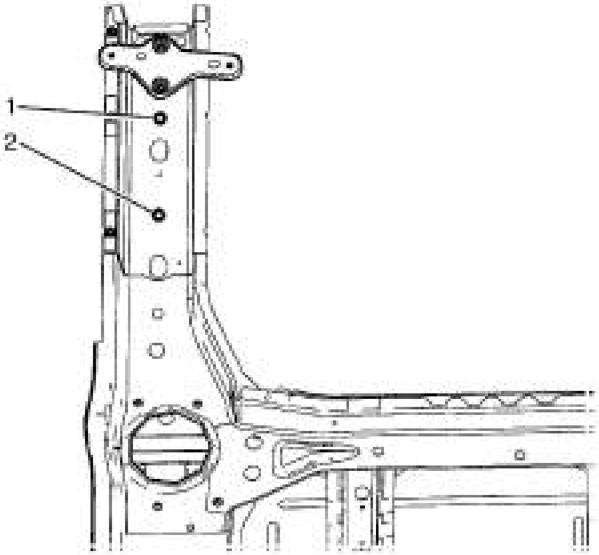
Installation Procedure

Important: This part has structural weld-thru adhesive in the joint areas. Replace this with additional spot welds at the attachment points. This can be accomplished by adding an additional weld between each factory weld in all areas.

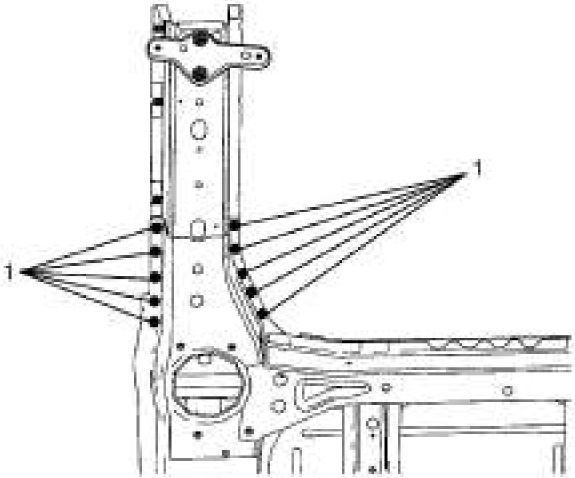
Important: If the location of the original spot weld holes can not be determined, or if structural weld-thru adhesive is present, space the puddle weld holes every 32 mm (1¼ in).

Important: Spot welding is the preferred method for attaching panels and should be used wherever possible. A puddle weld should be performed where your spot welder is unable to reach.

1. Drill 8 mm (5/16 in) puddle weld holes in the service part, as necessary, in the locations puddle welding is needed.
2. Prepare the mating surfaces, as necessary.
3. Apply structural adhesive GM6449G or equivalent to all mating surfaces.



4. Align the rear rail extension using the datum points (1) and (2) to the vehicle.



5. Weld (1) the rear rail extension to the vehicle.
6. Clean and prepare all welded surfaces.
7. Install the rear end panel. Refer to Rear End Panel Replacement .
8. Install the side extension panel assembly. Refer to Body Side Inner Panel Extension Replacement .
9. Apply the sealers, and anti-corrosion materials to the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair .
10. Paint the repaired area. Refer to Basecoat/Clearcoat Paint Systems .
11. Install the rear frame. Refer to Rear Frame Replacement .
12. Install the rear muffler hanger bracket. Refer to Exhaust Hanger Mounting Bracket Replacement .
13. Install the rear muffler heat shields. Refer to Exhaust Muffler Heat Shield Replacement - Left Side or Exhaust Muffler Heat Shield Replacement - Right Side .

14. Install the rear muffler assembly. Refer to Exhaust Muffler Replacement - Left Side or Exhaust Muffler Replacement - Right Side .
15. Install the rear bumper fiasco. Refer to Rear Bumper Fascia Replacement .
16. Install the rear wheel liners. Refer to Rear Inner Wheelhouse Replacement in Body Rear End.
17. Install the spare wheel carrier. Refer to Spare Wheel Carrier Replacement .
18. Install the rear wheels. Refer to Tire and Wheel Removal and Installation .
19. Lower the vehicle.
20. Install the battery tray. Refer to Battery Tray Replacement .
21. Install the battery. Refer to Battery Replacement .
22. Connect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection .
23. Install the rear compartment floor carpet. Refer to Rear Compartment Floor Panel Carpet Replacement in Interior Trim.
24. Enable the SIR system. Refer to SIR Disabling and Enabling in SIR.
25. If re-programming is required. Refer to Control Module References .

Rear Rail Replacement (Sportwagon)

Removal Procedure

Caution: Refer to Approved Equipment for Collision Repair Caution in the Preface section.

Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Foam Sound Deadeners Caution in the Preface section.

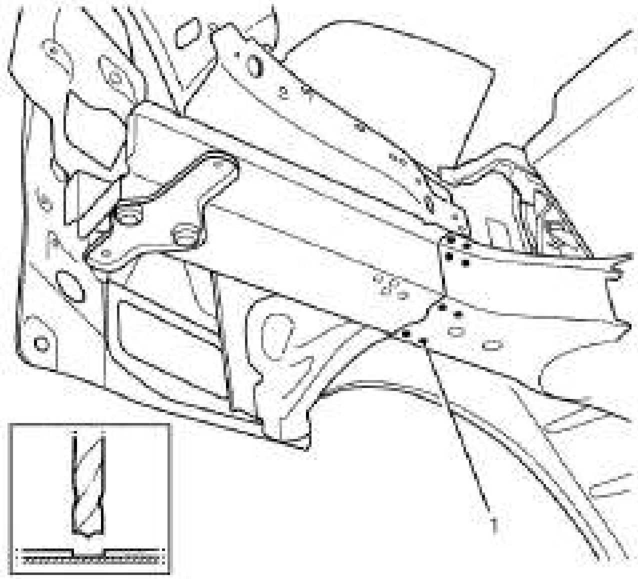
Important: This procedure should be used if the damage is rearward of the factory joint in the rail assembly.

1. Disable the SIR system. Refer to SIR Disabling and Enabling.

   Caution: Refer to Battery Disconnect Caution in the Preface section.

2. Disconnect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
3. Remove the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
4. Remove the rear bumper impact bar. Refer to Rear Bumper Impact Bar Replacement.
5. Remove the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.
6. Remove the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
7. Remove the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
8. Remove the liftgate weatherstrip. Refer to Liftgate Weatherstrip Replacement.
9. Remove the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
10. Remove the battery. Refer to Battery Replacement.
11. Remove the battery tray. Refer to Battery Tray Replacement.
12. Remove the pressure relief valve. Refer to Pressure Relief Valve Replacement.
13. Remove the tail lights. Refer to Tail Lamp Assembly and /or Backup, Sidemarker, Stop, Turn Signal Bulb Replacement.
14. Remove the liftgate. Refer to Liftgate Replacement.
15. Remove the rear muffler assembly. Refer to Exhaust Muffler Replacement - Left Side or Exhaust Muffler Replacement - Right Side.
16. Remove the rear muffler heat shields. Refer to Exhaust Muffler Heat Shield Replacement - Left Side or Exhaust Muffler Heat Shield Replacement - Right Side.
17. Remove the rear bumper bracket. Refer to Rear Bumper Bracket Replacement.
18. Remove the rear muffler hanger bracket. Refer to Exhaust Hanger Mounting Bracket Replacement.
19. Remove the rear frame. Refer to Rear Frame Replacement.
20. Remove and note the location of any sound deadening materials.
21. Remove the spare wheel and emergency kit from the rear compartment.
22. Remove the spare wheel carrier. Refer to Spare Wheel Carrier Replacement.
23. Remove and note the location of the sealers and anti-corrosion materials from the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.
24. Remove the body side inner panel extension assembly. Refer to Body Side Inner Panel Extension Replacement.
25. Remove the rear end panel. Refer to Rear End Panel Replacement.

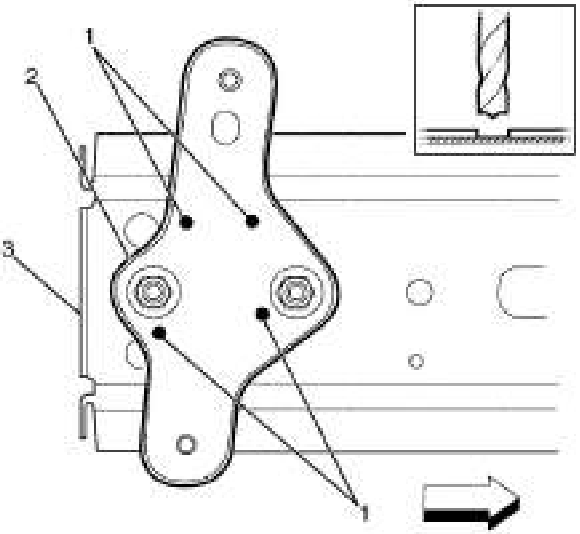
26. Repair as much of the damage as possible.



Important: Do not damage any inner panels or reinforcements.

Important: Note the number and location of welds for installation of the service assembly.

27. Locate, mark and drill out all factory welds (1) attaching the rear rail to the underbody.
28. Remove the damaged rail section from the vehicle.



Important: The following step is only required if the old exhaust bracket is undamaged and is to be re-used with the new rear rail.

29. Locate, mark and drill out the factory welds (1) attaching the exhaust hanger mounting

bracket (2) to the rear rail (3). Left hand rail shown, right hand is mirror image.

Installation Procedure

Important: This part has structural weld-thru adhesive in the joint areas. Replace this with additional spot welds at the attachment points. This can be accomplished by adding an additional weld between each factory weld in all areas.

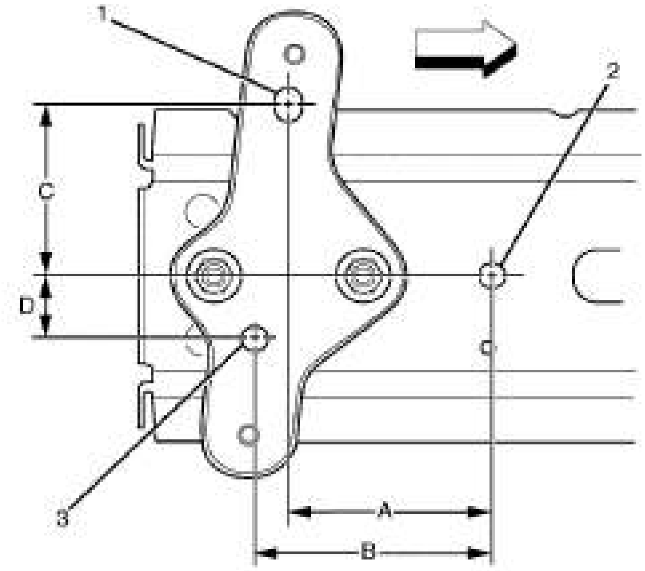
Important: If the location of the original spot weld holes can not be determined, or if structural weld-thru adhesive is present, space the puddle weld holes every 32 mm (1¼ in).

Important: Ensure that all factory welds are replaced in their original locations.

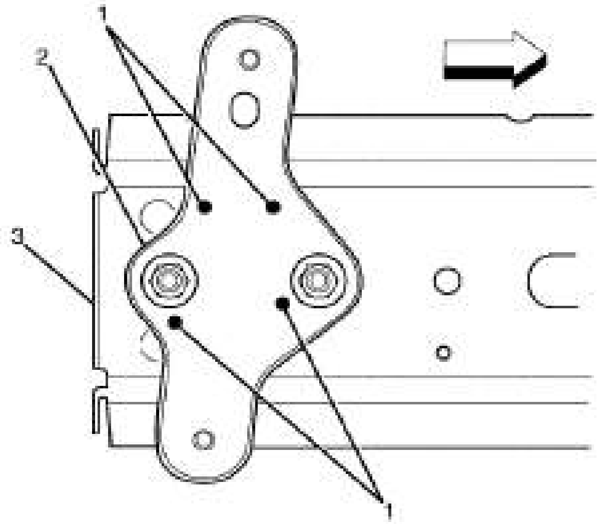
Important: Ensure that all structural adhesives and sealers are replaced in their original locations.

Important: Spot welding is the preferred method for attaching panels and should be used wherever possible. A puddle weld should be performed where your spot welder is unable to reach.

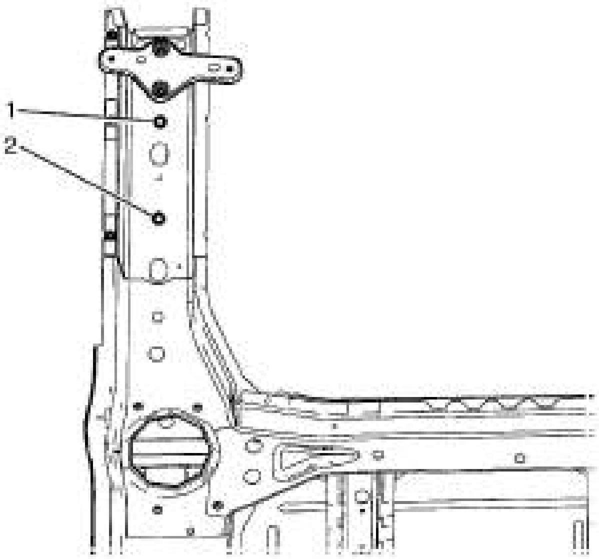
1. Drill 8 mm (5/16 in) puddle weld holes in the service part, as necessary, in the locations puddle welding is needed.
2. Prepare the mating surfaces, as necessary.



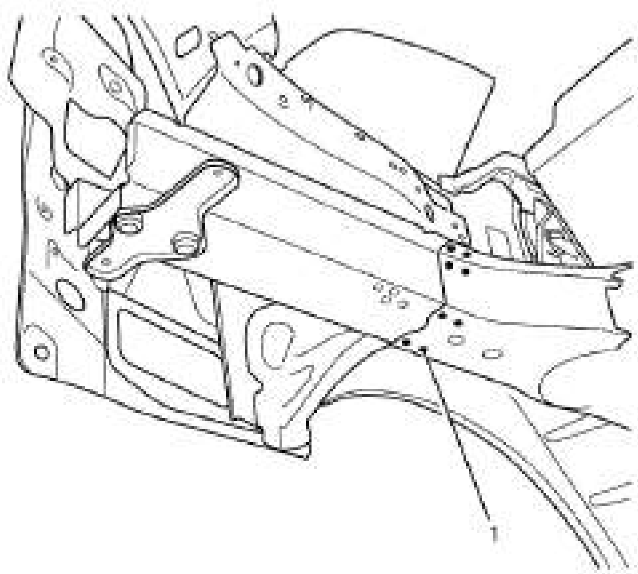
3. Align the exhaust hanger bracket to the new rear rail (left hand rail shown, right hand is mirror image). Dimensions are as follows: A = 95 mm; B = 111 mm; C = 79 mm; D = 30 mm. Datum hole identification as follows: 1 = 13.1x17.5mm; 2 = 13.1mm dia; 3 = 13.1mm dia.
4. Apply structural adhesive GM6449G or equivalent to all mating surfaces.



5. Weld (1) the exhaust hanger mounting bracket (2) to the rear rail (3).



6. Align the new rear rail to the vehicle using the datum points (1) and (2). Datum points (1) and (2) are 13.1mm dia holes. Refer to Dimensions - Body.



7. Weld (1) the rear rail to the underbody.
8. Clean and prepare all welded surfaces.
9. Install the rear end panel. Refer to Rear End Panel Replacement.
10. Install the body side inner panel extension. Refer to Body Side Inner Panel Extension Replacement.
11. Apply sealers and anti-corrosion materials to the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.
12. Paint the repaired area. Refer to Basecoat/Clearcoat Paint Systems.
13. Install the spare wheel carrier. Refer to Spare Wheel Carrier Replacement.
14. Install the spare wheel and emergency kit to the rear compartment.
15. Install the sound deadening materials to the locations recorded on removal.
16. Install the rear frame. Refer to Rear Frame Replacement.
17. Install the rear muffler hanger bracket. Refer to Exhaust Hanger Mounting Bracket Replacement.
18. Install the rear bumper bracket. Refer to Rear Bumper Bracket Replacement.
19. Install the rear muffler heat shields. Refer to Exhaust Muffler Heat Shield Replacement - Right Side or Exhaust Muffler Heat Shield Replacement - Left Side.
20. Install the rear muffler assembly. Refer to Exhaust Muffler Replacement - Left Side or Exhaust Muffler Replacement - Right Side.
21. Install the liftgate. Refer to Liftgate Replacement.
22. Install the tail lights. Refer to Tail Lamp Assembly and /or Backup, Sidemarker, Stop, Turn Signal Bulb Replacement.
23. Install the pressure relief valve. Refer to Pressure Relief Valve Replacement.
24. Install the battery tray. Refer to Battery Tray Replacement.
25. Install the battery. Refer to Battery Replacement.
26. Install the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
27. Install the liftgate weatherstrip. Refer to Liftgate Weatherstrip Replacement.
28. Install the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
29. Install the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
30. Install the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.
31. Install the rear bumper impact bar. Refer to Rear Bumper Impact Bar Replacement.
32. Install the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.

33. Connect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
34. Enable the SIR system. Refer to SIR Disabling and Enabling.

Rear End Panel Replacement (SWB)

Removal Procedure

Caution: Refer to Approved Equipment for Collision Repair Caution in the Preface section.

Caution: Refer to Foam Sound Deadeners Caution in the Preface section.

Important: This panel is replaced at factory seams.

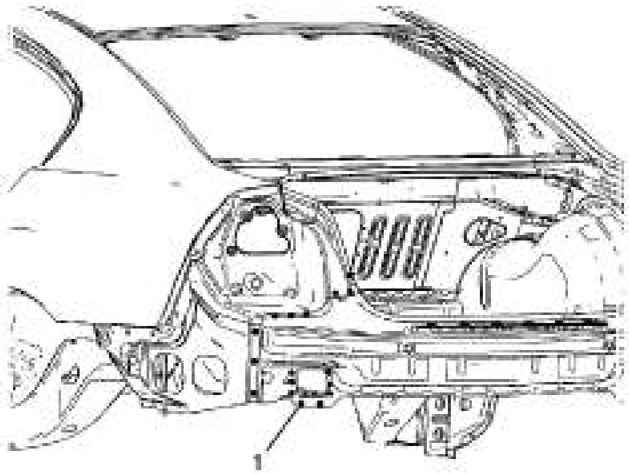
Caution: Sectioning should be performed only in the recommended areas. Failure to do so may compromise the structural integrity of the vehicle and cause personal injury if the vehicle is in a collision.

1. Disable the SIR system. Refer to SIR Disabling and Enabling .

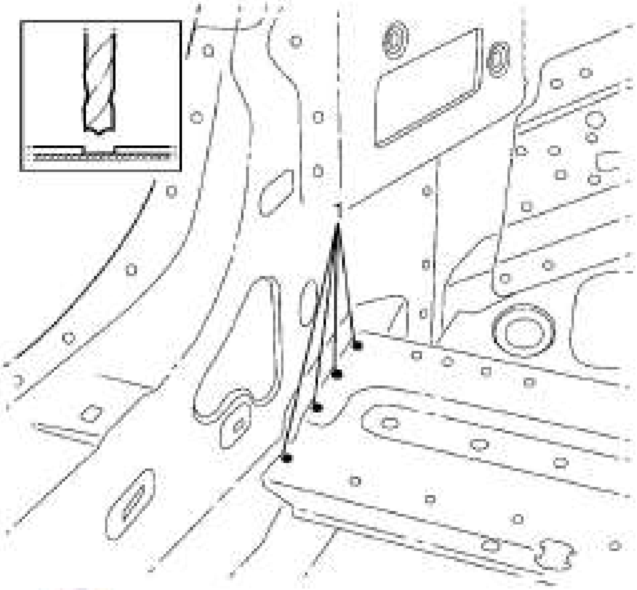
   Caution: Refer to Battery Disconnect Caution in the Preface section.

2. Disconnect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection .
3. Remove the rear bumper fascia. Refer to Rear Bumper Fascia Replacement .
4. Remove the rear impact bar. Refer to Rear Bumper Impact Bar Replacement .
5. Remove the rear impact bar bracket. Refer to Rear Bumper Bracket Replacement .
6. Remove the tail lights. Refer to Parking and Turn Signal Lamp Replacement .
7. Remove the spare wheel and emergency kit from the rear compartment.
8. Remove the rear lock striker. Refer to Rear Compartment Lid Latch Striker Replacement in Body Rear End.
9. Remove the spare wheel and tyre carrier. Refer to Spare Wheel Carrier Replacement .
10. Repair as much of the damage as possible.
11. Remove the sealers and anti-corrosion materials from the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair .

    Important: Note the number and location of the factory welds for installation of the rear end panel.



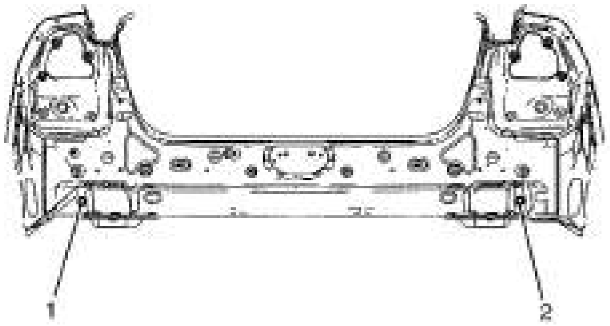
12. Locate, mark and drill out the spot welds in the rear end panel assembly to the tail lamp filler panel. Repeat for opposite side.
13. Locate, mark and drill out the spot welds in the rear end panel assembly to the rear chassis rail. Repeat for opposite side.



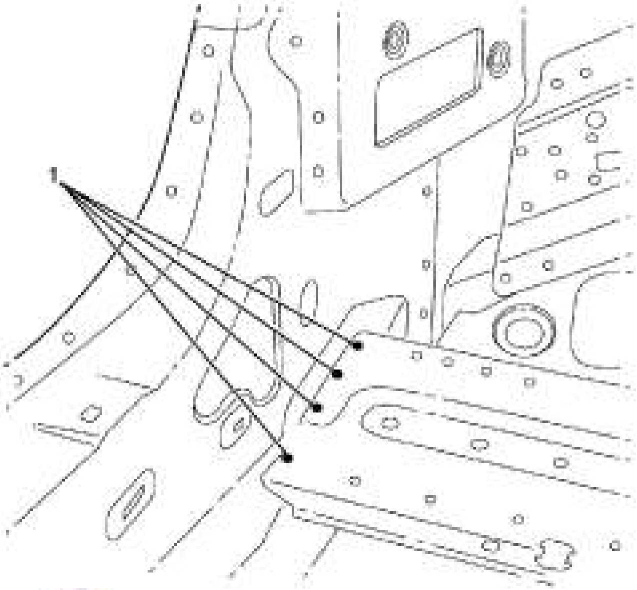
14. Locate, mark and drill out the spot welds (1) of the rear end panel assembly to the side extension. Repeat for opposite side.
15. Remove the rear end panel.

Installation Procedure

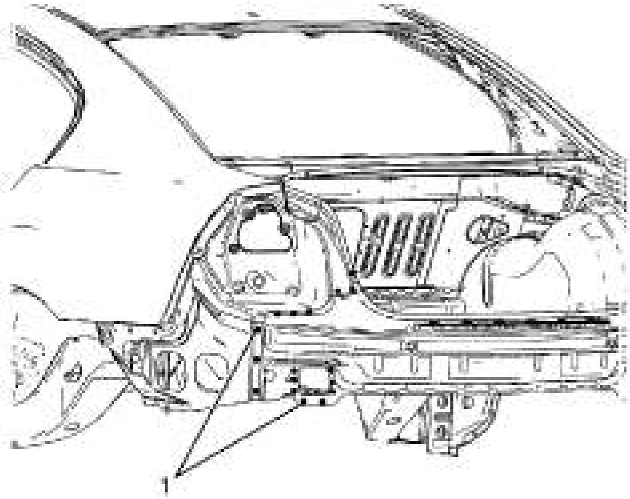
1. Prepare all mating surfaces as necessary.



2. Align the rear end panel assembly using the datum points (1) and (2) to the vehicle.



3. Weld (1) the rear end panel assembly to the side extension. Repeat for opposite side.



4. Weld (1) the rear end panel assembly to the rear chassis rail. Repeat for opposite side.
5. Weld the rear end panel assembly to the tail lamp filler panel. Repeat for opposite side.
6. Clean and prepare all of the welded surfaces.
7. Apply the sealers and anti-corrosion materials to the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair .
8. Paint the repaired area. Refer to Basecoat/Clearcoat Paint Systems .
9. Install the spare wheel and tyre carrier. Refer to Spare Wheel Carrier Replacement .
10. Install the rear lock striker. Refer to Rear Compartment Lid Latch Striker Replacement in Body Rear End.
11. Install the tail lights. Refer to Parking and Turn Signal Lamp Replacement .
12. Install the rear impact bar. Refer to Rear Bumper Fascia Insert Replacement .
13. Install the rear bumper fascia. Refer to Rear Bumper Fascia Replacement .
14. Install the spare wheel and emergency kit from the rear compartment.

Caution: Refer to Battery Disconnect Caution in the Preface section.

15. Connect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection .
16. Enable the SIR system. Refer to SIR Disabling and Enabling in SIR.
17. If re-programming is required. Refer to Control Module References .

Rear End Panel Replacement (Sportwagon)

Removal Procedure

Caution: Refer to Approved Equipment for Collision Repair Caution in the Preface section.

Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Foam Sound Deadeners Caution in the Preface section.

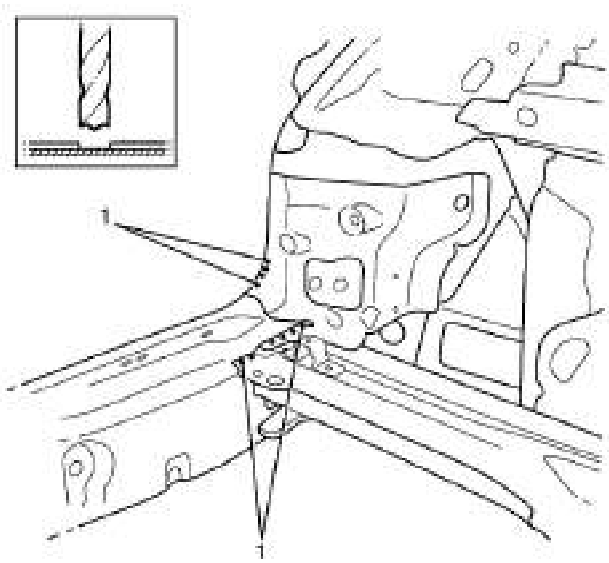
1. Disable the SIR system. Refer to SIR Disabling and Enabling.

Caution: Refer to Battery Disconnect Caution in the Preface section.

2. Disconnect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
3. Remove the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
4. Remove the rear bumper impact bar. Refer to Rear Bumper Impact Bar Replacement.
5. Remove the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.
6. Remove the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
7. Remove the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
8. Remove the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
9. Remove the liftgate latch striker. Refer to Liftgate Latch Striker Replacement.
10. Remove the rear bumper impact bar bracket. Refer to Rear Bumper Bracket Replacement.
11. Remove the liftgate weatherstrip. Refer to Liftgate Weatherstrip Replacement.
12. Remove the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
13. Remove the battery. Refer to Battery Replacement.
14. Remove the battery tray. Refer to Battery Tray Replacement.
15. Remove the pressure relief valve. Refer to Pressure Relief Valve Replacement.
16. Remove the tail lights. Refer to Tail Lamp Assembly and /or Backup, Sidemarker, Stop, Turn Signal Bulb Replacement.
17. Remove the liftgate. Refer to Liftgate Replacement.
18. Remove the spare wheel and emergency kit from the rear compartment.
19. Remove the spare wheel carrier. Refer to Spare Wheel Carrier Replacement.

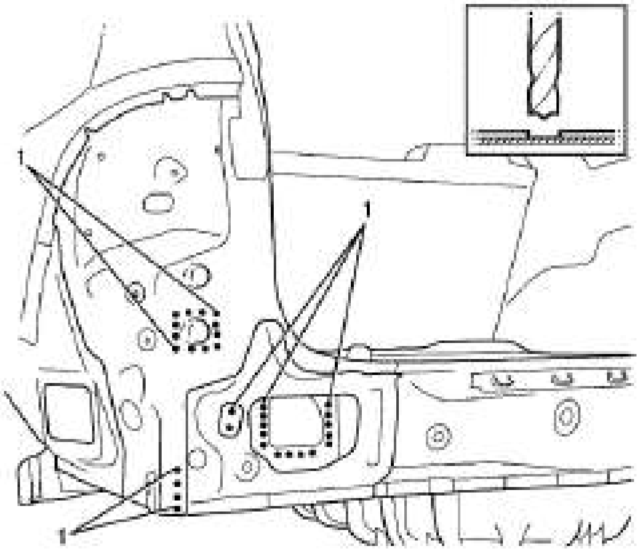
Important: Note the location of sealers and anti-corrosion materials for installation of the service assembly.

20. Remove the sealers and anti-corrosion materials from the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.

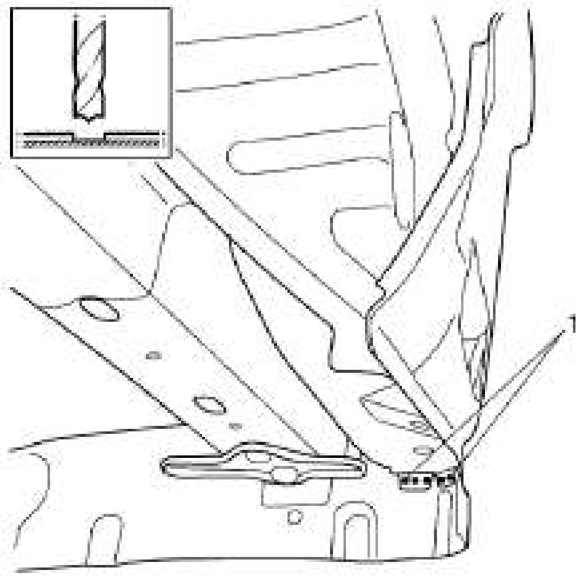


Important: Note the number and location of the factory welds for installation of the service assembly.

21. Locate, mark and drill out the factory welds attaching the rear end panel assembly to the back body pillar inner lower panel and rear compartment floor panel extension (1).
22. Repeat for the opposite side.



23. Locate, mark and drill out the factory welds attaching the rear end panel assembly to the body tail-lamp filler panel and rear compartment floor panel rail (1).
24. Repeat for the opposite side.



25. Locate, mark and drill out the factory welds attaching the rear end panel assembly to the rear compartment floor panel outer extension (1).
26. Repeat for the opposite side.
27. Remove the rear end panel assembly from the vehicle.

Installation Procedure

Important: Spot welding is the preferred method for attaching panels and should be used whenever possible. A plug weld should only be performed where spot welding is not possible.

Important: If the location of the original plug weld holes cannot be determined, or if structural weld-thru adhesive is present, space the plug weld holes every 32 mm (1¼ in).

Important: Ensure that all factory welds are replaced in their original locations.

Important: Ensure that all structural adhesives and sealers are replaced in their original locations.

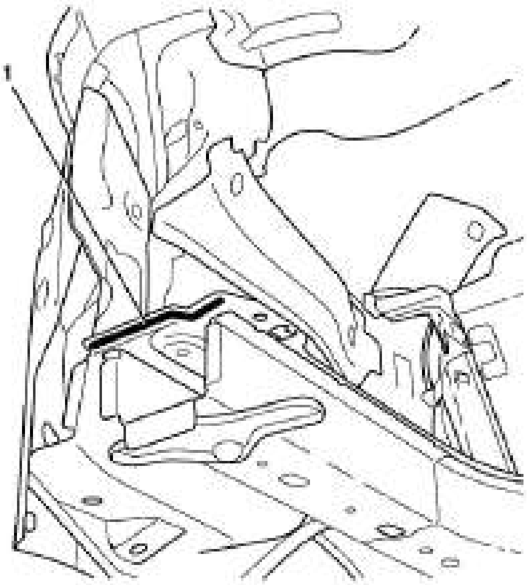
Important: Follow the adhesive manufacturer's instructions during the assembly process. Heat must be applied as per the manufacturer's specifications to cure the adhesives and to expand the sealing baffles.

Important: Secondary sealer must be applied to the perimeter of all flanges and over all joints.

1. Drill 8 mm (5/16 in) plug weld holes as necessary in the locations noted when dissembling.

Important: Clean all adhesive mating surfaces in accordance with the adhesive manufacturer's specifications.

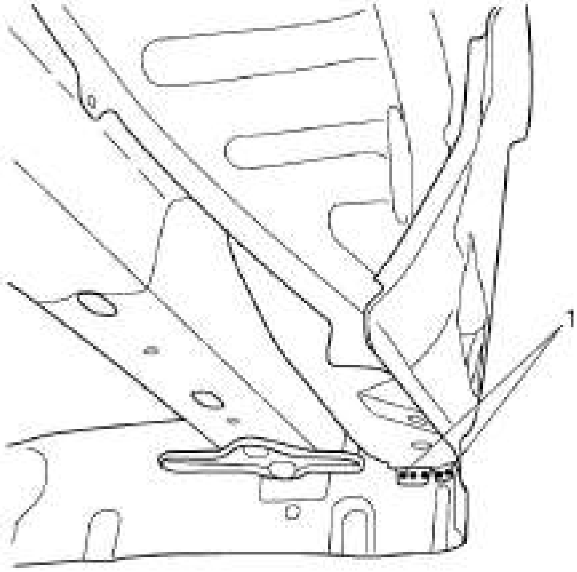
2. Clean and prepare the mating surfaces of the rear end panel assembly.
3. Repeat for the opposite side.



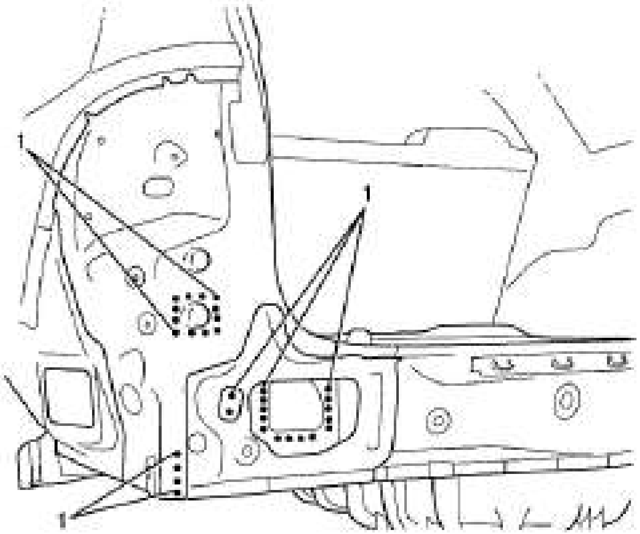
4. Apply the approved structural adhesive (1) GM6449G or equivalent along the outer edge of the rear compartment floor panel outer extension.

   Important: As the rear end panel assembly is installed to the vehicle, structural adhesive should be visible on the outside edges of both surfaces (squeezed out when pushed together).

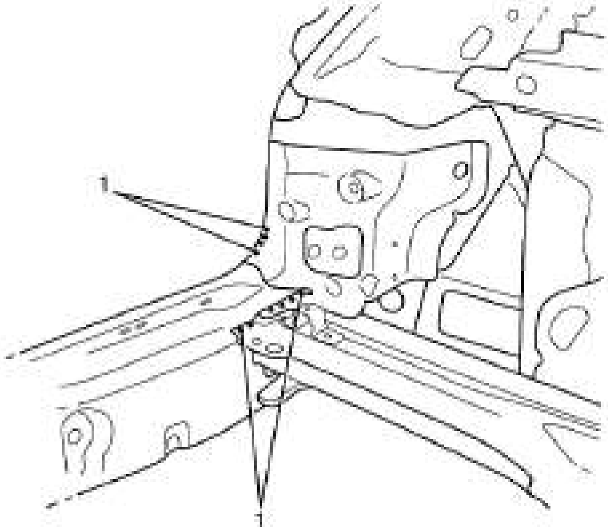
5. Install the rear end panel assembly to the vehicle.



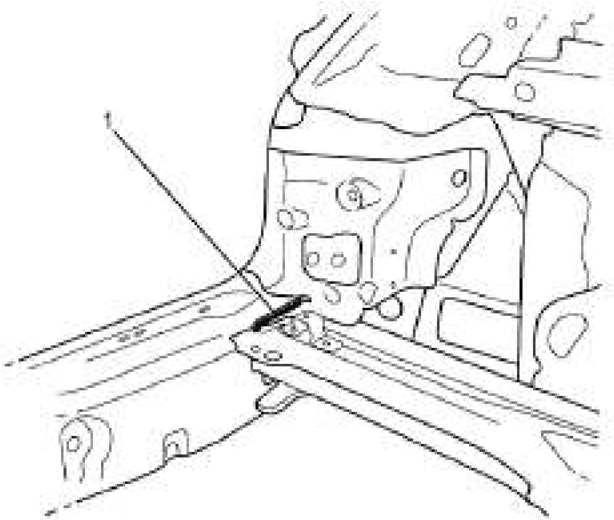
6. Weld the rear end panel assembly to the rear compartment floor panel outer extension (1).
7. Repeat for the opposite side.



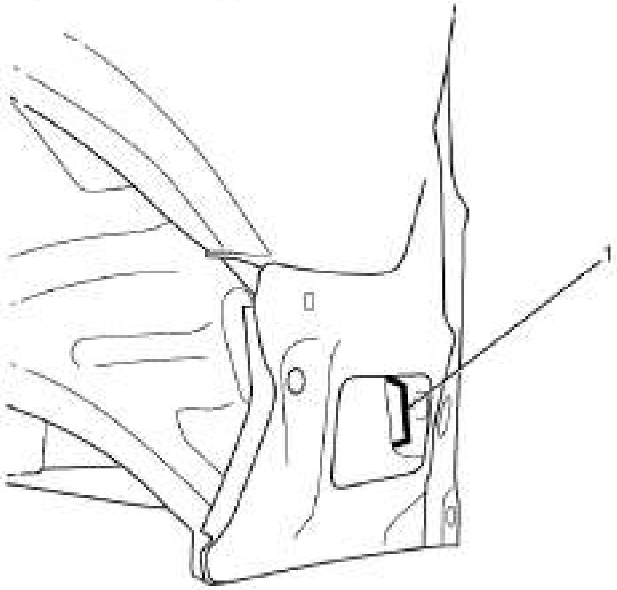
8. Weld the rear end panel assembly to the body tail-lamp filler panel and the rear compartment floor panel rail (1).
9. Repeat for the opposite side.



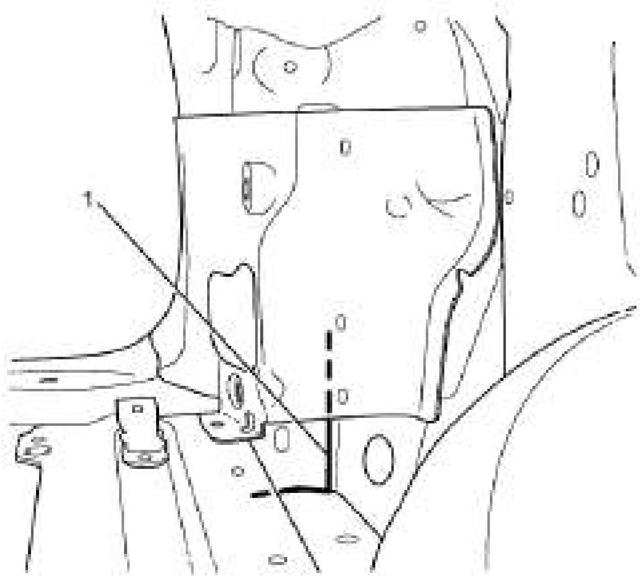
10. Weld the rear end panel assembly to the back body pillar inner lower panel and the rear compartment floor panel extension (1).
11. Repeat for the opposite side.



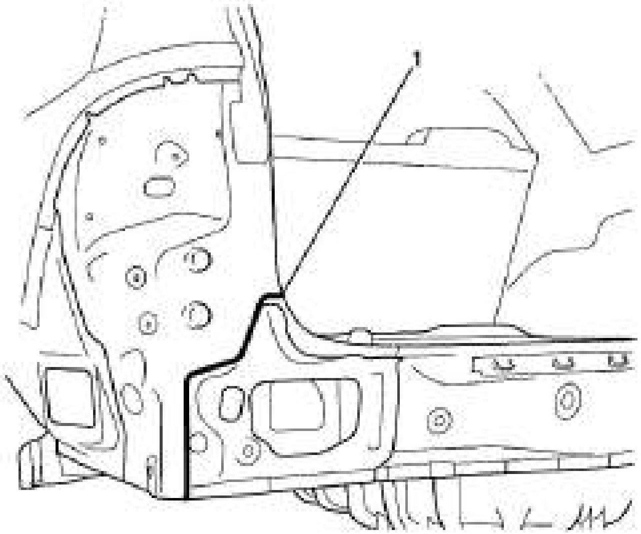
12. Apply secondary sealer (1) GM9984532 or equivalent along the rear edge of the rear compartment floor panel outer extension.
13. Repeat for the opposite side.



14. Apply secondary sealer (1) GM9984532 or equivalent to the rear compartment floor panel rail.
15. Repeat for the opposite side.



16. Apply secondary sealer (1) GM9984532 or equivalent to the body tail-lamp filler panel.
17. Repeat for the opposite side.



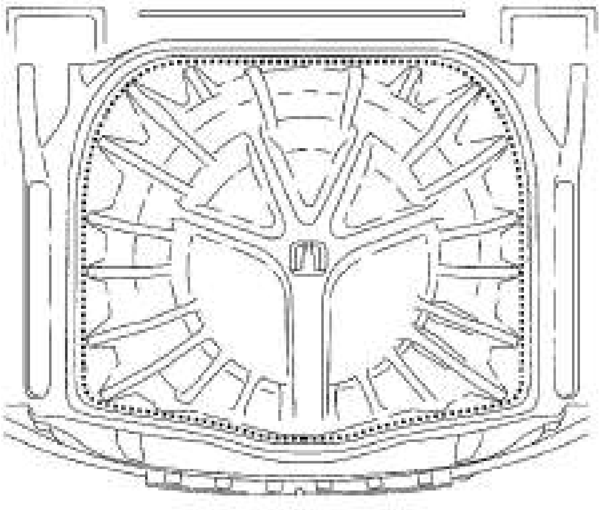
18. Apply secondary sealer (1) GM9984532 or equivalent to the body tail-lamp filler panel.
19. Repeat for the opposite side.
20. Apply anti-corrosion materials to the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.
21. Paint the repaired area. Refer to Basecoat/Clearcoat Paint Systems.
22. Install the spare wheel carrier. Refer to Spare Wheel Carrier Replacement.
23. Install the spare wheel and emergency kit to the rear compartment.
24. Install the liftgate. Refer to Liftgate Replacement.
25. Install the tail lights. Refer to Tail Lamp Assembly and /or Backup, Sidemarker, Stop, Turn Signal Bulb Replacement.
26. Install the pressure relief valve. Refer to Pressure Relief Valve Replacement.
27. Install the battery tray. Refer to Battery Tray Replacement.

28. Install the battery. Refer to Battery Replacement.
29. Install the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
30. Install the liftgate weatherstrip. Refer to Liftgate Weatherstrip Replacement.
31. Install the rear bumper impact bar bracket. Refer to Rear Bumper Bracket Replacement.
32. Install the liftgate latch striker. Refer to Liftgate Latch Striker Replacement.
33. Install the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
34. Install the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
35. Install the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
36. Install the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.
37. Install the rear bumper impact bar. Refer to Rear Bumper Impact Bar Replacement.
38. Install the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
39. Connect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
40. Enable the SIR system. Refer to SIR Disabling and Enabling.

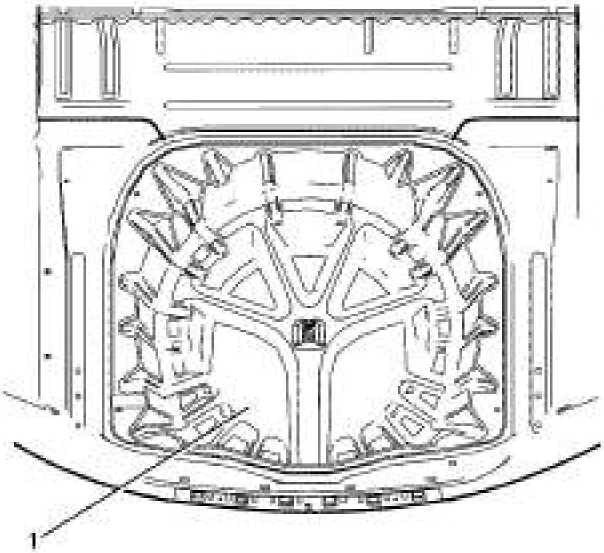
Spare Wheel Carrier Replacement (Sedan)

Removal Procedure

1. Remove the rear compartment floor carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
2. Remove the spare wheel and emergency kit from the rear compartment.
3. Remove the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.

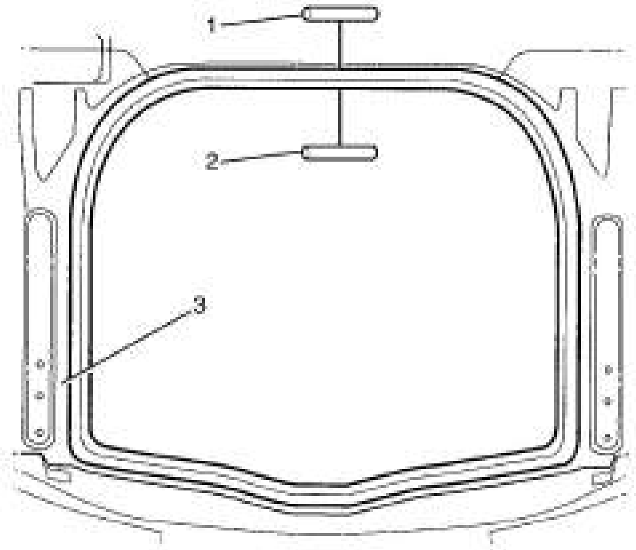


4. Cut along the spare wheel panel component as shown with a suitable air saw.



Important: The spare wheel well panel is a single use item. The spare wheel well panel must be discarded after use.

5. Remove the cut section of the spare wheel well panel component (1) from the vehicle.



Important: Use a suitable tool to install the piano wire from J-36020 (2) through the urethane at the corner of the spare wheel well compartment (1).

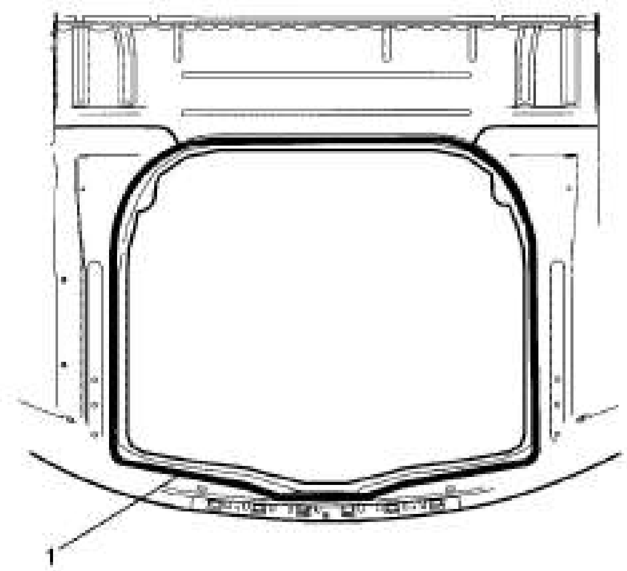
6. Install J-36020 (2) to the vehicle.
7. Connect the end of the piano wire to the other handle of the J-36020 (2).

Important: Keep the outside handle of J-36020 (1) against the rear compartment extension floor panel (3) and cycle the full length of the piano wire to prevent heat build up.

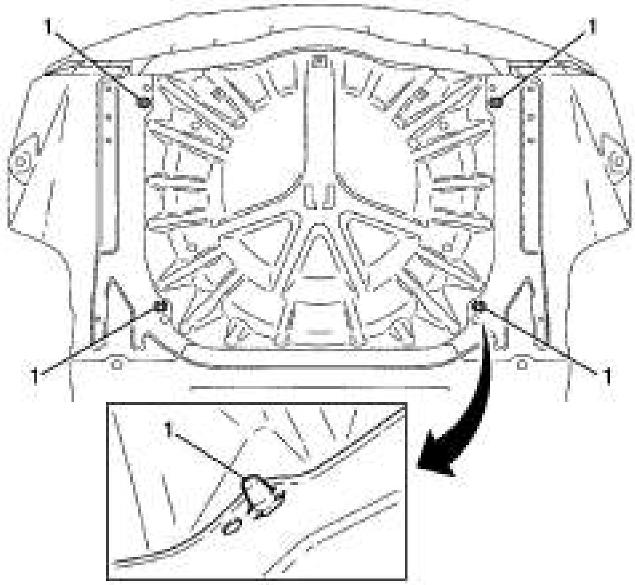
8. Cut through the urethane bead around the spare wheel well compartment (4) to the rear compartment extension floor panel (3) with the aid of an assistant.

   Discard the remaining section of the spare wheel well panel.

Installation Procedure



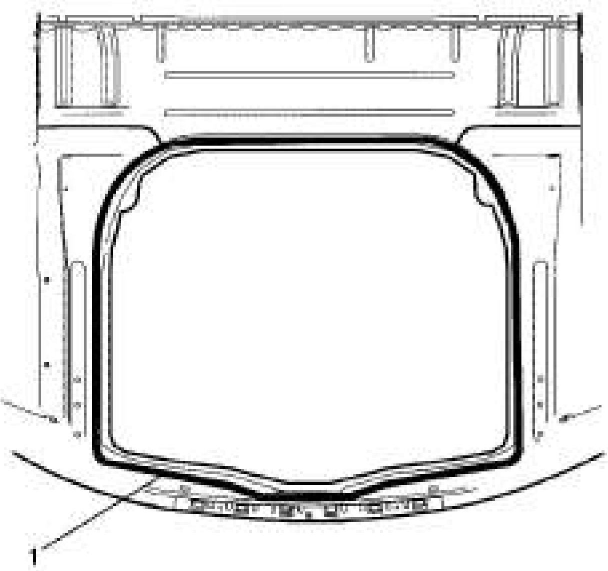
1. Clean the rear compartment panels of all adhesive (1) using a suitable cleaning solution.



Important: The Adhesive flange on the spare wheel well panel must not be handled with bare hands. This could lead to contamination of the primer on the spare wheel well panel flange.

Important: Make sure that the spare wheel well panel datum pins (1) are properly located in the rear compartment panels.

2. Test fit the spare wheel well panel to the rear compartment panels to identify any gaps around the rear compartment panels.

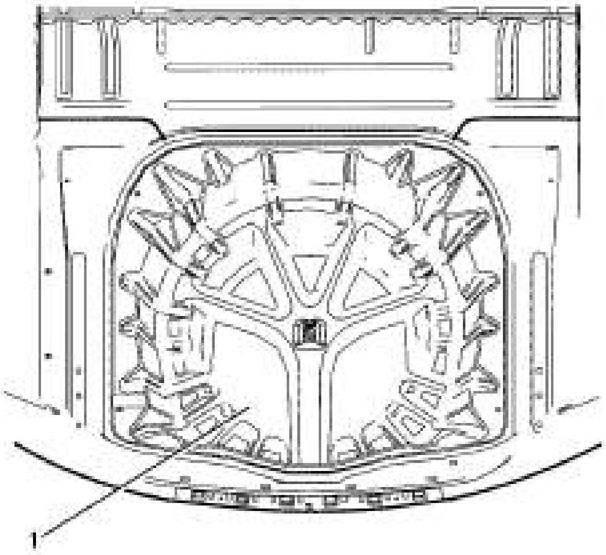


Important: Make sure that the rear compartment panels and the spare wheel well panel are free of any contaminants

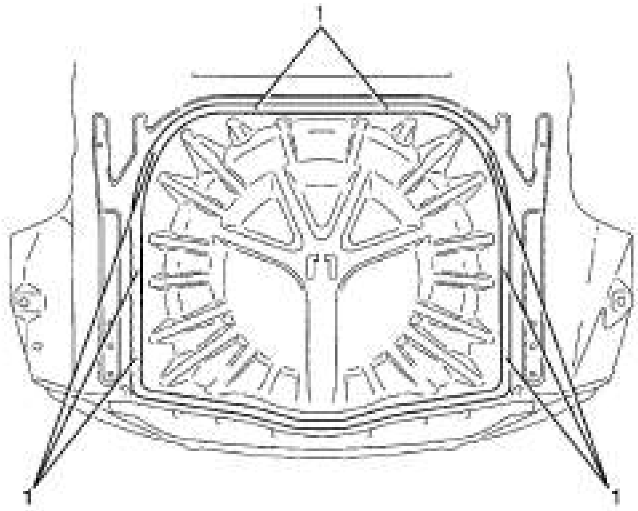
3. Apply a bead of urethane GMW3041 or equivalent approximately 10 millimetres in diameter to the rear compartment panels (1).

   Important: The adhesive begins to bond after 30 minutes, during this time fitment of the spare wheel well panel must be fitted to the rear compartment panels

4. If any gaps were identified in the test fitment, apply extra adhesive to the area.



5. Carefully install the NEW spare wheel well panel (1) to the vehicle to avoid smearing of the urethane.



6. Apply one kilogram weights (1) to the edges of the spare wheel well panel to aid in adhesion to the rear compartment panels

   Important: Allow adhesive to cure for 8 hours before fitting any other components to the spare wheel well panel.

   Important: Do NOT drive the vehicle for 24 hours after fitting the spare wheel well panel to allow the adhesive to fully cure.

7. Install the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
8. Install the spare wheel and emergency kit to the rear compartment.
9. Install the rear compartment floor carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.

Spare Wheel Carrier Replacement (Sportwagon)

Tools Required

J-36020 Stationary Glass Removal Tool.

Removal Procedure

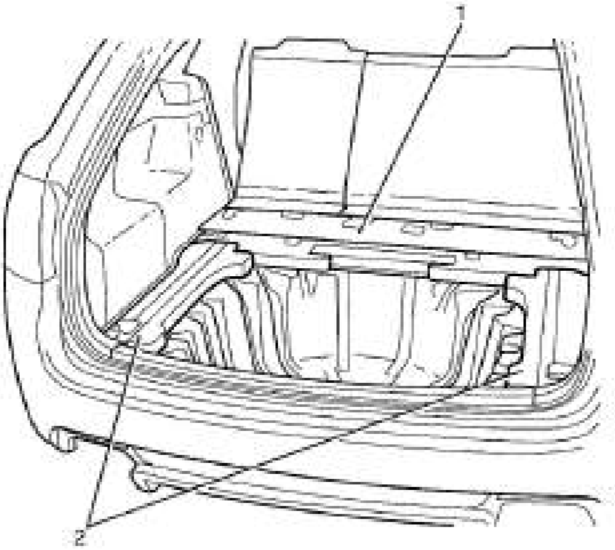
Caution: In order to reduce the risk of personal injury when exposed to toxic fumes while grinding, cutting, or applying repair material on any type of sheet molded compound or RIM rigid plastic, observe the following guidelines:

- Work in a properly ventilated area
- Apply protective cream to any exposed skin
- Remove any mixture that comes into contact with skin
- Wash skin with cold water to remove glass and resin dust
- Use a sander with a vacuum attachment
- Follow the repair material manufacturer's instructions

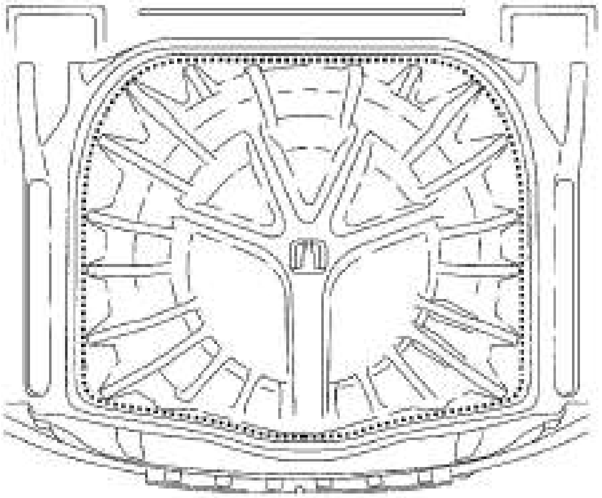
Also, always wear the following:

- An approved respirator, or air supplied respirator
- Eye protection
- Rubber gloves
- Earplugs
- Protective clothing

1. Remove the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
2. Remove the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
3. Remove the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.

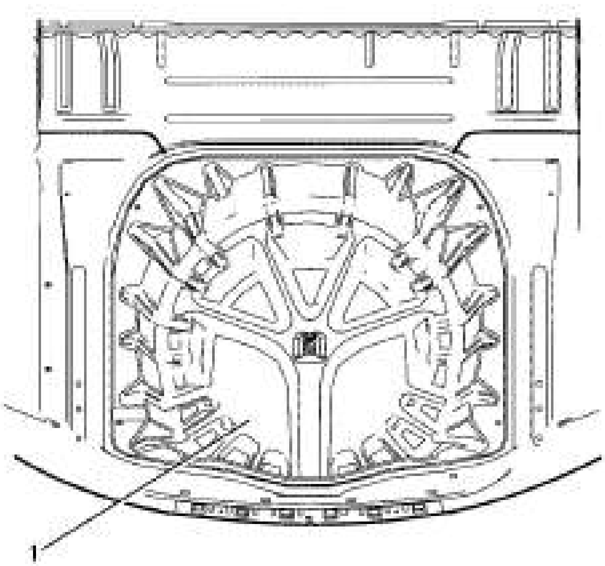


4. Remove the rear compartment floor panel carpet exterior support foams (2).
5. Remove the rear compartment floor panel centre support foam (1).
6. Remove the spare wheel and emergency kit from the rear compartment.
7. Remove the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.



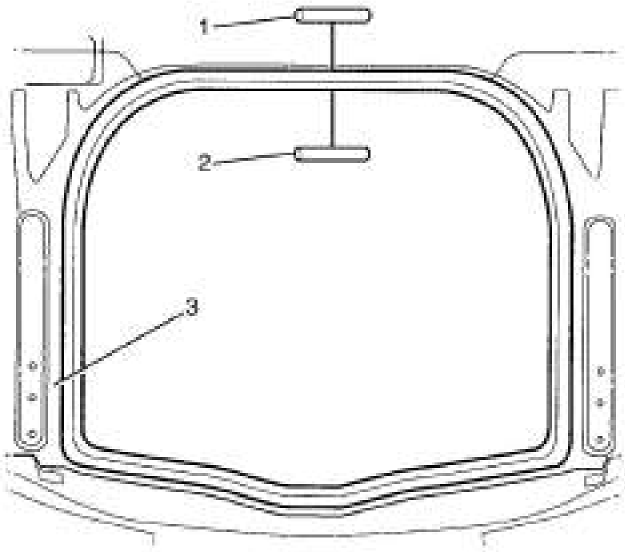
Important: Take care when cutting to avoid damage to adjacent panels and other parts of the vehicle.

8. Cut along the spare wheel panel component as shown with a suitable air saw.



Important: The spare wheel well panel is a single use item. The spare wheel well panel must be discarded after use.

9. Remove the cut section of the spare wheel well panel component (1) from the vehicle.



Important: Stationary glass removal tool J-36020 (2) is used to cut the urethane adhesive between the remaining part of the spare wheel carrier and the vehicle body. Use a suitable tool to install the piano wire from J-36020 (2) through the urethane at the corner of the spare wheel well compartment (1).

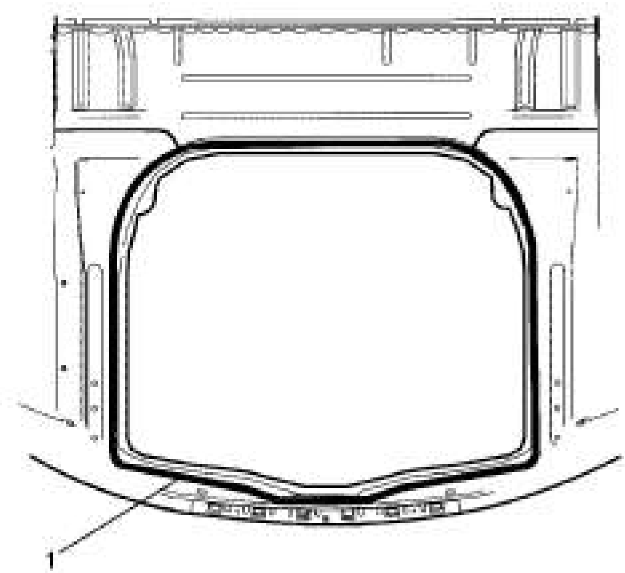
10. Install J-36020 (2) to the vehicle.
11. Connect the end of the piano wire to the other handle of the J-36020 (2).

Important: Keep the outside handle of the J-36020 (1) against the rear compartment floor panel (3) and cycle the full length of the piano wire to prevent heat build up.

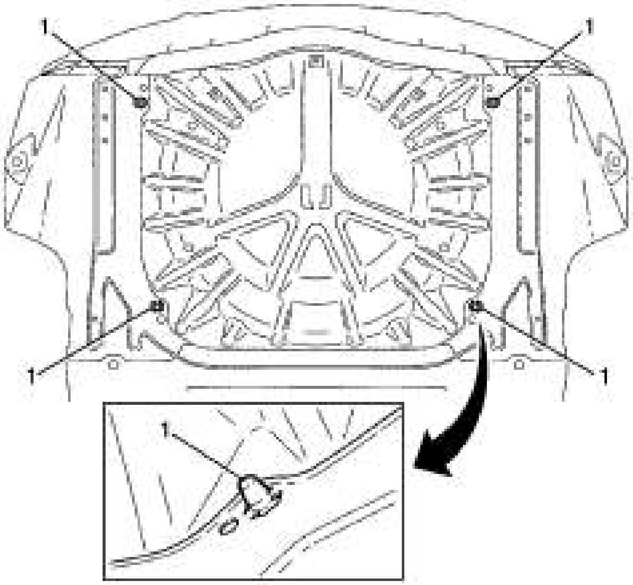
12. Cut through the urethane bead around the spare wheel well panel (4) to the rear compartment floor panel (3) with the aid of an assistant.

    Discard the remaining section of the spare wheel well panel.

Installation Procedure



1. Clean the rear compartment panels of all adhesive (1) using a suitable cleaning solution.



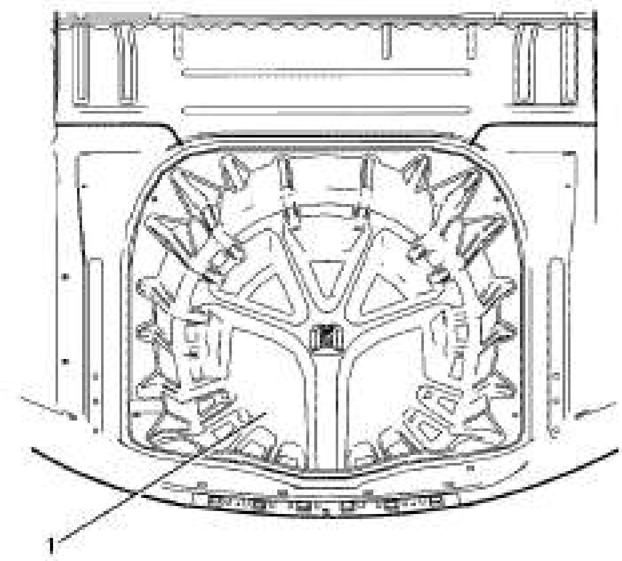
Important: The Adhesive flange on the spare wheel well panel must not be handled with bare hands. This could lead to contamination of the primer on the spare wheel well panel flange.

Important: Make sure that the spare wheel well panel datum pins (1) are properly located in the rear compartment panels.

2. Test fit the spare wheel well panel to the rear compartment panels to identify and rectify any gaps around the rear compartment panels.

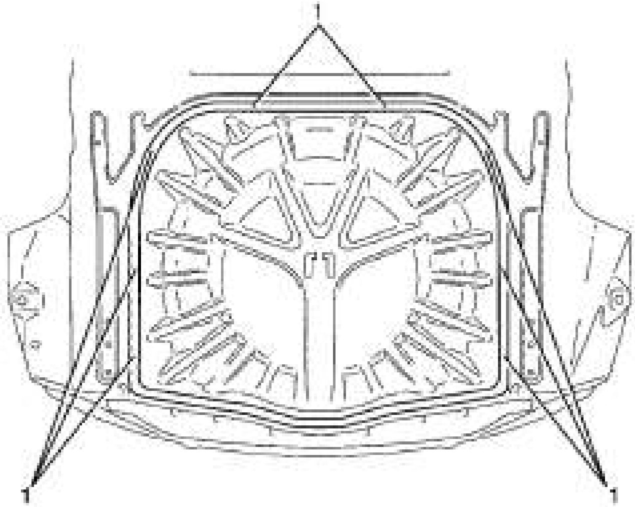
Important: Make sure that the rear compartment panels and the spare wheel well panel are free of any contaminants.

3. Apply a continuous bead of urethane GMW3041 (1) or equivalent approximately 10 millimetres in diameter to the underside of the flange on the spare wheel carrier (2). The adhesive bead should follow the centre of the channel on this flange.



Important: The adhesive begins to bond after 30 minutes. The spare wheel well panel must be fitted within this time.

4. Carefully install the NEW spare wheel well panel (1) to the vehicle to avoid smearing of the urethane. Ensure that there are no gaps between the spare wheel carrier and rear compartment panels.

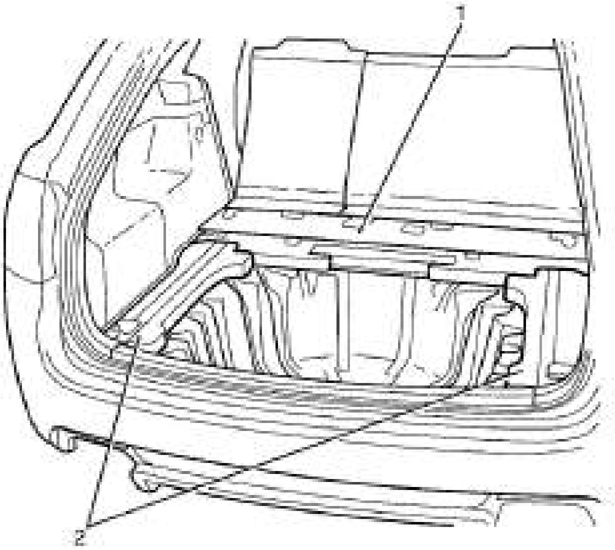


5. Apply one kilogram weights (1) to the edges of the spare wheel well panel to aid in adhesion to the rear compartment panels.

   Important: Allow adhesive to cure for 8 hours before fitting any other components to the spare wheel well panel.

   Important: DO NOT drive the vehicle for 24 hours after fitting the spare wheel well panel to allow the adhesive to fully cure.

6. Install the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
7. Install the spare wheel and emergency kit to the rear compartment.



8. Install the rear compartment floor panel centre support foam (1).
9. Install the rear compartment floor panel carpet exterior support foams (2).

10. Install the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
11. Install the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
12. Install the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Collision Repair | Repair Instructions | Document ID: 1997005

Body Tail Lamp Filler Panel Replacement (With Extension Panel SWB)

Removal Procedure

Caution: Refer to Approved Equipment for Collision Repair Caution in the Preface section.

Caution: Refer to Foam Sound Deadeners Caution in the Preface section.

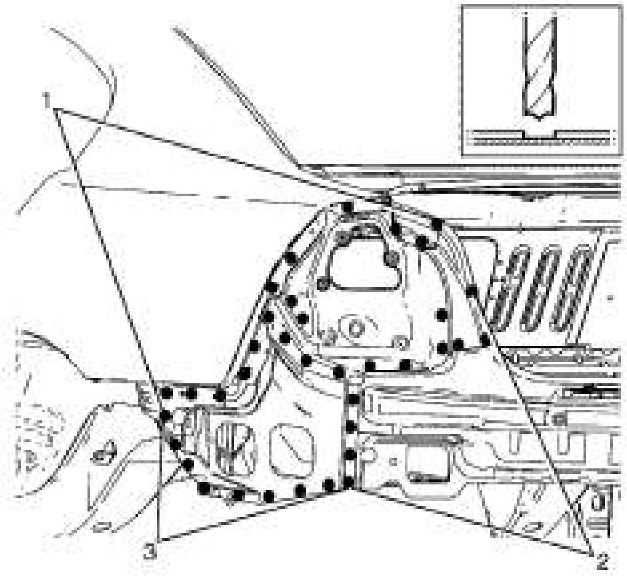
1. Disable the SIR system. Refer to SIR Disabling and Enabling.

Caution: Refer to Battery Disconnect Caution in the Preface section.

2. Disconnect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
3. Remove the rear interior trims. Refer to Quarter Upper Trim Panel Replacement.
4. Remove the rear compartment side trims. Refer to Rear Corner Trim Panel Carpet Replacement.
5. Remove the battery. Refer to Battery Replacement.
6. Remove the battery tray. Refer to Battery Tray Replacement.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

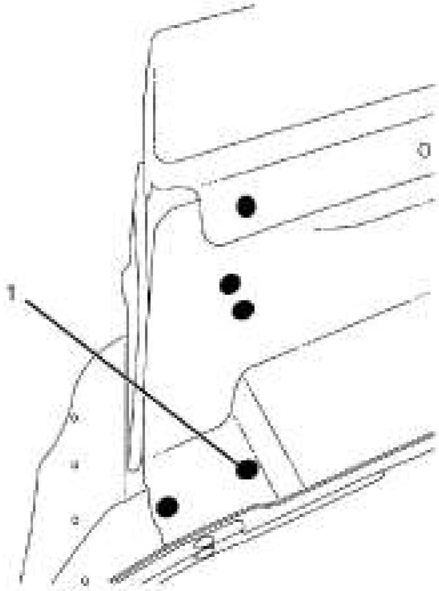
7. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
8. Remove the rear wheels. Refer to Tire and Wheel Removal and Installation.
9. Remove the rear impact bar. Refer to Rear Bumper Fascia Insert Replacement.
10. Remove the rear pressure relief valves. Refer to Pressure Relief Valve Replacement.
11. Remove the tail lights. Refer to Parking and Turn Signal Lamp Replacement.



12. Locate, mark and drill out the spot welds (1) in the tail lamp filler and rear extension panel to

rear quarter panel.

13. Locate, mark and drill out the spot welds (3) in the rear extension panel to side extension panel.
14. Locate, mark and drill out the spot welds in the tail lamp filler panel to side extension panel.
15. Locate, mark and drill out the spot welds (2) in the tail lamp filler panel to rear end panel.

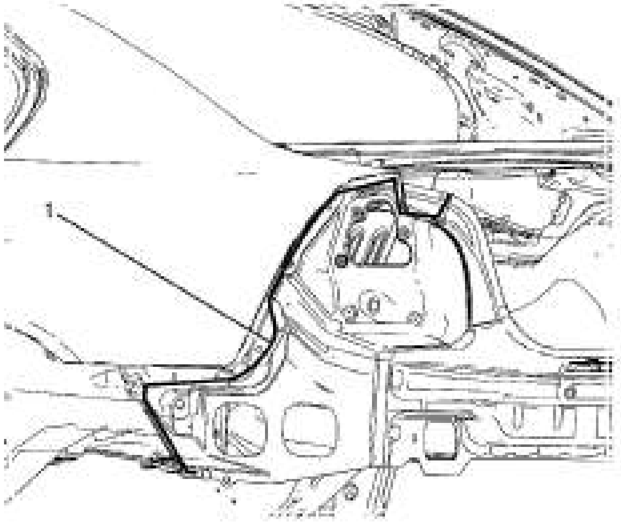


16. Locate, mark and drill out the spot welds (1) in the tail lamp filler panel to inner upper extension panel.
17. Remove the tail lamp filler panel and extension panel from the vehicle.

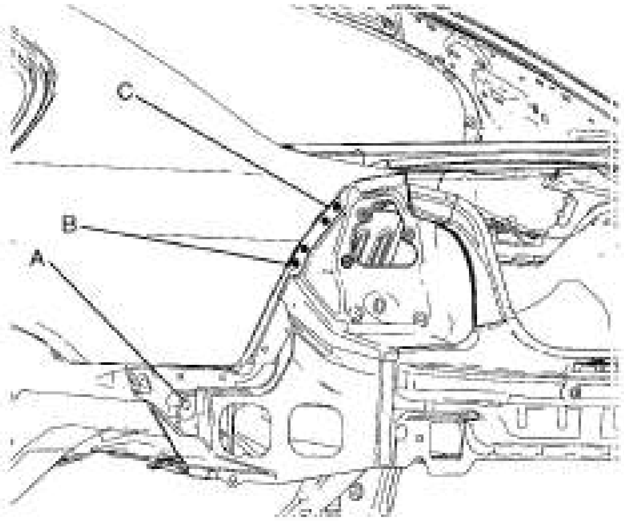
Installation procedure

Important: If the location of the original spot weld holes can not be determined, or if structural weld-thru adhesive is present, space the puddle weld holes every 32 mm (1¼ in).

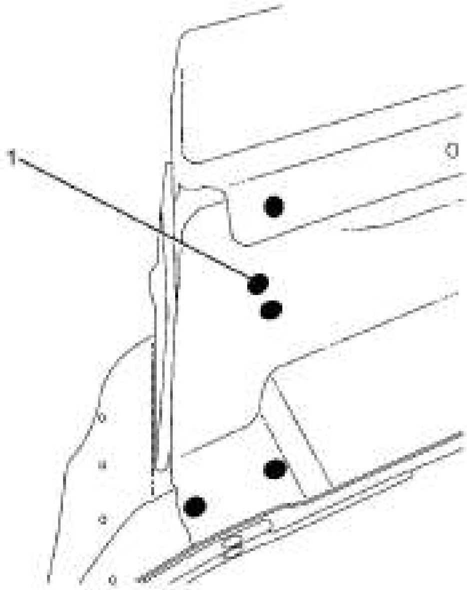
Important: Spot welding is the preferred method for attaching panels and should be used wherever possible. A puddle weld should be performed where your spot welder is unable to reach.



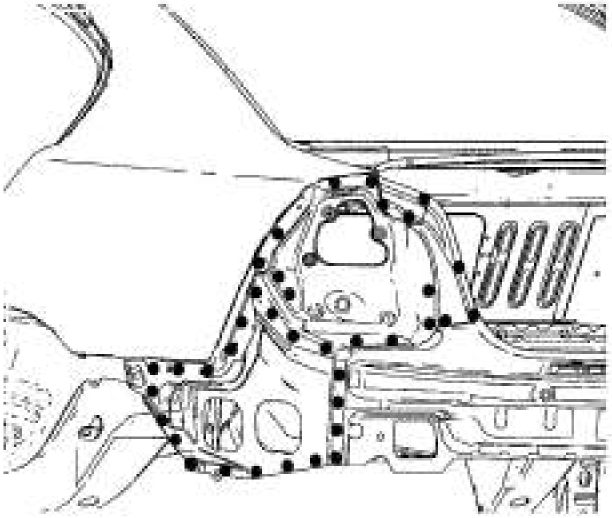
1. Apply the primary sealer (1) GM6449G or equivalent along the tail lamp filler panel and rear extension panel to the rear quarter panel.
2. Position the tail lamp filler panel to the vehicle.



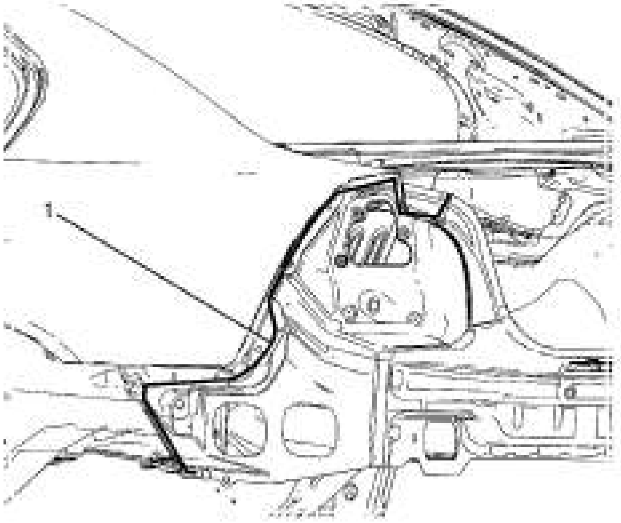
3. Align the datum hole alignment points at A, B and C.
   - Datum A is 10.5mm
   - Datum B is 10.2mm X 16.1mm
   - Datum C is 23.1mm



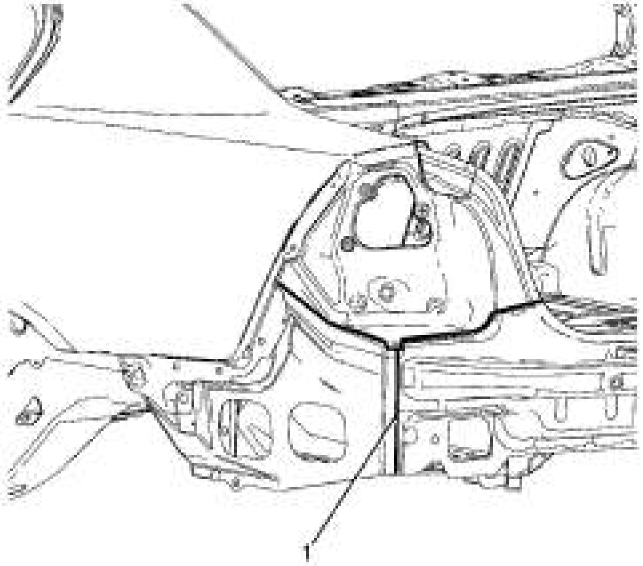
4. Weld (1) the tail light filler panel to the inner upper extension panel.



5. Weld the tail lamp filler panel to the rear end panel.
6. Weld the tail lamp filler panel to the side extension.
7. Weld the rear extension panel to the side extension panel.
8. Weld the tail lamp filler panel and the rear extension panel to the rear quarter panel.



9. Apply the secondary sealer (1) GM specification 9984532 or equivalent along the tail lamp filler panel and side extension to the rear quarter panel.



10. Apply the secondary sealer (1) GM specification 9984532 or equivalent along the tail lamp filler panel to the rear end panel.
11. Apply the sealers and anti-corrosion materials to the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.
12. Paint the repaired area. Refer to Basecoat/Clearcoat Paint Systems.
13. Install the tail lights. Refer to Parking and Turn Signal Lamp Replacement.
14. Install the pressure relief valves. Refer to Pressure Relief Valve Replacement .
15. Install the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
16. Install the rear wheels. Refer to Tire and Wheel Removal and Installation.
17. Install the battery tray. Refer to Battery Tray Replacement.
18. Install the battery. Refer to Battery Replacement.
19. Install the rear compartment side trims. Refer to Rear Corner Trim Panel Carpet

Replacement.

20. Install the rear interior trims. Refer to Quarter Upper Trim Panel Replacement.

Caution: Refer to Battery Disconnect Caution in the Preface section.

21. Connect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
22. Enable the SIR system. Refer to SIR Disabling and Enabling.
23. If re-programming is required. Refer to Control Module References.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Collision Repair | Repair Instructions | Document ID: 1997007

Body Tail Lamp Filler Panel Replacement (SWB)

Removal Procedure

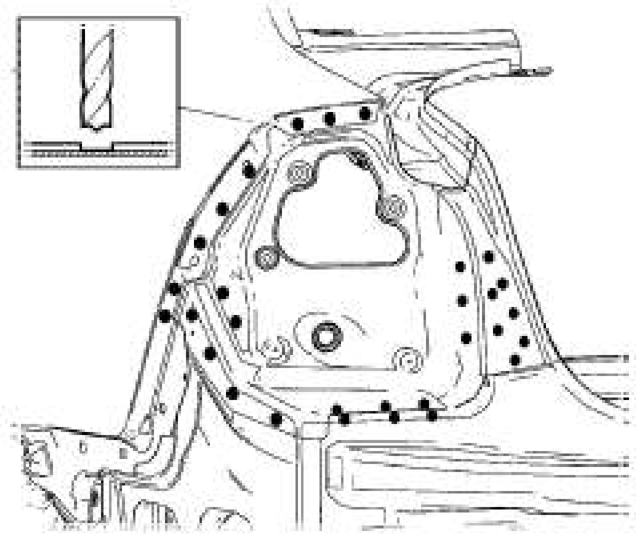
Caution: Refer to Approved Equipment for Collision Repair Caution in the Preface section.

Caution: Refer to Foam Sound Deadeners Caution in the Preface section.

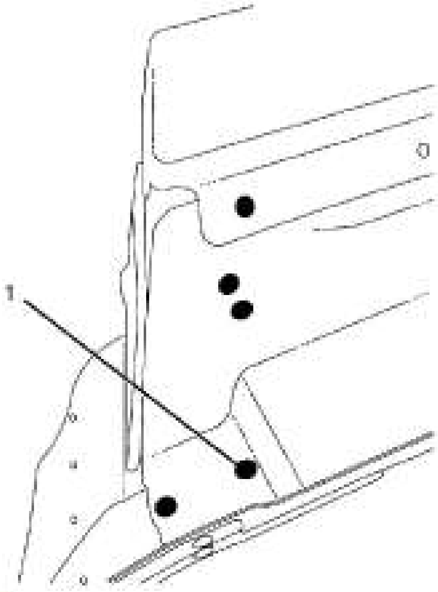
1. Disable the SIR system. Refer to SIR Disabling and Enabling.

Caution: Refer to Battery Disconnect Caution in the Preface section.

2. Disconnect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
3. Remove the rear compartment side trims. Refer to Rear Corner Trim Panel Carpet Replacement.
4. Remove the rear interior trims. Refer to Quarter Upper Trim Panel Replacement.
5. Remove the battery. Refer to Battery Replacement.
6. Remove the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
7. Remove the tail lights. Refer to Parking and Turn Signal Lamp Replacement.

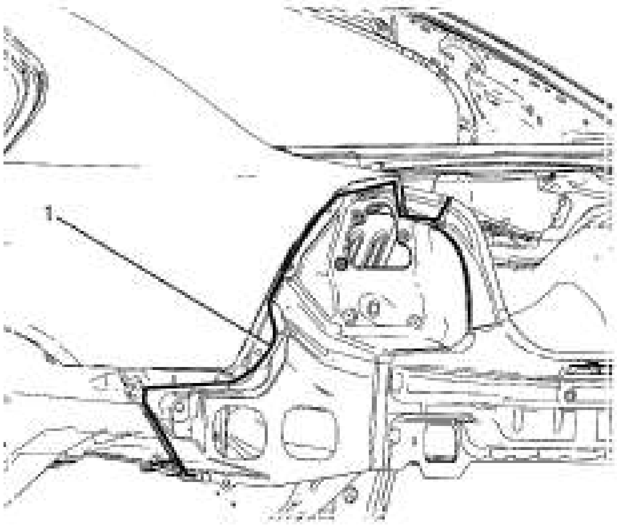


8. Locate, mark and drill out the spot welds in the tail lamp filler panel to rear quarter panel.
9. Locate, mark and drill out the spot welds in the tail lamp filler panel to rear end panel.
10. Locate, mark and drill out the spot welds in the tail lamp filler panel to side extension.

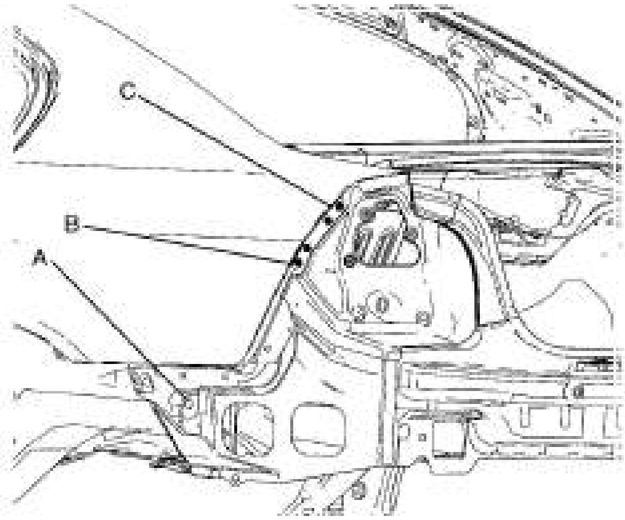


11. Locate, mark and drill out the spot welds in the tail lamp filler panel to upper extension.
12. Remove the tail lamp filler panel from the vehicle.

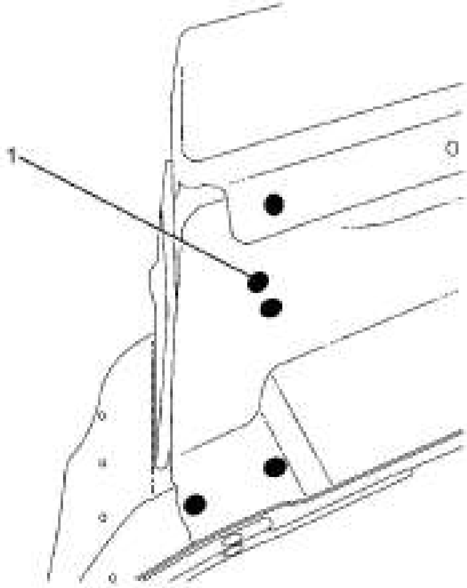
Installation procedure



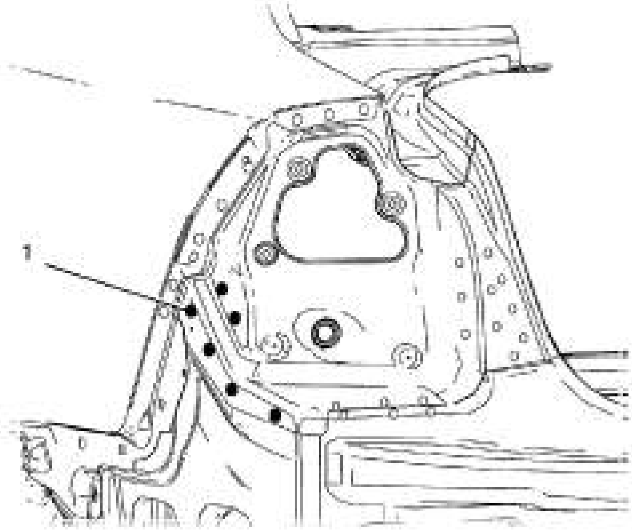
1. Apply the primary sealer (1) GM6449G or equivalent path to the tail lamp filler panel.
2. Install the tail lamp filler panel to the vehicle.



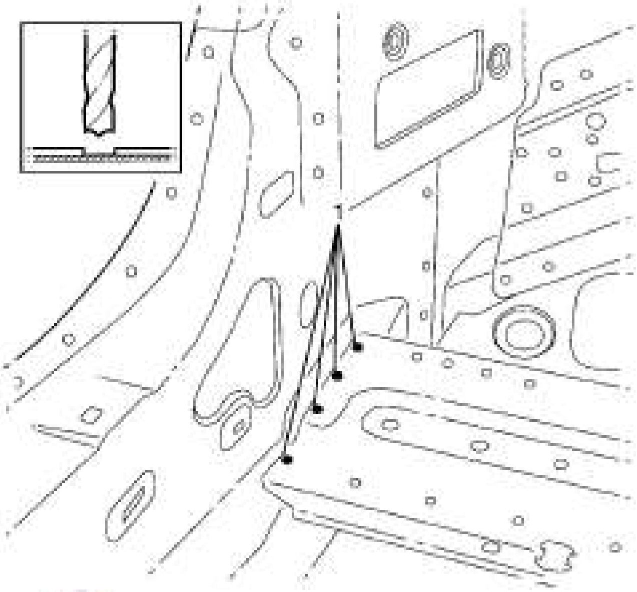
3. Align the datum hole alignment points at A, B and C.
   - Datum A is 4.1mm
   - Datum B is 10.2mm X 16.1mm
   - Datum C is 10.5mm



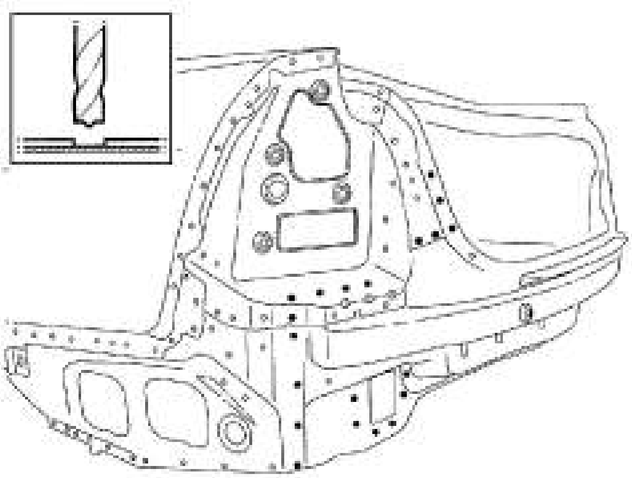
4. Weld (1) the tail light filler panel to the upper extension.



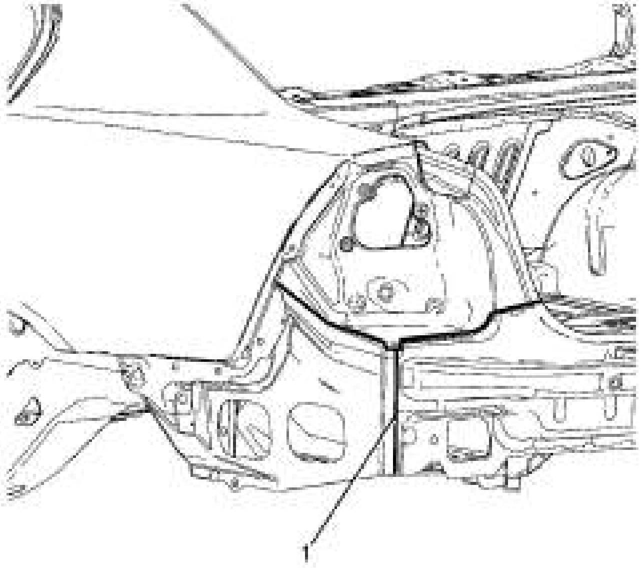
5. Weld (1) the tail light filler panel to the side extension.



6. Weld (1) the tail lamp filler panel to the rear end panel.



7. Weld (1) the tail lamp filler panel to the rear quarter panel.



8. Apply the secondary sealer (1) GM specification 9984532 or equivalent along the tail lamp filler panel to the rear quarter panel.
9. Apply the secondary sealer (1) GM specification 9984532 or equivalent along the tail lamp filler panel to the rear end panel.
10. Apply the secondary sealer (1) GM specification 9984532 or equivalent along the tail lamp filler panel to the side extension panel.
11. Apply the sealers and anti-corrosion materials to the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.
12. Paint the repaired area. Refer to Basecoat/Clearcoat Paint Systems.
13. Install the tail lights. Refer to Parking and Turn Signal Lamp Replacement.
14. Install the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
15. Install the battery. Refer to Battery Replacement.
16. Install the rear compartment side trims. Refer to Rear Corner Trim Panel Carpet

Replacement.

17. Install the rear interior trims. Refer to Quarter Upper Trim Panel Replacement.

Caution: Refer to Battery Disconnect Caution in the Preface section.

18. Connect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
19. Enable the SIR system. Refer to SIR Disabling and Enabling.
20. If re-programming is required. Refer to Control Module References.

Body Tail Lamp Filler Panel Replacement (Sportwagon)

Removal Procedure

Caution: Refer to Approved Equipment for Collision Repair Caution in the Preface section.

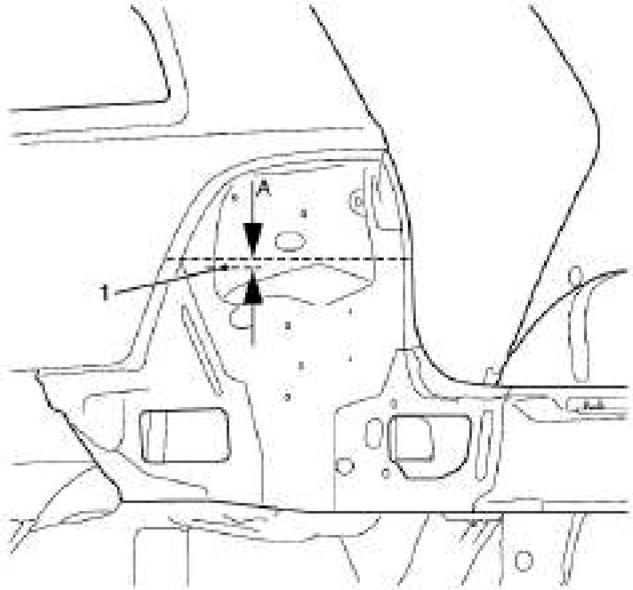
Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Foam Sound Deadeners Caution in the Preface section.

1. Disable the SIR system. Refer to SIR Disabling and Enabling.

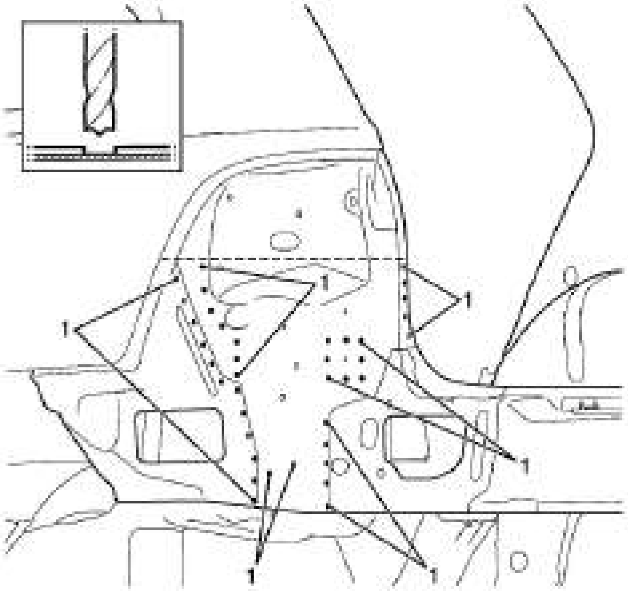
   Caution: Refer to Battery Disconnect Caution in the Preface section.

2. Disconnect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
3. Remove the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.
4. Remove the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
5. Remove the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
6. Remove the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
7. Remove the liftgate weatherstrip. Refer to Liftgate Weatherstrip Replacement.
8. Remove the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
9. Remove the battery. Refer to Battery Replacement.
10. Remove the battery tray. Refer to Battery Tray Replacement.
11. Remove the liftgate. Refer to Liftgate Replacement.
12. Remove the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
13. Remove the tail lamp. Refer to Tail Lamp Assembly and /or Backup, Sidemarker, Stop, Turn Signal Bulb Replacement.
14. Note the location and remove the sealers and anti-corrosion materials from the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.



Important: Measure from the centre of the datum hole to create an accurate cut line.

15. Mark a horizontal sectioning line 16 mm above datum point (1) on the Tail Lamp Filler Panel. Datum point (1) is a 10 mm dia hole in the Tail Lamp Filler Panel.



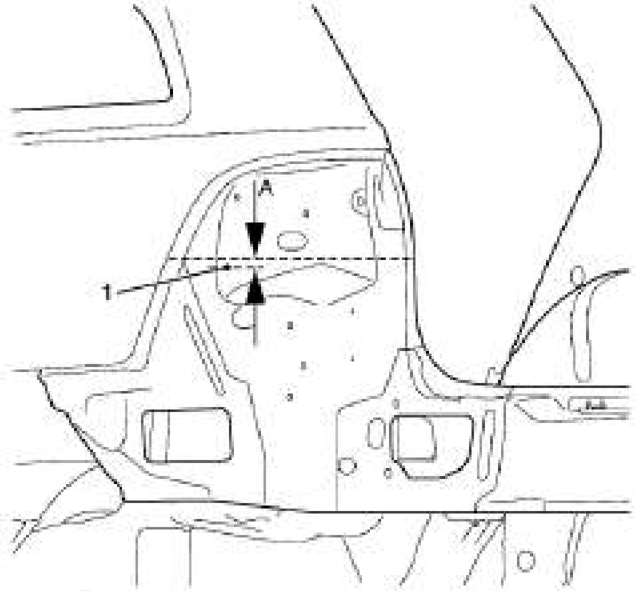
Important: Do not damage any inner panels or reinforcements.

Important: Note the number and location of welds for installation of the service assembly.

Important: Only remove welds below the sectioning line.

16. Locate, mark and drill out the spot welds (1) that attach the body tail lamp filler panel lower

section to vehicle body.



Important: Only cut through the Tail Lamp Filler Panel. Do not damage any inner panels or reinforcements.

17. Cut along the cut line (1) on the body side outer panel with a suitable cutting tool.
18. Remove the body tail lamp filler panel lower portion of the vehicle.

Installation Procedure

Important: Spot welding is the preferred method for attaching panels and should be used whenever possible. A plug weld should only be performed where spot welding is not possible.

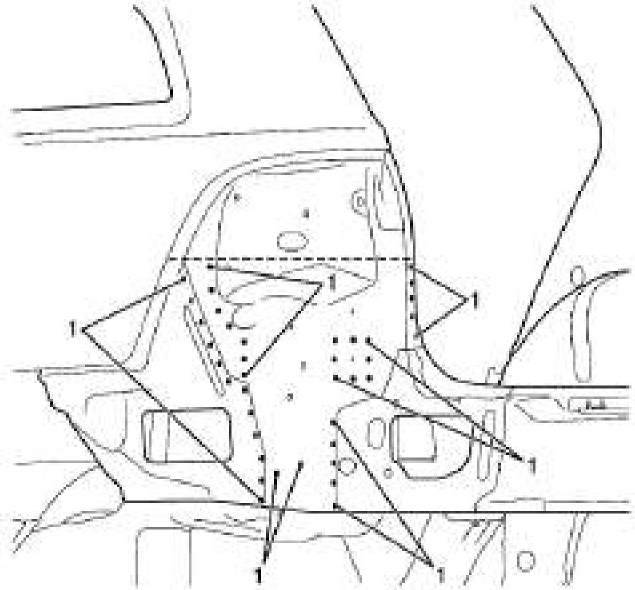
Important: If the location of the original plug weld holes cannot be determined, or if structural weld-thru adhesive is present, space the plug weld holes every 32 mm (1¼ in).

Important: Ensure that all factory welds are replaced in their original locations.

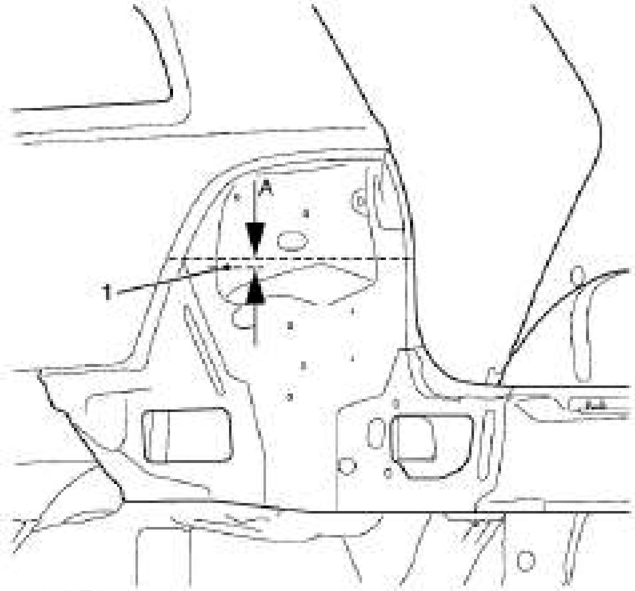
Important: Ensure that all structural adhesives and sealers are replaced in their original locations.

Important: Follow the adhesive manufacturer's instructions during the assembly process. Heat must be applied as per the manufacturer's specifications to cure the adhesives and to expand the sealing baffles.

1. Drill 8 mm (5/16 in) plug weld holes as necessary in the locations noted when disassembling.
2. Cut the new Tail Lamp Filler Panel in corresponding locations to fit the remaining original Tail Lamp Filler Panel. The sectioning joint should be trimmed to allow a gap of one-and-one-half-times the metal thickness at the sectioning joint.
3. Clean and prepare the mating surfaces of the body tail lamp filler panel and the body side panel assembly.
4. Align the body Tail Lamp Filler Panel repair section to the vehicle using three dimensional measuring equipment. Refer to Dimensions - Body

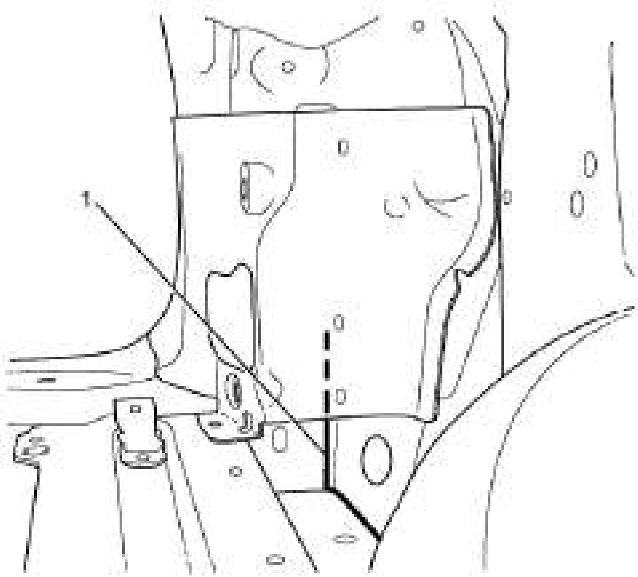


5. Weld the body tail lamp filler panel repair section (1) to the vehicle body.

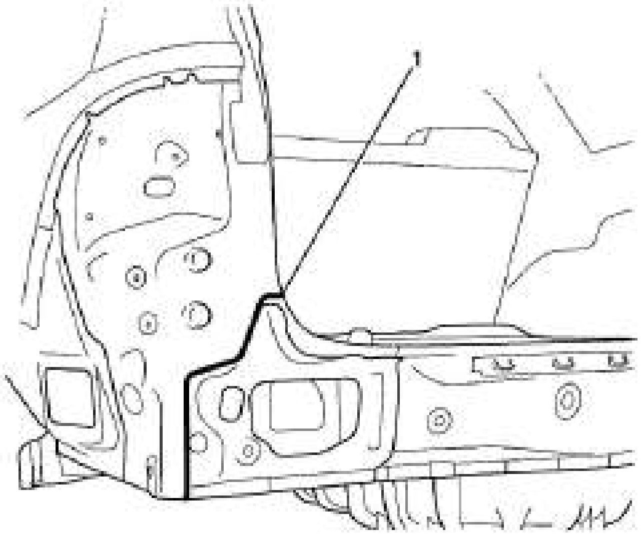


Important: To create a solid weld with minimum heat distortion, make 25 mm (1 in) stitch welds along the seam with 25 mm (1 in) gaps between them.

6. Stitch weld the Tail Lamp Filler Panel repair section to the vehicle body at the sectioning location.



7. Apply secondary sealer GM9984532 or equivalent to the edge of the body tail lamp filler panel (1).



8. Apply secondary sealer GM9984532 or equivalent to the edge of the body tail lamp filler panel (1).
9. Apply the sealers and anti-corrosion materials to the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.
10. Paint the repaired area. Refer to Basecoat/Clearcoat Paint Systems.
11. Install the tail lamp. Refer to Tail Lamp Assembly and /or Backup, Sidemarker, Stop, Turn Signal Bulb Replacement.
12. Install the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
13. Install the liftgate. Refer to Liftgate Replacement.
14. Install the battery tray. Refer to Battery Tray Replacement.
15. Install the battery. Refer to Battery Replacement.
16. Install the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel

Replacement.

17. Install the liftgate weatherstrip. Refer to Liftgate Weatherstrip Replacement.
18. Install the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
19. Install the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
20. Install the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
21. Install the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.
22. Connect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
23. Enable the SIR system. Refer to SIR Disabling and Enabling.

Rear End Panel Filler Replacement (Sportwagon)

Removal Procedure

Caution: Refer to Approved Equipment for Collision Repair Caution in the Preface section.

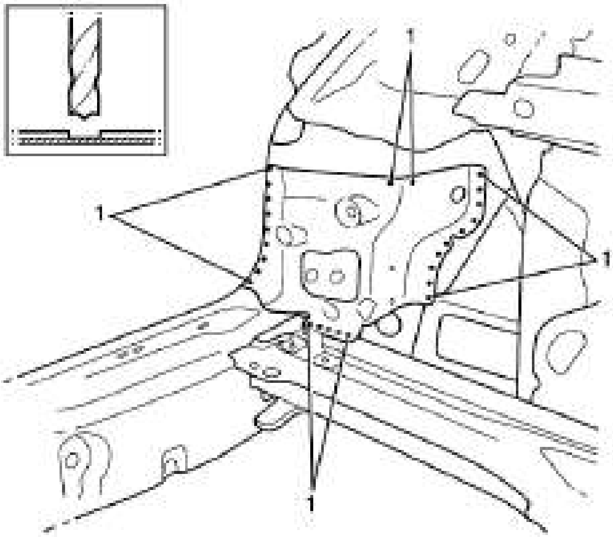
Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Foam Sound Deadeners Caution in the Preface section.

1. Disable the SIR system. Refer to SIR Disabling and Enabling.

   Caution: Refer to Battery Disconnect Caution in the Preface section.

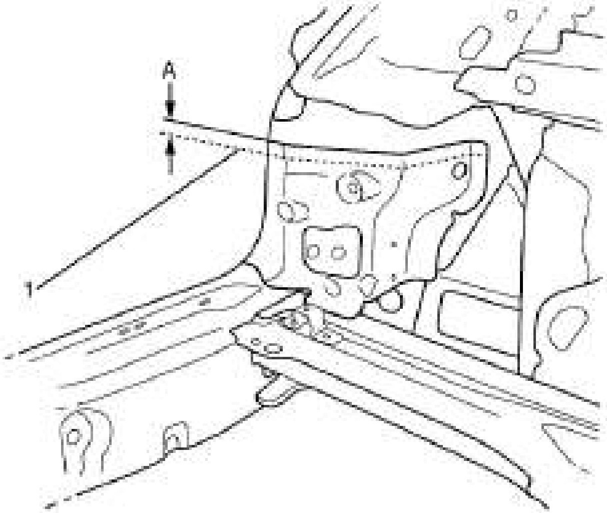
2. Disconnect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
3. Remove the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.
4. Remove the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
5. Remove the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
6. Remove the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
7. Remove the liftgate weatherstrip. Refer to Liftgate Weatherstrip Replacement.
8. Remove the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
9. Remove the battery. Refer to Battery Replacement.
10. Remove the battery tray. Refer to Battery Tray Replacement.
11. Remove the liftgate. Refer to Liftgate Replacement.
12. Remove the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
13. Remove the tail lamp. Refer to Tail Lamp Assembly and /or Backup, Sidemarker, Stop, Turn Signal Bulb Replacement.
14. Note the location and remove the sealers and anti-corrosion materials from the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.



Important: Note the location of the factory adhesive and sealants for installation of the service assembly.

Important: Note the number and location of the factory welds for the installation of the service assembly.

15. Locate, mark and drill out the spot welds attaching the Tail Lamp Inner Filler Panel to body side assembly and floor assembly (1).



Important: The Tail Lamp Inner Filler Panel is attached to the vehicle with spotwelds and a bead of adhesive along the top.

16. Mark a horizontal cut line 25 mm (1.0 in) (Dimension A) below the top of the Tail Lamp Inner Filler Panel. The cut line must be parallel with the top of the Tail Lamp Inner Filler Panel.

    Important: Only cut through the Tail Lamp Inner Filler Panel. Do not damage any inner panels or reinforcements.

17. Cut along the cut line (1) on the Tail Lamp Inner Filler Panel with a suitable cutting tool.
18. Remove the lower portion of the Tail Lamp Inner Filler Panel from the vehicle.

    Important: Do not damage any inner panels or reinforcements.

19. Using a suitable tool remove the remaining strip of Tail Lamp Inner Filler Panel from the inner body side. Ensure all traces of old adhesive are removed.

Installation Procedure

Important: Spot welding is the preferred method for attaching panels and should be used whenever possible. A plug weld should only be performed where spot welding is not possible.

Important: If the location of the original plug weld holes cannot be determined, or if structural weld-thru adhesive is present, space the plug weld holes every 32 mm (1¼ in).

Important: Ensure that all factory welds are replaced in their original locations.

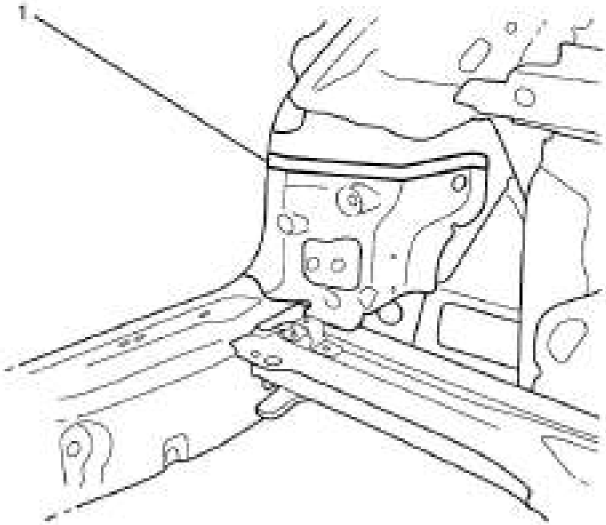
Important: Ensure that all structural adhesives and sealers are replaced in their original locations.

Important: Follow the adhesive manufacturer's instructions during the assembly process. Heat must be applied as per the manufacturer's specifications to cure the adhesives and to expand the sealing baffles.

1. Drill 8 mm (5/16 in) plug weld holes as necessary in the locations noted when disassembling.

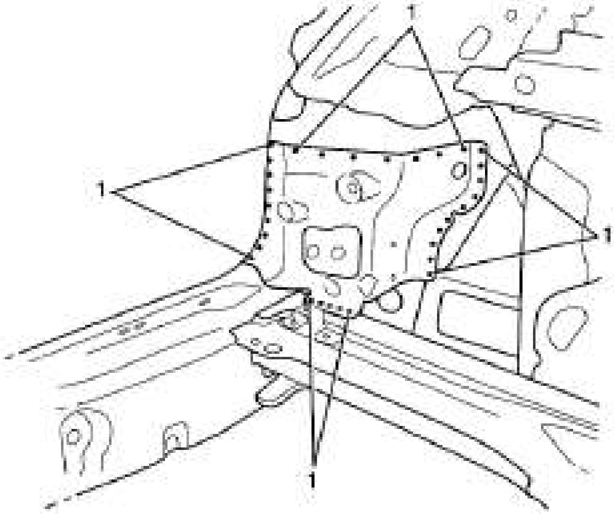
   Important: Secondary sealer must be applied to the perimeter of all flanges. Secondary sealer must be applied to all welds/joints that were originally covered by secondary sealer.

2. Clean and prepare the mating surfaces of both parts of the body side panel assembly.



3. Apply approved structural adhesive (1) GM6449G or equivalent to the mating surfaces between the tail lamp filler panel and the back body inner pillar panel.

   Important: As the tail lamp filler panel is installed to the vehicle, structural adhesive should be visible on the outside edges of both surfaces (squeezed out when pushed together).



4. Weld the tail lamp filler panel to the vehicle (1). Apply additional welds spaced every 32 mm (1¼ in) to the joint between the tail lamp filler panel and back body inner pillar panel.
5. Apply the sealers and anti-corrosion materials to the repair area, as necessary. Refer to Anti-Corrosion Treatment and Repair.
6. Paint the repaired area. Refer to Basecoat/Clearcoat Paint Systems.
7. Install the tail lamp. Refer to Tail Lamp Assembly and /or Backup, Sidemarker, Stop, Turn

Signal Bulb Replacement.

8. Install the rear bumper fascia. Refer to Rear Bumper Fascia Replacement.
9. Install the liftgate. Refer to Liftgate Replacement.
10. Install the battery tray. Refer to Battery Tray Replacement.
11. Install the battery. Refer to Battery Replacement.
12. Install the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
13. Install the liftgate weatherstrip. Refer to Liftgate Weatherstrip Replacement.
14. Install the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
15. Install the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
16. Install the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
17. Install the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.
18. Connect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
19. Enable the SIR system. Refer to SIR Disabling and Enabling.

Metal Panel Bonding

Important: The application of heat can degrade the mechanical properties of certain high strength steel panels. With the exception of welding processes, do not use heat to repair or straighten the following panels:

- Centre Pillar Reinforcement
- Rocker Outer Panel
- Rocker Inner Panel
- #4 Crossbar
- Door Impact Beam

If required, the use of heat (maximum of 650 degrees C for up to 90 sec) is acceptable for other steel body panels.

This is intended to provide general guidelines for adhesive bonding of exterior panels to partially alleviate the requirement for extensive spot welding and plug Metal-Inert Gas (MIG) welding procedures. Bonding cannot be used for butt weld type joints. Bonding is not recommended for vertical lap joints unless specified in the repair procedure. Bonding is most effective on horizontal lap joints. The benefits of panel bonding are:

- No heat or burn damage when additional welding is not required
- Corrosion protection
- Can act as a sealant
- Improved process for complicated shapes (wheelhouse area)

The scope of this specification is intended to provide the performance guidelines of structural adhesive systems used to repair (metallic) automotive bodies in the aftermarket. These types of adhesives are intended for use when bonding replacement body panels as an option to welding as the attachment means. Holden information outlines the use of room temperature cure acrylic adhesives that contain glass bead technology.

Bonding procedures in general are applicable only to a factory seams type approach.

Sectioning or partial panelling of full panels is not supported by Holden unless specifically documented in a Service Bulletin or Manual.

Applicable components for this technology are EXTERIOR PANELS ONLY, including door skins, tail end panels, roof outer panels and quarter panels.

Important: Do not use adhesives for vehicle underbody or upper body structure type repairs such as structural rails, shock/strut towers, floor pans, upper fender rails, body side pillars, door rings--side or rear, rocker panels, unless specifically documented in a Holden Service Bulletin or Manual. If in doubt, use only the procedures referenced in the Service Manual for the specific vehicle being repaired.

Always follow the system manufacturer's instructions for application, handling, and curing.

Adhesives currently meeting the performance requirements include Holden materials and products manufactured by 3M, Lord Adhesives and Dow. Refer to Collision Repair Specifications .

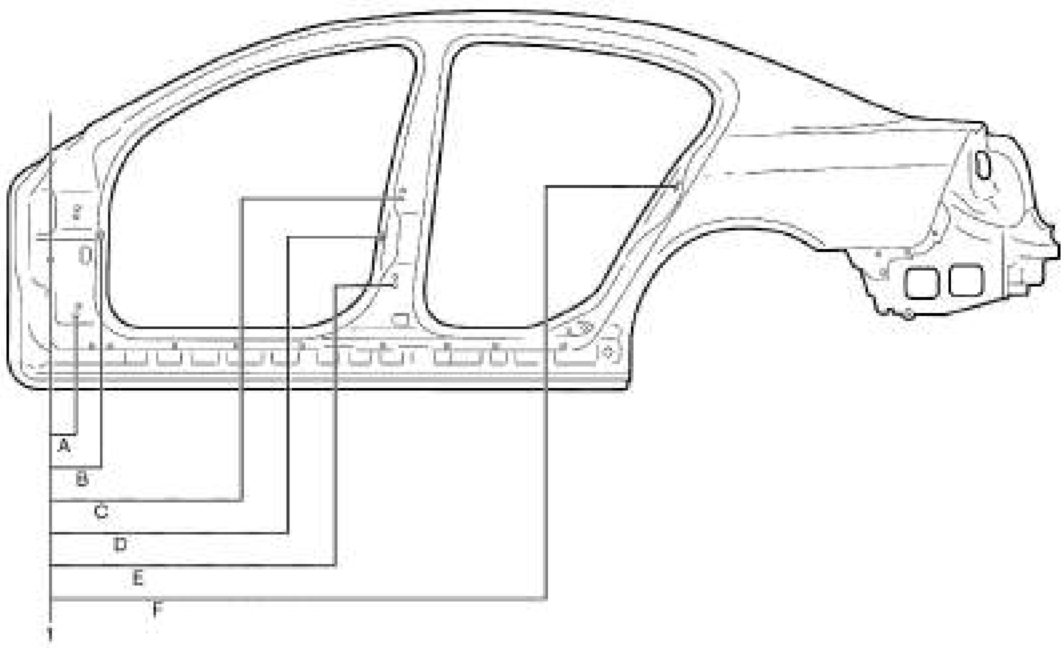
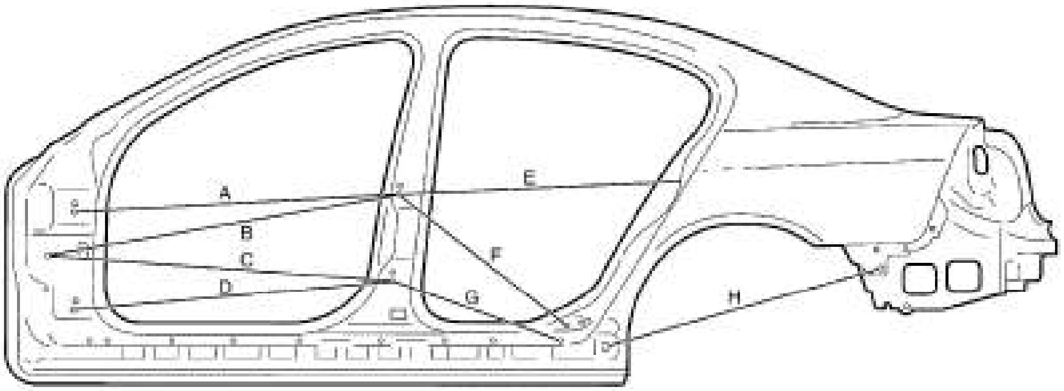
Dimensions - Body (SWB)



Location	Description	Length	Width	Height
1	Zero Line 25 mm Gage Hole	0	1660 mm (65.35 in)	550 mm (21.65 in)
A	Door Hinge Attach	76 mm (2.99 in)	1687 mm (66.42 in)	363 mm (14.29 in)
B	Door Hinge Attach	155 mm (6.1 in)	1592 mm (62.68 in)	452 mm (17.8 in)
C	Door Hinge Attach	1186 mm (46.69 in)	1704 mm (67.09 in)	756 mm (29.76 in)
D	Upper Door Lock Striker Attach	1170 mm (46.06 in)	1633 mm (64.29 in)	581 mm (22.87 in)
E	Door Hinge Attach	1186 mm (46.69 in)	1702 mm (67.01 in)	461 mm (18.15 in)
F	Upper Door Lock Striker Attach	2131 mm (83.9 in)	1640 mm (64.57 in)	795 mm (31.3 in)
All dimensions are measured from a zero line, a center line, and a common datum. All dimensions are symmetrical unless otherwise specified.				

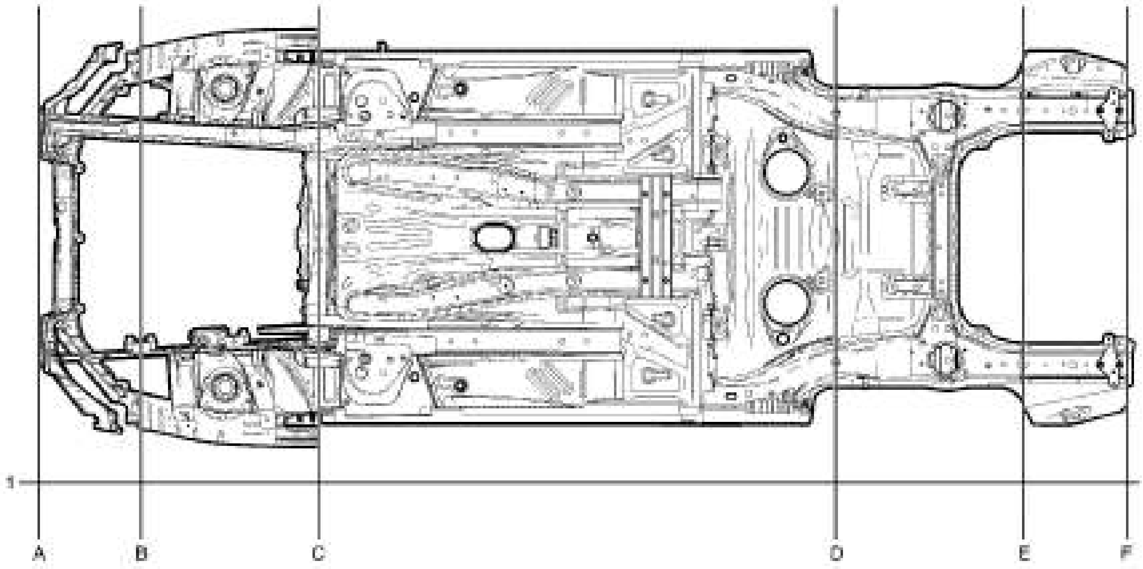
Point-to-Point Measurements



Location	Description	Length
A	Lower Top Front Door Hinge Hole to Lower Top Rear Door Hinge Hole	1103 mm (43.43 in)
B	Hinge Pillar Datum Hole to Lower Top Rear Door Hinge Hole	1205 mm (47.44 in)
C	Hinge Pillar Datum Hole to Lower Bottom Rear Door Hinge Hole	1170 mm (46.06 in)
D	Lower Bottom Front Door Hinge Hole to Lower Bottom Rear Door Hinge Hole	1086 mm (42.76 in)
E	Lower Top Rear Door Hinge Hole to Upper Rear Door Striker Hole	948 mm (37.32 in)
F	Lower Top Rear Door Hinge Hole to Lower Body Side Datum Hole	880 mm (34.65 in)
G	Lower Bottom Front Door Hinge Hole to Lower Body Side Datum Hole	763 mm (30.04 in)
H	Lower Body Side Datum Hole to Rear Body Side Datum Hole	961 mm (37.83 in)

All dimensions are measured from a zero line, a center line, and a common datum. All dimensions are symmetrical unless otherwise specified.

Dimensions - Underbody



Location	Description	Length	Width	Height
1	Zero Line 18 mm Hole	1535 mm (60.43 in)	810 mm (31.89 in)	128 mm (5.04 in)
A	20 mm Hole	805 mm (31.69 in)	886 mm (34.88 in)	328 mm (12.91 in)
B	10 mm Bumper Mounting	1136 mm (44.72 in)	0	0
C	16 mm Hole	2140 mm (84.25 in)	1024 mm (40.31 in)	200 mm (7.87 in)
D	25.1 mm x 39.7 mm Gage Hole	2910 mm (114.57 in)	1048 mm (41.26 in)	434 mm (17.09 in)
E	25.1 mm x 39.7 mm Gage Hole	3114 mm (122.60 in)	1048 mm (41.26 in)	434 mm (17.09 in)
F	18 mm Bumper Mounting	3335 mm (131.30 in)	0	0
All dimensions are measured from a zero line, a center line, and a common datum. All dimensions are symmetrical unless otherwise specified.

Dimensions - Body (Sportwagon)

Vehicle Dimensions - Main

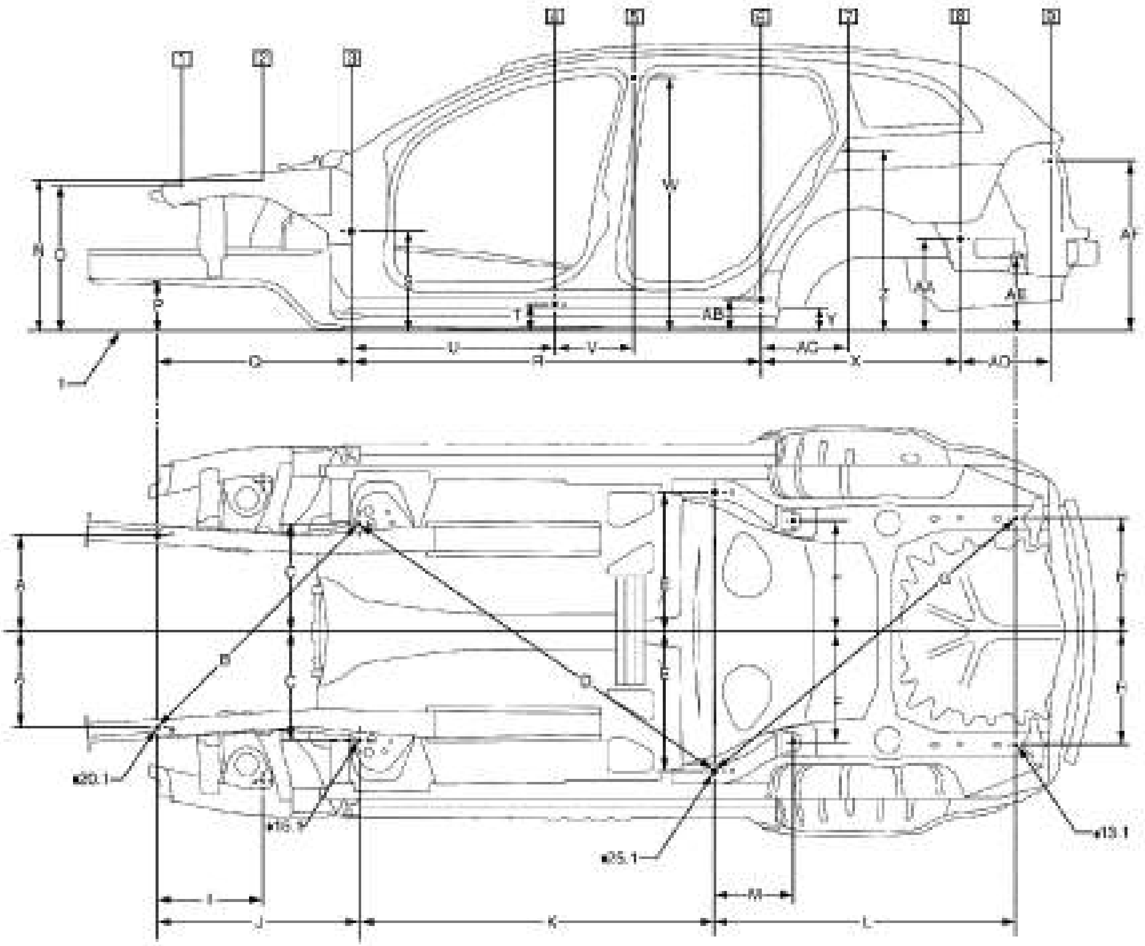
Important:: Dimensions are measured from the centre of holes, on the outer side of the metal surface.

Important:: The main datum surface (1) is the underside of each outrigger at the 16.1mm dia datum hole. The main datum surface (1) is parallel with the bottom of each rocker assembly inboard of the pinch weld flange.

Important:: All dimensions are projected to be either parallel with or at 90 degrees to the main datum surface (1).

Important:: The plan view is shown as viewed from beneath the vehicle.

Important:: For location details of measurement points 1 -- 9, refer to Vehicle Dimensions - Measuring Points.



Location	Description	Length
A	Centreline of vehicle to centre of 20.1mm dia datum hole	444 mm (17.48 in)
B	Centre of 20.1mm dia datum hole to centre of 16.1mm dia datum hole	1329 mm (52.31 in)
C	Centreline of vehicle to centre of 16.1mm datum dia hole	500 mm (19.69 in)
D	Centre of 16.1mm dia datum hole to centre of 25.1mm dia datum hole	2004 mm (78.91 in)
E	Centreline of vehicle to centre of 25.1mm datum dia hole	645 mm (25.39 in)
F	Centreline of vehicle to centre of rear frame mounting hole	512 mm (20.16 in)
G	Centre of 25.1mm dia datum hole to centre of 13.1mm dia datum hole	1820 mm (71.66 in)
H	Centreline of vehicle to centre of 13.1mm datum dia hole	524 mm (20.63 in)
I	Centre of 20.1mm dia datum hole to centre of 10.1mm dia datum hole	481 mm (18.92 in)
J	Centre of 20.1mm dia datum hole to centre of 16.1mm dia datum hole	935 mm (36.81 in)
K	Centre of 16.1mm dia datum hole to centre of 25.1mm dia datum hole	1645 mm (64.76 in)
L	Centre of 25.1mm dia datum hole to centre of 13.1mm dia datum hole	1395 mm (54.92 in)
M	Centre of 25.1mm dia datum hole to centre of rear frame mounting hole	365 mm (14.37 in)
N	Datum surface 1 to centre of 10.1mm dia datum hole	693 mm (27.27 in)
O	Datum surface 1 to centre of 9.9mm dia hole	661 mm (26.01 in)
P	Datum surface 1 to centre of 20.1mm dia datum hole	232 mm (9.14 in)
Q	Centre of 20.1mm dia datum hole to centre of 25.1mm dia datum hole	900 mm (35.43 in)
R	Centre of 25.1mm dia datum hole to centre of 25.1mm dia datum hole	1895 mm (74.61 in)
S	Datum surface 1 to centre of 25.1mm dia datum hole	455 mm (17.93 in)
T	Datum surface 1 to centre of 16.1mm dia datum hole	140 mm (5.53 in)
U	Centre of 25.1mm dia datum hole to centre of 16.1mm dia datum hole	940 mm (37.01 in)
V	Centre of 25.1mm dia datum hole to centre of 13.1mm dia datum hole	524 mm (20.63 in)
		1165 mm

W	Datum surface 1 to centre of 13.1mm dia datum hole	(45.88 in)
X	Centre of 25.1mm dia datum hole to centre of 20.1mm dia datum hole	920 mm (36.20 in)
Y	Datum surface 1 to centre of rear frame mounting hole	103 mm (4.07 in)
Z	Datum surface 1 to centre of 8.2mm dia hole	809 mm (31.83 in)
AA	Datum surface 1 to centre of 20.1mm dia datum hole	420 mm (16.54 in)
AB	Datum surface 1 to centre of 25.1mm dia datum hole	140 mm (5.52 in)
AC	Centre of 25.1mm dia datum hole to centre of 8.2mm dia hole	379 mm (15.65 in)
AD	Centre of 20.1mm dia datum hole to centre of 16.1mm dia datum hole	418 mm (16.47 in)
AE	Datum surface 1 to centre of 13.1mm dia datum hole	338 mm (13.31 in)
AF	Datum surface 1 to centre of 16.1mm dia datum hole	786 mm (30.93 in)

Vehicle Dimensions - Engine Compartment

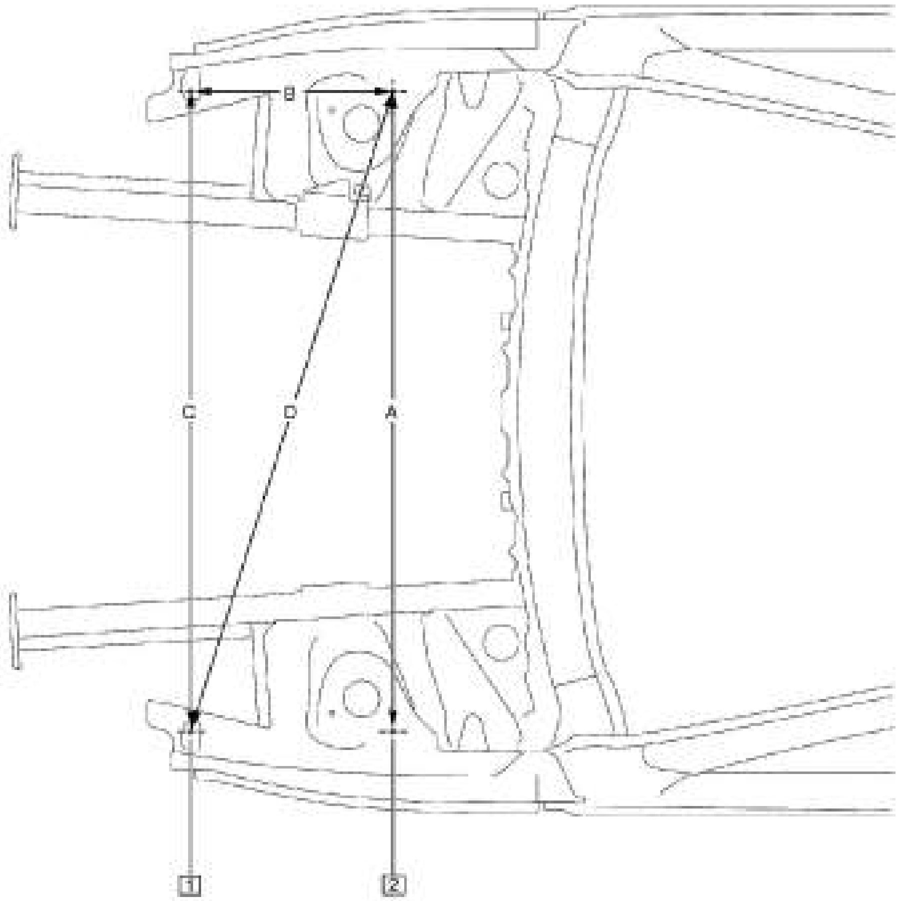
Important:: Dimensions are measured from the centre of holes, on the outer side of the metal surface.

Important:: The main datum surface (1) is the underside of each outrigger at the 16.1mm dia datum hole. The main datum surface (1) is parallel with the bottom of each rocker assembly inboard of the pinch weld flange.

Important:: All dimensions are projected to be either parallel with the main datum surface (1). Refer to Vehicle Dimensions - Main.

Important:: The plan view is shown as viewed from above the vehicle.

Important:: For location details of measurement points 1 -- 2, refer to Vehicle Dimensions - Measuring Points.



Location	Description	Length
A	Centre of 10.1mm dia datum hole to centre of 10.1mm dia datum hole	1574 mm (61.99 in)
B	Centre of 10.1mm dia datum hole to centre of 9.9mm dia hole	427 mm (16.82 in)
C	Centre of 9.9mm dia hole to centre of 9.9mm dia hole	1511 mm (59.47 in)
D	Centre of 9.9mm dia hole to centre of 10.1mm dia datum hole	1600 mm (63.00 in)

Vehicle Dimensions - Measuring Points

Important: Dimensions are measured from the centre of holes, on the outer side of the metal surface.

Front Frame Replacement

Tools Required

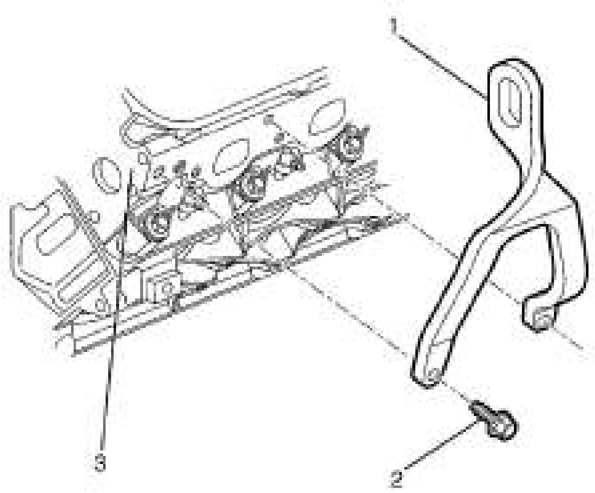
EN 46114 Engine Lift Bracket

Removal Procedure

Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

1. Remove the engine dress cover. Refer to Engine Cover Replacement for 3.6L engine or Engine Cover Replacement for 6.0L engine.
2. Remove the radiator air baffle. Refer to Radiator Air Upper Baffle and Deflector Replacement .

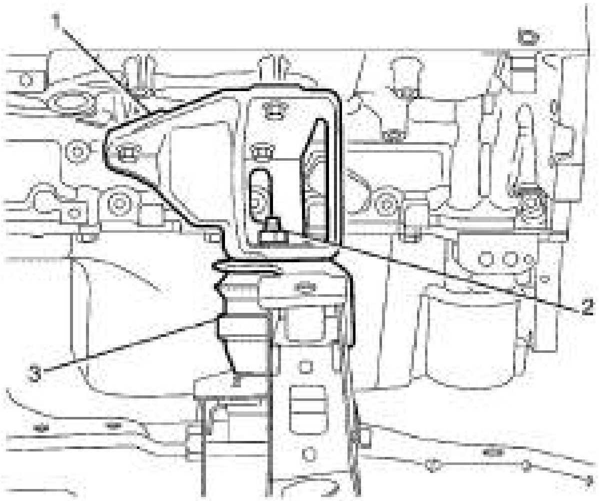


3. Position the EN 46114 (1) on the cylinder head (2).

Notice: Refer to Fastener Notice in the Preface section.

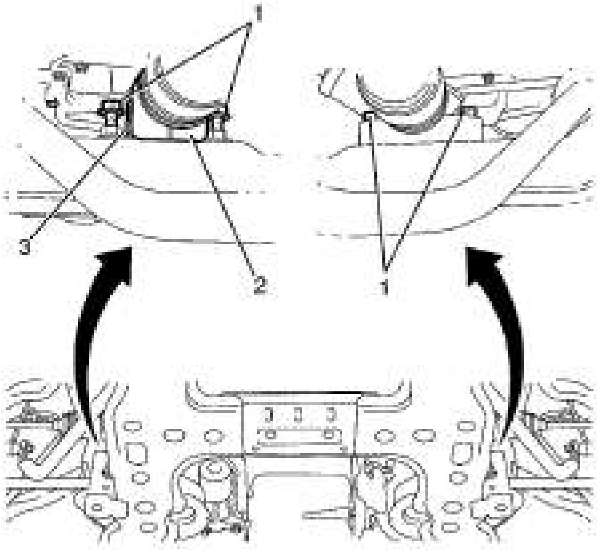
4. Install the EN 46114 to cylinder head retaining bolts (3).

Tighten
Tighten the EN 46114 to cylinder head retaining bolts (3) to 50 N·m (36 lb ft).

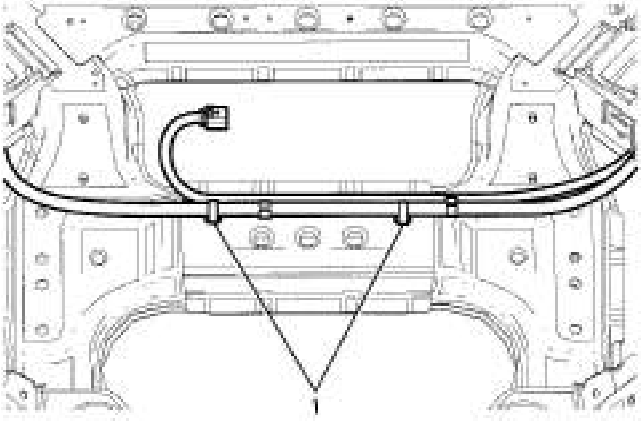


Important: When lifting the engine assembly, observe the clearance between the rear of the engine assembly and the dash panel.

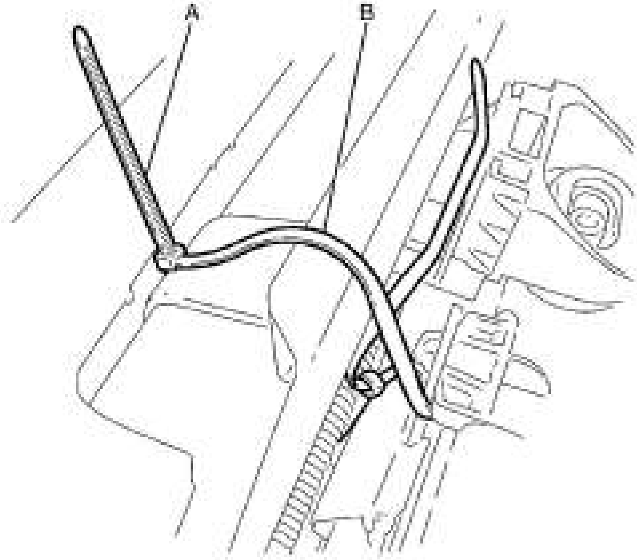
5. Install a suitable lifting tool and raise the engine assembly until the engine mount brackets (1) are clear of the engine mount retainers (2).
6. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
7. Remove the front bumper fascia. Refer to Front Bumper Fascia Replacement.
8. Remove the front air deflector. Refer to Front Air Deflector Replacement.
9. Remove the splash shield. Refer to Engine Splash Shield Replacement.
10. Remove the front control arm. Refer to Control Arm Replacement.
11. Remove the front castor arm. Refer to Front Lower Control Front Arm Replacement.
12. Remove the stabilizer shaft link. Refer to Stabilizer Shaft Link Replacement.



13. Remove the steering gear to subframe retaining bolts (1).



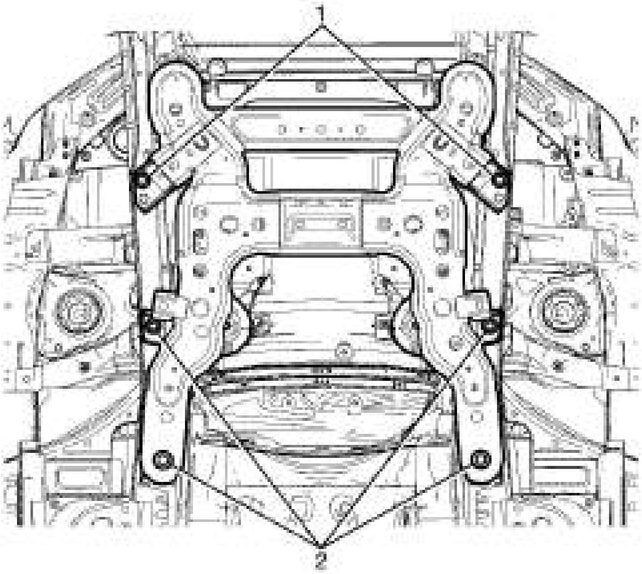
14. Disconnect the electrical harness retainers (1) securing the engine harness to the frame.



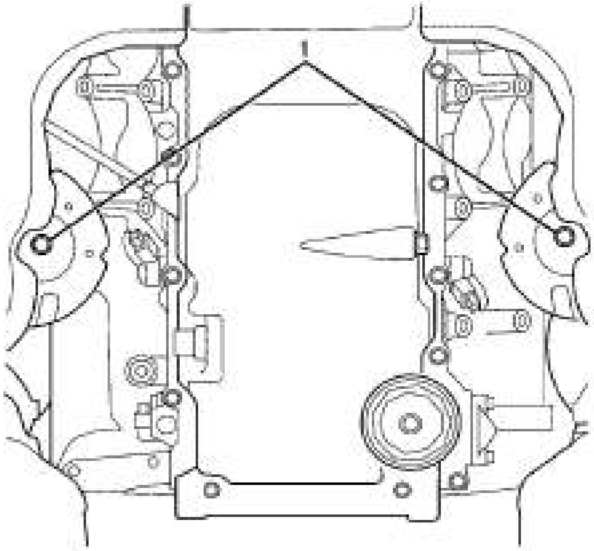
Important: It is necessary to secure the radiator to the front end assembly, as the radiator is supported by the subframe.

Important: Thread zip tie A around the front end assembly and zip tie B through the radiator and condenser mount. Insert zip tie A into the retainer of zip tie B and insert zip tie B into the retainer of zip tie A.

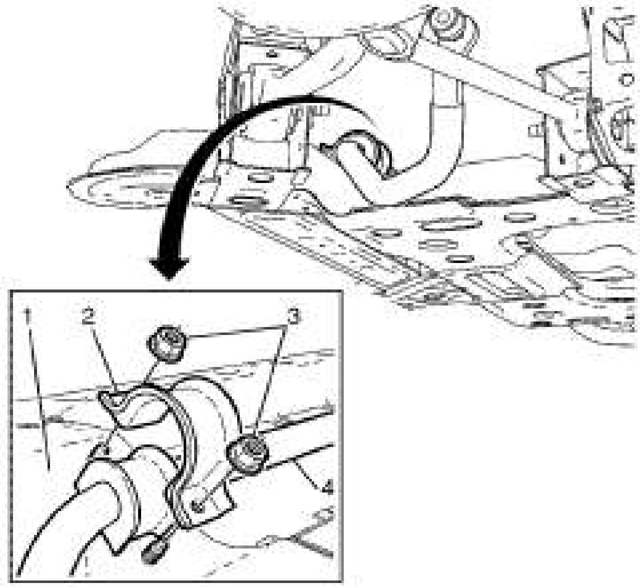
15. Secure the radiator to the radiator upper mounting brackets.



16. Install a suitable bench trolley under the frame.
17. Lower the vehicle to the frame support table.
18. Remove the front sub frame to front chassis rail retaining bolts (2).
19. Carefully raise the body from the frame.
20. Make sure when raising the body the following items are clear from the frame.
    - The brake pipes
    - The steering knuckle assembly
    - The wheel speed sensor electrical harness



21. Remove the lower engine mount to front sub frame retaining nuts (1).



Important: Nuts with micro-encapsulated thread sealant must be discarded after removal.

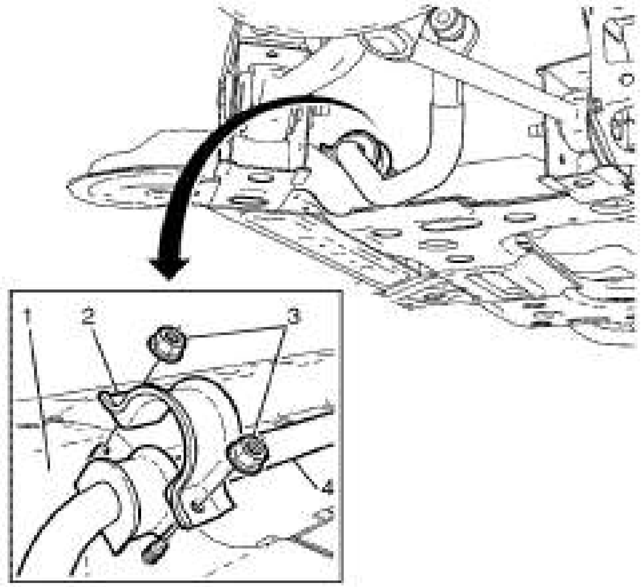
22. Remove the stabliser bar insulator bracket to subframe retaining nuts (3) on both sides of the stabiliser bar (4). Repeat for the opposite side.

    Discard the nuts.

23. Remove the stabliser bar insulator bracket (2) from the subframe (1) on both sides of the stabiliser bar.
24. Remove the stabliser bar from the front subframe.
25. With the aid of an assistant, remove the frame from the support fixture.

Installation Procedure

1. With the aid of an assistant, install the frame to the support fixture.



2. Install the stabilizer bar to the front subframe.
3. install the stabilizer bar caps (2) to the front subframe

   Important: Do not fully tighten the stabilizer shaft retaining bolts to the frame at this stage.

4. Install NEW stabilizer shaft to front sub frame retaining nuts (3).

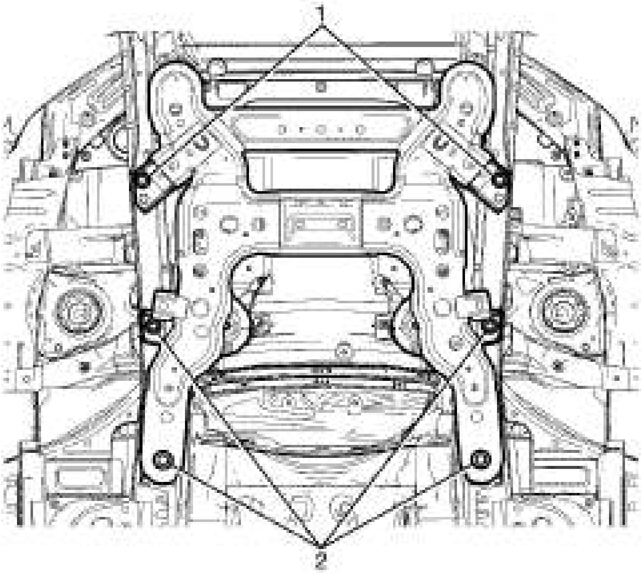
   Do not fully tighten at this stage.

5. Install the engine mount to the front subframe.
6. Install the lower engine mount to front sub frame retaining nuts (2).

   Do not fully tighten at this stage.

7. Carefully lower the body to the frame.
8. Make sure the following components are clear from the frame.
   - The wheel speed sensor electrical harness
   - The steering knuckle assembly
   - The brake pipes

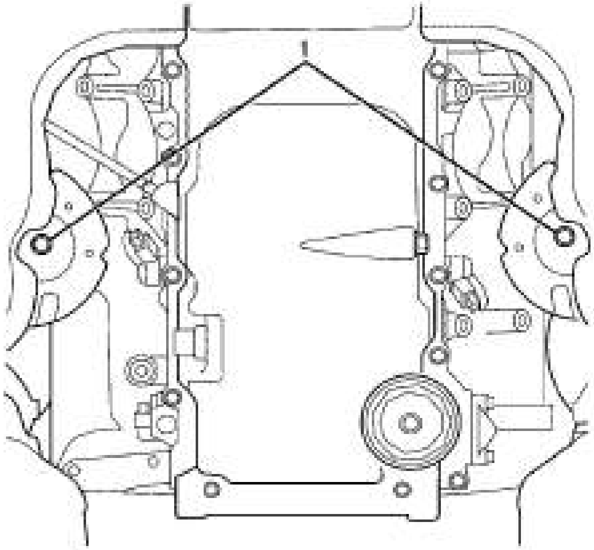
   Notice: Refer to Fastener Notice in the Preface section.



9. Install the front sub frame to front chassis rail retaining bolts (1 and 2).

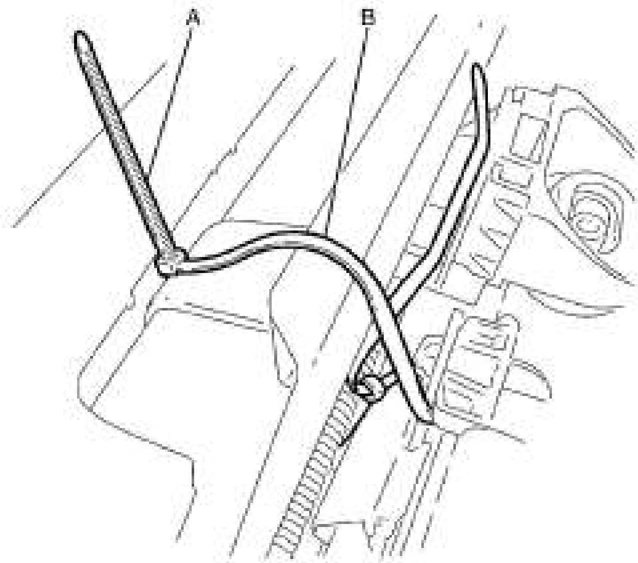
   Tighten
   Tighten the bolts to 95 N·m (70 lb ft).

10. Raise the vehicle.
11. Remove the suitable bench trolley from under the vehicle.
12. Lower the engine and remove the suitable lifting tool from the engine.

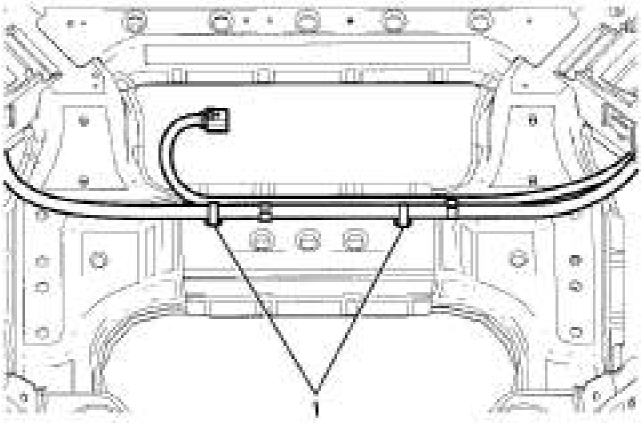


13. Install the lower engine mount to front sub frame retaining nuts (2).

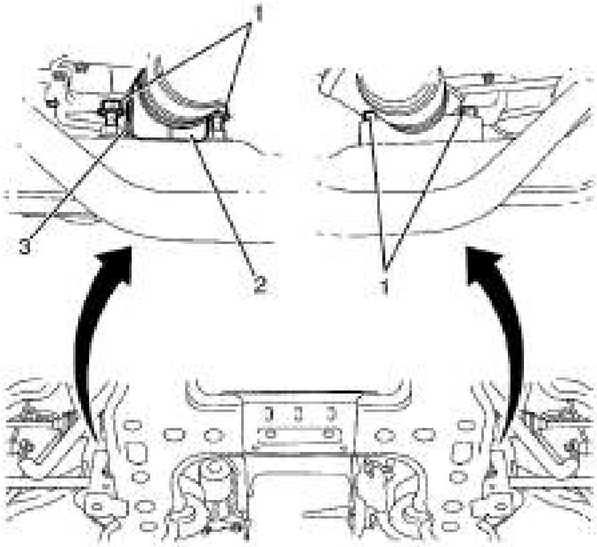
   Tighten
   Tighten the retaining nuts to 80 N·m (59 lb ft).



14. Cut zip tie A around the front end assembly and zip tie B through the radiator and condenser mount.



15. Secure the engine electrical harness retainers (1) to the frame.



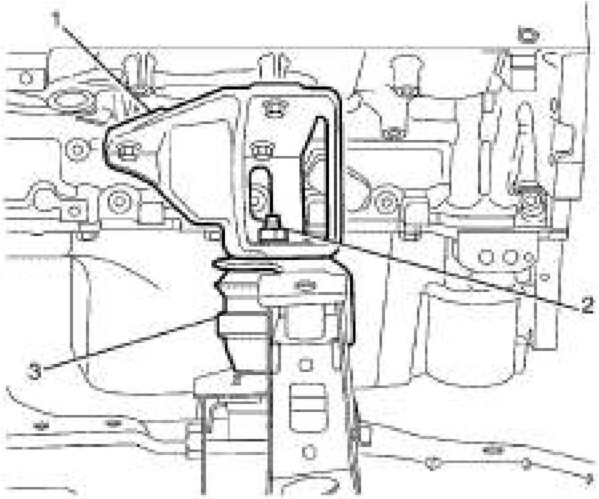
16. Install the steering gear insulator (3) to the steering gear.
17. Install the steering gear insulator retaining bracket (2) to the steering gear insulator (3).

    Notice: Refer to Fastener Notice in the Preface section.

18. Install the steering gear to subframe retaining bolts (1).

    Tighten
    Tighten the retaining bolts to 65 N·m (48 lb ft).

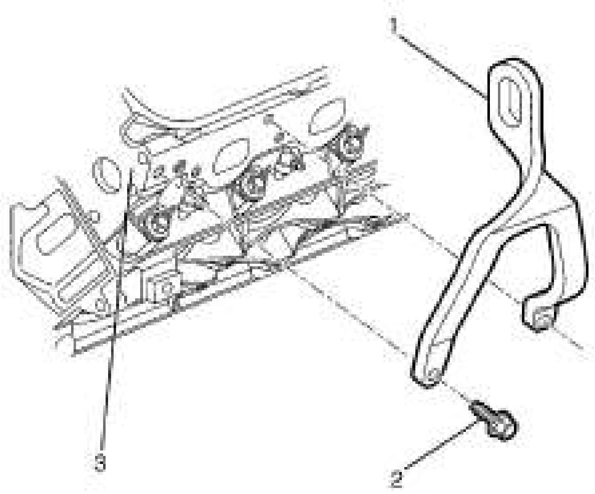
19. Install the stabilizer shaft link. Refer to Stabilizer Shaft Link Replacement.
20. Install the front castor arm. Refer to Front Lower Control Front Arm Replacement.
21. Install the front control arm. Refer to Control Arm Replacement.
22. Install the splash shield. Refer to Engine Splash Shield Replacement.
23. Install the front air deflector. Refer to Front Air Deflector Replacement.
24. Install the front bumper fascia. Refer to Front Bumper Fascia Replacement.



Important: When lifting the engine assembly, observe the clearance between the rear of the engine assembly and the dash panel.

25. Lower the suitable lifting tool until the engine mount brackets are located on the engine mount retainers.

Notice: Refer to Fastener Notice in the Preface section.

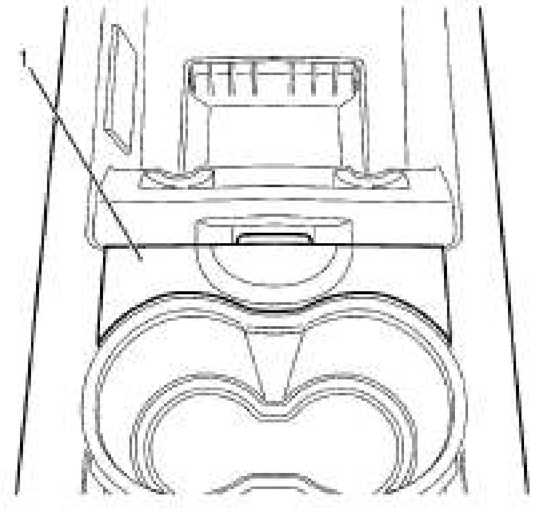


26. Remove the EN 46114 to cylinder head retaining bolts (3).
27. Remove the EN 46114 (1) from the cylinder head (2).
28. Install the radiator air baffle. Refer to Radiator Air Upper Baffle and Deflector Replacement
29. Install the engine dress cover. Refer to Engine Cover Replacement for 3.6L engine or Engine Cover Replacement for 6.0L engine.
30. Align the vehicle. Refer to Wheel Alignment Measurement .

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Frame and Underbody | Repair Instructions | **Document ID: 1993239**

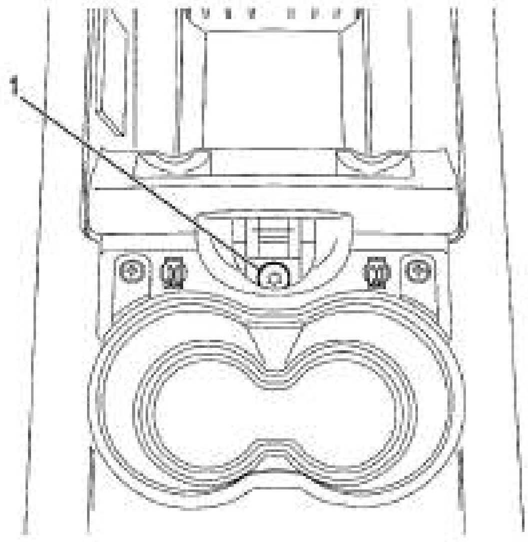
Rear Frame Replacement

Removal Procedure

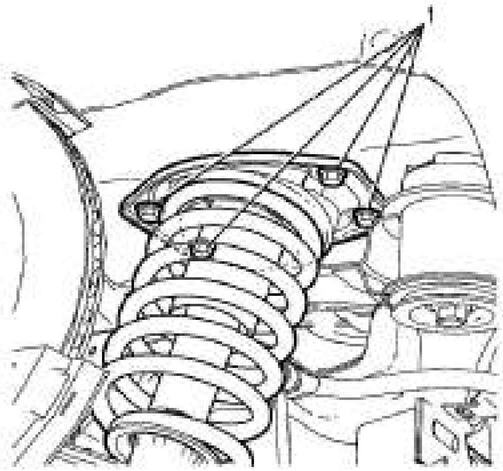


Important: The park brake cable adjustment bolt cover trim (1) is retained by two clips. Gently pry upwards with fingers at the front floor console armrest latch to remove.

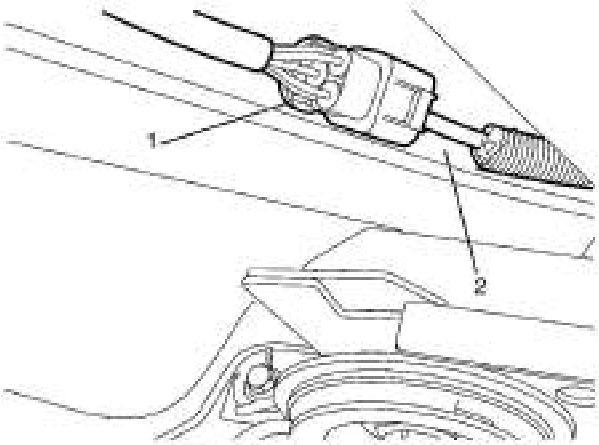
1. Remove the park brake cable adjustment bolt cover trim (1).



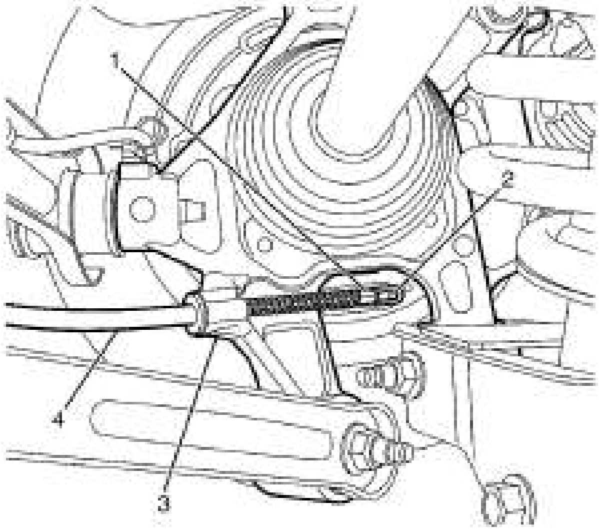
2. Loosen the park brake cable adjustment bolt (1) all the way to ensure maximum slack in the rear park brake cables.
3. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle .
4. Remove the rear wheels. Refer to Tire and Wheel Removal and Installation .
5. Remove the exhaust system. Refer to Exhaust System Replacement .
6. Remove the propeller shaft. Refer to Propeller Shaft Replacement .
7. Remove the drive shafts. Refer to Wheel Drive Shaft Replacement .
8. Remove the differential. Refer to Differential Replacement .



9. Remove the top strut assembly to body retaining bolts (1).



10. Disconnect the wheel speed sensor jumper harness electrical connector (1).

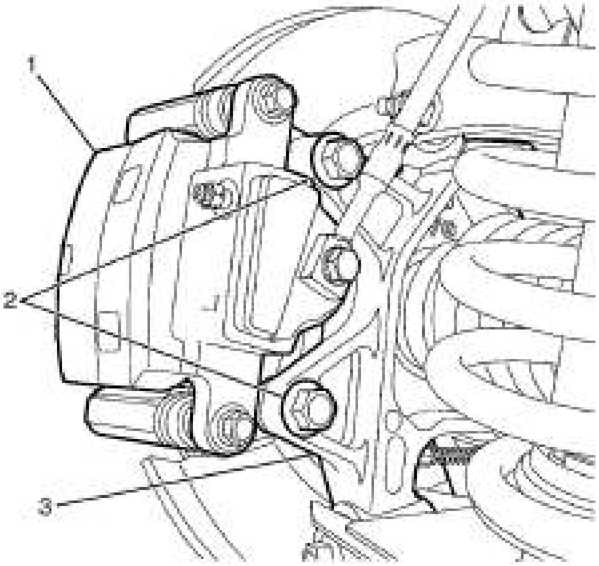


Important: Detach the rear park brake cable and clevis (1) from the park brake actuator (2) by pivoting the rear park brake cable and clevis (1) rearward using pliers.

11. Detach the rear park brake cable and clevis (1) from the park brake actuator (2).

Important: Remove the outer cable (4) from the rear knuckle (3) by pulling the outer cable (4) forward.

12. Remove the outer cable (4) from the rear knuckle (3).



Important: Bolts with micro-encapsulated thread sealant must be discarded after removal.

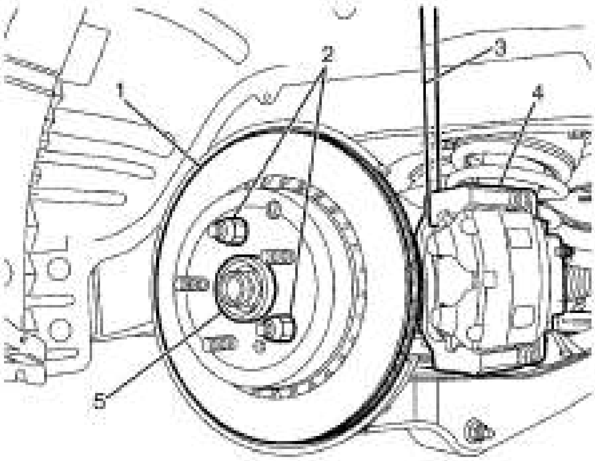
13. Remove the brake caliper anchor plate to knuckle retaining bolts (1).

    Discard the bolts.

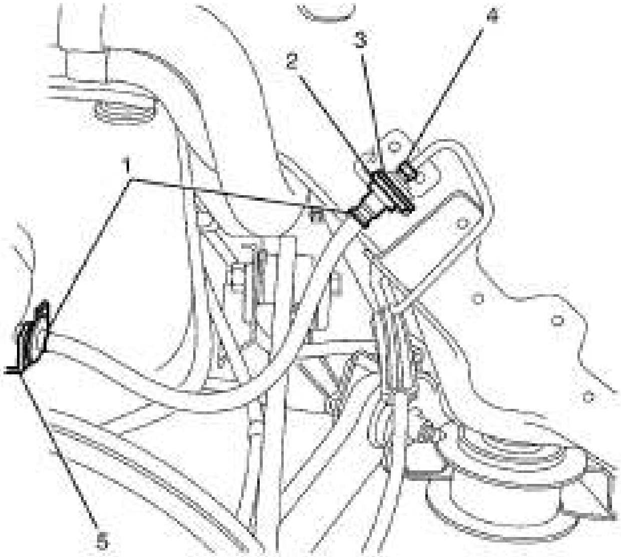
    Important: DO NOT disconnect the hydraulic brake flexible hose from the brake caliper otherwise complete bleeding of the braking system will be necessary.

14. Remove the brake caliper (2) from the knuckle (3).

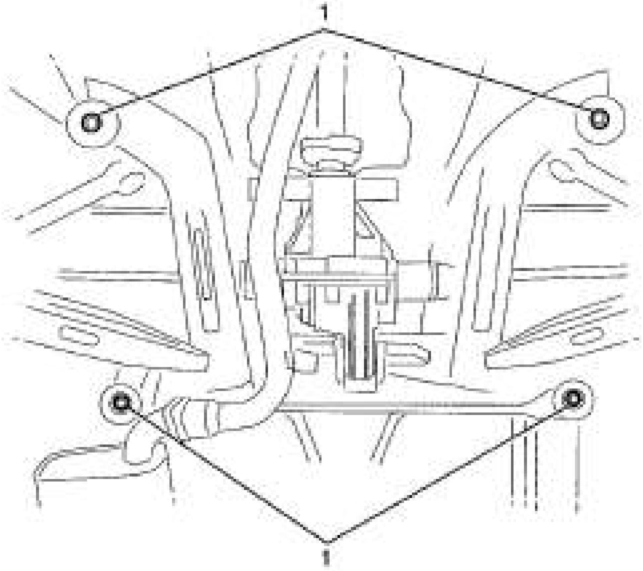
    Notice: Refer to Brake Caliper Notice in the Preface section.



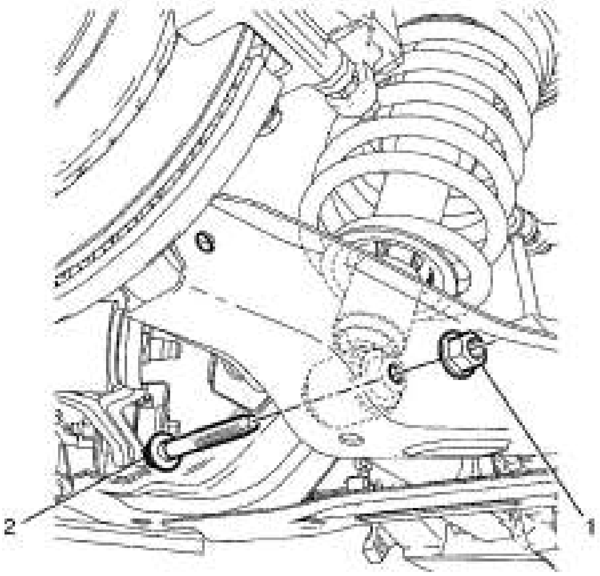
15. Support the brake caliper (1) with heavy mechanic's wire, or equivalent (2).
16. Remove the 2 wheel nuts (4) retaining the brake disc (3) to the hub (5).
17. Clean all dirt and foreign material from the brake hose and the brake pipe fittings.



18. Detach the brake hose (1) from the upper control arm mounted brake hose retaining bracket (5).
19. Position the suitable frame support table under the vehicle.
20. Using suitable frame support table, lower the vehicle to the frame support table.

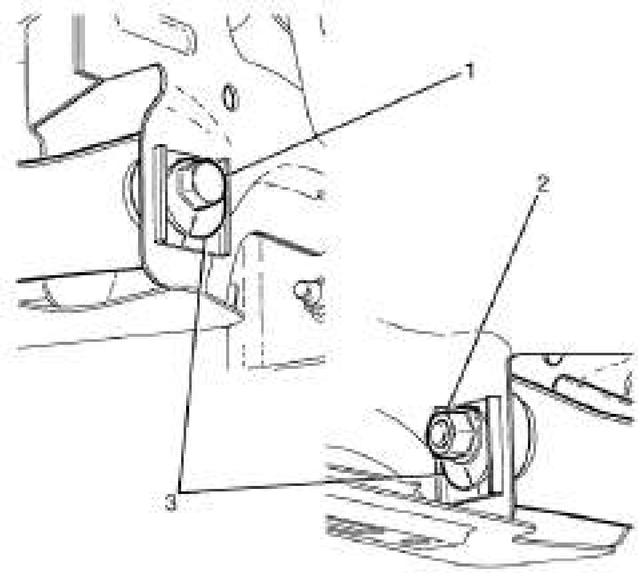


21. Remove the rear sub frame to rear chassis rail retaining bolts (4) and washers (3).
22. Carefully raise the vehicle from the rear frame assembly.
23. Remove the headlamp levelling sensor. Refer to Headlamp Leveling Module Replacement .
24. Remove the stabiliser shaft link. Refer to Stabilizer Shaft Link Replacement .
25. Remove the stabiliser shaft. Refer to Stabilizer Shaft Replacement .
26. Remove the rear wheel hub and knuckle assembly. Refer to Knuckle Replacement in rear Suspension..



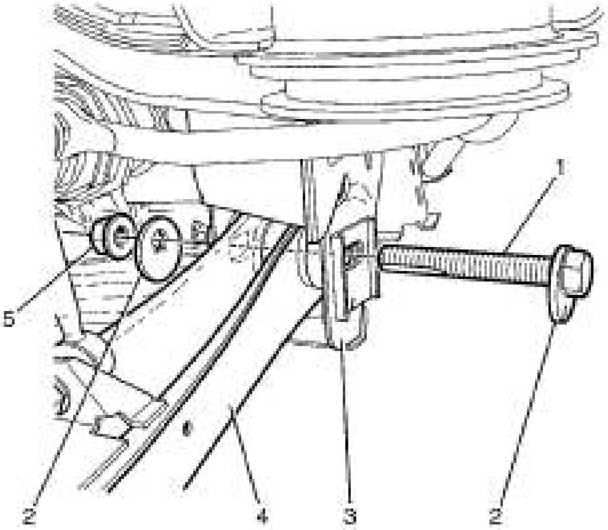
27. Remove the rear strut assembly to lower control arm retaining bolt (2) and nut (1).

    Discard the nut.



Important: The lower control arm to subframe retaining bolt (1) and nut (2) eccentric washers (3) are used to adjust the rear suspension camber. One eccentric washer (3) is mounted directly to the head of the lower control arm to subframe retaining bolt (1).

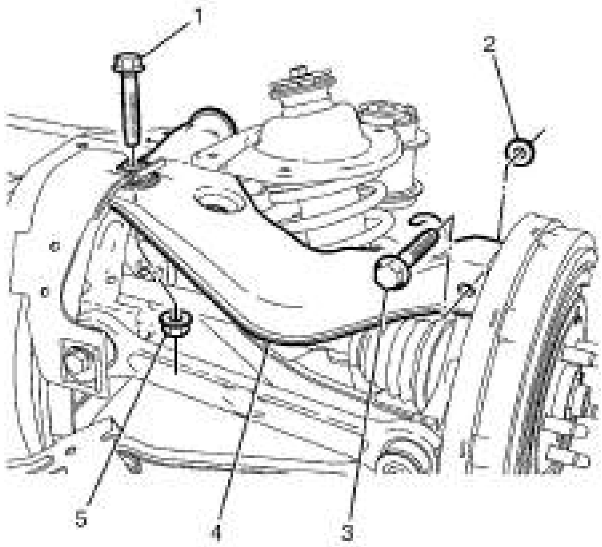
28. Scribe the eccentric washers (3) with reference to their seating position relative to the subframe.



29. Remove the lower control arm to subframe retaining bolt (1) and nut (5).

Discard the nut.

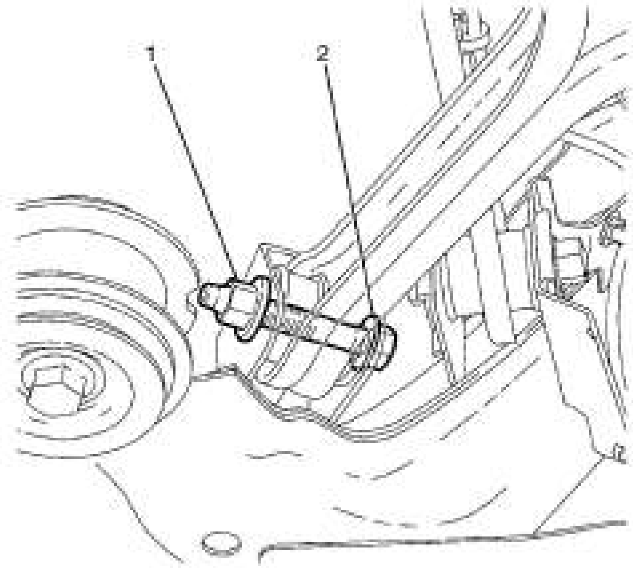
30. Remove the lower control arm (4) from the subframe (3).
31. Remove the upper control arm pivot bushing. Refer to Knuckle Replacement .



Important: Nuts with micro-encapsulated thread sealant must be replaced after removal.

32. Remove the upper control arm ball joint bushing to subframe retaining bolt (1) and nut (5).

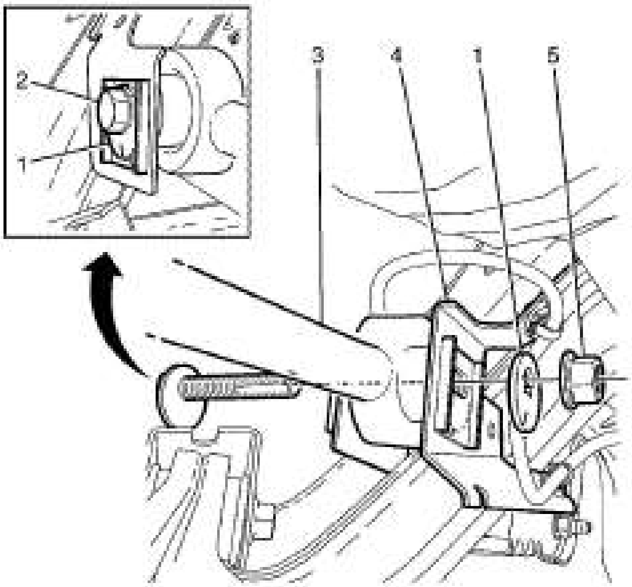
Discard the nut.



33. Remove the Y-Link to subframe retaining bolt (2) and nut (1).

Discard the nut.

34. Remove the Y-Link (5).



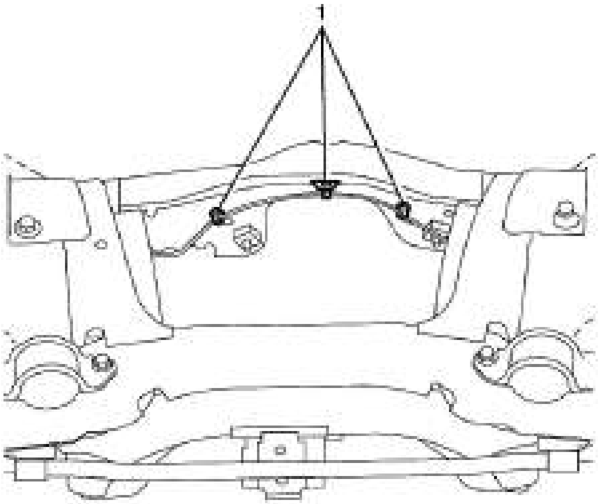
Important: The I-Link to subframe retaining bolt (2), nut (5) and eccentric washers (1) are used to adjust the rear suspension toe. One eccentric washer (1) is mounted directly to the head of the I-Link to subframe retaining bolt (2).

35. Scribe the eccentric washers (1) with reference to their seating position relative to the subframe (4).

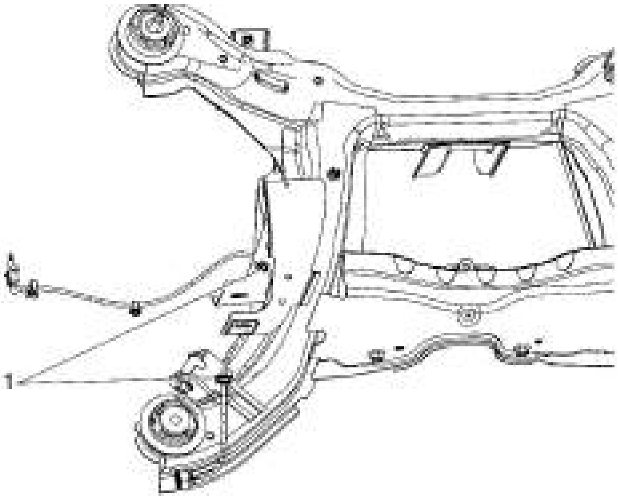
Important: Nuts with micro-encapsulated thread sealant must be discarded after removal.

Discard the nut.

36. Remove the I-Link to subframe retaining bolt (2) and nut (5).
37. Remove the I-Link (3) from the subframe (4).

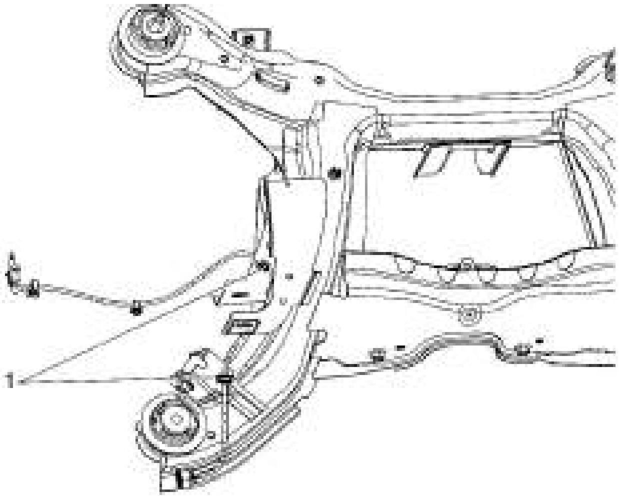


38. Disconnect the rear frame wiring harness to rear frame center retaining clips (1).

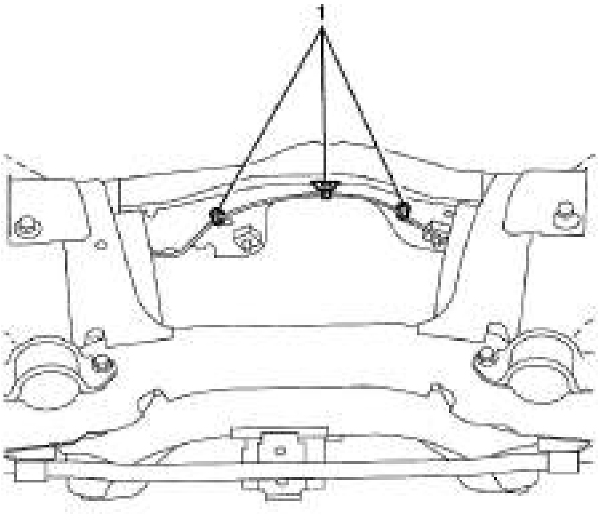


39. Disconnect the rear frame wiring harness to rear frame side retaining clips (1).

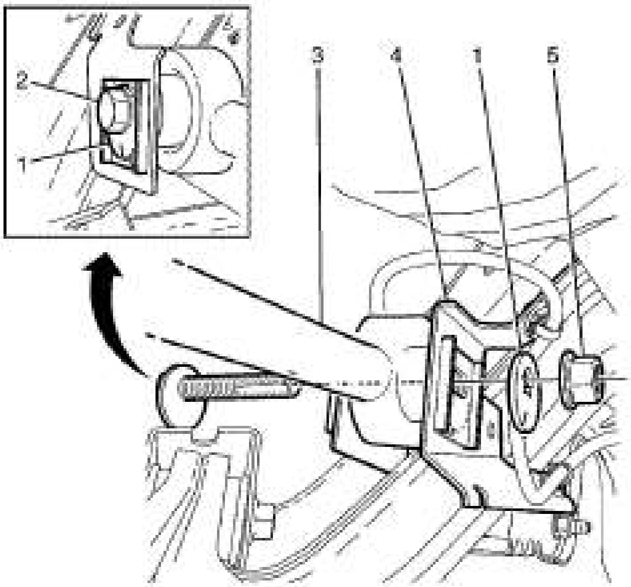
Installation Procedure



1. Connect the rear frame wiring harness to rear subframe side retaining clips (1).



2. Connect the rear frame wiring harness to rear subframe center retaining clips (1).



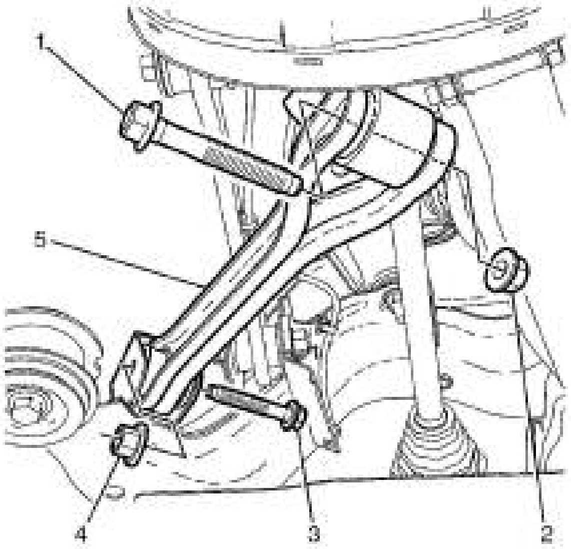
3. Install the I-Link (3) into the rear subframe (4).

Important: The eccentric washers (1) must be fitted correctly in terms of their orientation and alignment marks.

Important: The I-Link to rear subframe retaining bolt (2) and NEW nut (5) must not to be fully tightened at this stage.

4. Install the I-Link to rear subframe retaining bolt (2).
5. Install the eccentric washer (1) and the NEW nut (5).

Do not fully tighten at this stage.



6. Install the Y-Link (5) to the rear subframe.

   Important: The Y-Link to subframe retaining bolt (3) and nut (4) must not to be fully tightened at this stage.

7. Install the Y-Link to rear subframe retaining bolt (3) and NEW nut (4).

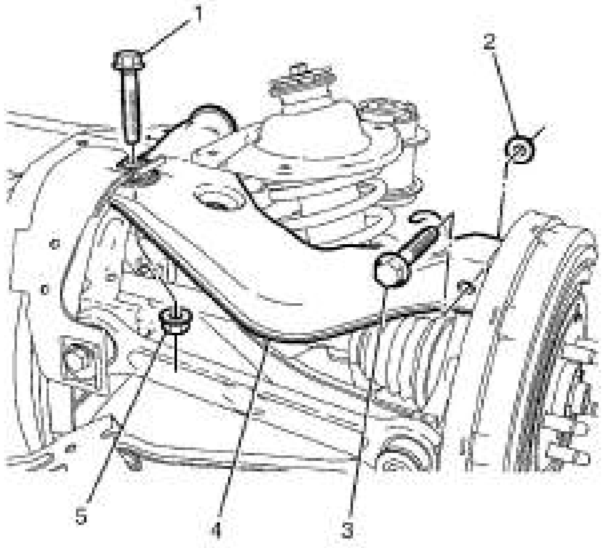
   Do not fully tighten at this stage.

   Important: The Y-Link to knuckle retaining bolt (1) and nut (2) must not to be fully tightened at this stage.

8. Install the Y-Link to knuckle retaining bolt (1) and NEW nut (2).

   Do not fully tighten at this stage.

   Notice: Refer to Fastener Notice in the Preface section.



9. Install the upper control arm (4) into the rear subframe.
10. Install the upper control arm ball joint bushing to rear subframe retaining bolt (1) and NEW nut (5).

    Tighten
    Tighten the bolt and nut a first pass to 40 N·m (30 lb ft).

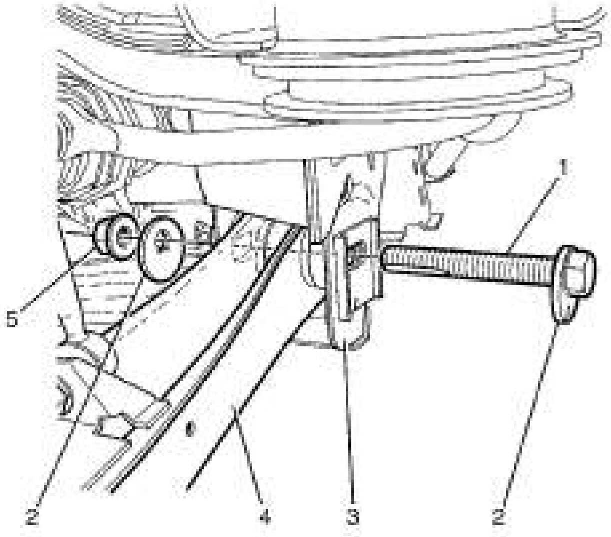
    Tighten
    Tighten the bolt and nut a final pass 90 Degrees.

11. Install the upper control arm to knuckle retaining bolt (3) and NEW nut (2).

Tighten
Tighten the bolt and nut a first pass to 60 N·m (44 lb ft).

Tighten
Tighten the bolt and nut a second pass an additional 90 degrees.

12. Install the upper control arm pivot bushing. Refer to Knuckle Replacement .



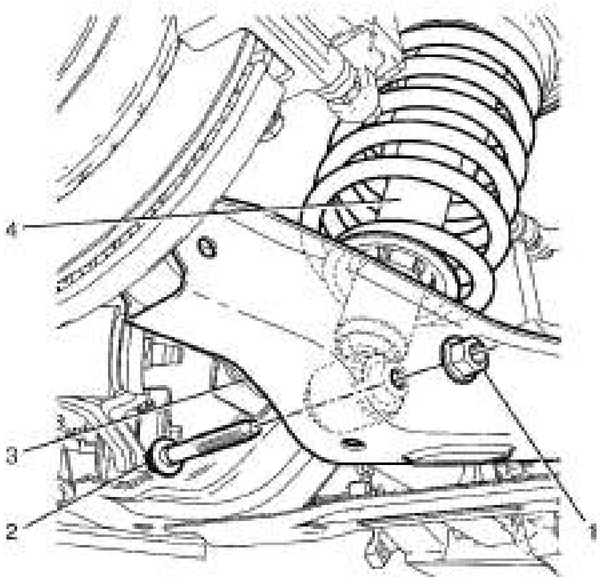
13. Install the lower control arm (4) into the rear subframe (3).

Important: The eccentric washers (2) must be fitted correctly in terms of their orientation and alignment marks.

Important: Do not fully tighten the lower control arm to rear subframe retaining bolt (1) and nut (5) at this stage.

14. Install the lower control arm to rear subframe retaining bolt (1).
15. Install the eccentric washer (2) and the NEW nut (5).

Do not fully tighten at this stage.



16. Connect the rear strut assembly (4) to the lower control arm (3).

    Important: Do not fully tighten the lower control arm to strut assembly retaining bolt (2) and nut (1) at this stage.

17. Install the lower control arm to strut assembly retaining bolt (2) and NEW nut (1).

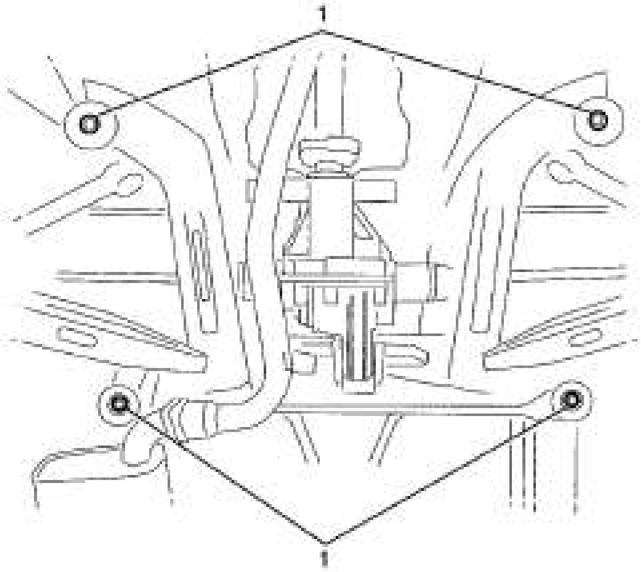
    Do not fully tighten at this stage.

18. Install the rear wheel hub and knuckle assembly. Refer to Knuckle Replacement in rear Suspension.
19. Install the stabiliser shaft. Refer to Stabilizer Shaft Replacement .
20. Install the stabiliser shaft link. Refer to Stabilizer Shaft Link Replacement .
21. Install the headlamp levelling sensor. Refer to Headlamp Leveling Module Replacement .

    Important: Make sure the intermediate brake cable is clear of the rear frame to body mount prior to securing the frame retaining bolts.

22. Lower the vehicle to the frame.
23. Index the rear side frame mounts to the rear locator sleeves located on the body.
24. Lower the vehicle until the frame mounts contact the body rail.

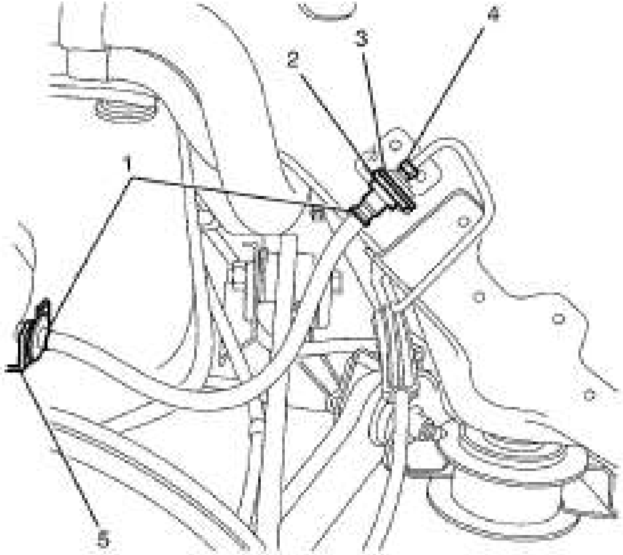
    Notice: Refer to Fastener Notice in the Preface section.



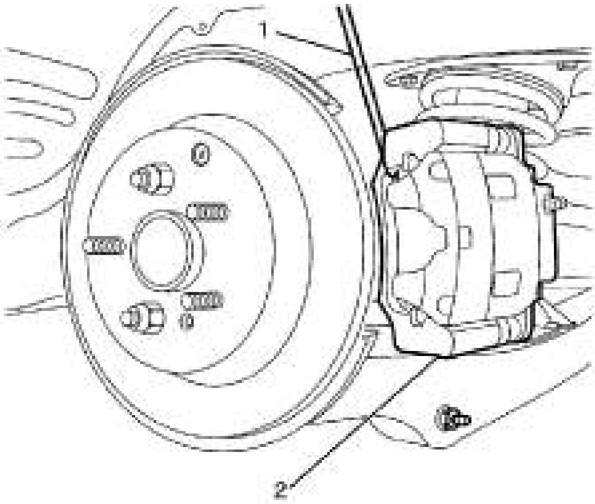
25. Install the rear sub frame to rear chassis rail retaining bolts.

    Tighten
    Tighten the bolts to 200 N·m (148 lb ft).

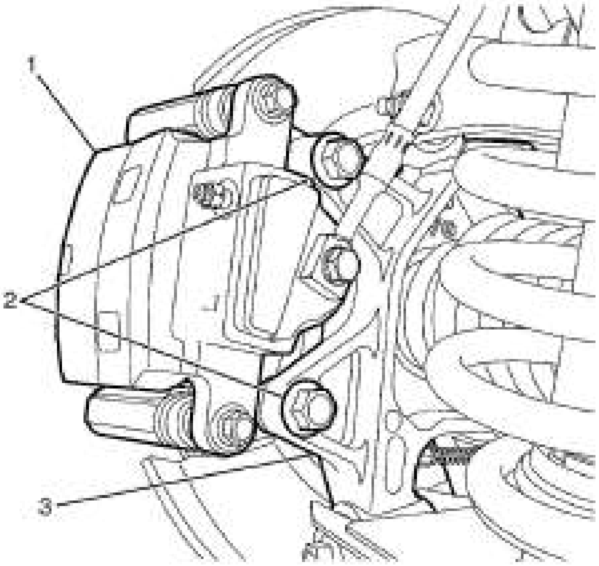
26. Raise the vehicle.
27. Remove the suitable frame support table from under the vehicle.



28. Attach the brake hose (1) from the upper control arm mounted brake hose retaining bracket (5).



29. Remove the heavy mechanic's wire, or equivalent support (2) from the brake caliper (1).



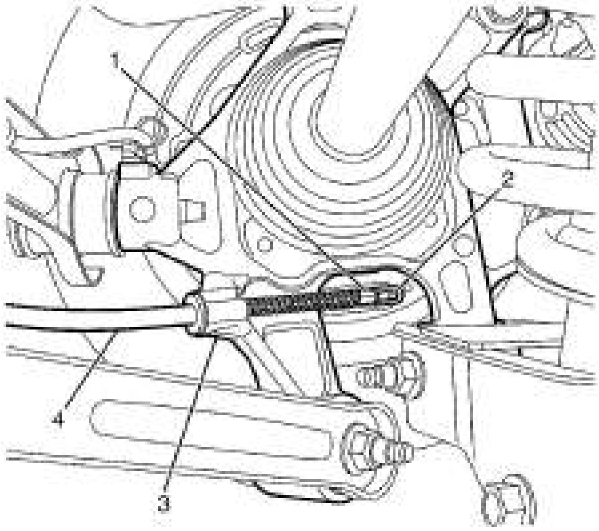
Notice: Make sure the brake hose is not twisted or kinked after installation. Damage to the hose could result.

30. Install the brake caliper assembly (2) to the knuckle (3).

Notice: Refer to Fastener Notice in the Preface section.

31. Install the NEW brake caliper anchor plate to knuckle retaining bolts (1).

Tighten
Tighten the bolts to 110 N·m (81 lb ft).

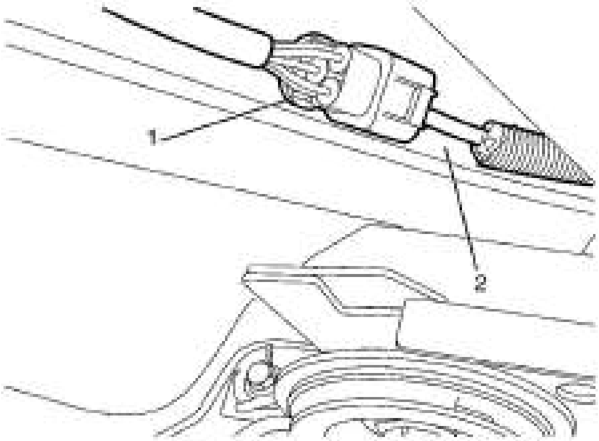


32. Install the rear park brake cable (4) into the rear knuckle (3).

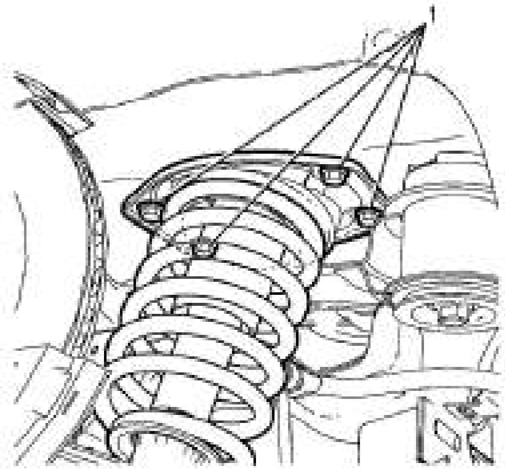
    Make sure that the rear park brake cables (4) are properly seated.

    Important: Attach the rear park brake cable and clevis (1) to the park brake actuator (2) by pivoting the rear park brake cable and clevis (1) rearward using pliers.

33. Attach the rear park brake cable and clevis (1) to the park brake actuator (2).

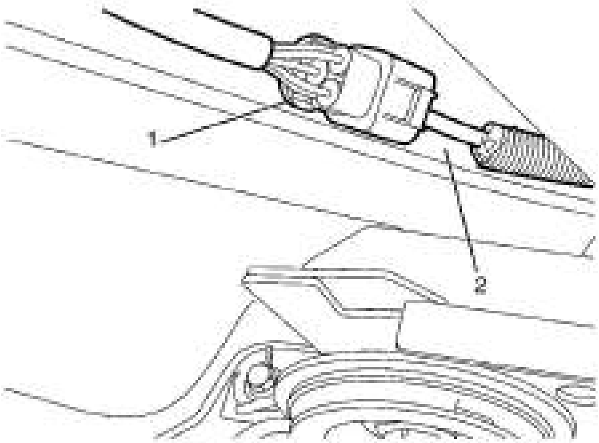


34. Connect the wheel speed sensor jumper harness electrical connector (1).

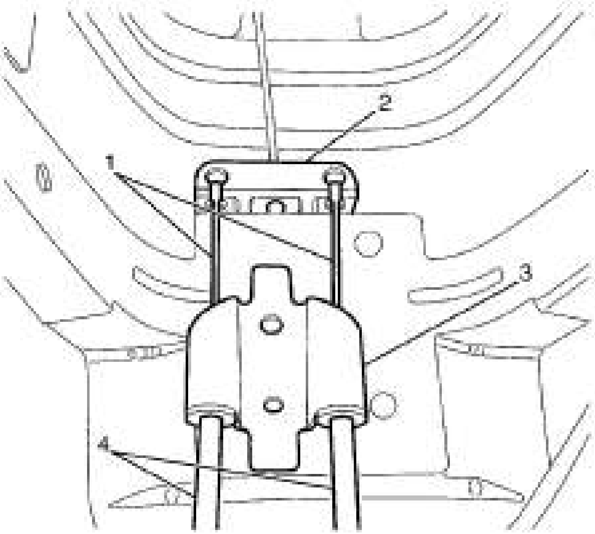


35. Install the top strut assembly to body retaining bolts (1).

    Tighten
    Tighten the bolts to 58 N·m (43 lb ft).



36. Connect the wheel speed sensor jumper harness electrical connector (1).
37. Attach the electrical connector (1) to the right hand rail (2).

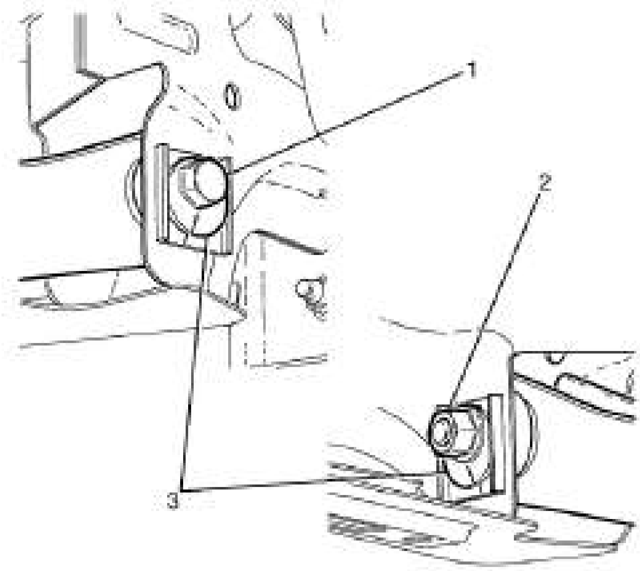


38. Install the outer cable (4) to the vehicle underbody bracket (3).

    Make sure that the outer cables (4) are properly seated in the vehicle underbody bracket (3).

    Important: Wrap a workshop cloth around the rear inner cable (1) to protect it from damage. Using pliers, pull the rear inner cable (1) forward and downwards to install the ball nipple to the front park brake cable and equaliser bracket assembly (2).

39. Install the rear inner cables (1) to the front park brake cable and equaliser bracket assembly (2).
40. Install the rear strut assembly. Refer to Strut Assembly Replacement in Rear Suspension.
41. Install the differential. Refer to Differential Replacement .
42. Install the drive shafts. Refer to Wheel Drive Shaft Replacement .
43. Install the propeller shaft. Refer to Propeller Shaft Replacement .
44. Install the exhaust system. Refer to Exhaust System Replacement .
45. Install the rear wheel. Refer to Tire and Wheel Removal and Installation .
46. Lower the vehicle to the ground.
47. Bounce the vehicle several times to settle the suspension.



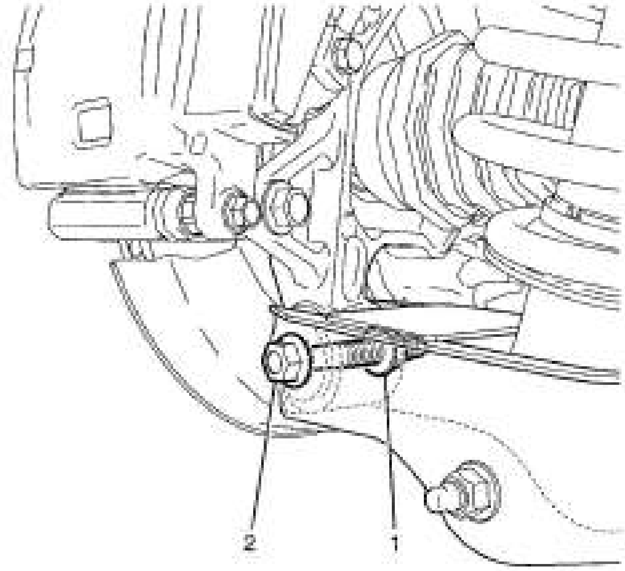
Important: The lower control arm to the subframe retaining bolt (1) and nut (2) eccentric washers (3) are used to adjust rear suspension camber.

48. Align the marks on the eccentric washers (3) with the marks on the subframe.

Important: Make sure that the vehicle is positioned on a suitable hoist to load the rear suspension bushes to the correct position.

49. Tighten the lower control arm to subframe retaining bolt (1) and nut (2).

Tighten
Tighten the bolt and nut to 175 N·m (129 lb ft).

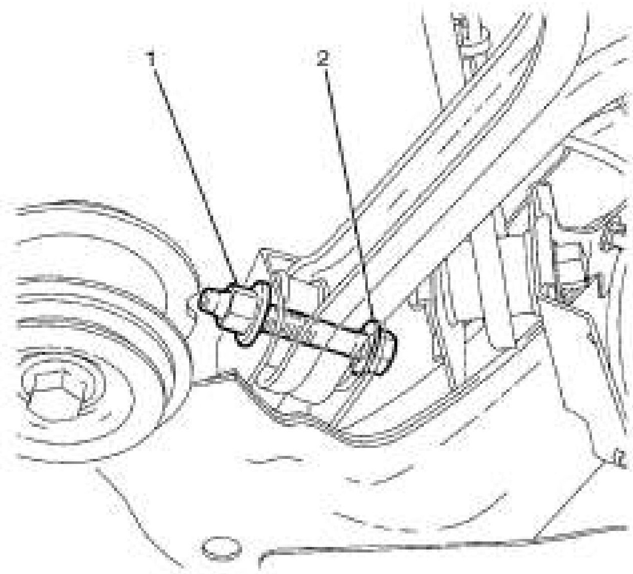


50. Tighten the lower control arm to knuckle retaining bolt (2) and nut (1).

    Tighten
    Tighten the bolt and nut a first pass to 40 N·m (30 lb ft).

    Tighten
    Tighten the bolt and nut a final pass 120 Degrees.

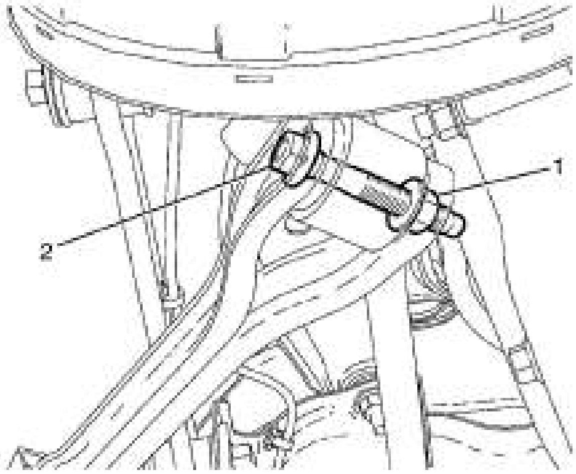
    Notice: Refer to Fastener Notice in the Preface section.



Important: Make sure that the vehicle is positioned on a suitable hoist to load the rear suspension bushes to the correct position.

51. Tighten the Y-Link to subframe retaining bolt (2) and NEW nut (1).

    Tighten
    Tighten the bolt and nut to 100 N·m (74 lb ft).

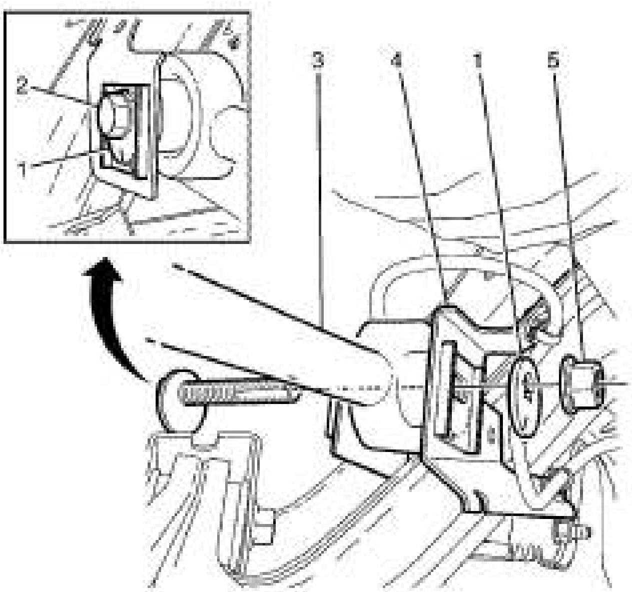


52. Tighten the Y-Link to knuckle retaining bolt (2) and NEW nut (1).

    Tighten
    Tighten the bolt and nut a first pass to 40 N·m (30 lb ft).

    Tighten
    Tighten the bolt and nut a final pass 120 Degrees.

    Notice: Refer to Fastener Notice in the Preface section.



Important: Make sure that the vehicle is positioned on a suitable hoist to load the rear suspension bushes to the correct position.

53. Align the marks on the eccentric washers (1) with the marks on the subframe (3).
54. Tighten the I-Link to subframe retaining bolt (2) and NEW nut (4).

    Tighten
    Tighten the bolt and nut to 175 N·m (129 lb ft).

55. Check the wheel alignment of the vehicle. Refer to Wheel Alignment Measurement .
56. Correct the wheel alignment of the vehicle, if necessary. Refer to Rear Camber Adjustment ; and Rear Toe Adjustment .

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Frame and Underbody | Repair Instructions | **Document ID: 2006487**

Rear Suspension Support Bushing Replacement

Tools Required

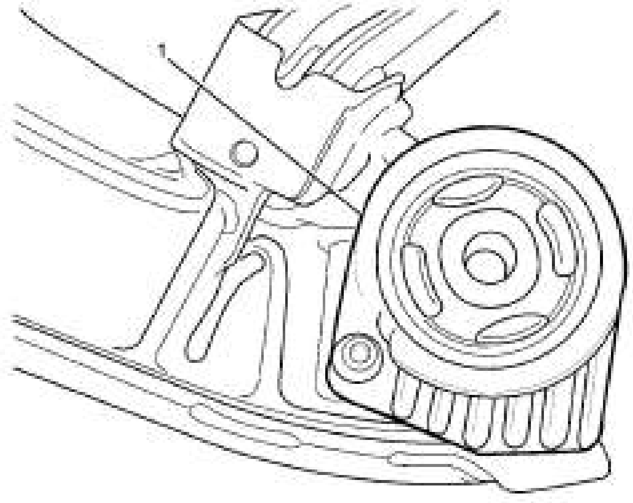
CH-49509 Rear Frame Bush Removal tool

Removal Procedure

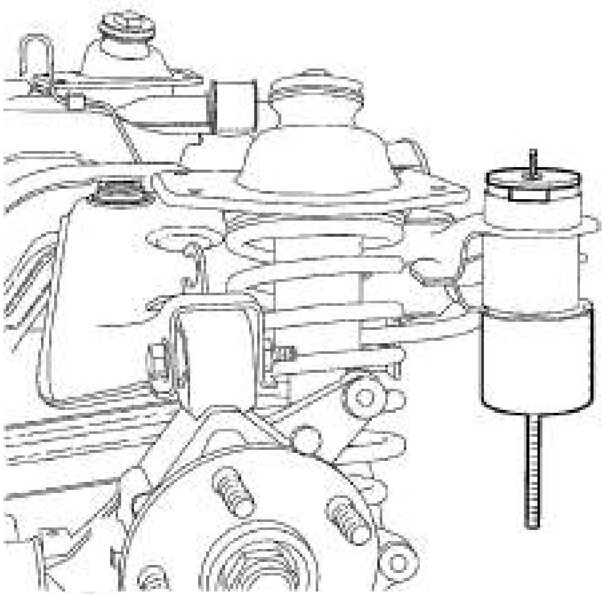
> **Caution:** Refer to Safety Glasses Caution in the Preface section.

> **Caution:** Refer to Vehicle Lifting Caution in the Preface section.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Remove the rear sub frame from the vehicle. Refer to Rear Frame Replacement.

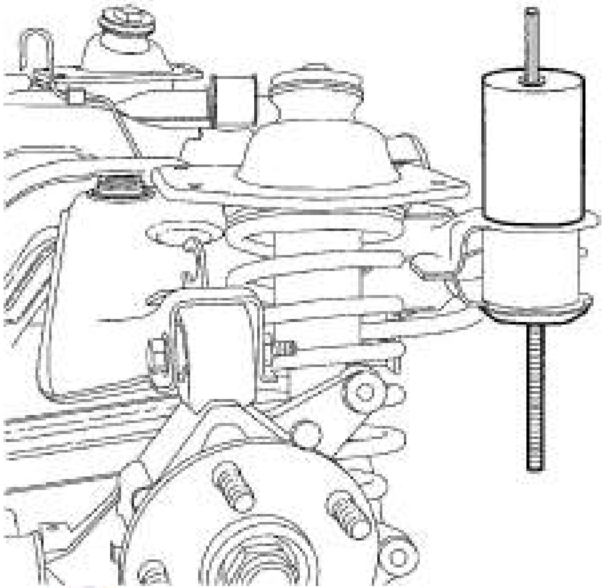


3. Remove the rear sub frame insulator rubber (1) from the rear sub frame.

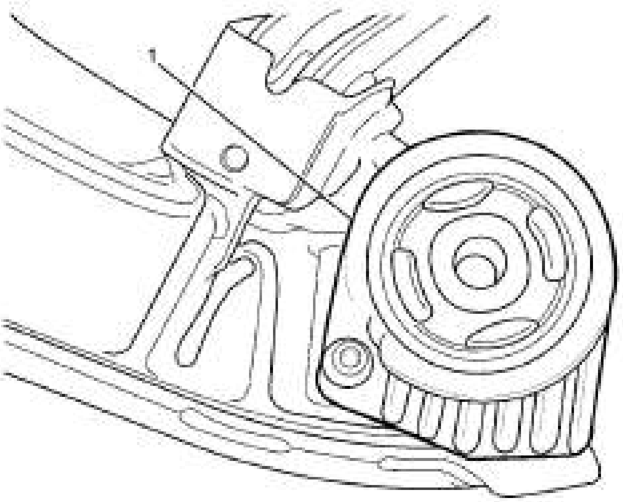


4. Install the rear sub frame bush tool CH-49509 to the rear sub frame bush.
5. Remove the rear sub frame bush by slowly pressing the rear sub frame removal tool into the rear sub frame.
6. Remove the rear sub frame bush from the rear sub frame.

Installation Procedure



1. Install the rear sub frame bush to the rear sub frame.
2. Install the rear sub frame bush tool CH-49509 to the rear sub frame bush.
3. Install the rear sub frame bush by slowly pressing rear sub frame tool.
4. Remove the rear sub frame bush tool from the rear sub frame.



5. Install the rear sub frame insulator rubber (1) to the rear sub frame.
6. Install the rear sub frame to the vehicle. Refer to Rear Frame Replacement.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Frame and Underbody | Repair Instructions | **Document ID: 1990486**

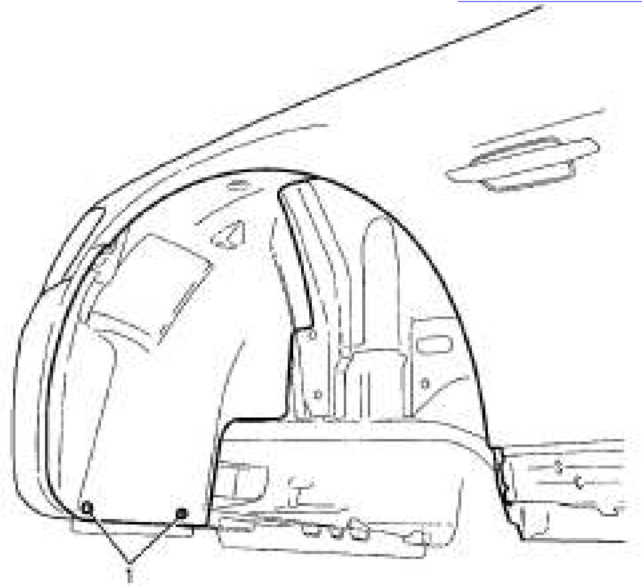
Front Wheelhouse Liner Replacement

Removal Procedure

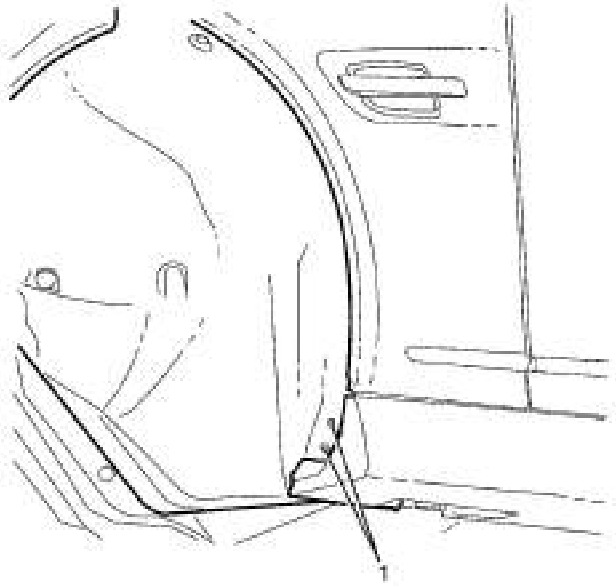
Caution: Refer to Vehicle Lifting Caution in the Preface section.

Caution: Refer to Safety Glasses Caution in the Preface section.

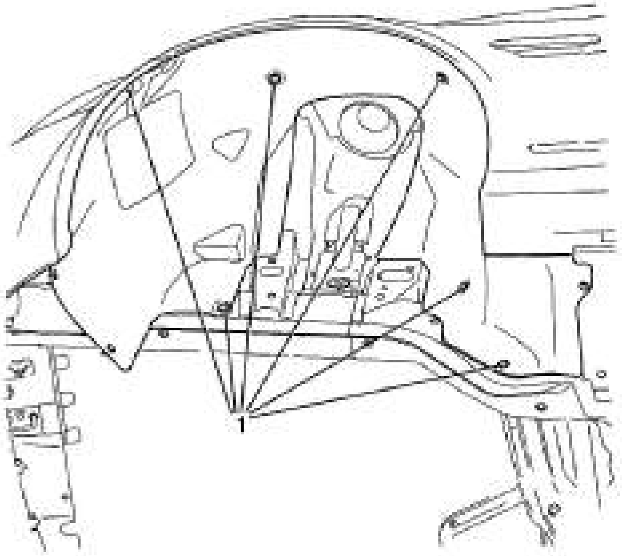
1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle .
2. Remove the front wheel. Refer to Tire and Wheel Removal and Installation .



3. Remove the front wheelhouse liner to the front air deflector push-in retainers (1).



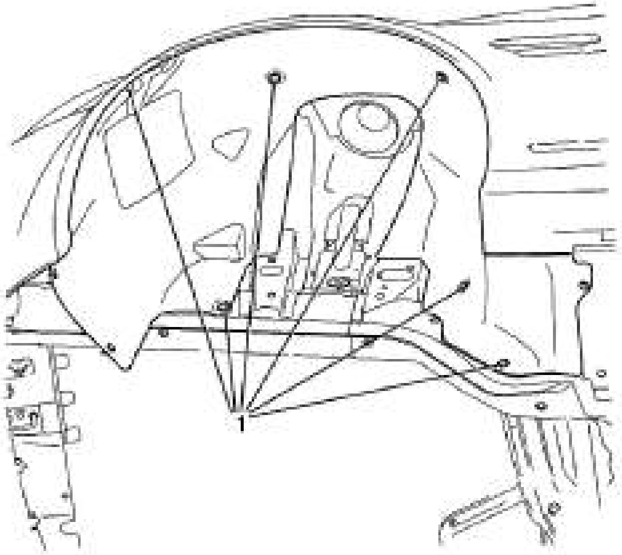
4. Remove the front wheelhouse liner to rocker panel retaining screws (1).



5. Remove the front wheelhouse liner to wheelhouse retaining scrivets (1).
6. Remove the front wheelhouse liner from the vehicle.

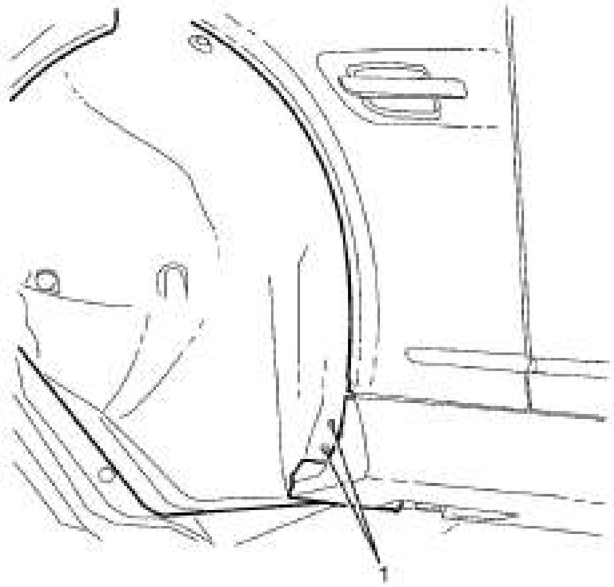
Installation Procedure

1. Position the front wheelhouse liner to the vehicle.



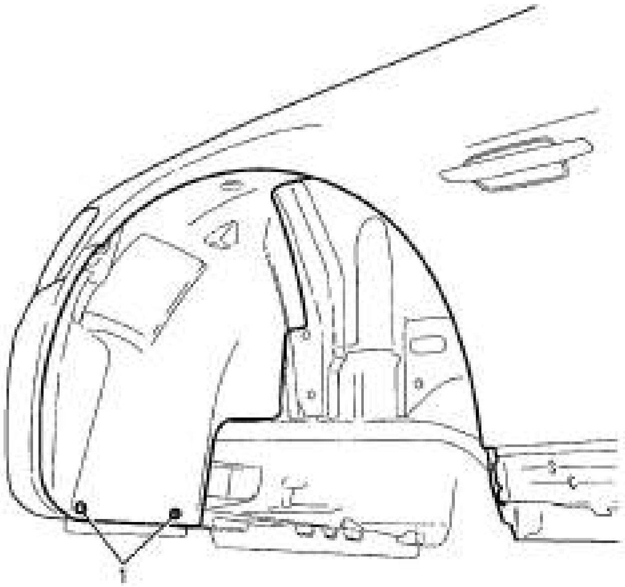
2. Install the front wheelhouse liner to wheelhouse retaining scrivets (1).

Notice: Refer to Fastener Notice in the Preface section.



3. Install the front wheelhouse liner to rocker panel retaining screws (1).

   Tighten
   Tighten the screws to 2 N·m (18 lb in).



4. Install the front wheelhouse liner to the front air deflector retaining screws (1).

   Tighten
   Tighten the screws to 2 N·m (18 lb in).

5. Install the front wheel. Refer to Tire and Wheel Removal and Installation .

6. Lower the vehicle.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Frame and Underbody | Repair Instructions | **Document ID: 2006502**

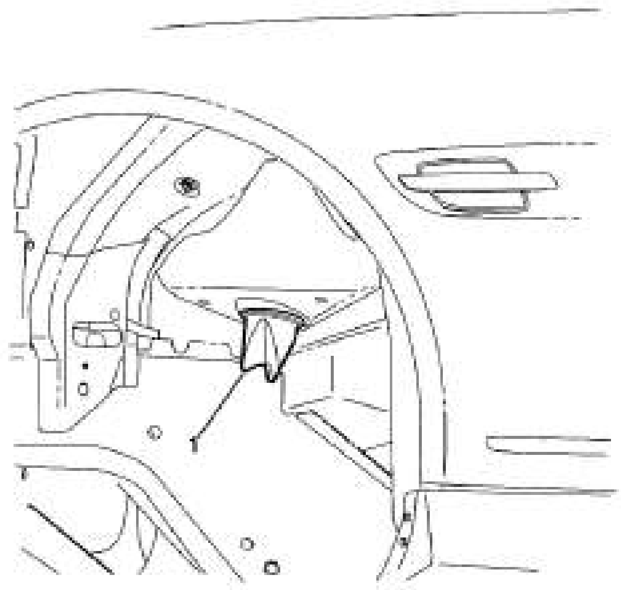
Front Wheelhouse Panel Rear Brace Drain Hole Valve Replacement

Removal Procedure

Caution: Refer to Vehicle Lifting Caution in the Preface section.

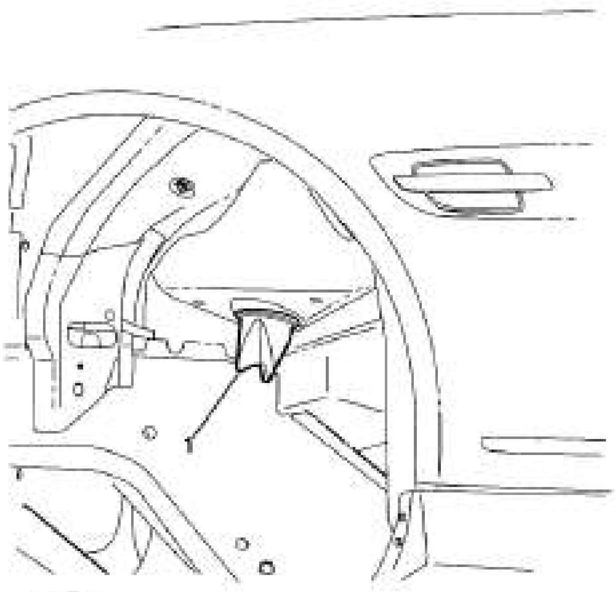
Caution: Refer to Safety Glasses Caution in the Preface section.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Remove the front wheel. Refer to Tire and Wheel Removal and Installation.
3. Remove the front wheelhouse liner. Refer to Front Wheelhouse Liner Replacement.



4. Remove the cowl drain valve (1) by prying away from the inner wheelhouse.
5. Remove the cowl drain valve from the vehicle.

Installation Procedure



1. Install the cowl drain valve (1) to the vehicle.
2. Install the cowl drain valve by applying pressure to the inner wheelhouse.
3. Install the front wheelhouse liner. Refer to Front Wheelhouse Liner Replacement.
4. Install the front wheel. Refer to Tire and Wheel Removal and Installation.
5. Lower the vehicle.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Frame and Underbody | Repair Instructions | Document ID: 1990487

Wheelhouse Splash Shield Replacement

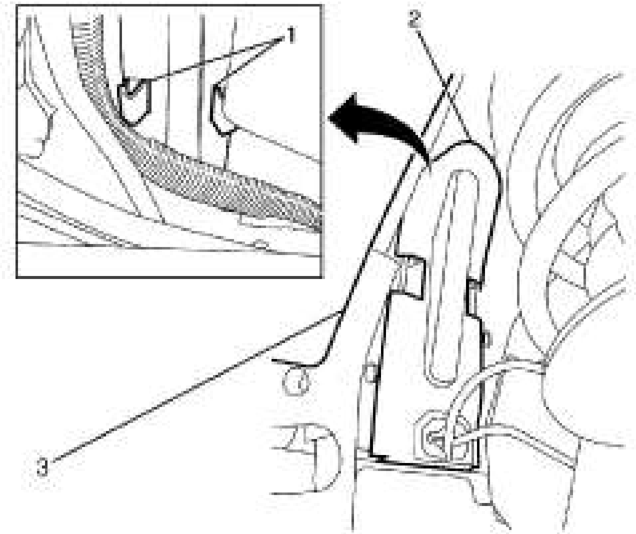
Removal Procedure - Left Side

Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

Caution: Refer to Brake Dust Caution in the Preface section.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Remove the left front wheel. Refer to Tire and Wheel Removal and Installation.



Important: Depress the splash guard clips (1) to disengage the splash guard (2) from the wheel house (3).

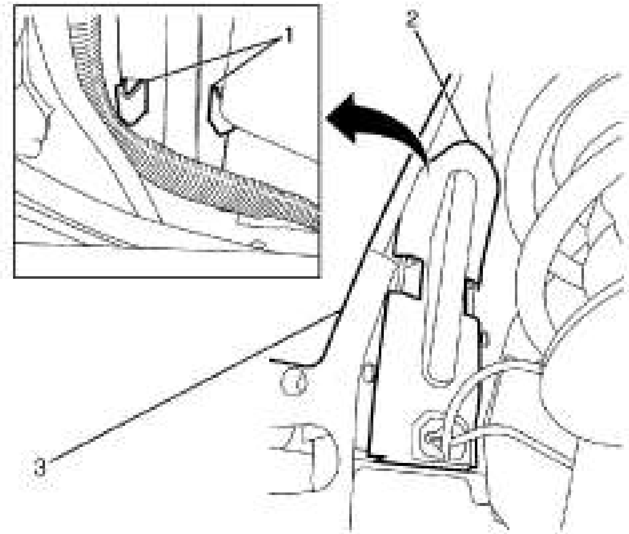
3. Remove the splash guard (2) from the wheel house (3).

Installation Procedure - Left Side

Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

Caution: Refer to Brake Dust Caution in the Preface section.



Important: Make sure the splash guard clips (1) are correctly engaged with the wheel house (3) to prevent an induced rattle condition.

1. Install the splash guard (2) to the wheel house (3).
2. Install the left front wheel. Refer to Tire and Wheel Removal and Installation.
3. Lower the vehicle to the ground.

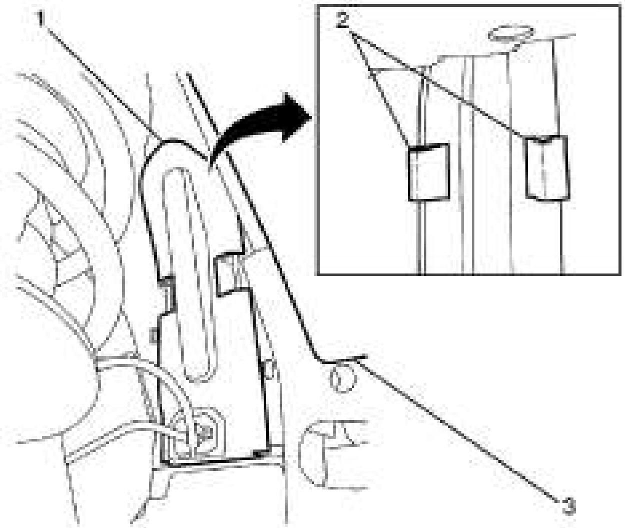
Removal Procedure - Right Side

Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

Caution: Refer to Brake Dust Caution in the Preface section.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Remove the right front wheel. Refer to Tire and Wheel Removal and Installation.



Important: Depress the splash guard clips (2) to disengage the splash guard (1) from the wheel house (3).

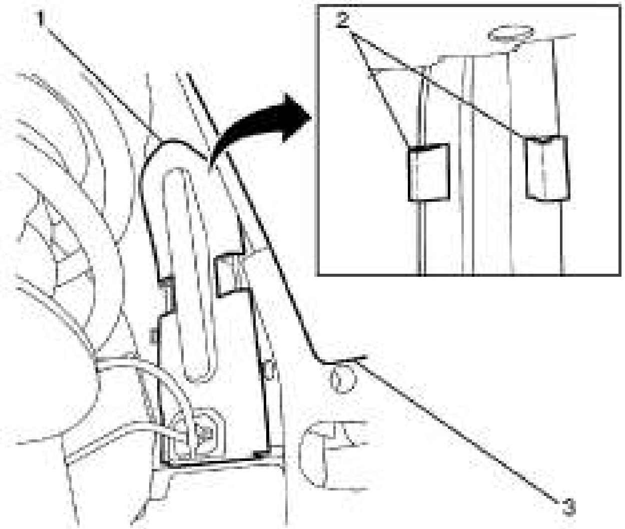
3. Remove the splash guard (1) from the wheel house (3).

Installation Procedure - Right Side

Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

Caution: Refer to Brake Dust Caution in the Preface section.



Important: Make sure the splash guard clips (2) are correctly engaged with the wheel house (3) to prevent an induced rattle condition.

1. Install the splash guard (1) to the wheel house (3).
2. Install the right front wheel. Refer to Tire and Wheel Removal and Installation.
3. Lower the vehicle to the ground.

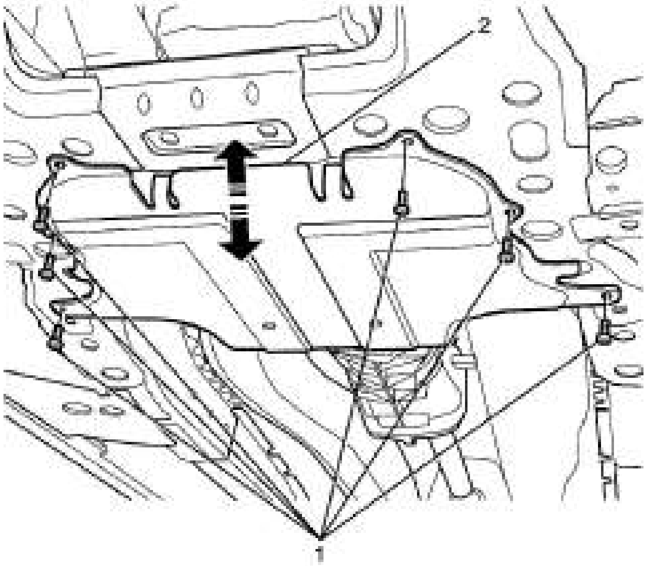
Oil Pan Drain Plug Splash Shield Replacement

Removal Procedure

Caution: Refer to Safety Glasses Caution in the Preface section.

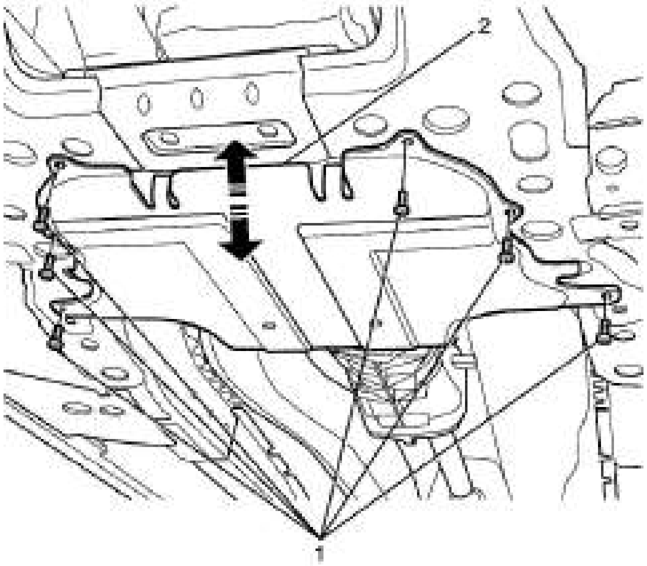
Caution: Refer to Vehicle Lifting Caution in the Preface section.

1. Raise and support vehicle. Refer to Lifting and Jacking the Vehicle in General Information.



2. Remove the sump guard to engine cradle retaining bolts (1).
3. Remove the sump guard (2) from the engine cradle.

Installation Procedure



1. Align the sump guard (2) with the engine cradle.

   Notice: Refer to Fastener Notice in the Preface section.

2. Install the sump guard to engine cradle retaining bolts (1).

   Tighten
   Tighten the bolts to 19 N·m (14 lb ft).

3. Lower the vehicle.

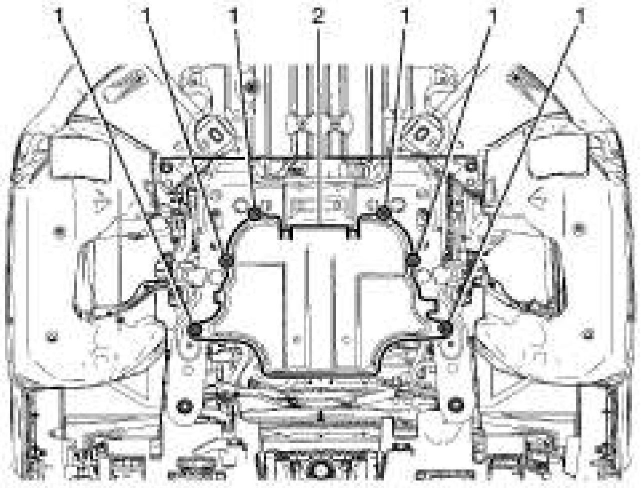
Engine Splash Shield Replacement

Removal Procedure

Caution: Refer to Vehicle Lifting Caution in the Preface section.

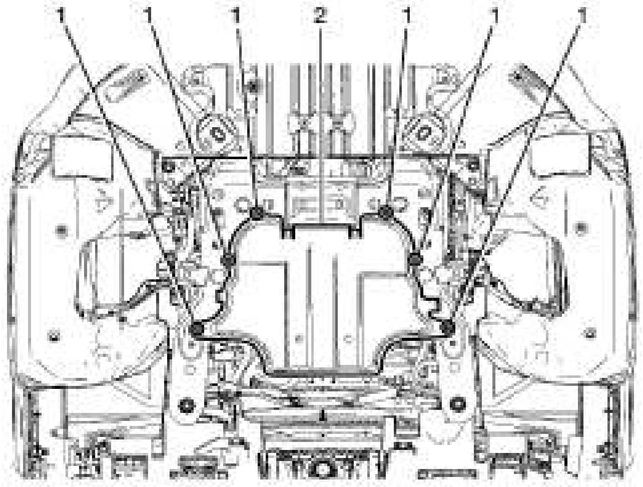
Caution: Refer to Safety Glasses Caution in the Preface section.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle .



2. Remove the engine splash shield to front subframe retaining screws (1).
3. Remove the engine splash shield (2) from the front subframe.

Installation Procedure



1. Install the engine splash shield (2) to the front subframe.

   Notice: Refer to Fastener Notice in the Preface section.

2. Install the engine splash shield to front subframe retaining screws (1).

   Tighten
   Tighten the screws to 9 N·m (80 lb in).

3. Lower the vehicle.

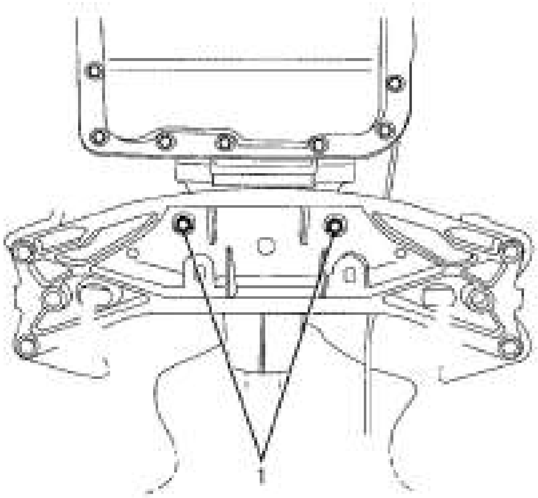
Transmission Support Replacement (Except 5L40 and 6L50)

Removal Procedure

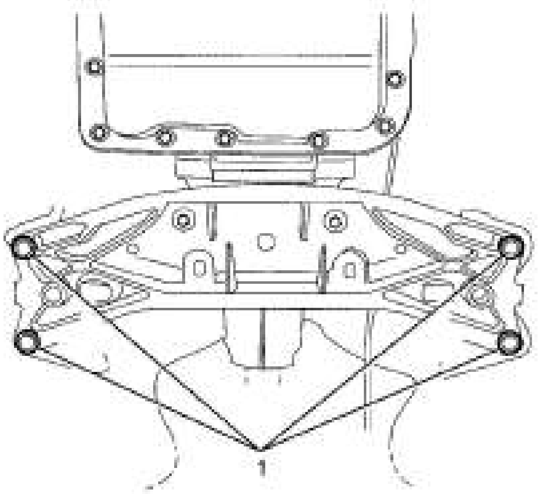
Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Remove the exhaust system. Refer to Exhaust System Replacement.

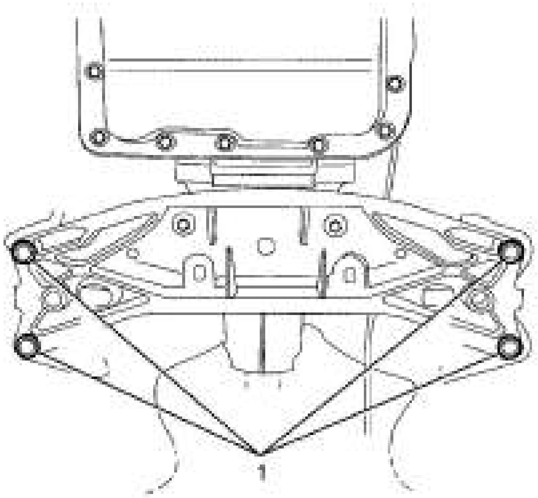


3. Remove the transmission support to transmission mount retaining nuts.
4. Support the transmission with a suitable supporting stand.



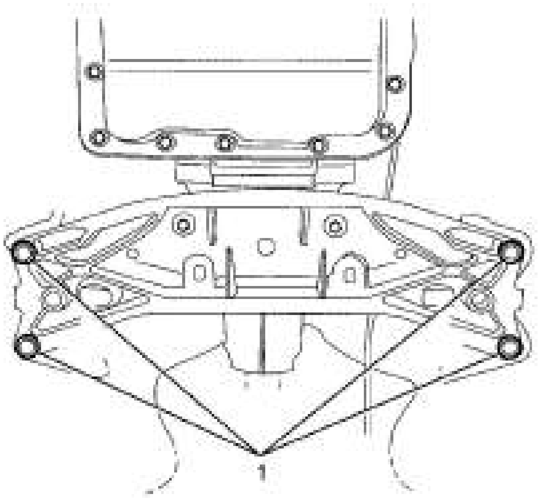
5. Remove the transmission support to lower sub frame rail retaining bolts.
6. Remove the transmission support from the vehicle.

Installation Procedure



1. Install the transmission support to the vehicle.
2. Install the transmission support to lower sub frame rail retaining bolts.

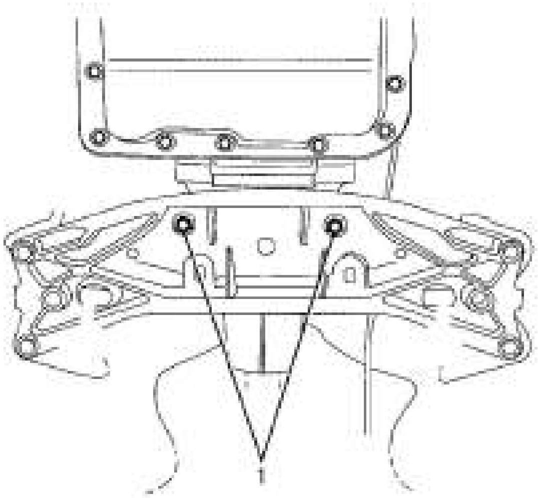
   Notice: Refer to Fastener Notice in the Preface section.



3. Tighten the transmission support to under body retaining bolts.

   Tighten
   Tighten the bolts to 55 N·m (41 lb ft).

4. Remove the suitable supporting stand from the transmission.



5. Install the transmission support to transmission mount retaining nuts.

   Tighten
   Tighten the nuts to 25 N·m (18 lb ft).

6. Install the exhaust system. Refer to Exhaust System Replacement.
7. Lower the vehicle.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Frame and Underbody | Repair Instructions | Document ID: 2178792

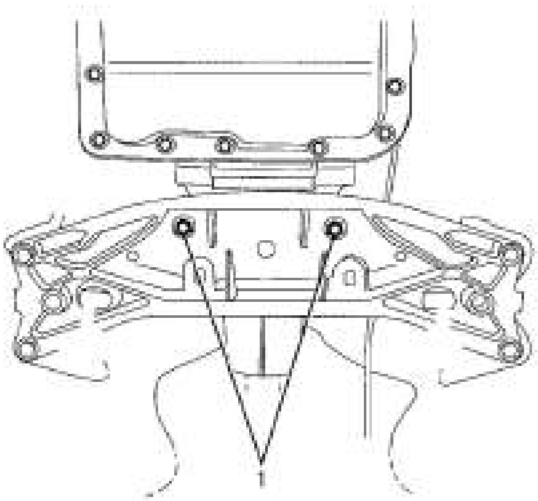
Transmission Support Replacement (5L40 and 6L50)

Removal Procedure

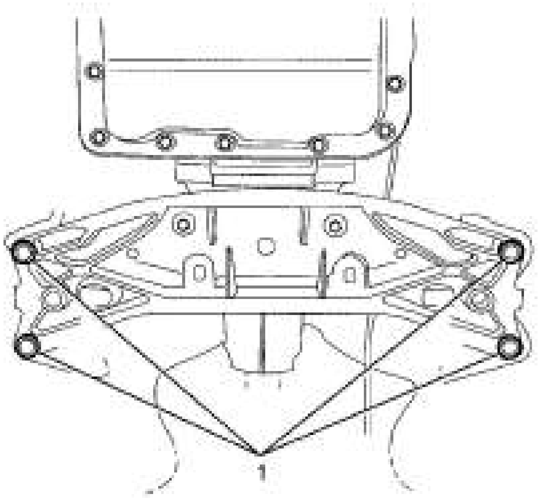
Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Remove the exhaust system. Refer to Exhaust System Replacement.

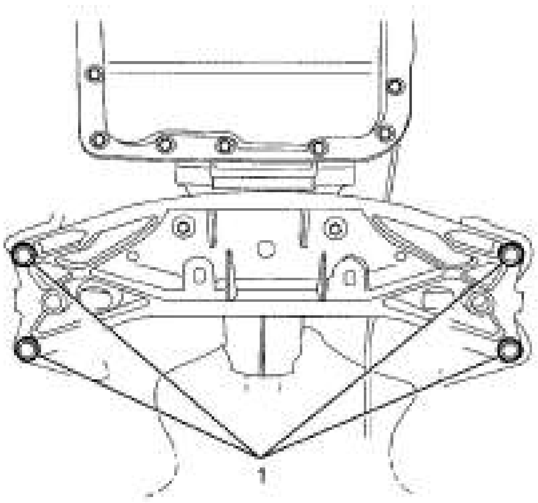


3. Remove the transmission support to transmission mount retaining nuts.
4. Support the transmission with a suitable supporting stand.



5. Remove the transmission support to lower sub frame rail retaining bolts.
6. Remove the transmission support from the vehicle.

Installation Procedure



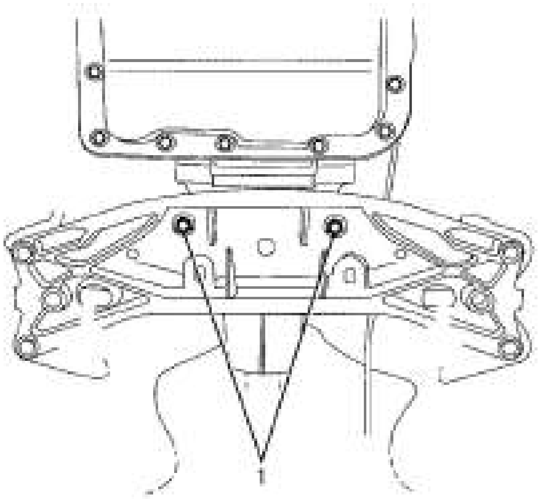
1. Install the transmission support to the vehicle.

   Notice: Refer to Fastener Notice in the Preface section.

2. Install the transmission support to lower sub frame rail retaining bolts (1).

   Tighten
   Tighten the bolts to 55 N·m (41 lb ft).

3. Remove the suitable supporting stand from the transmission.



4. Install the transmission support to transmission mount retaining nuts (1).

   Tighten
   Tighten the nuts to 58 N·m (43 lb ft).

5. Install the exhaust system. Refer to Exhaust System Replacement.
6. Lower the vehicle.

Underbody Inspection

Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle .
2. Check for obvious deterioration of the floor pan.
3. Check for loose dirt and corrosion around the inside of the floor pan reinforcement member access holes. This is the first indication that corrosion may exist in hidden areas, and repairs may be required before the final cleaning and protective treatment is performed.
4. Using a chisel, ensure that the drain provisions in the floor pan reinforcement members are open. There are drain holes in the body side panels also. These holes can be opened using a punch or a drift. The side panel drain holes are in the rear section of the rocker panels, and in the lower rear quarter panels.

Frame and Underbody Description

The following components are supported by a front crossmember frame which is rigidly bolted to the body rail at 6 locations.

- The engine
- The front suspension components
- The steering linkage

The following components are supported by the rear suspension frame which is attached to the body rail through rubber insulators at 4 locations:

- The rear drive axle assembly
- The rear suspension components

The transmission support is rigidly bolted to the floor pan and supports the transmission extension.

The underbody frames must be properly aligned to maintain the correct transmission, suspension and wheel alignment.

Important: In the event there is evidence of structural damage to the frames they must be replaced.

The individual underbody components contribute directly to the overall strength of the unibody. Use proper metal panel bonding techniques during service repair operations to the underbody. Refer to Metal Panel Bonding in Collision Repair for metal panel bonding information and for vehicle preparation.

The components must be corrosion protected whenever body repair operations damage or destroy the original sealing surfaces. Use a two part catalysed primer when corrosion protection is needed to welded surfaces. Apply the sealers and anti-corrosion materials as necessary. Refer to Anti-Corrosion Treatment and Repair. Do not combine paint systems. Refer to Basecoat/Clearcoat Paint Systems, for further information.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Frame and Underbody | Special Tools and Equipment | Document ID: 1989955

Minor scratches or acid rain pitting	2000 Grade Unigrit Sanding Paper	Compound Power Cleaner (M-84) W-7000 Cutting Pad	Swirl Free Polish (M-2) W-9000 Finishing Pad
Major runs or sags	1500 Grade Unigrit Sanding Block	Compound Power Cleaner (M-84) W-7000 Cutting Pad	Swirl Free Polish (M-2) W-6000 Pad for DA Polishers
Major orange peel or acid rain pitting	1500 Grade Unigrit Sanding Paper	Compound Power Cleaner (M-84) W-7000 Cutting Pad	Swirl Free Polish (M-2) W-6000 Pad for DA Polishers
Need for protection	--	--	Quick Detailer (M-6601) will provide protection without streaking. Contains the mildest of cleaners which will insure even application of polish.

Basecoat/Clearcoat Paint Systems

Caution: Exposure to isocyanates during paint preparation and application processes can cause severe breathing problems. Read and follow all of the instructions from the manufacturers of painting materials, equipment, and protective gear.

All paint finish repairs of rigid exterior surfaces must meet Holden standards. Refer to the latest revision of the Holden Approved Refinish Materials book to identify the paint systems you may use that have been engineered to meet Holden standards. The Holden Approved Refinish Materials book supplies all approved products, including volatile organic compound (VOC) compliant regulations recommended by the individual manufacturer, and detailed procedures for materials used in their paint system.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Paint and Coatings | Introduction | **Document ID: 1995237**

Anti-Corrosion Treatment and Repair

Caution: When applying sound deadeners, or anti-corrosion materials due care and preventative measures must be exercised to prevent any material from being sprayed into door and quarter panel mechanisms such as door locks, window run channels, window regulators and seat belt retractors, as well as any moving or rotating mechanical or suspension parts on the underbody, particularly the parking brake cable. After material application, be sure that all body drain holes are open. Improper application may increase chance of corrosion damage or limit the operation of moving parts, resulting in personal injury.

Any procedure that disturbs these special treatments, such as panel replacement or collision damage repair operations, may leave the metal unprotected and result in corrosion. Proper recoating of these surfaces with service-type anti-corrosion material is essential.

After repair and/or replacement parts are installed, all accessible bare metal surfaces must be treated with metal conditioner and reprimed. Refer to the Holden Approved Refinish Materials book which identifies the paint systems you may use.

Anti-corrosion compounds are light-bodied materials designed to penetrate between metal-to-metal surfaces, such as pinch-weld joints, hem flanges, and integral panel attaching points where metal surfaces are difficult to coat with conventional undercoating materials, and are inaccessible for painting. The materials that are suitable for interior and exterior are listed in the chart below. Conventional undercoating is recommended in order to coat large areas, such as replacement door and quarter outer panels, floor pan sections, lids, hoods, fenders, etc. During undercoating operations, care should be taken to prevent the material from being sprayed into door and quarter panel hardware mechanisms, such as door locks, window run channels, window regulators, and seat belt retractors. On the underbody, the material should not be applied to any moving or rotating part, energy absorbing bumper components, or shock absorbers. After undercoating, make sure that all body drain holes are open.

Interior Protectant

The following products are available from Holden Dealer Equipment. For technical information, call 187-Permatex (1-877-376-2839):

Exterior Protectants

The following product is available from *ECP, Inc. Contact them at 1-800-323-3521 or www.ecpinc.net.

*We believe these sources and their products to be reliable. There may be additional manufacturers of such material. General Motors does not endorse, indicate any preference for, or assume any responsibility for the products from these firms, or for any such items which may be available from other sources.

These sealers are intended to prevent water and dust from entering the vehicle and also are anti-corrosion barriers. Sealers are applied to such areas as rear compartment lid hem flanges, wheelhouse, quarter outer, floor, cowl, roof, and various other panel to panel attaching points. The originally sealed joints are obvious and any damage to these sealed locations should be corrected by resealing. Attaching points of new replacement panels should be resealed. Replacement lids and doors will also require sealing in the hem flange areas.

Flange joints, overlap joints, and seams should be sealed using a quality sealer of medium-bodied consistency. The sealer used must retain its flexible characteristics after curing and be paintable.

Open joints which require bridging of the sealer in order to close a gap should be sealed using a heavy-bodied caulking material. Follow the label directions for the material selected.

Color application may be required in order to restore repaired areas such as hood, fenders, doors, quarters, lid, roof, engine compartment, underbody, and inner panels to original appearance. When this is necessary, conventional refinishing preparation, undercoat buildup, and color application techniques should be followed.

Deadener materials, spray-on type, are used on various metal panels in order to provide corrosion resistance and joint sealing. They control the general noise level inside the passenger area of the vehicle. When deadeners are disturbed because of damage, are removed during repair operations, or a new replacement panel is installed, the deadener material must be replaced by a service equivalent material. The application pattern and location of deadener materials can be determined by observing the original production installation.

Cleaning of the interior and underbody panel surfaces is necessary when original galvanized or other anti-corrosion materials have been burned off during welding or heating operations. Removal of the residue from burning will require additional care in such areas as interior surfaces of box-type construction and when configurations of the metal panels limit access to interior surfaces.

Paint Identification

Caution: Exposure to isocyanates during paint preparation and application processes can cause severe breathing problems. Read and follow all of the instructions from the manufacturers of painting materials, equipment, and protective gear.

Important: Always refer to the Holden Approved Refinish Materials book. This book identifies the paint systems you may use.

Use the service parts identification label to identify the type of paint technology, paint codes, trim level, and any special order paint colors on the vehicle. Refer to Vehicle, Engine and Transmission ID and VIN Location, Derivative and Usage.

Clearcoat Repair without Repainting

Repair Procedure

1. Thoroughly wash the repair area with Liquid Wash and Wax, or the equivalent.
2. Environmental damage may be corrected. Refer to Environmental Fallout (Acid Rain) or Rail Dust Damage Repair.

   Important: Follow all of the instructions from the manufacturer of the polishing material.

3. If sanding and/or polishing is required , refer to Clearcoat Repair Specifications - Meguiar Products or Clearcoat Repair Specifications - 3M Products.
4. Use a paint gage before, during, and after sanding and/or polishing, to avoid removing too much clearcoat. Refer to Paint Gages.

Environmental Fallout (Acid Rain)

Notice: Refer to Clearcoat/Ultraviolet Screeners Notice in the Preface section.

Important: Always refer to the manufacturer's packaged instructions for the detailed procedures of materials used for compounding and/or polishing.

Since the severity of the condition varies from area to area, proper diagnosis of the contamination extent is critical to the success of the repairs. Perform the diagnosis under high intensity fluorescent lighting on the horizontal surfaces (hood, roof panel, rear compartment lid), after the surfaces have been properly cleaned by washing the vehicle with Liquid Wash and Wax, or equivalent.

There are 3 basic types of acid rain damage:

Surface Level Contamination: May be repaired by simply washing the vehicle, cleaning the surface with a silicone wax and grease remover, neutralizing acidic residue, and finesse polishing--Refer to Surface Level Contamination Repair.

Clearcoat Etching: Slight etching is still noticeable after the above washing and finesse polishing procedure. Refer to Slight Clearcoat Damage - Wet Sanding, Finesse Polishing.

Basecoat Etching: Severe etching beyond the clearcoat into the basecoat in the affected areas will require refinishing. Refer to Basecoat/Clearcoat Paint Systems.

Surface Level Contamination Repair

1. Thoroughly wash and dry the contaminated area with Liquid Wash and Wax, or equivalent.
2. Clean the affected area with silicone, wax and grease remover.
3. Remove and neutralize acidic residue by cleaning the contaminated areas with a mixture of baking soda and water (1 tablespoon of baking soda per 1 liter or 1 quart of water). Rinse thoroughly and dry the panel completely.
4. Apply finesse-type polish with a foam panel. If damage has been repaired, remove any swirl marks with a dual action orbital polisher and foam pad. Refer to Clearcoat Repair Specifications - Meguiar Products or Clearcoat Repair Specifications - 3M Products.
5. If some damage remains, refer to Slight Clearcoat Damage - Wet Sanding, Finesse Polishing.

Slight Clearcoat Damage - Wet Sanding, Finesse Polishing

1. Select a small contaminated test area.
2. Film thickness should be taken prior to the sanding and polishing. Refer to Paint Gages.
3. Wet sand and finesse polish the contaminated test area. Refer to Clearcoat Repair Specifications - Meguiar Products or Clearcoat Repair Specifications - 3M Products. If during the polishing you suspect or observe that etching has penetrated into the basecoat, too much clearcoat has been removed during sanding, or base color is transferred to the polishing pad during polishing, then the affected areas will require refinishing. Refer to Basecoat/Clearcoat Paint Systems.

Paint Gages

Paint thickness gages measure the total thickness of the vehicle finish. It is important to accurately measure the thickness of the finish on each vehicle as the thickness of the finish will vary on each vehicle. Use a paint gage before the sanding process in order to accurately measure how much finish there is to remove before, during, and after the sanding process. Paint gages range from magnetic pull type to sophisticated electronic types, and are available from a variety of sources. The older magnetic type gages, at best have a 5 percent accuracy range and are not sensitive enough to detect removal of 0.02 mm 0.5 mil (0.0005 in) clearcoat. The newer type magnetic gages have improved accuracy ranges. Most gages are confined to checking either ferrous metal, steel, non-ferrous metal, or aluminum panel. At this time, there are no viable gages for reading film thickness on composite (SCM doors, RIM fenders) panels. The more sophisticated (ETG) electronic paint thickness gages digital type gages are able to read film thickness on both ferrous and non-ferrous metal panel. Digital ETG gages may have an accuracy range of 1 percent and include thickness standards for recalibration. The following paint thickness gages are available.

Paint Thickness Gages

- 147-5437-ETG Standard model
- 147-5437-ETG-P Standard model with print option
- 147-5437-N-ETG-N Non-ferrous model for aluminium panels
- 147-5437-NP-ETG-NP Non-ferrous model with print option
- 147-54437-SD-ETG Steel and aluminium gage

Clearcoat Thickness

The clearcoat on the vehicle is typically 0.036-0.046 mm (0.0014-0.0018 in) thick. The clearcoat contains ultraviolet screeners. Removing more than 0.005 mm (0.0002 in) of the clearcoat may result in early paint failure.

Rail Dust Damage Repair

Caution: Refer to Eye Protection Caution in the Preface section.

Important: If rail dust has penetrated into the basecoat, the panel requires refinishing. Make sure all the rail dust has been removed prior to refinishing or the rust spots will return.

Rail dust damage comes from the tiny iron particles produced from the friction between the train wheels and the track. It can also be deposited on vehicles if stored near any operation producing iron dust (i.e., steel ore yards). This dust can either lay on top of, or embed into the paint surface. It is usually diagnosed as bumps in the paint surface or rust colored spots in the paint.

1. Move the vehicle to a cool shaded area and make sure the vehicle surfaces are cool during the removal process.
2. Thoroughly wash the repair area with Liquid Wash and Wax, or the equivalent.
3. Wipe the area dry.
4. Clean the affected area with silicone, wax and grease remover.
5. Perform the removal process according to the manufacturer's directions of the type of repair material used (Gel Type Oxalic Acid or Clay Type Non-Acid Based). If, upon inspection, some particles are still present, the process may be repeated. If the damage has been repaired, complete the repair to the entire panel.
6. Polish the entire panel after the removal process. Refer to Clearcoat Repair Specifications - Meguiar Products or Clearcoat Repair Specifications - 3M Products. If small pits remain in the clearcoat after all of the damage has been repaired, refer to Clearcoat Repair without Repainting.

Flexible Plastic Part Repair Materials

Thermoset Plastic Type	Type of Repair	Recommended Repair Material	Availability
Most flexible and semi flexible plastic*	Most repairs*	Compoxy Repair Material	Refer to your local paint supplier
		CMR-8 Composite Repair Material	Refer to your local paint supplier
* TPO, TEO, (Polyolefin Plastics) require the application of the adhesive primer before the repair compound is applied.			

Rigid Plastic Part Repair Materials

Thermoset Plastic Type	Type of Repair	Recommended Repair Material	Availability
Sheet moulding compound (SMC), RIM rigid plastic parts	Cosmetic filling	Structural Bonding Epoxy	Refer to your local paint supplier
		Sikkens Polystop LP™ or equivalent polyester repair putty	Refer to your local paint supplier
Most rigid plastic parts	Cosmetic repair, adhesive bonding	Structural Bonding Epoxy	Refer to your local paint supplier
Most rigid plastic parts	Adhesive bonding	Structural Bonding Epoxy	Refer to your local paint supplier
Most rigid plastic parts	Adhesive structural* bonding	Structural Bonding Epoxy	Refer to your local paint supplier
Most rigid plastic parts	Adhesive bonding Structural bonding	Structural Bonding Epoxy	Refer to your local paint supplier
SRIM most rigid plastic parts	Cosmetic repair, adhesive bonding	SRIM™ repair kit	Refer to your local paint supplier
* Structural adhesive bonding may require the use of a pneumatic applicator, to speed the application of the epoxy.			Refer to your local paint supplier

General Plastic Repair

Caution: In order to reduce the risk of personal injury when exposed to toxic fumes while grinding, cutting, or applying repair material on any type of sheet molded compound or RIM rigid plastic, observe the following guidelines:

- Work in a properly ventilated area
- Apply protective cream to any exposed skin
- Remove any mixture that comes into contact with skin
- Wash skin with cold water to remove glass and resin dust
- Use a sander with a vacuum attachment
- Follow the repair material manufacturer's instructions

Also, always wear the following:

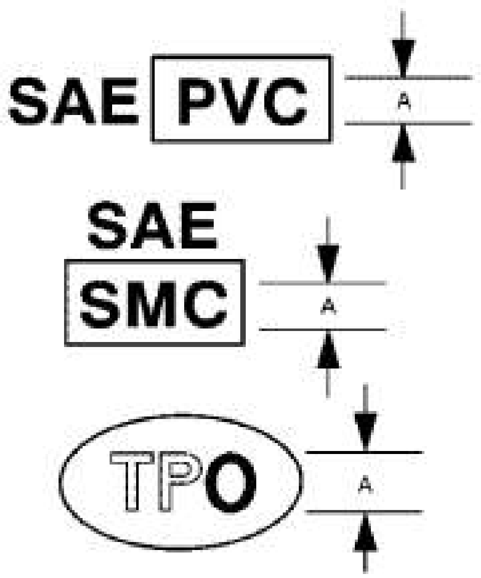
- An approved respirator, or air supplied respirator
- Eye protection
- Rubber gloves
- Earplugs
- Protective clothing

The following procedures should be followed when repairing all types of thermoset plastic:

- Follow the manufacturer's application and curing recommendations.
- Do not intermix systems. Use the supplies and the repair materials from the same manufacturer.
- Clean the inner and outer surfaces of the repair area with a soap impregnated scouring pad in order to remove any dirt or mould.
- Clean the area with a wax and grease remover, using only enough of the remover to dampen a cloth. Allow the panel to dry thoroughly.
- Remove the surface finish from the area to be repaired. Adhesives are designed to adhere to the plastic substrate, not the finish.
- Prime the surface before applying the repair material.
- Inspect the rear side of the work area before making repairs in order to avoid possible damage to wires, motors, etc.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Repair | Plastic Panel Information and Repair | Description and Operation | **Document ID: 1995247**

How to Identify Plastic Parts



Plastic parts can be identified by the SAE code, which is usually found on the rear of the part, and/or by the characteristics of the plastic. Knowing the type of plastic aids in selecting the proper repair materials and in selecting the proper repair procedure.

Look for the SAE code stamped into the part.

Code Found

Match the code to those in the plastic identification chart to determine whether the plastic is thermoplastic or thermoset plastic, and whether the plastic is rigid or flexible. Refer to Plastic Identification and Refinishing Systems.

No Code Found

Caution: Do NOT use a plastic burn test to distinguish the type of plastic. The burn test produces vapors which are harmful.

Perform one or both of the following tests to determine if the part is thermoplastic polyolefin or thermoset non-polyolefin.

Float Test

1. Cut a shaving of plastic from the back of the part.

   The shaving should be free of mould release agents and paint.

2. Place the shaving in a container of water.
    - Thermoplastic polyolefin floats.
    - Thermoset non-polyolefin sinks.

Abrasion Test

- Sand a spot near the damaged area with Grade 36 Roloc Disc.
- Thermoplastic polyolefin material melts or frays when sanded.
- Thermoset non-polyolefin material sands cleanly.

Thermoplastic and thermoset plastics can be either rigid or flexible. Thermoplastic plastic parts are best repaired with a hot iron plastic material-feed welder, but are usually replaced. Thermoset plastic can be repaired with epoxy or other more rigid 2 package repair material.

- For rigid thermoset repair materials, refer to Rigid Plastic Part Repair Materials.
- For flexible thermoset repair materials, refer to Flexible Plastic Part Repair Materials.
- For general repair instructions, refer to General Plastic Repair.

Plastic Identification and Refinishing Systems

Identifying Symbol - Old Symbol in ( )s	Chemical Composition or Plastic Family Name	Typical Area(s) Where Part is Used	Examples of Common/Trade Names	Type of Plastic
ABS	Acrylonitrile/ Butadiene-Styrene	Armrest Support, Console, Instrument Panel Console, Steering Column Bracket/Jacket, Trim Molding	ABS, Absafil, Magnum, Cycolac, Dyel, Kralastic, Lustran	Thermoplastic
ABS + PC	Acrylonitrile/ Butadiene-Styrene + Polycarbonate	Instrument Panel, Instrument Panel Console	Bayblend, Cycoloy, KHA, Pulse	Rigid
ABS/PVC	ABS/Vinyl (Soft)	Head Rest Cover, Instrument Panel Pad, Trim Molding/Panel	ABS Vinyl	Flexible, Vinyl
EPDM	Ethylene Propylene Diene Monomer	Body Panel, Bumper Impact Strip	EPDM, Nordel	Rigid
EVA (EVAC)	Ethylene/Vinyl Acetate	Head Rest Cover, Miscellaneous Soft Trim	Elvax, Microthane	Flexible

Diagnostic Starting Point - Doors

Begin the diagnosis by reviewing the system Description and Operation. Reviewing the Description and Operation information will help you determine the correct symptom diagnostic procedure when a malfunction exists. Reviewing the Description and Operation information will also help you determine if the condition described by the customer is normal operation. Refer to Diagnostic System Check - Vehicle , in order to identify the correct procedure for diagnosing the system and where the procedure is located.

The Diagnostic System Check will provide the following information:

- The identification of the control module which command the system
- The ability of the control module to communicate through the serial data circuit
- The identification of any stored diagnostic trouble codes (DTCs) and their status

Diagnostic Starting Point - Fixed and Moveable Windows

Begin the system diagnosis with Diagnostic System Check - Vehicle. The Diagnostic System Check - Vehicle will provide the following information:

- The identification of the control modules which command the system
- The ability of the control modules to communicate through the serial data circuit
- The identification of any stored diagnostic trouble codes (DTCs) and their status

The use of the Diagnostic System Check will identify the correct procedure for diagnosing the system and where the procedure is located.

DTC B0283

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.
- Diagnostic Procedure Instructions provides an overview of each diagnostic category.

DTC Descriptors

DTC B0283 02: Electric Rear Defrost Circuit Short to Ground or Open

DTC B0283 05: Electric Rear Defrost Circuit Short to Battery or Open

Diagnostic Fault Information

Circuit	Short to Ground	Open/High Resistance	Short to Voltage	Signal Performance
Relay Switch B+	2	2	--	--
Rear Defog Relay Control	B0283 02	B0283 02, B0283 05	B0283 05	--
Rear Windows Defogger Grid Control	2	2	1	--
Rear Defog Relay Ground	--	B0283 02, B0283 05	2	--
Rear Window Defogger Grid Ground	--	2	2	--
1. Rear Defogger Always On 2. Rear Defogger Inoperative				

Circuit/System Description

The HVAC control module monitors the voltage level on the supply voltage circuit of the RR-Defog relay. The voltage level should be low while the RR-Defog relay is de-energized. The voltage will be near system voltage when the HVAC control module energizes the RR-Defog relay.

Conditions for Running the DTC

Battery voltage must be between 9-16 volts.

Conditions for Setting the DTC

B0283 02

When the HVAC control module detects a short to ground or an open/high resistance in the RR-Defog relay coil control circuit for 1 second or greater

B0283 05

When the HVAC control module detects a short to battery or an open/high resistance in the RR-Defog relay coil control circuit for 1 second or greater.

Action Taken When the DTC Sets

The rear window defogger will malfunction.

Conditions for Clearing the DTC

- The DTC will be current for as long as the fault is present.
- When the fault is no longer present, the DTC will be a history DTC.
- A history DTC will clear after 50 ignition cycles.

Scan Tool Reference

Control Module References for scan tool information

Circuit/System Verification

Command the Rear Window Demister ON and OFF with the scan tool. The rear window defogger should turn ON and OFF when changing between the commanded states.

Circuit / System Testing

1. Ignition OFF, disconnect the RR-Defog relay.
2. Test for less than 1 ohm between the ground circuit terminal 85 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance
3. Connect a test lamp between the control circuit terminal 86 and the ground circuit terminal 85.
4. Ignition ON, command the Rear Window Demister ON and OFF with a scan tool. The test lamp should turn ON and OFF when changing between the commanded states.

   If the test lamp is always ON, test the control circuit for a short to voltage. If the circuit tests normal, replace the HVAC control module.

   If the test lamp is always OFF, test the control circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the HVAC control module.
5. If all circuits test normal, test or replace the RR-Defog relay.

Component Testing

1. Ignition OFF, disconnect the RR-Defog relay.
2. Test for 60-180 ohms between terminals 85 and 86.

   If the not within the specified range, replace the relay.
3. Test for infinite resistance between the following terminals:
   - 30 and 86
   - 30 and 87
   - 30 and 85
   - 85 and 87

   If not the specified value, replace the relay.
4. Install a 25A fused jumper wire between relay terminal 85 and 12 volts. Install a jumper wire between relay terminal 86 and ground. Test for less than 2 ohms between terminals 30 and 87.

   If greater than the specified range, replace the relay.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

- Relay Replacement
- Control Module References for HVAC control module replacement, setup, and programming

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Fixed and Moveable Windows | Diagnostic Information and Procedures | **Document ID: 1976313**

Symptoms - Fixed and Moveable Windows

Important Preliminary Checks Before Starting:

1. Perform the Diagnostic System Check - Vehicle before using the symptom tables in order to verify that all of the following are true:
   - There are no DTCs set.
   - The control modules can communicate via the serial data link
2. Review the power window system operation or rear window defogger system operation in order to familiarize yourself with the system functions. Refer to the following:
   - Rear Window Defogger Description and Operation
   - Power Windows Description and Operation

Visual/Physical Inspection

- Inspect for aftermarket devices which could affect the operation of the rear window defogger. Refer to Checking Aftermarket Accessories .
- Inspect the easily accessible or visible system components for obvious damage or conditions which could cause the symptom.

Intermittent

Important:

- Inspect for proper installation of electrical components if an intermittent condition exists. Inspect for aftermarket theft deterrent devices, lights, and cellular phones. Ensure that no aftermarket equipment is connected to the class 2 circuit. If you can not locate an intermittent condition, a cellular phone signal may cause the condition. Faulty electrical connections or wiring may be the cause of intermittent conditions. Refer to Testing for Intermittent Conditions and Poor Connections .
- The problem may or may not turn ON the SERVICE VEHICLE SOON indicator or store a DTC. Do not use the symptom tables to diagnose intermittent conditions. The malfunction must be present in order to locate the problem.

Poor electrical connections or wiring cause most intermittent conditions. Perform a careful visual/physical check for the following conditions:

- Poor mating of the connector halves or a terminal not fully seated in the connector body
- An improperly formed or damaged terminal
- Reform or replace connector terminals in the problem circuit in order to ensure proper contact tension.
- Poor terminal to wire connection requires removing the terminal from the connector body in order to perform the check.

Use a scan tool in order to help detect intermittent conditions. The scan tool has several features that can be used to locate an intermittent condition. The snapshot feature can capture and store data parameters within the scan tool when the malfunction occurs. This information can then be reviewed in order to see what caused the malfunction.

Symptom List

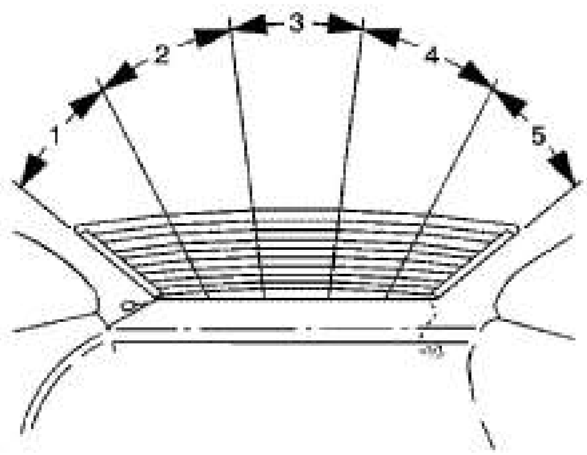
Refer to a symptom diagnostic procedure from the following list in order to diagnose the symptom:

- Rear Window Defogger Malfunction
- Power Windows Malfunction

Defogger Grid Lines Diagnosis

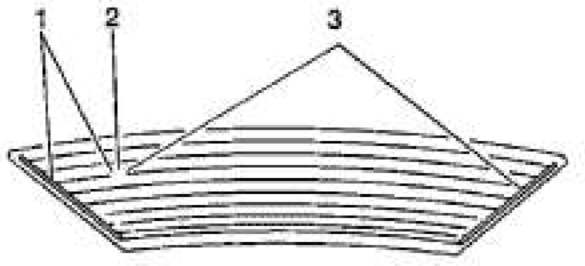
Important: This test is for reference only. A grid line fault requires rear window replacement. Refer to Rear Window Replacement.

1. Start the engine.
2. Activate the rear window defogger system.
3. Connect a test lamp to a known ground.



Important: The test lamp brilliance will decrease proportionately to the increased resistance in the grid line as the probe is moved from the battery positive bus wire to the ground bus wire. The test lamp brilliance may vary from one window to another.

4. Move the test lamp probe from zone 5 to zone 1 along each grid line.
   - If the test lamp shows full brilliance at both ends of the grid lines. Inspect for an open or poor connection in the ground circuit of the rear window defogger grid. Refer to Testing for Intermittent Conditions and Poor Connections and Connector Repairs.



- If the test lamp goes out, test the grid line in at least 2 places (1,3) to eliminate the possibility of bridging the open (2) in the grid line.

5. Once the open (2) is located, replace the rear window. Refer to Rear Window Replacement.

Rear Window Defogger Malfunction

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.
- Diagnostic Procedure Instructions provides an overview of each diagnostic category.

Diagnostic Fault Information

Circuit	Short to Ground	Open/High Resistance	Short to Voltage	Signal Performance
RR-Defog Relay Switch B+	2	2	--	--
Rear Defog Relay Control	B0283 02	B0283 02, B0283 05	B0283 05	--
Rear Defog Grid Control	2	2	1	--
RR-- Defog Relay Ground	--	B0283 02, B0283 05	2	--
Rear Defog Grid Ground	--	2	2	--
1. Rear Defogger Always On 2. Rear Defogger Inoperative				

Circuit/System Description

When the rear defogger button is pressed, voltage is supplied to the relay coil and the HVAC control module also illuminates the rear window defogger indicator. Battery positive voltage is supplied at all times to the relay switched input and the relay coil is always grounded. This allows battery positive voltage from the relay switched input through the switch contacts and out the relay switched output to the rear defog grid.

Description and Operation

Rear Window Defogger Description and Operation

Electrical Information Reference

- Circuit Testing
- Connector Repairs
- Testing for Intermittent Conditions and Poor Connections
- Wiring Repairs

Scan Tool Reference

Control Module References for scan tool information

Circuit/System Verification

1. Ignition ON, observe the scan tool Rear Window Demister Switch parameter while pressing the rear window defogger switch. The parameter should change between Inactive and Active.

   If the value does not change between the commanded states, replace the HVAC control module.
2. Observe the operation of the rear window defogger indicator while pressing the rear window defogger switch. The indicator should turn ON or OFF each time the rear window defogger switch is pressed.

   If the indicator does not turn ON or OFF with each switch press, replace the HVAC control module.
3. Command the Rear Window Demister Switch ON and OFF with a scan tool. The rear window defogger should turn ON and OFF when changing between the commanded states.

Circuit/System Testing

1. Ignition OFF, disconnect the RR-Defog relay.
2. Test for less than 1 Ω between the ground circuit terminal 85 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Ignition ON, verify a test lamp does not illuminate between the control circuit terminal 30 and ground.

   If the test lamp illuminates, test the control circuit for a short to voltage.
4. Verify a test lamp illuminates between the B+ circuit terminal 87 and ground.

   If the test lamp does not illuminate, test the B+ circuit for a short to ground or an open/high resistance. If the circuit tests normal and the B+ circuit fuse is open, test the control circuit terminal 30 for a short to ground.
5. Ignition OFF, disconnect the X2 harness connector at the rear defog grid.
6. Test for less than 1 Ω between the ground circuit terminal A and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
7. Connect the X2 harness connector at the rear defog grid.
8. Ignition ON, connect a 40A fused jumper wire between the B+ circuit terminal 87 and the control circuit terminal 30. Verify the rear defog grid is activated.

   If the rear defog grid does not activate, test the control circuit for an open/high resistance. If the circuit tests normal, test or replace the rear defog grid.
9. Connect a test lamp between the control circuit terminal 86 and the ground circuit terminal 85.

10. Command the Rear Window Demister ON and OFF with a scan tool. The test lamp should turn ON and OFF when changing between the commanded states.

    If the test lamp is always ON, test the control circuit for a short to voltage. If the circuit tests normal, replace the HVAC control module.

    If the test lamp is always OFF, test the control circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the HVAC control module.
11. If all circuits test normal, test or replace the RR-Defog relay.

Component Testing

Relay Test

1. Ignition OFF, disconnect the RR-Defog relay.
2. Test for 60-180 Ω between terminals 85 and 86.

   If not within the specified range, replace the relay.
3. Test for infinite resistance between the following terminals:
   - 30 and 86
   - 30 and 87
   - 30 and 85
   - 85 and 87

   If not the specified value, replace the relay.
4. Install a 30A fused jumper wire between relay terminal 85 and 12V. Install a jumper wire between relay terminal 86 and ground. Test for less than 2 Ω between terminals 30 and 87.

   If greater than the specified range, replace the relay.

Rear Window Defogger Grid Test

1. Ignition ON, turn on the rear window defogger.
2. Verify that a test lamp illuminates between each rear defog grid line and ground. The test lamp should be off when testing at the ground side of the grid and get brighter as the test lamp moves closer to the voltage supply side of the grid. The test lamp should be dim when testing each grid line in the middle.

   If the test lamp remains bright at the middle of the grid line, test for an open between the test point and the ground side of the grid.

   If the test lamp remains off at the middle of the grid line, test for an open between the test point and the voltage supply side of the grid

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

- Relay Replacement
- Rear Window Replacement
- Control Module References for HVAC control module replacement, setup, and programming

Power Windows Malfunction (Commodore, Berlina, Calais, GTS, Club)

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.
- Diagnostic Procedure Instructions provides an overview of each diagnostic category.

Diagnostic Fault Information

Circuit	Short to Ground	Open/High Resistance	Short to Voltage	Signal Performance
Door Lock Window Switch Ignition	1, 2	1, 2	--	--
Window Control Module Ignition	1	1	--	--
Rear Window Switch Signal	2	2	2	--
Lockout Switch Control	2	2	--	--
Front Window Motor Control	1	1	1	--
Rear Window Motor Control	2	2	2	--
Window Control Module Ground	--	1	1	--
Door Lock Window Switch Ground	--	2	2	--
1. Front Power Window Inoperative 2. Rear Power Window Inoperative				

Circuit/System Description

The power window system will operate any time the ignition is the ACC or RUN position. The power window system will also operate whenever the BCM is in RAP mode. The door lock window switch contains individual window switches for each power window. All windows may be controlled up and down from the door lock window switch. The individual rear passenger power window switches will only control the up and down operation of their respective power window.

Each power window contains a reversible power window motor. The direction the window travels is dependent upon the polarity of the supply voltage. By reversing polarity of the supply voltage the window motor will move up or down. Each power window motor is internally circuit breaker protected.

Moveable Window Schematics

Connector End View Reference

Component Connector End Views

Description and Operation

Power Windows Description and Operation

Electrical Information Reference

- Circuit Testing
- Connector Repairs
- Testing for Intermittent Conditions and Poor Connections
- Wiring Repairs

Circuit/System Verification

1. Ignition ON, command each window UP and DOWN using the appropriate window switch on the door lock window switch and the rear door window switches. Each window should perform the UP and DOWN functions from each switch.

   If a front window does not perform the UP/DOWN function, refer to Front Window Malfunction.

   If either rear power windows do not perform the UP/DOWN function, refer to Rear Window Malfunction.
2. Disable and enable the rear window door switches by pressing and depressing the lockout switch on the door lock window switch. The rear door power window switches should be enabled and disabled when changing between the commanded states.

   If both rear window switches continue to function while disabled, refer to Lockout Switch Malfunction.
3. Command the express down function of the driver and passenger door windows by pressing the LF and RF window switches and releasing. The driver and passenger windows should perform the express down function.

   If the function does not perform as specified, replace the window control module.

Circuit/System Testing

Front Window Malfunction

1. Ignition OFF, disconnect the X2 harness connector at the door lock window switch.
2. Ignition ON, verify that a test lamp illuminates between the ignition circuit terminal 1 and ground.

   If the test lamp does not illuminate, test the ignition circuit for a short to ground or an open/high resistance.

3. Ignition OFF, connect the X2 harness connector at the door lock window switch and disconnect the harness connector at the window control module.
4. Test for less than 1 ohm between the ground circuit terminal 5 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
5. Ignition ON, verify that a test lamp illuminates between the ignition circuit terminal 8 and ground.

   If the test lamp does not illuminate, test the ignition circuit for a short to ground or an open/high resistance.
6. Connect a test lamp between the appropriate signal circuit terminal listed below and ground:
   - Terminal 12
   - Terminal 9
7. Command the power window DOWN by using the appropriate window switch on the door lock window switch. The test lamp should illuminate during the DOWN command.

   If the test lamp is always OFF, test the signal circuit for a short to ground or an open/high resistance. If the circuit tests normal, test or replace the door lock window switch.

   If the test lamp is always ON, test the signal circuit for a short to voltage. If the circuit tests normal, test or replace the door lock window switch.
8. Connect a test lamp between the appropriate signal circuit terminal listed below and ground:
   - Terminal 6
   - Terminal 3
9. Command the power window UP by using the window switch on the door lock window switch. The test lamp should illuminate during the UP command.

   If the test lamp is always OFF, test the signal circuit for a short to ground or an open/high resistance. If the circuit tests normal, test or replace the door lock window switch.

   If the test lamp is always ON, test the signal circuit for a short to voltage. If the circuit tests normal, test or replace the door lock window switch.
10. Ignition OFF, connect the harness connector at the window control module and disconnect the harness connector at the appropriate front window motor.
11. Test for less than 5 ohms between the control circuit terminal A and ground.

    If greater than the specified range, test the control circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the window control module.
12. Test for less than 5 ohms between the control circuit terminal B and ground.

    If greater than the specified range, test the control circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the window control module
13. Ignition ON, connect a test lamp between the control circuit terminal A and control circuit terminal B.
14. Command the power window UP and DOWN by using the window switch on the door lock window switch. The test lamp should illuminate during the UP and DOWN command.

    If the test lamp is always OFF during either for the commands, test either control circuit for a short to ground. If the circuit tests normal, replace the window control module.
15. If all circuits test normal, test or replace the front window motor.

Rear Window Malfunction

1. Ignition OFF, disconnect the X1 harness connector at the door lock window switch.
2. Test for less than 1 ohm between the ground circuit terminal 9 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Ignition ON, verify that a test lamp illuminates between the ignition circuit terminal 10 and ground.

If the test lamp does not illuminate, test the ignition circuit for a short to ground or an open/high resistance.

4. Ignition OFF, connect the X1 harness connector at the door lock window switch and disconnect the harness connector at the appropriate rear window switch.

   Important: Verify the rear window switches are enabled by checking the lockout switch on the door lock window switch.

5. Ignition ON, verify that a test lamp illuminates between the control circuit terminal 4 and ground.
   If the test lamp does not illuminate, test the control circuit for a short to ground or an open/high resistance. If the circuit tests normal, test or replace the door lock window switch.
6. Ignition OFF, test for less than 1 ohm between the signal circuit terminal 3 and ground.
   If greater than the specified range, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, test or replace the door lock window switch.
7. Test for less than 1 ohm between the signal circuit terminal 6 and ground.
   If greater than the specified range, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, test or replace the door lock window switch.
8. Connect a test lamp between the signal circuit terminal 3 and the signal circuit terminal 6.
9. Ignition ON, command the rear passenger door window UP and DOWN by using the door lock window switch. The test lamp should illuminate when commanding the UP and DOWN states.
   If the test lamp does not illuminate during either of the commands, test both signal circuits for a short to ground. If the circuits test normal, test or replace the door lock window switch.
10. Ignition OFF, connect the harness connector at the rear window switch and disconnect the harness connector at the rear window motor.
11. Test for less than 5 ohms between the control circuit terminal A and ground.
    If greater than the specified range, test the control circuit for a short to voltage or an open/high resistance. If the circuit tests normal, test or replace the rear window switch.
12. Test for less than 5 ohms between the control circuit terminal B and ground.
    If greater than the specified range, test the control circuit for a short to voltage or an open/high resistance. If the circuit tests normal, test or replace the rear window switch.
13. Connect a test lamp between the control circuit terminal A and the control circuit terminal B.
14. Ignition ON, command the rear window UP and DOWN by using the rear window switch. The test lamp should illuminate when commanding the UP and DOWN states.
    If the test lamp does not illuminate during either of the commands, test both control circuits for a short to ground. If the circuits test normal, test or replace the rear window switch.
15. If all circuits test normal, test or replace the rear window motor.

Lockout Switch Malfunction

1. Ignition OFF, disconnect the harness connector at the appropriate rear window switch.
2. Connect a test lamp between the control circuit terminal 4 and ground.
3. Ignition ON, command the rear window lockout ON and OFF by pressing and depressing the lockout switch on the door lock window switch. The test lamp should turn ON and OFF when changing between the commanded states.
   If the test lamp is always ON, test the control circuit for a short to voltage. If the circuit tests normal, test or replace the door lock window switch.

If the test lamp is always OFF, test the control circuit for a short to ground or an open/high resistance. If the circuit tests normal, test or replace the door lock window switch.

4. If all circuits test normal, test or replace the rear window switch.

Component Testing

Door Lock Window Switch

1. Ignition OFF, disconnect the X1 and X2 harness connectors at the door lock window switch.
2. Test for less than 2 ohms between the control terminal 11 and the ignition terminal 10 with the lockout switch in the ENABLE position.

   If greater than the specified value, replace the door lock window switch
3. Test for infinite resistance between the control terminal 11 and the ignition circuit terminal 10 with the lockout switch in the DISABLE position.

   If less than the specified value, replace the door lock window switch.
4. With the switch in the INACTIVE position, test for infinite resistance between the control terminals listed below and the ignition terminal 10:
   - Control terminal 8
   - Control terminal 7
   - Control terminal 12
   - Control terminal 13

   If less than the specified value, replace the door lock window switch.
5. With the switch in the UP position, test for less than 2 ohms between the control terminals listed below and the ignition terminal 10:
   - LR window switch control terminal 8
   - RR window switch control terminal 13

   If greater than the specified range, replace the door lock window switch.
6. With the switch in the DOWN position, test for less than 2 ohms between the control terminals listed below and the ignition terminal 10:
   - LR window switch control terminal 7
   - RR window switch control terminal 12

   If greater than the specified range, replace the door lock window switch.

Passenger Rear Window Switch

1. Ignition OFF, disconnect the harness connector at the appropriate rear window switch.
2. Test for infinite resistance between the control terminals 1 and 5 and the control terminal 4 with the switch in the INACTIVE position.

   If less than the specified value, replace the rear window switch.
3. Test for less than 2 ohms between the control terminal 1 and the control terminal 4 with the switch in the UP position.

   If greater than the specified range, replace the rear window switch.
4. Test for less than 2 ohms between the control terminal 5 and the control terminal 4 with the switch in the DOWN position.

   If greater than the specified range, replace the rear window switch

Window Motor

> **Important:** When performing the following tests, make sure that the window motor is not all ready in the position the test is attempting to produce.

1. Ignition OFF, disconnect the harness connector at the appropriate window motor
2. Install a 20A fused jumper wire between the control terminal A and 12V. Momentarily install a jumper wire between the control terminal B and ground. The window motor should perform the UP/DOWN function.

   If the function does not perform as specified, replace the window motor.
3. Reverse the jumper wires; the window motor should perform the DOWN/UP function.

   If the function does not perform as specified, replace the window motor.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

- Rear Side Door Window Switch Replacement
- Power Mirror Switch Replacement
- Front Side Door Window Regulator Motor Replacement
- Rear Side Door Window Regulator Motor Replacement
- Front Door Module Replacement

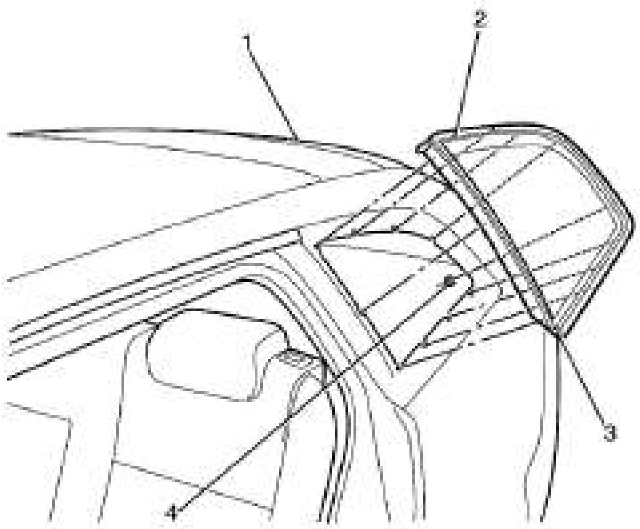
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Fixed and Moveable Windows | Repair Instructions | **Document ID: 2090820**

Body Side Window Replacement (Sportwagon)

Removal Procedure

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Install a suitable liftgate brace to the vehicle.
2. Remove the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.
3. Remove the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
4. Remove the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
5. Remove the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
6. Remove the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
7. Remove the headlining rear trim panel retainer. Refer to Headlining Rear Trim Panel Retainer Replacement.
8. Remove the body side window rear garnish moulding. Refer to Body Side Window Rear Garnish Molding Replacement.
9. Remove the body lock pillar lower trim panel. Refer to Body Lock Pillar Lower Trim Panel Replacement.
10. Remove the body lock pillar trim panel. Refer to Body Lock Pillar Trim Panel Replacement.
11. Remove the body lock pillar upper trim panel. Refer to Body Lock Pillar Upper Trim Panel Replacement.



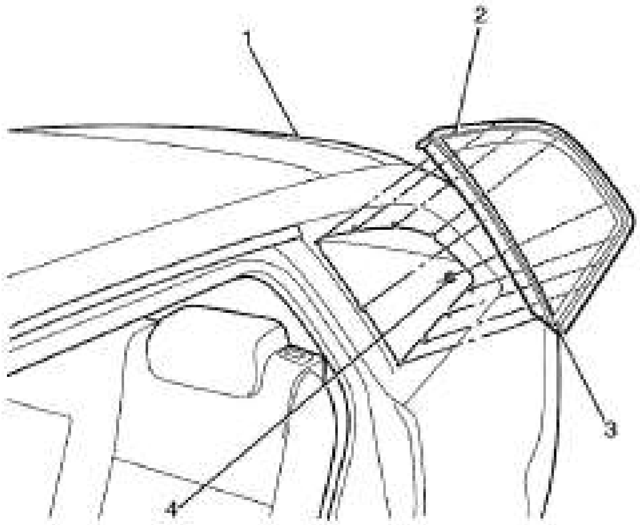
12. Remove the body side stationary window to body retaining nuts (4).

    Discard the nuts.

13. Remove the body side stationary window (2) from the vehicle (1).

14. Inspect the body side stationary window seal (3) for excessive wear and/or damage. Replace if necessary.

Installation Procedure



Important: Inspect the body side stationary window seal (3) for excessive wear and/or damage. Replace if necessary.

1. Install the body side stationary window seal (3) to the body side stationary window (2).
2. Install the body side stationary window (2) to the vehicle (1).

Notice: Refer to Fastener Notice in the Preface section.

3. Install the NEW body side stationary window to body retaining nuts (4).

Tighten
Tighten the nuts to 2 N·m (18 lb in).

4. Install the body lock upper pillar trim panel. Refer to Body Lock Pillar Upper Trim Panel Replacement.
5. Install the body lock pillar trim panel. Refer to Body Lock Pillar Trim Panel Replacement.
6. Install the body lock pillar lower trim panel. Refer to Body Lock Pillar Lower Trim Panel Replacement
7. Install the body side window rear garnish moulding. Refer to Body Side Window Rear Garnish Molding Replacement.
8. Install the headlining rear trim panel retainer. Refer to Headlining Rear Trim Panel Retainer Replacement.
9. Install the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
10. Install the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
11. Install the load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet

Replacement.

12. Install the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
13. Install the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

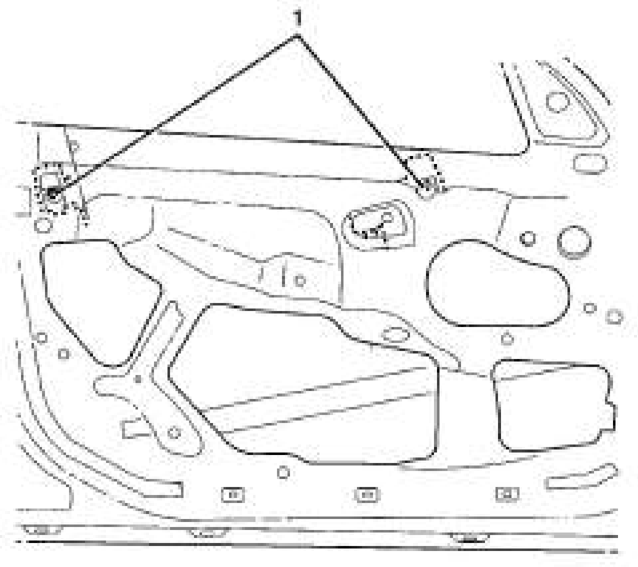
14. Remove the suitable liftgate brace to the vehicle.

Door Window Adjustment

1. Remove the door trim panel. Refer to Front Side Door Trim Panel Replacement or Rear Side Door Trim Panel Replacement.
2. Remove the water deflector. Refer to Front Side Door Water Deflector Replacement or Rear Side Door Water Deflector Replacement.

Caution: Refer to Glass and Sheet Metal Handling Caution in the Preface section.

Caution: Refer to Express Window Down Caution in the Preface section.



3. Loosen the window regulator to window glass retaining bolts (1).
4. Start the vehicle to make sure maximum power to the window motor. This is required to fully seat the window for adjustment.

Notice: Refer to Fastener Notice in the Preface section.

5. Raise the window to the full up position.

Tighten
Tighten the window clamp nuts to 8 N-m (71 lb in).

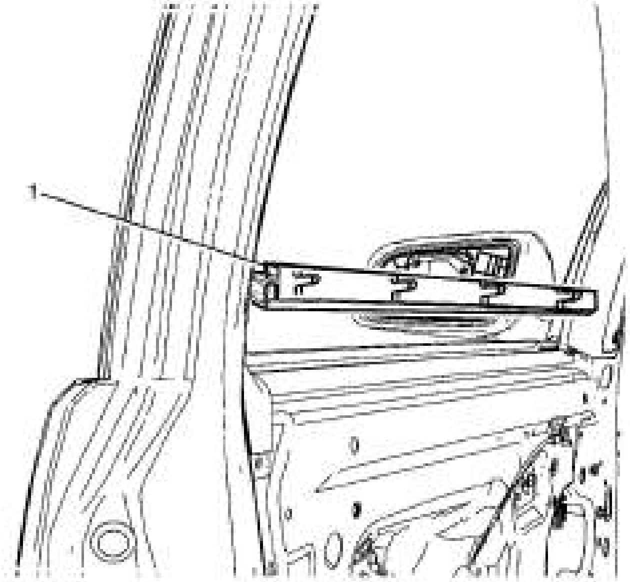
6. Inspect for correct window operation and a tight seal.
7. Shut off the vehicle.
8. Install the water deflector. Refer to Front Side Door Water Deflector Replacement or Rear Side Door Water Deflector Replacement.
9. Install the door trim panel. Refer to Front Side Door Trim Panel Replacement or Rear Side Door Trim Panel Replacement.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Fixed and Moveable Windows | Repair Instructions | Document ID: 1984477

Front Side Door Window Belt Inner Sealing Strip Replacement

Removal Procedure

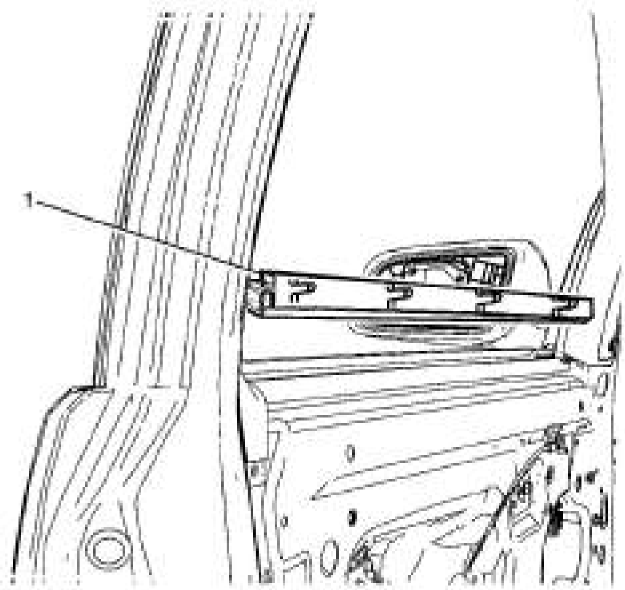
1. Lower the window to the full down position.
2. Remove the door trim panel. Refer to Front Side Door Trim Panel Replacement.



Important: Pull upward to release the window inner belt sealing strip (1).

3. Remove the window inner belt sealing strip (1).

Installation Procedure



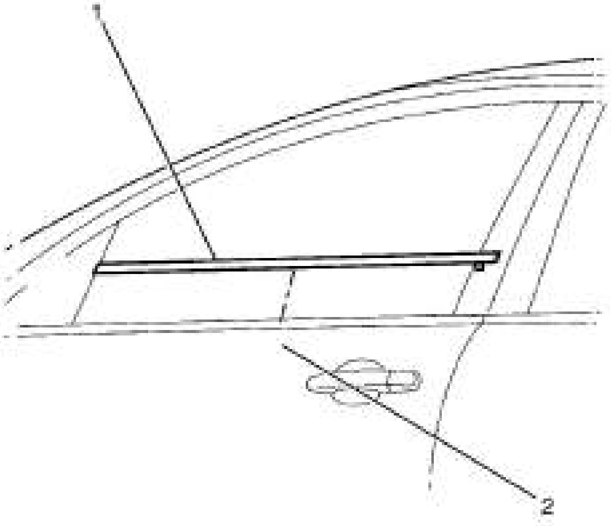
Important: Push downward to attach the window inner belt sealing strip (1).

1. Install the window inner belt sealing strip (1).
2. Install the door trim panel. Refer to Front Side Door Trim Panel Replacement.

Front Side Door Window Belt Outer Sealing Strip Replacement

Removal Procedure

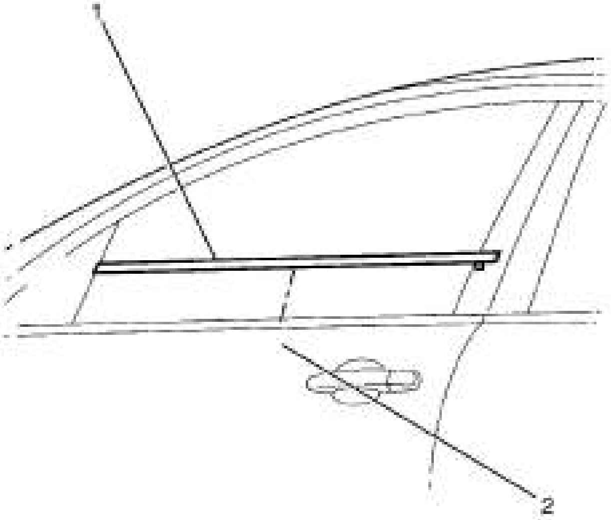
1. Remove the outside rearview mirror. Refer to Power Mirror Replacement.
2. Lower the window to the full down position.



Important: Pull the front door outer belt sealing strip (1) to detach the retainers.

3. Remove the front door outer belt sealing strip (1) from the door (2).

Installation Procedure



Important: Push the front door outer belt sealing strip (1) to attach the retainers.

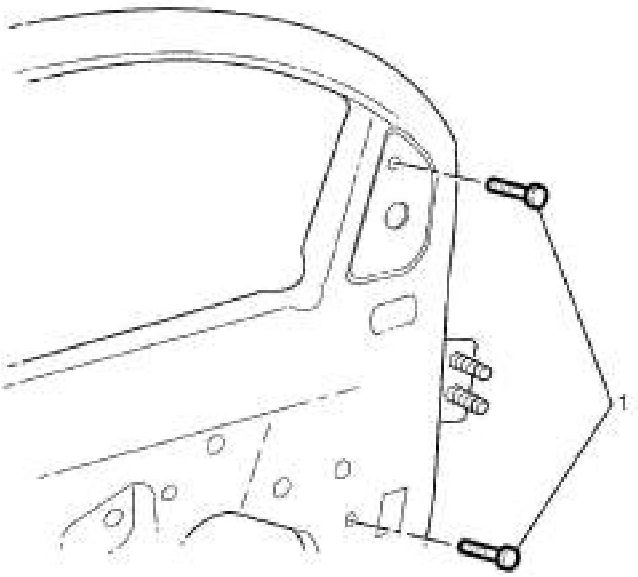
1. Install the front door outer belt sealing strip (1) to the door (2).
2. Install the outside rearview mirror. Refer to Power Mirror Replacement.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Fixed and Moveable Windows | Repair Instructions | **Document ID: 1991438**

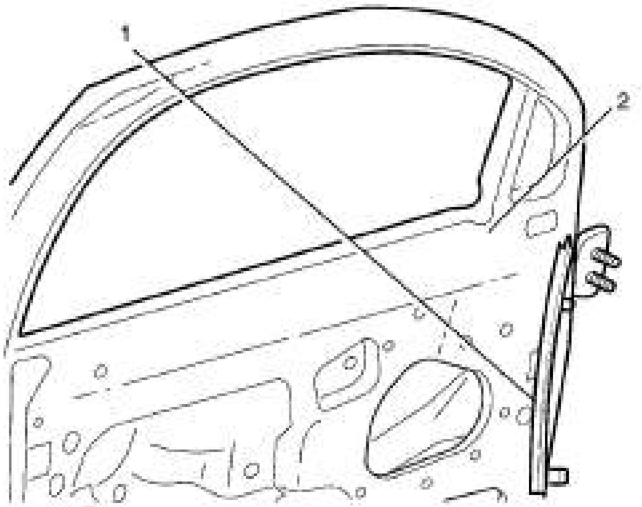
Front Side Door Window Front Channel and Rear Channel Replacement

Removal Procedure

1. Remove the door trim panel. Refer to Front Side Door Trim Panel Replacement.
2. Remove the speaker. Refer to Radio Front Side Door Lower Speaker Replacement in Entertainment.
3. Remove the water deflector. Refer to Front Side Door Water Deflector Replacement.
4. Remove the window inner belt sealing strip. Refer to Front Side Door Window Belt Inner Sealing Strip Replacement.
5. Remove the outside rearview mirror. Refer to Power Mirror Replacement.
6. Remove the window outer belt sealing strip. Refer to Front Side Door Window Belt Outer Sealing Strip Replacement in Doors.
7. Remove the window inner weatherstrip. Refer to Front Side Door Window Inner Weatherstrip Replacement.
8. Remove the window inner sealing strip. Refer to Front Door Opening Weatherstrip Replacement.



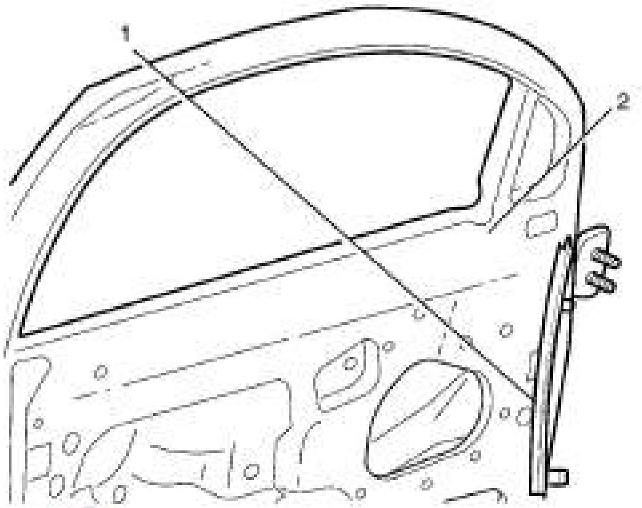
9. Remove the window channel to door retaining bolts (1).



Important: Rotate the top of the window channel (1) forward to aid in removal. Remove the window channel (1) through the large door access hole.

10. Remove the window channel (1) from the door (2).

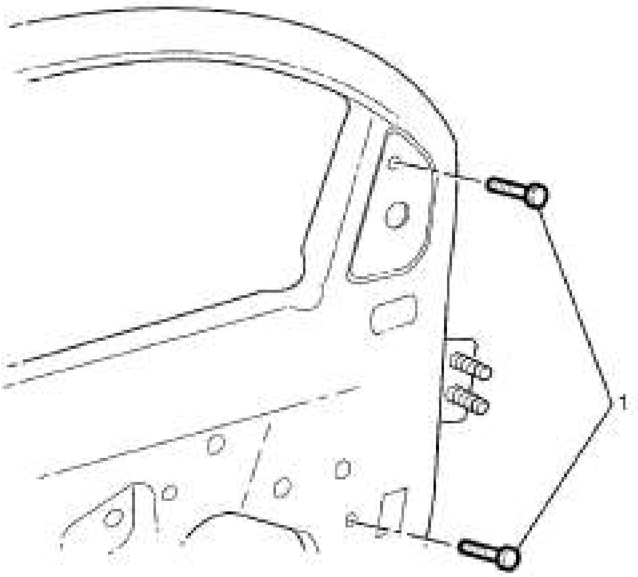
Installation Procedure



Important: Install the window channel through the large access hole and rotate the top of the window channel (1) rearward and align on the lower edge of the window.

1. Install the window channel (1) into the door (2).

   Notice: Refer to Fastener Notice in the Preface section.



2. Install the window channel to door retaining bolts (1).

   Tighten
   Tighten the bolts to 8 N-m (71 lb in).

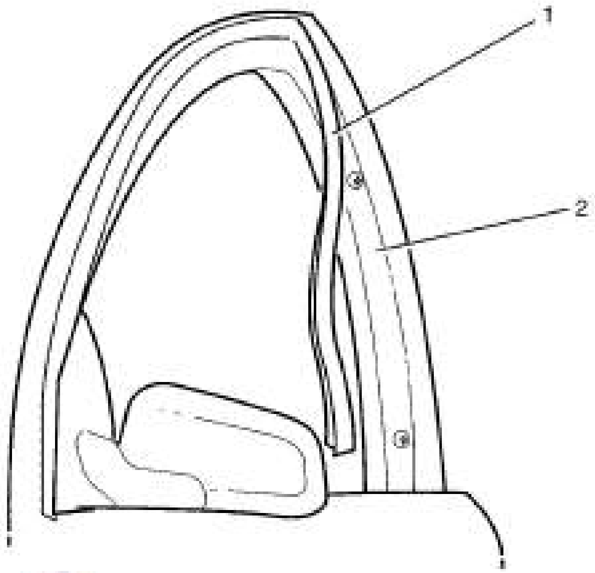
3. Install the window inner sealing strip. Refer to Front Door Opening Weatherstrip Replacement.
4. Install the window inner weatherstrip. Refer to Front Side Door Window Inner Weatherstrip Replacement.
5. Install the window inner belt sealing strip. Refer to Front Side Door Window Belt Inner Sealing Strip Replacement in Doors.
6. Install the window outer belt sealing strip. Refer to Front Side Door Window Belt Inner Sealing Strip Replacement in Doors.
7. Install the outside rear view mirror. Refer to Power Mirror Replacement.
8. Install the water deflector. Refer to Front Side Door Water Deflector Replacement.
9. Install the speaker. Refer to Radio Rear Side Door Speaker Replacement in Entertainment.
10. Install the door trim panel. Refer to Front Side Door Trim Panel Replacement.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Fixed and Moveable Windows | Repair Instructions | **Document ID: 1992283**

Front Side Door Window Inner Sealing Strip Replacement

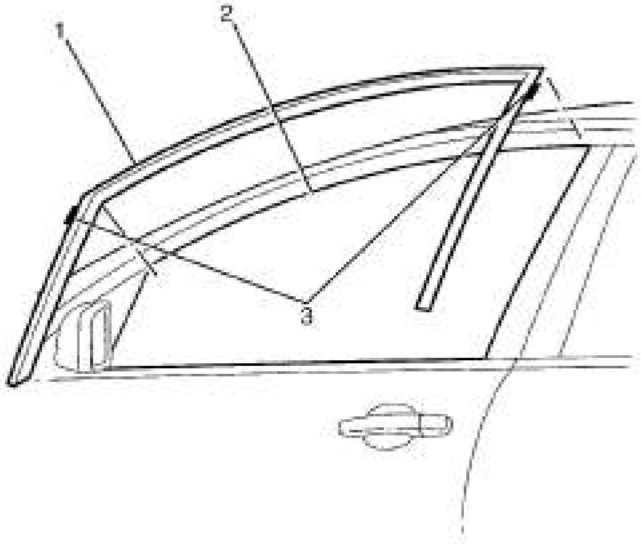
Removal Procedure

1. Remove the door trim panel. Refer to Front Side Door Trim Panel Replacement.
2. Remove the window inner belt sealing strip. Refer to Front Side Door Window Belt Inner Sealing Strip Replacement.
3. Remove the window outer belt sealing strip. Refer to Front Side Door Window Belt Outer Sealing Strip Replacement.
4. Lower the window to full down.



Important: Starting at the rear of the front door use a suitable tool to pry the window inner sealing strip (1) out of the door (2) then pull by hand.

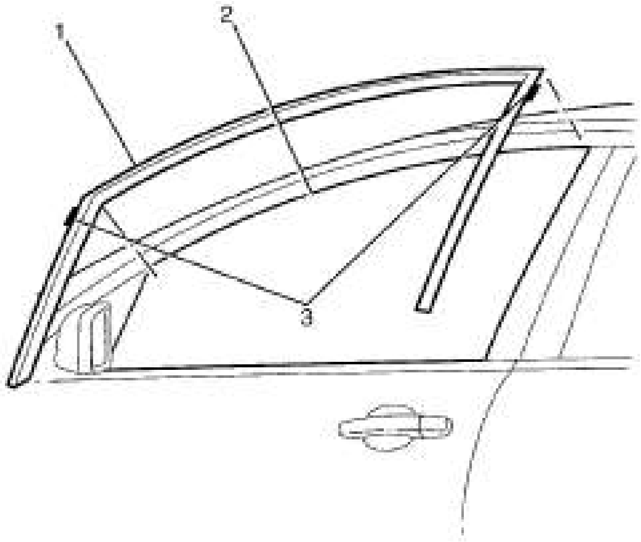
5. Remove the window inner sealing strip (1) from the rear of the front door (2).



Important: Pull remaining window sealing strip (1) from the door (2). Observe the orientation of the locating tabs (3) this will aid in correct re-installation.

6. Remove the window inner sealing strip (1) from the door (2).

Installation Procedure



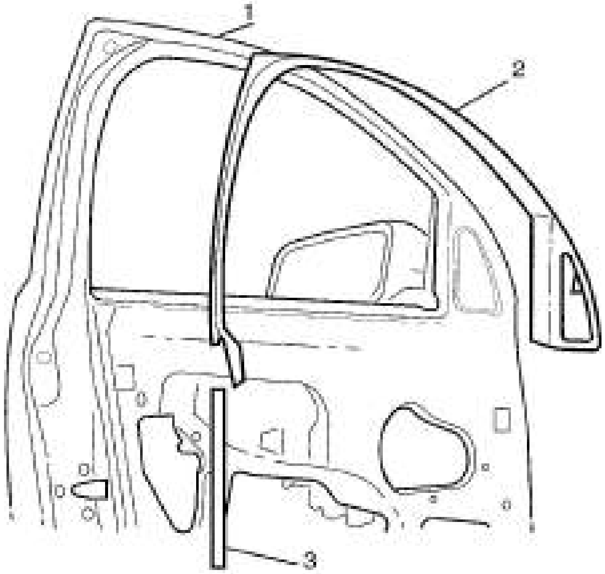
Important: Push the window inner sealing in by hand. The locating tabs (3) are at the top of the window inner sealing strip (1) and must fit into the correct location in the door (2) for correct sealing and operation.

1. Install the window inner sealing strip (1) into the door (2).
2. Install the window outer belt sealing strip. Refer to Front Side Door Window Belt Outer Sealing Strip Replacement.
3. Install the window inner belt sealing strip. Refer to Front Side Door Window Belt Inner Sealing Strip Replacement.
4. Install the door trim panel. Refer to Front Side Door Trim Panel Replacement.

Front Side Door Window Inner Weatherstrip Replacement

Removal Procedure

1. Remove the door trim panel. Refer to Front Side Door Trim Panel Replacement .
2. Remove the window inner belt sealing strip. Refer to Front Side Door Window Belt Inner Sealing Strip Replacement .

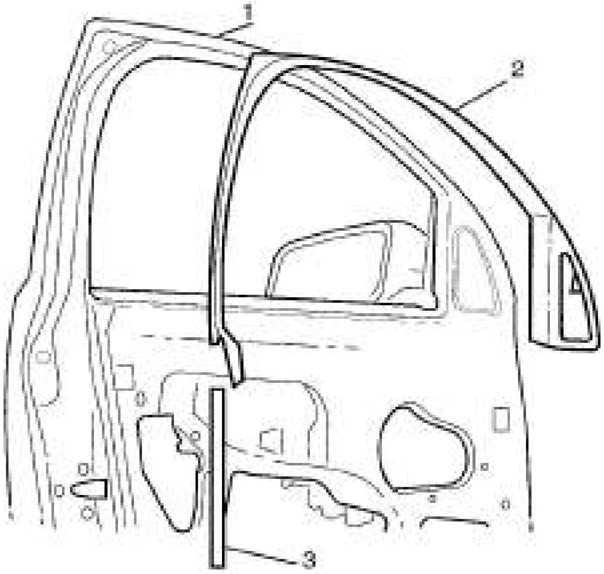


3. Remove the lower part of the inner window weatherstrip (3) from the door (1).

Important: Pull the inner window weatherstrip (2) to detach the retainers.

4. Remove the inner window weatherstrip (2) from the door (1).

Installation Procedure



Important: Locate the weatherstrip (2) at the datum located at the front first. Push the inner window weatherstrip (2) to attach the retainers.

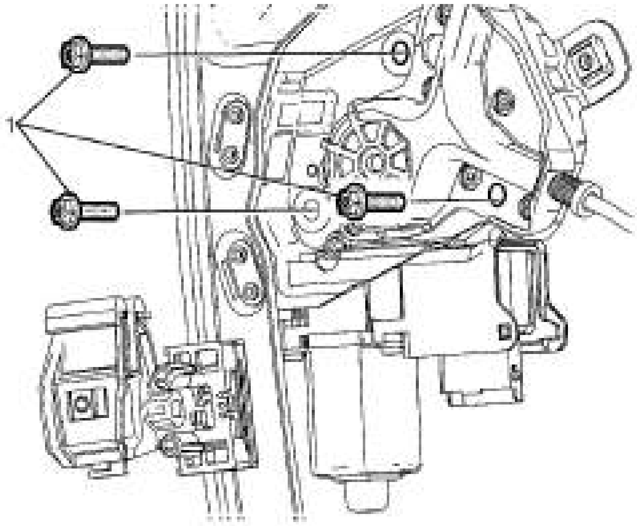
1. Install the inner window weatherstrip (2) to the door (1).
2. Install the lower part of the inner window weatherstrip (3) to the door (1).
3. Install the window inner belt sealing strip. Refer to Front Side Door Window Belt Inner Sealing Strip Replacement .
4. Install the door trim panel. Refer to Front Side Door Trim Panel Replacement .

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Fixed and Moveable Windows | Repair Instructions | Document ID: 1993051

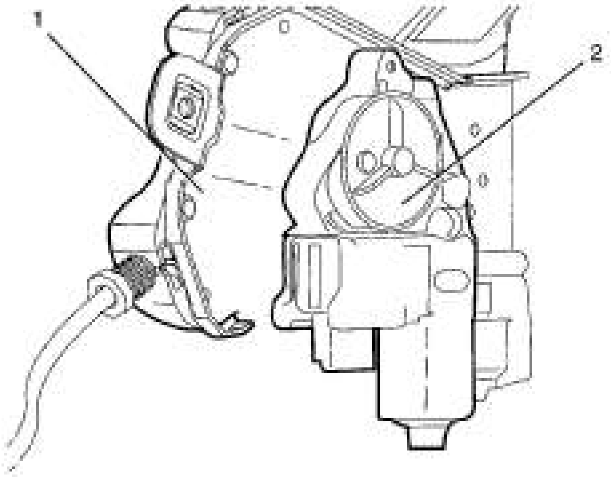
Front Side Door Window Regulator Motor Replacement

Removal Procedure

1. Remove the door trim panel. Refer to Front Side Door Trim Panel Replacement .
2. Remove the speaker. Refer to Radio Front Side Door Lower Speaker Replacement .
3. Remove the water deflector. Refer to Front Side Door Water Deflector Replacement .
4. Remove the window regulator. Refer to Front Side Door Window Regulator Replacement .

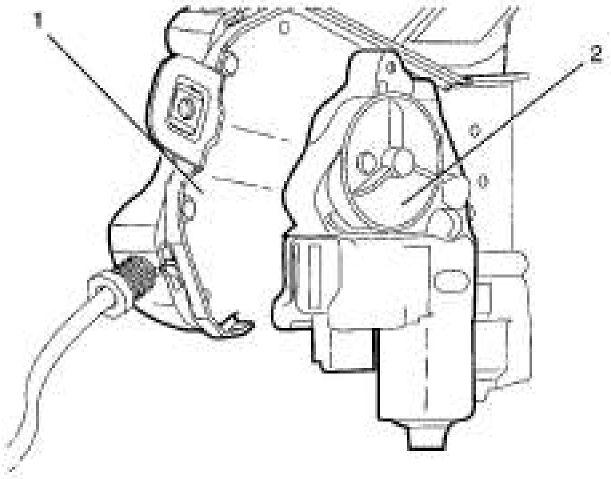


5. Remove the window regulator motor to window regulator retaining bolts (1).



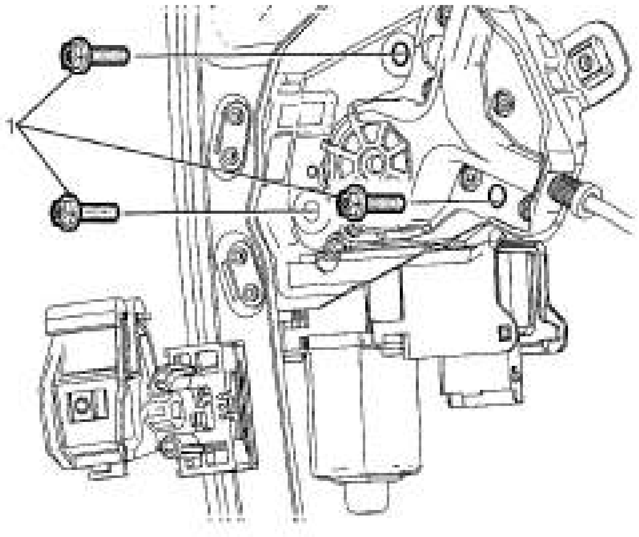
6. Remove the window regulator motor (2) from the window regulator (1).

Installation Procedure



1. Position the window regulator motor (2) to the window regulator (1).

   Notice: Refer to Fastener Notice in the Preface section.



2. Install the window regulator motor to window regulator retaining bolts (1).

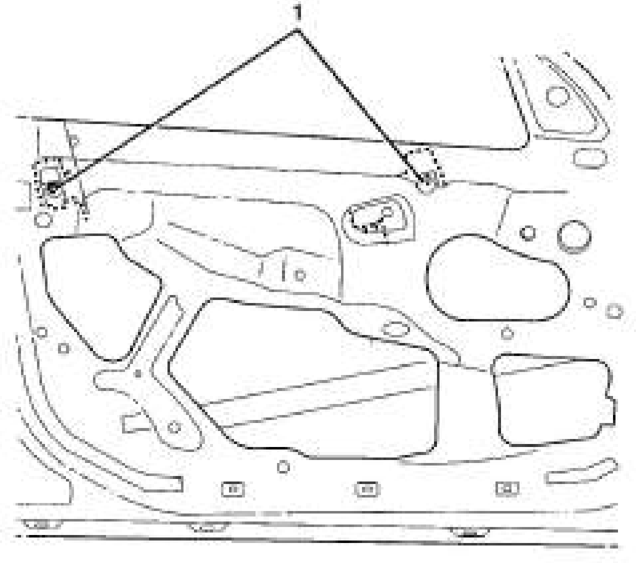
   Tighten
   Tighten the bolts to 8 N-m (71 lb in).

3. Install the window regulator. Refer to Front Side Door Window Regulator Replacement .
4. Install the water deflector. Refer to Front Side Door Water Deflector Replacement .
5. Install the speaker. Refer to Radio Front Side Door Lower Speaker Replacement .
6. Install the door trim panel. Refer to Front Side Door Trim Panel Replacement .

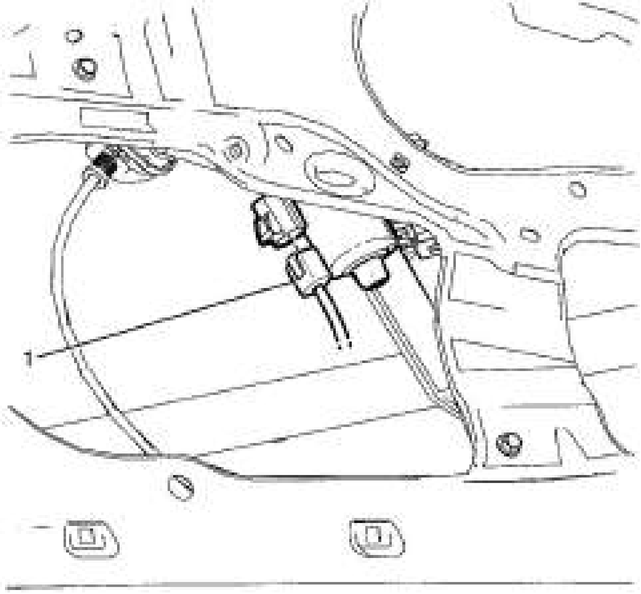
Front Side Door Window Regulator Replacement

Removal Procedure

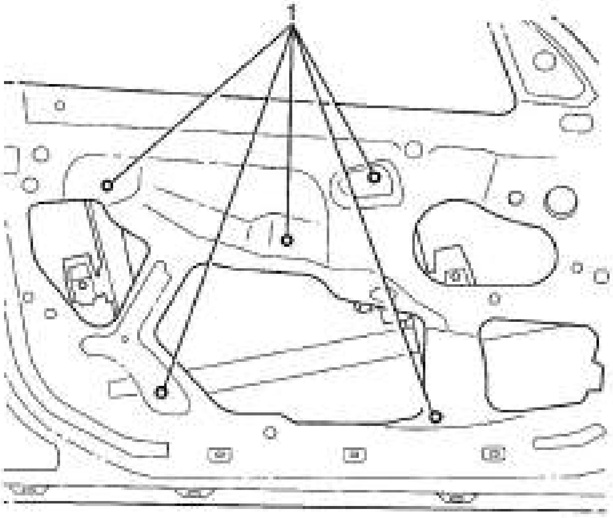
1. Remove the door trim panel. Refer to Front Side Door Trim Panel Replacement .
2. Remove the speaker. Refer to Radio Front Side Door Lower Speaker Replacement .
3. Remove the water deflector. Refer to Front Side Door Water Deflector Replacement .
4. Raise and support the window in the full up position.



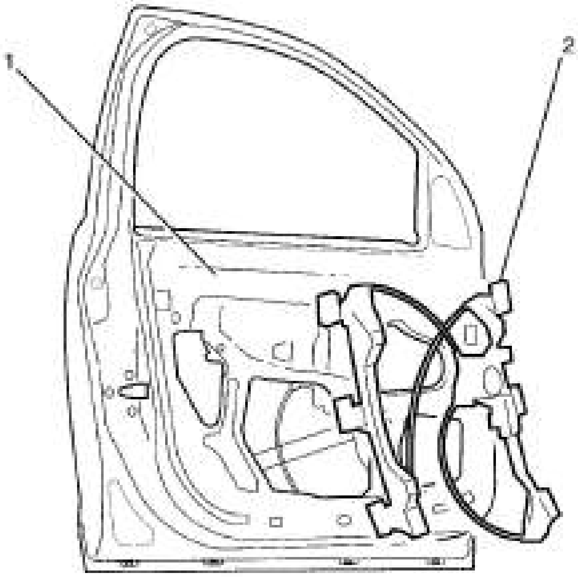
5. Loosen the window regulator to window glass retaining bolts (1).
6. Support the window glass.
7. Lower the window regulator approximately 1/2 way down.



8. Disconnect the window regulator electrical connector (1).

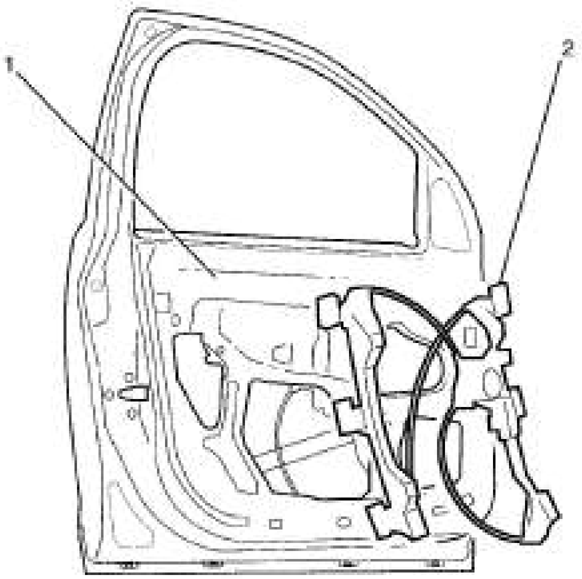


9. Remove the window regulator to door retaining bolts (1).



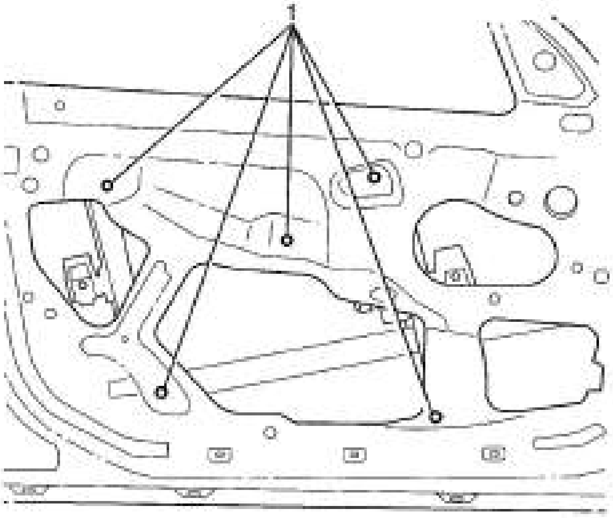
10. Remove the window regulator (2) through the large access hole in the door (1).

Installation Procedure



1. Position the window regulator (2) through the large access hole in the door (1).

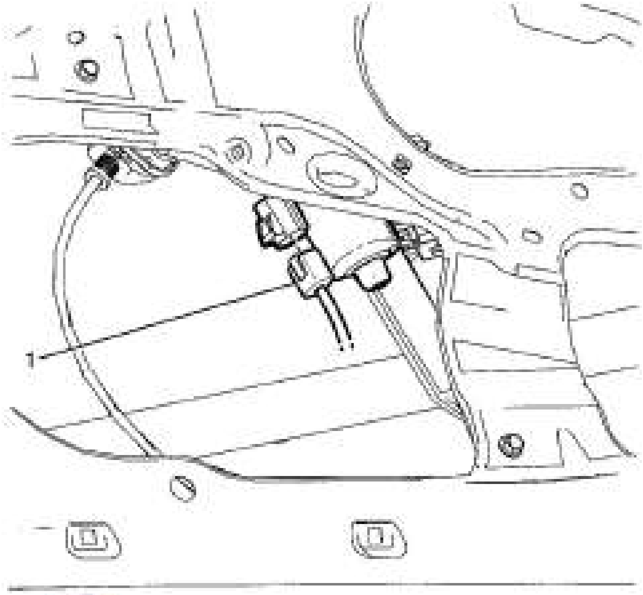
   Notice: Refer to Fastener Notice in the Preface section.



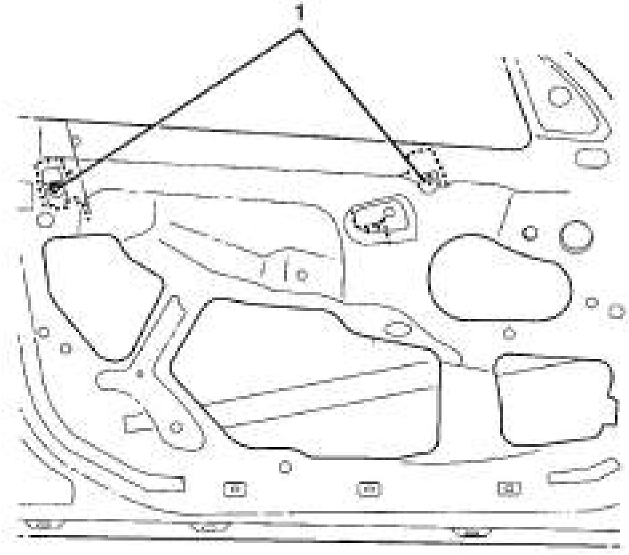
2. Install the window regulator to door retaining bolts (1).

   Tighten
   Tighten the bolts to 10 N-m (89 lb in).

3. Remove the support from the window.
4. Lower the window into the window regulator clamps.



5. Connect the window regulator electrical connector (1).
6. Start the vehicle to make sure maximum power to the window motor. This is required to fully seat the window for adjustment.
7. Raise the window to the full up position.



8. Tighten the window regulator to window glass retaining bolts (1).

   Tighten
   Tighten the bolts to 8 N-m (71 lb in).

9. Inspect the window for correct operation and a tight seal.
10. Shut off the vehicle.
11. Install the water deflector. Refer to Front Side Door Water Deflector Replacement .
12. Install the speaker. Refer to Radio Front Side Door Lower Speaker Replacement .

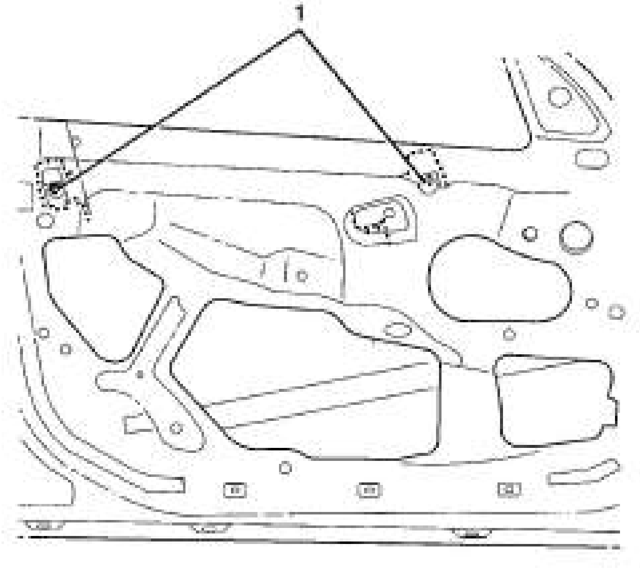
13. Install the door trim panel. Refer to Front Side Door Trim Panel Replacement .

Front Side Door Window Replacement

Removal Procedure

Caution: Refer to Glass and Sheet Metal Handling Caution in the Preface section.

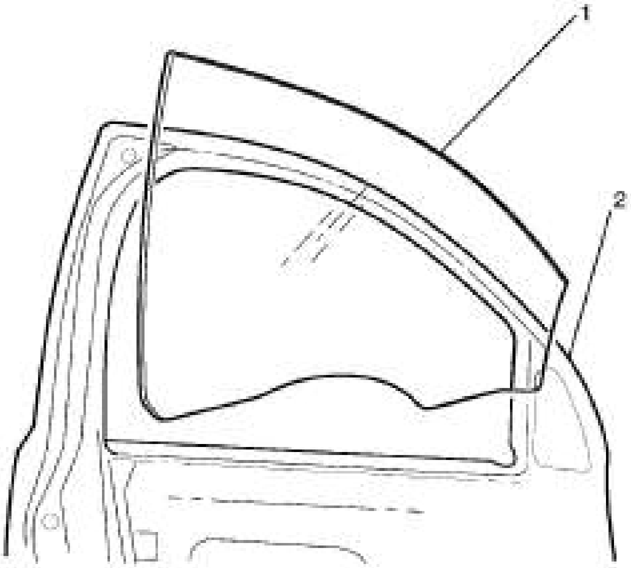
1. Remove the door trim panel. Refer to Front Side Door Trim Panel Replacement .
2. Remove the speaker. Refer to Radio Front Side Door Lower Speaker Replacement .
3. Remove the water deflector. Refer to Front Side Door Water Deflector Replacement .
4. Remove the window inner belt sealing strip. Refer to Front Side Door Window Belt Inner Sealing Strip Replacement
5. Remove the outside rearview mirror. Refer to Power Mirror Replacement .
6. Remove the window outer belt sealing strip. Refer to Front Side Door Window Belt Outer Sealing Strip Replacement .
7. Remove the window inner weatherstrip. Refer to Front Side Door Window Inner Weatherstrip Replacement .
8. Remove the window inner sealing strip. Refer to Front Door Opening Weatherstrip Replacement .
9. Raise and support the window in the full up position.



10. Loosen the window regulator to window retaining bolts (1).
11. Lower the window regulator to separate the window from the clamps.

Important: With the aid of an assistant hold the window while the support is removed.

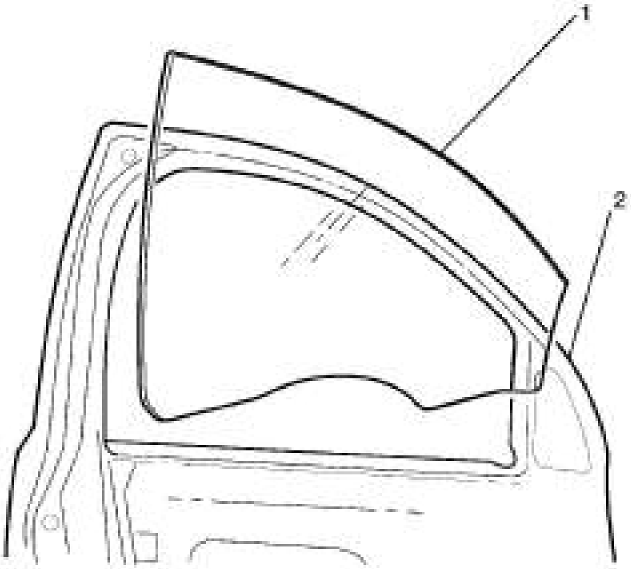
12. Remove the support from the window.



Important: Remove the window (1) with the aid of an assistant.

13. Remove the window (1) by tilting it forward then pulling it up and out of the door (2).

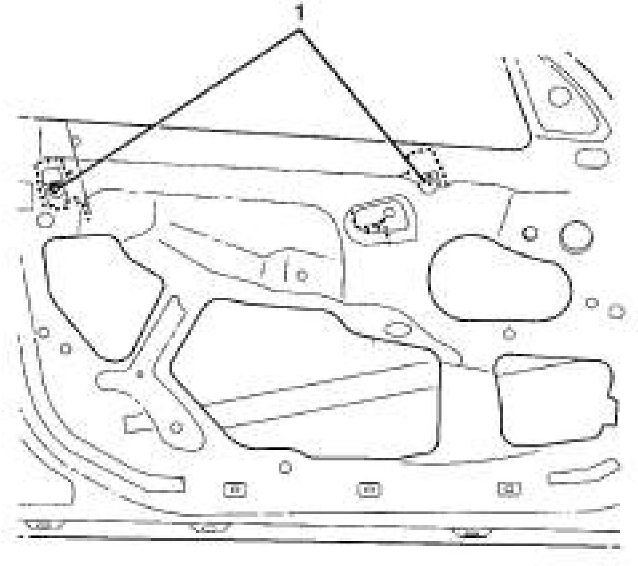
Installation Procedure



Important: Install the window (1) with the aid of an assistant.

Important: The window regulator should be approximately 1/2 way down before installing the window (1).

1. Install the window (1) down into the door (2).



2. Lower the window into the window regulator clamps (1).
3. Lower the window.
4. Install the window inner sealing strip. Refer to Front Door Opening Weatherstrip Replacement .
5. Start the vehicle to make sure maximum power to the window motor. This is required in order to fully seat the window for adjustment.
6. Raise the window to the fully closed position.

Notice: Refer to Fastener Notice in the Preface section.

7. Raise the window to the fully closed position.

Tighten
Tighten the nuts to 8 N-m (71 lb in).

8. Install the window inner weatherstrip. Refer to Front Side Door Window Inner Weatherstrip Replacement .
9. Install the outside rearview mirror. Refer to Power Mirror Replacement .
10. Install the window outer belt sealing strip.Refer to Front Side Door Window Belt Outer Sealing Strip Replacement .
11. Install the window inner belt sealing strip. Refer to Front Side Door Window Belt Inner Sealing Strip Replacement .
12. Inspect for correct window operation and a tight seal.
13. Shut off the vehicle.
14. Install the water deflector. Refer to Front Side Door Water Deflector Replacement .
15. Install the speaker. Refer to Radio Front Side Door Lower Speaker Replacement .
16. Install the door trim panel. Refer to Front Side Door Trim Panel Replacement .

Liftgate Window Replacement

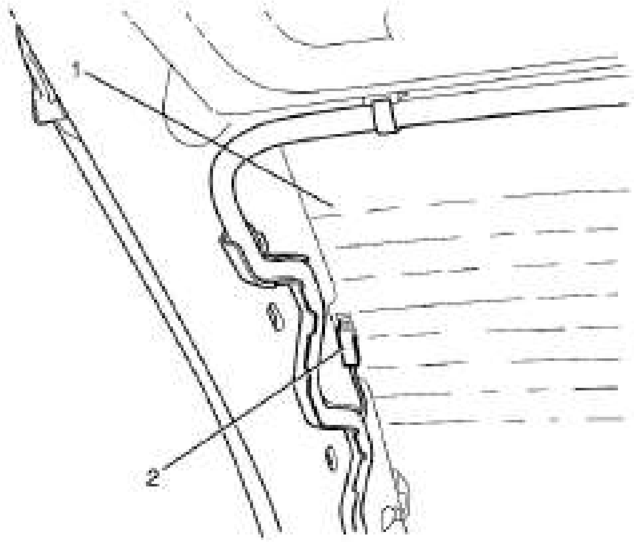
Tools Required

- J-36020 Stationary Glass Removal Tool
- J 24402-A Glass Sealant Remover (Cold Knife)
- J 24811 Urethane Adhesive Dispensing Gun
- Urethane Adhesive Kit or Equivalent
- Isopropyl Alcohol, Prepsol or Equivalent
- Commercial-type Utility Knife
- Razor Blade Scraper
- Suction Cups

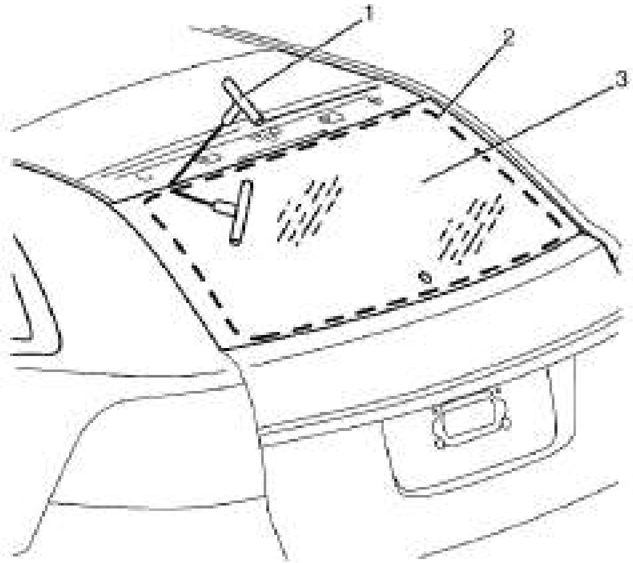
Removal Procedure

> **Important:** When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Install a suitable liftgate brace to the vehicle.
2. Remove the liftgate window side garnish moulding. Refer to Liftgate Window Side Garnish Molding Replacement.
3. Remove the liftgate window lower garnish moulding. Refer to Liftgate Window Lower Garnish Molding Replacement.
4. Remove the liftgate trim panel. Refer to Liftgate Trim Panel Replacement.
5. Remove the rear window wiper arm. Refer to Rear Window Wiper Arm Replacement.
6. Remove the rear window wiper motor. Refer to Rear Window Wiper Motor Replacement.
7. Remove the liftgate window upper garnish moulding. Refer to Liftgate Window Upper Garnish Molding Replacement.
8. Remove the liftgate upper moulding. Refer to Liftgate Upper Molding Replacement.



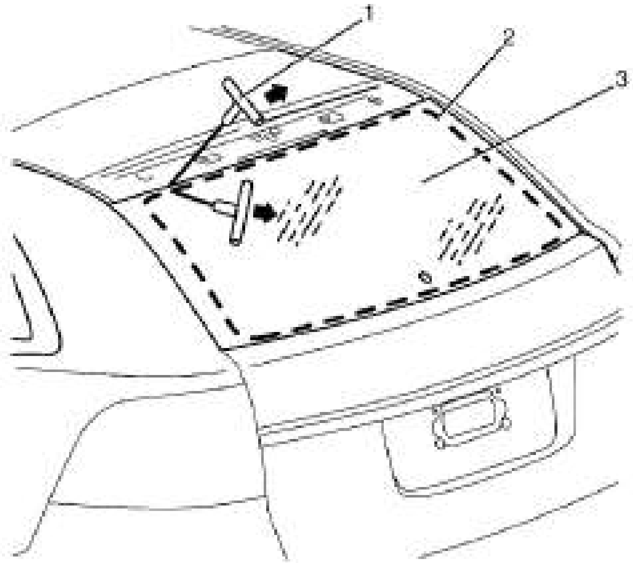
9. Disconnect the liftgate window electrical connectors (2) from the liftgate window (1).
10. Remove the suitable liftgate brace from the vehicle.
11. Close the liftgate.



Important: Before cutting out the stationary window, apply a double layer of masking tape around the perimeter of the painted surfaces and the interior trim.

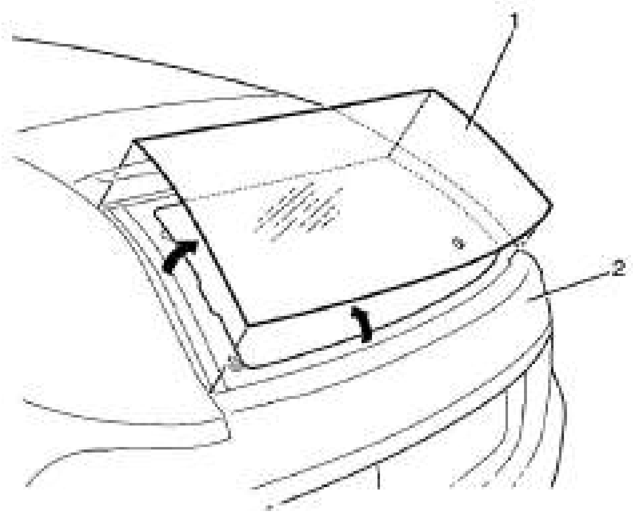
Important: Use a suitable tool to install the piano wire from J-36020 (1) through the urethane bead (2) at the upper corner of the liftgate window (3).

12. Install J-36020 (1) to the vehicle.
13. Connect the end of the piano wire to the other handle of J-36020 (1).



Important: Keep the inside handle of J-36020 (1) against the liftgate window (2) and cycle the full length of the piano wire to prevent heat build up.

14. With the aid of an assistant use tool J-36020 (1) to cut through the urethane bead (2) around the liftgate window (3) to the vehicle.



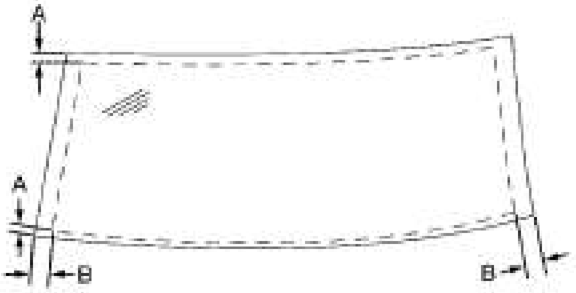
Important: The use of suction cups will aid in the liftgate window (1) removal.

15. With the aid of an assistant remove the liftgate window (1) from the vehicle (2).

Installation Procedure

Important: Use a lint free cloth and suitable oil free cleaning agent to make sure adhesion of the urethane.

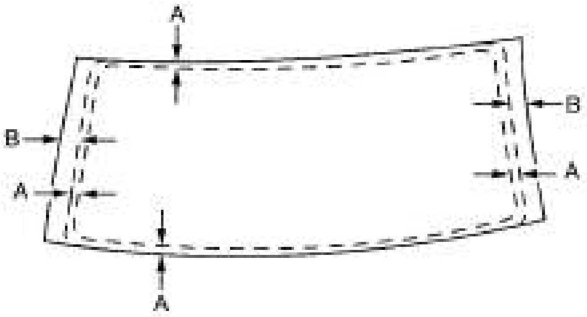
1. Clean surface and edges of liftgate window where urethane is to be applied.



Important: The clear glass primer dries almost instantly and may stain the viewing area of the liftgate window if not applied evenly. Wipe off the clear glass primer with a lint free cloth immediately after application.

Important: Apply the clear glass primer with a suitable applicator.

2. Apply clear glass primer to the inner surfaces of the liftgate window perimeter. Apply the clear glass primer as shown in the diagram where dimension A = 50mm and dimension B = 100mm.

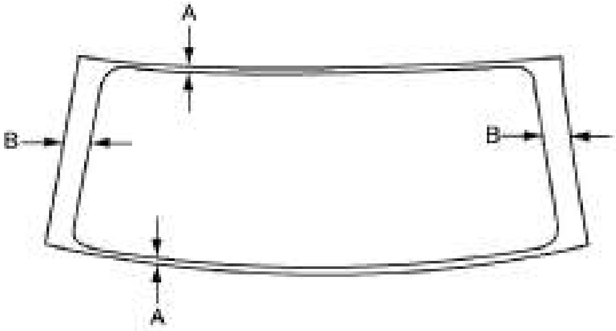


Important: Agitate the black glass primer for 1 minute to mix thoroughly.

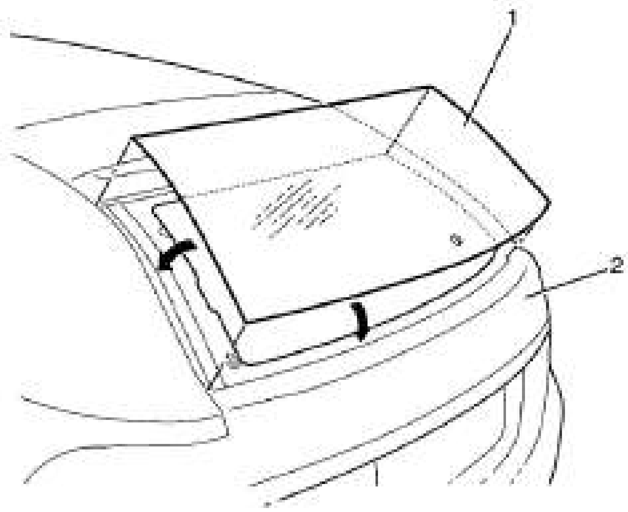
Important: Apply a 25mm wide layer of black glass primer with the applicator to the liftgate window (1) perimeter.

3. Apply the black glass primer to the liftgate window (1). Apply the clear glass primer as shown in the diagram where dimension A = 25mm and dimension B = 47mm.

Caution: Refer to Window Retention Caution in the Preface section.



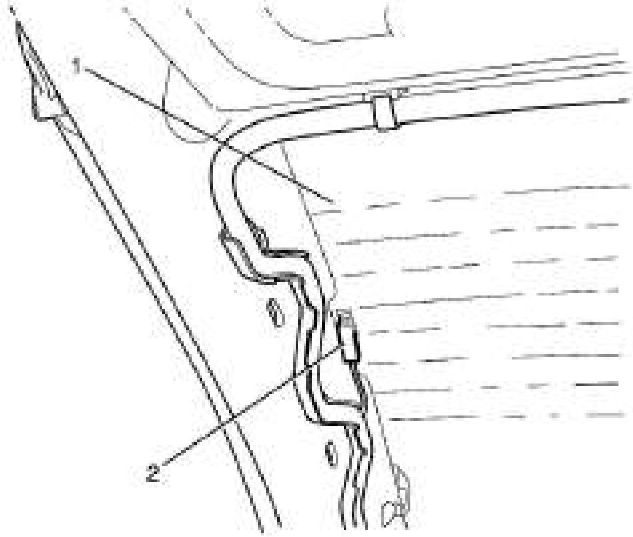
4. Apply a 7mm wide and 14mm deep continuous layer of urethane GMW3041 or equivalent to the inside perimeter of the liftgate window (1). Apply the urethane as shown in the diagram where dimension A = 12.5mm and dimension B = 59mm.



Important: The liftgate window (1) is aligned by two datum pins located on the outer upper edges of the liftgate window and two 8mm thick foam spacers located on the outer lower edges of the liftgate window (1).

Important: During the curing period of the urethane adhesive, the door windows should be left open to avoid a build up of pressure when the doors are opened and closed.

5. With the aid of an assistant install the liftgate window (1) to the vehicle (2).
6. Press the liftgate window (1) firmly into position.
7. Open the liftgate
8. Install a suitable liftgate brace to the vehicle.



9. Connect the liftgate window electrical connectors (2) to the liftgate window (1).
10. Remove the double layer of masking tape from around the perimeter of the painted surfaces and the interior trim.
11. Install the liftgate upper moulding. Refer to Liftgate Upper Molding Replacement.
12. Install the liftgate window upper garnish moulding. Refer to Liftgate Window Upper Garnish Molding Replacement.
13. Install the rear window wiper motor. Refer to Rear Window Wiper Motor Replacement.
14. Install the rear window wiper arm. Refer to Rear Window Wiper Arm Replacement.
15. Install the liftgate trim panel. Refer to Liftgate Trim Panel Replacement.
16. Install the liftgate window lower garnish moulding. Refer to Liftgate Window Lower Garnish Molding Replacement.
17. Install the liftgate window side garnish moulding. Refer to Liftgate Window Side Garnish Molding Replacement.

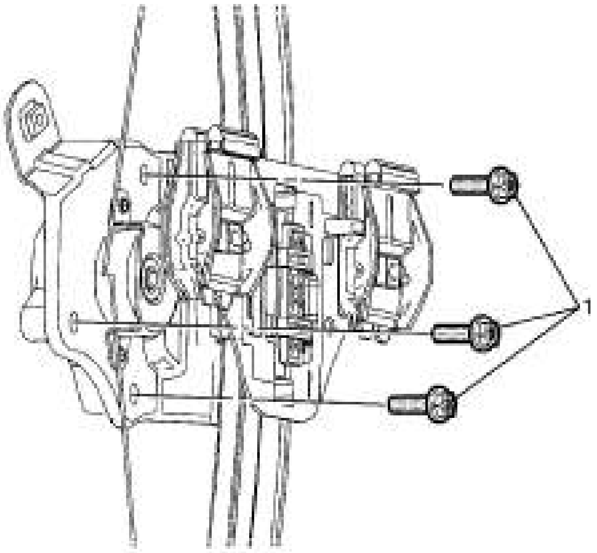
Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

18. Remove the suitable liftgate brace from the vehicle.

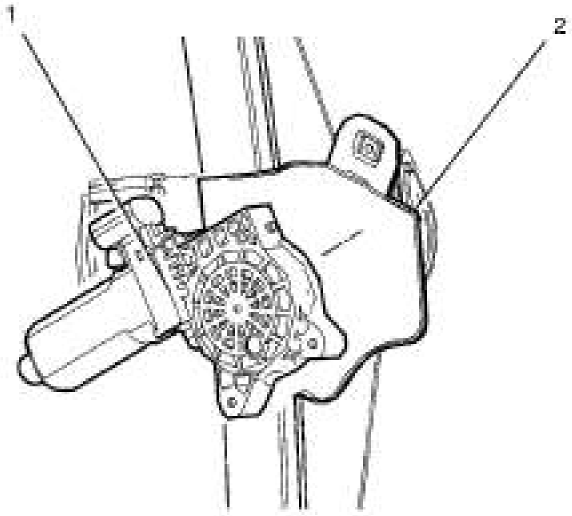
Rear Side Door Window Regulator Motor Replacement

Removal Procedure

1. Remove the door trim panel. Refer to Rear Side Door Trim Panel Replacement.
2. Remove the speaker. Refer to Radio Rear Side Door Speaker Replacement in Entertainment.
3. Remove the water deflector. Refer to Rear Side Door Water Deflector Replacement.
4. Remove the window regulator. Refer to Rear Side Door Window Regulator Replacement.

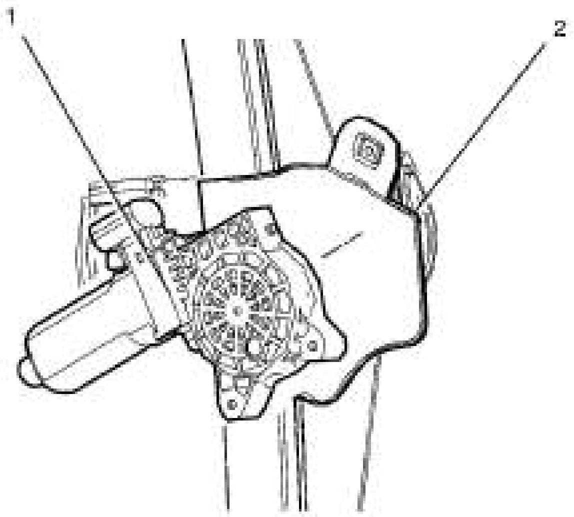


5. Remove the window regulator motor to window regulator retaining bolts (1).



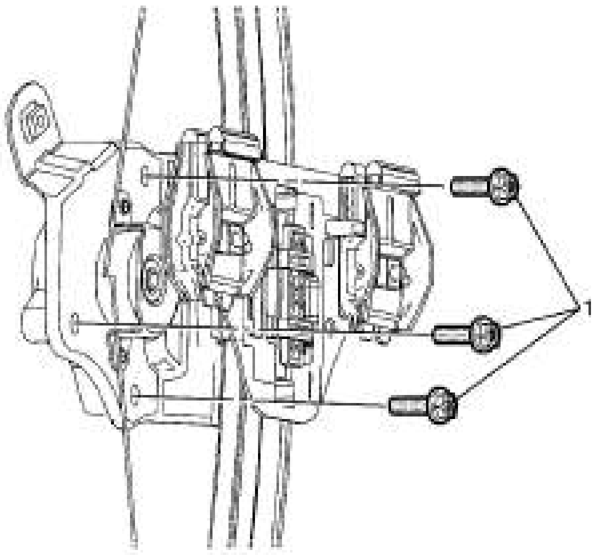
6. Remove the window regulator motor (1) from the window regulator (2).

Installation Procedure



1. Position the window regulator motor (1) to the window regulator (2).

   Notice: Refer to Fastener Notice in the Preface section.



2. Install the window regulator motor to window regulator retaining bolts (1).

   Tighten
   Tighten the bolts to 8 N-m (71 lb in).

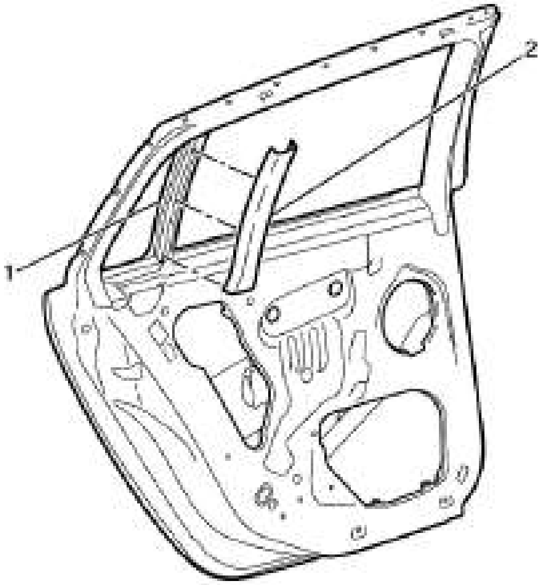
3. Install the window regulator. Refer to Rear Side Door Window Regulator Replacement.
4. Install the water deflector. Refer to Rear Side Door Water Deflector Replacement.
5. Install the speaker. Refer to Radio Rear Side Door Speaker Replacement in Entertainment.
6. Install the door trim panel. Refer to Rear Side Door Trim Panel Replacement.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Fixed and Moveable Windows | Repair Instructions | Document ID: 2146786

Rear Side Door Stationary Window Channel Replacement (Sportwagon)

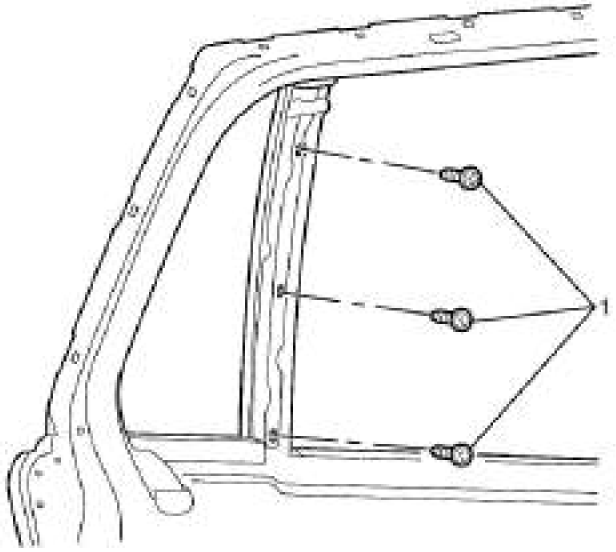
Removal Procedure

1. Remove the rear side door trim panel. Refer to Rear Side Door Trim Panel Replacement.
2. Remove the rear side door window inner belt sealing strip. Refer to Rear Side Door Window Inner Sealing Strip Replacement.
3. Remove the rear side door window outer sealing strip. Refer to Rear Side Door Window Outer Sealing Strip Replacement.
4. Remove the rear side door window regulator. Refer to Rear Side Door Window Regulator Replacement.
5. Remove the rear side door window from the rails.
6. Lower the rear side door window to the full down position.

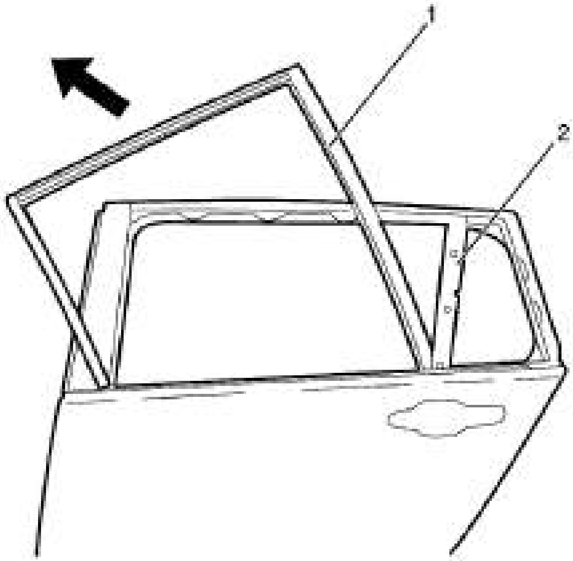


Important: Remove the rear side door stationary window channel trim panel (2) to retaining clips.

7. Remove the rear side door stationary window channel trim panel (2) from the rear side door (1).

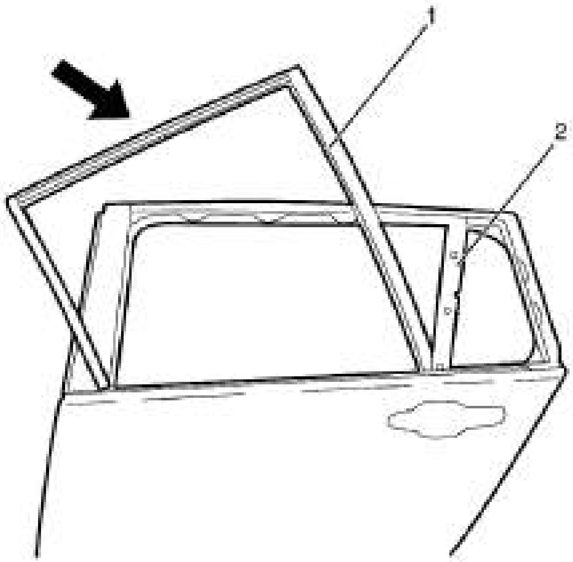


8. Remove the rear side door frame to rear side door stationary window channel retaining screws (1).



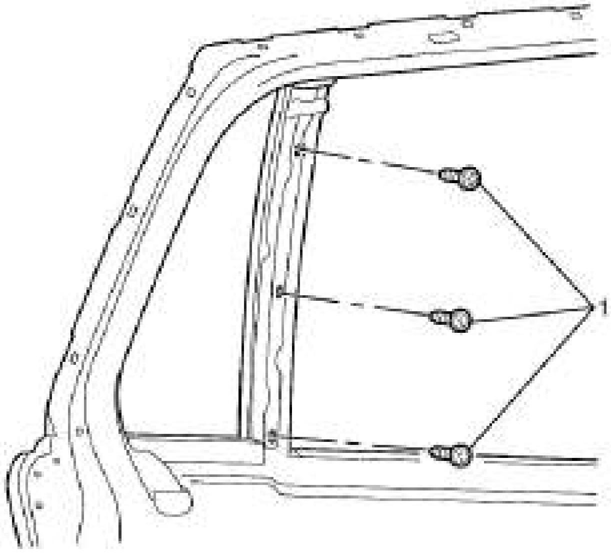
9. Remove the rear side door stationary window channel (1) from the rear side door (2).

Installation Procedure



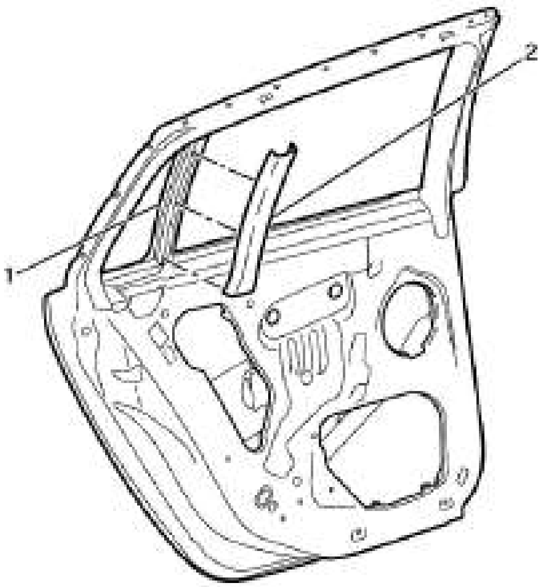
1. Install the rear side door stationary window channel (1) to the rear side door (2).

   Notice: Refer to Fastener Notice in the Preface section.



2. Install the rear side door frame to rear side door stationary window channel retaining screws (1).

   Tighten
   Tighten the screws to 3 N·m (27 lb in).



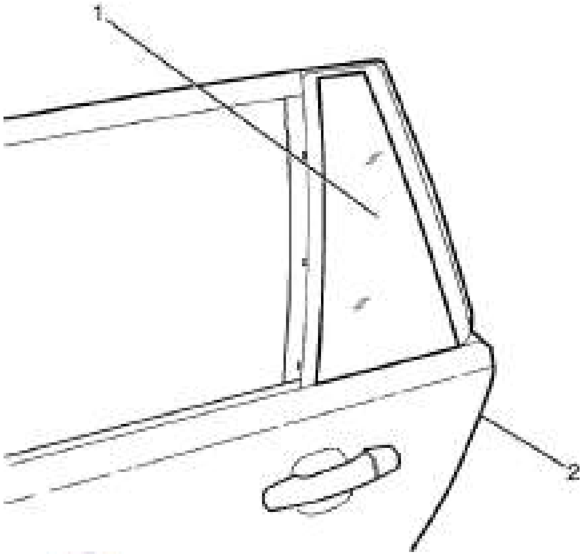
Important: Push the rear side door stationary window channel trim panel (1) to attach the retaining clips.

3. Install the rear side door stationary window channel trim panel (2) to the rear side door (1).
4. Install the rear side door window to the rails.
5. Install the rear side door window regulator. Refer to Rear Side Door Window Regulator Replacement.
6. Install the rear side door window outer sealing strip. Refer to Rear Side Door Window Outer Sealing Strip Replacement.
7. Install the rear side door window inner belt sealing strip. Refer to Rear Side Door Window Inner Sealing Strip Replacement.
8. Install the rear side door trim panel. Refer to Rear Side Door Trim Panel Replacement.

Rear Side Door Stationary Window Replacement (Sportwagon)

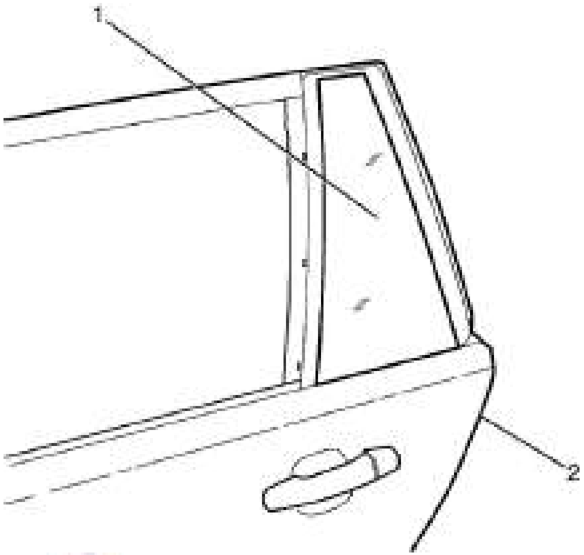
Removal Procedure

1. Remove the rear side door trim panel. Refer to Rear Side Door Trim Panel Replacement.
2. Remove the rear side door window inner belt sealing strip. Refer to Rear Side Door Window Inner Sealing Strip Replacement.
3. Remove the rear side door window outer sealing strip. Refer to Rear Side Door Window Outer Sealing Strip Replacement.
4. Remove the rear side door window regulator. Refer to Rear Side Door Window Regulator Replacement.
5. Remove the rear side door window from the rails.
6. Lower the rear side door window to the full down position.
7. Remove the rear side door stationary window channel. Refer to Rear Side Door Stationary Window Channel Replacement.



8. Remove the rear side door stationary window (1) from the rear side door (2).

Installation Procedure



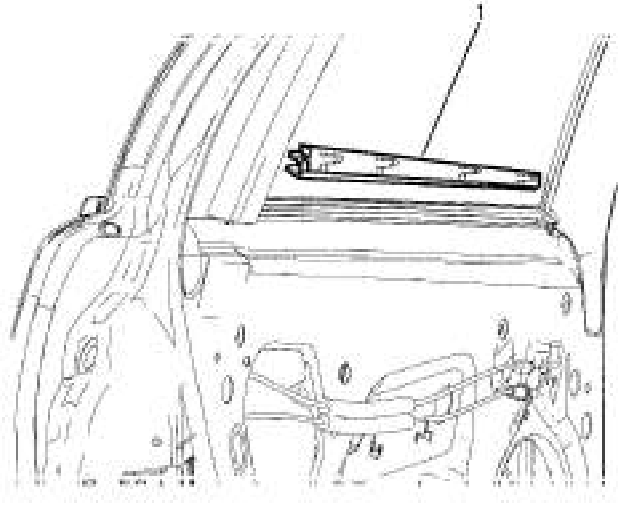
1. Install the rear side door stationary window (1) to the rear side door (2).
2. Install the rear side door stationary window channel. Refer to Rear Side Door Stationary Window Channel Replacement.
3. Install the rear side door window to the rails.
4. Install the rear side door window regulator. Refer to Rear Side Door Window Regulator Replacement.
5. Install the rear side door window outer sealing strip. Refer to Rear Side Door Window Outer Sealing Strip Replacement.
6. Install the rear side door window inner belt sealing strip. Refer to Rear Side Door Window Inner Sealing Strip Replacement.
7. Install the rear side door trim panel. Refer to Rear Side Door Trim Panel Replacement.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Fixed and Moveable Windows | Repair Instructions | Document ID: 1984475

Rear Side Door Window Inner Sealing Strip Replacement (Beltline)

Removal Procedure

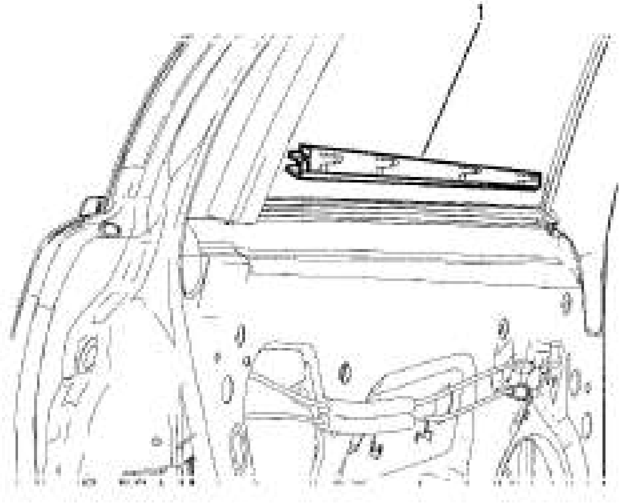
1. Lower the window to the full down position.
2. Remove the door trim panel. Refer to Rear Side Door Trim Panel Replacement.



Important: Pull upward to release the window inner belt sealing strip (1).

3. Remove the window inner belt sealing strip (1).

Installation Procedure



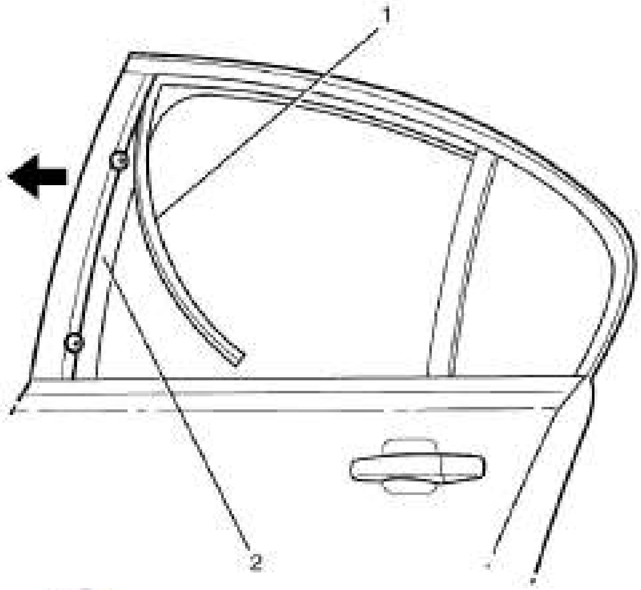
Important: Push downward to attach the window inner belt sealing strip (1).

1. Install the window inner belt sealing strip (1).
2. Install the door trim panel. Refer to Rear Side Door Trim Panel Replacement.

Rear Side Door Window Inner Sealing Strip Replacement (Window - Sedan)

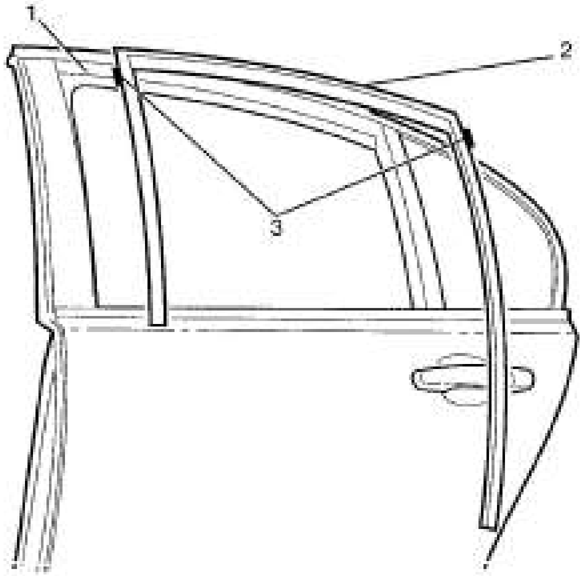
Removal Procedure

1. Remove the door trim panel. Refer to Rear Side Door Trim Panel Replacement.
2. Remove the window inner belt sealing strip. Refer to Rear Side Door Window Inner Sealing Strip Replacement.
3. Remove the window outer belt sealing strip. Refer to Rear Side Door Window Outer Sealing Strip Replacement.



Important: Use a suitable tool to pry the window inner sealing strip (1) out of the door (2) then pull by hand.

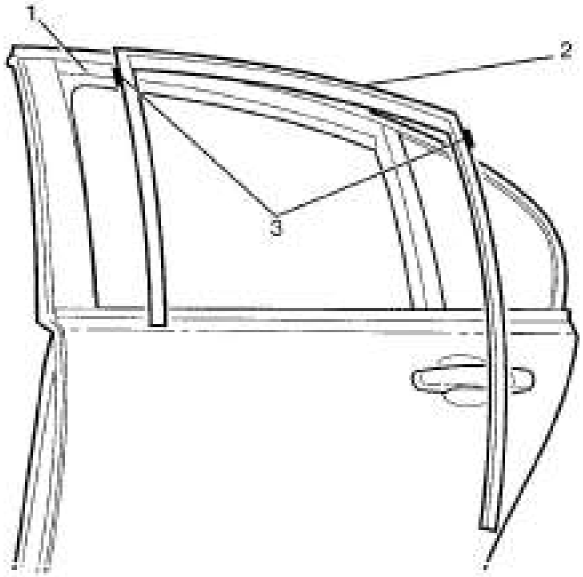
4. Remove the window inner sealing strip (1) from the front of the rear door (2).



Important: Pull remaining window sealing strip (1) from the door (2). Observe the orientation of the locating tabs (3) this will aid in correct re-installation.

5. Remove the window inner sealing (2) from the door (1).

Installation Procedure



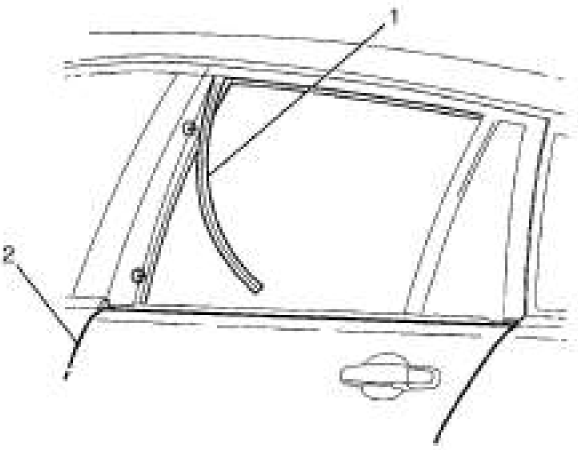
Important: Push the window inner sealing in by hand. The locating tabs (3) are at the top of the window inner sealing strip (2) and must fit into the correct location in the door (1) for correct sealing and operation..

1. Install the window inner sealing strip (2) to the door (1).
2. Install the window outer belt sealing strip. Refer to Rear Side Door Window Outer Sealing Strip Replacement.
3. Install the window inner belt sealing strip. Refer to Rear Side Door Window Inner Weatherstrip Replacement.
4. Install the door trim panel. Refer to Rear Side Door Trim Panel Replacement.

Rear Side Door Window Inner Sealing Strip Replacement (Window - Sportwagon)

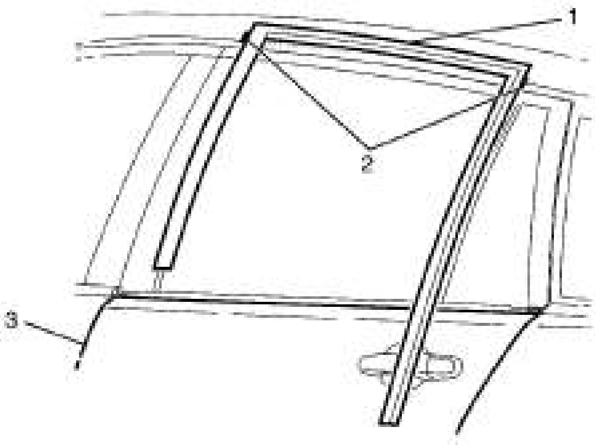
Removal Procedure

1. Remove the rear side door trim panel. Refer to Rear Side Door Trim Panel Replacement.
2. Remove the rear side door window inner belt sealing strip. Refer to Rear Side Door Window Inner Sealing Strip Replacement.
3. Remove the rear side door window outer belt sealing strip. Refer to Rear Side Door Window Outer Sealing Strip Replacement.



Important: Use a suitable tool to pry the rear side door window inner sealing strip (1) out of the rear side door (2) then pull by hand.

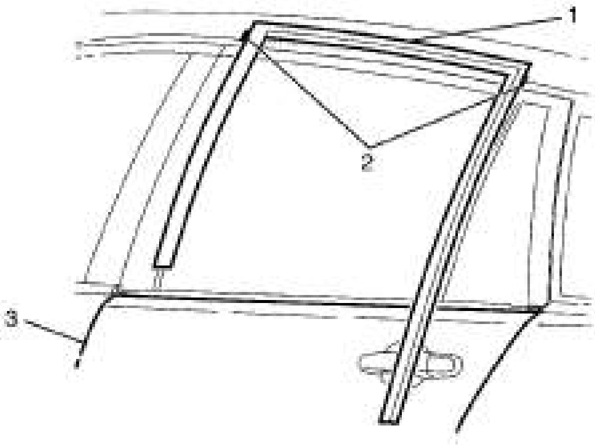
4. Remove the rear side door window inner sealing strip (1) from the rear side door (2) starting from the front.



Important: Pull remaining rear side door window inner sealing strip (1) from the rear side door (3). Observe the orientation of the locating tabs (2) as this will aid in correct installation

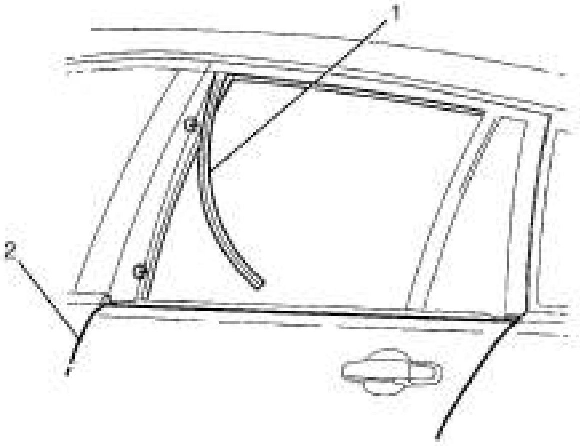
5. Remove the rear side door window inner sealing (1) from the rear side door (3).

Installation Procedure



Important: Push in the rear side door window inner sealing by hand. The locating tabs (2) are at the top of the rear side door window inner sealing strip (1) and must fit into the correct location in the rear side door (3) for correct sealing and operation.

1. Position the rear side door window inner sealing strip (1) to the rear side door (3).



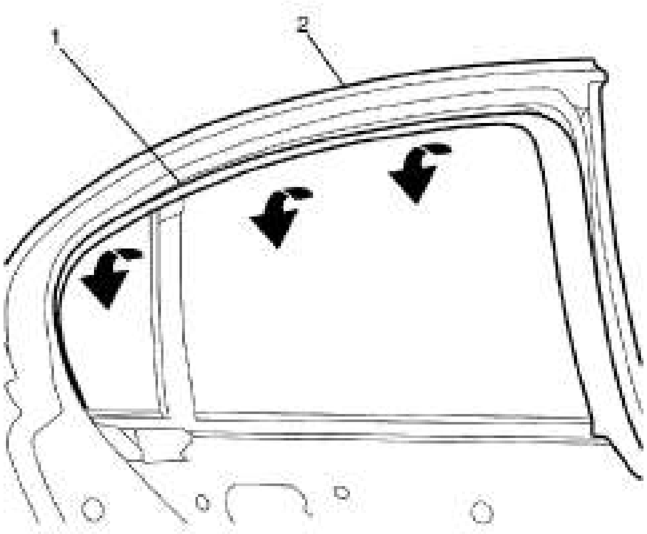
2. Install the rear side door window inner sealing strip (1) to the rear side door (2).
3. Install the rear side door window outer belt sealing strip. Refer to Rear Side Door Window Outer Sealing Strip Replacement.
4. Install the rear side door window inner belt sealing strip. Refer to Rear Side Door Window Inner Sealing Strip Replacement.
5. Install the rear side door trim panel. Refer to Rear Side Door Trim Panel Replacement.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Fixed and Moveable Windows | Repair Instructions | Document ID: 2090814

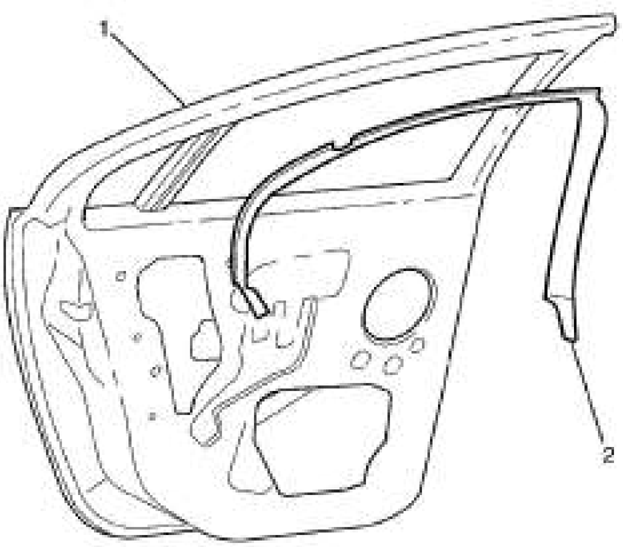
Rear Side Door Window Inner Weatherstrip Replacement (Sedan)

Removal Procedure

1. Remove the door trim panel. Refer to Rear Side Door Trim Panel Replacement.
2. Remove the window inner belt sealing strip. Refer to Rear Side Door Window Inner Sealing Strip Replacement.
3. Remove the rear door stationary window. Refer to Rear Side Door Window Frame Rear Applique Replacement.
4. Lower the rear window.



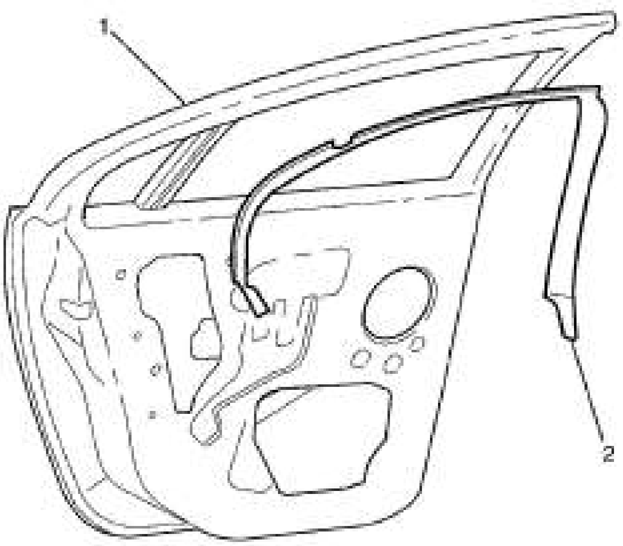
5. Push the top of the window inner weatherstrip (1) outwards to disengage from the door frame (2).



Important: Pull the window inner weatherstrip (2) inwards to remove from the door (1).

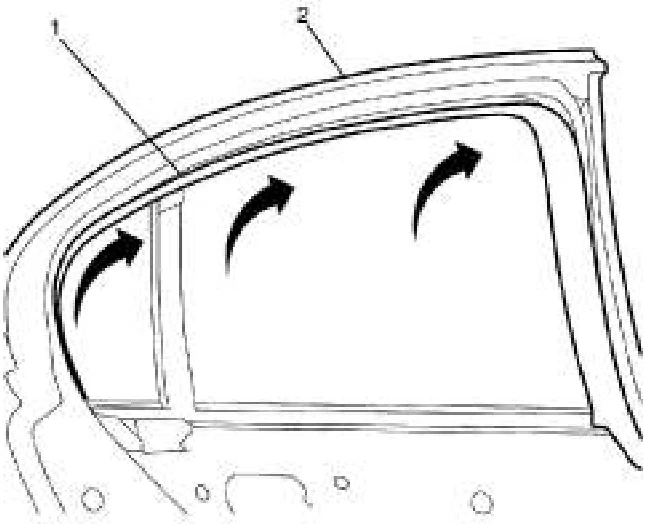
6. Remove the window inner weatherstrip (2) from the door (1).

Installation Procedure



Important: Push the top of the window inner weatherstrip (2) through the door frame (1).

1. Install the window inner weatherstrip (2) to the door (1).



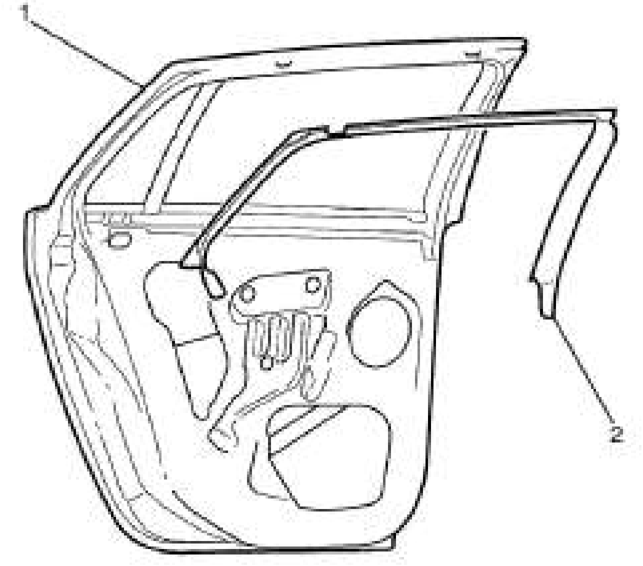
2. Pull the top of the window inner weatherstrip (1) inwards to engage to the door frame (2).
3. Install the rear door stationary window.Refer to Rear Side Door Window Frame Rear Applique Replacement.
4. Install the window inner belt sealing strip. Refer to Rear Side Door Window Inner Sealing Strip Replacement.
5. Install the door trim panel. Refer to Rear Side Door Trim Panel Replacement.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Fixed and Moveable Windows | Repair Instructions | **Document ID: 2090817**

Rear Side Door Window Inner Weatherstrip Replacement (Sportwagon)

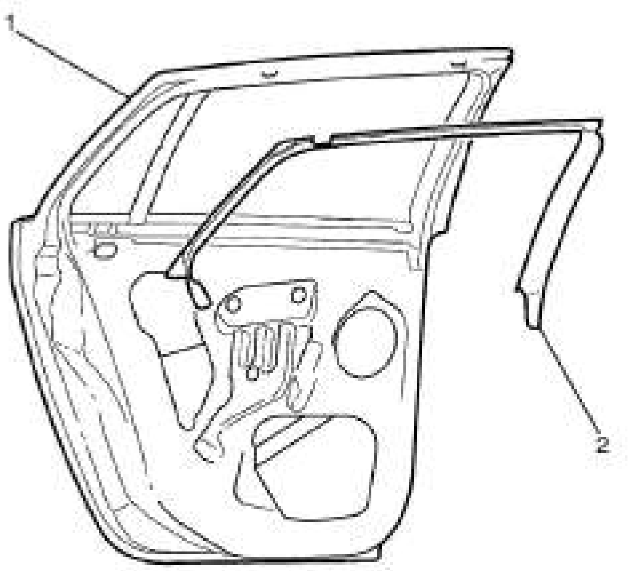
Removal Procedure

1. Remove the rear side door trim panel. Refer to Rear Side Door Trim Panel Replacement.
2. Remove the rear side door window inner belt sealing strip. Refer to Rear Side Door Window Inner Sealing Strip Replacement.
3. Remove the rear side door window outer sealing strip. Refer to Rear Side Door Window Outer Sealing Strip Replacement.
4. Remove the rear side door window regulator. Refer to Rear Side Door Window Regulator Replacement.
5. Remove the rear side door window from the rails.
6. Lower the rear side door window to the full down position.
7. Remove the rear side door stationary window channel. Refer to Rear Side Door Stationary Window Channel Replacement.
8. Remove the rear side door stationary window. Refer to Rear Side Door Stationary Window Replacement.



9. Remove the window inner weatherstrip (2) from the rear side door (1).

Installation Procedure

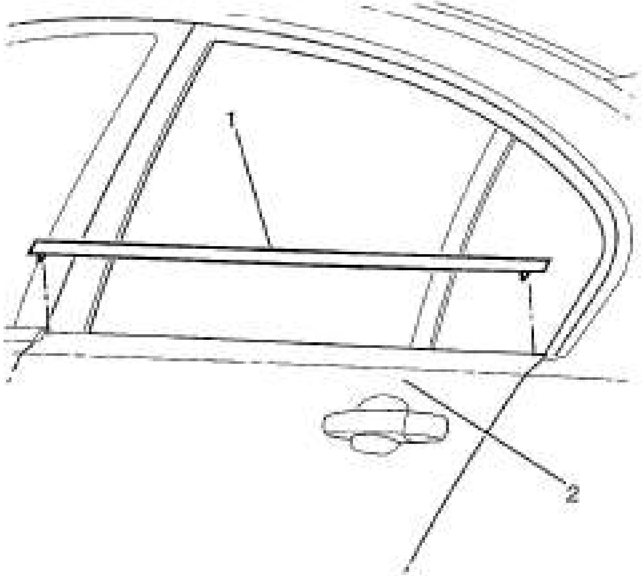


1. Install the rear window inner weatherstrip (2) to the rear side door (1).
2. Install the rear side door stationary window. Refer to Rear Side Door Stationary Window Replacement.
3. Install the rear side door stationary window channel. Refer to Rear Side Door Stationary Window Channel Replacement.
4. Install the rear side door window to the rails.
5. Install the rear side door window regulator. Refer to Rear Side Door Window Regulator Replacement.
6. Install the rear side door window outer sealing strip. Refer to Rear Side Door Window Outer Sealing Strip Replacement.
7. Install the rear side door window inner belt sealing strip. Refer to Rear Side Door Window Inner Sealing Strip Replacement.
8. Install the rear side door trim panel. Refer to Rear Side Door Trim Panel Replacement.

Rear Side Door Window Outer Sealing Strip Replacement (Sedan)

Removal Procedure

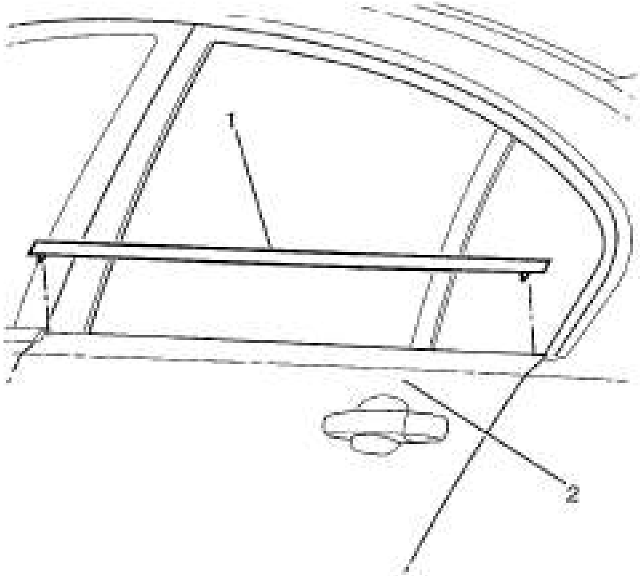
1. Lower the window to the full down position.



Important: Pull the rear door outer belt sealing strip (1) up to detach the retainers.

2. Remove the rear door outer belt sealing strip (1) from the rear door (2).

Installation Procedure



Important: Push the rear door outer belt sealing strip (1) down to attach the retainers.

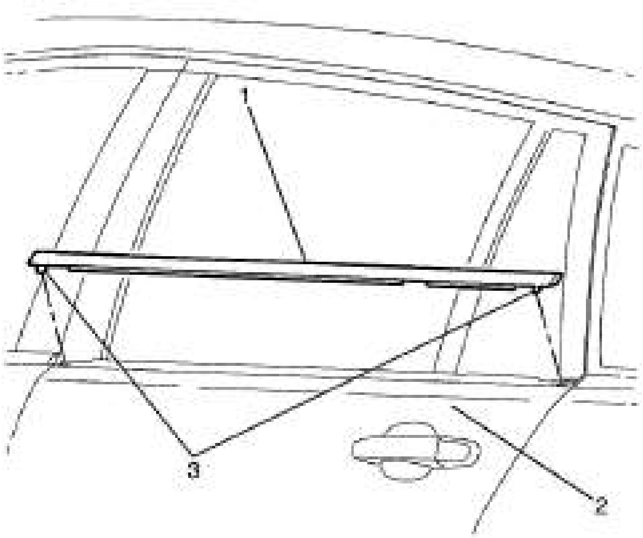
1. Install the rear door outer belt sealing strip (1) to the rear door (2).
2. Raise the rear door window.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Fixed and Moveable Windows | Repair Instructions | **Document ID: 2090819**

Rear Side Door Window Outer Sealing Strip Replacement (Sportwagon)

Removal Procedure

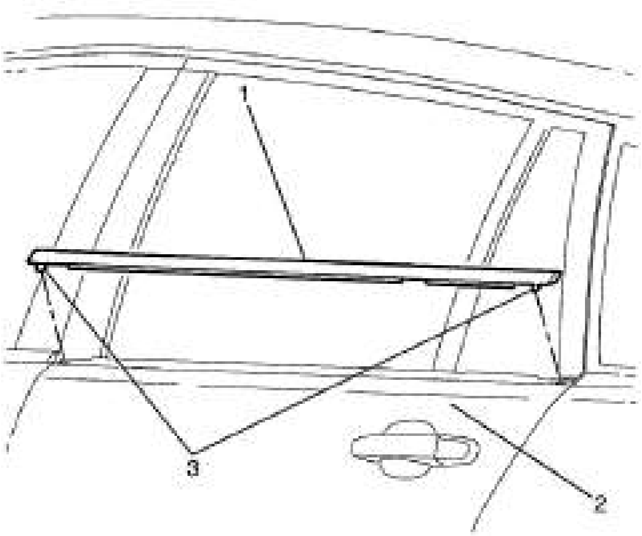
1. Lower the rear door window to the full down position.



Important: Pull the rear door outer belt sealing strip (1) up to detach the retainers (3).

2. Remove the rear door outer belt sealing strip (1) from the rear door (2).

Installation Procedure



Important: Push the rear door outer belt sealing strip (1) down to attach the retainers (3).

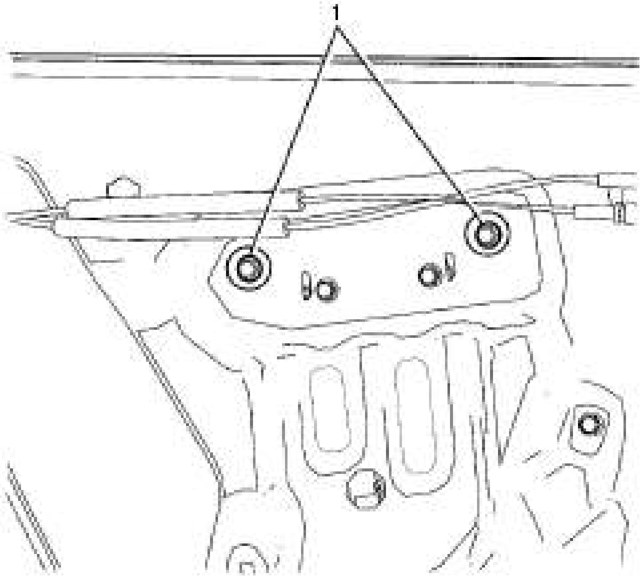
1. Install the rear door outer belt sealing strip (1) to the rear door (2).
2. Raise the rear door window.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Fixed and Moveable Windows | Repair Instructions | Document ID: 1991476

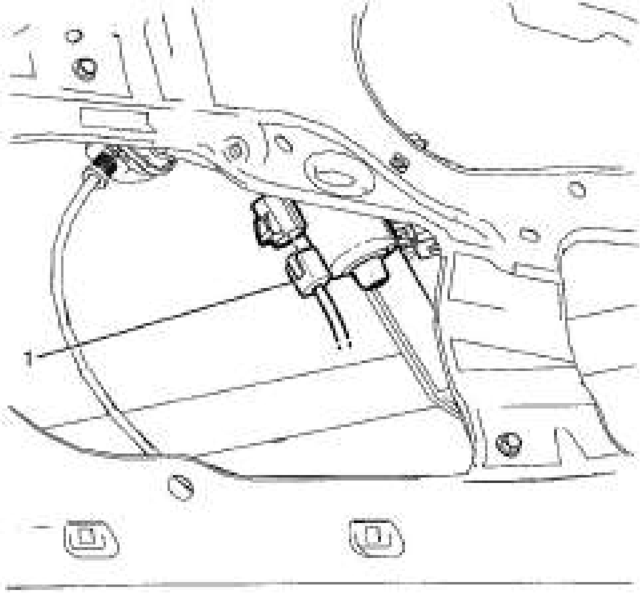
Rear Side Door Window Regulator Replacement

Removal Procedure

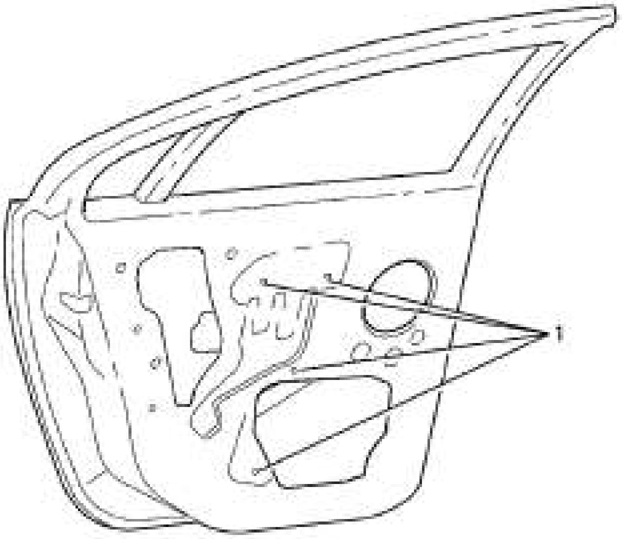
1. Remove the door trim panel. Refer to Rear Side Door Trim Panel Replacement.
2. Remove the speaker. Refer to Radio Rear Side Door Speaker Replacement.
3. Remove the water deflector. Refer to Rear Side Door Water Deflector Replacement.
4. Raise and support the window in the full up position.



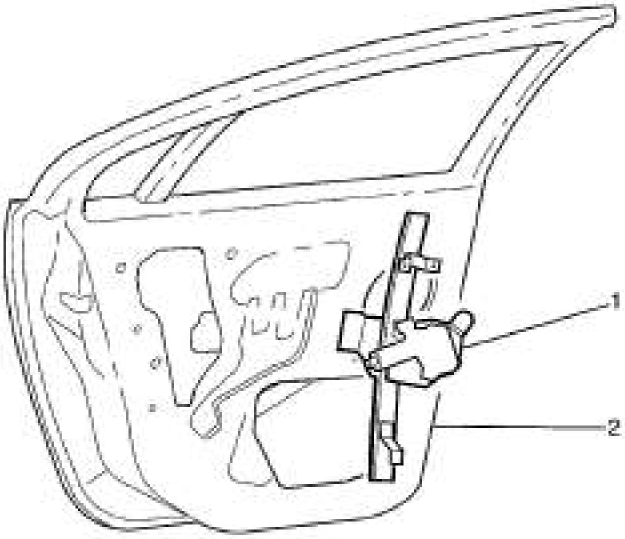
5. Loosen the window regulator to window glass retaining bolts (1).
6. Support the window glass.
7. Lower the window regulator approximately 1/2 way down.



8. Disconnect the window regulator electrical connector (1).

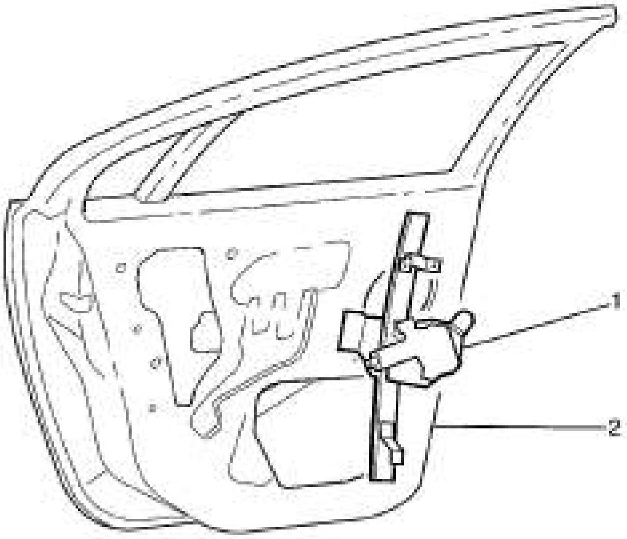


9. Remove the window regulator to door retaining bolts (1).



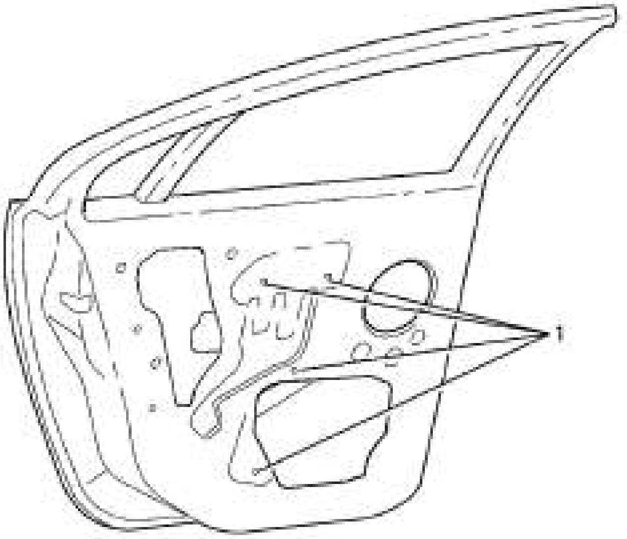
10. Remove the window regulator (1) through the large access hole in the door (2).

Installation Procedure



1. Position the window regulator (1) through the large access hole in the door (2).

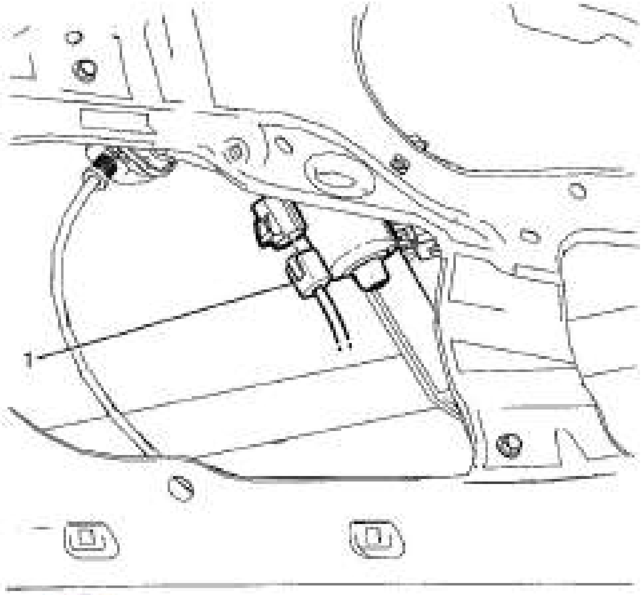
   Notice: Refer to Fastener Notice in the Preface section.



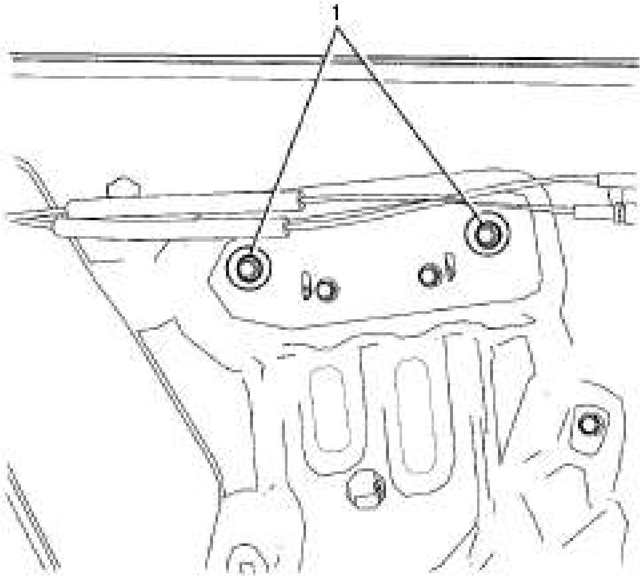
2. Install the window regulator to door retaining bolts (1).

   Tighten
   Tighten the bolts to 10 N-m (89 lb in).

3. Remove the support from the window.
4. Lower the window into the window regulator clamps.



5. Connect the window regulator electrical connector (1).
6. Start the vehicle to make sure maximum power to the window motor. This is required to fully seat the window for adjustment.
7. Raise the window to the full up position.



8. Tighten the window regulator to window glass retaining bolts (1).

   Tighten
   Tighten the bolts to 8 N-m (70 lb in).

9. Inspect the window for correct operation and a tight seal.
10. Shut off the vehicle.
11. Install the water deflector. Refer to Rear Side Door Water Deflector Replacement.
12. Install the speaker. Refer to Radio Rear Side Door Speaker Replacement.

13. Install the door trim panel. Refer to Rear Side Door Trim Panel Replacement.

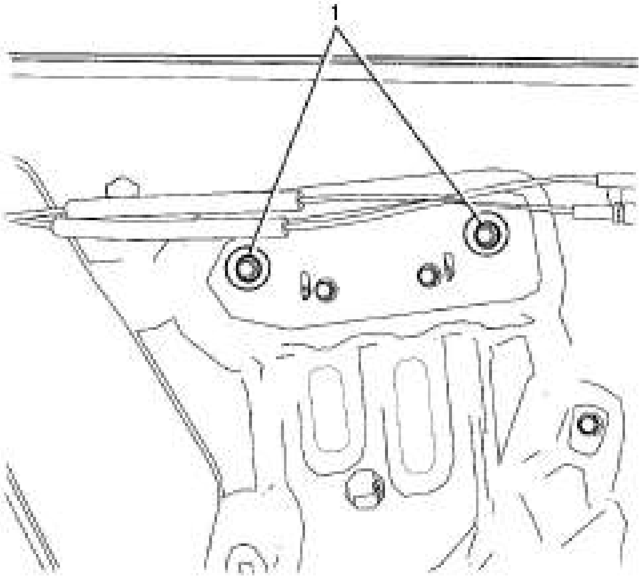
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Fixed and Moveable Windows | Repair Instructions | **Document ID: 1993063**

Rear Side Door Window Replacement

Removal Procedure

Caution: Refer to Glass and Sheet Metal Handling Caution in the Preface section.

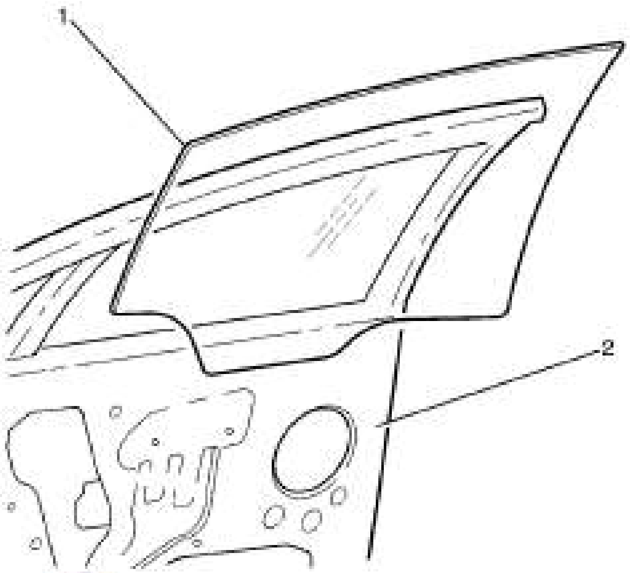
1. Remove the door trim panel. Refer to Rear Side Door Trim Panel Replacement .
2. Remove the speaker. Refer to Radio Rear Side Door Speaker Replacement .
3. Remove the water deflector. Refer to Rear Side Door Water Deflector Replacement .
4. Remove the window inner belt sealing strip. Refer to Rear Side Door Window Inner Sealing Strip Replacement .
5. Remove the rear door stationary window. Refer to Rear Side Door Window Frame Rear Applique Replacement .
6. Remove the window inner weatherstrip. Refer to Rear Side Door Window Inner Weatherstrip Replacement .
7. Remove the window outer belt sealing strip. Refer to Rear Side Door Window Outer Sealing Strip Replacement .
8. Remove the window inner sealing strip. Refer to Rear Side Door Window Inner Sealing Strip Replacement .
9. Raise and support the window to the full up position.



10. Loosen the window regulator to window retaining bolts (1).
11. Lower the window regulator approximately 1/2 way down position.

Important: With the aid of an assistant hold the window while the support is removed.

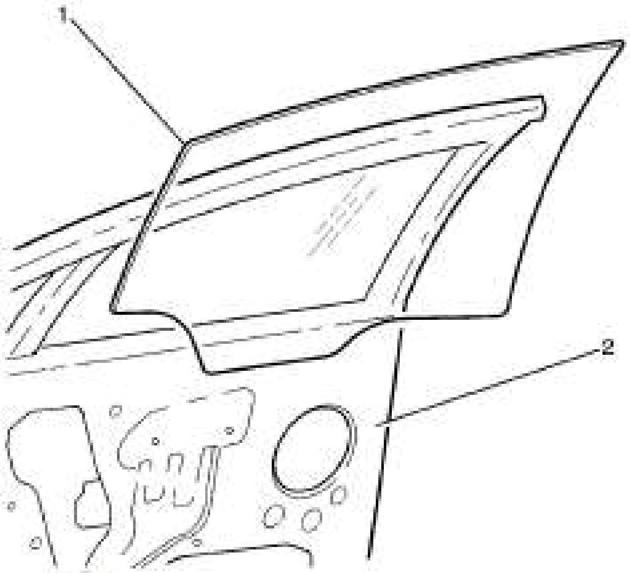
12. Remove the support from the window.



Important: Remove the window (1) with the aid of an assistant.

13. Remove the window (1) up and out of the door (2).

Installation Procedure

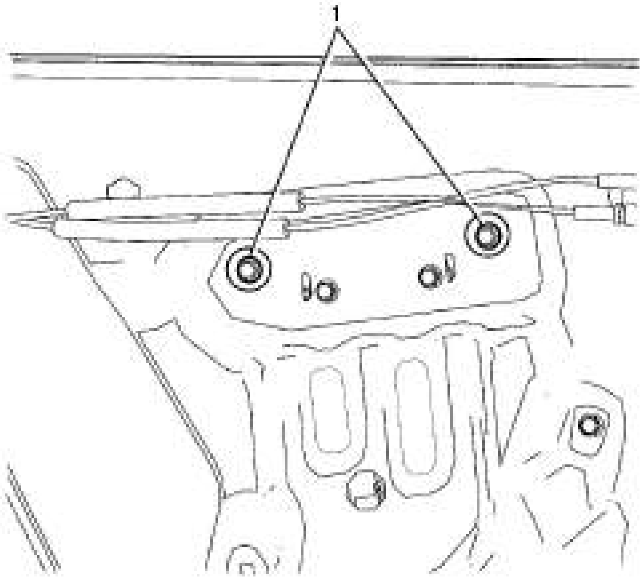


Important: Install the window (1) with the aid of an assistant.

Important: The window regulator should be approximately 1/2 way down before installing the window (1).

1. Install the window (1) down into the door (2).
2. Lower the window into the window clamps.
3. Lower the window.
4. Install the inner window weatherstrip. Refer to Rear Side Door Window Inner Weatherstrip Replacement .
5. Install the rear door stationary window. Refer to Rear Side Door Window Frame Rear Applique Replacement .
6. Install the window inner sealing strip. Refer to Rear Side Door Window Inner Sealing Strip Replacement .
7. Start the vehicle in order to make sure maximum power to the window motor. This is required to fully seat the window for adjustment.
8. Raise the window to full up position.

   Notice: Refer to Fastener Notice in the Preface section.



9. Tighten the window regulator to window retaining bolts (1).

   Tighten
   Tighten the nuts to 8 N-m (71 lb in).

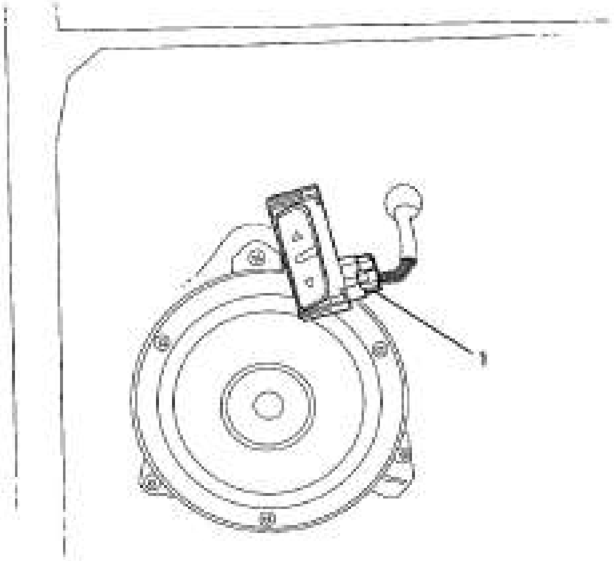
10. Inspect the window for correct operation and a tight seal.
11. Shut off the vehicle.
12. Install the window outer belt sealing strip. Refer to Rear Side Door Window Outer Sealing Strip Replacement .
13. Install the window inner belt sealing strip. Refer to Rear Side Door Window Inner Sealing Strip Replacement .
14. Install water deflector. Refer to Rear Side Door Water Deflector Replacement .
15. Install the speaker. Refer to Radio Rear Side Door Speaker Replacement in Entertainment.
16. Install the door trim panel. Refer to Rear Side Door Trim Panel Replacement .

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Fixed and Moveable Windows | Repair Instructions | Document ID: 1984484

Rear Side Door Window Switch Replacement

Removal Procedure

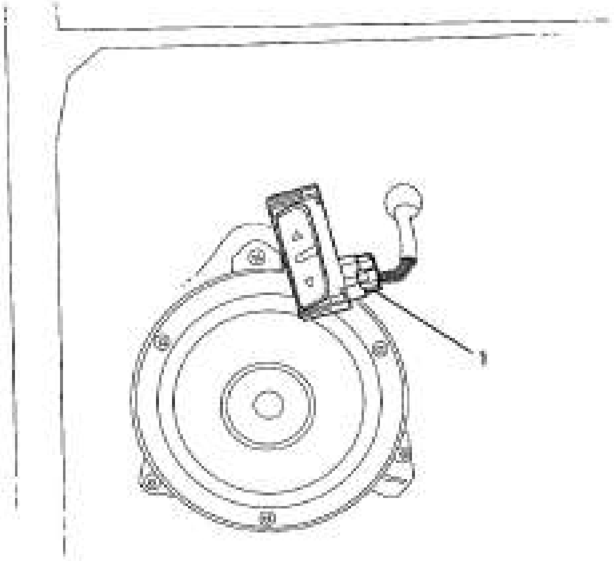
1. Remove the door trim panel. Refer to Rear Side Door Trim Panel Replacement.



2. Disconnect the power window switch electrical connector (1).
3. Remove the power window switch from the door.

Installation Procedure

1. Position the power window switch to the door (1).



2. Connect the power window switch electrical connector (1).
3. Install the door trim panel. Refer to Rear Side Door Trim Panel Replacement.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Fixed and Moveable Windows | Repair Instructions | **Document ID: 1995718**

Rear Window Replacement

Tools Required

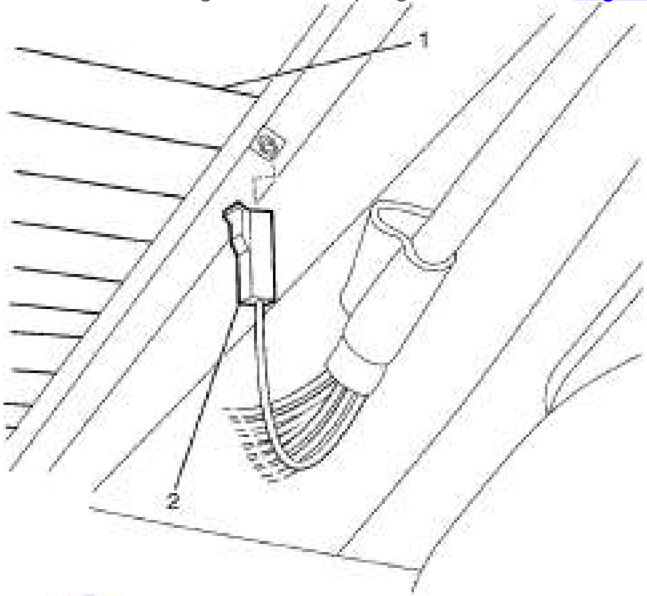
- J-36020 Stationary Glass Removal Tool
- Glass Sealant Remover (Cold Knife)
- Urethane Adhesive Kit or Equivalent
- Isopropyl Alcohol, Prepsol or Equivalent
- Cartridge-type Caulking Gun
- Commercial-type Utility Knife
- Razor Blade Scraper
- Suction Cups

Removal Procedure

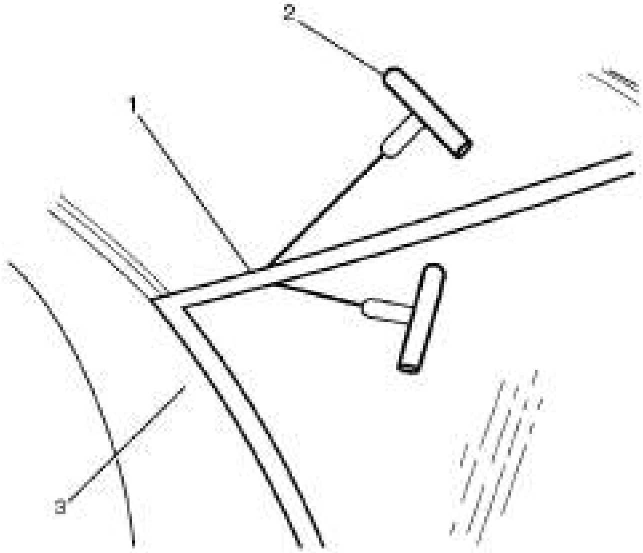
Caution: When working with any type of glass or sheet metal with exposed or rough edges, wear approved safety glasses and gloves in order to reduce the chance of personal injury.

Caution: If a window is cracked but still intact, crisscross the window with masking tape in order to reduce the risk of damage or personal injury.

1. Cover the seats and carpeting to protect them from broken glass.
2. Remove rear window upper garnish mould. Refer to Quarter Upper Trim Panel Replacement .
3. Remove the high level stop light. Refer to High Mount Stop Lamp Replacement .



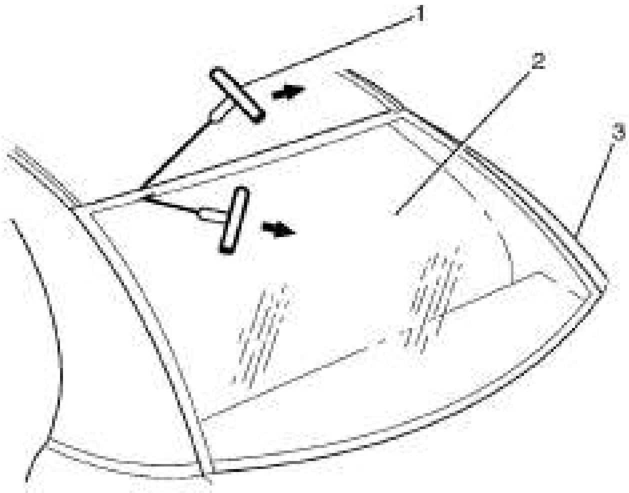
4. Disconnect the rear window electrical connectors (2) from the rear window (1).



Important: Before cutting out a stationary window, apply a double layer of masking tape around the perimeter of the painted surfaces and the interior trim.

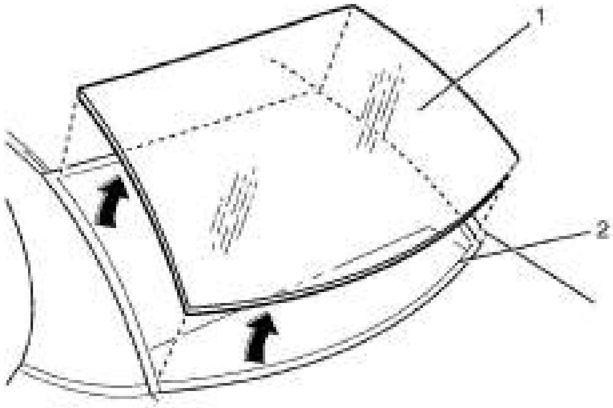
Important: Use a suitable tool to install the piano wire from J-36020 (2) through the urethane at a upper corner of the rear window (1).

5. Install J-36020 (2) to the vehicle (3).
6. Connect the end of the piano wire to the other handle of J-36020 (2).



Important: Keep the inside handle of J-36020 (1) against the rear window (2) and cycle the full length of the piano wire to prevent heat build up.

7. With the aid of an assistant cut through the urethane bead around the rear window (2) to the vehicle (3).



Important: The use of suction cups will aid in the rear window (1) removal.

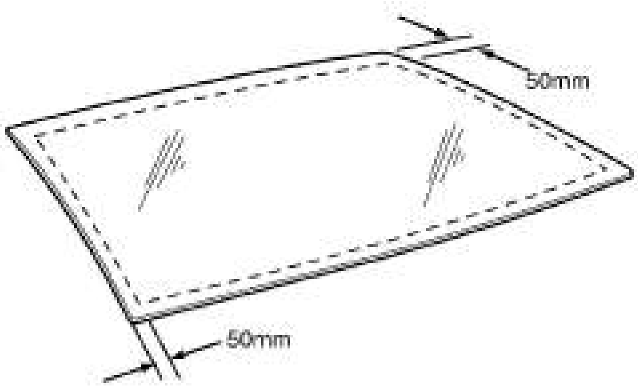
8. With the aid of an assistant remove the rear window (1) from the vehicle (2).

Installation Procedure

Caution: Failure to prep the area prior to the application of primer may cause insufficient bonding of urethane adhesive. Insufficient bonding of urethane adhesive may allow unrestrained occupants to be ejected from the vehicle resulting in personal injury.

Important: Use a lint free cloth and suitable oil free cleaning agent to make sure adhesion of the urethane.

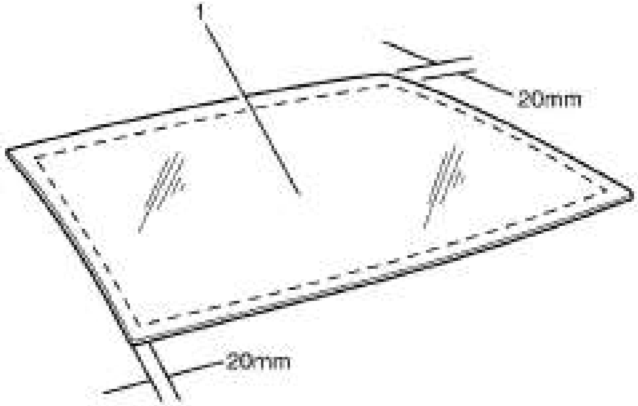
1. Clean surface and edges of rear window where urethane is to be applied.



Important: The clear glass primer dries almost instantly and may stain the viewing area of the rear window if not applied evenly. Wipe off the clear glass primer with a lint free cloth immediately after application.

Important: Apply the clear glass primer with a suitable applicator.

2. Apply a 50mm wide layer of clear glass primer to the inner surface of the rear window perimeter.

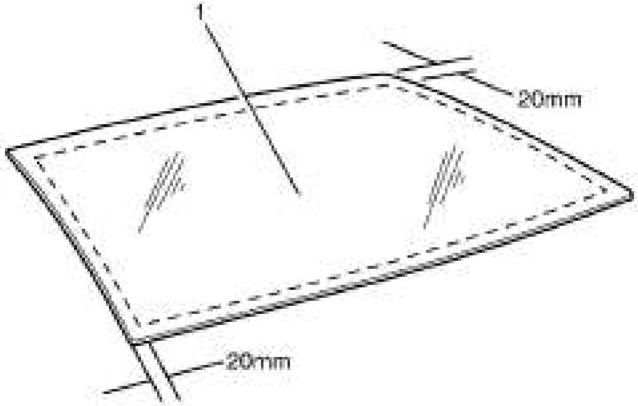


Important: Agitate the black glass primer for 1 minute to mix thoroughly.

Important: Apply a 20mm wide layer of black glass primer with the applicator to the rear window (1) perimeter.

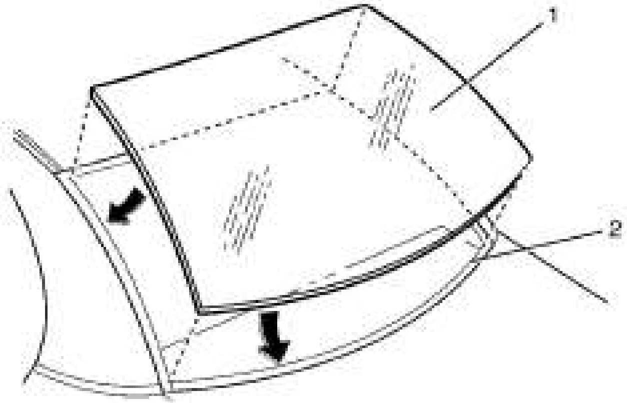
3. Apply the black glass primer to the rear window (1).

Caution: Refer to Window Retention Caution in the Preface section.



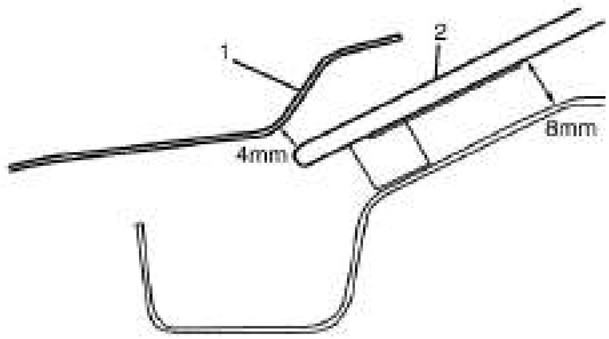
Important: Apply a 7mm wide and 14mm deep layer of urethane GMW3041 or equivalent 20mm inside the perimeter of the rear window (1).

4. Apply the urethane GMW3041 or equivalent to the rear window (1).

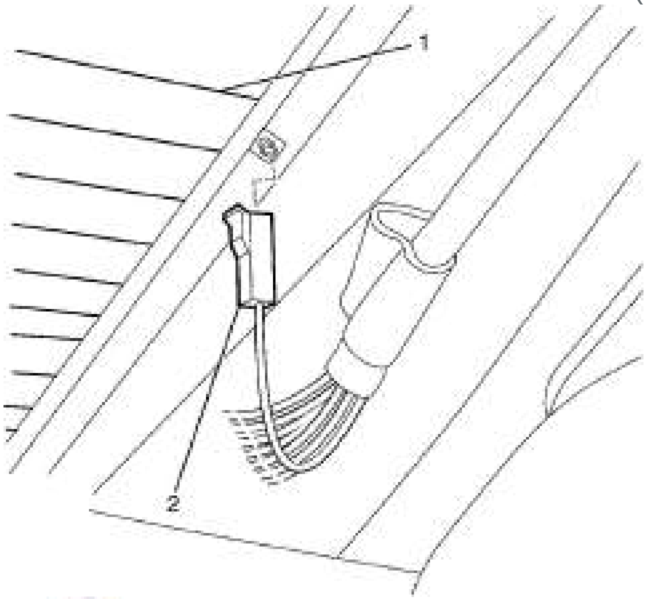


Important: The rear window (1) is aligned by two datum pins located at the top of the rear window and 8mm foam spacers one at the top and two at the bottom of the rear window (1).

5. With the aid of an assistant install the rear window (1) to the vehicle (2).
6. Press the rear window (1) firmly into position.



7. Check the clearance between the rear window (2) and the deck lid (1).



8. Connect the rear window electrical connectors (2) to the rear window (1).
9. Remove the double layer of masking tape from around the perimeter of the painted surfaces and the interior trim.
10. Install the rear window upper garnish mould. Refer to Quarter Upper Trim Panel Replacement .
11. Install the high level stop light. Refer to High Mount Stop Lamp Replacement .

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Fixed and Moveable Windows | Repair Instructions | **Document ID: 1991474**

Window Motor Programming - Express Function

Important: This system is programmed after one full up and down cycle. This needs to be done when the regulators are replaced.

The following steps explain how to program the side door window regulator motors:

- Press and hold the power window switch until the window is fully DOWN.
- Continue holding the power window switch for approximately 3 seconds.
- Press and hold the power window switch until the window is fully UP.
- Continue holding the power window switch for approximately 3 seconds.
- The power window regulator motor is now programmed for the express function.
- Repeat this process for all of the power windows.

Windshield Replacement

Tools Required

- J-36020 Stationary Glass Removal Tool
- Glass Sealant Remover (Cold Knife)
- Urethane Adhesive Kit or Equivalent
- Isopropyl Alcohol, Prepsol or Equivalent
- Cartridge-type Caulking Gun
- Commercial-type Utility Knife
- Razor Blade Scraper
- Suction Cups

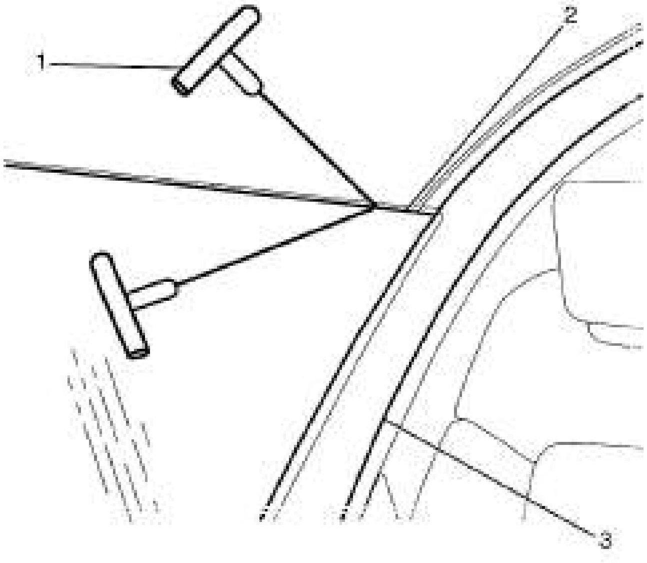
Removal Procedure

Caution: When working with any type of glass or sheet metal with exposed or rough edges, wear approved safety glasses and gloves in order to reduce the chance of personal injury.

Caution: If broken glass falls into the defroster outlets, it can be blown into the passenger compartment and cause personal injury.

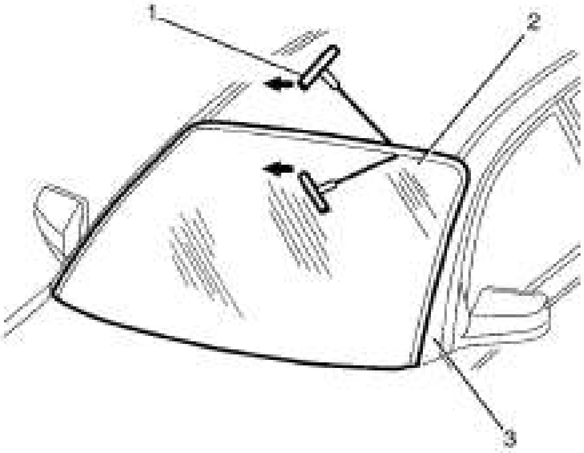
Important: Before cutting out a stationary window, apply a double layer of masking tape around the perimeter of the painted surfaces and the interior trim.

1. Remove the windshield wiper arms. Refer to Windshield Wiper Arm Replacement .
2. Remove the air inlet grille assembly. Refer to Air Inlet Grille Panel Replacement .
3. Remove the interior windshield side garnish panels. Refer to Windshield Garnish Molding Replacement .
4. Remove the internal rearview mirror. Refer to Inside Rearview Mirror Replacement .
5. Remove the rain sensor (if fitted). Refer to Windshield Outside Moisture Sensor Replacement .
6. Remove the exterior windshield garnish mouldings. Refer to Windshield Pillar Garnish Molding Replacement .
7. Protect the following parts:
    - The upper dash pad
    - The defroster outlets and A/C outlets
    - The seats and carpeting



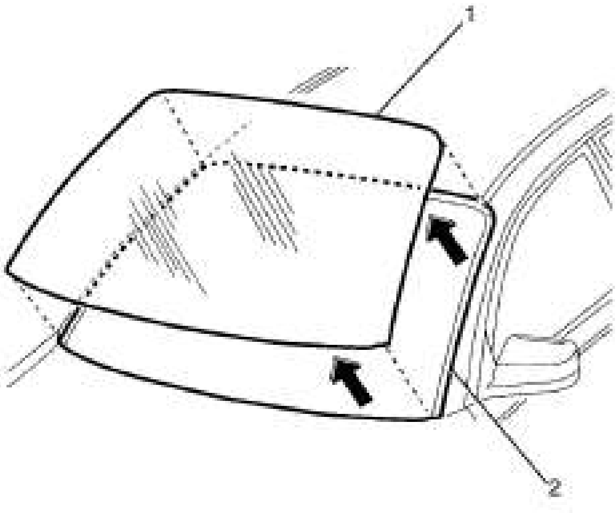
Important: Use a suitable tool to install the piano wire from J-36020 (1) through the urethane at a upper corner of the windshield (2).

8. Install J-36020 (1) to the vehicle (3).
9. Connect the end of the piano wire to the other handle of the J-36020 (2).



Important: Keep the inside handle of J-36020 (1) against the windshield (2) and cycle the full length of the piano wire to prevent heat build up.

10. With the aid of an assistant cut through the urethane bead around the windshield (2) to the vehicle (3).



Important: The use of suction cups will aid in the windshield (1) removal from the vehicle (2).

11. With the aid of an assistant remove the windshield (1) from the vehicle (2).

Installation Procedure

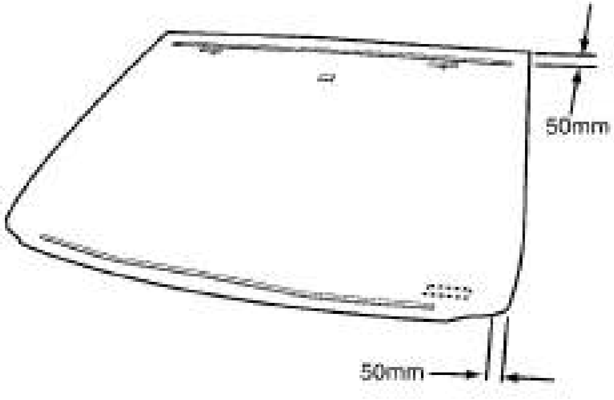
Important: Remove all of the urethane from the pinch-weld surface by using a clean utility knife or razor blade scraper. Avoid the removal of paint when removing urethane.

1. Remove any urethane from the pinch-weld.

Caution: Failure to prep the area prior to the application of primer may cause insufficient bonding of urethane adhesive. Insufficient bonding of urethane adhesive may allow unrestrained occupants to be ejected from the vehicle resulting in personal injury.

Important: Use a lint free cloth and suitable oil free cleaning agent to make sure adhesion of the urethane.

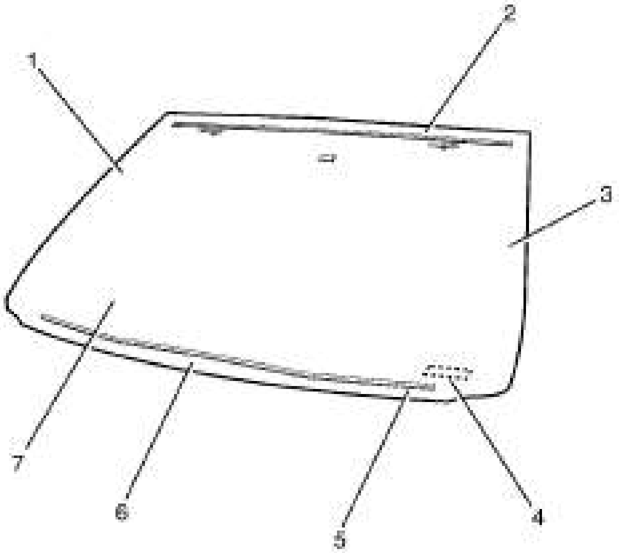
2. Clean surface and edges of the windshied where urethane is to be applied.



Important: The clear glass primer dries almost instantly and may stain the viewing area of the windshield if not applied evenly. Wipe off the clear glass primer with a lint free cloth immediately after application.

Important: Apply the clear glass primer with a suitable applicator.

3. Apply a 50mm wide layer of clear glass primer to the inner surface of the windshield perimeter.

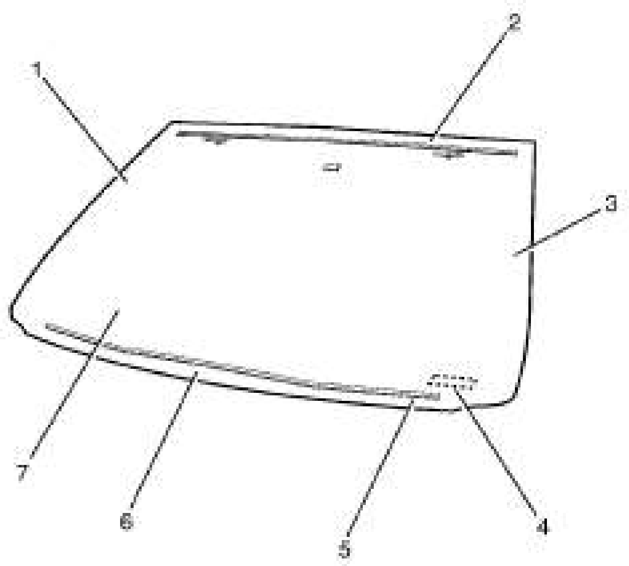


Important: Agitate the black glass primer for 1 minute to mix thoroughly.

Important: Apply a 20mm wide layer of black glass primer with a suitable applicator to the inner upper (2), left (3) and right (1) side surface of the windshield perimeter. Apply a 20mm wide layer of black glass primer 20mm from the lower edge (6) of the windshield and 15mm from the lower edge (5) of the windshield where the VIN (4) is displayed.

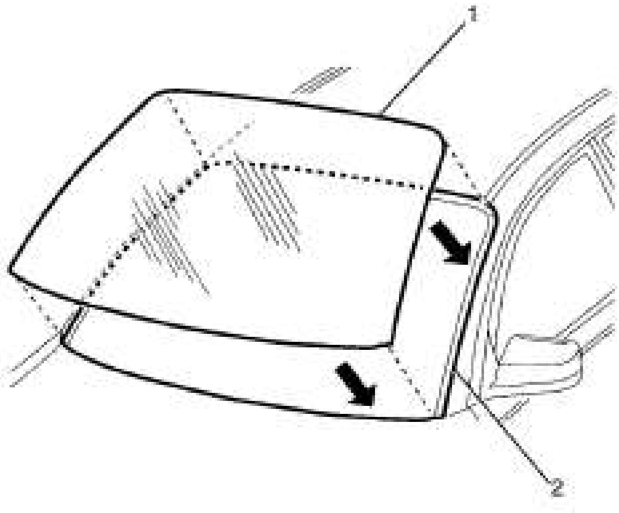
4. Apply the black glass primer to the windshield (7).

Caution: Refer to Window Retention Caution in the Preface section.



Important: Apply a 7mm wide and 14mm deep layer of urethane GMW3041 or equivalent to the inner upper (2), left (3) and right (1) side surface of the windshield perimeter. Apply a 7mm wide and 14mm deep layer of urethane 20mm from the lower edge (6) of the windshield and 15mm from the lower edge (5) of the windshield where the VIN (4) is displayed.

5. Apply the urethane GMW3041 or equivalent to the windshield (7).



Important: The windshield is aligned by two datum pins located at the top of the windshield and two 8mm foam spacers one at the top and one at the bottom of the windshield (1).

Important: The use of suction cups will aid the installation of the windshield (1) to the vehicle (2).

6. With the aid of an assistant install the windshield (1) to the vehicle (2).
7. Press the windshield (1) firmly into position.
8. Install the air inlet grille assembly. Refer to Air Inlet Grille Panel Replacement .
9. Install the windshield wiper arms. Refer to Windshield Wiper Arm Replacement .
10. Install the interior windshield side garnish panels. Refer to Windshield Garnish Molding Replacement .
11. Install the exterior windshield garnish mouldings. Refer to Windshield Pillar Garnish Molding Replacement .
12. Remove the double layer of masking tape from around the perimeter of the painted surfaces and the interior trim.
13. Install the rain sensor (if fitted). Refer to Windshield Outside Moisture Sensor Replacement .
14. Install the internal rearview mirror. Refer to Inside Rearview Mirror Replacement .

Power Windows Description and Operation

Power Window System Components

The power window system consists of the following components:

- Door lock/windowswitch
- Window control module
- Left rear window switch
- Right rear window switch
- Window regulator motors in each of the doors
- WNDW MTR Circuit Breaker 20A
- WNDW CNTRL Fuse 2A

Front Window Operation and the Master Control Window Switches

When the ignition switch is in the RUN or ACCY position, or retained accessory power (RAP) is enabled, battery positive voltage is supplied to the door lock/window switch. When the left front or right front window switch is pressed in the down position, a signal is sent to the window control module which supplies voltage to the appropriate window motor down circuit and ground to the window motor up circuit causing the window to open. When the left front or right front window switch is pulled in the up position, a signal is sent to the window control module which reverses the polarity of the window motor and the window closes.

Express Down Feature

The driver and passenger windows will travel to the fully down position when the left front or right front window switch is pressed and released. Pulling the same window switch to the up position will cancel the express down command.

Express Up Feature

Some models are equipped with smart motors which allows for express down and express up functions. When the left front or right front window switch is pulled and released, the appropriate front window will travel to the fully up position. Pressing the same window switch to the down position will cancel the express up command. As a safety feature, the smart motors will detect excessive resistance while performing the express up function and automatically reverse direction to prevent injury to any occupants that may become trapped between the closing window and the door frame. The automatic reverse safety feature can be overridden by pulling and holding the window switch.

Lockout Switch Feature

The door lock/window switch contains a rear window lockout switch which disconnects the battery positive voltage supply to the rear door window switches, disabling them. Normal rear window operation is still available from the door lock/window switch.

Rear Window Operation and the Rear Window Switches

The rear power window door switches receive battery voltage through the window lockout control circuit if the rear window switches are enabled. Ground for the rear passenger power window motors is supplied through normally closed up and down contacts of both the rear window switches and the switches on the door lock/window switch. When the either rear window switch is placed in the down position, the power window motor down control circuit is switched to 12 volts and is applied to the down side of the rear window motor. Since the other side of the rear power motor is connected to ground through the normally closed up contacts of both the rear window switch and door lock/window switch, the window travels down. By placing the rear window switch in the up position, the polarity of the power window motor is reversed and the window travels up.

Rear Window Defogger Description and Operation

System Description

The rear window defogger system consists of the following components:

- RR DEFOG fuse
- RR DEFOG relay
- Rear window defogger grid
- HVAC control module

Battery positive voltage is supplied through the RR DEFOG fuse in the underhood fuse block to the REAR DEFOG relay switched input. Ground for the RR DEFOG relay is provided by G102. Ground for the rear window defogger grid is provided by G304.

When the rear window defogger switch is pressed, the HVAC control module provides voltage to the RR DEFOG relay coil, energizing the relay. When the relay is energized, the relay switch closes allowing B+ voltage to flow through the closed relay switch to the rear window defogger grid. The properties of the rear window defogger grid has a resistance to the flow of electrical current causing the elements within the grid to radiate heat.

When the rear window defog switch is pressed, the HVAC control module keeps the RR DEFOG relay control circuit for active for 15 minutes, additional activation of the rear window defogger system results in 7.5 minute activation cycles except when the vehicle speed is greater than 80 km/h (50 mph) which results in a continuous rear window defogger operation.

Stationary Window Description (Sportwagon)

Stationary Window Description

The windshield assembly is manufactured from laminated glass and has a tinted upper band. Toughened safety glass is used for all other windows. The windshield and liftgate window are retained to the body with urethane adhesive which adheres the windshield and liftgate window to the body, increasing structural integrity. The reinstallation of the windshield and liftgate window with urethane adhesive requires complete replacement of the urethane adhesive bead. The windshield and liftgate window are positioned on the body with datum pins that are integral to the windshield and liftgate window. The body side stationary window assembly is attached to the vehicle using nuts.

Stationary Window Description (SWB)

The windshield assembly is manufactured from laminated glass and has a tinted upper band. Toughened safety glass is used for all other windows. The windshield and rear window are retained to the body with urethane adhesive which adheres the windshield and rear window to the body, increasing structural integrity. The reinstallation of the windshield and rear window with urethane adhesive requires complete replacement of the urethane adhesive bead.

Diagnostic Starting Point - Horns

Begin the system diagnosis with the Diagnostic System Check - Vehicle. The Diagnostic System Check will provide the following information:

- The identification of the control modules which command the system
- The ability of the control modules to communicate through the serial data circuit
- The identification of any stored diagnostic trouble codes (DTC's) and their status

The use of the Diagnostic System Check will identify the correct procedure for diagnosing the system and where the procedure is located.

DTC B2750

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.
- Diagnostic Procedure Instructions provides an overview of each diagnostic category.

DTC Descriptor

DTC B2750 00: Horn Relay Coil Circuit

Diagnostic Fault Information

Circuit	Short to Ground	Open/High Resistance	Short to Voltage	Signal Performance
Horn Relay B+	2	2	--	--
Horn Relay Control	1	2	B2750 00	--
Horn Control	2	2	1	--
Horn Ground	--	2	2	--
1. Horn Always On 2. Horn Inoperative				

Circuit/System Description

The body control module (BCM) controls the horn relay by grounding the control circuit of the horn relay coil energizing the relay. When the horn relay is energized, the horn relay contacts close applying voltage through the horn fuse and the horn control circuit to the horns.

Conditions for Running the DTC

When the horn output is actively being requested by the BCM.

Conditions for Setting the DTC

The BCM detects a fault in the horn relay control circuit for approximately 125 milliseconds.

Action Taken When the DTC Sets

The BCM disables the output to the horn relay until the next ignition cycle.

Conditions for Clearing the DTC

- The DTC clears when the fault is no longer detected.
- The current DTC will become history when the request for the output is removed.
- The history DTC will clear after 50 consecutive fault-free ignition cycles have occurred.

Scan Tool Reference

Control Module References for scan tool information

Circuit/System Verification

Command the Horn Relay Test ON and OFF with the scan tool. The horns should turn ON and OFF when changing between the commanded states.

Circuit/System Testing

1. Ignition OFF, disconnect the HORN relay.
2. Ignition ON, verify a test lamp illuminates between the B+ circuit terminal 85 and ground.

   If the test lamp does not illuminate, test the B+ circuit for a short to ground or an open/high resistance.
3. Connect a test lamp between the control circuit terminal 86 and the B+ circuit terminal 85.
4. Command the Horn Relay test ON and OFF with a scan tool. The test lamp should turn ON and OFF when changing between the commanded states.

   If the test lamp is always OFF, test the control circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.

   If the test lamp is always ON, test the control circuit for a short to ground. If the circuit tests normal, replace the BCM.

5. If all circuits test normal, test or replace the HORN relay.

Component Testing

1. Ignition OFF, disconnect the HORN relay.
2. Test for 60-180 ohms between terminals 85 and 86.

   If not within the specified range, replace the relay.
3. Test for infinite resistance between the following terminals:
   - 30 and 86
   - 30 and 87
   - 30 and 85
   - 85 and 87

   If not the specified value, replace the relay.
4. Install a 30A fused jumper wire between relay terminal 85 and 12 volts. Install a jumper wire between relay terminal 86 and ground. Test for less than 2 ohms between terminals 30 and 87.

   If greater than the specified range, replace the relay.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

- Relay Replacement
- Control Module References for BCM replacement, setup and programming

Symptoms - Horns

Important: The following steps must be completed before using the symptom tables:

1. Perform Diagnostic System Check - Vehicle, before using the symptom tables in order to verify that all of the following are true:
   - There are no DTC's set.
   - The control modules can communicate via the serial data link.
2. Review the system operation in order to familiarize yourself with the system functions. Refer to Horns System Description and Operation.

Visual/Physical Inspection

- Inspect for aftermarket devices which could affect the operation of the horn system. Refer to Checking Aftermarket Accessories.
- Inspect the easily accessible or visible system components for obvious damage or conditions which could cause the symptom.
- Perform the following if a horn buzzes or has a harsh tone:
  - Inspect for debris in the joint where the horn fastens to the vehicle.
  - Test the torque of the horn mounting hardware. The horn mounting hardware should be tightened to a torque of 10 N·m (7 lb ft).

Intermittent

Faulty electrical connections or wiring may be the cause of intermittent conditions. Refer to Testing for Intermittent Conditions and Poor Connections.

Symptom List

Refer to a symptom diagnostic procedure Horns Malfunction in order to diagnose the symptom.

Horns Malfunction

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.
- Diagnostic Procedure Instructions provides an overview of each diagnostic category.

Diagnostic Fault Information

Circuit	Short to Ground	Open/High Resistance	Short to Voltage	Signal Performance
Horn Relay B+	2	2	--	--
Horn Relay Control	1	2	B2750 00	--
Horn Control	2	2	1	--
Horn Ground	--	2	2	--
1. Horn Always On 2. Horn Inoperative				

Circuit/System Description

Battery positive voltage is applied at all times to the horn relay coil and the horn relay switch. Pressing the horn switch applies ground through the switch contacts and the horn relay control circuit to the coil side of the relay, energizing the relay. Battery voltage is then applied through the switch side of the relay, the horn fuse, and the horn control circuit to the horns. The body control module (BCM) may also apply ground to the horn relay control circuit as described above. The horns sound as long as ground is applied to the horn relay control circuit.

Diagnostic Aids

A short to ground in the HORN relay control circuit or a short to voltage in the horn control circuit will cause the horns to sound continuously until the horns overheat and become inoperative.

Rotate the steering wheel while pressing the horn pad to identify intermittent and poor connections within the steering column.

If diagnosing a Horn- Poor Tone condition, inspect the following:

- Debris or water in the horn assembly.
- Proper horn mounting hardware torque. Refer to Fastener Tightening Specifications.
- Debris in the joint where the horns attach to the vehicle.
- Debris in direct contact with the horn

- Vehicle components vibrating while the horn is sounding

Description and Operation

Horns System Description and Operation

Electrical Information Reference

- Circuit Testing
- Connector Repairs
- Testing for Intermittent Conditions and Poor Connections
- Wiring Repairs

Scan Tool Reference

Control Module References for scan tool information

Circuit/System Verification

1. Ignition ON, press and release the steering wheel horn pad. The horns should sound and emit a clear and even tone only when the horn pad is pressed

    If the horns do not sound when the horn pad is pressed or continues sounding after the horn pad is released, refer to Horn Malfunction.

    If the sound emitted from the horns are not clear and even, refer to Horn - Poor Tone.
2. Command the Horn Relay Test ON and OFF with the scan tool. The horns should turn ON and OFF when changing between the commanded states.

    If the horns do not turn ON and OFF when changing between the commanded states, refer to Command Malfunction.

Circuit/System Testing

Horn Switch Circuit Test

1. Ignition OFF, disconnect the HORN relay.
2. Ignition ON, verify that a test lamp does not illuminate between the control circuit terminal 87 and ground.

    If the test lamp illuminates, test the control circuit for a short to voltage.

3. Verify that a test lamp illuminates between the B+ circuit terminal 85 and ground.

   If the test lamp does not illuminate, test the B+ circuit for a short to ground or an open/high resistance.
4. Verify that a test lamp illuminates between the B+ circuit terminal 30 and ground.

   If the test lamp does not illuminate, test the B+ circuit for an open/high resistance.
5. Ignition OFF, disconnect the harness connector at the appropriate horn.
6. Test for less than 1 ohm between the ground circuit terminal 2 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
7. Connect the harness connector at the horn.
8. Ignition ON, connect a 15A fused jumper wire between the B+ circuit terminal 30 and the control circuit terminal 87. Verify the horns are activated.

   If the horns do not activate, test the control circuit for a short to ground or an open/high resistance. If the circuit tests normal, test or replace the horn.
9. Connect a test lamp between the B+ circuit terminal 85 and the control circuit terminal 86.
10. Press and release the steering wheel horn pad. The test lamp should turn ON and OFF when changing between the commanded states.

    If the test lamp is always ON, test the control circuit for a short to ground. If the circuit tests normal, inspect for a sticking horn switch.

    If the test lamp is always OFF, test the control circuit for a short to voltage or an open/high resistance. If the circuit tests normal, inspect for an open horn switch.
11. If all circuits test normal, test or replace the HORN relay.

Horn - Poor Tone

1. Ignition OFF, disconnect the harness connector at the appropriate horn.
2. Test for less than 1 ohm between the ground circuit terminal 2 and ground.

   If greater than the specified range, test the ground circuit for a high resistance.
3. Disconnect the HORN relay.
4. Test for less than 1 ohm between the control circuit terminal 87 and the control circuit terminal 1 at the horn.

   If greater than the specified range, test the control circuit for an open/high resistance.
5. If all circuits test normal, test or replace the horn.

Command Malfunction

1. Ignition OFF, disconnect the HORN relay.
2. Connect a test lamp between the B+ circuit terminal 85 and the control circuit terminal 86.
3. Ignition ON, command the Horn Relay Test ON and OFF with a scan tool. The test lamp should turn ON and OFF when changing between the commanded states.

   If the test lamp is always ON, test the control circuit for a short to ground. If the circuit tests normal, replace the BCM.

   If the test lamp is always OFF, test circuit the control circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.

Component Testing

Horn Test

1. Ignition OFF, disconnect the harness connector at the appropriate horn.
2. Install a 15A fused jumper wire between the control terminal 1 and 12V. Install a jumper

wire between the ground terminal 2 and ground. Verify the horn emits a clear and even tone.

If the sound emitted is not clear and even, replace the horn.

Relay Test

1. Ignition OFF, disconnect the HORN relay.
2. Test for 60-180 ohms between terminals 85 and 86.

   If not within the specified range, replace the relay.
3. Test for infinite resistance between the following terminals:
   - 30 and 86
   - 30 and 87
   - 30 and 85
   - 85 and 87

   If not the specified value, replace the relay.
4. Install a 30A fused jumper wire between relay terminal 85 and 12V. Install a jumper wire between relay terminal 86 and ground. Test for less than 2 ohms between terminals 30 and 87.

   If greater than the specified range, replace the relay.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

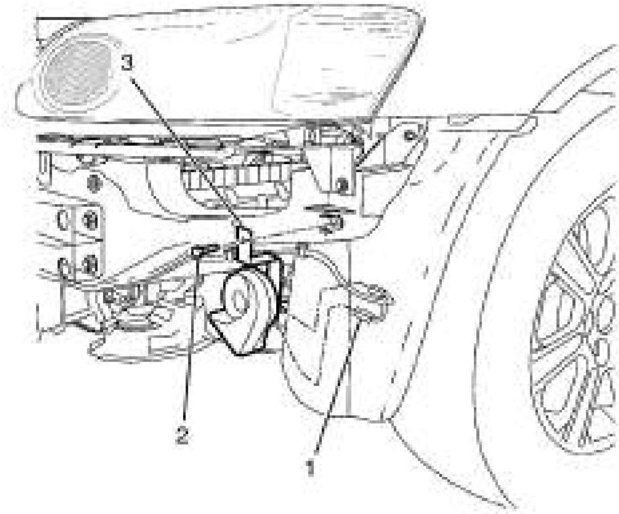
- Relay Replacement
- Horn Replacement
- Steering Wheel Inflatable Restraint Module Replacement
- Control Module References for BCM replacement, setup and programming

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Horns | Repair Instructions | **Document ID: 1977354**

Horn Replacement

Removal Procedure

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Remove the front facia assembly. Refer to Front Bumper Fascia Replacement.

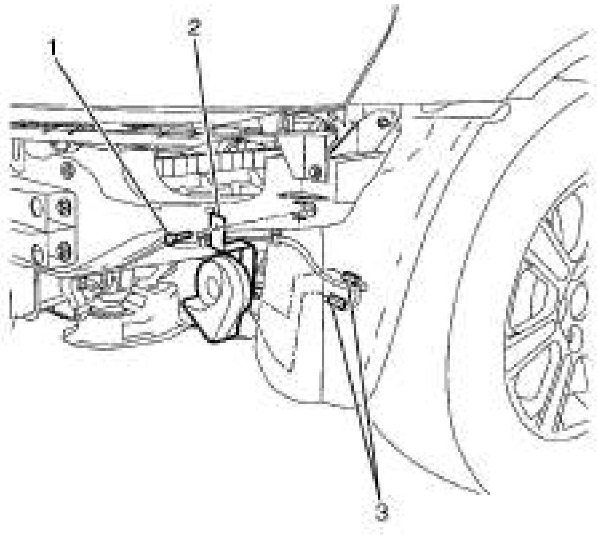


3. Disconnect the horn electrical connector from the horn unit (1)
4. Remove the horn assembly to front end module retaining bolt (2).
5. Pull the horn assembly (3) outward to remove it from the vehicle.

Installation Procedure

1. Align horn in correct position on vehicle.

   Notice: Refer to Fastener Notice in the Preface section.



2. Install the horn assembly to front end module retaining bolt (1).

   Tighten
   Tighten the bolt to 4.5 N-m (39 lb in).

3. Connect the horn electrical connectors (3) to the horn assembly.
4. Install the front facia assembly. Refer to Front Bumper Fascia Replacement.
5. Lower the vehicle.

Horns System Description and Operation

System Description

The horn system consists of the following components:

- HORN fuse
- THEFT HORN fuse
- Horn relay
- Horn switch
- Left Horn
- Right Horn
- Theft Deterrent Alarm Siren
- Body control module (BCM)

System Operation

- The vehicle horns are activated whenever the horn switch is depressed.
- The BCM commands the horns ON under any of the following conditions:
  - When the immobilizer detects a vehicle intrusion.
  - When the keyless entry system is used to lock the vehicle, a horn chirp may sound to notify the driver that the vehicle has been locked. The notification feature may be enabled or disabled through personalization. For further information refer to Keyless Entry System Description and Operation.
  - When the panic button is pressed on the key fob. For further information refer to Keyless Entry System Description and Operation.

Circuit Operation

Battery positive voltage is applied at all times to the horn relay coil and the horn relay switch. Pressing the horn switch applies ground to the horn relay control circuit or when the body control module (BCM) receives a request to sound the horns, it to will provide a ground to the horn relay control circuit. When the horn relay control circuit is grounded, the horn relay is energized and battery positive voltage is applied to the horns through the horn control circuit. The horns sound as long as ground is applied to the horn relay control circuit

The theft deterrent alarm siren shares the same control circuit as the left and right horns, but the theft deterrent alarm has it's own 10A fuse so that if the HORN fuse is open while the BCM is commanding the theft deterrent alarm, the theft deterrent alarm siren will still sound independently of the left and right horns.

Diagnostic Starting Point - Lighting

Begin the system diagnosis with the Diagnostic System Check - Vehicle. The Diagnostic System Check - Vehicle will provide the following information:

- The identification of the control modules which command the system
- The ability of the control modules to communicate through the serial data circuit
- The identification of any stored diagnostic trouble codes (DTCs) and their status

The Use of the Diagnostic System Check - Vehicle will identify the correct procedure for diagnosing the system and where the procedure is located.

DTC B0970

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.
- Diagnostic Procedure Instructions provides an overview of each diagnostic category.

DTC Descriptor

DTC B0970 00: Hazard Warning Switch Stuck

Circuit / System Description

The hazard flashers may be activated in any power mode. The hazard switch is integrated into the driver information display panel. When the hazard switch is placed in the ON position, the radio communicates via serial data with the body control module (BCM) requesting the hazard lamps be activated. The BCM supplies battery voltage to all four turn signal lamps in an ON and OFF duty cycle. When the hazard switch is activated, the BCM sends a serial data message to the instrument panel cluster (IPC) requesting both turn signal indicators to be cycled ON and OFF.

Conditions for Running the DTC

Battery voltage must be between 9-16 volts.

Conditions for Setting the DTC

The radio detects the hazard switch is held in the ON position for greater that 60 seconds.

Actions Taken When the DTC Sets

Hazard lamps are always ON.

Conditions for Clearing the DTC

- The condition responsible for setting the DTC no longer exists.
- A history DTC will clear once 100 consecutive malfunction-free ignition cycles have occurred.

DTC B2530

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.
- Diagnostic Procedure Instructions provides an overview of each diagnostic category.

DTC Descriptor

DTC B2530 00: Front Fog Lamps Control Circuit

Diagnostic Fault Information

Circuit	Short to Ground	Open/High Resistance	Short to Voltage	Signal Performance
Fog Lamp Relay B+	--	1	1	--
Fog Lamp Switch Signal	2	2	2	--
Fog Lamp Relay Control	1	1	B2530 00	--
Fog Lamp Control	1	1	1	--
Fog Lamp - LF Ground	--	1	--	--
Fog Lamp - RF Ground	--	1	--	--
Fog Lamp Switch Ground	--	2	--	--
1. Front Fog Lamps Malfunction 2. Front Fog Lamp Switch Malfunction				

Circuit/System Description

The fog lamp relay is supplied with battery voltage at all times. The fog lamp switch signal circuit is grounded momentarily by pressing the fog lamp switch. The body control module (BCM) energizes the fog lamp relay by applying ground to the fog lamp relay control circuit. When the fog lamp relay is energized, the relay switch contacts close and battery voltage is applied through the FOG LAMP fuse to the fog lamp supply voltage circuit which illuminates the fog lamps.

Conditions for Running the DTC

- Battery voltage must be between 9-16 volts.

- Fog lamps ON.

Conditions for Setting the DTC

The BCM detects a short to voltage in the fog lamp relay control circuit.

Actions Taken When the DTC Sets

The front fog lamps will not operate when the park lamps are ON and the fog lamp switch is active.

Conditions for Clearing the DTC

- The condition responsible for setting the DTC no longer exists.
- A history DTC will clear once 100 consecutive malfunction-free ignition cycles have occurred.

Scan Tool Reference

Control Module References for scan tool information

Circuit/System Testing

1. Ignition OFF, disconnect the fog lamp relay.
2. Connect a test lamp between the B+ circuit terminal 86 and the control circuit terminal 85.
3. Command the Front Fog Light Test ON and OFF with a scan tool. The test lamp should turn ON and OFF when changing between the commanded states.

   If the test lamp is always ON, test the control circuit for a short to ground. If the circuit tests normal, replace the BCM.

If the test lamp is always OFF, test the control circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.

4. If all circuits test normal, test or replace the fog lamp relay.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

DTC Descriptor

DTC B2545 00: Backup Lamps Circuit

Diagnostic Fault Information

Circuit	Short to Ground	Open/High Resistance	Short to Voltage	Signal Performance
Backup Lamp Relay B+	1	1	--	--
Backup Lamp Relay Control	1	1	B2545 00	--
Backup Lamps Control	1	1	1	--
Backup Lamp Ground - Left	--	1	--	--
Backup Lamp Ground - Right	--	1	--	--
1. Backup Lamps Malfunction				

Circuit/System Description

When the transmission is placed in the REVERSE position, the transmission control module (TCM) sends a serial data message to the body control module (BCM). The message indicates that the gear selector is in the REVERSE position. The BCM applies ground to the backup lamp relay control circuit energizing the backup lamp relay coil. With the relay coil energized, the switch contacts close allowing battery voltage to flow from the BACKUP LP fuse to the left and right backup lamps. Once the driver moves the gear selector out of the REVERSE position, a message is sent by the TCM via serial data requesting the BCM to remove ground from the backup lamp relay control circuit.

Conditions for Running the DTC

- Battery voltage must be between 9-16 volts.
- Backup lamps commanded ON.

Conditions for Setting the DTC

DTC B2545 00 will set when the BCM detects a short to voltage in the backup lamp relay control circuit.

Actions Taken When the DTC Sets

When DTC B2545 00 is present, the backup lamps will not operate.

Conditions for Clearing the DTC

- The condition responsible for setting the DTC no longer exists.
- A history DTC will clear once 100 consecutive malfunction-free ignition cycles have occurred.

DTC Descriptor

DTC B2555 00: Pass Compartment Lamp Control Circuit

Diagnostic Fault Information

Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.

Circuit/System Description

The courtesy lamp fuse supplies battery voltage to the body control module (BCM). The BCM applies battery voltage to the courtesy lamps through the courtesy lamp supply voltage circuit. The courtesy lamps are triggered by the door switch, a door lock/unlock command a momentary switch located next to the centre interior light. The lamps are controlled by the BCM. When any door is opened, the door switch contacts close sending the BCM a door-open input, or if the BCM receives a door lock or unlock input, the BCM will activate the courtesy lamp supply voltage circuit, providing battery voltage to the interior lights.

Conditions for Running the DTC

Battery voltage must be between 9-16 volts.

Conditions for Setting the DTC

The BCM detects an open or short to voltage in the courtesy light control circuit.

Action Taken When the DTC Sets

When DTC B2555 is present, the courtesy lamps will only operate manually from the momentary switch.

Conditions for Clearing the DTC

- The conditions for setting the DTC are no longer present.
- The history DTC clears after 40 fault-free ignition cycles.
- The DTC can be cleared using a scan tool.

Circuit/System Verification

Ensure all the doors are closed, lock and unlock the doors. The courtesy lights should illuminate and deactivate as the doors are unlocked and locked.

Circuit/System Testing

1. Disconnect the courtesy lamp harness connector at the courtesy lamp.
2. Connect a test lamp between the courtesy lamp control circuit and a known ground at the courtesy harness connector.

   Activate and deactivate the momentary switch the test lamp should illuminate and deactivate as the switch is operated.

   If the test lamp does not illuminate and deactivate, with all doors closed, open and close the drivers door. The test lamp should illuminate and deactivate as the door is opened and closed.

   If the test lamp does not illuminate and deactivate on either circuit, locate and repair an open/high resistance or short to voltage in the control circuit.
3. If circuits test OK, replace the BCM.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

Control Module References for BCM replacement, setup and programming.

1. Headlamps Malfunction

2. Park, License, and/or Tail Lamps Malfunction

Circuit/System Description

When the headlamp and panel dimmer switch is placed in the headlamp position, ground is applied to the body control module (BCM) through the headlamp low beam signal circuit. The BCM then applies ground to the headlamp low beam relay control circuit which energizes the low beam relay. With the low beam relay energized, the switch contacts close allowing battery voltage to flow through the LO BEAM fuses to the low beam headlamps. Ground for the low beam headlamps is supplied at ground G102.

Conditions for Running the DTC

- Battery voltage must be between 9-16 volts.
- Headlamps ON.

Conditions for Setting the DTC

DTC B2575 00 will set when the BCM detects a short to voltage in the headlamp low beam relay control circuit.

Actions Taken When the DTC Sets

When DTC B2575 00 is present, the low beam headlamps will not operate.

Conditions for Clearing the DTC

- The condition responsible for setting the DTC no longer exists.
- A history DTC will clear once 100 consecutive malfunction-free ignition cycles have occurred.

Turn Signal/Multifunction Switch Ground	--	1	--	--

1. Headlamps Malfunction

2. Park, License, and/or Tail Lamps Malfunction

Circuit/System Description

The body control module (BCM) supplies a B+ reference voltage through each of the headlamp switch signal circuits to the headlamp switch. When the headlamp switch is in the AUTO position, all headlamp switch signal circuits to the BCM are open and the BCM operates in the automatic mode. When the headlamp switch is turned to the PARK position, only the park lamp switch signal circuit is pulled low signaling the BCM park lamps ON request. When the headlamp switch is turned to the HEAD position, the park lamp and headlamp switch signal circuits are both pulled low, signaling the BCM the headlamps ON request. When the headlamp switch is turned to the OFF position, only the headlamp OFF switch signal circuit is pulled low, signaling the BCM the lights off request.

Conditions for Running the DTC

- Battery voltage must be between 9-16 volts.
- Headlamp and panel dimmer switch cycled between the AUTO, PARK, HEAD, and OFF positions.

Conditions for Setting the DTC

The BCM receives a mismatch signal between the headlamps OFF signal circuit, the headlamps ON signal circuit, and the park lamps ON signal circuit.

Action Taken When the DTC Sets

The BCM disregards the headlamp switch input and defaults to automatic headlamp function.

Conditions for Clearing the DTC

- The condition responsible for setting the DTC no longer exists.
- A history DTC will clear once 100 consecutive malfunction-free ignition cycles have occurred.

Circuit / System Testing

1. Ignition OFF, disconnect the harness connector at the headlamp and panel dimmer switch.
2. Ignition ON, verify the scan tool Headlamp Switch parameter is Off.

   If not the specified value, test the signal circuit terminal 1 for short to ground. If the circuit tests normal, replace the BCM.
3. Verify the scan tool Auto Headlamp Disable Switch parameter is Inactive.

   If not the specified value, test the signal circuit terminal 3 for short to ground. If the circuit tests normal, replace the BCM.
4. Verify the scan tool Park Lamp Switch parameter is Off.

   If not the specified value, test the signal circuit terminal 5 for short to ground. If the circuit tests normal, replace the BCM.
5. Install a 3A fused jumper wire between the signal circuit terminal 1 and ground. Verify the scan tool Headlamp Switch parameter is On.

   If not the specified value, test the signal circuit for a short to voltage or an open/high resistance. If the circuits test normal replace the BCM.
6. Install a 3A fused jumper wire between the signal circuit terminal 3 and ground. Verify the scan tool Auto Headlamp Disable Switch parameter is Active.

   If not the specified value, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
7. Install a 3A fused jumper wire between the signal circuit terminal 5 and ground. Verify the scan tool Park Lamp Switch parameter is On.

   If not the specified value, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
8. If all circuits test normal, test or replace the headlamp and panel dimmer switch.

Headlamp and Panel Dimmer Switch Ground	--	1	--	--
Turn Signal/Multifunction Switch Ground	--	1	--	--
1. Headlamps Malfunction				

2. Park, License, and/or Tail Lamps Malfunction

Circuit/System Description

When the turn signal/multifunction switch is placed in the headlamps high or flash to pass (FTP) position, ground is applied to the body control module (BCM) through the headlamp high beam signal circuit or the flash to pass switch signal circuit. The BCM applies ground to the headlamp high beam relay control circuit which energizes the high beam relay. With the high beam relay energized, the switch contacts close allowing battery voltage to flow through the HI BEAM fuses to the high beam headlamps. Ground for the high beam headlamps is supplied at ground G104.

Conditions for Running the DTC

- Battery voltage must be between 9-16 volts.
- High beam headlamps ON.

Conditions for Setting the DTC

DTC B2580 00 will set when the BCM detects a short to voltage in the headlamp high beam relay control circuit.

Actions Taken When the DTC Sets

When DTC B2580 00 is present, the high beam headlamps and flash to pass (FTP) will not operate.

Conditions for Clearing the DTC

- The condition responsible for setting the DTC no longer exists.
- A history DTC will clear once 100 consecutive malfunction-free ignition cycles have occurred.

Tail/Stop Lamp - Right Ground	--	1	--	--
Headlamp And Panel Dimmer Switch Ground	--	1	--	--
1. Park, License, and/or Tail Lamps Malfunction				

Circuit/System Description

Battery voltage is applied at all times to both the coil and switch sides of the PRK LAMP relay located in the underhood fuse block. The headlamp and panel dimmer switch is suppled with ground at G201 at all times. When the headlamp switch is placed in either the HEAD or PARK position, ground is applied to the park lamp signal circuit to the body control module (BCM). The

BCM responds by applying ground to the park lamp relay control circuit. This energizes the park lamp relay coil causing the relay switch contacts to close allowing battery voltage to flow through the LT PRK and RT PRK fuses to all of the park, tail, and license lamps.

Conditions for Running the DTC

- Battery voltage must be between 9-16 volts.
- Park lamps ON.

Conditions for Setting the DTC

DTC B2585 00 will set when the BCM detects a short to voltage in the park lamp relay control circuit.

Actions Taken When the DTC Sets

When DTC B2585 00 is present, the park lamps will not operate.

Conditions for Clearing the DTC

- The condition responsible for setting the DTC no longer exists.
- A history DTC will clear once 100 consecutive malfunction-free ignition cycles have occurred.

1. Interior Backlighting Malfunction

2. Dimmer Switch Malfunction

Circuit/System Description

The up/down dimmer controls located on the headlamp and panel dimmer switch is used to increase and decrease the brightness of the interior backlighting components. Each dimmer control switch provides a voltage signal that will increase as the brightness of the lights are increased and decrease as the brightness of the lights are decreased. The body control module (BCM) supplies each dimmer control switch with a signal circuit. When either the up or down dimmer control switch is placed in the desired position, the dimmed voltage setting is applied from the appropriate dimmer control switch through the dimmer switch signal circuit to the BCM. The BCM interprets the signal and applies the dimmed voltage to the LED backlight dimming control circuit and the interior backlighting components dim to the requested level.

Conditions for Running the DTC

- Battery voltage must be between 9-16 volts.
- Park lamps ON.

Conditions for Setting the DTC

DTC B2610 00 will set when the BCM detects a short to ground in the LED backlight dimming control circuit.

Actions Taken When the DTC Sets

The BCM will not dim or illuminate any indicators supplied by the LED backlight dimming control circuit.

Conditions for Clearing the DTC

- The condition responsible for setting the DTC no longer exists.
- A history DTC will clear once 100 consecutive malfunction-free ignition cycles have occurred.

DTC Descriptor

DTC B2615 00 : Passenger Compartment Dimming 2 Circuit

Diagnostic Fault Information

Circuit	Short to Ground	Open/High Resistance	Short to Voltage	Signal Performance
CTSY/TRN SIG RT FRT Fuse B+ Terminal 2 X4	B2615 00	B2615 00	--	--
Courtesy Lamps Control	B2615 00	B2615 00	B2615 00	--

Circuit/System Description

The body control module (BCM) applies battery voltage to the courtesy lamps through the courtesy lamp control circuit. When any door is opened, the jam switch contacts close and the BCM receives a door-ajar input. If the BCM receives a door lock or unlock input or a rear hatch open input, the BCM will activate the courtesy lamp control circuit, providing battery voltage to all of the instrument panel (I/P) courtesy lamps, rearview mirror lamps, and rear compartment lamps. In the event that any of these lamps were to remain illuminated for more than 20 minutes with the ignition switch in the OFF position, the BCM will deactivate the inadvertent power courtesy lamp control circuit to prevent a total battery discharge condition.

Conditions for Running the DTC

Battery voltage must be between 9-16 volts.

Conditions for Setting the DTC

DTC B2615 00 will set for the following conditions:

- The BCM detects a short to voltage, short to ground, or an open/high resistance in the courtesy lamps control circuit.
- The BCM detects a short to ground or an open/high resistance in the CTSY/TRN SIG RT FRT fuse B+ circuit terminal 2 X4.

Actions Taken When the DTC Sets

The BCM will not illuminate any courtesy lamps supplied by the courtesy lamps control circuit.

Conditions for Clearing the DTC

- The condition responsible for setting the DTC no longer exists.
- A history DTC will clear once 100 consecutive malfunction-free ignition cycles have occurred.

Circuit/System Testing

1. Ignition OFF, disconnect the X4 harness connector at the BCM.
2. Ignition ON, verify that a test lamp illuminates between the B+ circuit terminal 2 and ground.

   If the test lamp does not illuminate, test the B+ circuit for a short to ground or an open/high resistance.
3. Ignition OFF, connect the X4 harness connector at the BCM.
4. Disconnect the harness connectors at the following components.
   - Dome/reading lamp - front
   - Dome/reading lamp - rear
   - Ignition key cylinder lamp
   - Courtesy lamp - left footwell
   - Courtesy lamp - right footwell
   - Courtesy lamp - LF door

  - Courtesy lamp - LR door
  - Courtesy lamp - RF door
  - Courtesy lamp - RR door
5. Connect a test lamp between each control circuit terminal listed below and ground.
   - Dome/reading lamp - front terminal 4
   - Dome/reading lamp - rear terminal 2
   - Ignition key cylinder lamp terminal A
   - Courtesy lamp - left footwell terminal 1
   - Courtesy lamp - right footwell terminal 1
   - Courtesy lamp - LF door terminal A
   - Courtesy lamp - LR door terminal A
   - Courtesy lamp - RF door terminal A
   - Courtesy lamp - RR door terminal A
6. Command the Interior Lamp Test ON and OFF with a scan tool. The test lamp should turn ON and OFF when changing between the commanded states.

   If the test lamp is always ON, test the control circuit for a short to voltage. If the circuit tests normal, replace the BCM.

   If the test lamp is always OFF, test the control circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the BCM.
7. Reconnect each component one at a time and verify the DTC does not reset as current.

   If the DTC resets as current, test or replace the component responsible for setting the DTC.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

- Ignition Lock Cylinder Bulb Replacement
- Console Lamp Replacement
- Dome Lamp Replacement
- Vanity Mirror Lamp Replacement
- Rear Compartment Courtesy Lamp Replacement
- Instrument Panel Compartment Lamp Replacement

1. Interior Backlighting Malfunction				

Circuit/System Description

The up/down dimmer controls located on the headlamp and panel dimmer switch is used to increase and decrease the brightness of the interior backlighting components. Each dimmer control switch provides a voltage signal that will increase as the brightness of the lights are increased and decrease as the brightness of the lights are decreased. The body control module (BCM) supplies each dimmer control switch with a signal circuit. When either the up or down dimmer control switch is placed in the desired position, the dimmed voltage setting is applied from the appropriate dimmer control switch through the dimmer switch signal circuit to the BCM. The BCM interprets the signal and applies the dimmed voltage to the LED backlight dimming control circuits and the interior backlighting components dim to the requested level.

Conditions for Running the DTC

- Battery voltage must be between 9-16 volts.
- Park lamps ON.

Conditions for Setting the DTC

The BCM detects a short to ground in the LED backlight dimming control circuit terminal 25 X3.

Actions Taken When the DTC Sets

The BCM will not dim or illuminate any indicators supplied by the LED backlight dimming control circuit terminal 25 X3.

Conditions for Clearing the DTC

- The condition responsible for setting the DTC no longer exists.
- A history DTC will clear once 100 consecutive malfunction-free ignition cycles have occurred.

1. Headlamps Malfunction 2. Daytime Running Lamps Malfunction				

Circuit/System Description

With Manual HVAC

The ambient light sensor is used to monitor outside lighting conditions. The ambient light sensor provides a voltage signal that will vary between 0.2 and 4.9 volts depending on outside lighting conditions. The body control module (BCM) provides a 5-volt reference signal to the ambient light sensor which is permanently grounded at G201. The BCM monitors the ambient light sensor signal circuit to determine if outside lighting conditions are correct for either daytime running lights (DRL) or automatic lamp control (ALC) when the headlamp switch is in the AUTO position. In daylight conditions the BCM will command the DRLs ON. The DRLs consists on the low beam headlamps illuminated at full intensity. During low light conditions the BCM will command the low beam headlamps ON. Any function or condition that turns on the headlamps will cancel DRL operation.

LHD With Automatic HVAC

The ambient light/sun load sensor is used to monitor outside lighting conditions. The ambient light sensor provides a voltage signal that will vary between 0.2 and 4.9 volts depending on outside lighting conditions. The body control module (BCM) provides a 5-volt reference signal to the ambient light sensor and the HVAC control module provides a low reference ground. The BCM monitors the ambient light sensor signal circuit to determine if outside lighting conditions are correct for either daytime running lights (DRL) or automatic lamp control (ALC) when the headlamp switch is in the AUTO position. In daylight conditions the BCM will command the DRLs ON. The DRLs consists on the low beam headlamps illuminated at full intensity. During low light conditions the BCM will command the low beam headlamps ON. Any function or condition that turns on the headlamps will cancel DRL operation.

RHD With Automatic HVAC

The ambient light/sun load sensor is used to monitor outside lighting conditions. The ambient light sensor provides a voltage signal that will vary between 0.2 and 4.9 volts depending on outside lighting conditions. The body control module (BCM) provides a 5-volt reference signal to the ambient light sensor which is permanently grounded at G201. The BCM monitors the ambient light sensor signal circuit to determine if outside lighting conditions are correct for either daytime running lights (DRL) or automatic lamp control (ALC) when the headlamp switch is in the AUTO position. In daylight conditions the BCM will command the DRLs ON. The DRLs consists on the low beam headlamps illuminated at full intensity. During low light conditions the BCM will command the low beam headlamps ON. Any function or condition that turns on the headlamps will cancel DRL operation.

Conditions for Running the DTC

Battery voltage must be between 9-16 volts.

Conditions for Setting the DTC

B2645 03

The BCM detects a short to ground in the ambient light sensor signal circuit.

B2645 07

The BCM detects a short to voltage or an open/high resistance in the ambient light sensor signal circuit.

Actions Taken When the DTC Sets

- Automatic lamp control (ALC) is inoperative.
- The BCM defaults to low light status and commands the low beam headlamps ON.

Conditions for Clearing the DTC

- The condition responsible for setting the DTC no longer exists.
- A history DTC will clear once 100 consecutive malfunction-free ignition cycles have occurred.

Scan Tool Reference

Control Module References for scan tool information

Circuit/System Testing

With Manual HVAC

1. Ignition OFF, disconnect the harness connector at the ambient light sensor.
2. Ignition OFF, scan tool OFF, test for less than 1 ohm between the ground circuit terminal B and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Ignition ON, verify the scan tool Ambient Light Sensor parameter is greater than 4.65 volts.

   If less than the specified range, test the signal circuit terminal A for a short to ground. If the circuit tests normal, replace the BCM.
4. Install a 3 A fused jumper wire between the signal circuit terminal A and the ground circuit terminal B. Verify the scan tool Ambient Light Sensor parameter is less than 0.196 volts.

   If greater than the specified range, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
5. If all circuits test normal, replace the ambient light sensor.

With Automatic HVAC - LHD

1. Ignition OFF, disconnect the harness connector at the sunload sensor.
2. Ignition ON, verify that a test lamp illuminates between the low reference circuit terminal C and B+.

   If the test lamp does not illuminate, test the low reference circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the HVAC control module.
3. Ignition ON, verify the scan tool Ambient Light Sensor parameter is greater than 4.65 volts.

   If less than the specified range, test the signal circuit terminal D for a short to ground. If the circuit tests normal, replace the BCM.
4. Install a 3 A fused jumper wire between the signal circuit terminal D and the low reference circuit terminal C. Verify the scan tool Ambient Light Sensor parameter is less than 0.196 volts.

   If greater than the specified range, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
5. If all circuits test normal, replace the sunload sensor assembly.

With Automatic HVAC - RHD

1. Ignition OFF, disconnect the harness connector at the sunload sensor.
2. Ignition OFF, scan tool OFF, test for less than 1 ohm between the ground circuit terminal C and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Ignition ON, verify the scan tool Ambient Light Sensor parameter is greater than 4.65 volts.

   If less than the specified range, test the signal circuit terminal D for a short to ground. If the circuit tests normal, replace the BCM.
4. Install a 3 A fused jumper wire between the signal circuit terminal D and the ground circuit terminal C. Verify the scan tool Ambient Light Sensor parameter is less than 0.196 volts.

   If greater than the specified range, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
5. If all circuits test normal, replace the ambient light sensor.

1. Headlamp Leveling Malfunction				

Circuit/System Description

Each headlamp assembly contains a headlamp leveling motor that is controlled by the headlamp control module. The front and rear headlamp leveling sensors provide the headlamp control module with suspension position information. Each sensor receives a 5-volt reference, signal, and low reference circuits from the headlamp control module. The sensors are connected to the control arms of the front and rear suspension. As the vehicle travels, the suspension compresses and rebounds moving the suspension position sensor arms. This causes the signal output of the sensor to change. The headlamp control module compares the information from both suspension position sensors and adjusts the headlamp leveling as needed. The headlamp control module is wired to each headlamp leveling motor with 4 directional motor control circuits.

Conditions for Running the DTC

- Battery voltage must be between 9-16 volts.
- Ignition in the ON or RUN position.
- Headlamps ON.

Conditions for Setting the DTC

B3410 02 or B3420 02

The headlamp control module detects a short to ground on the headlamp leveling sensor signal circuit.

B3410 05 or B3420 05

The headlamp control module detects a short to voltage or an open/high resistance on the headlamp leveling sensor signal circuit.

B3410 08 or B3420 08

The headlamp control module detects an invalid signal on the headlamp leveling sensor signal circuit.

Actions Taken When the DTC Sets

- The headlamp control module disables the headlamp leveling system.
- The driver information center (DIC) will display AFL Lamps Need Service.
- On vehicles equipped with both AFL and headlamp leveling, the AFL system will remain active.

Conditions for Clearing the DTC

- The condition responsible for setting the DTC no longer exists.
- A history DTC will clear once 50 consecutive malfunction-free cycles have occurred.

Circuit/System Description

Each headlamp assembly contains a headlamp leveling motor that is controlled by the headlamp control module. The front and rear headlamp leveling sensors provide the headlamp control module with suspension position information. Each sensor receives a 5-volt reference, signal, and low reference circuits from the headlamp control module. The sensors are connected to the control arms of the front and rear suspension. As the vehicle travels, the suspension compresses and rebounds moving the suspension position sensor arms. This causes the signal output of the sensor to change. The headlamp control module compares the information from both suspension position sensors and adjusts the headlamp leveling as needed. The headlamp control module is wired to each headlamp leveling motor with 4 directional motor control circuits.

Conditions for Running the DTC

- Battery voltage must be between 9-16 volts.
- Ignition in the ON or RUN position.
- Headlamps ON.

Conditions for Setting the DTC

B3435 02

The headlamp control module detects a short to ground on any of the left motor control circuits.

B3435 05

The headlamp control module detects a short to voltage or an open/high resistance on any of the left motor control circuits.

B3435 54

The headlamp control module detects an overheating condition on any of the left motor control circuits.

B3440 02

The headlamp control module detects a short to ground on any of the right motor control circuits.

B3440 05

The headlamp control module detects a short to voltage or an open/high resistance on any of the right motor control circuits.

B3440 54

The headlamp control module detects an overheating condition on any of the right motor control circuits.

Actions Taken When the DTC Sets

- When DTC B3435 or DTC B3440 sets, the headlamp control module will attempt to return the lamps to a nominal position and disable all requests to all headlamp actuators.
- The driver information center (DIC) will display AFL Lamps Need Service.

Conditions for Clearing the DTC

- The condition responsible for setting the DTC no longer exists.
- A history DTC will clear once 50 consecutive malfunction-free cycles have occurred.

Scan Tool Reference

Control Module References for scan tool information

Circuit/System Testing

1. Ignition OFF, disconnect the harness connector at the inoperative headlamp.
2. Remove the COMM ENABLE 10A fuse.
3. Ignition OFF, scan tool OFF, test for 20K -22K ohms between each control circuit terminal listed below and ground.
   - Headlamp leveling motor control terminal 3
   - Headlamp leveling motor control terminal 4
   - Headlamp leveling motor control terminal 5
   - Headlamp leveling motor control terminal 10

   If greater than the specified range, test the control circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the headlamp control module.

   If less than the specified range, test the control circuit for a short to ground. If the circuit tests normal, replace the headlamp control module.
4. Install the COMM ENABLE 10A fuse.
5. Ignition ON, scan tool OFF, headlamps ON, verify that a test lamp does not illuminate between each control circuit terminal listed below and ground.
   - Headlamp leveling motor control terminal 3
   - Headlamp leveling motor control terminal 4
   - Headlamp leveling motor control terminal 5
   - Headlamp leveling motor control terminal 10

   If the test lamp illuminates, test the control circuit for a short to voltage. If the circuit tests normal, replace the headlamp control module.
6. If all circuits test normal, replace the appropriate headlamp assembly.

2. Center High Mounted Stop Lamp (CHMSL) Malfunction

3. Cruise Control Malfunction

Circuit/System Description

The brake pedal position sensor is used to sense the action of the driver application of the brake pedal. The brake pedal position sensor provides an analog voltage signal that will increase as the brake pedal is applied. The body control module (BCM) provides a low reference signal and a 5-volt reference voltage to the brake pedal position sensor. When the variable signal reaches a voltage threshold indicating the brakes have been applied, the BCM will apply battery voltage to the stop lamp control circuit illuminating the left and right stop lamps and the center high mounted stop lamp (CHMSL). The BCM also applies battery voltage to the transmission control module (TCM) and engine control module (ECM) via the brake applied signal circuit.

Conditions for Running the DTC

- Battery voltage must be between 9-16 volts.
- Brakes APPLIED.

Conditions for Setting the DTC

- The DTC will set when the BCM detects a short to ground in the stop lamp control circuit when the stop lamps are being commanded ON.
- The DTC will set when the BCM detects a short to ground or an open/high resistance in the STOP fuse B+ circuit terminal 4 X4.

Actions Taken When the DTC Sets

The BCM will not illuminate the stop lamps.

Conditions for Clearing the DTC

- The condition responsible for setting the DTC no longer exists.
- A history DTC will clear once 100 malfunction-free ignition cycles have occurred.

Circuit/System Testing

1. Ignition OFF, disconnect the X4 harness connector at the BCM.
2. Verify that a test lamp illuminates between the STOP fuse B+ circuit terminal 4 and ground.

   If the test lamp does not illuminate, test the B+ circuit for a short to ground or an open/high resistance.
3. Connect the X4 harness connector at the BCM.
4. Disconnect the harness connectors at the following components.
   - CHMSL
   - Tail/stop lamp - left
   - Tail/stop lamp - right
5. Connect a test lamp between the control circuit terminal 4 at the tail/stop lamp - right and ground.
6. Ignition ON, command the Brake Light Test ON and OFF with a scan tool. The test lamp should turn ON and OFF when changing between the commanded states.

   If the test lamp is always ON, test the control circuit for a short to voltage. If the circuit tests normal, replace the BCM.

   If the test lamp is always OFF, test the control circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the BCM.
7. Reconnect each component one at a time and verify the DTC does not reset as current.

   If the DTC resets as current, test or replace the component responsible for setting the DTC.

Circuit/System Description

The brake pedal position sensor is used to sense the action of the driver application of the brake pedal. The brake pedal position sensor provides an analog voltage signal that will increase as the brake pedal is applied. The body control module (BCM) provides a low reference signal and a 5-volt reference voltage to the brake pedal position sensor. When the variable signal reaches a voltage threshold indicating the brakes have been applied, the BCM will apply battery voltage to the stop lamp control circuit illuminating the left and right stop lamps and the center high mounted stop lamp (CHMSL). The BCM also applies battery voltage to the transmission control module (TCM) and engine control module (ECM) via the brake applied signal circuit.

Conditions for Running the DTC

- Battery voltage must be between 9-16 volts.
- Brakes APPLIED.

Conditions for Setting the DTC

DTC C0277 06 will set for the following conditions:

- The BCM detects a short to ground or an open/high resistance in the brake pedal position sensor signal circuit.
- The BCM detects a short to ground or an open/high resistance in the brake pedal position sensor 5-volt reference circuit.

DTC C0277 07 will set for the following conditions:

- The BCM detects a short to battery voltage in the brake pedal position sensor signal circuit.
- The BCM detects a short to battery voltage in the brake pedal position sensor 5-Volt Reference circuit.

C0277 09

The DTC will set when the BCM detects the brake pedal position sensor signal is changing faster than possible under normal operating conditions.

C0277 4B

The DTC will set when the brake pedal position sensor home position is not learned.

C0890 03

The DTC will set when the BCM detects a short to ground in the brake pedal position sensor voltage reference circuit for 0.5 seconds or greater.

C0890 07

The DTC will set when the BCM detects a short to battery voltage in the brake pedal position sensor voltage reference circuits for 0.5 seconds or greater.

Actions Taken When the DTC Sets

- The ABS Fault indicator is commanded ON.
- If the DTC sets while the vehicle is running, the BCM will activate the brake lights when the vehicles transmission is not in the PARK position and the vehicle is not accelerating.
- For DTC C0277 4B the stop lamps may not activate at the expected brake pedal positions.

Conditions for Clearing the DTC

- The condition responsible for setting the DTC no longer exists.
- For DTC C0277 07 the ignition must be cycled before the code can be cleared.
- For DTC C0277 4B a successful brake pedal position sensor calibration has been performed.
- A history DTC will clear once 50 malfunction-free ignition cycles have occurred.
- A DTC will not clear the current status until the next ignition cycle.

Circuit/System Testing

C0277 06, C0277 07, C0890 03, and C0890 07

1. Ignition OFF, disconnect the harness connector at the brake pedal position sensor.
2. Ignition ON, verify that a test lamp illuminates between B+ and the low reference circuit terminal C.

   If the test lamp does not illuminate, test the low reference circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
3. Ignition ON, test for 4.8-5.2 volts between the 5-volt reference circuit terminal A and ground.

   If less than the specified range, test the 5-volt reference circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the BCM.

   If greater than the specified range, test the 5-volt reference circuit for a short to voltage. If the circuit tests normal, replace the BCM.
4. Verify the scan tool BPP Sensor parameter is less than 2 counts.

   If greater than the specified range, test the signal circuit terminal B for a short to voltage. If the circuit tests normal, replace the BCM.
5. Install a 3 A fused jumper wire between B+ and the signal circuit terminal B. Verify the scan tool BPP Sensor parameter is greater than 1000 counts.

   If less than the specified range, test the signal circuit for short to ground or an open/high resistance. If the circuit tests normal, replace the BCM.
6. If all circuits test normal, test or replace the brake pedal position sensor.

C0277 09

1. Replace the brake pedal position sensor.
2. Perform the brake pedal position sensor recalibration procedure. Refer to Brake Pedal Position Sensor Calibration.
3. Operate the vehicle within the Conditions for Running and Setting the DTC and verify the DTC does not reset.

   If the DTC resets, replace the BCM.

C0277 4B

Verify that DTC C0277 4B is not set.

If the DTC is set, perform the brake pedal position sensor calibration procedure. If the DTC resets, replace the brake pedal position sensor.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

- Stop Lamp Switch Replacement
- Brake Pedal Position Sensor Calibration
- Control Module References for BCM replacement, setup, and programming

Circuit/System Description

The brake pedal position sensor is used to sense the action of the driver application of the brake pedal. The brake pedal position sensor provides an analog voltage signal that will increase as the brake pedal is applied. The body control module (BCM) provides a low reference signal and a 5-volt reference voltage to the brake pedal position sensor. When the variable signal reaches a voltage threshold indicating the brakes have been applied, the BCM will apply battery voltage to the stop lamp control circuit illuminating the left and right stop lamps and the center high mounted stop lamp (CHMSL). The BCM also applies battery voltage to the transmission control module (TCM) and engine control module (ECM) via the brake applied signal circuit.

Conditions for Running the DTC

- Battery voltage must be between 9-16 volts.
- Brakes APPLIED.

Conditions for Setting the DTC

The BCM detects a short to ground in the brake applied signal circuit.

Actions Taken When the DTC Sets

The Service Vehicle Soon indicator is commanded ON.

Conditions for Clearing the DTC

- The condition responsible for setting the DTC no longer exists.
- A history DTC will clear once 100 malfunction-free ignition cycles have occurred.

Circuit/System Testing

1. Ignition OFF, disconnect the appropriate harness connector listed below.
   - ECM X1 - with L76
   - ECM X2 - with LY7
2. Connect a test lamp between the apprpriate signal circuit terminal listed below and ground.
   - ECM terminal 9 X1 - with L76
   - ECM terminal 52 X2 - with LY7
3. Ignition ON, command the stop lamps ON and OFF by applying and releasing the brake pedal. The test lamp should turn ON and OFF when changing between the commanded states.

   If the test lamp is always ON, test the signal circuit for a short to voltage. If the circuit tests normal, replace the BCM.

   If the test lamp is always OFF, test the signal circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the BCM.
4. Ignition OFF, connect a test lamp between the appropriate signal circuit terminal listed below at the ECM harness connector and the connector terminal at the ECM.
   - ECM terminal 9 X1 - with L76
   - ECM terminal 52 X2 - with LY7
5. Ignition ON, command the stop lamps ON and OFF by applying and releasing the brake pedal. The test lamp should turn ON and OFF when changing between the commanded states.

   If the test lamp does not turn ON and OFF when commanded, replace the ECM.
6. Ignition OFF, connect the harness connector at the ECM.
7. Disconnect the harness connector at the TCM.
8. Connect a test lamp between the appropriate signal circuit terminal listed below and ground.
   - TCM terminal 42 - with 4L60E/4L65E
   - TCM terminal 38 - with 5L40E
   - Automatic transmission terminal 6 - 6L50E
9. Ignition ON, command the stop lamps ON and OFF by applying and releasing the brake pedal. The test lamp should turn ON and OFF when changing between the commanded states.

   If the test lamp is always ON, test the signal circuit for a short to voltage. If the circuit tests normal, replace the BCM.

   If the test lamp is always OFF, test the signal circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the BCM.
10. If all circuits test normal, replace the TCM.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

- Brake Pedal Position Sensor Calibration
- Control Module References for BCM, ECM, or TCM replacement, setup, and programming

Symptoms - Lighting

Important: The following steps must be completed before using the symptom table.

- Perform the Diagnostic System Check - Vehicle before using a symptom table in order to verify that all of the following conditions are true:
  - There are no DTCs set.
  - The control modules can communicate via the serial data link.
- Review the system description and operation in order to familiarize yourself with the system functions. Refer to the following:
  - Interior Lighting Systems Description and Operation.
  - Exterior Lighting Systems Description and Operation.

Visual/Physical Inspection

- Inspect for aftermarket devices which may affect the operation of the lighting system. Refer to Checking Aftermarket Accessories.
- Inspect the easily accessible or visible system components for obvious damage or conditions which may cause the symptom.

Intermittent

Thoroughly inspect the wiring and connectors. An incomplete inspection of the wiring and connectors may result in misdiagnosis causing part replacement with the reappearance of the malfunction. If an intermittent malfunction exists, refer to Testing for Intermittent Conditions and Poor Connections.

Symptom List

Refer to a symptom diagnostic procedure from the following list in order to diagnose the symptom:

- Backup Lamps Malfunction
- Courtesy Lamps Malfunction
- Daytime Running Lamps Malfunction
- Front Fog Lamps Malfunction
- Rear Fog Lamps Malfunction
- Hazard Lamps Malfunction
- Headlamps Malfunction
- Headlamp Leveling Malfunction
- Interior Backlighting Malfunction
- Park, License, and/or Tail Lamps Malfunction
- Stop Lamps Malfunction
- Trailer Lamps Malfunction

- Turn Signal Lamps and/or Indicators Malfunction

Backup Lamps Malfunction

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.
- Diagnostic Procedure Instructions provides an overview of each diagnostic category.

Diagnostic Fault Information

Circuit	Short to Ground	Open/High Resistance	Short to Voltage	Signal Performance
Backup Lamp Relay B+	1	1	--	--

Backup Lamps Control	1	1	1	--
Backup Lamp Ground - Left	--	1	--	--
Backup Lamp Ground - Right	--	1	--	--
1. Backup Lamps Malfunction				

Circuit/System Description

When the transmission is placed in the REVERSE position, the transmission control module (TCM) sends a serial data message to the body control module (BCM). The message indicates that the gear selector is in the REVERSE position. The BCM applies ground to the backup lamp relay control circuit energizing the backup lamp relay coil. With the relay coil energized, the switch contacts close allowing battery voltage to flow from the BACKUP LP fuse to the left and right backup lamps. Once the driver moves the gear selector out of the REVERSE position, a message is sent by the TCM via serial data requesting the BCM to remove ground from the backup lamp relay control circuit.

Circuit/System Testing

1. Ignition OFF, disconnect the backup lamp relay.
2. Ignition ON, verify that a test lamp does not illuminate between the control circuit terminal 87 and ground.

   If the test lamp illuminates, test the control circuit for a short to voltage.
3. Verify that a test lamp illuminates between the B+ circuit terminal 30 and ground.

   If the test lamp does not illuminate, test the B+ circuit for a short to ground or an open/high resistance. If the circuit tests normal and the B+ circuit fuse is open, test the control circuit terminal 87 for a short to ground. If the circuit tests normal, test or replace the backup lamp relay.
4. Verify that a test lamp illuminates between the B+ circuit terminal 85 and ground.

   If the test lamp does not illuminate, test the B+ circuit for an open/high resistance.
5. Disconnect the harness connector at the inoperative backup lamp.
6. Ignition OFF, exterior lamps OFF, test for less than 5 ohms between the ground circuit terminal 1 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
7. Connect the harness connector at the inoperative backup lamp.
8. Connect a 15A fused jumper wire between the B+ circuit terminal 30 and the control circuit terminal 87. Verify the backup lamps illuminate.

   If the backup lamps do not illuminate, test the control circuit for an open/high resistance. If the circuit tests normal, test or replace the inoperative backup lamp.
9. Connect a test lamp between the B+ circuit terminal 85 and the control circuit terminal 86.
10. Command the Reverse Light Test ON and OFF with a scan tool. The test lamp should turn ON and OFF when changing between the commanded states.

    If the test lamp is always ON, test the control circuit for a short to ground. If the circuit tests normal, replace the BCM.

    If the test lamp is always OFF, test the control circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
11. If all circuits test normal, test or replace the backup lamp relay.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

Circuit/System Description

The body control module (BCM) applies battery voltage to the courtesy lamps through 2 separately controlled courtesy lamp supply voltage circuits. When any door is opened, the door ajar switch contacts close and the BCM receives a door-ajar input. If the BCM receives a door lock or unlock input or a rear hatch open input, the BCM will activate the courtesy lamp supply voltage circuits, providing battery voltage to all of the dome/reading lamps, ignition key cylinder lamp, rear compartment lamp, sunshade lamps footwell lamps, and courtesy lamps. In the event that any of these lamps were to remain illuminated for more than 20 minutes with the ignition switch in the OFF position, the BCM will deactivate the courtesy lamp control circuits to prevent a total battery discharge condition.

Circuit/System Verification

1. Ignition ON, doors CLOSED, observe the scan tool Interior Lamp Activation Reason parameter while turning the courtesy lamp defeat switch ON and OFF. The parameter should change between Off and Manual Defeat.

   If the parameter does not change between the commanded states, refer to Dome Lamp Defeat Switch Malfunction.
2. Ignition ON, courtesy lamp defeat switch OFF, observe the scan tool Interior Lamp Activation Reason parameter while opening and closing each door. The parameter should change between Door Open and Door Closed.

   If the parameter does not change as each door is opened and closed, refer to Door Ajar Indicator Malfunction.
3. Operate the dome lamp switch On and Off. The dome lamps should turn On and Off as the switch is activated.

   If the dome lamps do not turn On and Off as the switch is activated, refer to Dome Lamp Switch Malfunction.
4. Command the Interior Lamp Test ON and OFF with a scan tool. The courtesy lamps should turn ON and OFF when changing between the commanded states.

   If the courtesy lamps do not turn On and Off when commanded, refer to Courtesy Lamps Malfunction.

Circuit/System Testing

Dome Lamp Switch Malfunction

1. Ignition OFF, disconnect the harness connector at the front dome lamp.
2. Ignition OFF, scan tool OFF, doors CLOSED, interior lamps OFF, test for less than 5 ohms between the ground circuit terminal 1 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Ignition ON, verify that a test lamp does not illuminate between the signal circuit terminal 2 and ground.

   If the test lamp illuminates, test the signal circuit for a short to voltage. If the circuit tests normal, replace the BCM.
4. Test for B+ between the signal circuit terminal 2 and ground.

   If not the specified value, test the signal circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the BCM.
5. If all circuits test normal, replace the dome lamp.

Dome Lamp Defeat Switch Malfunction

1. Ignition OFF, disconnect the harness connector at the front dome lamp.

2. Ignition OFF, scan tool OFF, doors CLOSED, interior lamps OFF, test for less than 5 ohms between the ground circuit terminal 1 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Ignition ON, verify that a test lamp does not illuminate between the signal circuit terminal 3 and ground.

   If the test lamp illuminates, test the signal circuit for a short to voltage. If the circuit tests normal, replace the BCM.
4. Test for B+ between the signal circuit terminal 3 and ground.

   If not the specified value, test the signal circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the BCM.
5. If all circuits test normal, replace the dome lamp.

Courtesy Lamps Malfunction

1. Ignition OFF, disconnect the harness connector at the inoperative courtesy lamp.
2. Ignition OFF, scan tool OFF, doors CLOSED, interior lamps OFF, test for less than 5 ohms between the appropriate ground circuit terminal listed below and ground.
   - Dome/reading lamp - front terminal 1
   - Dome/reading lamp - rear terminal 1
   - Ignition key cylinder lamp terminal B
   - Courtesy lamp - left footwell terminal 2
   - Courtesy lamp - right footwell terminal 2
   - Courtesy lamp - LF door terminal A X2
   - Courtesy lamp - LR door terminal A X2
   - Courtesy lamp - RF door terminal A X2
   - Courtesy lamp - RR door terminal A X2

   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Connect a test lamp between the appropriate control circuit terminal listed below and ground.
   - Dome/reading lamp - front terminal 4
   - Dome/reading lamp - rear terminal 2
   - Ignition key cylinder lamp terminal A
   - Courtesy lamp - left footwell terminal 1
   - Courtesy lamp - right footwell terminal 1
   - Courtesy lamp - LF door terminal A X1
   - Courtesy lamp - LR door terminal A X1
   - Courtesy lamp - RF door terminal A X1
   - Courtesy lamp - RR door terminal A X1
4. Command the Interior Lamp Test ON and OFF with a scan tool. The test lamp should turn ON and OFF when changing between the commanded states.

   If the test lamp is always ON, test the control circuit for a short to voltage. If the circuit tests normal, replace the BCM.

   If the test lamp is always OFF, test the control circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the BCM.
5. If all circuits test normal, replace the inoperative courtesy lamp.

Reading Lamps Malfunction

1. Ignition OFF, disconnect the X3 harness connector at the BCM.
2. Ignition ON, verify that a test lamp illuminates between the B+ circuit terminal 2 and ground.

   If the test lamp does not illuminate, test the B+ circuit for a short to ground or an open/high resistance.
3. Ignition OFF, connect the X3 harness connector at the BCM.
4. Disconnect the harness connector at the inoperative dome/reading lamp assembly.
5. Ignition OFF, scan tool OFF, doors CLOSED, interior lamps OFF, test for less than 5 ohms between the ground circuit terminal 1 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
6. Ignition ON, verify that a test lamp illuminates between the appropriate control circuit terminal listed below and ground.
   - Dome/reading lamp - front terminal 5
   - Dome/reading lamp - rear terminal 3

   If the test lamp does not illuminate, test the control circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the BCM.
7. Remove the INADV/PWR/LED fuse and verify the test lamp turns OFF.

   If the test lamp remains illuminated, test the appropriate control circuit terminal listed below for a short to voltage. If the circuit tests normal, replace the BCM.
   - Dome/reading lamp - front terminal 5
   - Dome/reading lamp - rear terminal 3
8. If all circuits test normal, replace the inoperative dome/reading lamp assembly.

Rear Compartment Courtesy lamp Malfunction

1. Ignition OFF, disconnect the X3 harness connector at the BCM.
2. Ignition ON, verify that a test lamp illuminates between the B+ circuit terminal 2 and ground.

   If the test lamp does not illuminate, test the B+ circuit for a short to ground or an open/high resistance.
3. Ignition OFF, connect the X3 harness connector at the BCM.
4. Disconnect the X1 and X2 harness connectors at the rear compartment courtesy lamp.
5. Ignition OFF, trunk OPEN, test for less than 1 ohm between the control circuit terminal A X2 and ground.

   If greater than the specified range, test the control circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the rear compartment lid latch.
6. Ignition ON, verify that a test lamp illuminates between the control circuit terminal A X1 and ground.

   If the test lamp does not illuminate, test the control circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the BCM.
7. Remove the INADV/PWR/LED fuse and verify the test lamp turns OFF.

   If the test lamp remains illuminated, test the control circuit terminal A X1 for a short to voltage. If the circuit tests normal, replace the BCM.
8. Ignition OFF, connect the X1 and X2 harness connectors at the rear compartment courtesy lamp. Disconnect the harness connector at the rear compartment lid latch.
9. Ignition ON, verify that a test lamp illuminates between the control circuit terminal 2 and ground.

   If the test lamp does not illuminate, test the control circuit for a short to ground or an open/high resistance.
10. If all circuits test normal, replace the rear compartment courtesy lamp.

Sunshade Lamps Malfunction

1. Ignition OFF, disconnect the X3 harness connector at the BCM.
2. Ignition ON, verify that a test lamp illuminates between the B+ circuit terminal 2 and ground.

   If the test lamp does not illuminate, test the B+ circuit for a short to ground or an open/high resistance.
3. Ignition OFF, connect the X3 harness connector at the BCM.
4. Ignition OFF, disconnect the harness connector at the inoperative sunshade lamp.
5. Ignition OFF, scan tool OFF, doors CLOSED, interior lamps OFF, test for less than 5 ohms between the ground circuit terminal 1 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
6. Ignition ON, verify that a test lamp illuminates between the control circuit terminal 2 and ground.

   If the test lamp does not illuminate, test the control circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the BCM.
7. Remove the INADV/PWR/LED and verify the test lamp turns OFF.

   If the test lamp remains illuminated, test the control circuit terminal 2 for a short to voltage. If the circuit tests normal, replace the BCM.
8. If all circuits test normal, replace the inoperative sunshade lamp assembly.

Console Compartment Lamp Malfunction

1. Ignition OFF, disconnect the X2 harness connectors at the console compartment lamp switch.
2. Ignition OFF, test for less than 1 ohm between the ground circuit terminal A X2 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Connect the X2 harness connectors at the console compartment lamp switch.
4. Ignition OFF, disconnect the X1 and X2 harness connectors at the console compartment lamp.
5. Ignition OFF, console compartment OPEN, test for less than 1 ohm between the control circuit terminal A X2 and ground.

   If the test lamp does not illuminate, test the control circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the console compartment lamp switch.
6. Verify that a test lamp illuminates between the control circuit terminal A X1 and ground.

   If the test lamp does not illuminate, test the control circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the BCM.
7. Remove the INADV/PWR/LED and verify the test lamp turns OFF.

   If the test lamp remains illuminated, test the control circuit terminal A X1 for a short to voltage. If the circuit tests normal, replace the BCM.
8. If all circuits test normal, replace the console compartment lamp.

I/P Compartment Lamp Malfunction

1. Ignition OFF, disconnect the X2 harness connectors at the I/P compartment lamp switch.
2. Ignition OFF, test for less than 1 ohm between the ground circuit terminal A X2 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Connect the X2 harness connectors at the I/P compartment lamp switch.
4. Disconnect the X1 and X2 harness connectors at the I/P compartment lamp.
5. Ignition OFF, I/P compartment OPEN, test for less than 1 ohm between the control circuit terminal A X2 and ground.

   If greater than the specified range, test the control circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the I/P compartment lamp switch.

6. Verify that a test lamp illuminates between the control circuit terminal A X1 and ground.

   If the test lamp does not illuminate, test the control circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the BCM.
7. Remove the INADV/PWR/LED and verify the test lamp turns OFF.

   If the test lamp remains illuminated, test the control circuit terminal A X1 for a short to voltage. If the circuit tests normal, replace the BCM.
8. If all circuits test normal, replace the I/P compartment lamp.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

- Ignition Lock Cylinder Bulb Replacement
- Console Lamp Replacement
- Dome Lamp Replacement
- Vanity Mirror Lamp Replacement
- Rear Compartment Courtesy Lamp Replacement
- Instrument Panel Compartment Lamp Replacement
- Instrument Panel Compartment Lamp Switch Replacement
- Door Courtesy Lamp and Reflector Replacement
- Control Module References for BCM replacement, setup, and programming

Daytime Running Lamps Malfunction

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.

1. Headlamps Malfunction 2. Daytime Running Lamps Malfunction				

Circuit/System Description

With Manual HVAC

The ambient light sensor is used to monitor outside lighting conditions. The ambient light sensor provides a voltage signal that will vary between 0.2 and 4.9 volts depending on outside lighting conditions. The body control module (BCM) provides a 5-volt reference signal to the ambient light sensor which is permanently grounded at G201. The BCM monitors the ambient light sensor signal circuit to determine if outside lighting conditions are correct for either daytime running lights (DRL) or automatic lamp control (ALC) when the headlamp switch is in the AUTO position. In daylight conditions the BCM will command the DRLs ON. The DRLs consists on the low beam headlamps illuminated at full intensity. During low light conditions the BCM will command the low beam headlamps ON. Any function or condition that turns on the headlamps will cancel DRL operation.

LHD With Automatic HVAC

The ambient light/sun load sensor is used to monitor outside lighting conditions. The ambient light sensor provides a voltage signal that will vary between 0.2 and 4.9 volts depending on outside lighting conditions. The body control module (BCM) provides a 5-volt reference signal to the ambient light sensor and the HVAC control module provides a low reference ground. The BCM monitors the ambient light sensor signal circuit to determine if outside lighting conditions are correct for either daytime running lights (DRL) or automatic lamp control (ALC) when the headlamp switch is in the AUTO position. In daylight conditions the BCM will command the DRLs ON. The DRLs consists on the low beam headlamps illuminated at full intensity. During low light conditions the BCM will command the low beam headlamps ON. Any function or condition that turns on the headlamps will cancel DRL operation.

RHD With Automatic HVAC

The ambient light/sun load sensor is used to monitor outside lighting conditions. The ambient light sensor provides a voltage signal that will vary between 0.2 and 4.9 volts depending on outside lighting conditions. The body control module (BCM) provides a 5-volt reference signal to the ambient light sensor which is permanently grounded at G201. The BCM monitors the ambient light sensor signal circuit to determine if outside lighting conditions are correct for either daytime running lights (DRL) or automatic lamp control (ALC) when the headlamp switch is in the AUTO position. In daylight conditions the BCM will command the DRLs ON. The DRLs consists on the low beam headlamps illuminated at full intensity. During low light conditions the BCM will command the low beam headlamps ON. Any function or condition that turns on the headlamps will cancel DRL operation.

Circuit/System Verification

1. Ignition ON, with a scan tool command the Front Low Beam Test ON and OFF. The low beam headlamps should turn ON and OFF when changing between the commanded states.

   If the low beam headlamps do not turn ON and OFF when commanded, refer to Headlamps Malfunction.

   If the low beam headlamps turn ON and OFF when commanded, refer to Ambient Light Sensor Malfunction.
2. Ignition ON, park brake released, verify with a scan tool the Park Brake Switch parameter displays Inactive.

   If not the specified value, refer to Symptoms - Hydraulic Brakes.

Circuit/System Testing

Ambient Light Sensor Malfunction - with Manual HVAC

1. Ignition OFF, disconnect the harness connector at the ambient light sensor.
2. Ignition OFF, verify that a test lamp illuminates between the ground circuit terminal B and B+.

   If the test lamp does not illuminate, test the ground circuit for a short to voltage or an open/high resistance.
3. If all circuits test normal, replace the BCM.

Ambient Light Sensor Malfunction - LHD with Automatic HVAC

1. Ignition OFF, disconnect the harness connector at the sunload sensor.
2. Ignition ON, verify that a test lamp illuminates between the low reference circuit terminal C and B+.

   If the test lamp does not illuminate, test the low reference circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the HVAC control module.
3. If all circuits test normal, replace the BCM.

Ambient Light Sensor Malfunction - RHD with Automatic HVAC

1. Ignition OFF, disconnect the harness connector at the sunload sensor.
2. Ignition ON, verify that a test lamp illuminates between the ground circuit terminal C and B+.

   If the test lamp does not illuminate, test the ground circuit for a short to voltage or an open/high resistance.
3. If all circuits test normal, replace the BCM.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

- Sunload and Twilight Sentinel Sensor Replacement
- Control Module References for BCM replacement, setup, and programming

Front Fog Lamps Malfunction

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.

Fog Lamp - LF Ground	--	1	--	--
Fog Lamp - RF Ground	--	1	--	--
Fog Lamp Switch Ground	--	2	--	--
1. Front Fog Lamps Malfunction 2. Front Fog Lamp Switch Malfunction				

Circuit/System Description

The fog lamp relay is supplied with battery voltage at all times. The fog lamp switch signal circuit is grounded momentarily by pressing the fog lamp switch. The body control module (BCM) energizes the fog lamp relay by applying ground to the fog lamp relay control circuit. When the fog lamp relay is energized, the relay switch contacts close and battery voltage is applied through the FOG LAMP fuse to the fog lamp supply voltage circuit which illuminates the fog lamps.

Circuit/System Verification

Ignition ON, observe the scan tool Front Fog Lamp Switch parameter while turning the front fog lamp switch ON and OFF. The parameter should change between Active and Inactive.

> If the parameter does not change between the commanded states, refer to Front Fog Lamp Switch Malfunction.
>
> If the parameter changes between the commanded states, refer to Front Fog Lamps Malfunction.

Circuit/System Testing

Front Fog Lamp Switch Malfunction

1. Ignition OFF, disconnect the harness connector at the headlamp and panel dimmer switch.
2. Ignition OFF, test for less than 5 ohms between the ground circuit terminal 4 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Ignition ON, verify the scan tool Front Fog Lamp Switch parameter is Inactive.

   If not the specified value, test the signal circuit terminal 6 for a short to ground. If the circuit tests normal, replace the BCM.
4. Install a 3A fused jumper wire between the signal circuit terminal 6 and the ground circuit terminal 4. Verify the scan tool Front Fog Lamp Switch parameter is Active.

   If not the specified value, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
5. If all circuits test normal, test or replace the headlamp and panel dimmer switch.

Front Fog Lamps Malfunction

1. Ignition OFF, disconnect the front fog lamp relay.
2. Ignition ON, verify that a test lamp does not illuminate between the control circuit terminal 87 and ground.

If the test lamp illuminates, test the control circuit for a short to voltage.

3. Verify that a test lamp illuminates between the B+ circuit terminal 30 and ground.

   If the test lamp does not illuminate, test the B+ circuit for a short to ground or an open/high resistance.
4. Verify that a test lamp illuminates between the B+ circuit terminal 86 and ground.

   If the test lamp does not illuminate, test the B+ circuit for an open/high resistance.
5. Disconnect the harness connector at the inoperative fog lamp.
6. Ignition OFF, test for less than 5 ohms between the ground circuit terminal B and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
7. Connect the harness connector at the inoperative fog lamp.
8. Connect a 15A fused jumper wire between the B+ circuit terminal 30 and the control circuit terminal 87. Verify the fog lamps illuminate.

   If the fog lamps do not illuminate, test the control circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the inoperative fog lamp.
9. Connect a test lamp between the B+ circuit terminal 85 and the control circuit terminal 86.
10. Command the Front Fog Light Test ON and OFF with a scan tool. The test lamp should turn ON and OFF when changing between the commanded states.

    If the test lamp is always ON, test the control circuit for a short to ground. If the circuit tests normal, replace the BCM.

    If the test lamp is always OFF, test the control circuit for a short to voltage or open/high resistance. If the circuit tests normal, replace the BCM.
11. If all circuits test normal, test or replace the fog lamp relay.

Front Fog Lamp Indicator Malfunction

Ignition ON, with a scan tool perform the Display Tests for the instrument panel cluster (IPC) and observe the fog lamp indicator.

If the fog lamp indicator illuminates during the test, replace the BCM.

If the fog lamp indicator does not illuminate during the test or remains illuminated at all times, replace the IPC.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

- Headlamp Switch Replacement
- Front Fog Lamp Replacement
- Underhood Electrical Center or Junction Block Replacement
- Relay Replacement
- Control Module References for BCM or IPC replacement, setup, and programming

Rear Fog Lamps Malfunction

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.
- Diagnostic Procedure Instructions provides an overview of each diagnostic category.

Circuit/System Verification

Ignition ON, observe the scan tool Rear Fog Light Switch parameter while turning the front fog lamp switch ON and OFF. The parameter should change between Active and Inactive.

If the parameter does not change between the commanded states, refer to Rear Fog Lamp Switch Malfunction.

If the parameter changes between the commanded states, refer to Rear Fog Lamp Malfunction.

Circuit/System Testing

Rear Fog Lamp Switch Malfunction

1. Ignition OFF, disconnect the harness connector at the headlamp and panel dimmer switch.
2. Ignition OFF, test for less than 5 ohms between the ground circuit terminal 4 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Ignition ON, verify the scan tool Rear Fog Light Switch parameter is Inactive.

   If not the specified value, test the signal circuit terminal 2 for a short to ground. If the circuit tests normal, replace the BCM.
4. Install a 3A fused jumper wire between the signal circuit terminal 2 and the ground circuit terminal 4. Verify the scan tool Rear Fog Light Switch parameter is Active.

   If not the specified value, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
5. If all circuits test normal, test or replace the headlamp and panel dimmer switch.

Rear Fog Lamp Malfunction

1. Ignition OFF, disconnect the rear fog lamp relay.
2. Ignition ON, verify that a test lamp does not illuminate between the control circuit terminal 87 and ground.

   If the test lamp illuminates, test the control circuit for a short to voltage.

3. Verify that a test lamp illuminates between the B+ circuit terminal 30 and ground.

   If the test lamp does not illuminate, test the B+ circuit for a short to ground or an open/high resistance.

4. Verify that a test lamp illuminates between the B+ circuit terminal 85 and ground.

   If the test lamp does not illuminate, test the B+ circuit for an open/high resistance.

5. Disconnect the harness connector at the rear fog lamp.
6. Ignition OFF, test for less than 5 ohms between the ground circuit terminal 2 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.

7. Connect the harness connector at the rear fog lamp.
8. Connect a 10A fused jumper wire between the B+ circuit terminal 30 and the control circuit terminal 87. Verify the rear fog lamp illuminates.

   If the rear fog lamp does not illuminate, test the control circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the rear fog lamp.

9. Connect a test lamp between the B+ circuit terminal 85 and the control circuit terminal 86.
10. Command the rear fog lamp ON and OFF with the rear fog lamp switch. The test lamp should turn ON and OFF when changing between the commanded states.

    If the test lamp is always ON, test the control circuit for a short to ground. If the circuit tests normal, replace the BCM.

    If the test lamp is always OFF, test the control circuit for a short to voltage or open/high resistance. If the circuit tests normal, replace the BCM.

11. If all circuits test normal, test or replace the rear fog lamp relay.

Rear Fog Lamp Indicator Malfunction

Ignition ON, with a scan tool perform the Display Tests for the instrument panel cluster (IPC) and observe the fog lamp indicator.

If the rear fog lamp indicator illuminates during the test, replace the BCM.

If the rear fog lamp indicator does not illuminate during the test or remains illuminated at all times, replace the IPC.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

- Headlamp Switch Replacement
- Rear Fog Lamp Replacement
- Underhood Electrical Center or Junction Block Replacement
- Relay Replacement
- Control Module References for BCM or IPC replacement, setup, and programming

Hazard Lamps Malfunction

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.
- Diagnostic Procedure Instructions provides an overview of each diagnostic category.

Circuit/System Description

The hazard flashers may be activated in any power mode. The hazard switch is integrated into the driver information display panel. When the hazard switch is placed in the ON position, the radio communicates via serial data with the body control module (BCM) requesting the hazard lamps be activated. The BCM supplies battery voltage to all four turn signal lamps in an ON and OFF duty cycle. When the hazard switch is activated, the BCM sends a serial data message to the instrument panel cluster (IPC) requesting both turn signal indicators to be cycled ON and OFF.

Circuit/System Description

With the headlamp switch in the ON position, the headlamp switch headlamp ON signal circuit is grounded through the headlamp and panel dimmer switch at G201. In response to this input, the body control module (BCM) provides ground to either the headlamp low beam relay control circuit or the headlamp high beam relay control circuit. The position of the headlamp dimmer switch determines which relay coil is supplied with ground. The BCM supplies ground to the relay coil circuits, if the headlamps are necessary. The underhood fuse block supplies battery voltage to the relay coil and switch circuits. The low beam headlamps operate when the BCM grounds the relay coil control circuit to the relay coil of the low beam relay. This energizes the low beam relay causing the switch contacts to close. With the switch contacts closed, battery voltage is applied to the LT LO and RT LO beam fuses through to the left and right low beam headlamps. When the headlamp high beam relay coil is energized, current flows through the LT HI and the RT HI beam fuses to the high beam headlamps. With the headlamp dimmer switch in the high beam position the BCM sends a serial data message to the instrument panel cluster (IPC) requesting the IPC to illuminate the high beam indicator.

Scan Tool Reference

Control Module References for scan tool information

Circuit/System Verification

1. Ignition ON, command the Parking Light Test On and Off with a scan tool. The park lamps

should turn On and Off when commanded.

If the park lamps do not turn On and Off when commanded, refer to Park, License, and/or Tail Lamps Malfunction.

2. Observe the scan tool Headlamp Switch parameter while turning the headlamp switch ON and OFF. The parameter should change between On and Off.

   If the parameter does not change between the commanded states, refer to Headlamp Switch Malfunction.
3. Observe the scan tool Flash to Pass Switch parameter while applying and releasing the flash to pass switch. The parameter should change between Active and Inactive.

   If the parameter does not change between the commanded states, refer to Turn Signal/Multifunction Switch Malfunction.
4. Observe the scan tool High Beam Switch parameter while applying and releasing the high beam select switch. The parameter should change between Active and Inactive.

   If the parameter does not change between the commanded states, refer to Turn Signal/Multifunction Switch Malfunction.
5. Observe the scan tool Auto Headlamp Disable Switch parameter while applying and releasing the automatic lamp control disable switch. The parameter should change between Active and Inactive.

   If the parameter does not change between the commanded states, refer to Headlamp Switch Malfunction.
6. Command the Front Low Beam Test ON and OFF with a scan tool. The low beam headlamps should turn ON and OFF when commanded.

   If the low beam headlamps do not turn ON and OFF when commanded, refer to Headlamps Malfunction - Low Beam.
7. Command the Front High Beam Test ON and OFF with a scan tool. The low beam headlamps should turn ON and OFF when commanded.

   If the high beam headlamps do not turn ON and OFF when commanded, refer to Headlamps Malfunction - High Beam.

Circuit/System Testing

Headlamp Switch Malfunction

1. Ignition OFF, disconnect the harness connector at the headlamp and panel dimmer switch.
2. Ignition OFF, test for less than 5 ohms between the ground circuit terminal 4 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Ignition ON, verify the scan tool Headlamp Switch parameter is Off.

   If not the specified value, test the signal circuit terminal 1 for short to ground. If the circuit tests normal, replace the BCM.
4. Verify the scan tool Auto Headlamp Disable Switch parameter is Inactive.

   If not the specified value, test the signal circuit terminal 3 for short to ground. If the circuit tests normal, replace the BCM.
5. Install a 3A fused jumper wire between the signal circuit terminal 1 and ground. Verify the scan tool Headlamp Switch parameter is On.

   If not the specified value, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
6. Install a 3A fused jumper wire between the signal circuit terminal 3 and ground. Verify the scan tool Auto Headlamp Disable Switch parameter is Active.

   If not the specified value, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.

7. If all circuits test normal, test or replace the headlamp and panel dimmer switch.

Turn Signal / Multifunction Switch Malfunction

1. Ignition OFF, disconnect the harness connector at the turn signal/multifunction switch.
2. Ignition OFF, test for less than 5 ohms between the ground circuit terminal 4 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Verify the scan tool Flash to Pass Switch parameter is Inactive.

   If not the specified value, test the signal circuit terminal 2 for a short to ground. If the circuit tests normal, replace the BCM.
4. Verify the scan tool High Beam Switch parameter is Inactive.

   If not the specified value, test the signal circuit terminal 3 for a short to ground. If the circuit tests normal, replace the BCM.
5. Install a 3A fused jumper wire between the signal circuit terminal 2 and ground. Verify the scan tool Flash to Pass Switch parameter is Active.

   If not the specified value, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
6. Install a 3A fused jumper wire between the signal circuit terminal 3 and ground. Verify the scan tool High Beam Switch parameter is Active.

   If not the specified value, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
7. If all circuits test normal, test or replace the turn signal/multifunction switch.

Headlamps Malfunction - Low Beam without 9C1

1. Ignition OFF, disconnect the low beam relay.
2. Ignition ON, verify that a test lamp does not illuminate between the control circuit terminal 87 and ground.

   If the test lamp illuminates, test the control circuit for a short to voltage.
3. Verify that a test lamp illuminates between the B+ circuit terminal 30 and ground.

   If the test lamp does not illuminate, test the B+ circuit for a short to ground or an open/high resistance.
4. Verify that a test lamp illuminates between the B+ circuit terminal 86 and ground.

   If the test lamp does not illuminate, test the B+ circuit for an open/high resistance.
5. Disconnect the harness connector at the inoperative low beam headlamp.
6. Ignition OFF, scan tool OFF, exterior lamps OFF, test for less than 5 ohms between the ground circuit terminal 2 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
7. Connect the harness connector at the inoperative low beam headlamp.
8. Connect a 20A fused jumper wire between the B+ circuit terminal 30 and the control circuit terminal 87. Verify the low beam headlamps illuminate.

   If the low beam headlamps do not illuminate, test the control circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the inoperative low beam headlamp.
9. Connect a test lamp between the B+ circuit terminal 86 and the control circuit terminal 85.
10. Command the Front Low Beam Test ON and OFF with a scan tool. The test lamp should turn ON and OFF when changing between the commanded states.

    If the test lamp is always ON, test the control circuit for a short to ground. If the circuit tests normal, replace the BCM.

    If the test lamp is always OFF, test the control circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.

11. If all circuits test normal, test or replace the low beam relay.

Headlamps Malfunction - High Beam without 9C1

1. Ignition OFF, disconnect the high beam relay.
2. Ignition ON, verify that a test lamp does not illuminate between the control circuit terminal 87 and ground.

   If the test lamp illuminates, test the control circuit for a short to voltage.
3. Verify that a test lamp illuminates between the B+ circuit terminal 30 and ground.

   If the test lamp does not illuminate, test the B+ circuit for a short to ground or an open/high resistance.
4. Verify that a test lamp illuminates between the B+ circuit terminal 86 and ground.

   If the test lamp does not illuminate, test the B+ circuit for an open/high resistance.
5. Disconnect the harness connector at the inoperative high beam headlamp.
6. Ignition OFF, scan tool OFF, exterior lamps OFF, test for less than 5 ohms between the ground circuit terminal 3 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
7. Connect the harness connector at the inoperative high beam headlamp.
8. Connect a 20A fused jumper wire between the B+ circuit terminal 30 and the control circuit terminal 87. Verify the high beam headlamps illuminate.

   If the high beam headlamps do not illuminate, test the control circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the inoperative high beam headlamp.
9. Connect a test lamp between the B+ circuit terminal 86 and the control circuit terminal 85.
10. Command the Front High Beam Test ON and OFF with a scan tool. The test lamp should turn ON and OFF when changing between the commanded states.

    If the test lamp is always ON, test the control circuit for a short to ground. If the circuit tests normal, replace the BCM.

    If the test lamp is always OFF, test the control circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
11. If all circuits test normal, test or replace the high beam relay.

High Beam Indicator Malfunction

Ignition ON, with a scan tool perform the Display Tests for the instrument panel cluster (IPC) and observe the high beam indicator.

If the high beam indicator illuminates during the test, replace the BCM.

If the high beam indicator does not illuminate during the test or remains illuminated at all times, replace the IPC.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

- Headlamp Switch Replacement
- Headlamp Replacement
- Underhood Electrical Center or Junction Block Replacement

- Relay Replacement
- Turn Signal Switch Replacement
- Control Module References for BCM or IPC replacement, setup, and programming

Headlamp Leveling Malfunction

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.
- Diagnostic Procedure Instructions provides an overview of each diagnostic category.

Circuit/System Description

Each headlamp assembly contains a headlamp leveling motor that is controlled by the headlamp control module. The front and rear headlamp leveling sensors provide the headlamp control module with suspension position information. Each sensor receives a 5-volt reference, signal, and low reference circuits from the headlamp control module. The sensors are connected to the control arms of the front and rear suspension. As the vehicle travels, the suspension compresses and rebounds moving the suspension position sensor arms. This causes the signal output of the sensor to change. The headlamp control module compares the information from both suspension position sensors and adjusts the headlamp leveling as needed. The headlamp control module is wired to each headlamp leveling motor with 4 directional motor control circuits.

Circuit/System Verification

1. Ignition ON, with a scan tool, command the AHL Motor Control Up and Down while observing both headlamps. Both headlamps should operate to the Up and Down positions when commanded.

   If the headlamps do not operate to the Up and Down positions when commanded, refer to Headlamp Leveling Actuator Malfunction.
2. Observe the scan tool Front Leveling Position Sensor voltage parameter. The parameter should be between 58 and 62 degrees.

   If the parameter is not within the specified range, refer to Headlamp Leveling Sensor Malfunction.
3. Observe the scan tool Rear Leveling Position Sensor voltage parameter. The parameter should be between 57 and 61 degrees.

   If the parameter is not within the specified range, refer to Headlamp Leveling Sensor

Malfunction.

Circuit / System Testing

Headlamp Leveling Actuator Malfunction

1. Ignition OFF, disconnect the harness connector at the inoperative headlamp.
2. Remove the COMM ENABLE 10A fuse.
3. Ignition OFF, scan tool OFF, test for 20K -22K ohms between each control circuit terminal listed below and ground.
    - Headlamp leveling motor control terminal 3
    - Headlamp leveling motor control terminal 4
    - Headlamp leveling motor control terminal 5
    - Headlamp leveling motor control terminal 10

    If greater than the specified range, test the control circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the headlamp control module.

    If less than the specified range, test the control circuit for a short to ground. If the circuit tests normal, replace the headlamp control module.
4. Install the COMM ENABLE 10A fuse.
5. Ignition ON, scan tool OFF, headlamps ON, verify that a test lamp does not illuminate between each control circuit terminal listed below and ground.
    - Headlamp leveling motor control terminal 3
    - Headlamp leveling motor control terminal 4
    - Headlamp leveling motor control terminal 5
    - Headlamp leveling motor control terminal 10

    If the test lamp illuminates, test the control circuit for a short to voltage. If the circuit tests normal, replace the headlamp control module.
6. If all circuits test normal, replace the appropriate headlamp assembly.

Headlamp Leveling Sensor Malfunction

1. Ignition OFF, disconnect the harness connector at the appropriate headlamp leveling sensor.
2. Ignition OFF, test for less than 10 ohms between the low reference circuit terminal 1 and ground.

    If greater than the specified range, test the low reference circuit for an open/high resistance. If the circuit tests normal, replace the headlamp control module.
3. Ignition ON, test for 4.8-5.2 volts between the 5-volt reference circuit terminal 2 and ground.

    If less than the specified range, test the 5-volt reference circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the headlamp control module.

    If greater than the specified range, test the 5-volt reference circuit for a short to voltage. If the circuit tests normal, replace the headlamp control module.
4. Verify the appropriate scan tool Leveling Position Sensor parameter is less than 59 degrees.

    If greater than the specified range, test the signal circuit terminal 3 for a short to voltage. If the circuit tests normal, replace the headlamp control module.
5. Install a 3A fused jumper wire between the signal circuit terminal 3 and the 5-volt reference circuit terminal 2. Verify the appropriate scan tool Leveling Position Sensor parameter is greater than 59 degrees.

    If less than the specified range, test the signal circuit for short to ground or an open/high resistance. If the circuit tests normal, replace the headlamp control module.

6. If all circuits test normal, replace the appropriate headlamp leveling sensor.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

Circuit/System Description

The up/down dimmer controls located on the headlamp and panel dimmer switch is used to increase and decrease the brightness of the interior backlighting components. Each dimmer control switch provides a voltage signal that will increase as the brightness of the lights are increased and decrease as the brightness of the lights are decreased. The body control module (BCM) supplies each dimmer control switch with a signal circuit. When either the up or down dimmer control switch is placed in the desired position, the dimmed voltage setting is applied from the appropriate dimmer control switch through the dimmer switch signal circuit to the BCM. The BCM interprets the signal and applies the dimmed voltage to the LED and incandescent backlight dimming control circuits and the interior backlighting components dim to the requested level.

Circuit/System Verification

Ignition ON, observe the scan tool LED Dimming PWM. Cmd. and Incand Dimming PWM Command parameters while operating the dimmer switch from high to low. The parameters should change from a high percent to a low percent as the switch is activated.

If the parameters do not change, refer to Panel Dimmer Switch Malfunction.

If the parameters change, refer to Interior Backlighting Malfunction.

Circuit/System Testing

Panel Dimmer Switch Malfunction

1. Ignition OFF, disconnect the harness connector at the headlamp and panel dimmer switch.
2. Ignition OFF, test for less than 5 ohms between the ground circuit terminal 4 and ground.

   If not the specified value, test the ground circuit for an open/high resistance.
3. Ignition OFF, disconnect the X7 harness connector at the BCM.
4. Ignition ON, verify that a test lamp does not illuminate between the signal circuits listed below and ground.
   - Dim down signal terminal 24
   - Dim up signal terminal 10

   If the test lamp illuminates, test the signal circuit for a short to voltage.
5. Ignition OFF, connect the X7 harness connector at the BCM.
6. Ignition ON, test for B+ between the signal circuit terminal 7 and ground.

   If not the specified value, test the signal circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the BCM.
7. Ignition ON, test for B+ between the signal circuit terminal 12 and ground.

   If not the specified value, test the signal circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the BCM.
8. If all circuits test normal, test or replace the headlamp and panel dimmer switch.

Interior Backlighting Malfunction

1. Ignition OFF, disconnect the X3 harness connector at the BCM.
2. Ignition ON, verify that a test lamp illuminates between the B+ circuit terminal 2 and ground.

   If the test lamp does not illuminate, test the B+ circuit for a short to ground or an open/high resistance.
3. Ignition OFF, connect the X3 harness connector at the BCM.
4. Disconnect the harness connector at the component with the inoperative backlighting.
5. Ignition OFF, scan tool OFF, interior lamps OFF, doors CLOSED, test for less than 5 ohms between the appropriate ground circuit terminal listed below and ground.
   - Automatic transmission shift lever terminal 3
   - Cigar lighter - console terminal C
   - Cigar lighter - front terminal C
   - Dome/reading lamps terminal 1
   - Door lock/window switch terminal 4 X2
   - Headlamp and panel dimmer switch terminal 4
   - Multifunction switch - center console terminal 2
   - Multifunction switch - center console terminal 7
   - Steering wheel control switch terminal 7

   If greater than the specified range, test the ground circuit for an open/high resistance.
6. Connect a test lamp between the appropriate control circuit terminal listed below and ground.
   - Automatic transmission shift lever terminal 8
   - Cigar lighter - console terminal A
   - Cigar lighter - front terminal A
   - Dome/reading lamps terminal 6
   - Door lock/window switch terminal 11 X2
   - Headlamp and panel dimmer switch terminal 8
   - Multifunction switch - center console terminal 1

- Multifunction switch - center console terminal 8
- Steering wheel control switch terminal 8

7. Command the Dimmed Illumination Test ON and OFF with a scan tool. The test lamp should turn ON and OFF when changing between the commanded states.

   If the test lamp is always OFF, test the control circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the BCM.

   If the test lamp is always ON, test the control circuit for a short to voltage. If the circuit tests normal, replace the BCM.

8. If all circuits test normal, test or replace the component with the inoperative backlighting.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

- Headlamp Switch Replacement
- Cigar Lighter Receptacle or 12-Volt Accessory Power Receptacle Replacement
- Power Mirror Switch Replacement
- Control Module References for BCM replacement, setup, and programming

1. Park, License, and/or Tail Lamps Malfunction 2. Park Lamp Switch Malfunction				

Circuit/System Description

Battery voltage is applied at all times to both the coil and switch sides of the PRK LAMP relay located in the underhood fuse block. The headlamp and panel dimmer switch is suppled with ground at G201 at all times. When the headlamp switch is placed in either the HEAD or PARK position, ground is applied to the park lamp signal circuit to the body control module (BCM). The BCM responds by applying ground to the park lamp relay control circuit. This energizes the park lamp relay coil causing the relay switch contacts to close allowing battery voltage to flow through the LT PRK and RT PRK fuses to all of the park, tail, and license lamps.

Scan Tool Reference

Control Module References for scan tool information

Circuit/System Verification

Ignition ON, observe the scan tool Park Lamp Switch parameter while turning the headlamp and panel dimmer switch to the PARK and AUTO positions. The parameter should change between On and Off.

If the parameter does not change between the commanded states, refer to Park Lamp Switch Malfunction.

If the parameter changes between the commanded states, refer to Park, License, and/or Tail Lamps Malfunction.

Circuit/System Testing

Park Lamp Switch Malfunction

1. Ignition OFF, disconnect the harness connector at the headlamp and panel dimmer switch.
2. Ignition OFF, test for less than 5 ohms between the ground circuit terminal 4 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Ignition ON, verify the scan tool Park Lamp Switch parameter is Off.

   If not the specified value, test the signal circuit terminal 5 for a short to ground. If the circuit tests normal, replace the BCM.
4. Install a 3A fused jumper wire between the signal circuit terminal 5 and ground. Verify the scan tool Park Lamp Switch parameter is On.

   If not the specified value, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
5. If all circuits test normal, test or replace the headlamp and panel dimmer switch.

Park, License, and/or Tail Lamps Malfunction

1. Ignition OFF, disconnect the park lamp relay.
2. Ignition ON, verify that a test lamp does not illuminate between the control circuit terminal 87 and ground.

   If the test lamp illuminates, test the control circuit for a short to voltage.
3. Verify that a test lamp illuminates between the B+ circuit terminal 30 and ground.

   If the test lamp does not illuminate, test the B+ circuit for a short to ground or an open/high resistance. If the circuit tests normal and the B+ circuit fuse is open, test the control circuit terminal 87 for a short to ground. If the circuit tests normal, test or replace the park lamp relay.
4. Verify that a test lamp illuminates between the B+ circuit terminal 86 and ground.

   If the test lamp does not illuminate, test the B+ circuit for an open/high resistance.
5. Disconnect the harness connector at the inoperative park/license lamp.
6. Ignition OFF, exterior lamps OFF, test for less than 5 ohms between the ground circuit and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
7. Connect the harness connector at the inoperative park/license lamp.
8. Connect a 20A fused jumper wire between the B+ circuit terminal 30 and the control circuit terminal 87. Verify the park/license lamps illuminate.

   If the park/license lamps do not illuminate, test the control circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the inoperative park/license lamp.
9. Connect a test lamp between the B+ circuit terminal 86 and the control circuit terminal 85.
10. Command the Parking light Test ON and OFF with a scan tool. The test lamp should turn ON and OFF when changing between the commanded states.

    If the test lamp is always ON, test the control circuit for a short to ground. If the circuit tests normal, replace the BCM.

    If the test lamp is always OFF, test the control circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
11. If all circuits test normal, test or replace the park lamp relay.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

- Headlamp Switch Replacement
- Rear License Lamp Replacement
- Parking and Turn Signal Lamp Replacement
- Tail Lamp Replacement
- Tail Lamp Assembly and /or Backup, Sidemarker, Stop, Turn Signal Bulb Replacement
- Relay Replacement

2. Center High Mounted Stop Lamp (CHMSL) Malfunction

3. Cruise Control Malfunction

Circuit/System Description

The brake pedal position sensor is used to sense the action of the driver application of the brake pedal. The brake pedal position (BPP) sensor provides an analog voltage signal that will increase as the brake pedal is applied. The body control module (BCM) provides a low reference signal and a 5-volt reference voltage to the brake pedal position sensor. When the variable signal reaches a voltage threshold indicating the brakes have been applied, the BCM will apply battery voltage to the stop lamp control circuit illuminating the left and right stop lamps and the center high mounted stop lamp (CHMSL). The BCM also applies battery voltage to the transmission control module

(TCM) and engine control module (ECM) via the brake applied signal circuit.

Circuit/System Verification

Ignition ON, observe the scan tool Brake Status parameter as you apply and unapply the brake pedal. The parameter should change between Off and On as the brake pedal is applied and released.

> If the parameter does not change as the brake pedal is applied and released, refer to Brake Pedal Position (BPP) Sensor Malfunction.
>
> If the parameter changes as the brake pedal is applied and released, refer to Stop Lamps Malfunction.

Circuit/System Testing

Stop Lamps Malfunction

1. Ignition OFF, disconnect the X4 harness connector at the BCM.
2. Verify that a test lamp illuminates between the B+ circuit terminal 4 and ground.
   > If the test lamp does not illuminate, test the B+ circuit for a short to ground or an open/high resistance.
3. Connect the X4 harness connector at the BCM.
4. Disconnect the harness connector at the inoperative stop lamp.

5. Ignition OFF, exterior lamps OFF, test for less than 5 ohms between the appropriate ground circuit terminal listed below and ground.
    - Tail/stop lamp terminal GRD
    - CHMSL terminal B

    If greater than the specified range, test the ground circuit for an open/high resistance.
6. Connect a test lamp between the appropriate control circuit terminal listed below and ground.
    - Tail/stop lamp terminal MJR
    - CHMSL terminal A
7. Ignition ON, command the Brake Light Test ON and OFF with a scan tool. The test lamp should turn ON and OFF when changing between the commanded states.

    If the test lamp is always ON, test the control circuit for a short to voltage. If the circuit tests normal, replace the BCM.

    If the test lamp is always OFF, test the control circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the BCM.
8. If all circuits test normal, replace the inoperative stop lamp.

Brake Pedal Position (BPP) Sensor Malfunction

1. Ignition OFF, disconnect the harness connector at the BPP sensor.
2. Ignition ON, verify that a test lamp illuminates between B+ and the low reference circuit terminal C.

    If the test lamp does not illuminate, test the low reference circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
3. Ignition ON, test for 4.8 volts and 5.2 volts between the 5-volt reference circuit terminal A and ground.

    If less than the specified range, test the 5-volt reference circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the BCM.

    If greater than the specified range, test the 5-volt reference circuit for a short to voltage. If the circuit tests normal, replace the BCM.
4. If all circuits test normal, test or replace the brake pedal position sensor.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

- High Mount Stop Lamp Replacement
- Tail Lamp Replacement
- Tail Lamp Assembly and /or Backup, Sidemarker, Stop, Turn Signal Bulb Replacement
- Stop Lamp Switch Replacement
- Control Module References for BCM replacement, setup, and programming

Trailer Lamps Malfunction

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.

1. Trailer Lamps Malfunction				

Circuit/System Description

The trailer harness contains an electronic control unit (ECU) to control the lighting signals to the trailer lamps. The trailer harness and trailer ECU is integrated into the vehicle wiring harness and controls the signals to the standard 7-pin trailer connector. The trailer connector is mounted to the vehicles rear fascia. Battery Voltage is supplied to the trailer ECU from the 30 A Trailer fuse located in the rear fuse block. The trailer harness also provides a connection for the addition of an electronic trailer brake system.

Scan Tool Reference

Control Module References for scan tool information

Circuit/System Verification

1. Ignition ON, command the Reverse Light Test On and Off with a scan tool. The vehicles backup lamps should turn on and off when commanded.

   If the backup lamps do not turn On and Off when commanded, refer to Backup Lamps Malfunction.
2. Command the Parking Light Test On and OFF with a scan tool. The vehicles park lamps should turn on and off when commanded.

   If the park lamps do not turn On and Off when commanded, refer to Park, License, and/or Tail Lamps Malfunction.
3. Command the Brake Light Test On and OFF with a scan tool. The vehicles stop lamps should turn on and off when commanded.

   If the stop lamps do not turn on and off when commanded, refer to Stop Lamps Malfunction.
4. Command the Rear Turn Signal Test On and OFF with a scan tool. The vehicles stop lamps should turn on and off when commanded.

   If the rear turn signal lamps do not turn on and off when commanded, refer to Turn Signal Lamps and/or Indicators Malfunction.
5. Verify the trailer lamps operate properly. All trailer lamps should illuminate when commanded.

   If all trailer lamps are inoperative, refer to Trailer Lamps Malfunction - All

   If individual trailer lamps are inoperative, refer to Trailer Lamps Malfunction - Individual

Circuit / System Testing

Trailer Lamps Malfunction - All

1. Ignition OFF, disconnect the harness connector at the trailer box converter module.
2. Ignition OFF, exterior lamps OFF, test for less than 5 ohms between the ground circuit terminal 3 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Ignition ON, verify that a test lamp illuminates between the B+ circuit terminal 6 and ground.

   If the test lamp does not illuminate, test the B+ circuit for a short to ground or an open/high resistance.
4. If all circuits test normal, replace the trailer box converter module.

Trailer Lamps Malfunction - Individual

1. Ignition OFF, disconnect the harness connector at the trailer box converter module.
2. Ignition OFF, exterior lamps OFF, test for less than 5 ohms between the ground circuit terminal 3 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Connect a test lamp between the appropriate signal circuit terminal listed below and ground.
   - Backup lamp terminal 12
   - Park lamp terminal 4
   - Stop lamp terminal 5
   - Turn signal lamp - left terminal 9
   - Turn signal lamp - right terminal 10
4. Ignition ON, command the appropriate Light Test listed below On and Off with a scan tool. The test lamp should turn ON and OFF when changing between the commanded states.
   - Reverse Light Test
   - Parking Light Test
   - Brake Light Test
   - Rear Turn Signal Test

   If the test lamp is always ON, test the signal circuit for a short to voltage.

   If the test lamp is always OFF, test the signal circuit for a short to ground or an open/high resistance.
5. Ignition OFF, connect the harness connector at the trailer box converter module.
6. Connect a test lamp between the appropriate control circuit terminal listed below at the trailer connector and ground.
   - Backup lamp terminal 2
   - Park lamp terminal 7
   - Stop lamp terminal 6
   - Turn signal lamp - left terminal 1
   - Turn signal lamp - right terminal 4
7. Ignition ON, command the appropriate Light Test listed below On and Off with a scan tool. The test lamp should turn ON and OFF when changing between the commanded states.
   - Reverse Light Test
   - Parking Light Test

- Brake Light Test
- Rear Turn Signal Test

  If the test lamp is always ON, test the control circuit for a short to voltage.

  If the test lamp is always OFF, test the control circuit for a short to ground or an open/high resistance.

8. If all circuits test normal, replace the trailer box converter module.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

Turn Signal Lamps and/or Indicators Malfunction

Diagnostic Instructions

1. Turn Signal Lamps and/or Indicators Malfunction 2. Turn Signal Switch Malfunction				

Circuit / System Description

Ground is applied at all times at G201 to the turn signal/multifunction switch. The turn signal lamps may only be activated with the ignition switch in the ON or START position. When the turn signal/multifunction switch is placed in either the TURN RIGHT or TURN LEFT position, ground is applied to the body control module (BCM) through either the right turn or left turn signal switch signal circuit. The BCM then applies a pulsating voltage to the front and rear turn signal lamps through there respective voltage supply circuits. When a turn signal request is received by the BCM, a serial data message is sent to the instrument panel cluster (IPC) requesting the respective turn signal indicator be pulsed ON and OFF.

Scan Tool Reference

Control Module References for scan tool information

Circuit / System Verification

Ignition ON, observe the scan tool Right and Left Turn Signal Switch parameters while cycling the turn signal switch between the left and right positions. The parameters should change between Active and Inactive.

If the parameters do not change between the commanded states, refer to Turn Signal Switch Malfunction.

If the parameters change between the commanded states, refer to Turn Signal Lamps Malfunction.

Circuit / System Testing

Turn Signal Switch Malfunction

1. Ignition OFF, disconnect the harness connector at the turn signal/multifunction switch.
2. Ignition OFF, test for less than 1 ohm between the ground circuit terminal 1 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Ignition ON, verify the scan tool Left Turn Signal Switch parameter is Inactive.

   If not the specified value, test the signal circuit terminal 8 for a short to ground. If the circuit tests normal, replace the BCM.
4. Verify the scan tool Right Turn Signal Switch parameter is Inactive.

   If not the specified value, test the signal circuit terminal 7 for a short to ground. If the circuit tests normal, replace the BCM.
5. Install a 3A fused jumper wire between the signal circuit terminal 8 and ground. Verify the scan tool Left Turn Signal Switch parameter is Active.

   If not the specified value, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
6. Install a 3A fused jumper wire between the signal circuit terminal 7 and ground. Verify the scan tool Right Turn Signal Switch parameter is Active.

   If not the specified value, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
7. If all circuits test normal, test or replace the turn signal/multifunction switch.

Turn Signal Lamps Malfunction

1. Ignition OFF, disconnect the X4 harness connector at the BCM.
2. Verify that a test lamp illuminates between the B+ circuit terminal 1 and ground.

   If the test lamp does not illuminate, test the B+ circuit for a short to ground or an open/high resistance.
3. Verify that a test lamp illuminates between the B+ circuit terminal 2 and ground.

   If the test lamp does not illuminate, test the B+ circuit for a short to ground or an open/high resistance.
4. Verify that a test lamp illuminates between the B+ circuit terminal 3 and ground.

   If the test lamp does not illuminate, test the B+ circuit for a short to ground or an open/high resistance.
5. Ignition OFF, connect the X4 harness connector at the BCM.
6. Ignition OFF, disconnect the harness connector at the inoperative turn signal lamp.
7. Ignition OFF, exterior lamps OFF, test for less than 5 ohms between the appropriate ground circuit terminal listed below and ground.
   - Left front turn signal terminal 1
   - Right front turn signal terminal 1
   - Left rear turn signal terminal 2
   - Right rear turn signal terminal 2
   - Left turn signal repeater terminal 1
   - Right turn signal repeater terminal 1

   If greater than the specified range, test the ground circuit for an open/high resistance.
8. Connect a test lamp between the appropriate control circuit terminal listed below and ground.
   - Left front turn signal terminal 9
   - Right front turn signal terminal 9
   - Left rear turn signal terminal 6

- Right rear turn signal terminal 6
- Left turn signal repeater terminal 2
- Right turn signal repeater terminal 2

9. Command the appropriate Turn Signal Test ON and OFF with a scan tool. The test lamp should turn ON and OFF when changing between the commanded states.

   If the test lamp is always ON, test the control circuit for a short to voltage. If the circuit tests normal, replace the BCM.

   If the test lamp is always OFF, test the control circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the BCM.

10. If all circuits test normal, replace the inoperative turn signal lamp assembly.

Turn Signal Indicators Malfunction

Ignition ON, with a scan tool perform the Display Tests for the instrument panel cluster (IPC) and observe the turn signal lamp indicators.

If the turn signal lamp indicators illuminate during the test, replace the BCM.

If the turn signal lamp indicators do not illuminate during the test or remain illuminated at all times, replace the IPC.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

- Parking and Turn Signal Lamp Replacement
- Repeater Lamp Replacement
- Tail Lamp Replacement
- Tail Lamp Assembly and /or Backup, Sidemarker, Stop, Turn Signal Bulb Replacement
- Turn Signal Switch Replacement
- Control Module References for BCM or IPC replacement, setup, and programming

Brake Pedal Position Sensor Calibration

The brake pedal position sensor (BPPS) receives a low reference signal and a 5-volt reference signal from the BCM. Whenever the brake pedal is applied, the BPPS applies a variable voltage signal to the BCM through the stop lamp switch signal circuit. The BPPS calibration must be performed after the BPPS or body control module (BCM) have been serviced. The calibration procedure will set BPPS home value. This value is used by the BCM to determine the action of the driver applying the brake system and to provide this information to the vehicle subsystems via the communication bus.

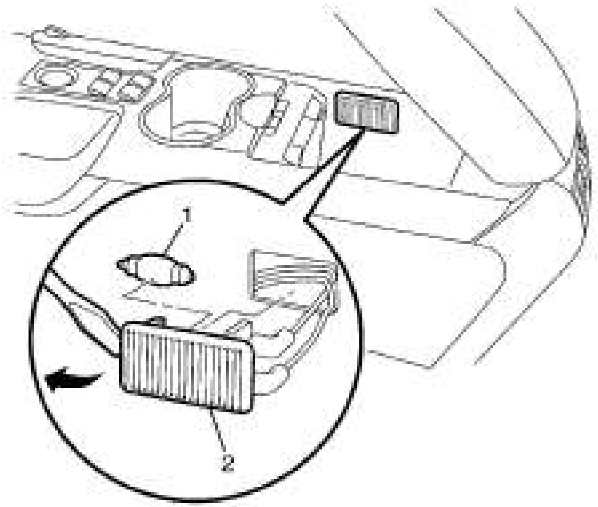
- Apply the parking brake.
- Place the transmission in the PARK position for automatic transmission or NEUTRAL for manual transmission.
- Install a scan tool.
- Clear all BCM DTCs before proceeding.
- Navigate to the Body menu.
- Select BCM menu item.
- Select Programming menu item.
- Select the Brake Pedal Position Sensor Learn procedure and follow the directions displayed on the screen.
- Turn ignition OFF and wait 30 seconds.

Console Lamp Replacement

Removal Procedure - Up to 17 Sept 2007

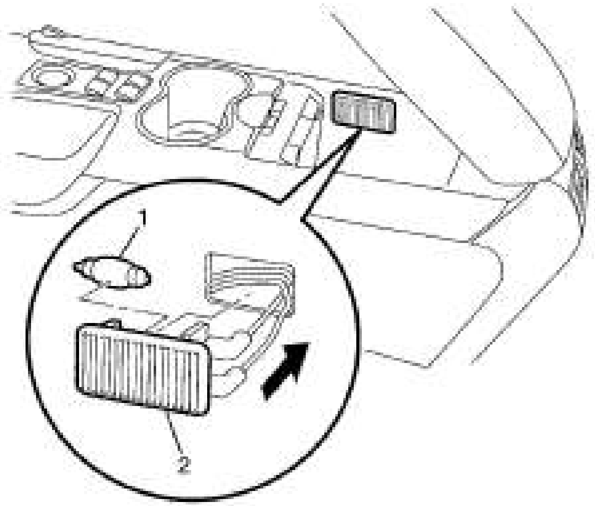
Caution: Refer to Battery Disconnect Caution in the Preface section.

1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection .



2. Insert a suitable tool under the console lamp assembly (2) and gently pry the lamp from the console.
3. Bend back the lever contact that holds the bulb (1) and remove the bulb from the lamp assembly.

Installation Procedure - Up to 17 Sept 2007



1. Install the new bulb (1) to the console lamp assembly.
2. Feed the lamp wiring into the cavity and push the lamp assembly (2) back into the cavity.
3. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection .
4. Check all vehicle lights for correct operation.

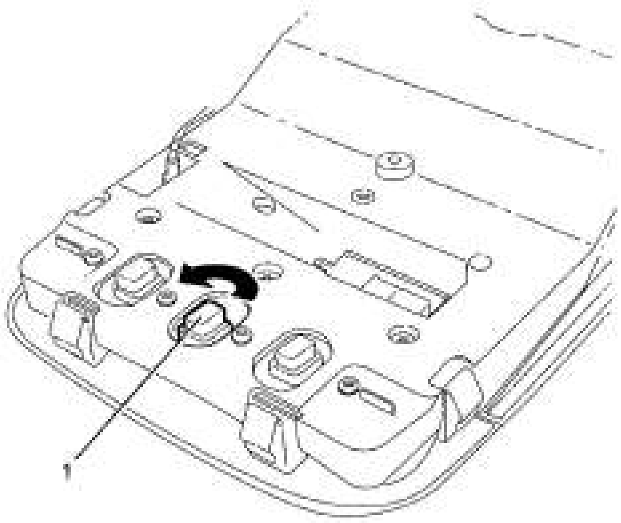
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Repair Instructions | Document ID: 1976221

Dome Lamp Bulb Replacement

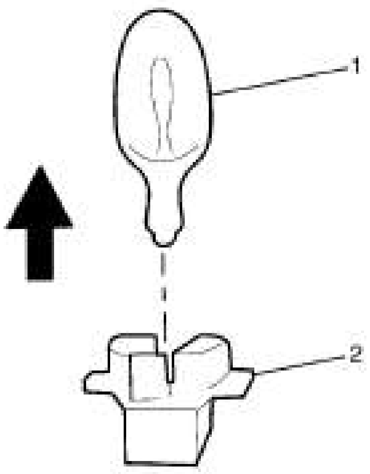
Removal Procedure - Front Bulb

Caution: Refer to Battery Disconnect Caution in the Preface section.

1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
2. Remove the front dome lamp assembly. Refer to Dome Lamp Replacement.

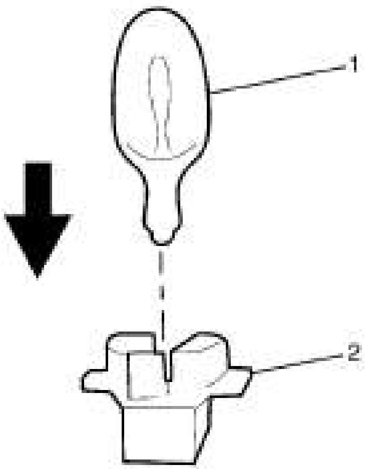


3. Twist the dome light bulb (1) assembly counter clockwise and remove from the dome lamp assembly.

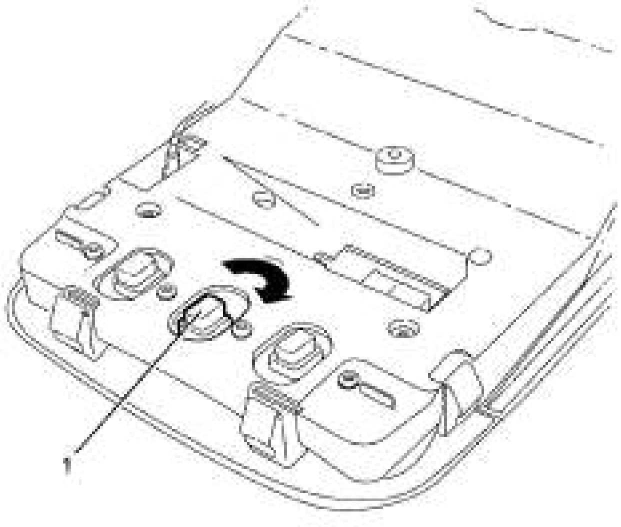


4. Remove the dome light bulb (1) by gently pulling it from the socket (2).

Installation Procedure - Front Bulb



1. Install a new dome light bulb (1) to the dome light socket (2).



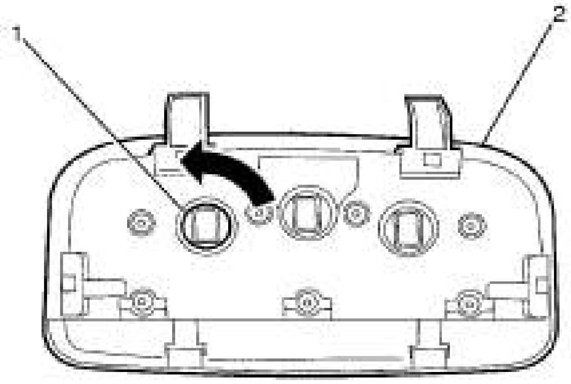
2. Install the dome light bulb (1) assembly, into the lamp assembly and twist clockwise to secure.
3. Install the front dome lamp assembly. Refer to Dome Lamp Replacement.
4. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and

Connection.

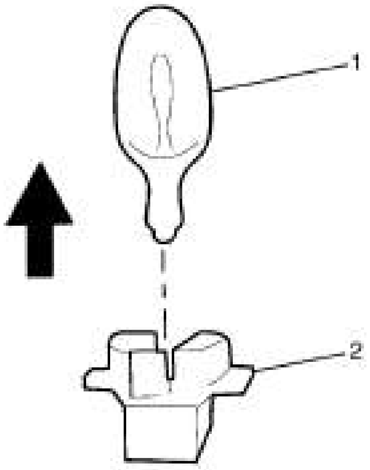
5. Test the front dome lamp for correct operation.

Removal Procedure - Rear Bulb

1. Remove the rear dome lamp assembly. Refer to Dome Lamp Replacement.

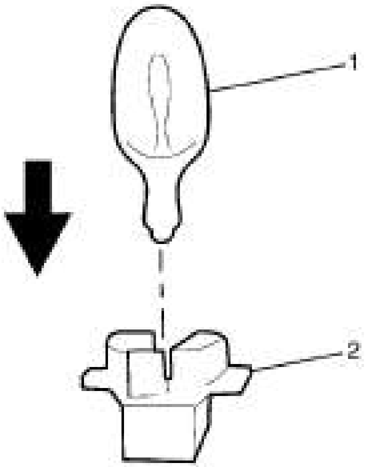


2. Twist the dome light bulb assembly (1) counter clockwise and remove from the dome lamp assembly (2).

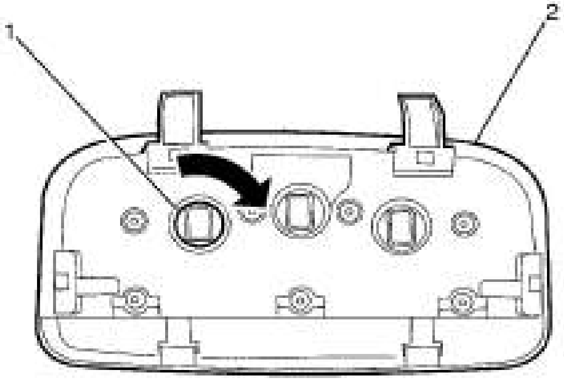


3. Remove the dome light bulb (1) by gently pulling it from the socket (2).

Installation Procedure - Rear Bulb



1. Install a new dome light bulb (1) to the socket (2).



2. Install the dome light bulb assembly, into the lamp assembly and twist clockwise to secure.
3. Install the rear dome lamp assembly. Refer to Dome Lamp Replacement.
4. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
5. Test the rear dome lamp for correct operation.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Repair Instructions | **Document ID: 1995455**

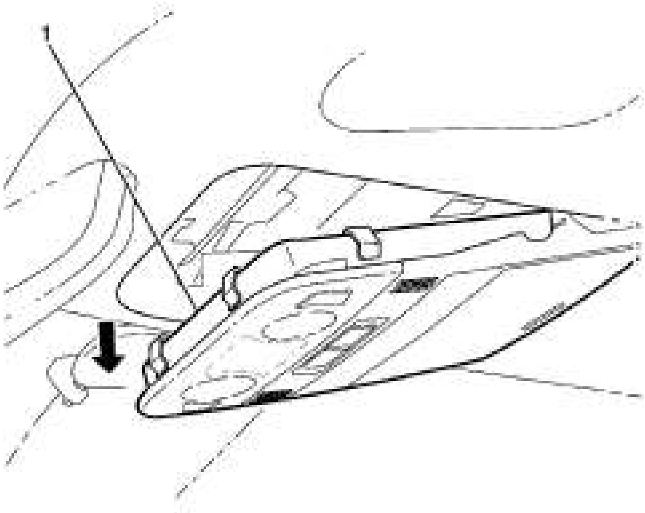
Dome Lamp Replacement

Removal Procedure - Front

Notice: Refer to General Repair Instructions in the Preface section.

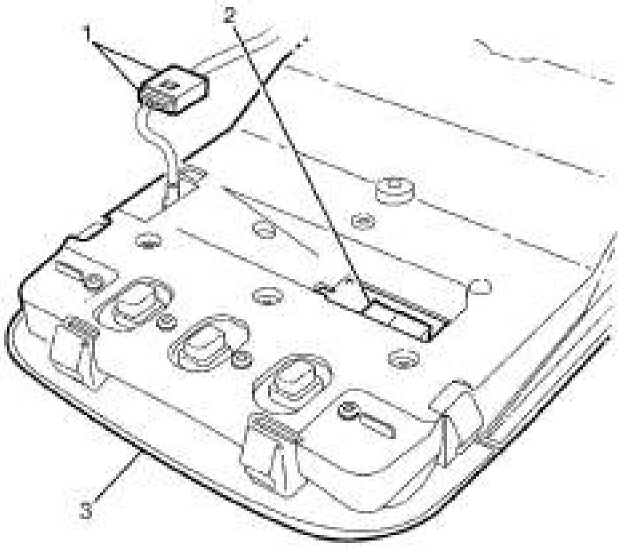
Caution: Refer to Battery Disconnect Caution in the Preface section.

1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.



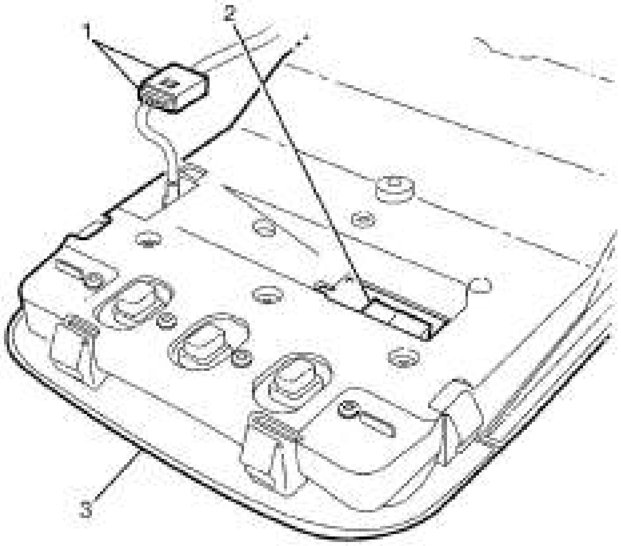
Important: The headliner can be easily damaged or discoloured. Use care when working in the area of the headliner.

2. Grasp the front of the dome lamp assembly (1) and carefully pull away from the headlining assembly.
3. Slide the dome lamp assembly (1) in a forward motion to allow the two locator arms to clear the headlining.

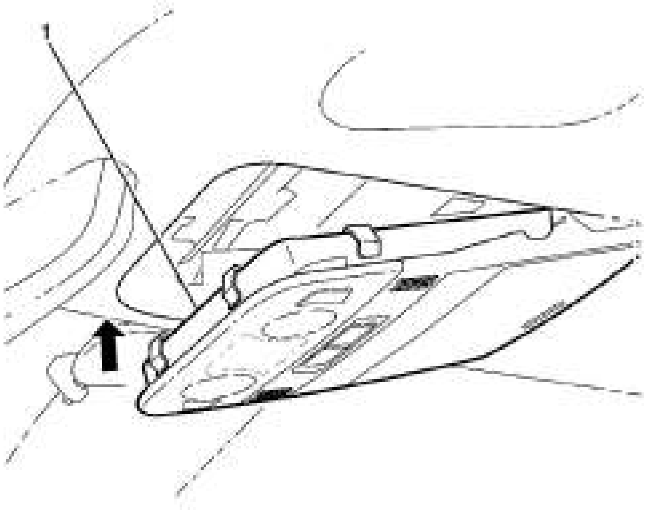


4. Disconnect the dome lamp assembly electrical connector (1).
5. Disconnect the bluetooth connection (1) from the dome lamp assembly (3).
6. Remove the dome lamp assembly (3).

Installation Procedure - Front



1. Connect the dome lamp assembly electrical connector (1).
2. Connect the bluetooth connection (1) dome lamp assembly (3).

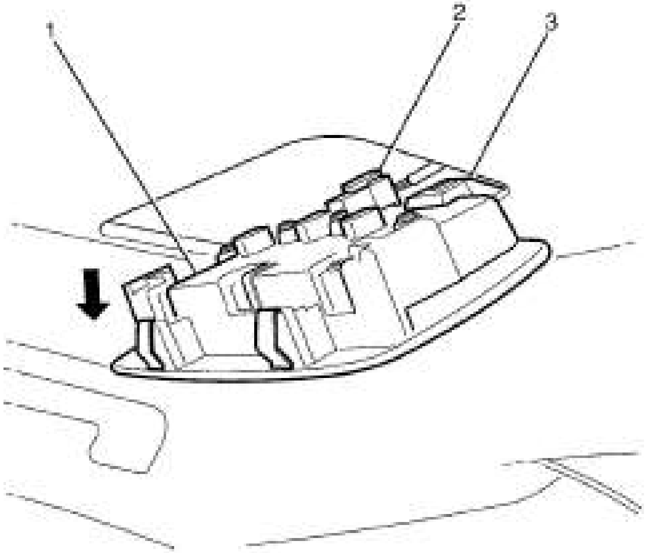


3. Insert the two locating arms into the headlining assembly.
4. Carefully push the dome lamp assembly (1) into the headlining assembly.
5. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
6. Test dome lamp assembly for the correct operation.

Removal Procedure - Rear (without Rear Seat Entertainment)

Caution: Refer to Battery Disconnect Caution in the Preface section.

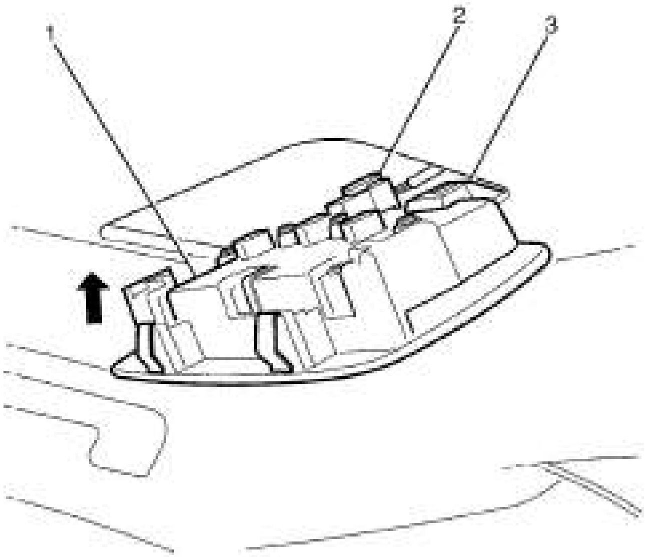
1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.



Important: The headliner can be easily damaged or discoloured. Use care when working in the area of the headliner.

2. Using a suitable tool, gently pry the front of the dome lamp assembly (1) down and lower the front of the assembly.
3. Pivot the lamp assembly down and pull the assembly forward to clear the rear locking arms (3).
4. Disconnect the dome lamp assembly electrical connector (2) and remove the dome lamp assembly.

Installation Procedure - Rear (without Rear Seat Entertainment)

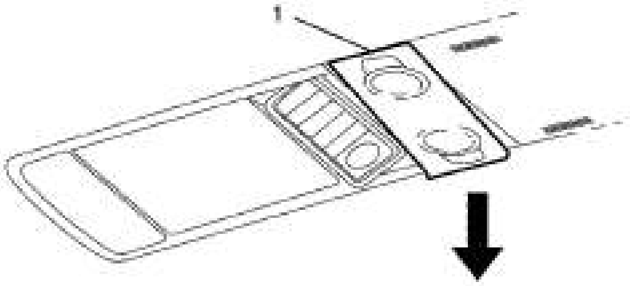


1. Connect the dome lamp assembly electrical connector (2).
2. Position the dome lamp assembly rear locking arms (3) into the headliner and pivot the front of the lamp assembly (1) up and into the headliner.
3. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
4. Check all vehicle lights for correct operation.

Removal Procedure - Rear (with Rear Seat Entertainment)

Caution: Refer to Battery Disconnect Caution in the Preface section.

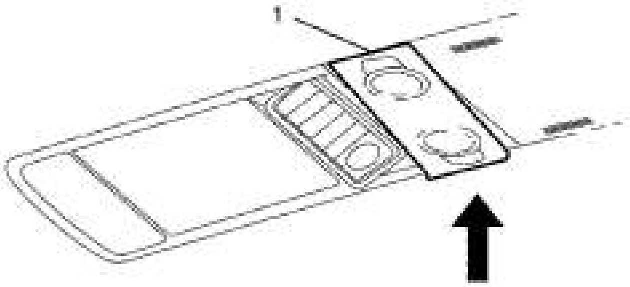
1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.



Important: The headliner can be easily damaged or discoloured. Use care when working in the area of the headliner.

2. Pull down on the left or right hand edge of the dome lamp assembly (1), using only your fingers.
3. Pull the lamp down and clear of the rear seat entertainment assembly.
4. Disconnect the dome lamp assembly electrical connector and remove the dome lamp assembly.

Installation Procedure - Rear (with Rear Seat Entertainment)



1. Connect the dome lamp assembly electrical connector.
2. Position the dome lamp assembly (1) with one side into the rear seat entertainment assembly and gently push the other side of the lamp assembly up and into the headliner.
3. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
4. Check all vehicle lights for correct operation.

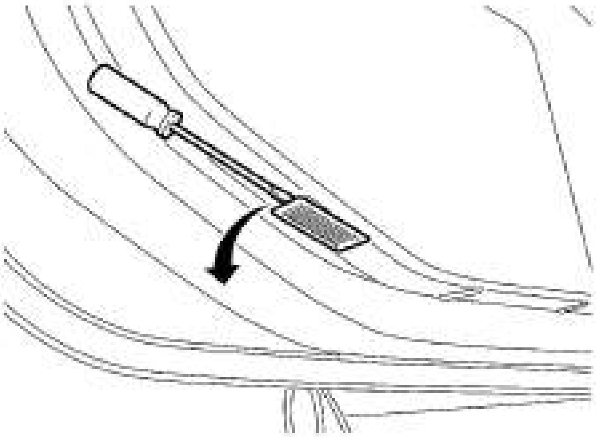
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Repair Instructions | Document ID: 1976216

Door Courtesy Lamp and Reflector Replacement

Removal Procedure

Caution: Refer to Battery Disconnect Caution in the Preface section.

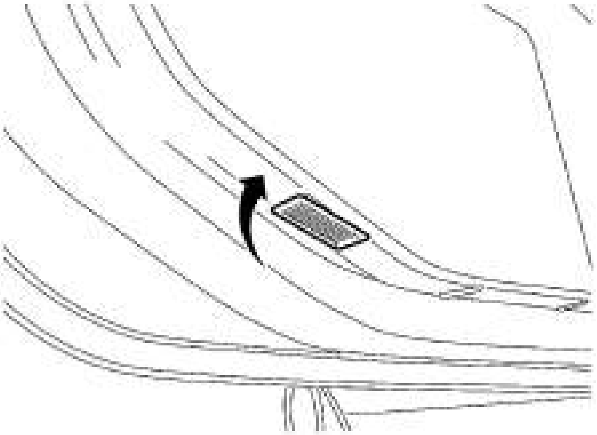
1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
2. Open the door.



3. Insert a suitable tool under the door courtesy lamp assembly and gently pry the lamp assembly from the door trim panel.
4. Remove the lamp assembly from the door trim panel and disconnect the electrical connector.
5. Bend back the lever contact that holds the bulb and remove the bulb from the lamp housing.

Installation Procedure

1. Install the new bulb to the lamp assembly.



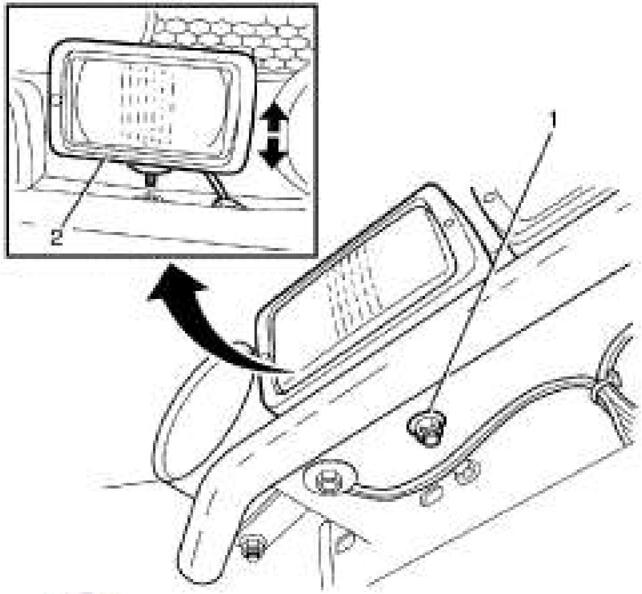
2. Connect the electrical connector to the lamp assembly.
3. Feed the lamp assembly wiring into the cavity and push the lamp back into the door panel cavity.
4. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
5. Check all vehicle lights for correct operation.

Emergency Vehicle Headlamp Flasher Replacement

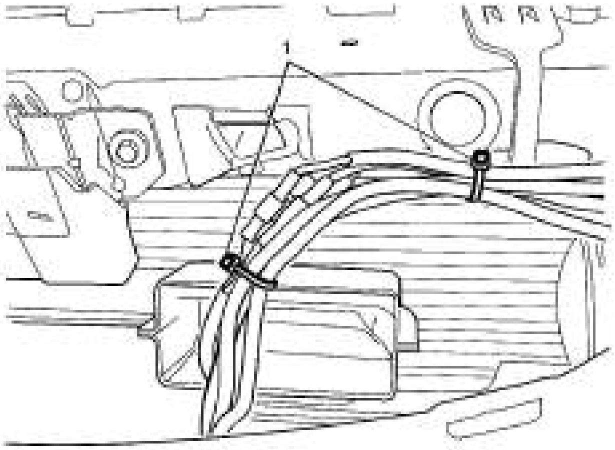
Removal Procedure

Caution: Refer to Battery Disconnect Caution in the Preface section.

1. Disconnect the battery negative cable from the battery. Refer to Battery Negative Cable Disconnection and Connection.
2. Remove the radiator grille. Refer to Radiator Grille Replacement.



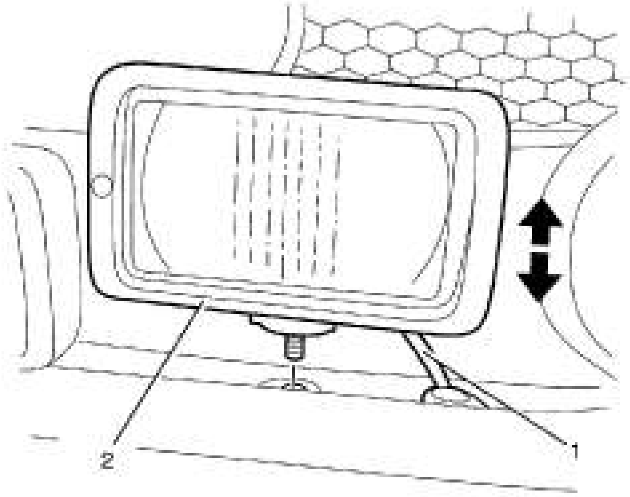
3. Remove the front flashing light to bumper bar retaining nut (1).
4. Detach the front flashing light (2) from the bumper bar.



Important: When removing the cable ties care must be undertaken not to damage the wiring loom.

Important: Cable ties are a single use item.

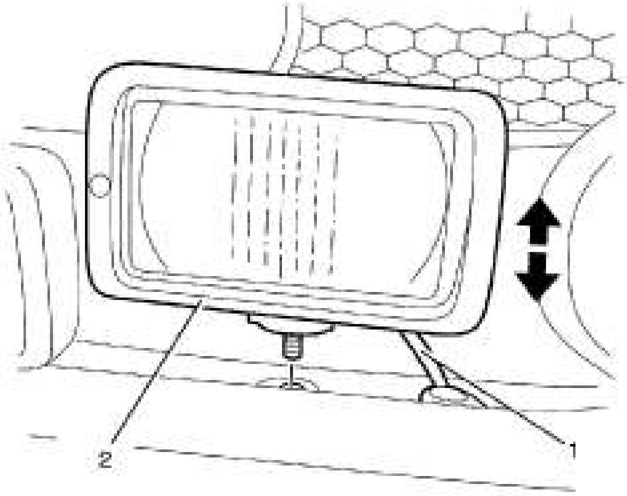
5. Remove the cable ties (1) from the wiring harness.
6. Locate the correct electrical connectors for the front flashing lights.
7. Disconnect the front flashing light electrical connectors.



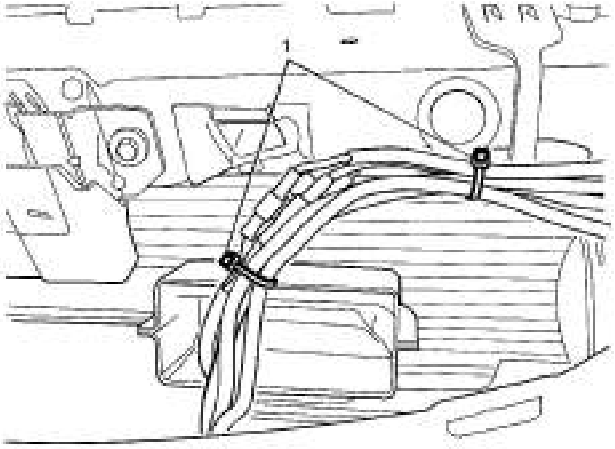
Important: When removing the front flashing light, take note of the route of the wiring harness routing.

8. Remove the front flashing lights (2) and wiring harness (1) from the vehicle.
9. Repeat steps 3 to 9 for the opposite flashing light (if required).

Installation Procedure

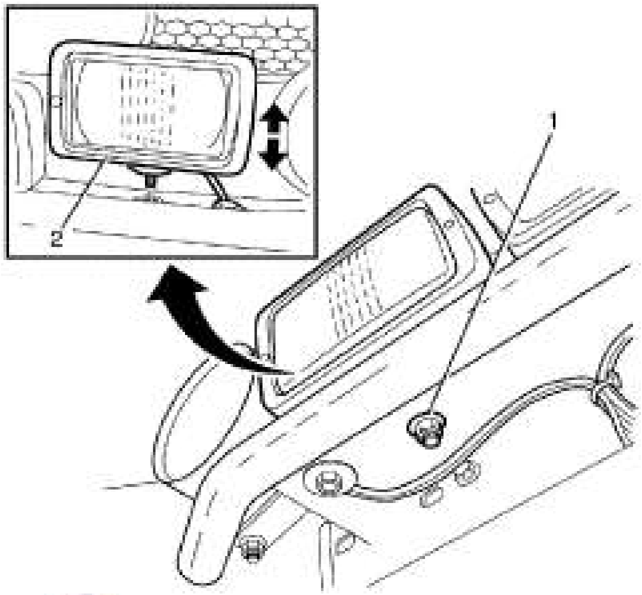


1. Install the front flashing lights (2) and wiring harness (1).



2. Connect the front flashing lights electrical connectors.
3. Secure the wiring harness with new cable ties (1).

Notice: Refer to Fastener Notice in the Preface section.



4. Install the front flashing light to bumper bar retaining nut (1).

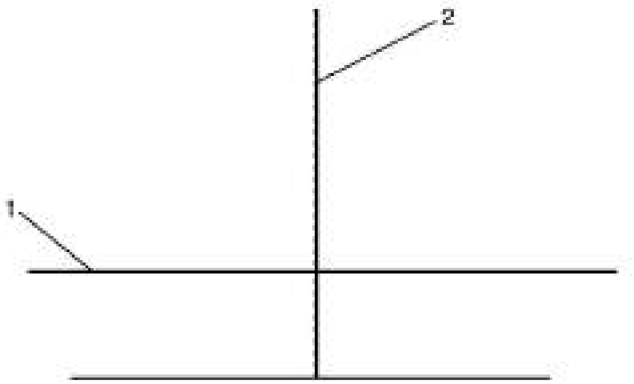
   Tighten
   Tighten the nut to xx N·m (xx lb in).

5. Install the radiator grille. Refer to Radiator Grille Replacement.
6. Repeat steps 1 to 4 for opposite side flashing light (if required).
7. Connect the battery negative cable to the battery. Refer to Battery Negative Cable Disconnection and Connection.
8. Test the front flashing lights for the correct operation.

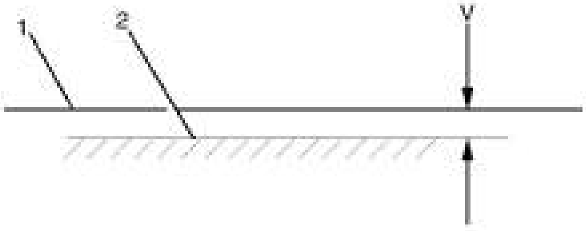
Fog Lamp Aiming (LWB SWB)

Aiming Procedure

Important: Use this procedure only when suitable test equipment is unavailable.

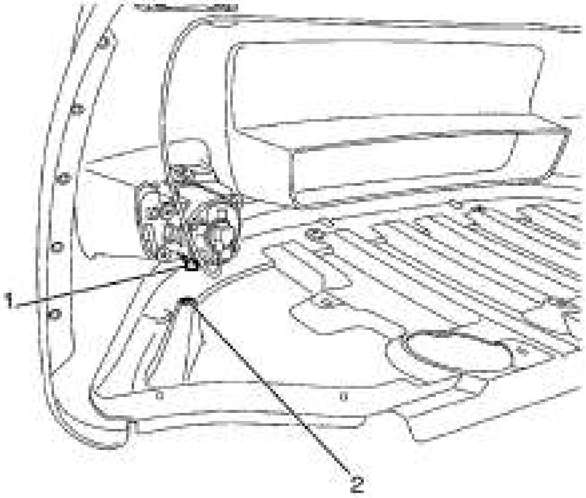


1. Set up a screen or use a vertical, with a flat horizontal wall. Park the vehicle immediately in front of the screen or wall and mark the following lines:
   - A vertical centre-line (2) that corresponds to the centre of the vehicle.
   - A horizontal line (1) that corresponds to the centre of the front fog lamp bulb.
2. Turn on the front fog lamps to check whether the marks are correctly positioned.
3. Reverse the vehicle straight back so the front is five metres in front of the screen or wall, ensuring the centre of the vehicle is aligned with the vertical centre-line mark (3) on the screen.



4. Turn on the front fog lamps. Aim each front fog lamp with the cut-off line (2) 100 mm (V) below the front fog lamp horizontal centre-line (1).

Adjustment Procedure



1. Access the fog lamp vertical adjuster (1) through the opening (2) in the front air deflector.
2. Adjust the fog lamp up or down until 100 mm is reached at the horizontal centre-line.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Repair Instructions | Document ID: 1985099

Front Fog Lamp Bulb Replacement (LWB SWB)

Removal Procedure

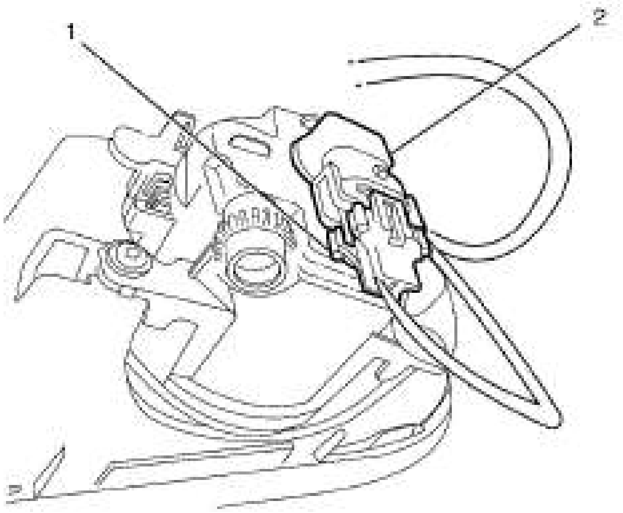
Caution: Refer to Battery Disconnect Caution in the Preface section.

1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.

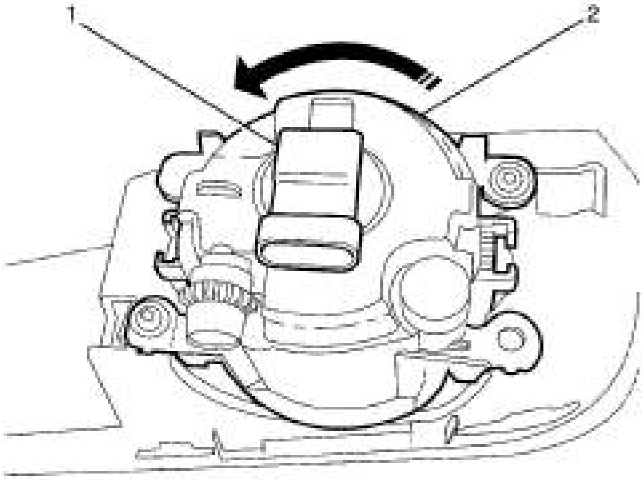
   Caution: Refer to Safety Glasses Caution in the Preface section.

   Caution: Refer to Vehicle Lifting Caution in the Preface section.

2. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
3. Remove the air deflector from the front end of the vehicle. Refer to Front Air Deflector Replacement.

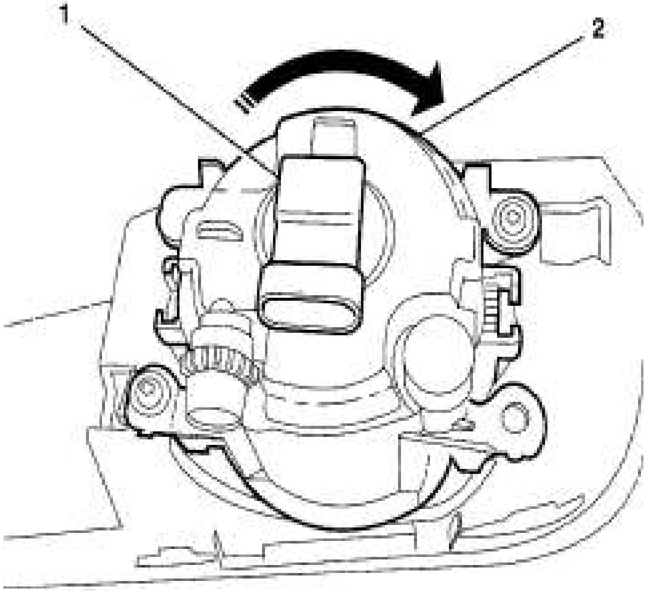


4. Disconnect the fog lamp bulb assembly electrical connector (1) from the fog lamp assembly (2).



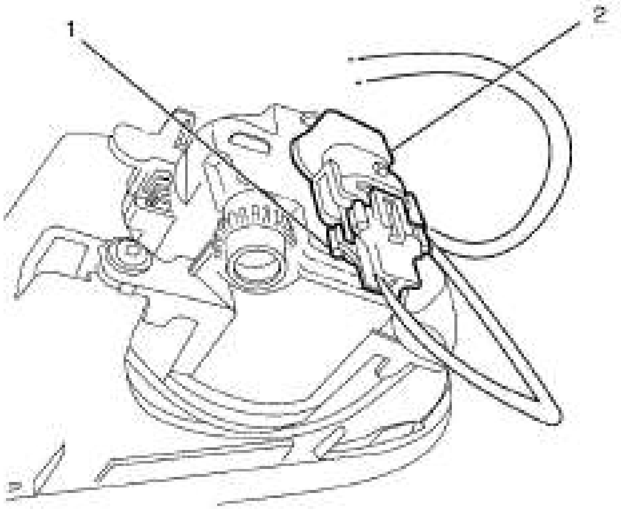
5. Remove the fog lamp bulb assembly (1) from the fog lamp assembly (2) by rotating the bulb assembly countercockwise.

Installation Procedure



Important: When replacing the fog lamp bulb do not handle the quartz envelope of the fog lamp bulb. Wipe the quartz envelope immediately with methylated spirits if it is touched accidentally or the performance of the bulb will deteriorate.

1. Install the front fog lamp bulb assembly (1) to the fog lamp assembly (2) and rotate it clockwise to secure.



2. Connect the fog lamp bulb assembly electrical connector (1) to the fog lamp assembly (2).
3. Install the air deflector to the front end of the vehicle. Refer to Front Air Deflector Replacement.
4. Lower the vehicle.

   Caution: Refer to Battery Disconnect Caution in the Preface section.

5. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
6. Adjust the fog lamps. Refer to Fog Lamp Aiming.

Front Fog Lamp Cover Replacement

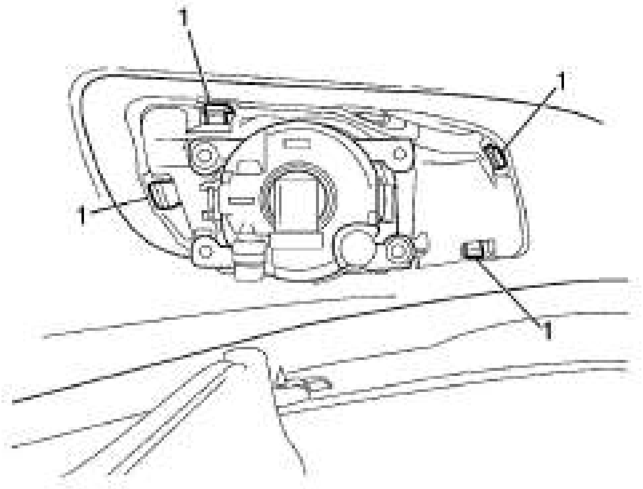
Removal Procedure

Type A

Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Remove the front air deflector. Refer to Front Air Deflector Replacement.



Important: Carefully pry the front fog lamp cover from the front bumper fascia

3. Disengage the front fog lamp cover retaining tabs (1) from the front bumper fascia.
4. Remove the front fog lamp cover from the vehicle.

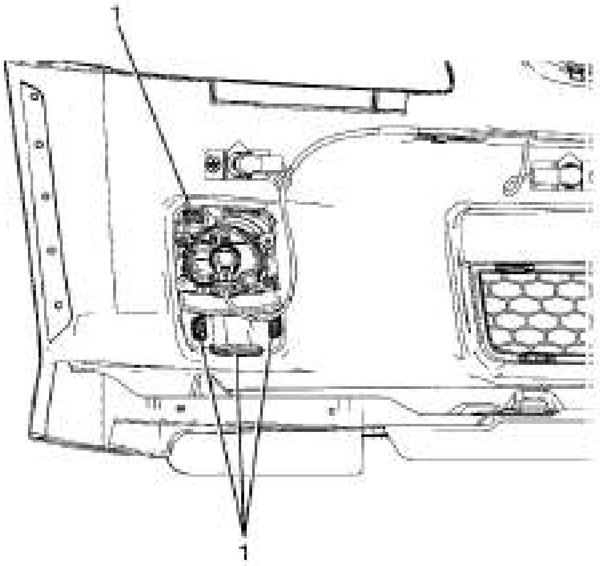
Removal Procedure

Type B

Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

1. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
2. Remove the front air deflector. Refer to Front Air Deflector Replacement.



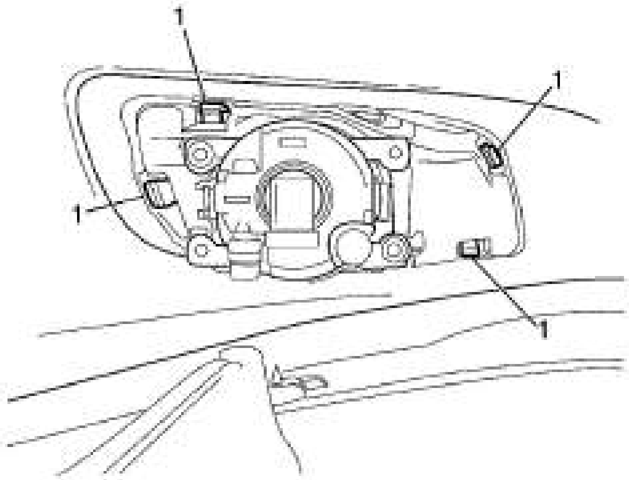
Important: Carefully pry the front fog lamp cover from the front bumper fascia

3. Disengage the front fog lamp cover retaining tabs (1) from the front bumper fascia.
4. Remove the front fog lamp cover from the vehicle.

Installation Procedure

Type A

1. Install the front fog lamp cover to the front bumper fascia.



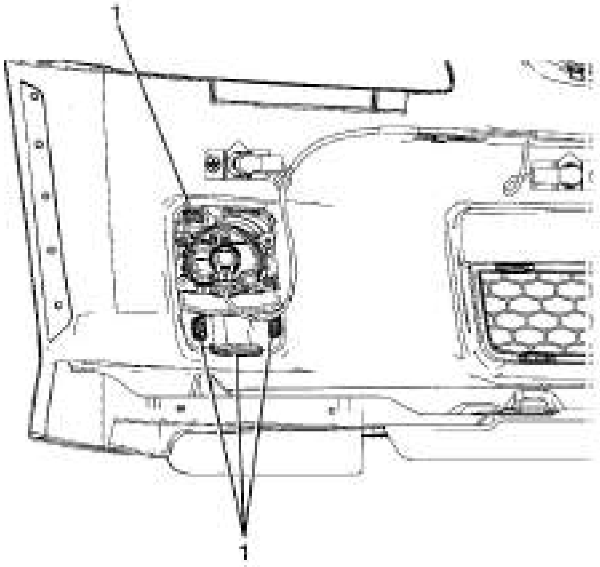
2. Firmly press the front fog lamp cover retaining tabs (1) into the front bumper fascia.

3. Install the front air deflector. Refer to Front Air Deflector Replacement.
4. Lower the vehicle.

Installation Procedure

Type B

1. Install the front fog lamp cover to the front bumper fascia.



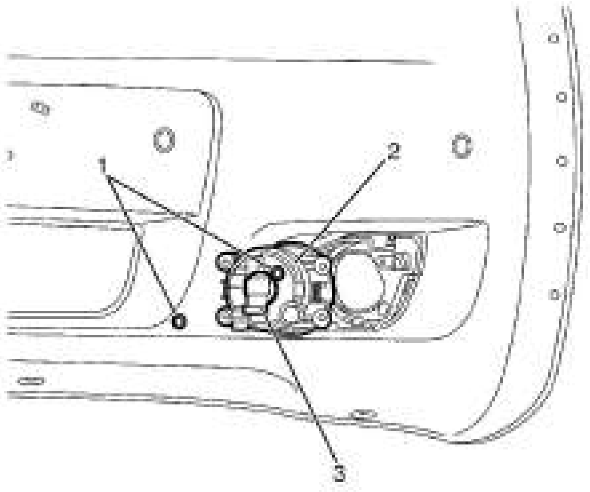
2. Firmly press the front fog lamp cover retaining tabs (1) into the front bumper fascia.
3. Install the front air deflector. Refer to Front Air Deflector Replacement.
4. Lower the vehicle.

Front Fog Lamp Replacement (LWB SWB)

Removal Procedure

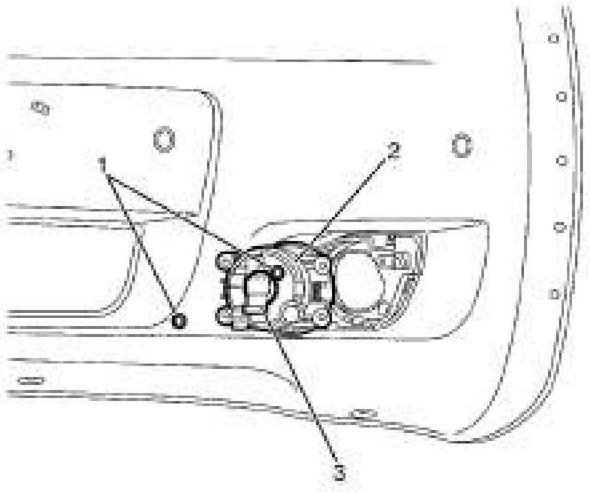
Caution: Refer to Battery Disconnect Caution in the Preface section.

1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
2. Remove the air deflector from the front end of the vehicle. Refer to Front Air Deflector Replacement.



3. Disconnect the electrical connector (3) from the fog lamp assembly.
4. Remove the fasteners (1) that secure the front fog lamp assembly (2) to the front fascia.
5. Remove the front fog lamp assembly from the vehicle.

Installation Procedure



Important: Do not handle the quartz envelope of the headlight bulb. Wipe the quartz envelope immediately with methylated spirits if it is touched accidentally or the performance of the bulb will deteriorate.

1. Install the front fog lamp assembly (2) to the front facia assembly.

   Notice: Refer to Fastener Notice in the Preface section.

2. Install and tighten the retaining screws to secure the front fog lamp assembly to the front fascia.

   Tighten
   Tighten the retaining screws to 2.0 N·m (18 lb in).

3. Connect the electrical connector (3) to the fog lamp assembly.
4. Install the air deflector to the front end of the vehicle. Refer to Front Air Deflector Replacement.

   Caution: Refer to Battery Disconnect Caution in the Preface section.

5. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
6. Adjust the fog lamps. Refer to Fog Lamp Aiming.

Hazard Warning Switch Replacement

The hazard warning switch is an integral part of the infotainment fascia, replacement of the hazard warning switch will require the replacement of the infotainment fascia. Refer to Radio Replacement

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Repair Instructions | **Document ID: 1995446**

Headlamp Aiming

Headlamp Aiming

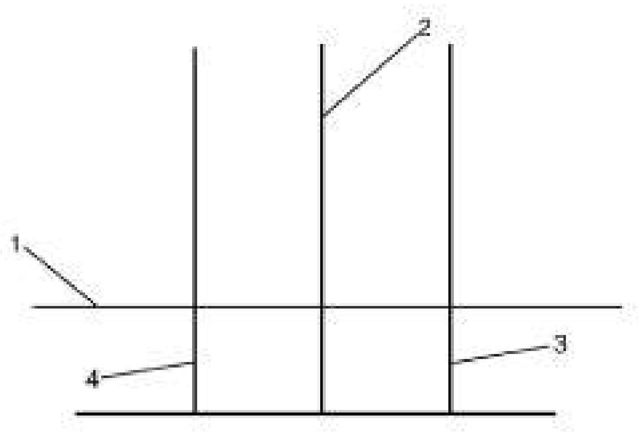
Important: During headlamp assembly aiming, do not use a cloth or similar material to cover the lens of the headlamp assembly being adjusted. Damage to the headlamp assembly will result if the headlamp beam is obstructed in this manor.

Headlamp aim should be checked:

- When a new headlamp capsule is installed.
- If service or repairs to the front end area have (or may have) disturbed the headlamps or their mounting.

Prior to aiming the headlamps, the following workshop area and equipment are needed:

- The area must consist of a level surface large enough to a mark reference line the length of a vehicle and an additional 7.62 m (25 ft) measured from the face of the lamps to the front of the aiming screen.
- The screen will be 1.52 m (5 ft) high x 3.66 m (12 ft) wide with a matte white surface well shaded from extraneous light, and correctly adjusted to the floor on which the vehicle stands. Provisions should be made to align the screen parallel with the vehicle.
-

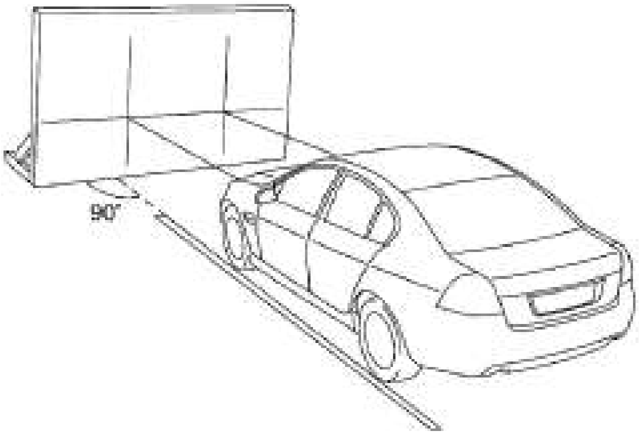


ı The screen must be provided with a fixed vertical centre-line (2) that corresponds to the centre of the vehicle, two laterally adjustable vertical lines (3 and 4) corresponding to the centre of the low beam bulb on each side of the vehicle and one vertically adjustable horizontal line (1) that corresponds to the centre of the front low beam bulb.

- If a regular commercial aiming screen is not available, the screen may consist of a vertical wall having a clear uninterrupted area approximately 1.83 m (6 ft) high and 3.66 m (12 ft) wide. The surface should be finished with a washable non-gloss white paint.

Prior to aiming the headlamps, the following steps must be taken:

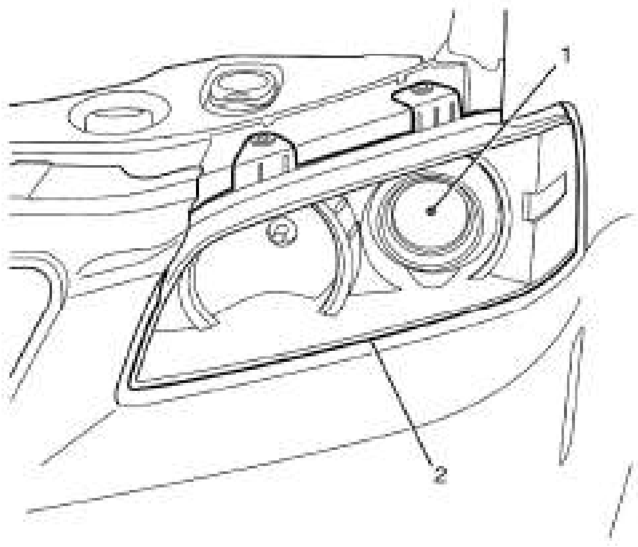
1. Remove any snow, ice or mud from the vehicle.
2. The vehicle must have a full tank of fuel.
3. Stop all other work on the vehicle.
4. If any service has been performed on the vehicle, make sure that all of the components are back in their original place.
5. The vehicle must be on a level surface.



6. The vehicle's left tires must be parallel to the reference line with the face of the headlamps extending 7.62 m (25 ft) from the front of the aiming screen.
7. DO NOT load any cargo in the vehicle.
8. The vehicle must contain 1 person or 72.56 kg (160 lb) on the driver's seat.
9. Inflate the tires to the correct pressure.
10. Simulate the vehicle loads if the intended use of the vehicle is for hauling heavy loads or towing a trailer.
11. Rock the vehicle in order to stabilize the suspension.

Headlamp Aiming Procedure

1. Open the hood.

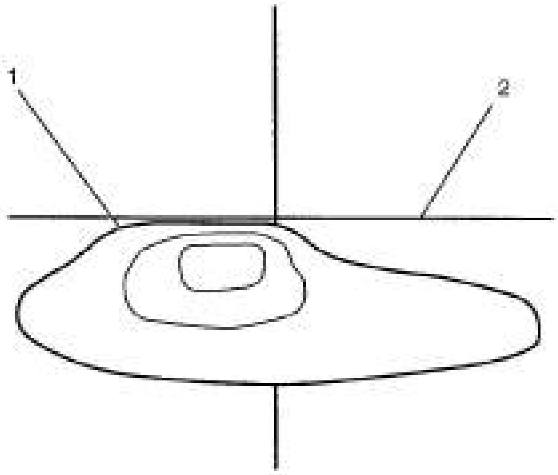


Important: Left headlamp shown. Right headlamp similar.

2. Locate the aim dot (1) on the low-beam side of the headlamp lens (2).
3. Measure the distance from the ground to the aim dot (1). Record the distance.
4. Repeat for the right headlamp.
5. At the screen, measure from the floor and place the horizontal tape at the recorded distances from steps 3 and 4.
6. Measure from the reference line on the floor to the left headlamp bulb centerline. Record the distance.
7. At the screen, measure from the reference line and place the vertical tape at the recorded distance from step 6.
8. Measure from the reference line on the floor to the right headlamp bulb centerline. Record the distance.
9. At the screen, measure from the reference line and place the vertical tape at the recorded distance from step 8.

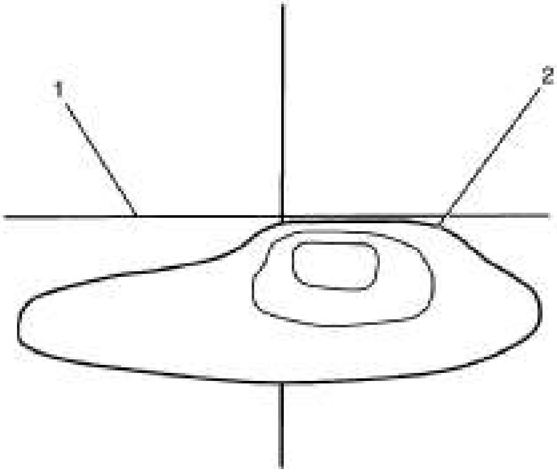
Notice: Do not cover a headlamp to improve beam cut-off when aiming. Covering a headlamp may cause excessive heat build-up which may cause damage to the headlamp.

10. Turn the low beam headlamps to the ON position and block the light from projecting onto the screen from the right headlamp.
    - For RHD drive variants go to step 11
    - For LHD drive variants go to step 12



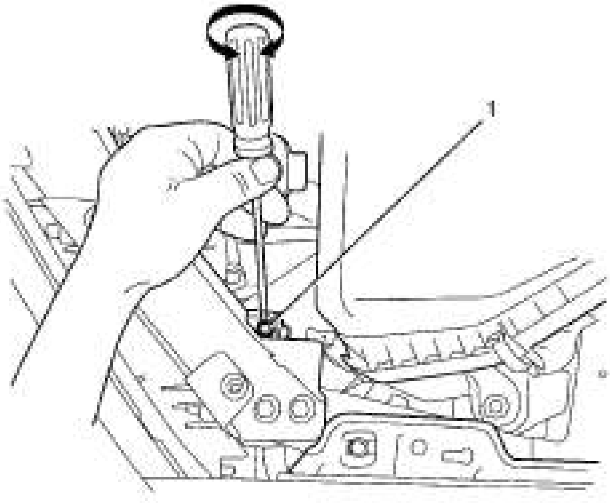
Important: This is for Right Hand Drive (RHD) variants only.

11. The top edge of the beam cut-off (2) should be positioned at the bottom edge of the horizontal tape line (1).



Important: This is for Left Hand Drive (LHD) variants only.

12. The top edge of the beam cut-off (2) should be positioned at the bottom edge of the horizontal tape line (1).



Important: Horizontal headlamp adjustment does not exist.

Important: To adjust the vertical aim of the headlamps, use a suitable tool to turn the headlamp adjuster (1) counter-clockwise to raise the beam or clockwise to lower the beam.

13. Adjust the vertical aim of the headlamps to the specifications required by the state and the local authorities, or as shown in step 11.
14. Repeat steps 11 and 12 for the right hand headlamp while blocking the light from projecting onto the screen from the left headlamp.
15. Close the hood.

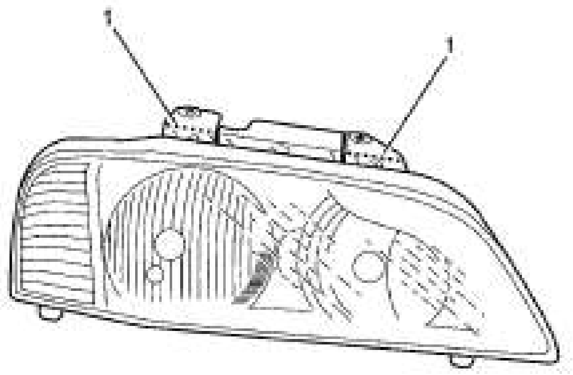
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Repair Instructions | **Document ID: 1995515**

Headlamp Bracket Replacement

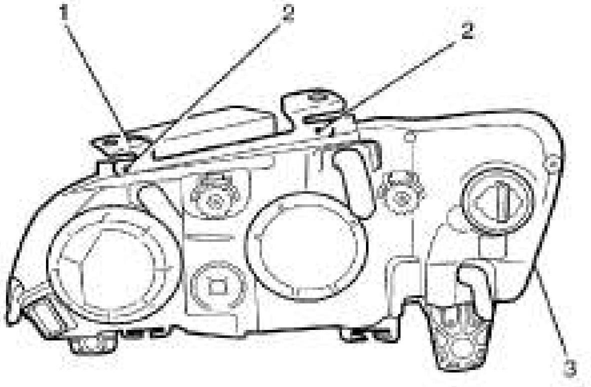
Installation Procedure (Type A)

Caution: Refer to Battery Disconnect Caution in the Preface section.

1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
2. Remove the radiator air baffle and deflector. Refer to Radiator Air Upper Baffle and Deflector Replacement.
3. Remove the front bumper fascia. Refer to Front Bumper Fascia Replacement.
4. Remove the headlamp. Refer to Headlamp Replacement.



5. Cut the headlamp assembly retaining brackets along the broken line (1) shown.
6. Discard the remaining ends of the bracket.

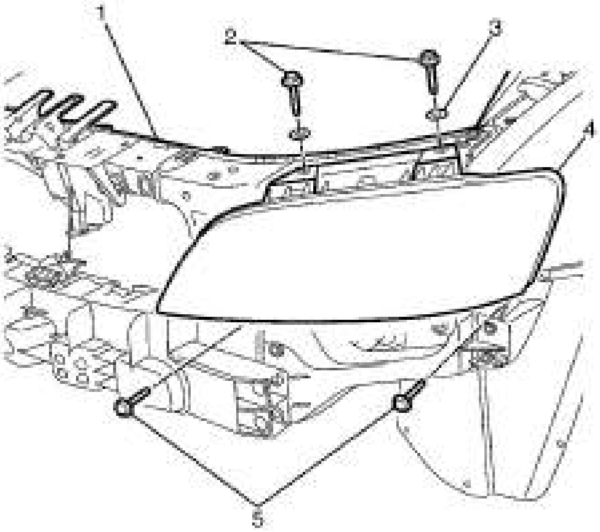


7. Install the headlamp bracket (1) to the headlamp assembly (3).

   Notice: Refer to Fastener Notice in the Preface section.

8. Install the headlamp bracket to headlamp assembly retaining screws (2).

   Tighten
   Tighten the screws to 1 N·m (9 lb in).



9. Install the headlamp assembly (4) to the front end module (1).

   Important: Replace the upper headlamp retaining bolts (2).

10. Install the NEW headlamp assembly to front end module upper retaining washers (3) and bolts (2).

    Tighten
    Tighten the bolts to 4.5 N·m (35 lb in).

11. Install the headlamp assembly to front end module lower retaining bolts (5).

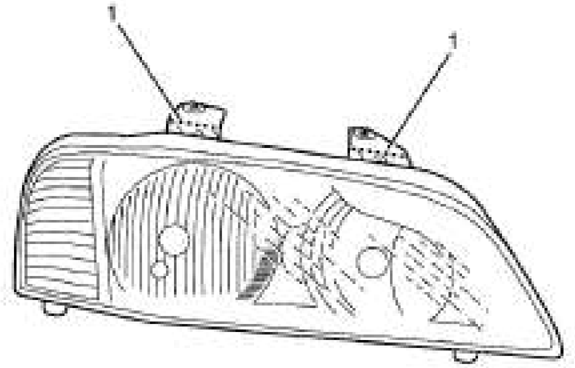
    Tighten
    Tighten the bolts to 4.5 N·m (35 lb in).

12. Install the front bumper fascia. Refer to Front Bumper Fascia Replacement.
13. Install the radiator air baffle and deflector. Refer to Radiator Air Upper Baffle and Deflector Replacement.
14. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
15. Check all vehicle lights for correct operation.
16. Adjust the headlamps. Refer to Headlamp Aiming.

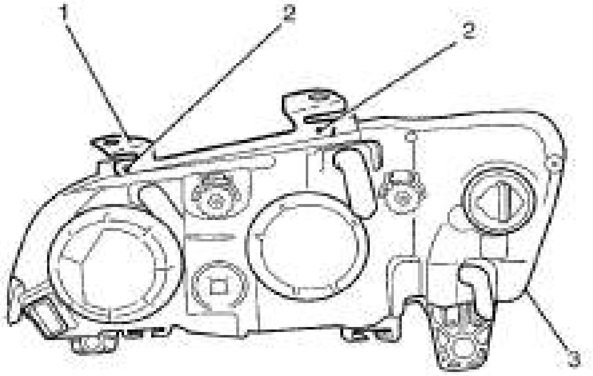
Installation Procedure (Type B)

Caution: Refer to Battery Disconnect Caution in the Preface section.

1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
2. Remove the radiator air baffle and deflector. Refer to Radiator Air Upper Baffle and Deflector Replacement.
3. Remove the front bumper fascia. Refer to Front Bumper Fascia Replacement.
4. Remove the headlamp. Refer to Headlamp Replacement.



5. Cut the headlamp assembly retaining brackets along the broken line (1) shown.
6. Discard the remaining ends of the bracket.

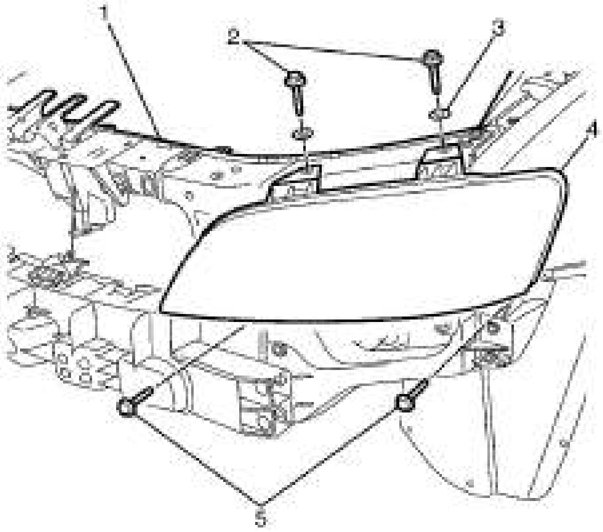


7. Install the headlamp bracket (1) to the headlamp assembly (3).

   Notice: Refer to Fastener Notice in the Preface section.

8. Install the headlamp bracket to headlamp assembly retaining screws (2).

   Tighten
   Tighten the screws to 1 N·m (9 lb in).



9. Install the headlamp assembly (4) to the front end module (1).

   Important: Replace the upper headlamp retaining bolts (2).

10. Install the NEW headlamp assembly to front end module upper retaining washers (3) and bolts (2).

    Tighten
    Tighten the bolts to 4.5 N·m (35 lb in).

11. Install the headlamp assembly to front end module lower retaining bolts (5).

    Tighten
    Tighten the bolts to 4.5 N·m (35 lb in).

12. Install the front bumper fascia. Refer to Front Bumper Fascia Replacement.
13. Install the radiator air baffle and deflector. Refer to Radiator Air Upper Baffle and Deflector Replacement.
14. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
15. Check all vehicle lights for correct operation.
16. Adjust the headlamps. Refer to Headlamp Aiming.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Repair Instructions | Document ID: 1996294

Headlamp Bulb Replacement (SWB)

Removal Procedure - Low Beam (Type A and Type B)

Caution: Refer to Battery Disconnect Caution in the Preface section.

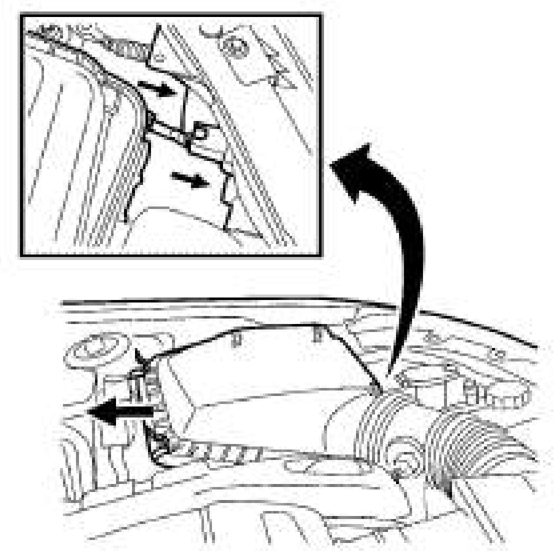
Caution: Halogen bulbs contain gas under pressure. Handling a bulb improperly could cause it to shatter into flying glass fragments. To help avoid personal injury:

- Turn off the lamp switch and allow the bulb to cool before changing the bulb.
- Leave the lamp switch OFF until the bulb change is complete.
- Always wear eye protection when changing a halogen bulb.
- Handle the bulb only by its base. Avoid touching the glass.
- Keep dirt and moisture off the bulb.
- Properly dispose of the used bulb.
- Keep halogen bulbs out of the reach of children.

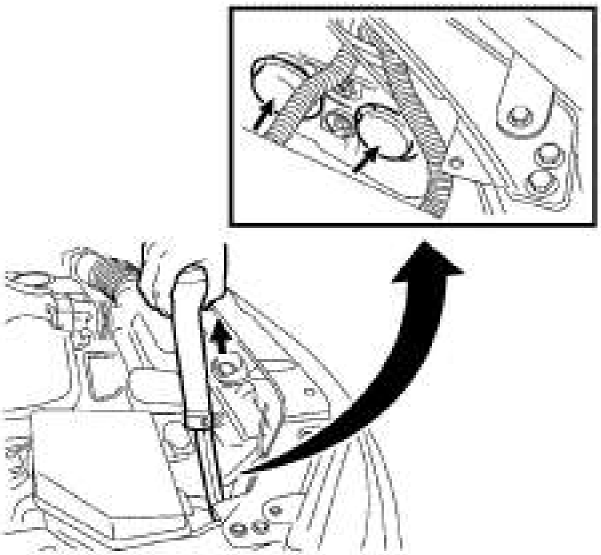
1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
2. Remove the radiator air baffle and deflector. Refer to Radiator Air Upper Baffle and Deflector Replacement

Important: For left-hand headlamp access, go to step 3.

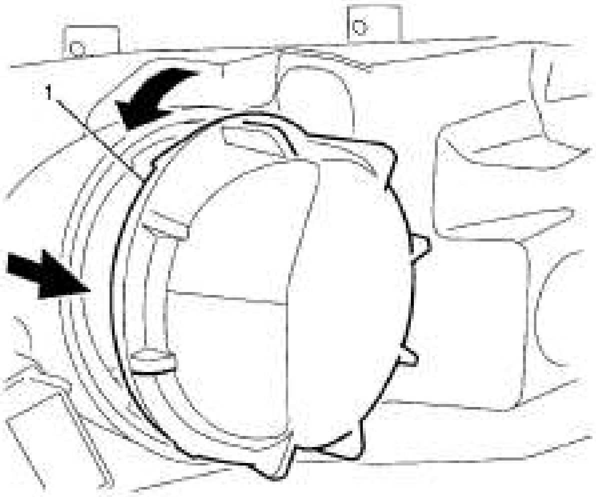
Important: For right-hand headlamp access, go to step 4.



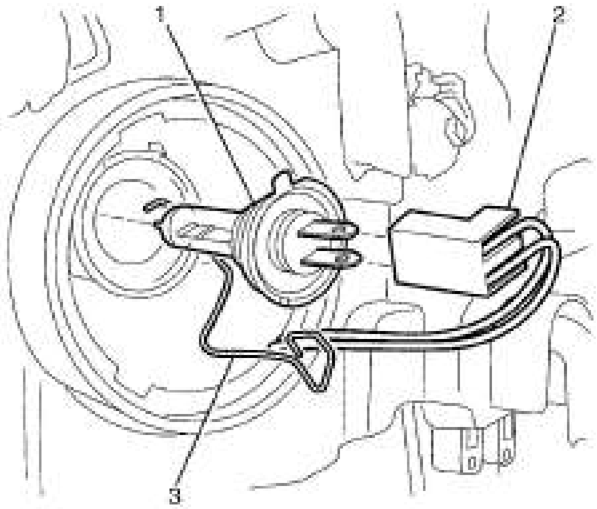
3. For access to the left-hand headlight, detach and move the airbox upper cover rearward. Go to step 4.



4. For access to the right-hand headlight, remove the coolant reservoir fill neck by pulling up on the neck assembly and position aside. Note the orientation of the aligning tabs and keyway of the coolant reservoir fill neck for installation.



5. Remove the low beam headlamp dust cap from the rear of the headlamp assembly by rotating the dust cap counter clockwise. Note orientation of the dust cap and tabs for installation.

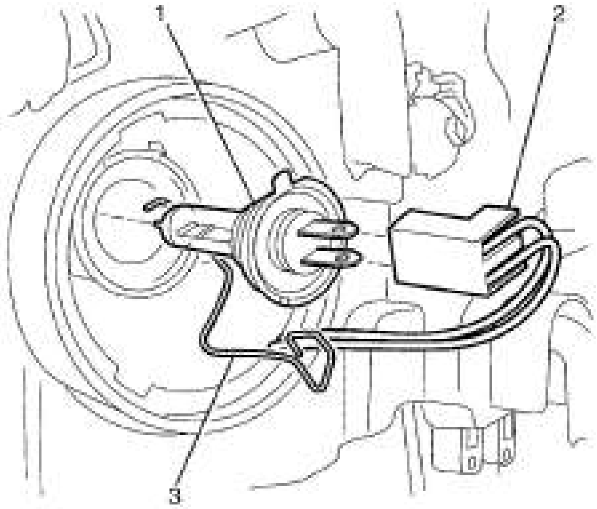


6. Disconnect the electrical connector (2) from the low beam headlight bulb (1).
7. Press and unclip the low beam headlight bulb spring retainer (3) and pivot the retainer clear from the bulb (1). Remove the bulb from the headlamp assembly.

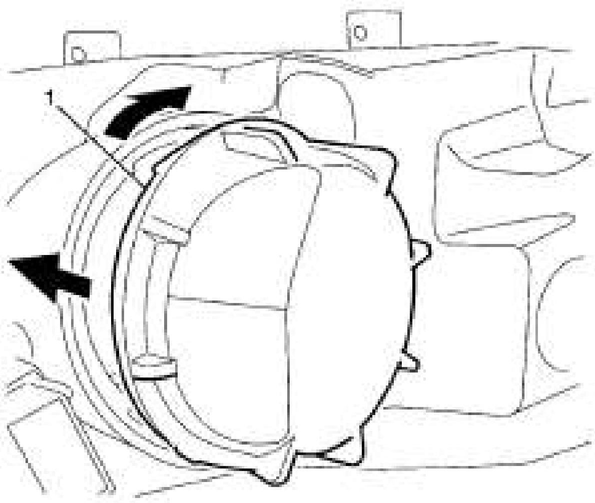
Installation Procedure - Low Beam (Type A and Type B)

Important: Do not handle the quartz envelope of the headlight bulb. Wipe the quartz envelope immediately with methylated spirits if it is touched accidentally or the performance of the bulb will deteriorate.

Important: The different-sized tabs on the bulb base and mating cut-outs in the headlamp assembly allow the bulb to seat correctly in one orientation position.



1. Install the new bulb (1) into the headlamp assembly, ensuring the locating tangs on the bulb mate correctly with the cut-outs in the headlamp.
2. Clip the bulb spring retainer (3) and secure.
3. Connect the wiring harness connector (2) to the bulb (1).
4. Inspect the low beam dust cap seal and replace if necessary.



5. Install the low beam headlamp dust cap (1) to the rear of the headlamp assembly by rotating clockwise to secure.
6. For the left-hand headlamp assembly, replace and secure the airbox upper cover. Go to step 8.
7. For the right-hand headlamp assembly, reinstall the coolant reservoir fill neck by aligning the tabs and keyway and pushing the neck into position.
8. Install the radiator air baffle and deflector. Refer to Radiator Air Upper Baffle and Deflector Replacement
9. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
10. Check all vehicle lights for correct operation.

Removal Procedure - High Beam (Type A and Type B)

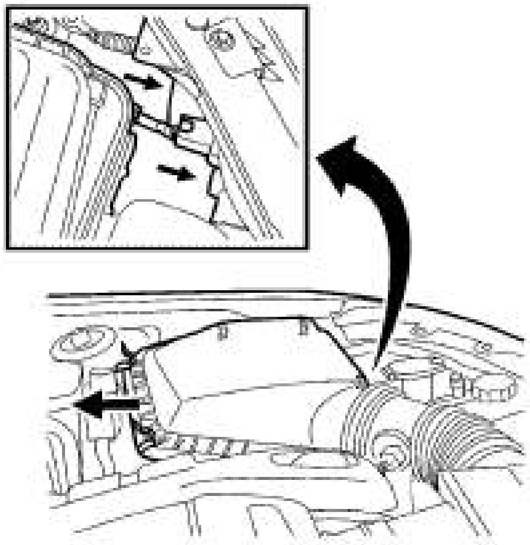
Caution: Refer to Battery Disconnect Caution in the Preface section.

Caution: Halogen bulbs contain gas under pressure. Handling a bulb improperly could cause it to shatter into flying glass fragments. To help avoid personal injury:

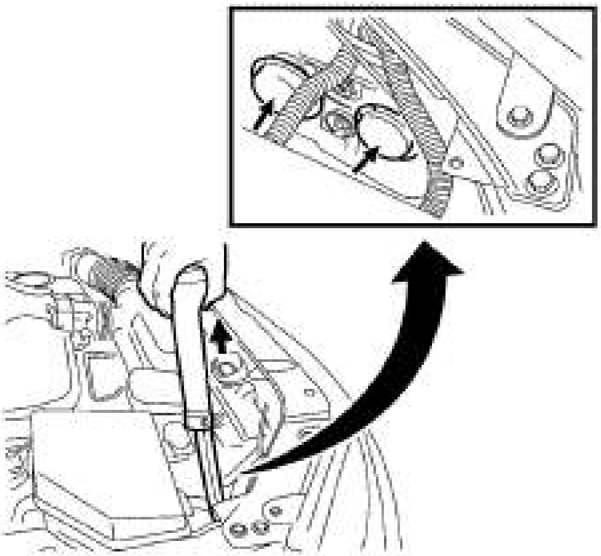
- Turn off the lamp switch and allow the bulb to cool before changing the bulb.
- Leave the lamp switch OFF until the bulb change is complete.
- Always wear eye protection when changing a halogen bulb.
- Handle the bulb only by its base. Avoid touching the glass.
- Keep dirt and moisture off the bulb.
- Properly dispose of the used bulb.

- Keep halogen bulbs out of the reach of children.

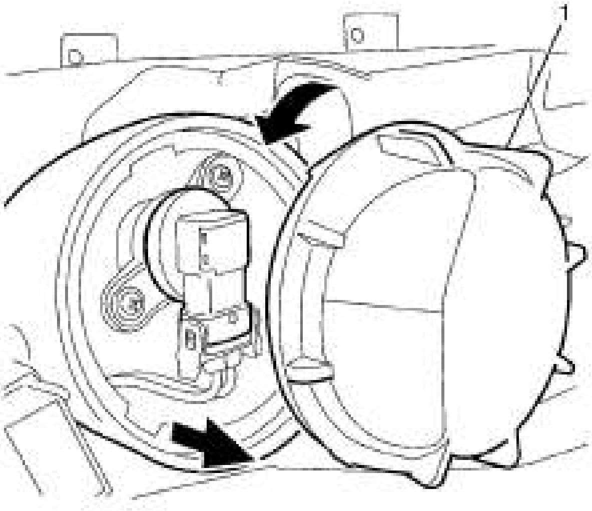
1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
2. Remove the radiator air baffle and deflector. Refer to Radiator Air Upper Baffle and Deflector Replacement



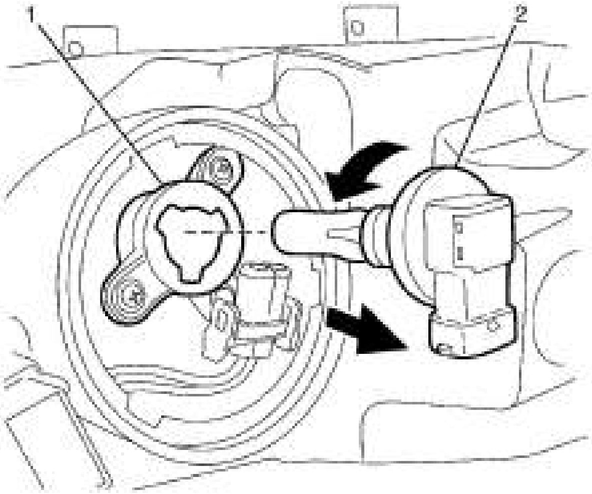
3. For access to the left-hand headlight assembly, detach and move the airbox upper cover rearward. Go to step 5.



4. For access to the right-hand headlight, remove the coolant reservoir fill neck by pulling up on the neck assembly and position aside. Note the orientation of the aligning tabs and keyway of the coolant reservoir fill neck for installation.



5. Remove the high beam headlamp dust cap (1) from the rear of the headlamp assembly by rotating the dust cap counter clockwise. Note the orientation of the dust cap and tabs for installation.
6. Disconnect the electrical connector from the high beam headlight bulb.

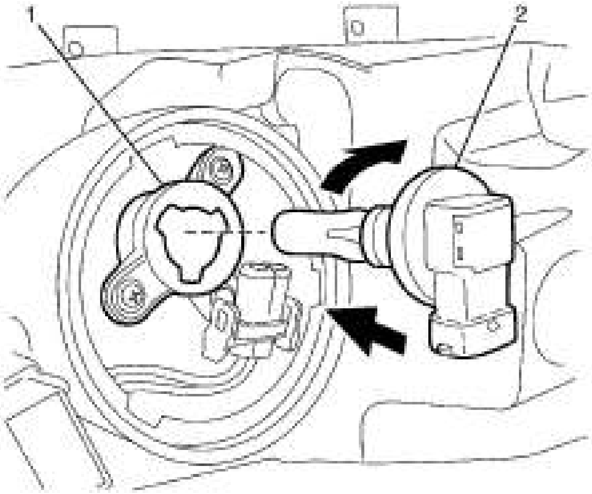


7. Rotate the high beam headlight bulb (2) counter clockwise and remove the bulb from the headlamp assembly (1).

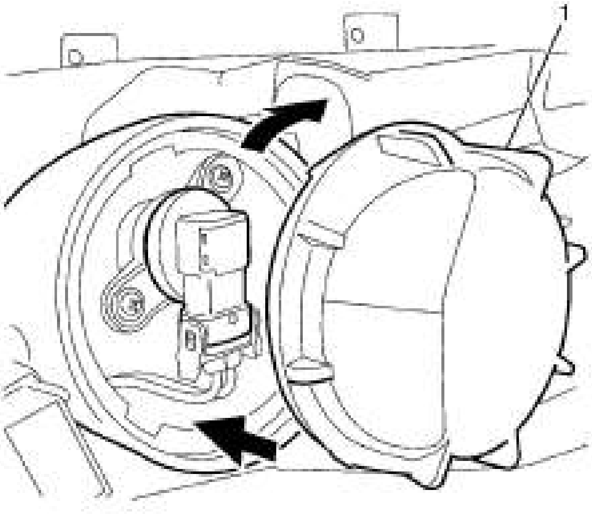
Installation Procedure - High Beam (Type A and Type B)

Important: Do not handle the quartz envelope of the headlight bulb. Wipe the quartz envelope immediately with methylated spirits if it is touched accidentally or the performance of the bulb will deteriorate.

Important: The different-sized tabs on the bulb base and mating cut-outs in the headlamp assembly allow the bulb to seat correctly in one orientation position.



1. Install the new high beam bulb (2) into the headlamp assembly (1) and lock the bulb in place by rotating it clockwise.
2. Connect the high beam bulb connector to the bulb and push the connector until the tangs of the connector engage.
3. Inspect the high beam dust cap seal and replace if necessary.



4. Install the high beam headlamp dust cap (1) to the rear of the headlamp assembly by aligning the tabs and rotating the dust cap clockwise to secure.

Important: For left-hand headlamp, go to step 5.

Important: For right-hand headlamp, go to step 6.

5. For the left-hand headlamp assembly, replace and secure the airbox upper cover. Go to step 7.
6. For the right-hand headlamp assembly, reinstall the coolant reservoir fill neck by aligning the tabs and keyway and pushing the neck into position.
7. Install the radiator air baffle and deflector. Refer to Radiator Air Upper Baffle and Deflector Replacement

Caution: Refer to Battery Disconnect Caution in the Preface section.

8. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
9. Check all vehicle lights for correct operation.

Removal Procedure - Front Park (Type A)

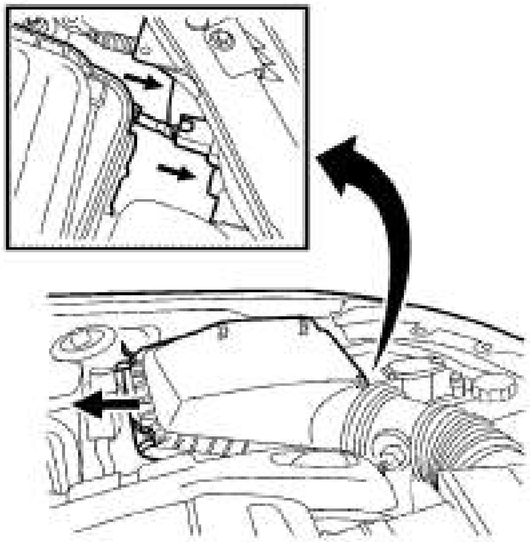
Caution: Halogen bulbs contain gas under pressure. Handling a bulb improperly could cause it to shatter into flying glass fragments. To help avoid personal injury:

- Turn off the lamp switch and allow the bulb to cool before changing the bulb.
- Leave the lamp switch OFF until the bulb change is complete.
- Always wear eye protection when changing a halogen bulb.
- Handle the bulb only by its base. Avoid touching the glass.
- Keep dirt and moisture off the bulb.
- Properly dispose of the used bulb.
- Keep halogen bulbs out of the reach of children.

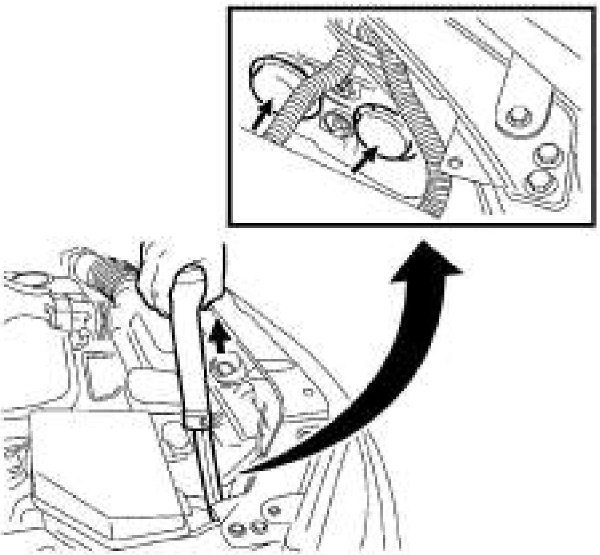
1. Remove the radiator air baffle and deflector. Refer to Radiator Air Upper Baffle and Deflector Replacement

Important: For left-hand headlamp access, go to step 3.

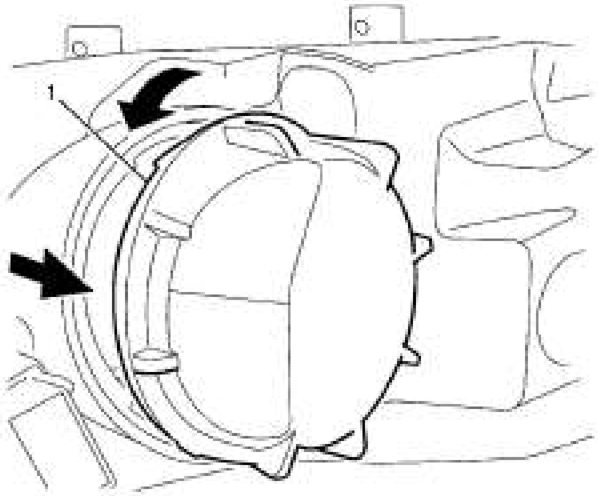
Important: For right-hand headlamp access, go to step 4.



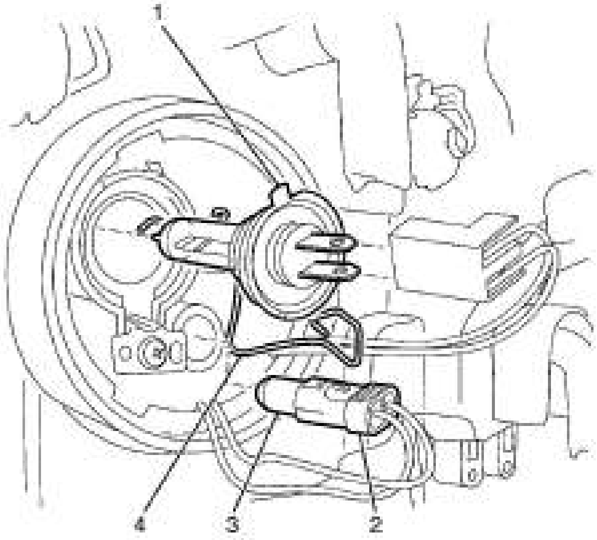
2. For access to the left-hand headlight, detach and move the airbox upper cover rearward. Go to step 4.



3. For access to the right-hand headlight, remove the coolant reservoir fill neck by pulling up on the neck assembly and position aside. Note the orientation of the aligning tabs and keyway of the coolant reservoir fill neck for installation.



4. Remove the low beam headlamp dust cap (1) from the rear of the headlamp assembly by rotating the dust cap counter clockwise. Note the orientation of the dust cap and tabs for installation.
5. Disconnect the electrical connector from the low beam headlight bulb.

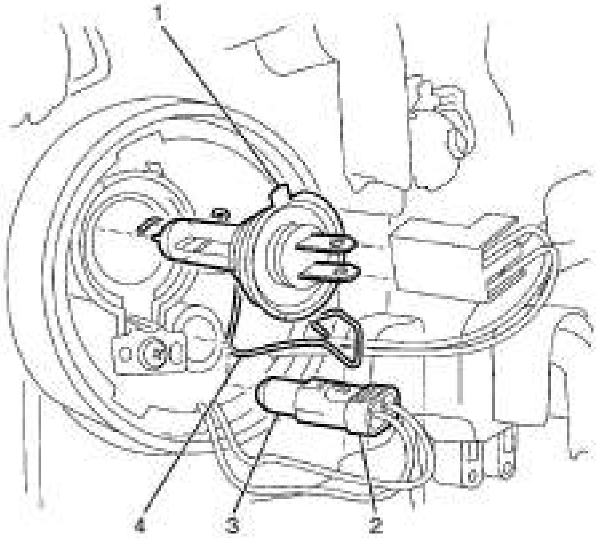


6. Press and unclip the low beam headlight bulb spring retainer (4) and pivot the retainer clear from the bulb (1). Remove the bulb from the headlamp assembly.
7. Using long nose pliers, pull the front park bulb socket (2) from the headlamp assembly.
8. Remove the front park bulb (3) from the socket.

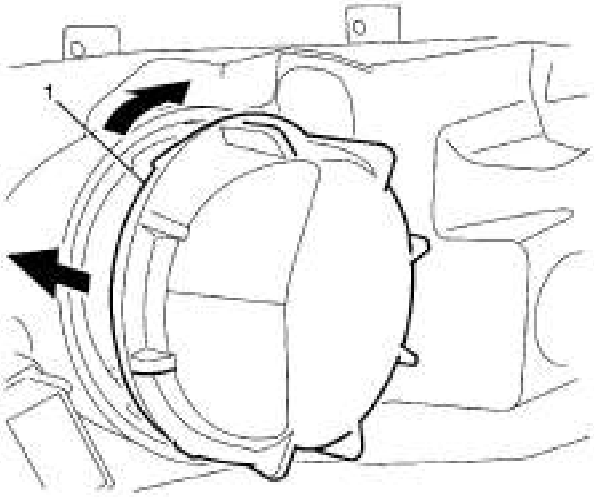
Installation Procedure - Front Park (Type A)

Important: Do not handle the quartz envelope of the headlamp bulb. Wipe the quartz envelope immediately with methylated spirits if it is touched accidentally or the performance of the bulb will deteriorate.

Important: The different-sized tabs on the bulb base and mating cut-outs in the headlamp assembly allow the bulb to seat correctly in one orientation position.



1. Install a new bulb (3) to the front park bulb socket (2).
2. Install the front park bulb socket to the headlamp assembly
3. Install the low beam bulb (1) into the headlamp assembly, ensuring the locating tangs on the bulb mate correctly with the cut-outs in the headlamp.
4. Clip the bulb spring retainer (4) and secure.
5. Connect the electrical connector to the bulb.
6. Inspect the low beam dust cap seal for damage and replace if necessary.



7. Install the low beam headlamp dust cap (1) to the rear of the headlamp assembly by aligning the tabs and rotating the dust cap clockwise to secure.
8. For the left-hand headlamp assembly, replace and secure the airbox upper cover. Go to step 9.
9. For the right-hand headlamp assembly, reinstall the coolant reservoir fill neck by aligning the tabs and keyway and pushing the neck into position.
10. Install the radiator air baffle and deflector. Refer to Radiator Air Upper Baffle and Deflector Replacement
11. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
12. Check all vehicle lights for correct operation.

Removal Procedure - Front Park (Type B)

Caution: Refer to Battery Disconnect Caution in the Preface section.

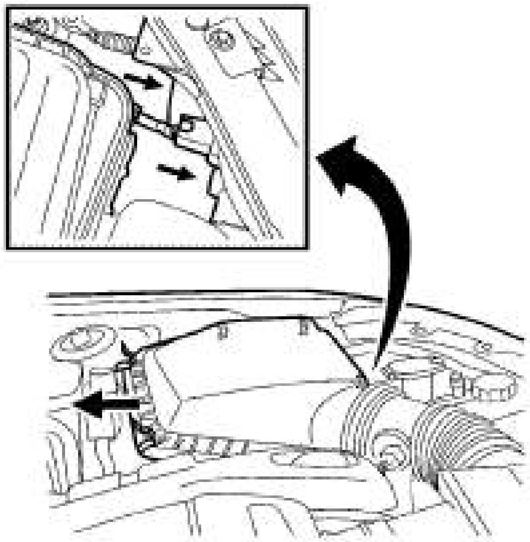
Caution: Halogen bulbs contain gas under pressure. Handling a bulb improperly could cause it to shatter into flying glass fragments. To help avoid personal injury:

- Turn off the lamp switch and allow the bulb to cool before changing the bulb.
- Leave the lamp switch OFF until the bulb change is complete.
- Always wear eye protection when changing a halogen bulb.
- Handle the bulb only by its base. Avoid touching the glass.
- Keep dirt and moisture off the bulb.
- Properly dispose of the used bulb.
- Keep halogen bulbs out of the reach of children.

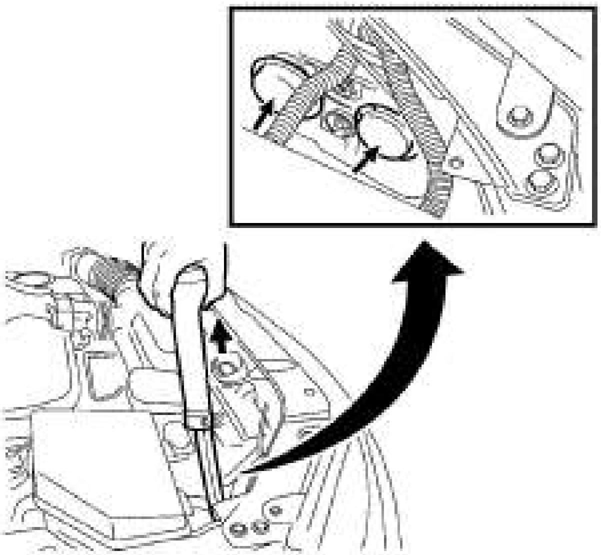
1. Disconnect the battery ground cable. Refer to Battery Disconnect Caution.
2. Remove the radiator air baffle. Refer to Radiator Air Upper Baffle and Deflector Replacement

Important: For left-hand headlamp access, go to step 3.

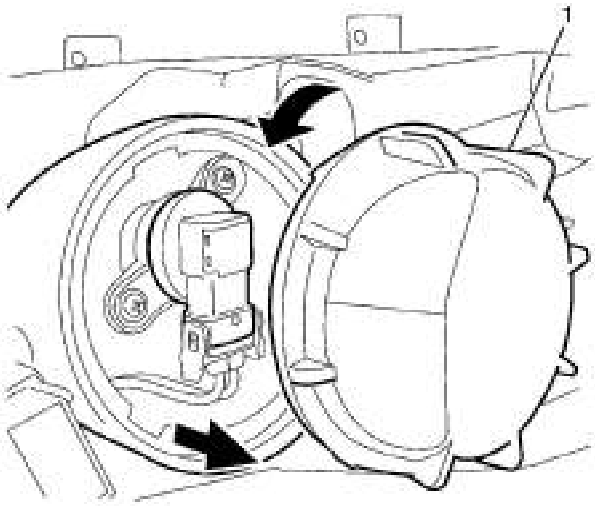
Important: For right-hand headlamp access, go to step 4.



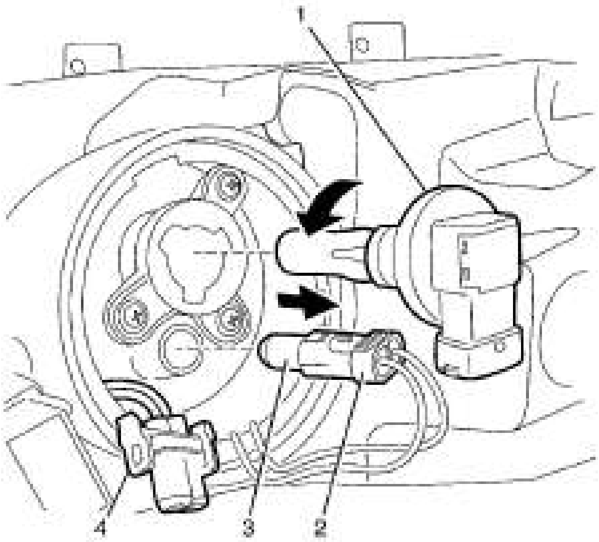
3. For access to the left-hand headlight, detach and move the airbox upper cover rearward. Go to step 4.



4. For access to the right-hand headlight, remove the coolant reservoir fill neck by pulling up on the neck assembly and position aside. Note the orientation of the aligning tabs and keyway of the coolant reservoir fill neck for installation.



5. Remove the high beam headlamp dust cap (1) from the rear of the headlamp assembly by rotating the dust cap counter clockwise. Note the orientation of the dust cap and tabs for installation.



6. Disconnect the electrical connector (4) from the high beam headlight bulb (1).
7. Rotate the high beam headlight bulb counter clockwise and remove the bulb from the headlamp assembly.

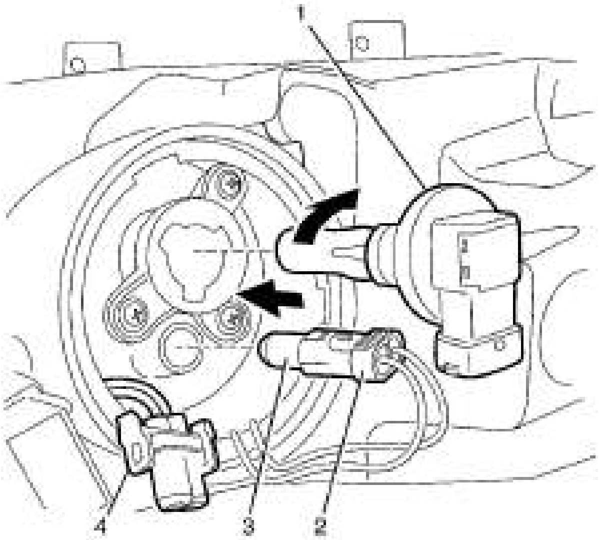
Notice: Refer to General Repair Instructions in the Preface section.

8. Pull the front park bulb socket (2) from the headlamp assembly.
9. Remove the front park bulb (3) from the socket (2).

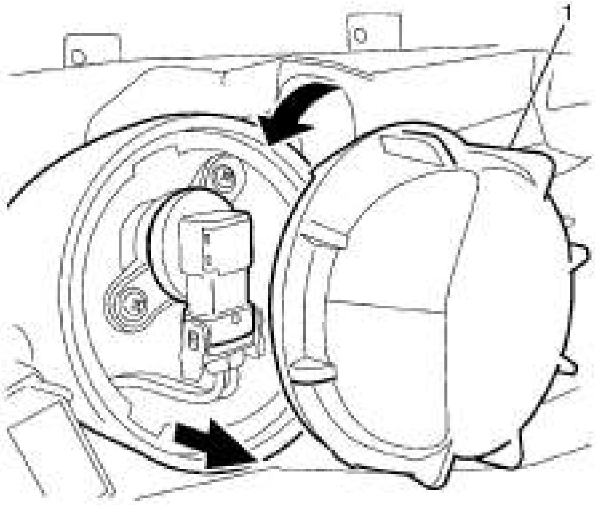
Installation Procedure - Front Park (Type B)

Important: Do not handle the quartz envelope of the headlight bulb. Wipe the quartz envelope immediately with methylated spirits if it is touched accidentally or the performance of the bulb will deteriorate.

Important: The different-sized tabs on the bulb base and mating cut-outs in the headlamp assembly allow the bulb to seat correctly in one orientation position.



1. Install a new bulb (3) to the front park bulb socket (2).
2. Install the front park bulb (3) and socket (2) to the headlamp assembly.
3. Install the high beam bulb (1) into the headlamp assembly and lock the bulb in place by rotating it clockwise.
4. Connect the high beam bulb connector (4) to the bulb and push the connector until the tangs of the connector engage.



5. Inspect the high beam dust cap seal and replace if necessary.
6. Install the high beam headlamp dust cap (1) to the rear of the headlamp assembly by aligning the tabs and rotating the dust cap clockwise to secure.

   Important: For left-hand headlamp, go to step 7.

   Important: For right-hand headlamp, go to step 8.

7. For the left-hand headlamp assembly, replace and secure the airbox upper cover. Go to step 9.
8. For the right-hand headlamp assembly, reinstall the coolant reservoir fill neck by aligning the tabs and keyway and pushing the neck into position.
9. Install the radiator air baffle. Refer to Radiator Air Upper Baffle and Deflector Replacement
10. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
11. Check all vehicle lights for correct operation.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Repair Instructions | **Document ID: 1982211**

Headlamp Leveling Control Module Replacement (Front)

Removal Procedure

Caution: Refer to Battery Disconnect Caution in the Preface section.

Caution: The high intensity discharge system produces high voltage and current. To reduce the risk of severe shocks and burns:

- Never open the high intensity discharge system ballast or the arc tube assembly starter.
- Never probe between the high intensity discharge system ballast output connector and the arc tube assembly.

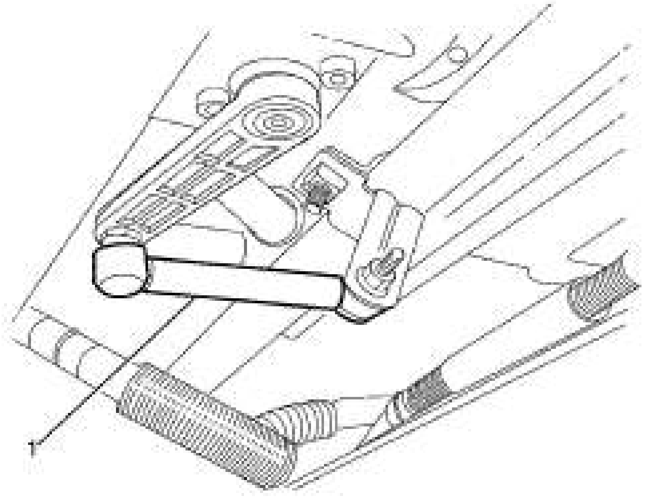
Caution: The high intensity discharge system produces high voltage and current. In order to reduce the risk of severe shocks and burns, the battery negative cable must be disconnected any time service work is being performed on or around the high intensity discharge system.

1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.

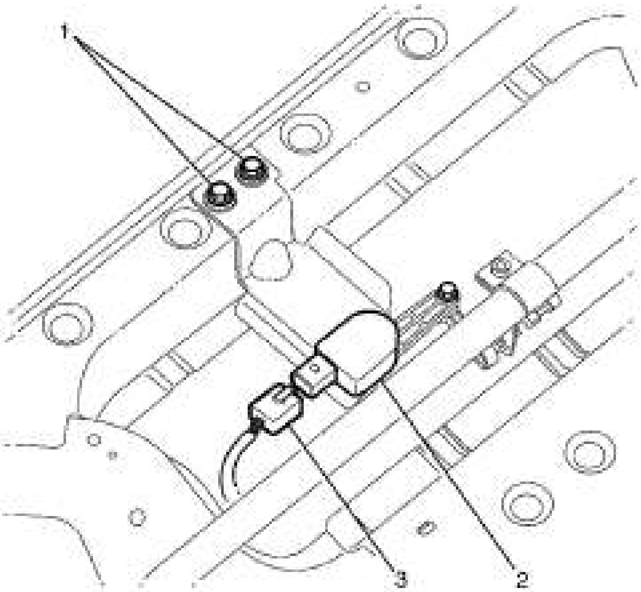
Caution: Refer to Safety Glasses Caution in the Preface section.

Caution: Refer to Vehicle Lifting Caution in the Preface section.

2. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.
3. Remove the air deflector. Refer to Front Air Deflector Replacement.

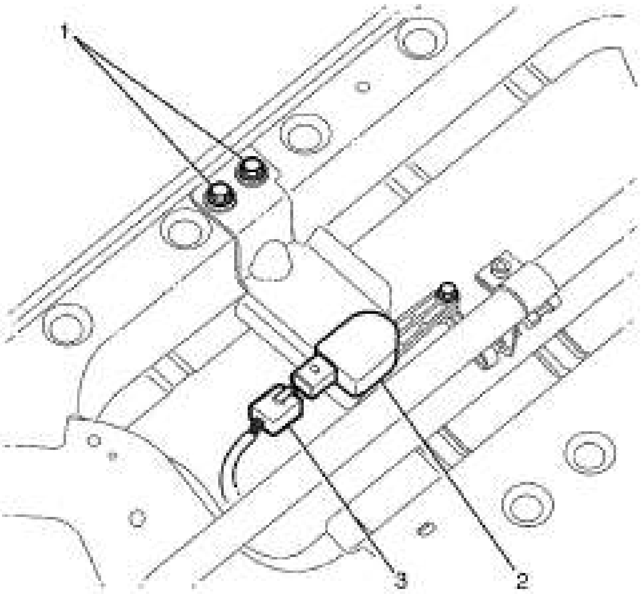


4. Using a suitable tool, remove the headlamp levelling sensor linkage (1) from the front suspension sway bar linkage.



5. Disconnect the headlamp levelling sensor electrical connector (3).
6. Remove the headlamp levelling sensor retaining bolts (1).
7. Remove the headlamp levelling sensor (2).

Installation Procedure



1. Install the headlamp levelling sensor (2).

   Notice: Refer to Fastener Notice in the Preface section.

2. Install the headlamp levelling sensor retaining bolts (1).

Tighten
Tighten the bolts to 8.0 N·m (71 lb in).

3. Connect the headlamp levelling sensor electrical connector (3).
4. Install the headlamp levelling sensor linkage to the sway bar linkage, listen for an audible click to confirm fitting.
5. Install the air deflector. Refer to Front Air Deflector Replacement.
6. Lower the vehicle. Refer to Lifting and Jacking the Vehicle.
7. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
8. Check all vehicle lights for correct operation.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Repair Instructions | **Document ID: 1982209**

Headlamp Leveling Control Module Replacement (SWB)

Removal Procedure

Caution: Refer to Battery Disconnect Caution in the Preface section.

Caution: The high intensity discharge system produces high voltage and current. To reduce the risk of severe shocks and burns:

- Never open the high intensity discharge system ballast or the arc tube assembly starter.
- Never probe between the high intensity discharge system ballast output connector and the arc tube assembly.

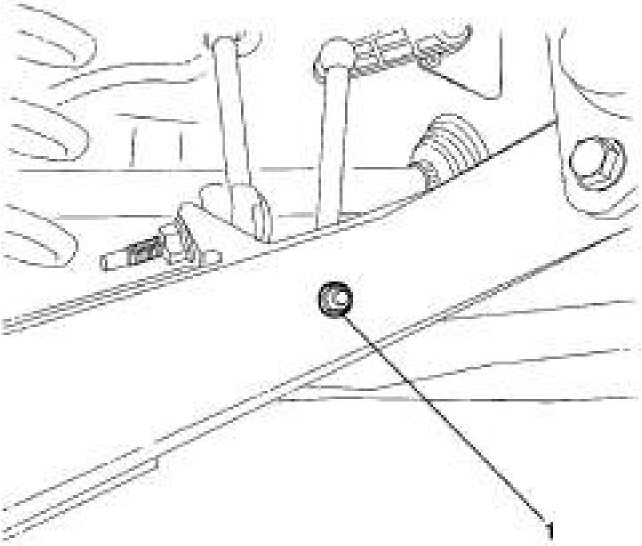
Caution: The high intensity discharge system produces high voltage and current. In order to reduce the risk of severe shocks and burns, the battery negative cable must be disconnected any time service work is being performed on or around the high intensity discharge system.

1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.

Caution: Refer to Safety Glasses Caution in the Preface section.

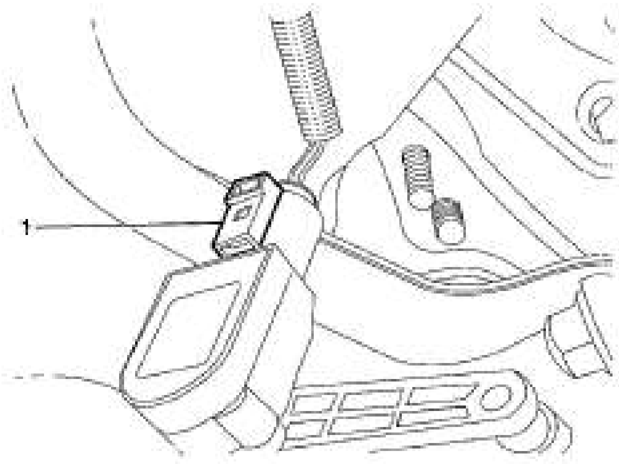
Caution: Refer to Vehicle Lifting Caution in the Preface section.

2. Raise and support the vehicle. Refer to Lifting and Jacking the Vehicle.

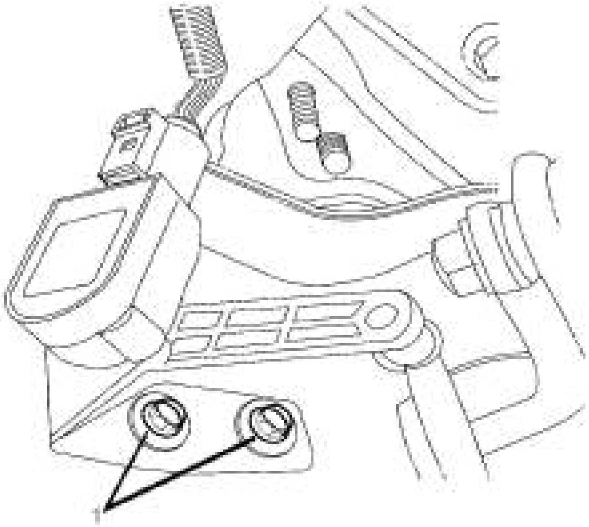


Important: The headlamp levelling linkages are not a serviceable item and should be replaced as a complete assembly.

3. Remove the headlamp levelling sensor linkage retaining bolt (1).

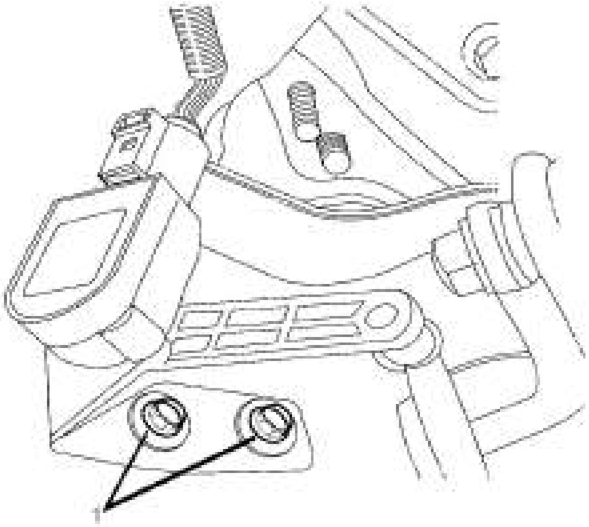


4. Disconnect the headlamp levelling sensor electrical connector (1).



5. Remove the head lamp levelling sensor retaining bolts.
6. Remove the head lamp levelling sensor.

Installation Procedure

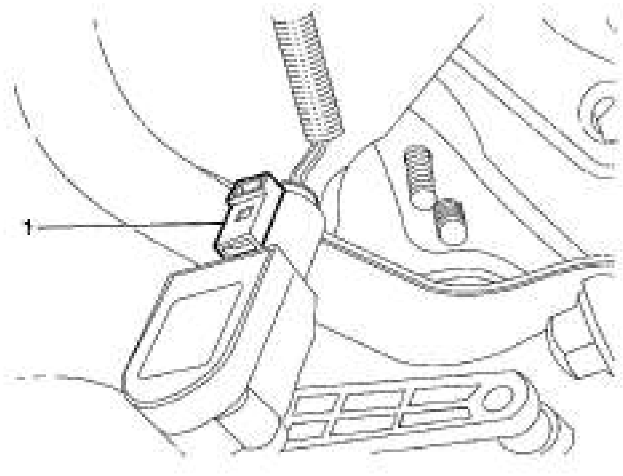


1. Install the head lamp levelling sensor.

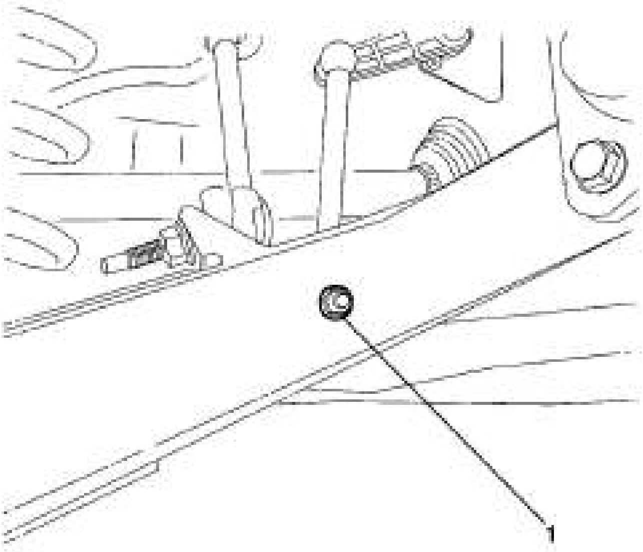
   Notice: Refer to Fastener Notice in the Preface section.

2. Install the head lamp levelling sensor retaining bolts.

   Tighten
   Tighten the bolts to 9.0 N·m (80 lb in).



3. Connect the headlamp levelling sensor electrical connector (1).



4. Install the head lamp levelling sensor linkage.

   Notice: Refer to Fastener Notice in the Preface section.

5. Install the head lamp levelling sensor linkage retaining nut (1).

   Tighten
   Tighten the nut to 4.0 N·m (35 lb in).

6. Lower the vehicle. Refer to Lifting and Jacking the Vehicle.
7. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
8. Check all vehicle lights for correct operation.

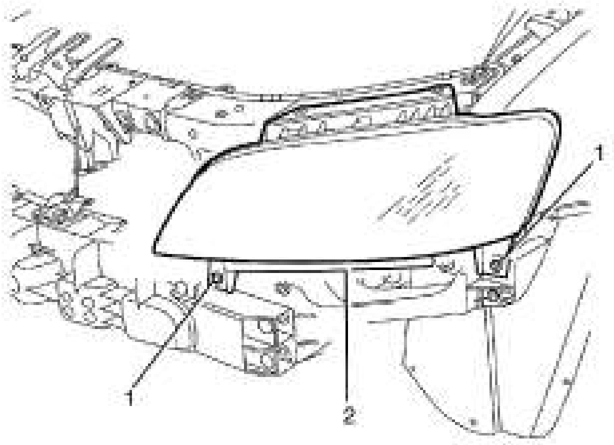
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Repair Instructions | **Document ID: 1995453**

Headlamp Replacement

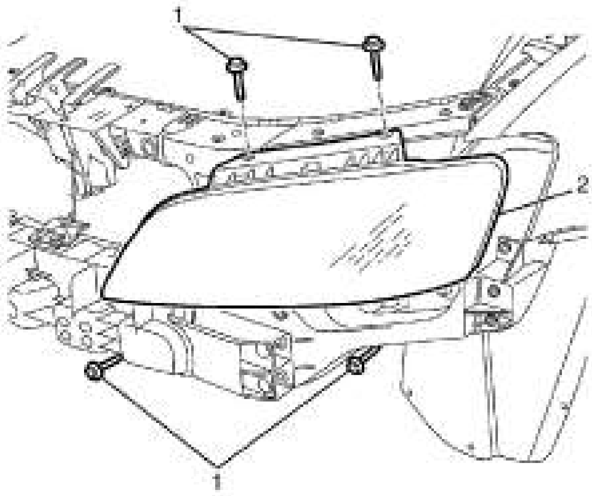
Removal Procedure

Caution: Refer to Battery Disconnect Caution in the Preface section.

1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection .
2. Remove the radiator air baffle and deflector. Refer to Radiator Air Upper Baffle and Deflector Replacement
3. Remove the front bumper fascia. Refer to Front Bumper Fascia Replacement .



4. Remove the headlamp bracket (2) to front end module retaining bolts (1).
5. Remove the headlamp bracket (2) from the front end module.

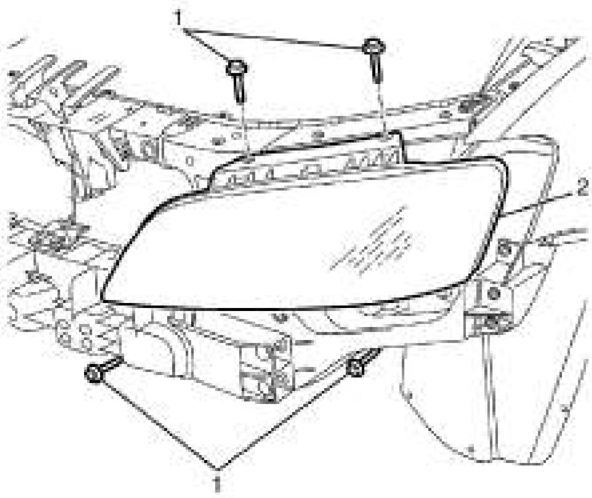


6. Remove the four bolts (1) that secure the headlamp assembly (2) to front end module.
7. Gently tilt headlamp out and disconnect the electrical connector from the headlamp assembly (2).
8. Remove the headlamp assembly (2) from the vehicle.

Installation Procedure

1. Install the headlamp assembly to the vehicle and connect the electrical connector.

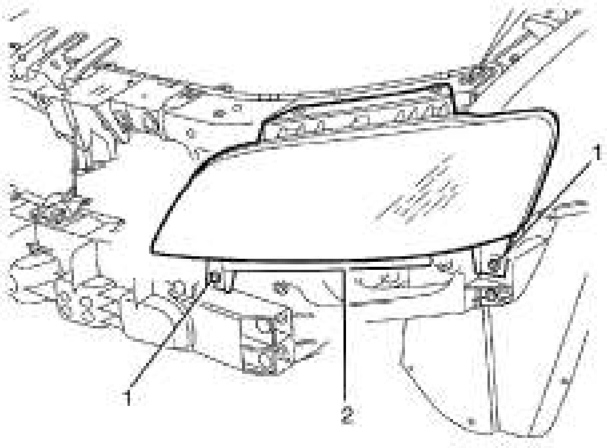
   Notice: Refer to Fastener Notice in the Preface section.



Important: Replace the upper headlamp retaining bolts.

2. Install the four bolts (1) that secure the headlamp assembly (2) to the front end module.

   Tighten
   Tighten the bolts to 4.5 N·m (35 lb in).



3. Install the headlamp bracket (2) to the front end module.

   Tighten
   Tighten the bolts to 4.5 N·m (35 lb in).

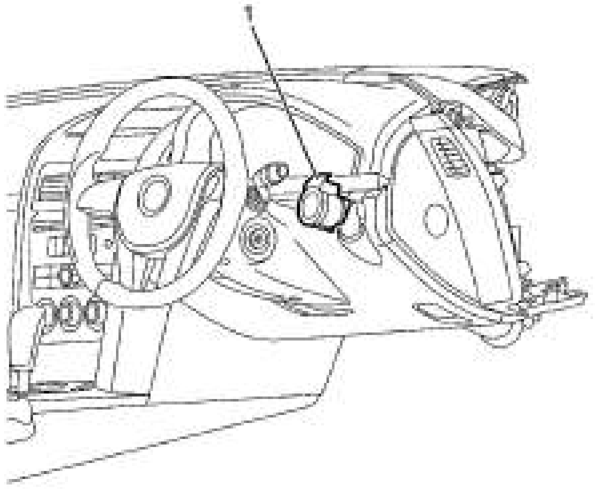
4. Install the headlamp bracket (2) to front end module retaining bolts (1).
5. Install the front bumper fascia. Refer to Front Bumper Fascia Replacement .
6. Install the radiator air baffle and deflector. Refer to Radiator Air Upper Baffle and Deflector Replacement
7. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection .
8. Check all vehicle lights for correct operation.
9. Adjust the headlamps. Refer to Headlamp Aiming .

Headlamp Switch Replacement (RHD)

Removal Procedure

Caution: Refer to Battery Disconnect Caution in the Preface section.

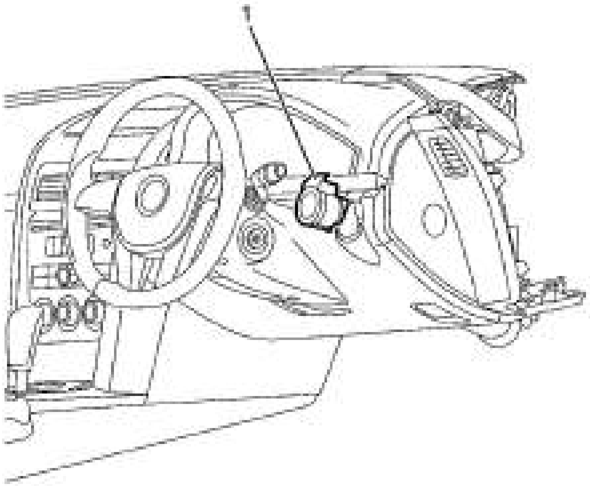
1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.



2. Remove headlamp switch (1) from I/P trim pad by gently prizing the switch assembly from the IP crashpad.
3. Disconnect the headlamp switch electrical connector.
4. Remove the headlamp switch.

Installation Procedure

1. Connect the headlamp switch electrical connector.



2. Install the headlamp switch (1) to the I/P trim pad.
3. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
4. Check all vehicle lights for correct operation.

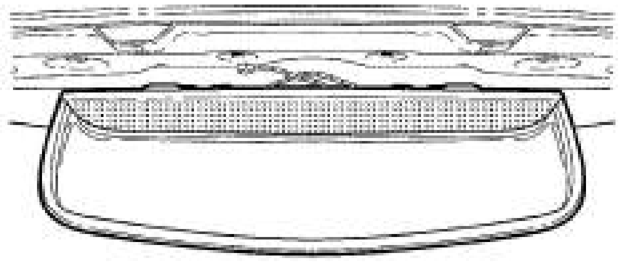
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Repair Instructions | **Document ID: 1976250**

High Mount Stop Lamp Bulb Replacement

Removal Procedure

Caution: Refer to Battery Disconnect Caution in the Preface section.

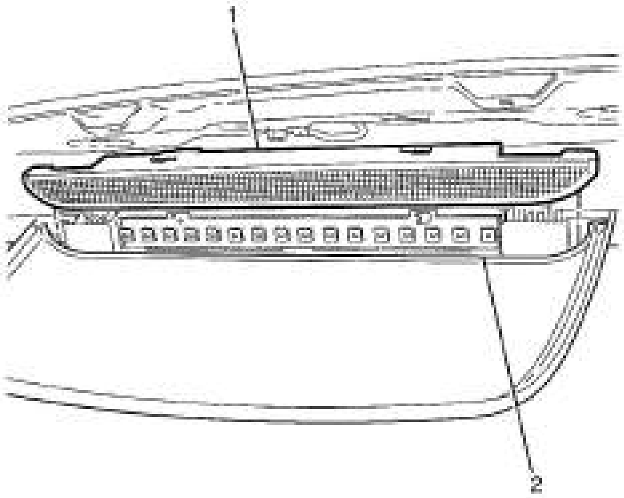
1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.



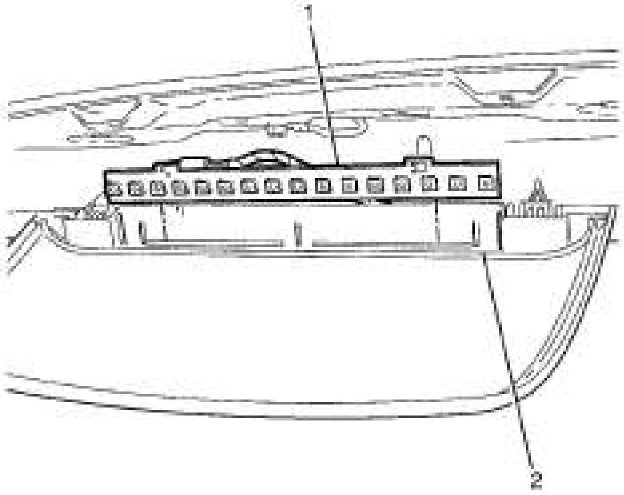
2. Pull downward on the centre high mounted stop lamp (CHMSL) bezel to disengage the retaining clips.

   Important: Force is only to be applied to CHMSL bracket not the headliner assembly.

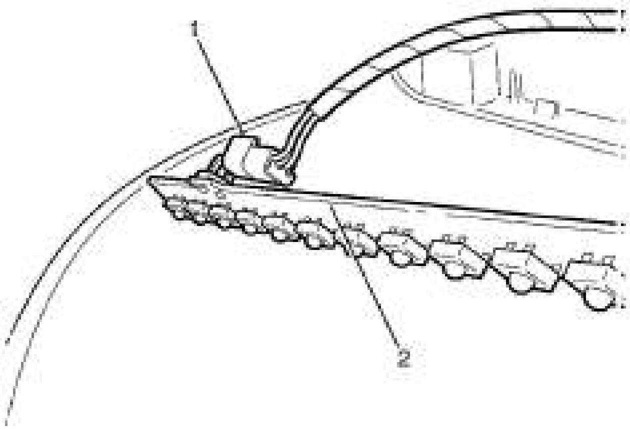
3. Pull the CHMSL bracket down as far as possible.



4. Remove the lens assembly (1) from the CHMSL (2) by unclipping the retaining lugs.

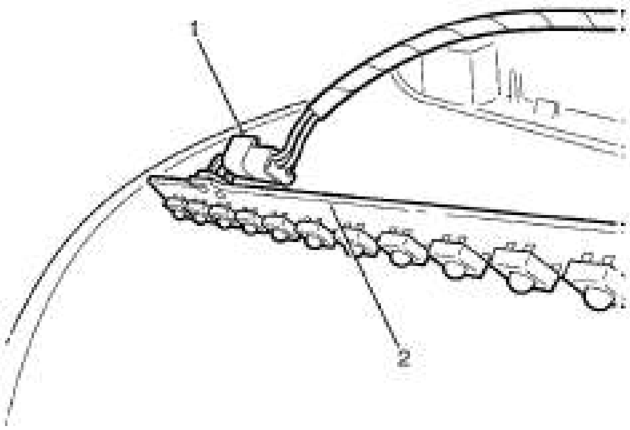


5. Carefully detach the PCB (1), by lifting it upwards out of the CHMSL (2).



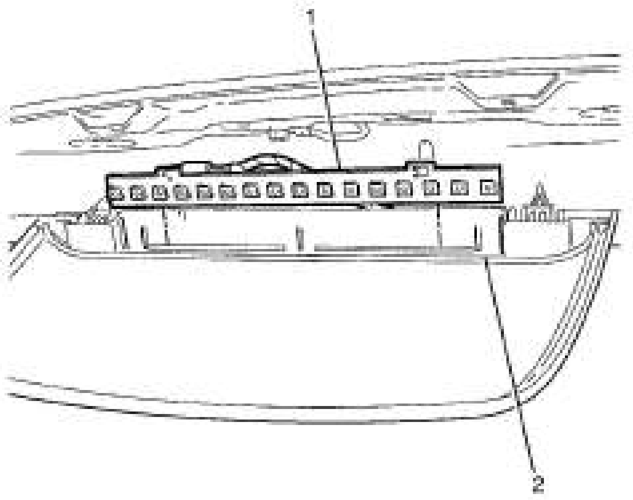
6. Disconnect the PCB (2) electrical connector (1).
7. Remove the PCB.

Installation Procedure

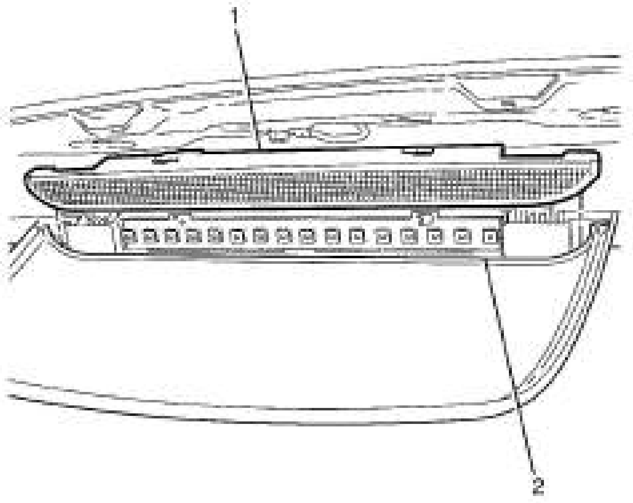


Important: When connecting the PCB electrical connector, make sure the tab on the connector is facing away from the PCB.

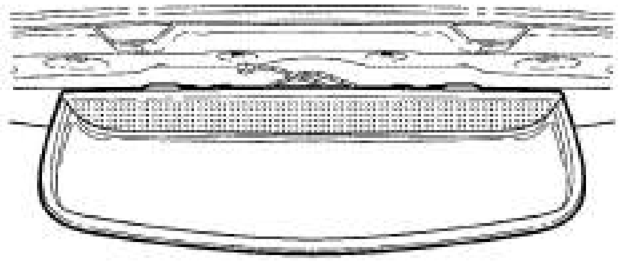
1. Connect the PCB (2) electrical connector (1).



2. Attach the PCB (1) to the CHMSL (2), by sliding it downward into the CHMSL.



3. Install the lens assembly (1) into the CHMSL (2) by clipping in the retaining lugs. Listen for an audible click to confirm fitting.



4. Install the CHMSL bezel, by engaging the retaining clips. Listen for an audible click to confirm fitting.
5. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
6. Test the stop lamp bulb for the correct operation.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Repair Instructions | **Document ID: 2069469**

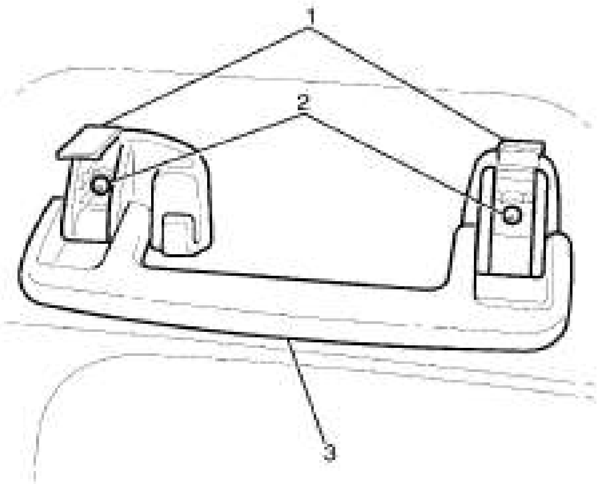
High Mount Stop Lamp Replacement (Sedan)

Removal Procedure

Caution: Refer to Battery Disconnect Caution in the Preface section.

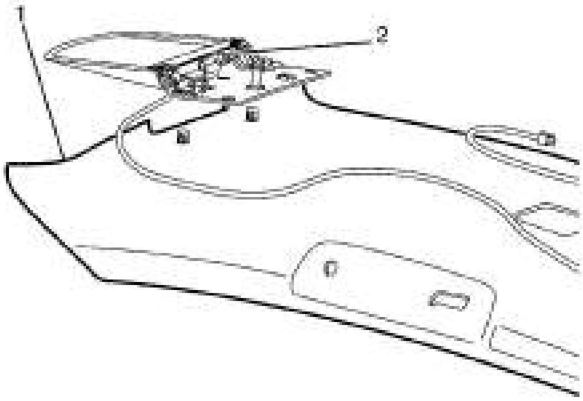
Important: If the high mounted stop lamp LED's are faulty and do not illuminate, the high mounted stop lamp PCB assembly must be replaced.

1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection .



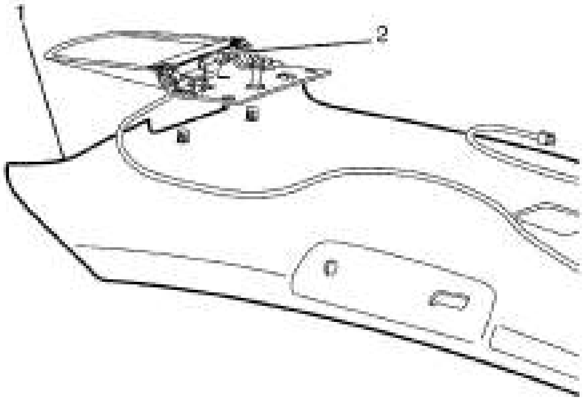
Important: Carry out for the two rear assist handles

2. Pry open the assist handle retaining screw covers (1).
3. Remove the assist handle to headliner retaining screws (2).
4. Remove the assist handles (3) from the headliner.
5. Remove the high mounted stop lamp bulb. Refer to High Mount Stop Lamp Bulb Replacement

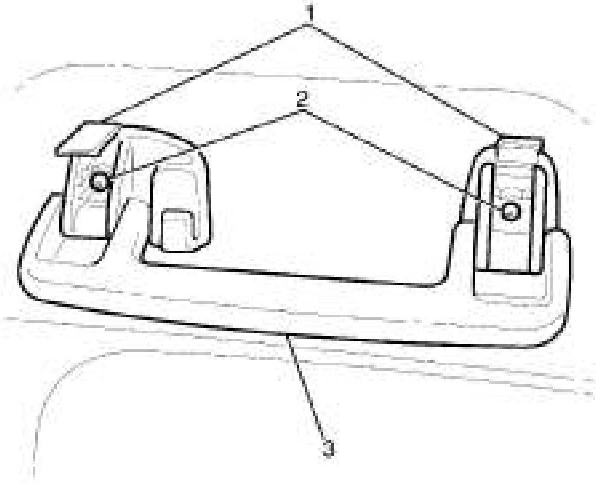


6. Unclip the high mounted stop lamp assembly (2) from the headliner (1).

Installation Procedure



1. Install the new high mounted stop lamp assembly (2) to the headliner (1).
2. Install the high mounted stop lamp bulb. Refer to High Mount Stop Lamp Bulb Replacement



Important: Carry out for the two rear assist handles

3. Install the assist handles (3) to the headliner.
4. Install the assist handle to headliner retaining screws (2).

   Tighten
   Tighten the assist handle retaining screws to 2.0 N·m (18 lb in).

5. Close the assist handle retaining screw covers (1).
6. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection .
7. Check all vehicle lights for correct operation.

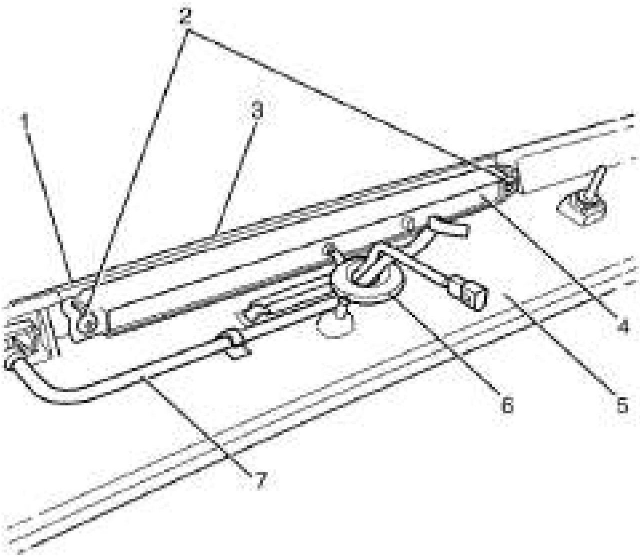
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Repair Instructions | **Document ID: 2069471**

High Mount Stop Lamp Replacement (Sportwagon)

Removal Procedure

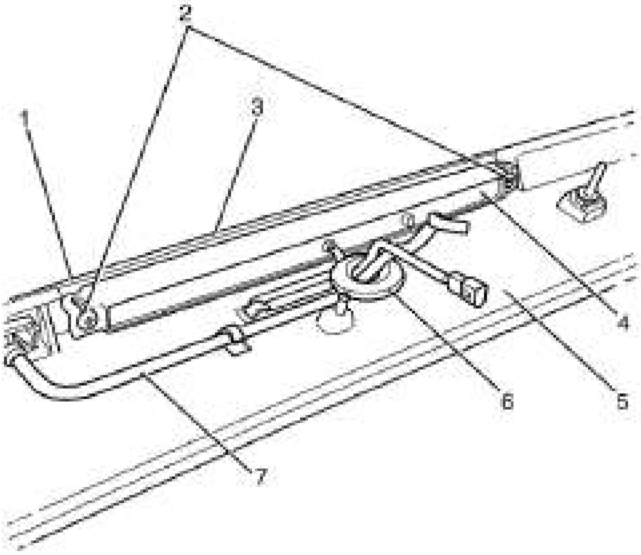
Caution: Refer to Battery Disconnect Caution in the Preface section.

1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
2. Remove the liftgate upper moulding. Refer to Liftgate Upper Molding Replacement.



3. Remove the high mounted stop lamp to liftgate upper moulding retaining screws (2).
4. Peel back adhesive tape (3) from top surface of the high mounted stop lamp (4), leaving the tape attached to moulding in the area under foam gasket (1).
5. Remove the high mounted stop lamp (4) from the liftgate upper moulding (5).
6. Cut cable tie on grommet (6), and slide washer hose (7) through grommet.

Installation Procedure



1. Position the NEW high mounted stop lamp (4) on the liftgate upper moulding (5).
2. Re-apply adhesive tape (3) to top surface of the high mounted stop lamp (4).

   Important: Take care to ensure that the plastic rib is correctly positioned relative to visual lamp face when re-applying tape.

3. Insert hose (7) through grommet (6), and attach new cable tie to grommet.

   Notice: Refer to Fastener Notice in the Preface section.

4. Install the high mounted stop lamp (4) to liftgate upper moulding retaining screws (2).

   Tighten
   Tighten the bolts to 2 N·m (18 lb in).

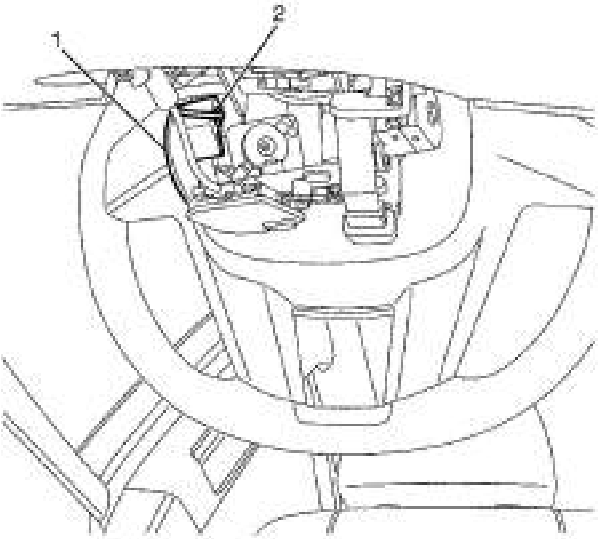
5. Install the liftgate upper moulding. Refer to Liftgate Upper Molding Replacement.
6. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Repair Instructions | **Document ID: 1982219**

Ignition Lock Cylinder Bulb Replacement (RHD)

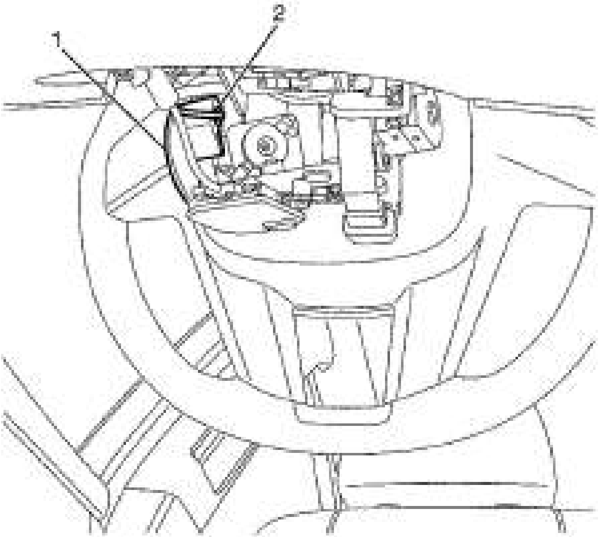
Removal Procedure

1. Remove the upper and lower steering column trim covers. Refer to Steering Column Trim Covers Replacement.



2. Remove the theft deterrent module (1) from the steering column. Refer to Theft Deterrent Module Replacement.
3. Turn the ignition lock cylinder lamp socket (2) counter clockwise and remove from the socket from the theft deterrent module (1).
4. Pull and remove the bulb from the ignition lock cylinder lamp socket.

Installation Procedure



1. Install a new bulb to the ignition lock cylinder lamp socket (2).
2. Install the ignition lock cylinder lamp socket (2) to the theft deterrent module (1) and turn clockwise to secure.
3. Install the theft deterrent module to the steering column. Refer to Theft Deterrent Module Replacement.
4. Check the operation of the ignition lock cylinder light.
5. Install the upper and lower steering column trim covers. Refer to Steering Column Trim Covers Replacement.

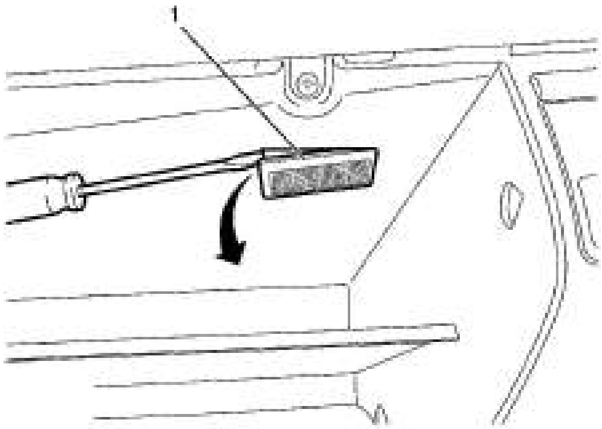
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Repair Instructions | **Document ID: 1995537**

Instrument Panel Compartment Lamp Replacement

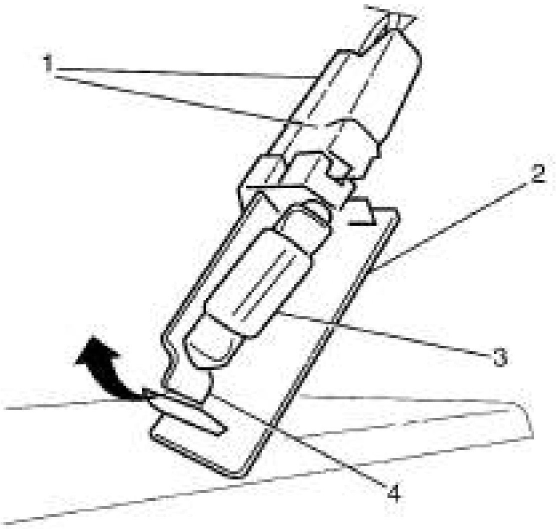
Removal Procedure

Caution: Refer to Battery Disconnect Caution in the Preface section.

1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
2. Open the instrument panel compartment.

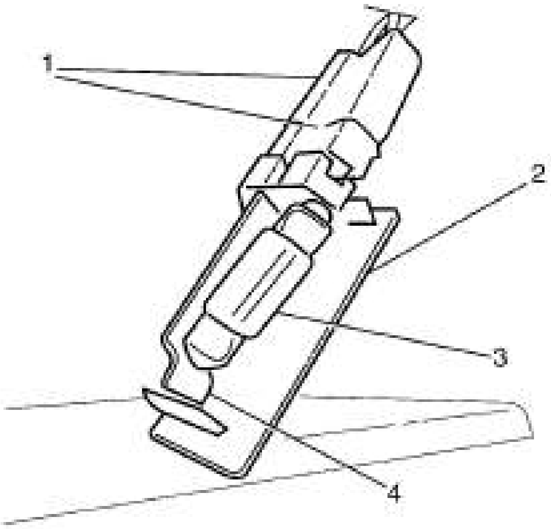


3. Insert a suitable tool under the instrument panel compartment lamp assembly (1) and gently pry the lamp assembly from the instrument panel compartment.

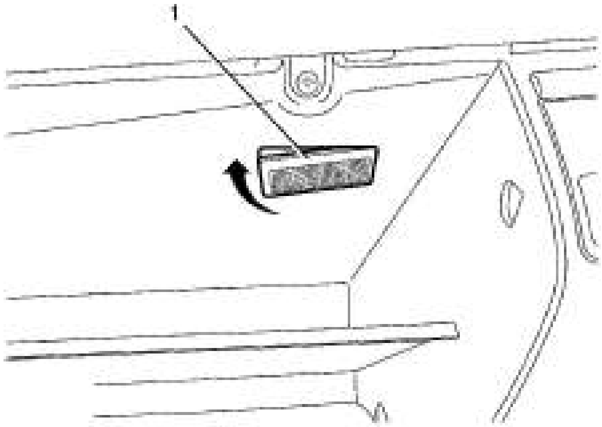


4. Disconnect the instrument panel compartment lamp (2) electrical connectors (1) and remove the lamp.
5. Bend back the contact lever (4) that secures the bulb (3) and remove the bulb from the lamp (2).

Installation Procedure



1. Install the new bulb (3) to the lamp (2), ensuring that the bulb is correctly positioned in the contact lever (4).
2. Connect the instrument panel compartment lamp (2) electrical connectors (1).



3. Feed the lamp assembly (1) wiring into the cavity and push the instrument panel compartment lamp back into the instrument panel compartment cavity. Listen for an audible click to confirm fitting.
4. Close the instrument panel compartment.

   Caution: Refer to Battery Disconnect Caution in the Preface section.

5. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
6. Check all vehicle lights for correct operation.

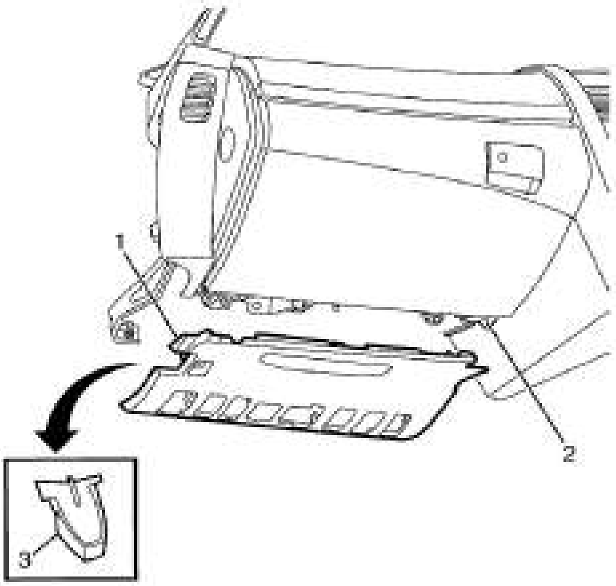
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Repair Instructions | **Document ID: 1977362**

Instrument Panel Compartment Lamp Switch Replacement

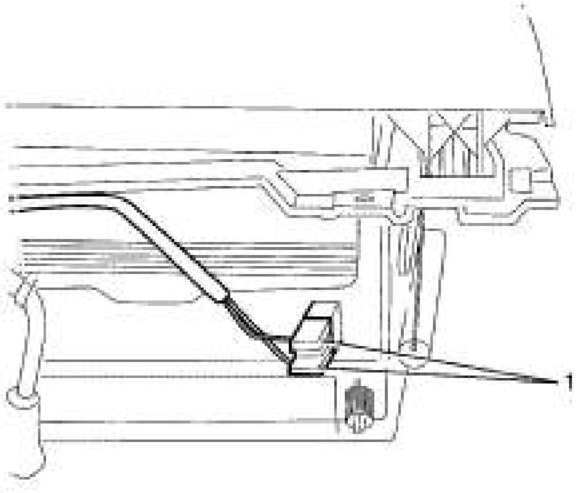
Removal Procedure

Caution: Refer to Battery Disconnect Caution in the Preface section.

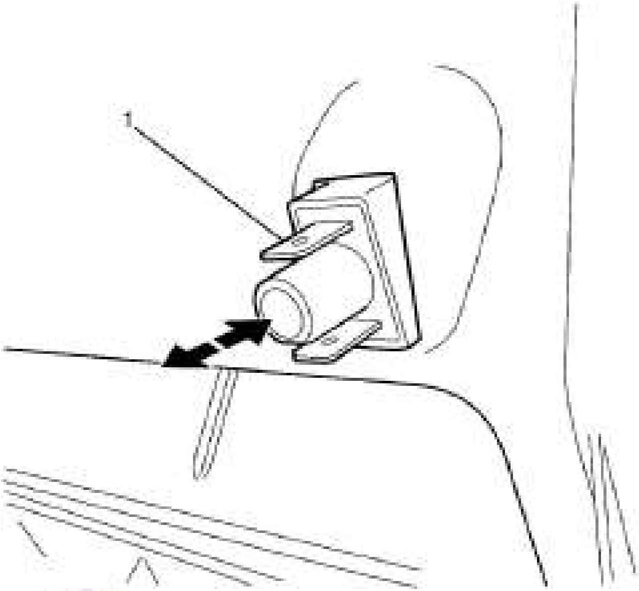
1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection .



2. Remove the left instrument panel lower trim plate (1) by pulling the panel down and disengaging the retaining clips.



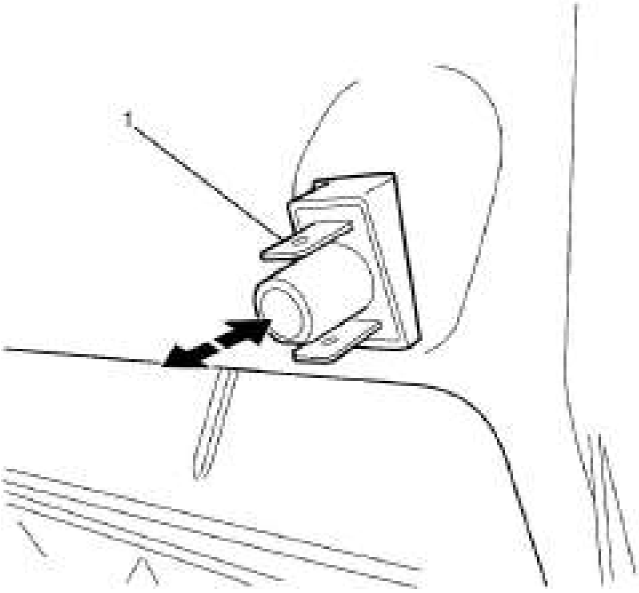
3. Disconnect the electrical connectors (1) from the instrument panel compartment lamp switch.
4. Open the instrument panel compartment.



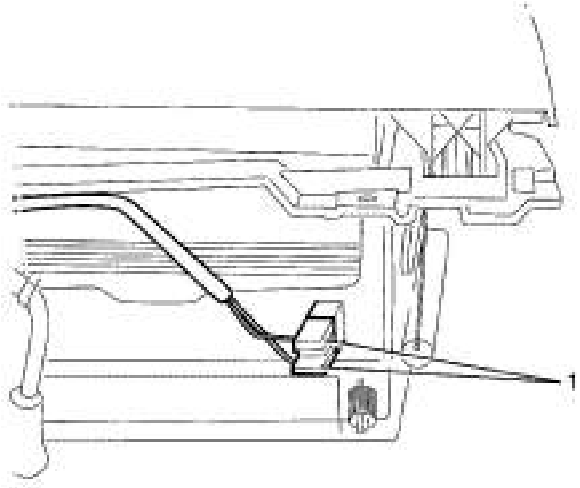
Important: Remove the instrument panel compartment lamp switch (1), by pushing it through the instrument panel compartment.

5. Remove the instrument panel compartment lamp switch (1).

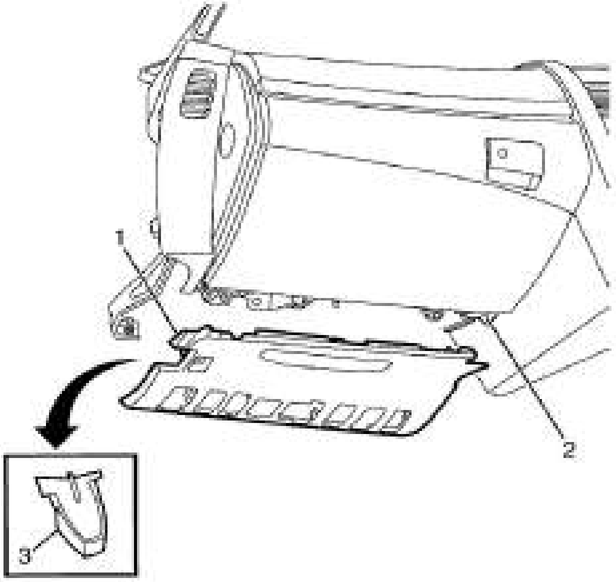
Installation Procedure



1. Install the instrument panel compartment lamp switch (1), listen for an audible click to confirm fitting.
2. Close the instrument panel compartment.



3. Connect the electrical connectors (1) to the instrument panel compartment lamp switch.



4. Install the left instrument panel lower trim plate (1) by engaging the instrument panel lower trim plate retaining clips.
5. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection .
6. Test the operation of the instrument panel compartment lamp switch.

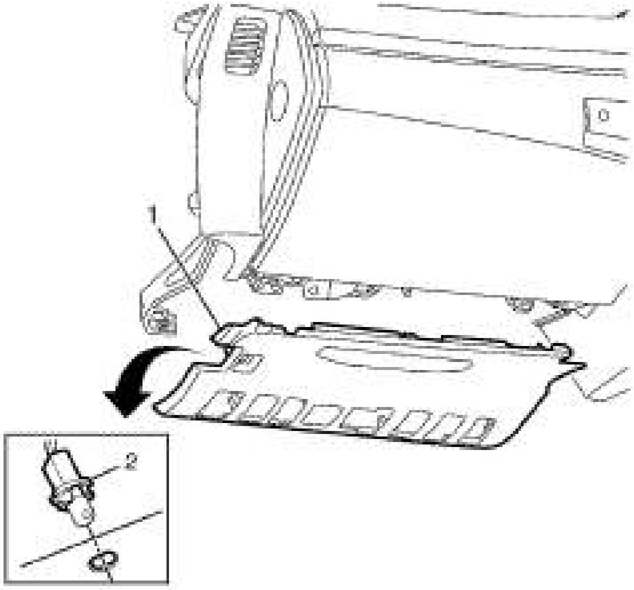
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Repair Instructions | **Document ID: 1982216**

Instrument Panel Courtesy Lamp Bulb Replacement - Left Side (Left Side)

Removal Procedure

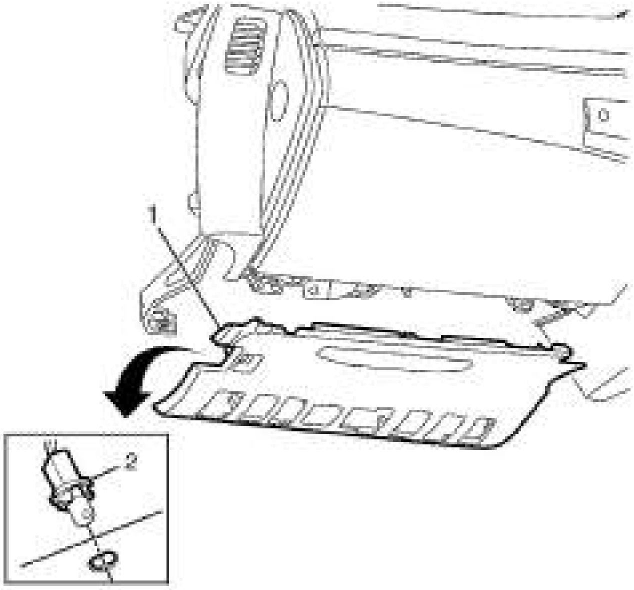
Caution: Refer to Battery Disconnect Caution in the Preface section.

1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.



2. Lower the left instrument panel lower trim plate (1) by pulling the panel down and away from the clips.
3. Remove the courtesy lamp socket assembly (2) from the left lower trim plate by turning the socket counterclockwise.
4. Pull and remove the courtesy light bulb from the courtesy lamp socket (2).

Installation Procedure



1. Install a new bulb into the bulb socket assembly (2).
2. Install the courtesy lamp socket assembly (2) to the I/P lower trim plate assembly (1) and turn the socket assembly clockwise to secure.
3. Install the left instrument panel lower trim plate (1) and make sure the trim plate clips securely engage.
4. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
5. Check all vehicle lights for correct operation.

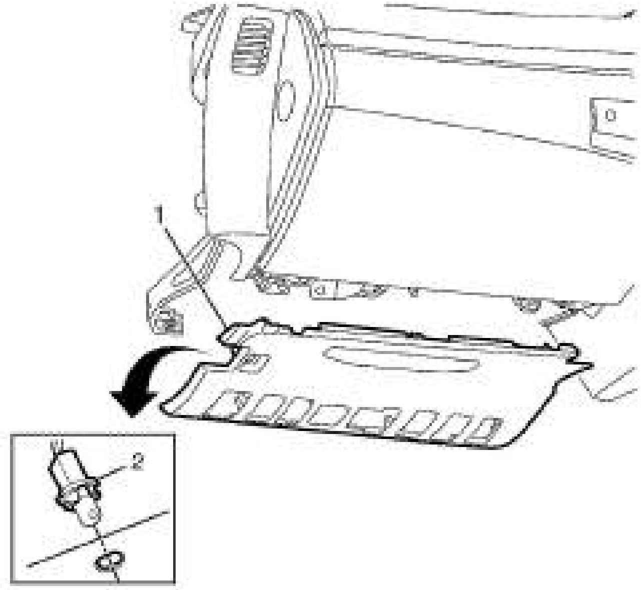
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Repair Instructions | Document ID: 1977371

Instrument Panel Courtesy Lamp Bulb Replacement - Left Side (Right Side)

Removal Procedure

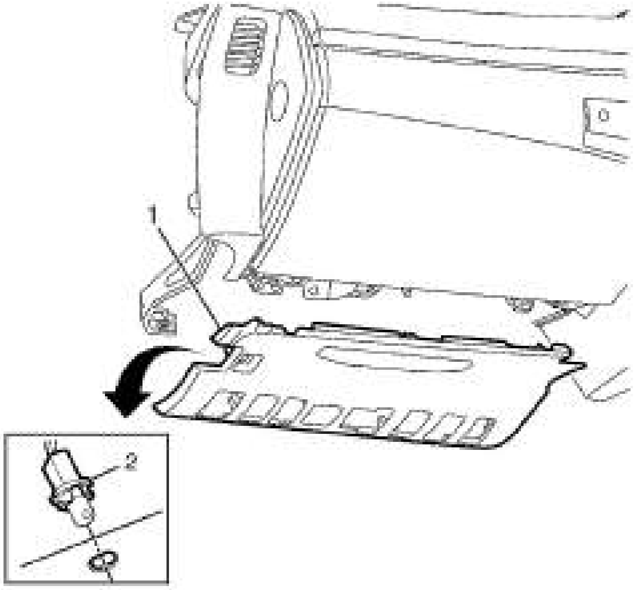
Caution: Refer to Battery Disconnect Caution in the Preface section.

1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.



2. Lower the left instrument panel lower trim plate (1) by pulling the panel down and away from the clips.
3. Remove the courtesy lamp socket assembly (2) from the left lower trim plate by turning the socket counterclockwise.
4. Pull and remove the courtesy light bulb from the courtesy lamp socket (2).

Installation Procedure



1. Install a new bulb into the bulb socket assembly (2).
2. Install the courtesy lamp socket assembly (2) to the I/P lower trim plate assembly (1) and turn the socket assembly clockwise to secure.
3. Install the left instrument panel lower trim plate (1) and make sure the trim plate clips securely engage.
4. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
5. Check all vehicle lights for correct operation.

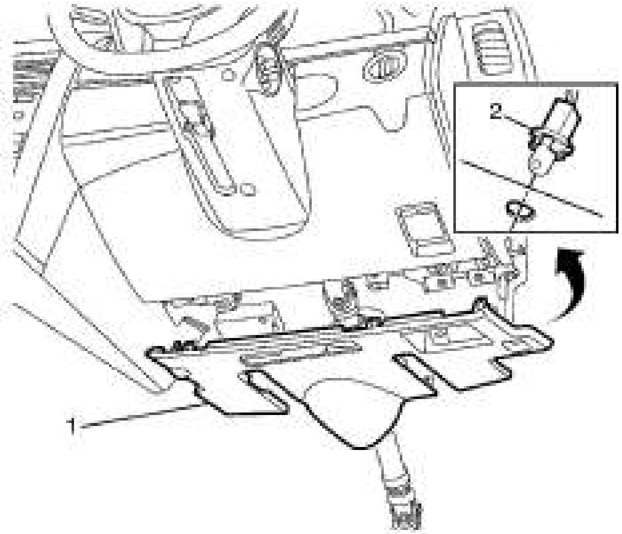
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Repair Instructions | **Document ID: 1977372**

Instrument Panel Courtesy Lamp Bulb Replacement - Right Side (Left Side)

Removal Procedure

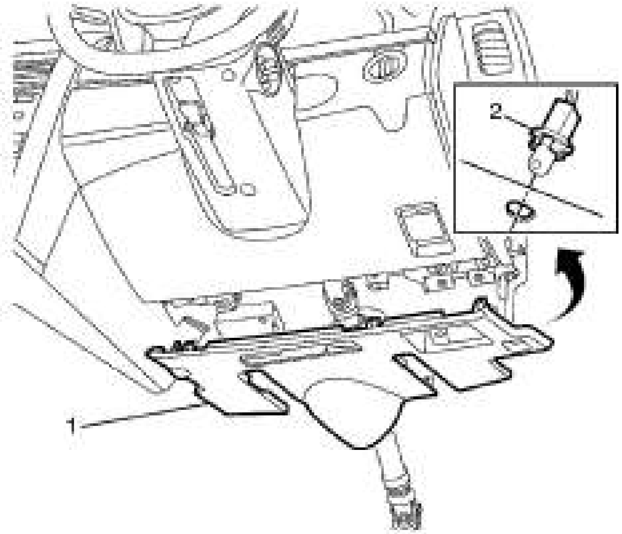
Caution: Refer to Battery Disconnect Caution in the Preface section.

1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.



2. Lower the right instrument panel lower trim plate (1) by pulling the panel down and away from the clips.
3. Remove the courtesy lamp socket assembly (2) from the left lower trim plate by turning the socket counter clockwise.
4. Pull and remove the courtesy light bulb (2) from the courtesy lamp socket.

Installation Procedure



1. Install a new bulb into the bulb socket assembly (2).
2. Install a new courtesy light bulb assembly (2) to the right instrument panel lower trim plate (1) and turn the assembly clockwise to secure.
3. Install the right instrument panel lower trim plate (1) and make sure the trim plate clips securely engage.
4. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
5. Check all vehicle lights for correct operation.

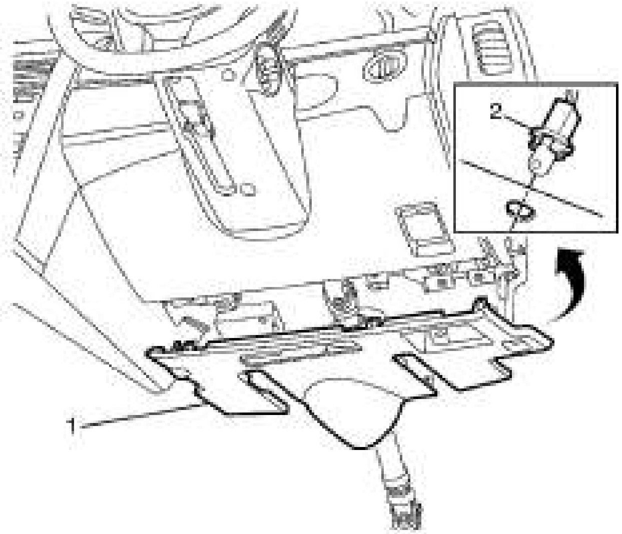
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Repair Instructions | Document ID: 1982215

Instrument Panel Courtesy Lamp Bulb Replacement - Right Side (Right Side)

Removal Procedure

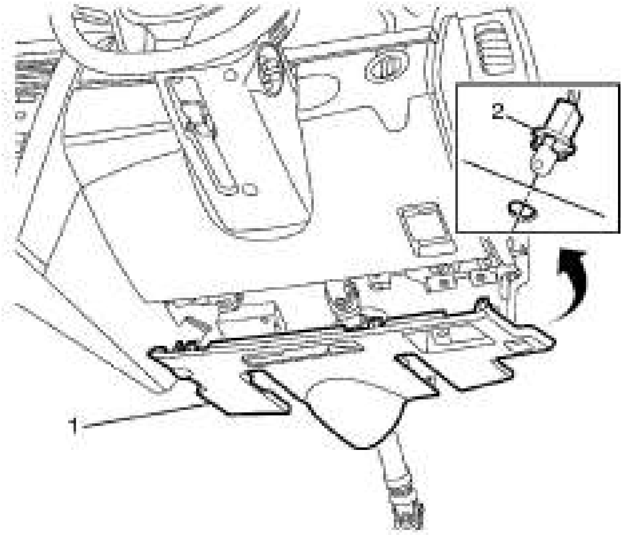
Caution: Refer to Battery Disconnect Caution in the Preface section.

1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.



2. Lower the right instrument panel lower trim plate (1) by pulling the panel down and away from the clips.
3. Remove the courtesy lamp socket assembly (2) from the left lower trim plate by turning the socket counter clockwise.
4. Pull and remove the courtesy light bulb (2) from the courtesy lamp socket.

Installation Procedure



1. Install a new bulb into the bulb socket assembly (2).
2. Install a new courtesy light bulb assembly (2) to the right instrument panel lower trim plate (1) and turn the assembly clockwise to secure.
3. Install the right instrument panel lower trim plate (1) and make sure the trim plate clips securely engage.
4. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
5. Check all vehicle lights for correct operation.

Instrument Panel Lamp Dimmer Switch Replacement

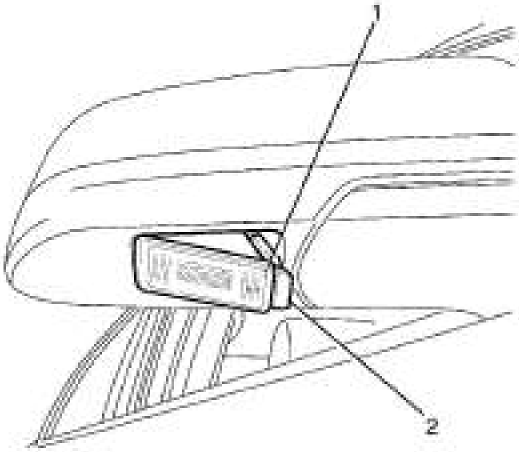
The instrument panel dimmer switch is serviced with the headlamp switch. Refer to Headlamp Switch Replacement.

Outside Rearview Mirror Courtesy Lamp Replacement

Removal Procedure

Caution: Refer to Battery Disconnect Caution in the Preface section.

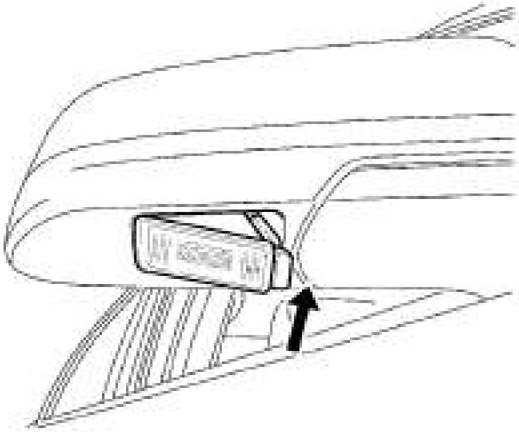
1. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.



2. Insert a suitable tool under the puddle lamp housing (1) and release the locking tab (2) of the lamp.
3. Pry the lamp assembly from the mirror and pivot and lower the assembly.
4. Bend back the lever contact that holds the bulb and remove the bulb from the lamp housing.

Installation Procedure

1. Install the new bulb to the puddle lamp assembly.



2. Feed the lamp wiring into the cavity and push the lamp back into the door mirror housing.
3. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
4. Check all vehicle lights for correct operation.

Parking and Turn Signal Lamp Replacement

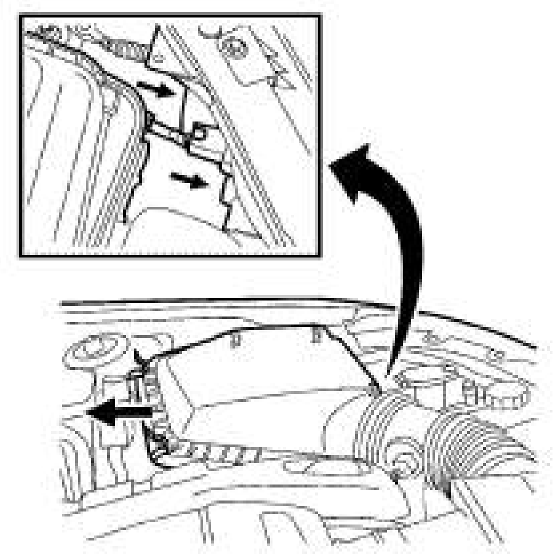
Removal Procedure

Caution: Refer to Battery Disconnect Caution in the Preface section.

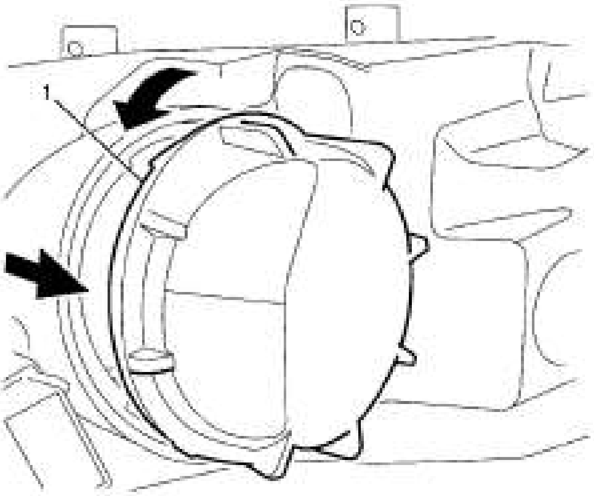
1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection .
2. Remove the radiator air baffle and deflector. Refer to Radiator Air Upper Baffle and Deflector Replacement

Important: For left-hand headlamp access, go to step 3.

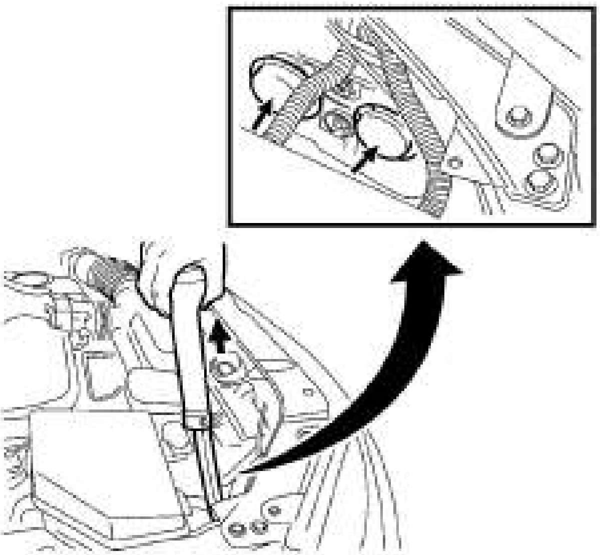
Important: For right-hand headlamp access, go to step 4.



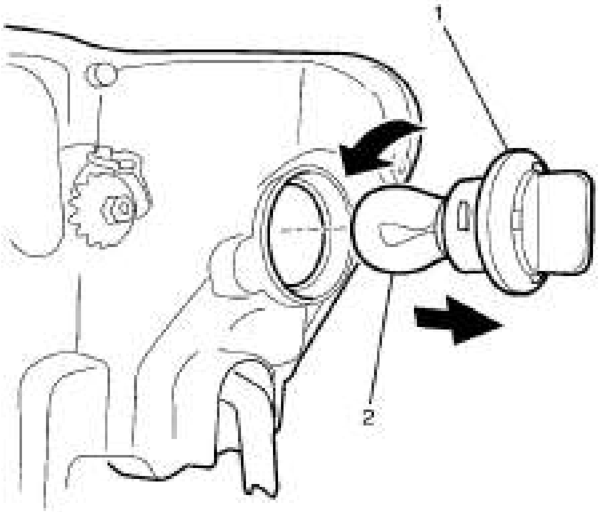
3. For access to the left-hand headlight, detach and move the airbox upper cover rearward. Go to step 5.



4. Remove the low beam headlamp dust cap from the rear of the headlamp assembly by rotating the dust cap counter clockwise. Note orientation of the dust cap and tabs for installation.

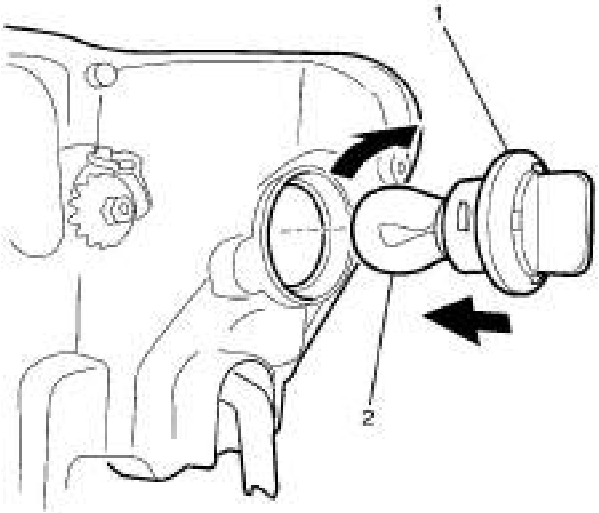


5. For access to the right-hand headlight, remove the coolant reservoir fill neck by pulling up on the neck assembly and position aside. Note the orientation of the aligning tabs and keyway of the coolant reservoir fill neck for installation.



6. Rotate the front indicator bulb (2) and socket (1) counter-clockwise and remove from the headlamp assembly.
7. Rotate the front indicator bulb (2) counter-clockwise and remove from the front indicator socket (1).

Installation Procedure



1. Install the front indicator bulb (2) into the front indicator socket (1) and secure by rotating clockwise.
2. Install the front indicator bulb (2) and socket (1) into the headlamp assembly and secure by rotating clockwise.
3. For the left-hand headlamp assembly, replace and secure the airbox upper cover.

4. For the right-hand headlamp assembly, reinstall the coolant reservoir fill neck by aligning the tabs and keyway and pushing the neck into position.
5. Install the radiator air baffle and deflector. Refer to Radiator Air Upper Baffle and Deflector Replacement
6. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection .
7. Check all vehicle lights for correct operation.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Repair Instructions | Document ID: 2079449

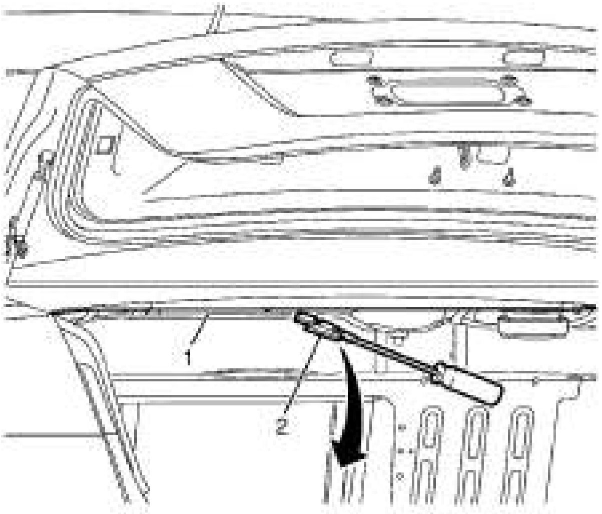
Rear Compartment Courtesy Lamp Replacement (Sedan)

Removal Procedure

1. Open rear compartment lid.

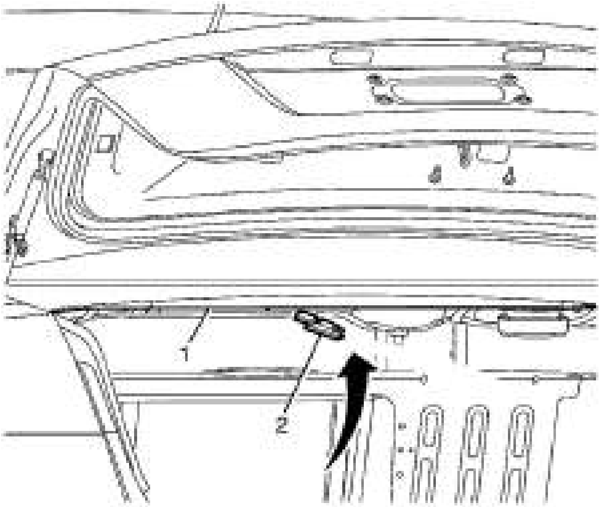
   Caution: Refer to Battery Disconnect Caution in the Preface section.

2. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.



3. Remove the rear compartment lamp (2) by prizing the lamp from the rear shelf (1).
4. Bend back the lever contact that holds the bulb and remove the bulb from the lamp assembly.

Installation Procedure



1. Install a new bulb to the rear compartment lamp housing (2).
2. Install the rear compartment lamp housing (2) by pushing wiring and connector of lamp into the rear shelf (1) cavity. Snap lamp into position.
3. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
4. Check all vehicle lights for correct operation.
5. Close the rear compartment lid.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Repair Instructions | **Document ID: 2079450**

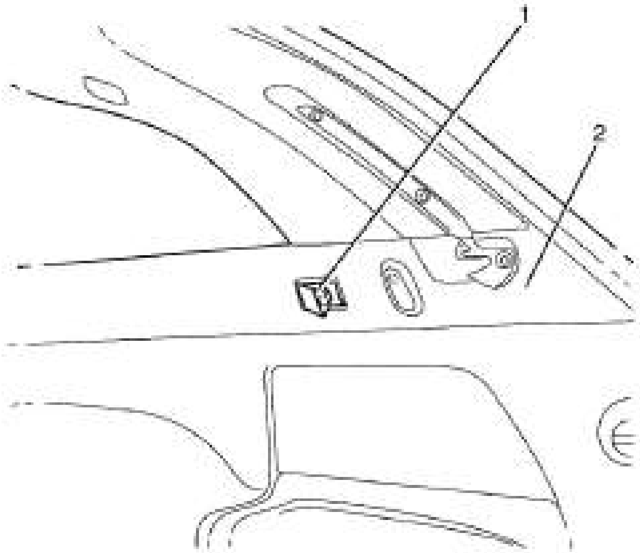
Rear Compartment Courtesy Lamp Replacement (Sportwagon)

Removal Procedure

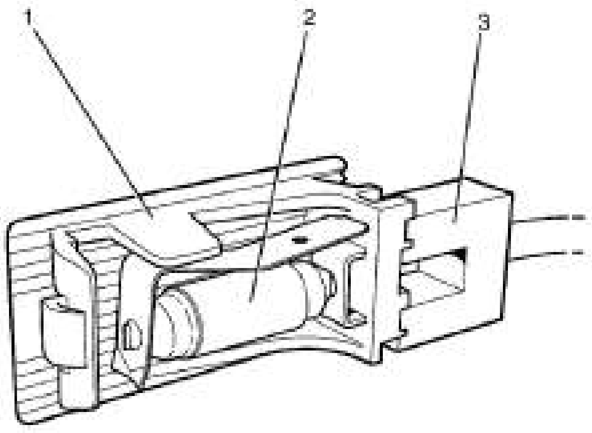
Caution: Refer to Battery Disconnect Caution in the Preface section.

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Install a suitable liftgate brace to the vehicle.
2. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection

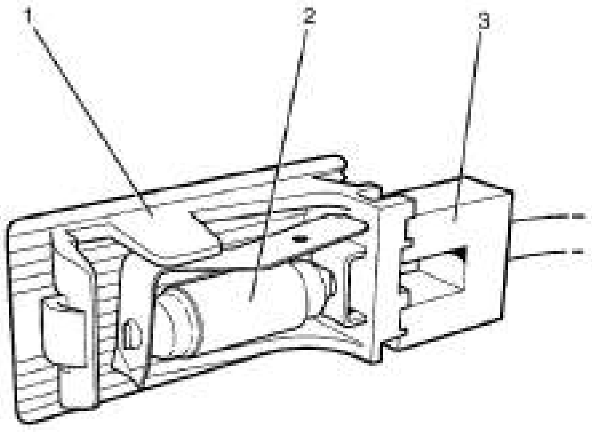


3. Using a suitable tool, pry the rear compartment courtesy lamp (1) from the quarter inner trim finish panel (2).

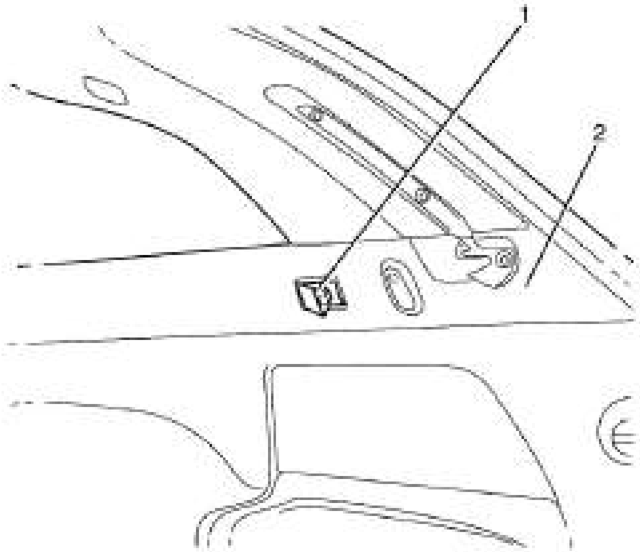


4. Disconnect the rear compartment courtesy lamp electrical connector (3) from the rear compartment courtesy lamp assembly (1).
5. Remove the rear compartment courtesy lamp bulb (2) from the rear compartment courtesy lamp assembly (1).

Installation Procedure



1. Install the rear compartment courtesy lamp bulb (2) into the rear compartment courtesy lamp assembly (1).
2. Connect the rear compartment courtesy lamp electrical connector (3) to the rear compartment courtesy lamp assembly (1).



3. Install the rear compartment courtesy lamp assembly (1) into the quarter inner trim finish panel (2).
4. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

5. Remove the suitable liftgate brace from the vehicle.
6. Check the operation of the rear compartment courtesy lamp.

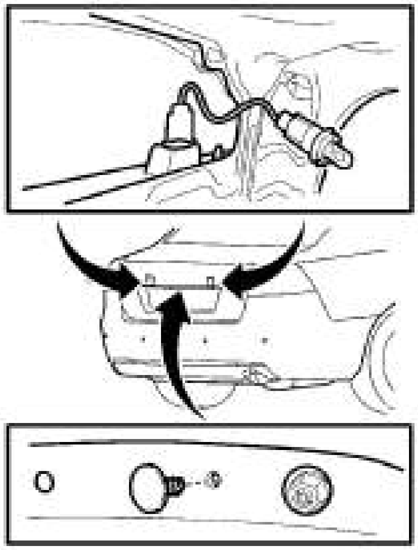
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Repair Instructions | Document ID: 2079444

Rear License Plate Lamp Bulb Replacement (Sedan)

Removal Procedure

Caution: Refer to Battery Disconnect Caution in the Preface section.

1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
2. Open the rear compartment lid.



Important: The license plate lamp bulbs are located in the rear compartment lid.

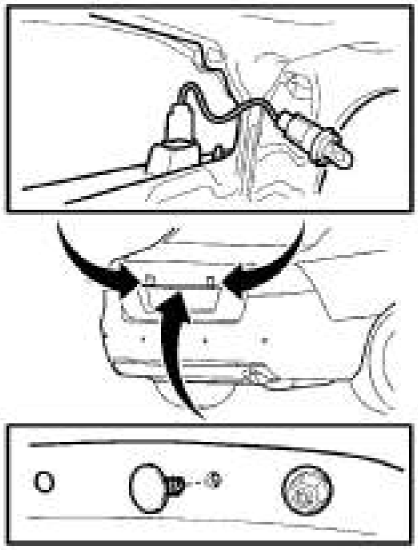
3. For access to the license plate lamp bulbs, remove the rear compartment lid interior trim clip and position the trim aside.
4. Remove the license plate lamp bulb holder from the lamp body by rotating counterclockwise.
5. Pull the license plate light bulb from the holder socket.

Installation Procedure

1. Install a new license plate light bulb into the license plate lamp bulb holder socket and push the bulb into the socket.

Important: Check the condition of license plate bulb base seal and replace if necessary. The tabs on the bulb base and mating cut-outs in the lamp assembly allow the bulb to seat correctly in the lamp housing.

2. Install the license plate lamp bulb holder to the lamp body in the rear compartment lid and rotate clockwise to secure.
3. Check all vehicle lights for correct operation.



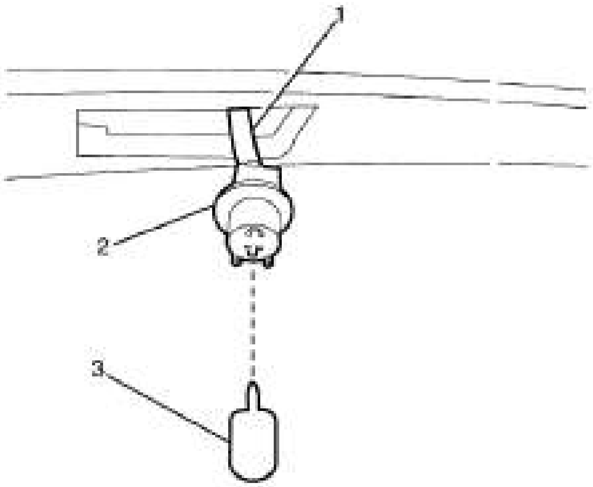
4. Install the rear compartment lid interior trim and secure with clip.
5. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
6. Close the rear compartment lid.

Rear License Plate Lamp Bulb Replacement (Sportwagon)

Removal Procedure

Caution: Refer to Battery Disconnect Caution in the Preface section.

1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
2. Remove the rear licence lamp assembly. Refer to Rear License Lamp Replacement.

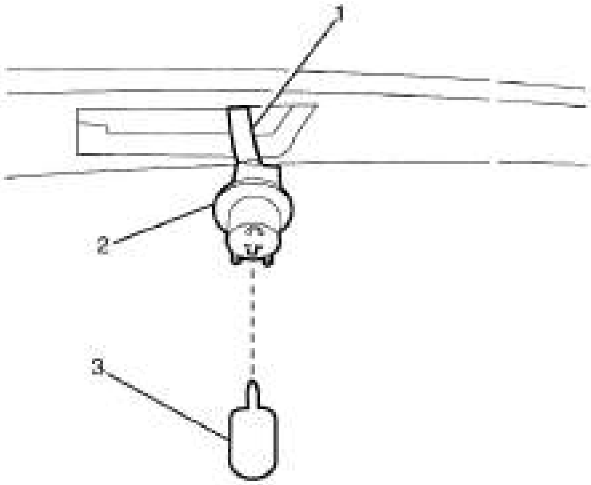


Important: DO NOT pull on the wiring harness (1). Damage to the wiring harness (1) may result.

Important: Remove the rear license lamp bulb (3) from the rear license lamp bulb holder (2) by pulling the rear license lamp bulb (3) away from the rear license lamp bulb holder (2).

3. Remove the rear license lamp bulb (3) from the rear license lamp bulb holder (2).
4. Discard the rear license lamp bulb (3).

Installation Procedure



Important: DO NOT pull on the wiring harness (1). Damage to the wiring harness (1) may result.

Important: Install the NEW rear license bulb (3) to the rear license lamp bulb holder (2) by pushing the NEW rear license bulb (3) into the rear license lamp bulb holder (2).

1. Install the NEW rear license bulb (3) to the rear license lamp bulb holder (2).
2. Install the rear license lamp assembly. Refer to Rear License Lamp Replacement.
3. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.

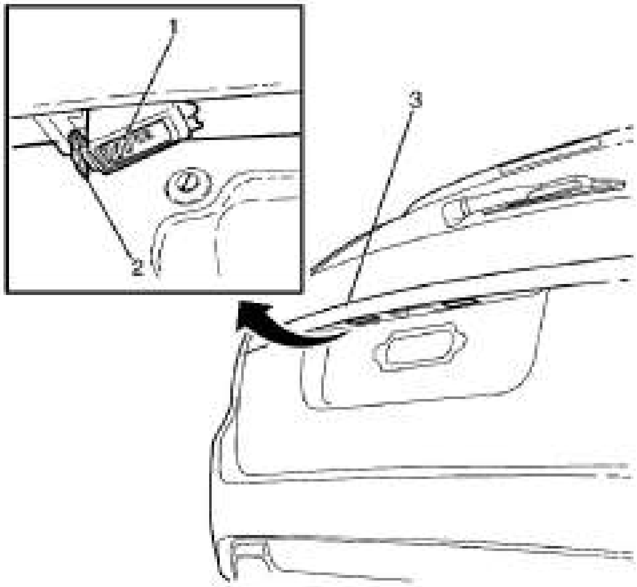
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Repair Instructions | Document ID: 2069474

Rear License Plate Lamp Replacement (Sportwagon)

Removal Procedure

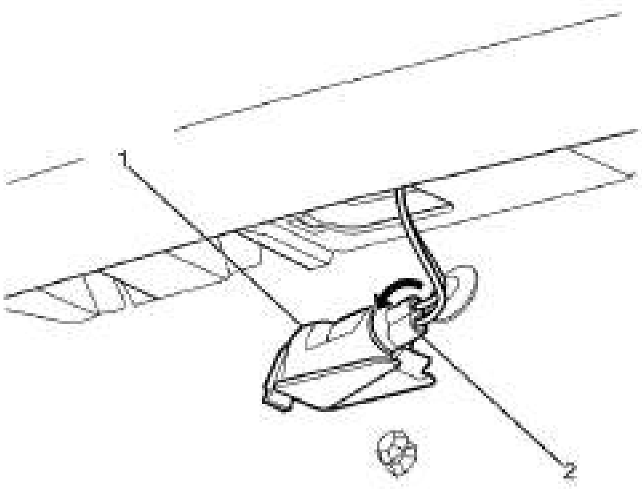
Caution: Refer to Battery Disconnect Caution in the Preface section.

1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.



Important: Remove the rear license lamp assembly (1), from the liftgate centre applique (3) by pressing the locking tab (2) toward the lamp assembly.

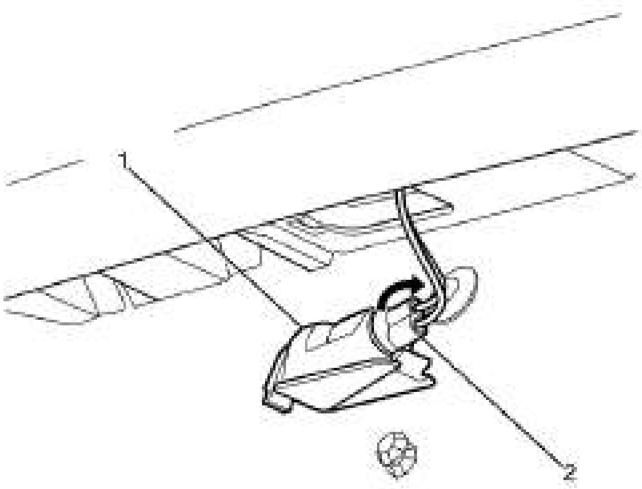
2. Remove the rear license lamp assembly (1) from the liftgate centre applique (3).



Important: Remove the rear license lamp bulb holder (2) from the rear license lamp assembly (1) by rotating the rear license lamp bulb holder (2) counter clockwise.

3. Remove the rear license lamp bulb holder (2) from the rear license lamp assembly (1).
4. Remove the rear license lamp assembly (1) from the vehicle.
5. For removal of the license lamp bulb. Refer to License Lamp Bulb Replacement.

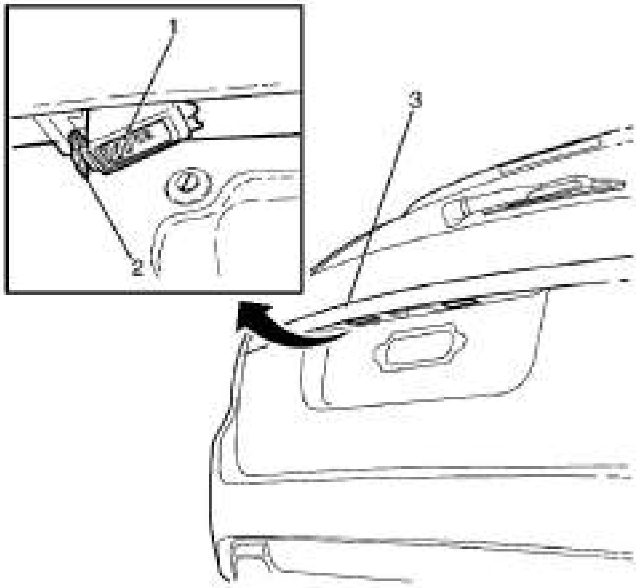
Installation Procedure



1. Position the rear license lamp assembly (1) to the vehicle.

Important: Install the rear license lamp bulb holder (2) to the rear license lamp assembly (1) by rotating the rear license lamp bulb holder (2) clockwise.

2. Install the rear license lamp bulb holder (2) to the rear license lamp assembly (1).



Important: Install the rear license lamp assembly (1) to the liftgate centre applique (3) by pushing the rear license lamp assembly (1) upwards into to the liftgate centre applique (3). Listen for an audible click from the locking tab (2) to confirm correct fitting.

3. Install the rear license lamp assembly (1) to the liftgate centre applique (3).
4. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.

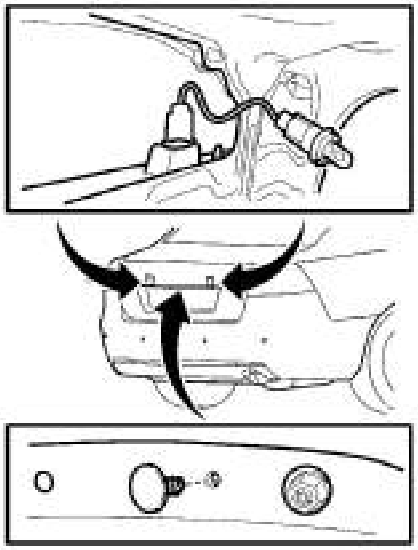
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Repair Instructions | **Document ID: 1976252**

Rear License Plate Lamp Replacement (SWB)

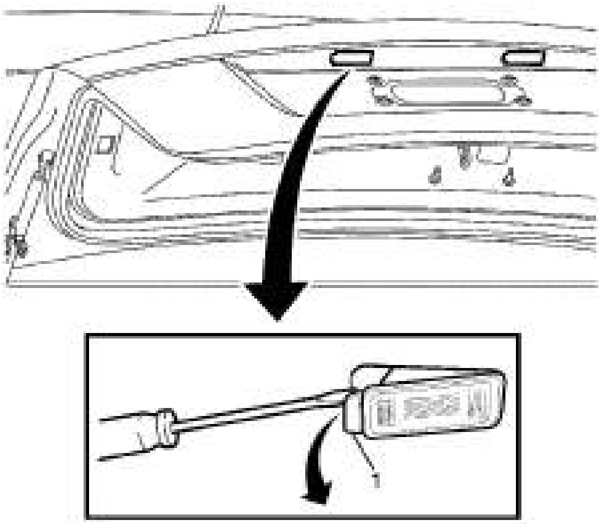
Removal Procedure

Caution: Refer to Battery Disconnect Caution in the Preface section.

1. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
2. Open the rear compartment lid.

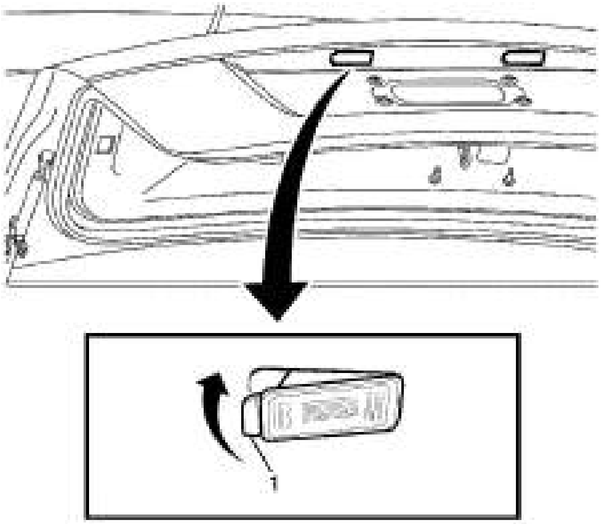


3. For access to the license plate light bulb, remove the rear compartment lid interior trim clip and position the trim aside.
4. Remove the license plate light bulb holder from the lamp body by rotating counterclockwise.



5. Insert a suitable tool under the licence plate lamp housing and release the locking tab (1) of the lamp.
6. Pry the lamp assembly from the rear compartment lid and pivot and lower the lamp assembly from the lid.

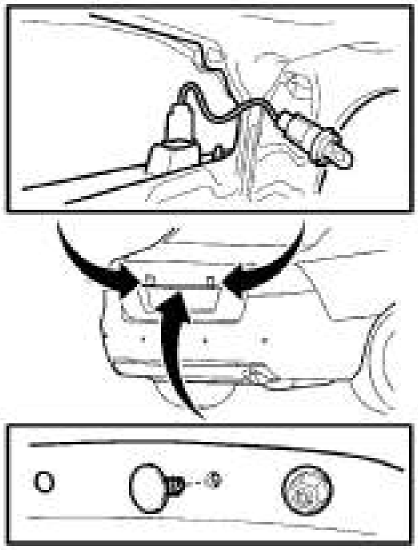
Installation Procedure



1. Install a new license plate lamp assembly to the rear compartment lid. Pivot the lamp into the cavity and snap into position. Listen for an audible click from the locking tab (1) to confirm fitting.
2. If necessary, install a new license plate light bulb into the license plate light bulb holder socket.

   Important: Check the condition of license plate bulb base seal and replace if necessary. The tabs on the bulb base and mating cut-outs in the lamp assembly allow the bulb to seat correctly in the lamp housing.

3. Install the license plate light bulb holder to the lamp body in the rear compartment lid and rotate clockwise to secure.
4. Check all vehicle lights for correct operation.



5. Install the rear compartment lid interior trim and secure with clip.

   Caution: Refer to Battery Disconnect Caution in the Preface section.

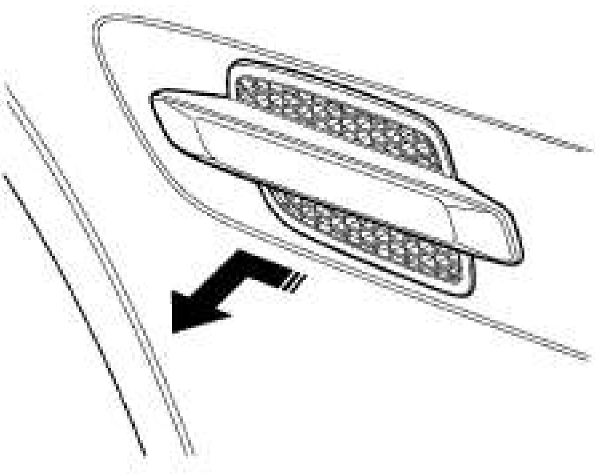
6. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
7. Close the rear compartment lid.

Repeater Lamp Bulb Replacement (LWB SWB)

Removal Procedure - Side Indicator

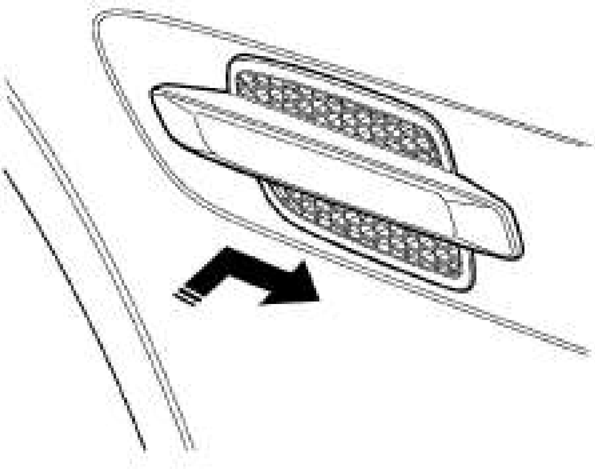
Caution: Refer to Battery Disconnect Caution in the Preface section.

1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.



2. Remove side indicator lamp assembly from the fender by grasping the assembly and pushing the assembly forward to disengage the rear clip from the fender.
3. Tilt the rear of the side indicator lamp assembly out and remove the assembly from the front fender.
4. Disconnect the electrical connector from the bulb socket, by depressing the connector clip and pulling connector from bulb socket.
5. Disconnect the bulb socket from the side indicator lamp assembly by rotating the socket counterclockwise.
6. Remove the side indicator bulb from the bulb socket.

Installation Procedure - Side Indicator



1. Install a new side indicator bulb to the bulb socket.
2. Connect electrical connector to the bulb socket, note orientation of the electrical connector.

   Important: The tabs on the bulb base and mating cut-outs in the lamp assembly allow the bulb to seat correctly in the lamp.

3. Install the bulb socket into the side indicator lamp assembly and rotate the socket clockwise to secure the bulb and socket.
4. Install rear portion of the side indicator lamp assembly into the fender and then push the front of the lamp assembly inwards to engage the front clip.

   Caution: Refer to Battery Disconnect Caution in the Preface section.

5. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
6. Check all vehicle lights for correct operation.

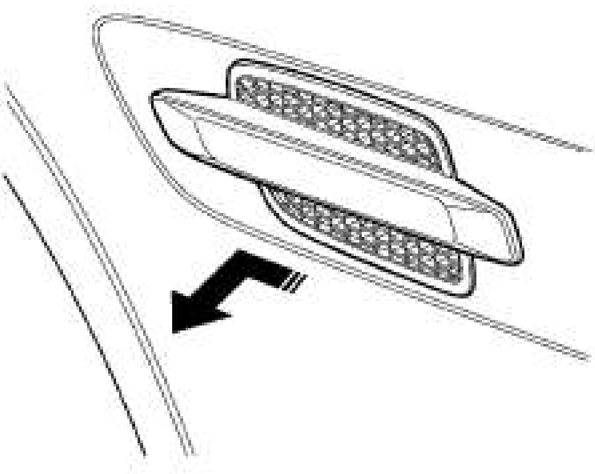
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Repair Instructions | Document ID: 1976242

Repeater Lamp Replacement (SWB)

Removal Procedure - Side Indicator Type A

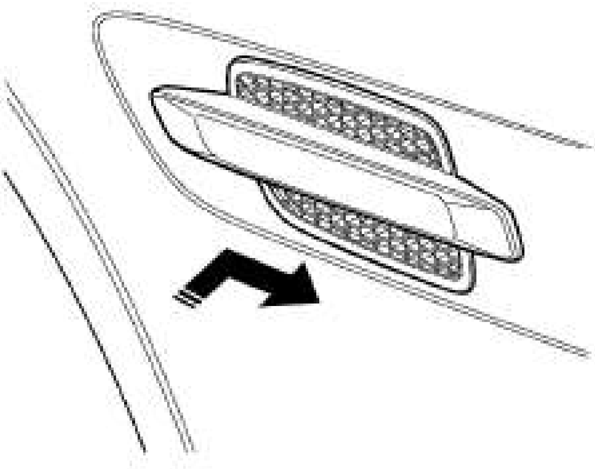
Caution: Refer to Battery Disconnect Caution in the Preface section.

1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.



2. Remove side indicator lamp assembly from the fender by grasping the assembly and pushing the assembly forward to disengage the rear clip from the fender.
3. Tilt the rear of the side indicator lamp assembly out and remove the assembly from the front fender.
4. Disconnect the bulb socket from the side indicator lamp assembly by rotating the socket counterclockwise.
5. Disconnect the electrical connector from the bulb socket, by depressing the connector clip and pulling connector from bulb socket.
6. Discard the repeater lamp.

Installation Procedure - Side Indicator Type A



1. Install the bulb socket into the new side indicator lamp assembly and rotate the socket clockwise to secure the bulb.
2. Connect electrical connector to the bulb socket, note oretayion of the electrcal connector.
3. Install rear portion of the side indicator lamp assembly into the fender and then push the front of the lamp assembly inwards to engage the front clip.

Caution: Refer to Battery Disconnect Caution in the Preface section.

4. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
5. Check all vehicle lights for correct operation.

Stop Lamp Switch Adjustment

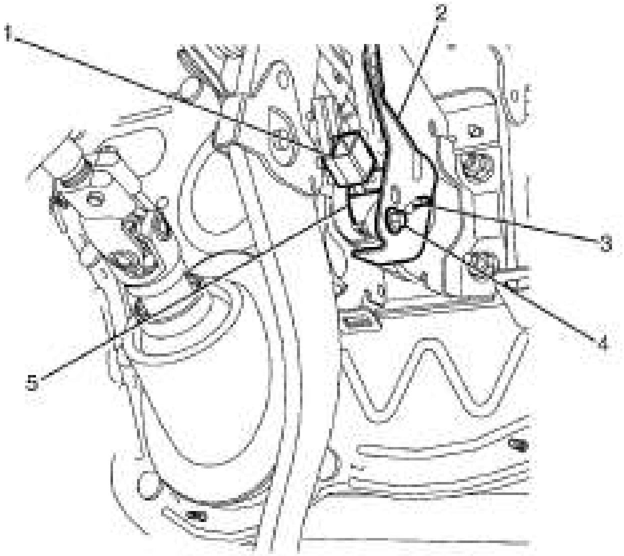
For brake pedal position sensor (BPPS) learn. Refer to Body Control Module Programming and Setup

---

Stop Lamp Switch Replacement (RHD)

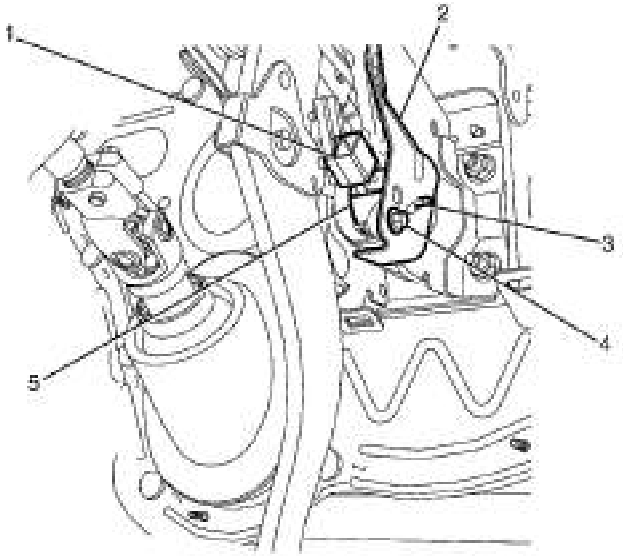
Removal Procedure

1. Remove the instrument panel lower right trim plate assembly. Refer to Instrument Panel Insulator Panel Replacement - Right Side.
2. Remove the knee bolster. Refer to Knee Bolster Replacement.



3. Disconnect the brake pedal position sensor electrical connector (1).
4. Remove the brake pedal position sensor to brake pedal bracket retaining bolt (4).
5. Disengage the brake pedal position sensor locating tab (3) from the brake pedal bracket (2).
6. Remove the brake pedal position sensor (5).

Installation Procedure



1. Connect the brake pedal position sensor electrical connector (1).
2. Align the brake pedal position sensor (5).

   Engage the brake pedal position sensor locating tab (3) to the brake pedal bracket (2).

   Notice: Refer to Fastener Notice in the Preface section.

3. Install the brake pedal position sensor to brake pedal bracket retaining bolt (4).

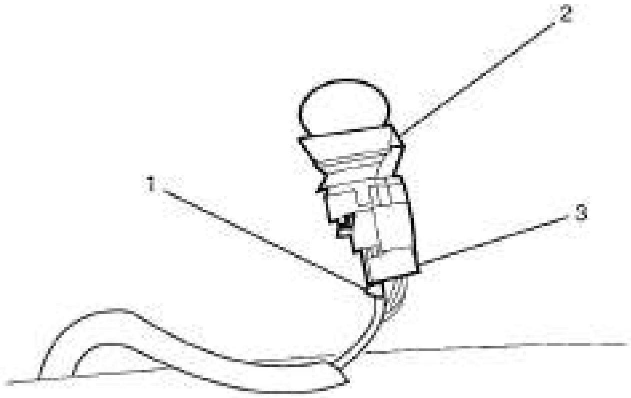
   Tighten
   Tighten the bolt to 3 N·m (26 lb ft).

4. Install the knee bolster. Refer to Knee Bolster Replacement.
5. Install the instrument panel lower right trim plate assembly. Refer to Instrument Panel Insulator Panel Replacement - Right Side.
6. Calibrate the brake pedal position sensor (5). Refer to Stop Lamp Switch Adjustment.

Sunload and Twilight Sentinel Sensor Replacement

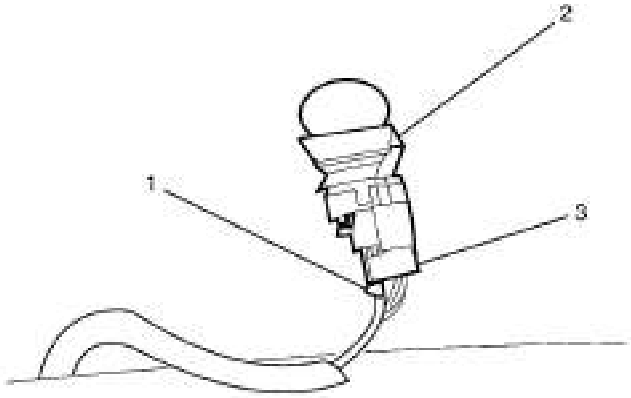
Removal Procedure

1. Remove the defrost grille. Refer to Defroster Grille Replacement.



2. Detach the sunload sensor (2) electrical connector retaining pin (3).
3. Remove the sunload sensor electrical connector (3).

Installation Procedure

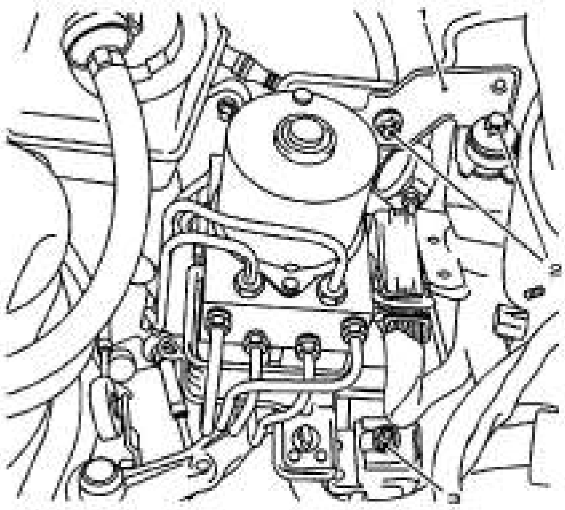


1. Install the sunload electrical connector (3).
2. Attach the sunload electrical connecter retaining pin (1).
3. Install the defrost grille. Refer to Defroster Grille Replacement.
4. Test the sunload sensor for the correct operation.

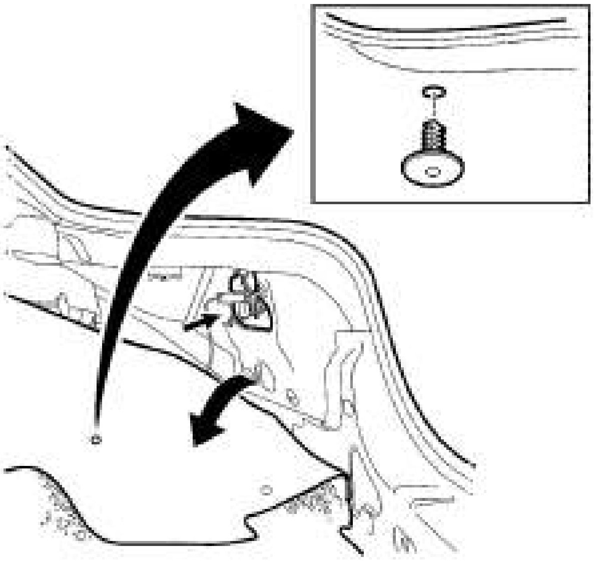
Tail Lamp Assembly and /or Backup, Sidemarker, Stop, Turn Signal Bulb Replacement (LWB)

Removal Procedure - Backup Light Bulb (LED tail lamp)

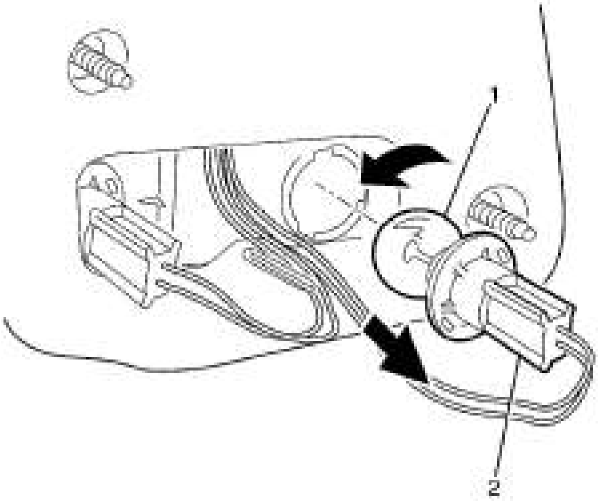
1. Open the rear compartment lid.



2. Remove the rear compartment lid trim clips and remove the trim.



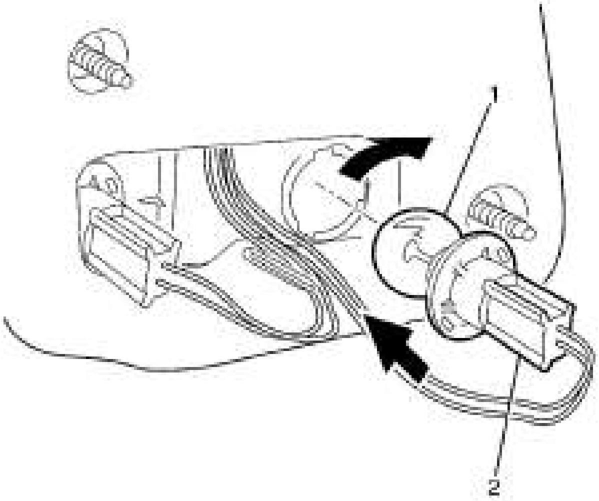
3. Remove the rear compartment lining clip and pull back the lining for access to the rear bulbs.



4. Remove the backup light bulb (1) and socket (2) from the rear tail lamp assembly by rotating the socket counterclockwise.
5. Remove the backup light bulb (1) from the socket (2) by pushing and rotating the bulb counterclockwise.

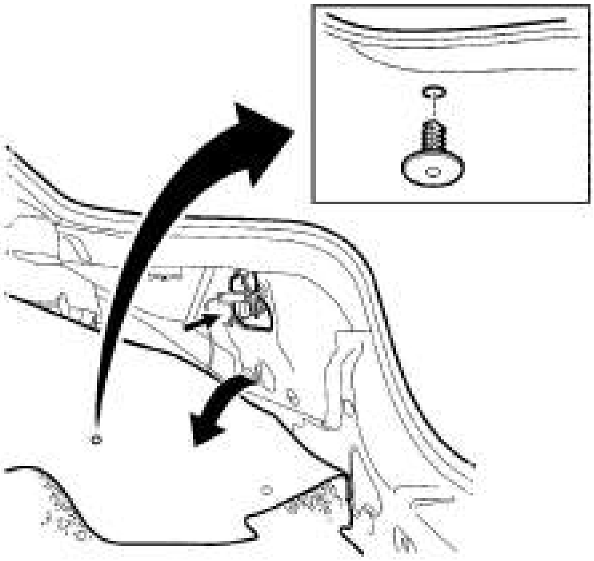
Installation Procedure - Backup Light Bulb (LED tail lamp)

1. Install the new backup light bulb into the socket by pushing and turning the bulb clockwise.

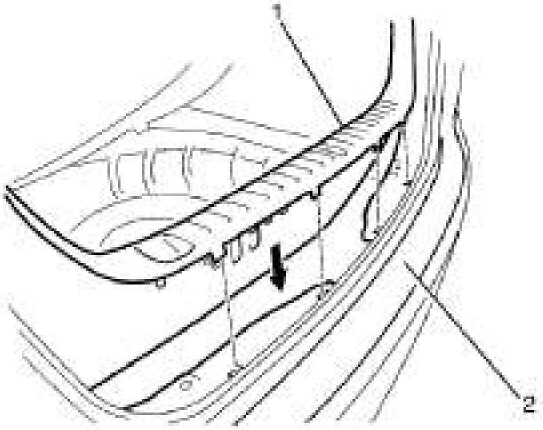


Important: The different-sized tabs on the bulb base and mating cut-outs in the tail lamp assembly allow the bulb to seat correctly.

2. Install the backup light bulb (1) and socket (2) into the rear tail lamp assembly and secure by rotating the socket clockwise.
3. Check all vehicle lights for correct operation.



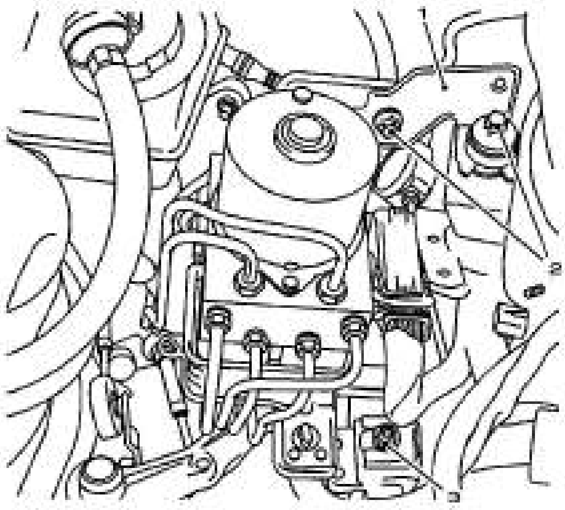
4. Install the rear compartment lining and reinstall clip to secure lining.



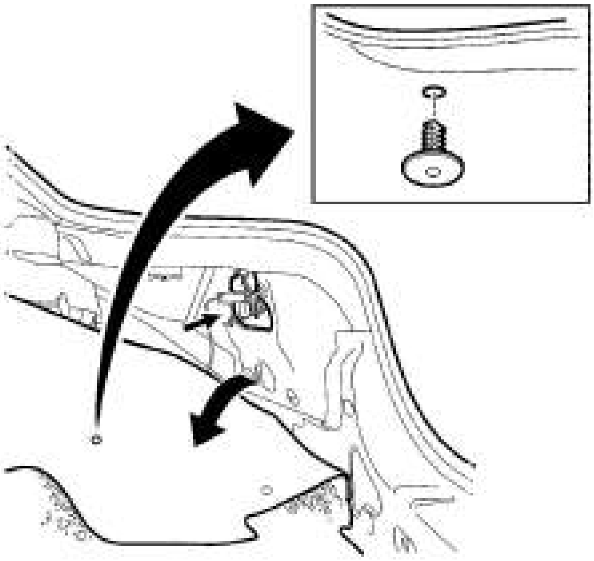
5. Install the rear compartment lid trim and reinstall the clips to secure the trim.

Removal Procedure - Rear Indicator Bulb (LED tail lamp)

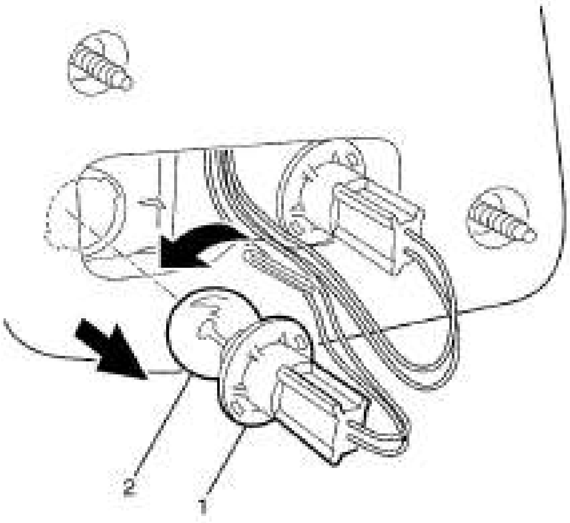
1. Open the rear compartment lid.



2. Remove the rear compartment lid trim clips and remove the trim.

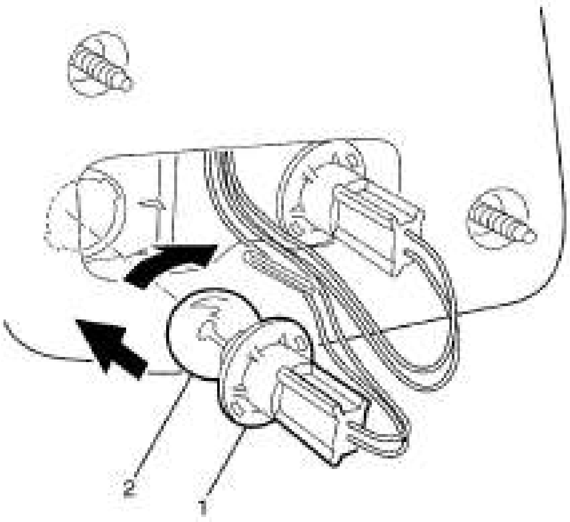


3. Remove the rear compartment lining clip and pull back the lining for access to the rear bulbs.



4. Remove the rear indicator light bulb (2) and socket (1) from the rear tail lamp assembly by rotating the socket counterclockwise.
5. Remove the rear indicator light bulb (2) from the socket (1) by pushing and rotating the bulb counterclockwise.

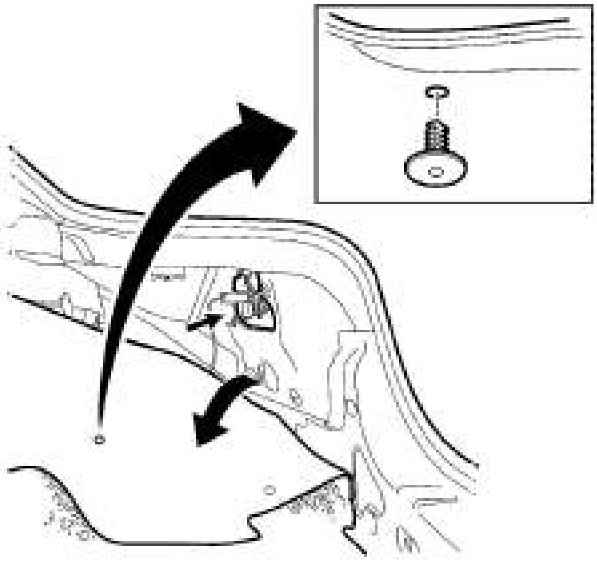
Installation Procedure - Rear Indicator Bulb (LED tail lamp)



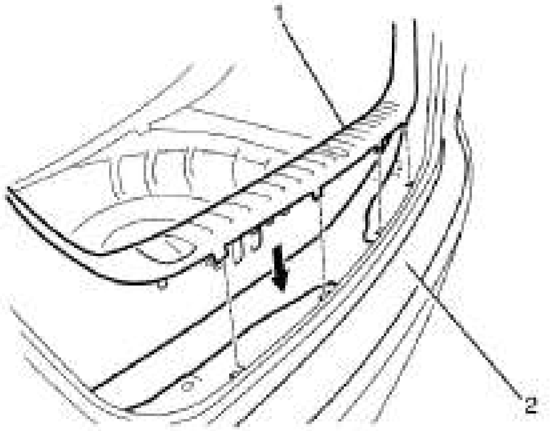
1. Install the new rear indicator light bulb (2) into the socket (1) by pushing and rotating the bulb clockwise.

Important: The different-sized tabs on the bulb base and mating cut-outs in the tail lamp assembly allow the bulb to seat correctly.

2. Install the rear indicator light bulb (2) and socket (1) into the rear tail lamp assembly and secure by rotating the socket clockwise.
3. Check all vehicle lights for correct operation.



4. Install the rear compartment lining and reinstall clip to secure lining.



5. Install the rear compartment lid trim and reinstall the clips to secure the trim.

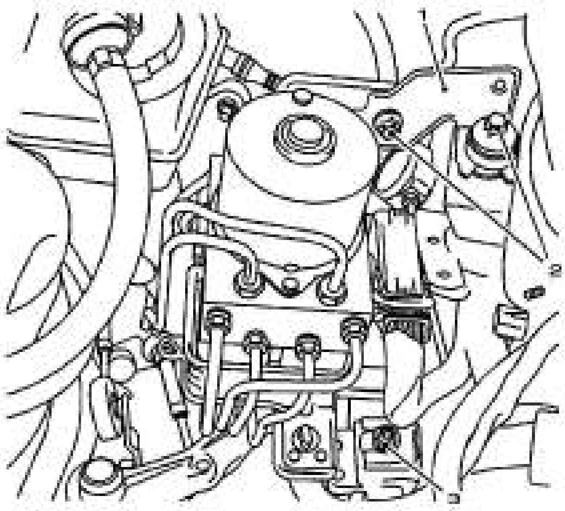
Removal Procedure - Stop/Tail Lamp Bulb (LED tail lamp)

Important: If the stop or tail LED's are faulty and do not illuminate, the tail lamp assembly must be replaced.

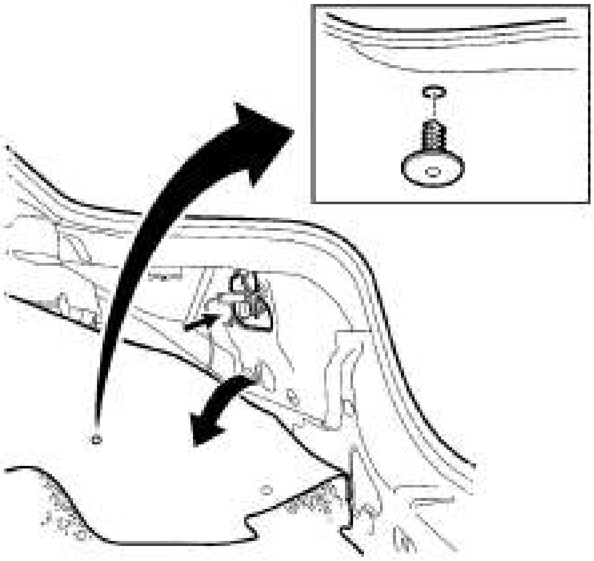
Refer to *Removal Procedure - Tail Lamp Assembly (LED tail lamp)* within this procedure for LED tail lamp replacement.

Removal Procedure - Tail Lamp Assembly (LED tail lamp)

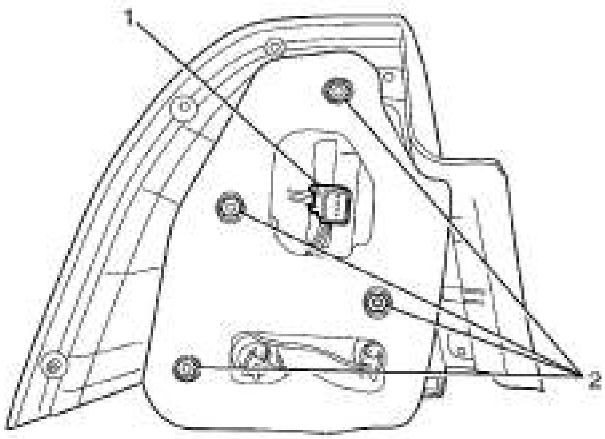
1. Open the rear compartment lid.



2. Remove the rear compartment lid trim clips and remove the trim.

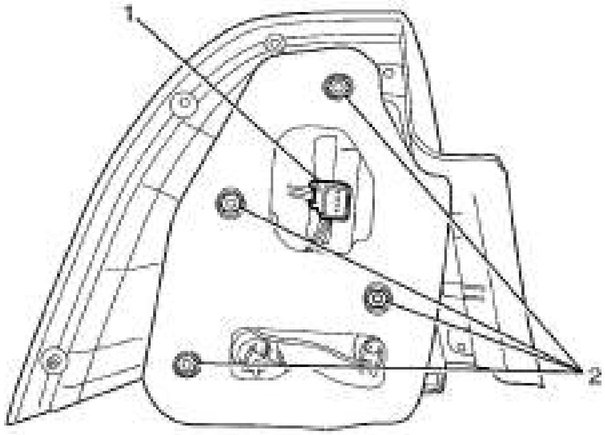


3. Remove the rear compartment lining clip and pull back the lining for access to the rear tail lamp assembly.



4. Disconnect the electrical connector (1) from the rear tail lamp assembly.
5. Remove nuts (2) that secure the rear tail lamp assembly, to rear body panel.
6. Remove the tail lamp assembly from the vehicle.

Installation Procedure - Tail Lamp Assembly



Important: Make sure the rear tail lamp sealing surface is clean to avoid damage to painted vehicle surface and to prevent water leaks.

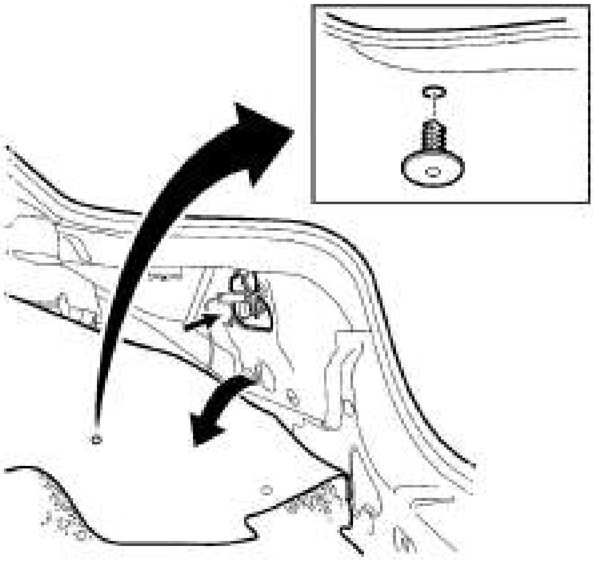
1. Install the new rear tail lamp assembly to the vehicle.

Notice: Refer to Fastener Notice in the Preface section.

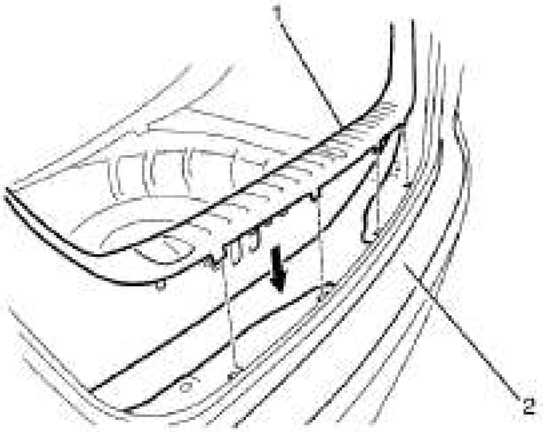
2. Install the nuts (2) that secure the rear tail lamp assembly to the rear body panel.

   Tighten
   Tighten the nuts to 3.0 N·m (27 lb in).

3. Connect the electrical connector (1) to the rear tail lamp assembly.
4. Check all vehicle lights for correct operation.



5. Install the rear compartment lining and reinstall clip to secure lining.



6. Install the rear compartment lid trim and reinstall the clips to secure the trim.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Repair Instructions | Document ID: 2069473

Tail Lamp Assembly and /or Backup, Sidemarker, Stop, Turn Signal Bulb Replacement (Sportwagon)

Removal Procedure - Tail Lamp Assembly

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Install a suitable liftgate brace to the vehicle.

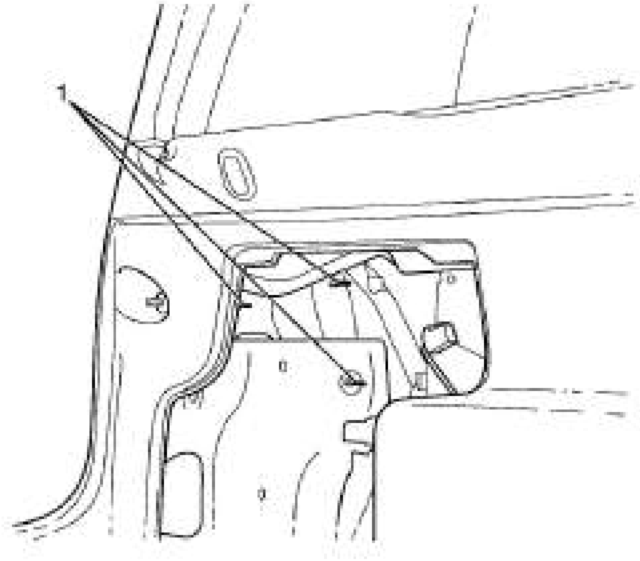
   Caution: Refer to Battery Disconnect Caution in the Preface section.

2. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.

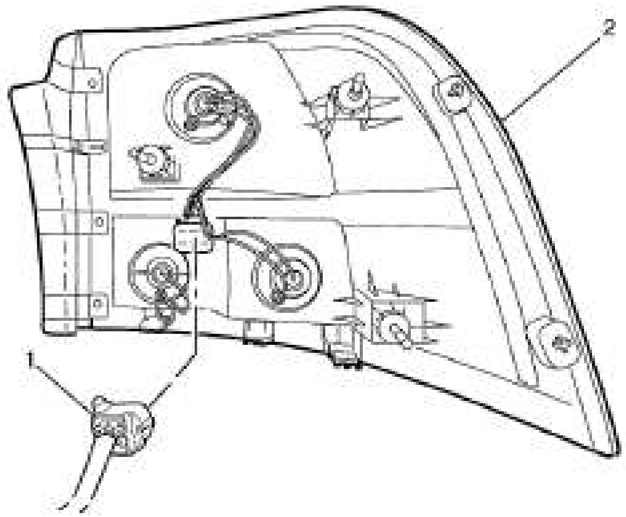
   Important: For access to the right-hand tail lamp assembly, go to step 3.

   Important: For access to the left-hand tail lamp assembly, go to step 4.

3. Remove the tail lamp access cover trim panel. Refer to Tail Lamp Replacement.
4. Remove the rear compartment side trim panel access hole cover. Refer to Rear Compartment Side Trim Panel Access Hole Cover Replacement

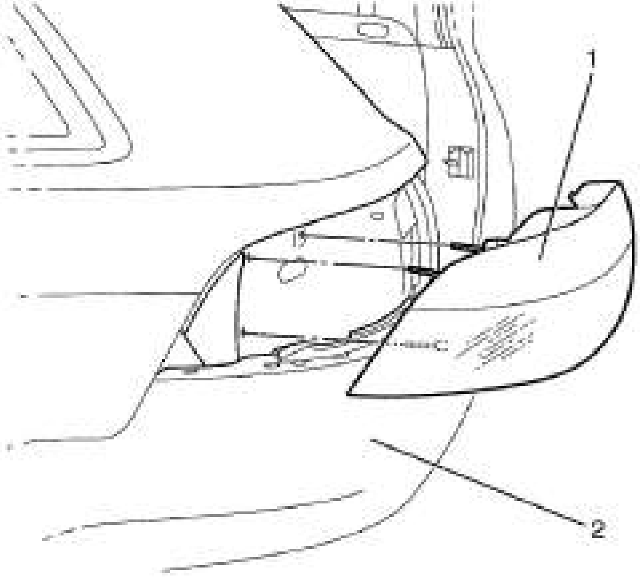


5. Remove the tail lamp assembly to vehicle retaining nuts (1).



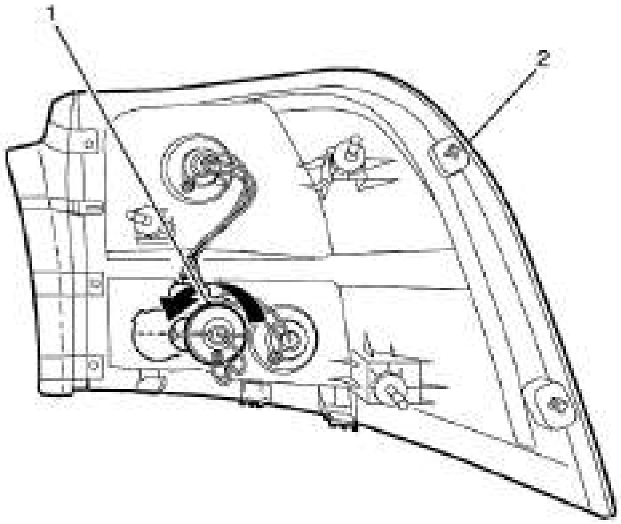
Important: Pull the tail lamp rearward to access the tail lamp electrical connector (1).

6. Disconnect the tail lamp assembly electrical connector (1) from the tail lamp assembly (2).



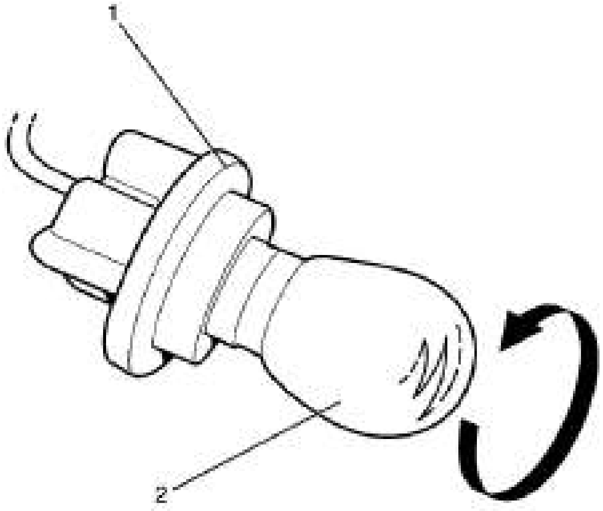
7. Remove the tail lamp assembly (1) from the vehicle (2).

Removal Procedure - Backup Lamp Bulb



Important: Remove the backup lamp bulb socket (1) from the tail lamp assembly (2) by rotating the backup lamp bulb socket (1) counter clockwise.

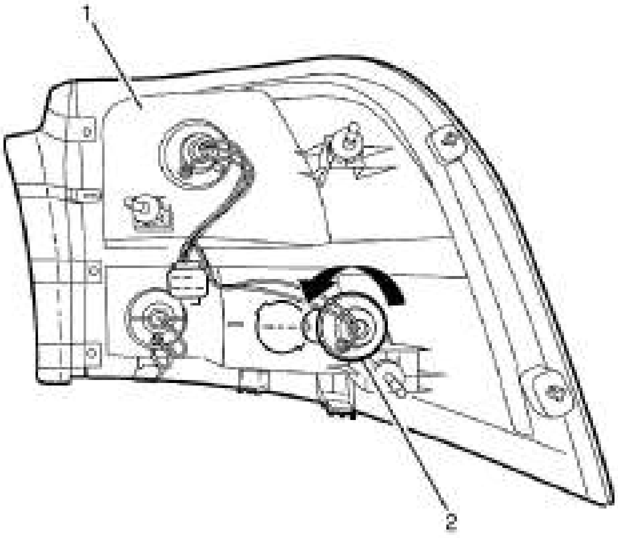
1. Remove the backup lamp bulb socket (1) from the tail lamp assembly (2).



Important: Remove the backup lamp bulb (2) from the backup lamp bulb socket (1) by pushing and rotating the backup lamp bulb (2) counter clockwise.

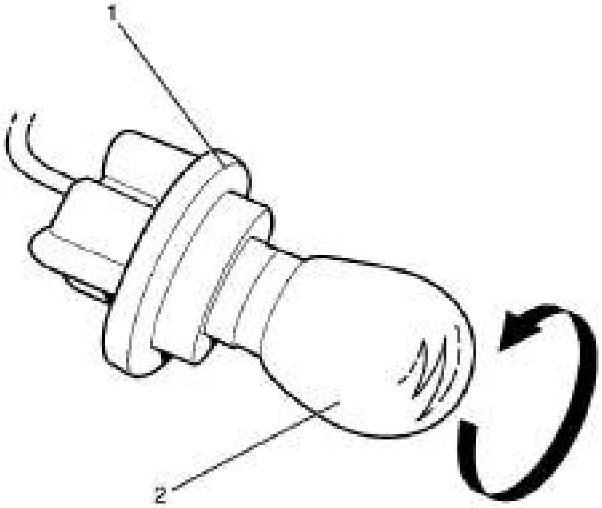
2. Remove the backup lamp bulb (2) from the backup lamp bulb socket (1).

Removal Procedure - Rear Indicator Bulb



Important: Remove the rear indicator lamp bulb socket (1) from the tail lamp assembly (2) by rotating the rear indicator lamp bulb socket (1) counter clockwise.

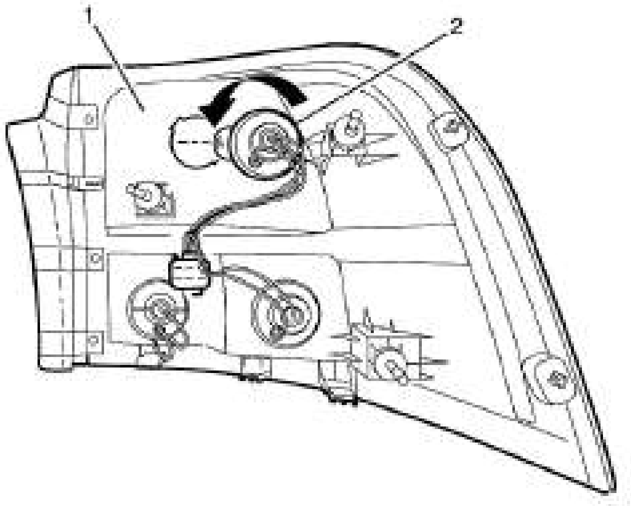
1. Remove the rear indicator lamp bulb socket (1) from the tail lamp assembly (2).



Important: Remove the rear indicator lamp bulb (2) from the rear indicator lamp bulb socket (1) by pushing and rotating the rear indicator lamp bulb (2) counter clockwise.

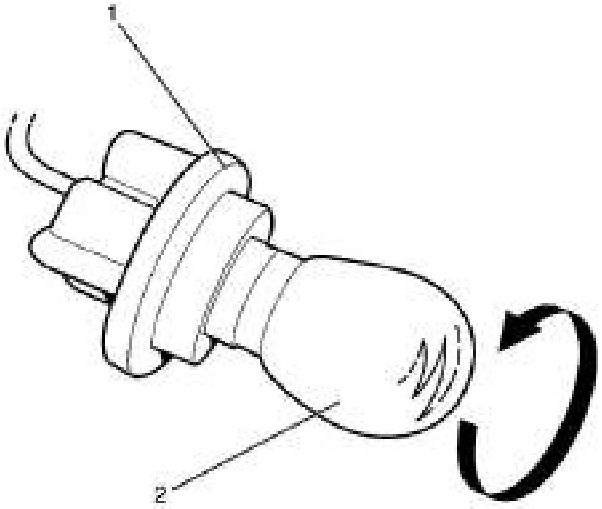
2. Remove the rear indicator lamp bulb (2) from the rear indicator lamp bulb socket (1).

Removal Procedure - Stop/Tail Lamp Bulb



Important: Remove the stop/tail lamp bulb socket (1) from the tail lamp assembly (2) by rotating the stop/tail lamp bulb socket (1) counter clockwise.

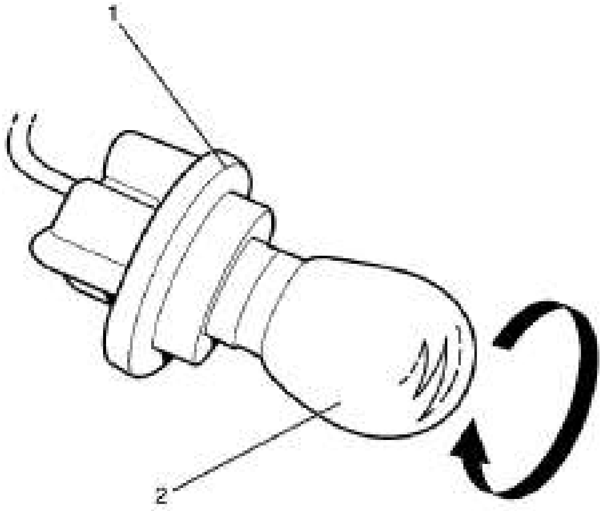
1. Remove the stop/tail lamp bulb socket (1) from the tail lamp assembly (2).



Important: Remove the stop/tail lamp bulb (2) from the stop/tail lamp bulb socket (1) by pushing and rotating the stop/tail lamp bulb (2) counter clockwise.

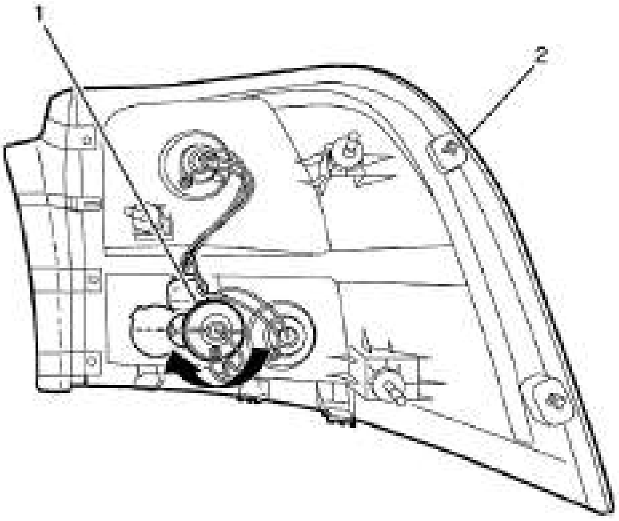
2. Remove the stop/tail lamp bulb (2) from the stop/tail lamp bulb socket (1).

Installation Procedure - Backup Lamp Bulb



Important: Install the backup lamp bulb (2) to the backup lamp bulb socket (1) by pushing and rotating the backup lamp bulb (2) clockwise.

1. Install the backup lamp bulb (2) to the backup lamp bulb socket (1).

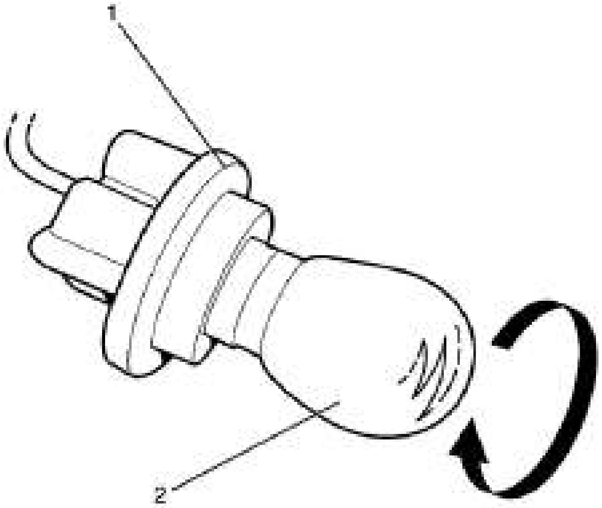


Important: The different-sized tabs on the backup lamp bulb socket (1) and mating cut-outs in the tail lamp assembly (2) allow the backup lamp bulb socket (1) to seat correctly.

Important: Install the backup lamp bulb socket (1) to the tail lamp assembly (2) by rotating the backup lamp bulb socket (1) clockwise.

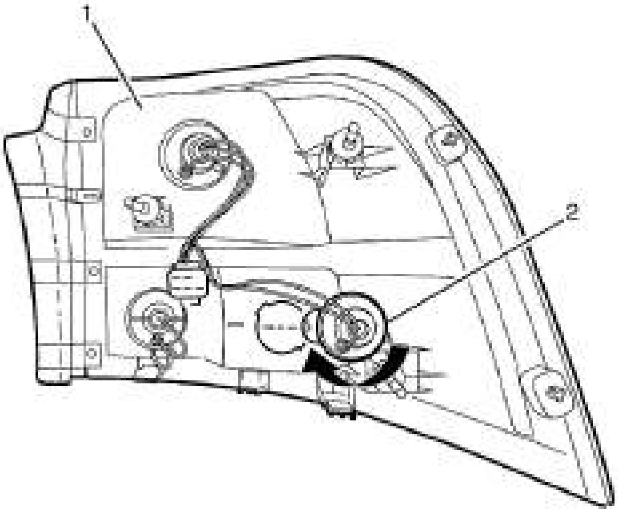
2. Install the backup lamp bulb socket (1) to the tail lamp assembly (2).

Installation Procedure - Rear Indicator Lamp Bulb



Important: Install the rear indicator lamp bulb (2) to the rear indicator lamp bulb socket (1) by pushing and rotating the rear indicator lamp bulb (2) clockwise.

1. Install the rear indicator lamp bulb (2) to the rear indicator lamp bulb socket (1).

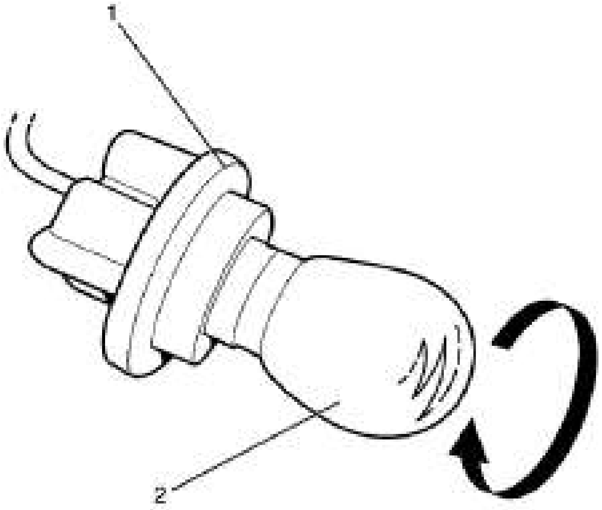


Important: The different-sized tabs on the rear indicator bulb socket (1) and mating cut-outs in the tail lamp assembly (2) allow the rear indicator lamp bulb socket (1) to seat correctly.

Important: Install the rear indicator lamp bulb socket (1) to the tail lamp assembly (2) by rotating the rear indicator lamp bulb socket (1) clockwise.

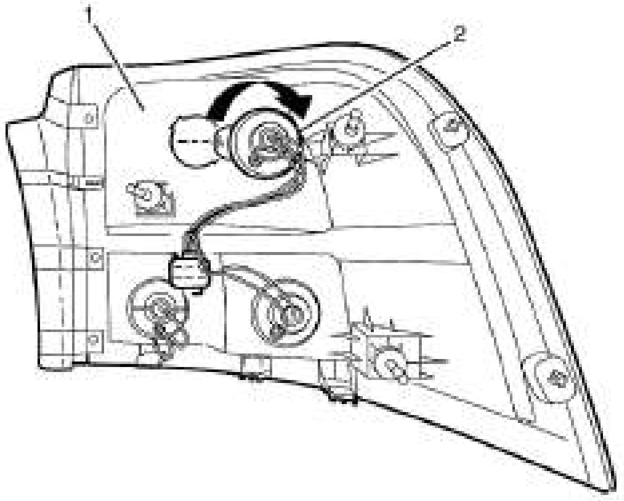
2. Install the rear indicator lamp bulb socket (1) to the tail lamp assembly (2).

Installation Procedure - Stop/Tail Lamp Bulb



Important: Install the stop/tail lamp bulb (2) to the stop/tail lamp bulb socket (1) by pushing and rotating the stop/tail lamp bulb (2) clockwise.

1. Install the stop/tail lamp bulb (2) to the stop/tail lamp bulb socket (1).

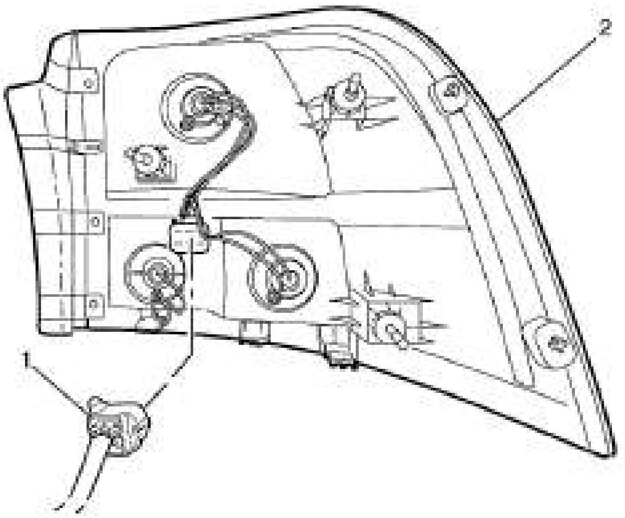


Important: The different-sized tabs on the stop/tail lamp bulb socket (1) and mating cut-outs in the tail lamp assembly (2) allow the stop/tail lamp bulb socket (1) to seat correctly.

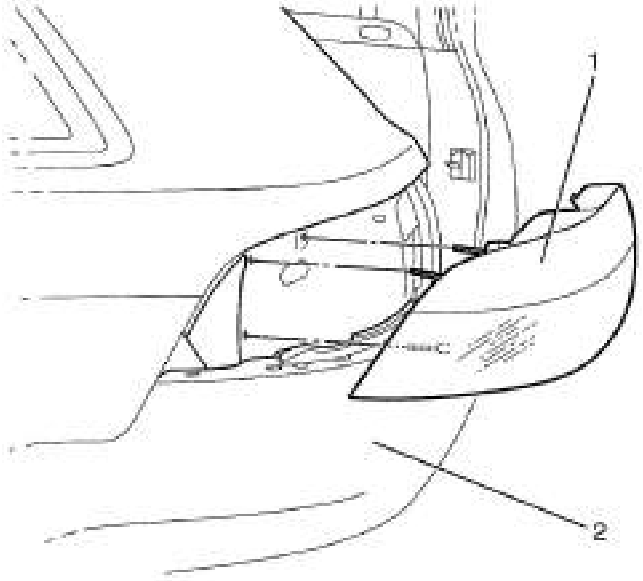
Important: Install the stop/tail lamp bulb socket (1) to the tail lamp assembly (2) by rotating the stop/tail lamp bulb socket (1) clockwise.

2. Install the stop/tail lamp bulb socket (1) to the tail lamp assembly (2).

Installation Procedure - Tail Lamp Assembly

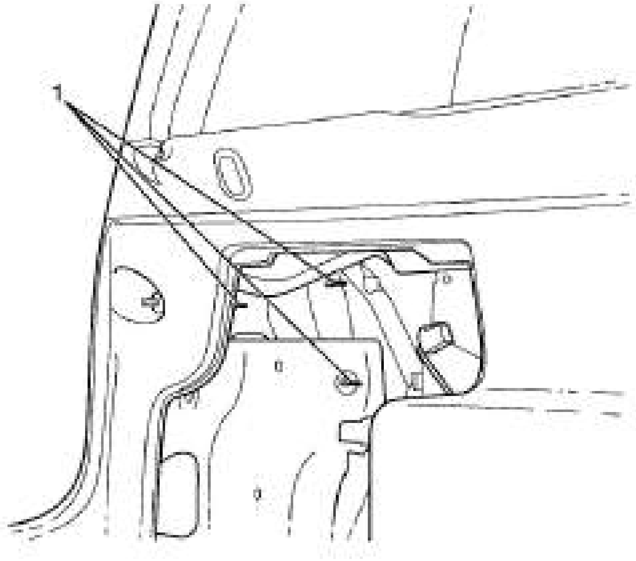


1. Connect the tail lamp assembly electrical connector (1) to the tail lamp assembly (2).



2. Install the tail lamp assembly (1) to the vehicle (2)

   Notice: Refer to Fastener Notice in the Preface section.



3. Install the tail lamp assembly to vehicle retaining nuts (1)

   Tighten
   Tighten the nuts to 4 N·m (35 lb in).

   Important: For the right-hand tail lamp assembly, go to step 4.

Important: For the left-hand tail lamp assembly, go to step 5.

4. Install the tail lamp access cover trim panel. Refer to Tail Lamp Replacement.
5. Install the rear compartment side trim panel access hole cover. Refer to Rear Compartment Side Trim Panel Access Hole Cover Replacement.
6. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

7. Remove the suitable liftgate brace from the vehicle.

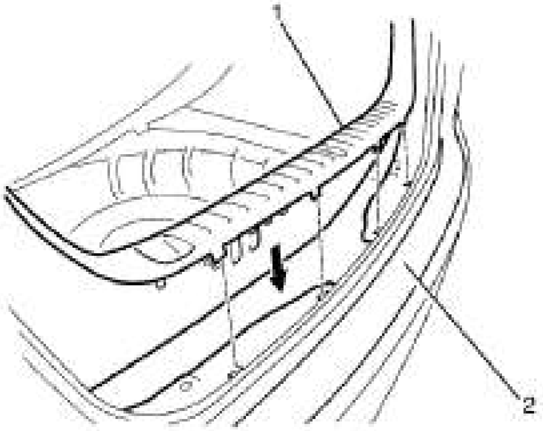
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Repair Instructions | **Document ID: 1976258**

Tail Lamp Assembly and /or Backup, Sidemarker, Stop, Turn Signal Bulb Replacement (SWB)

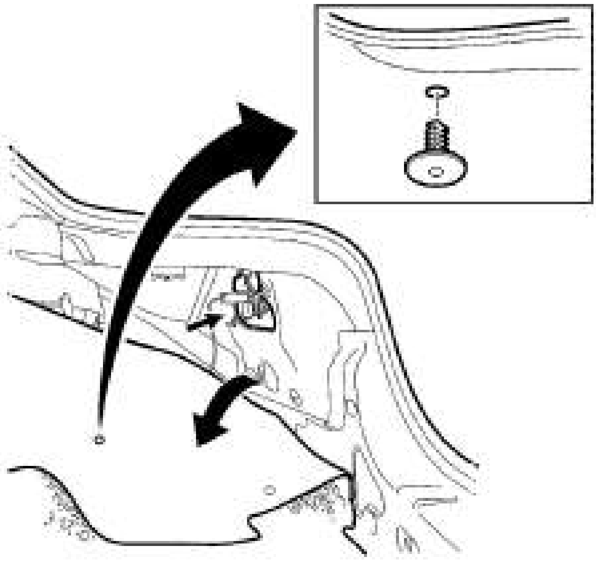
Removal Procedure - Backup Light Bulb

Caution: Refer to Battery Disconnect Caution in the Preface section.

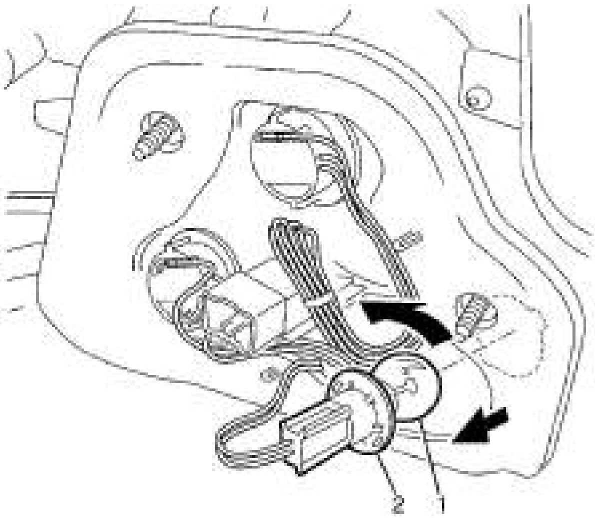
1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection .
2. Open the rear compartment lid.



3. Remove the rear compartment lid trim clips and remove the trim.

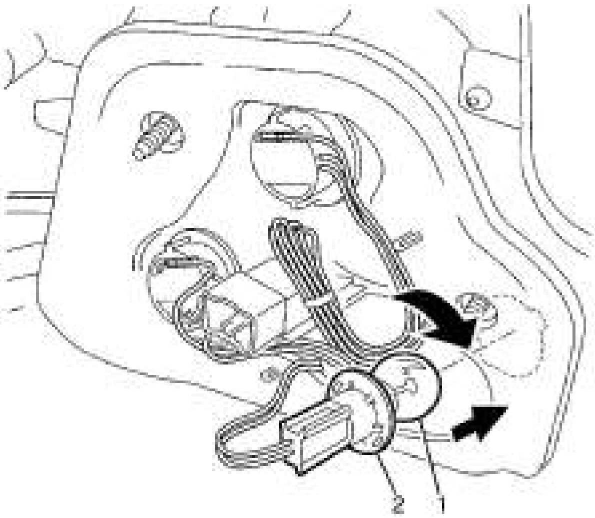


4. Remove the rear compartment lining clip and pull back the lining for access to the rear bulbs.



5. Remove the backup light bulb (1) and socket (2) from the rear lamp assembly by pushing and rotating the bulb counterclockwise.
6. Remove the backup light bulb (1) from the socket by pushing and rotating the bulb counterclockwise.

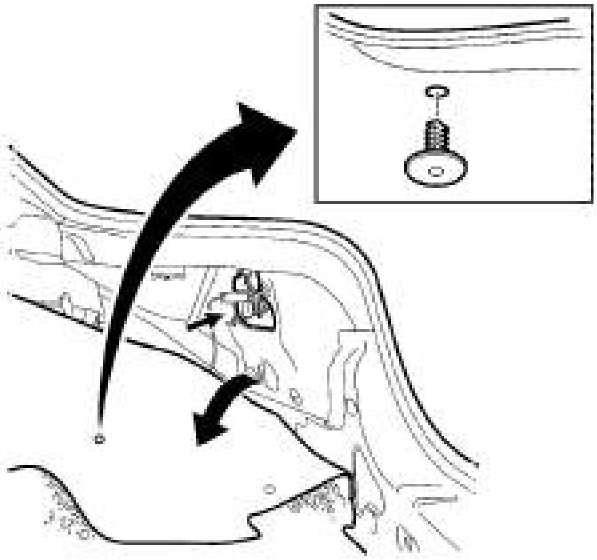
Installation Procedure - Backup Light Bulb



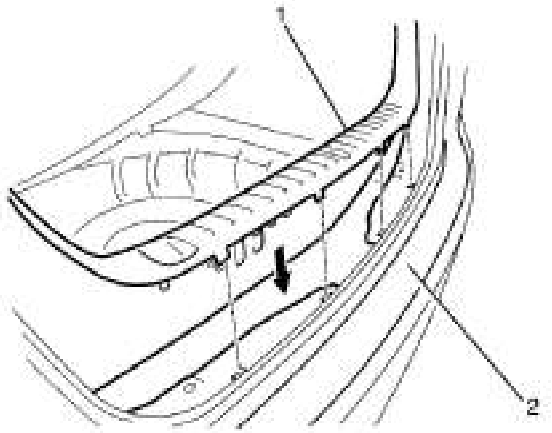
1. Install the new backup light bulb (1) into the socket (2) by pushing and rotating the bulb clockwise.

   Important: The different-sized tabs on the bulb base and mating cut-outs in the tail lamp assembly allow the bulb to seat correctly.

2. Install the backup light bulb (1) and socket (2) into the rear tail lamp assembly and secure by rotating the socket clockwise.
3. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection .
4. Check all vehicle lights for correct operation.



5. Install the rear compartment lining and reinstall clip to secure lining.

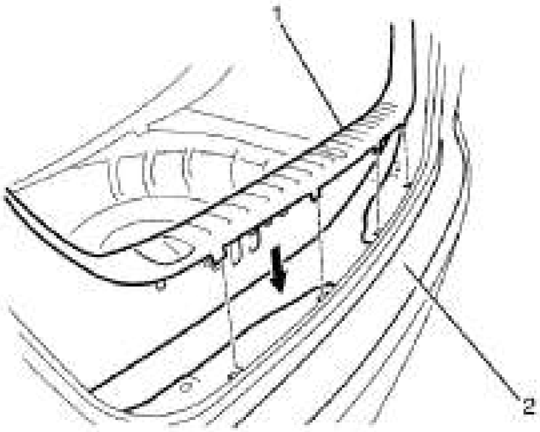


6. Install the rear compartment lid trim and reinstall the clips to secure the trim.

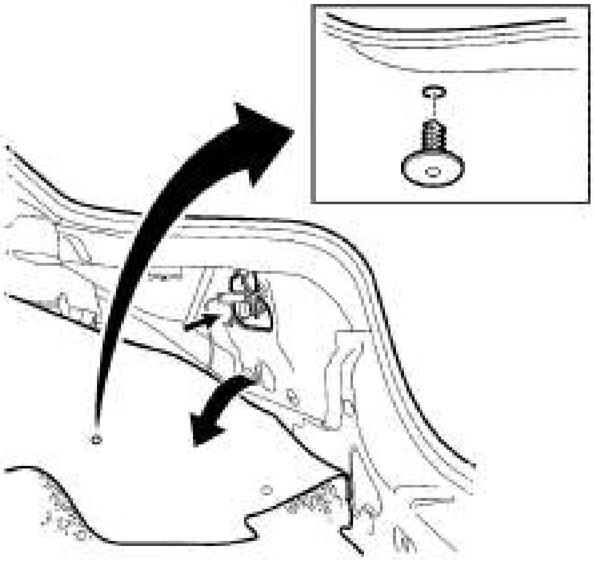
Removal Procedure - Rear Indicator Bulb

Caution: Refer to Battery Disconnect Caution in the Preface section.

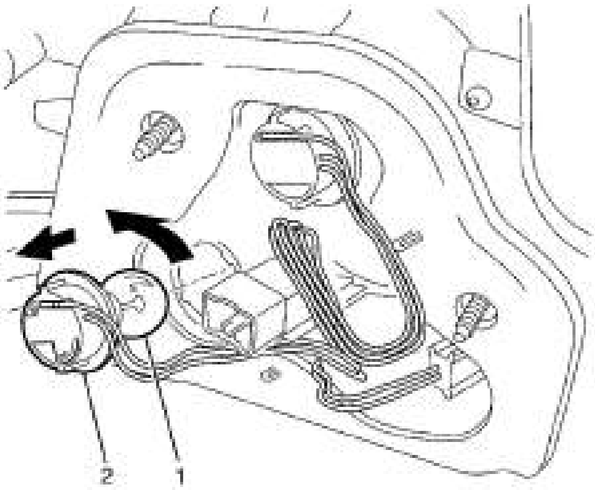
1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection .
2. Open the rear compartment lid.



3. Remove the rear compartment lid trim clips and remove the trim.



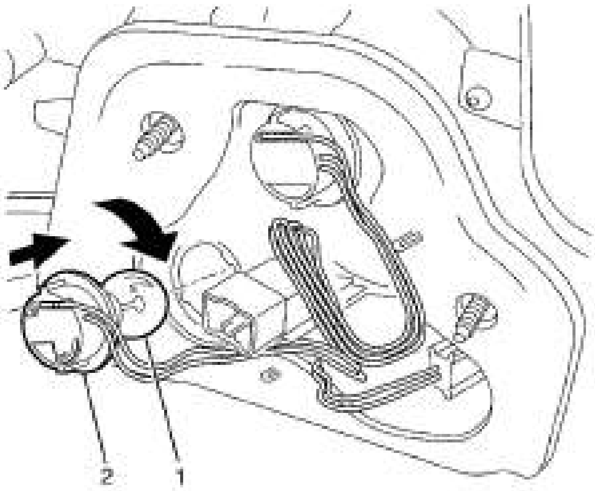
4. Remove the rear compartment lining clip and pull back the lining for access to the rear bulbs.



5. Remove the rear indicator light bulb (1) and socket (2) from the rear tail lamp assembly by rotating the socket counterclockwise.
6. Remove the rear indicator light bulb (1) from the socket (2) by pushing and rotating the bulb counterclockwise.

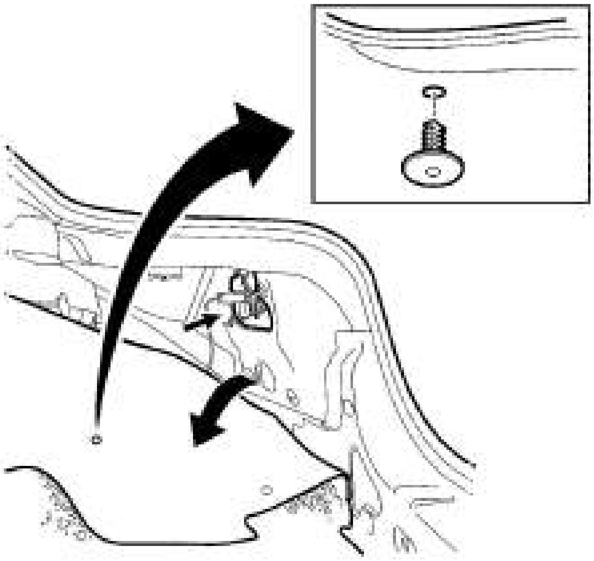
Installation Procedure - Rear Indicator Bulb

1. Install the new rear indicator light bulb into the socket by pushing and rotating the bulb clockwise.

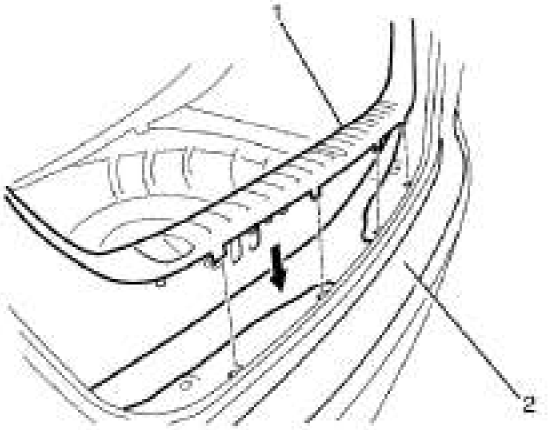


Important: The different-sized tabs on the bulb base and mating cut-outs in the tail lamp assembly allow the bulb to seat correctly.

2. Install the rear indicator light bulb (2) and socket (1) into the rear tail lamp assembly and secure by rotating the socket clockwise.
3. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection .
4. Check all vehicle lights for correct operation.



5. Install the rear compartment lining and reinstall clip to secure lining.



6. Install the rear compartment lid trim and reinstall the clips to secure the trim.

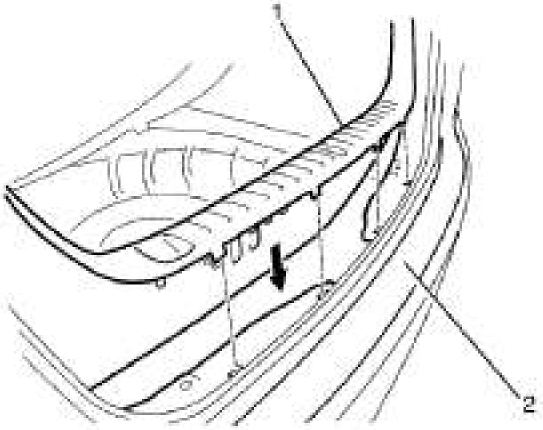
Removal Procedure - Stop/Tail Lamp Bulb

Caution: Refer to Battery Disconnect Caution in the Preface section.

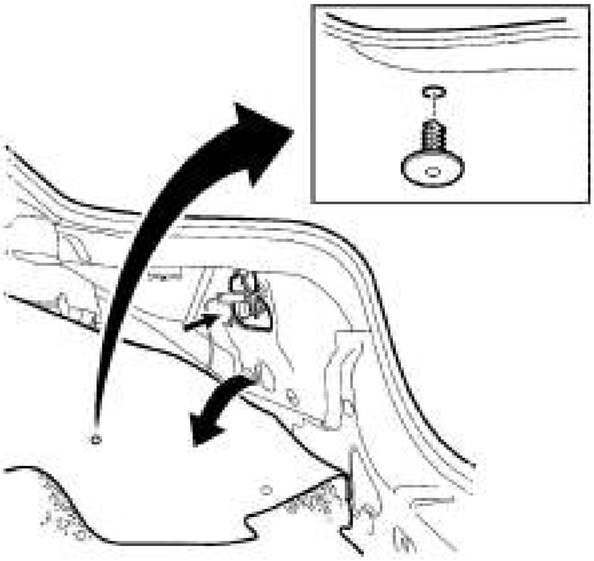
1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and

Connection .

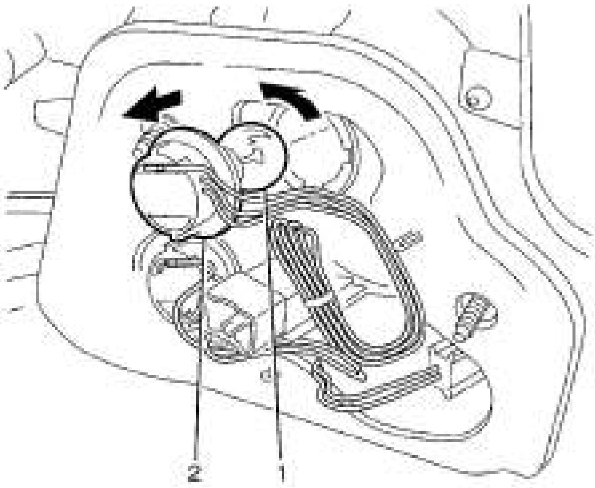
2. Open the rear compartment lid.



3. Remove the rear compartment lid trim clips and remove the trim.

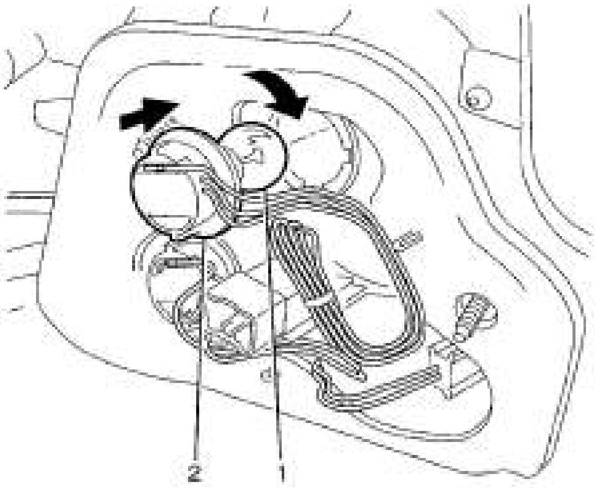


4. Remove the rear compartment lining clip and pull back the lining for access to the rear bulbs.



5. Remove the stop/tail lamp bulb (1) and socket (2) from the rear tail lamp assembly by rotating the socket counterclockwise.
6. Remove the stop/tail light bulb (1) from the socket (2) by pushing and rotating the bulb counterclockwise.

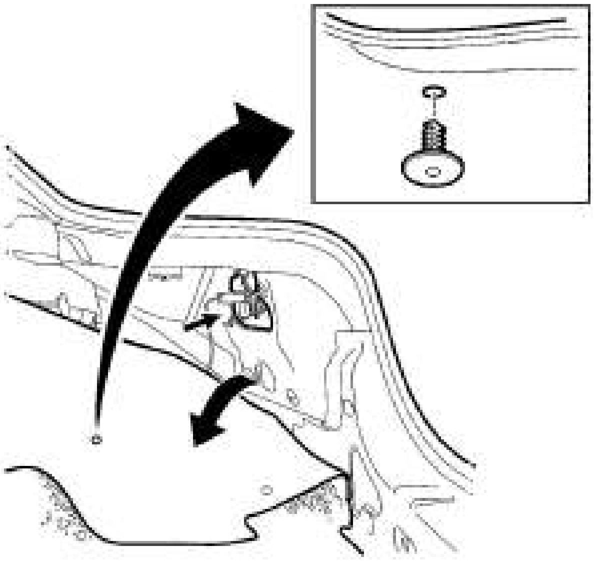
Installation Procedure - Stop/Tail Lamp Bulb



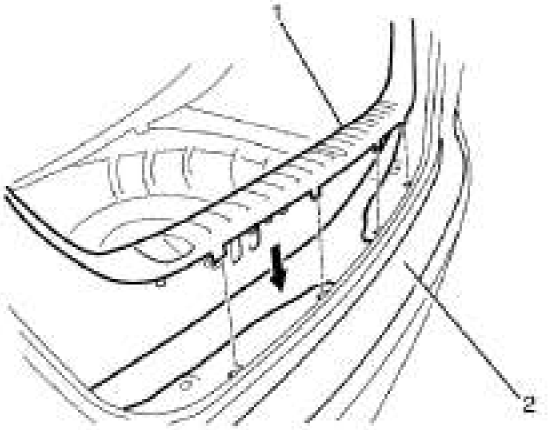
1. Install the new stop/tail light bulb (1) into the socket (2) by pushing and rotating the bulb clockwise.

   Important: The different-sized tabs on the bulb base and mating cut-outs in the tail lamp assembly allow the bulb to seat correctly.

2. Install the stop/tail lamp bulb (1) and socket (2) into the rear tail lamp assembly and secure by rotating the socket clockwise.
3. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection .
4. Check all vehicle lights for correct operation.



5. Install the rear compartment lining and reinstall clip to secure lining.



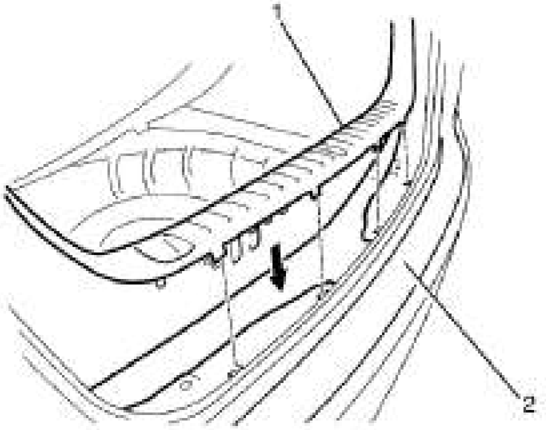
6. Install the rear compartment lid trim and reinstall the clips to secure the trim.

Removal Procedure - Tail Lamp Assembly

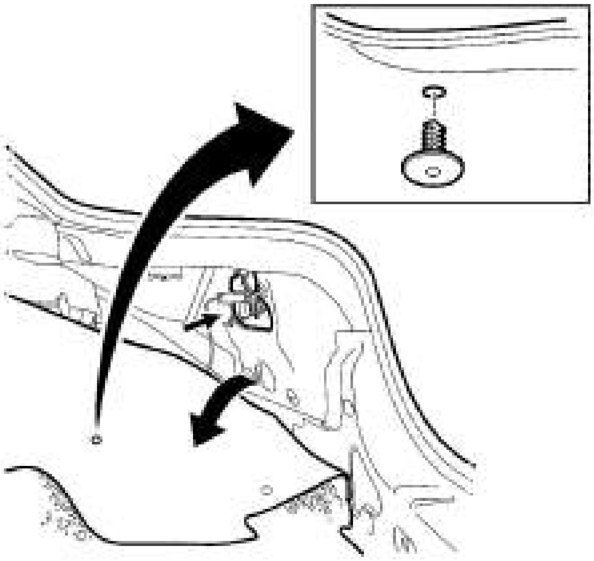
Caution: Refer to Battery Disconnect Caution in the Preface section.

1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and

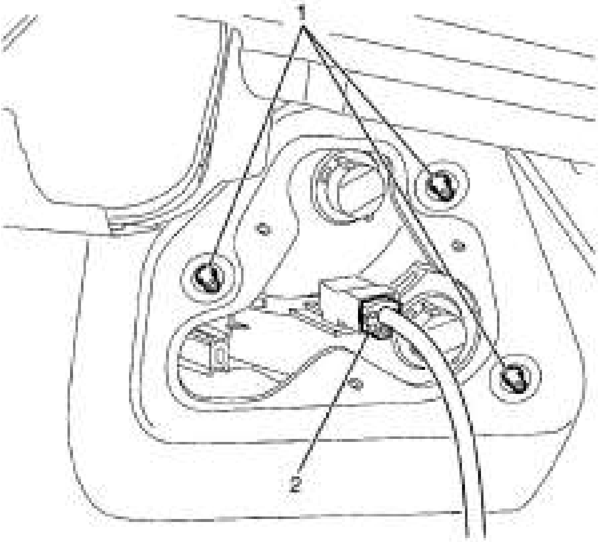
Connection .



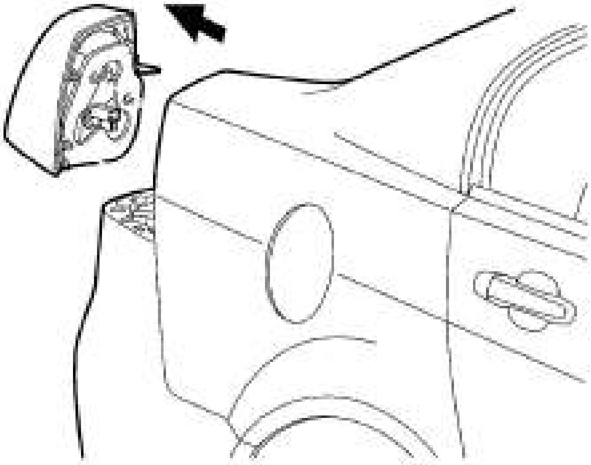
2. Remove the rear compartment lid trim clips and remove the trim.



3. Remove the rear compartment lining clip and pull back the lining for access to the rear tail lamp assembly.

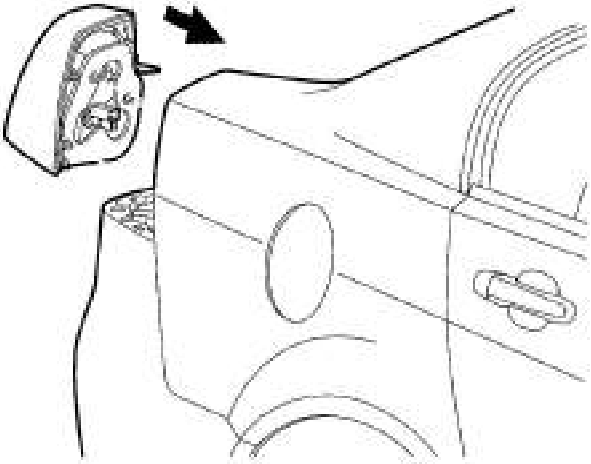


4. Disconnect the rear tail lamp electrical connector (2).
5. Remove the rear tail lamp to rear end panel retaining nuts (1).



6. Remove the rear tail lamp assembly from the vehicle.

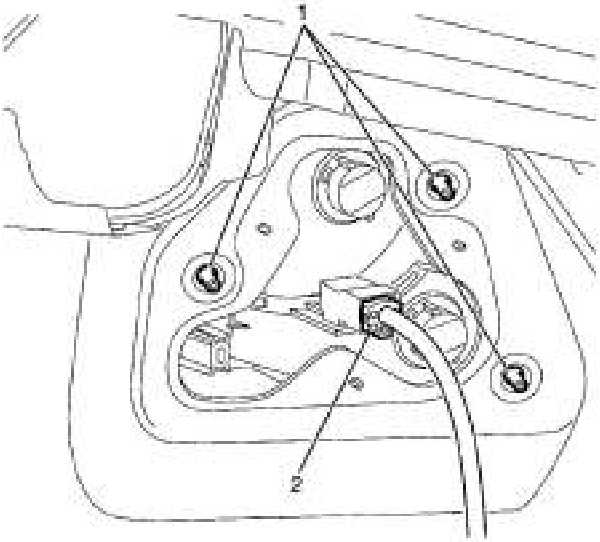
Installation Procedure



Important: Make sure the rear tail lamp sealing surface is clean to avoid damage to painted vehicle surface and to prevent water leaks.

1. Install the rear tail lamp assembly to the vehicle.

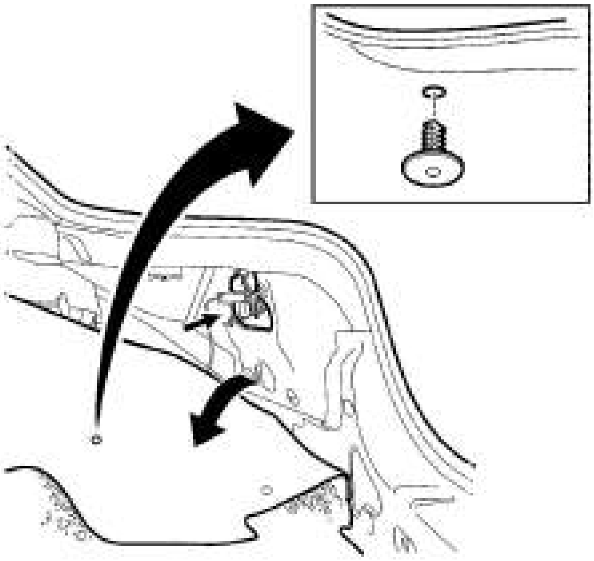
   Notice: Refer to Fastener Notice in the Preface section.



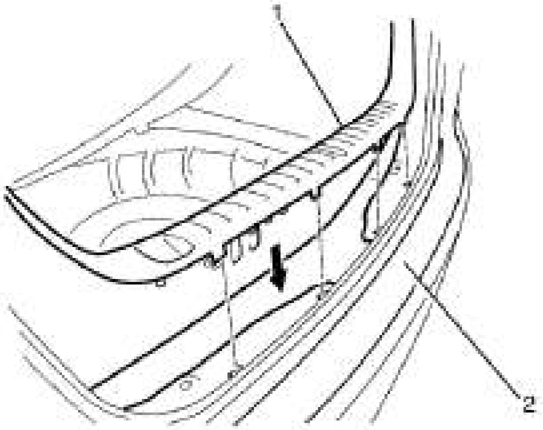
2. Install the rear tail lamp assembly retaining nuts (1).

   Tighten
   Tighten the nuts to 3.00 N·m (27 lb in).

3. Connect the rear tail lamp assembly electrical connector (2).
4. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection .
5. Check all lights for the correct operation.



6. Install the rear compartment lining clip and pull back the lining for access to the rear tail lamp assembly.



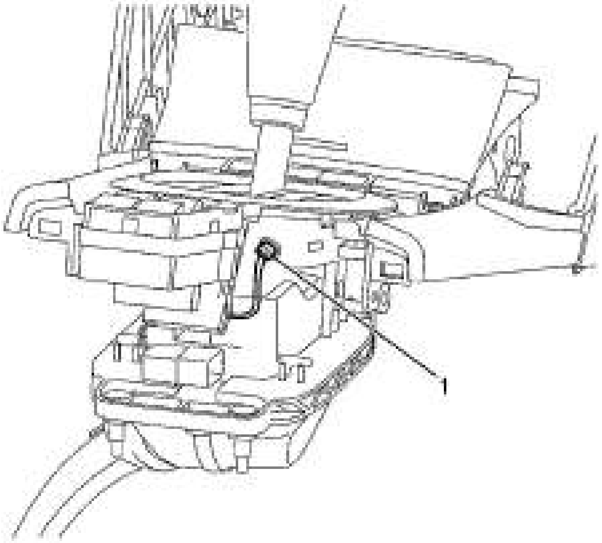
7. Install the rear compartment lid trim clips and remove the trim.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Repair Instructions | Document ID: 1976219

Transmission Floor Shift Control Indicator Lamp Replacement

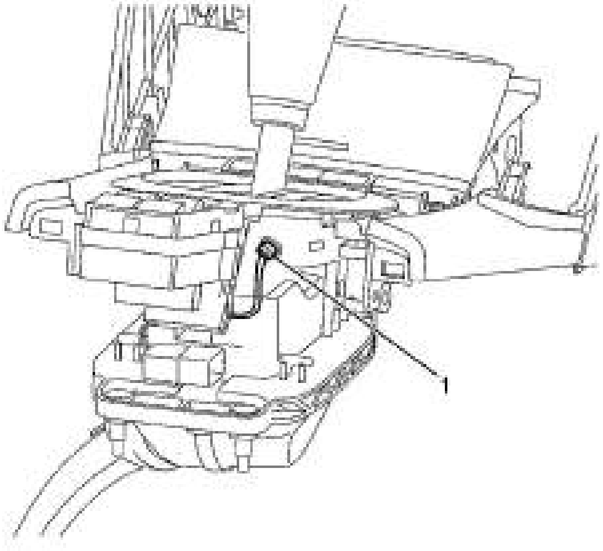
Removal Procedure

1. Remove the trim plate panel. Refer to Console Trim Plate Replacement.



2. Remove the transmission floor shift control indicator lamp from the rear of the shift control housing by turning the lamp socket (1) counter clockwise.
3. Pull the transmission floor shift control indicator light bulb from the socket.

Installation Procedure



1. Install a new transmission floor shift control indicator light bulb to the socket (1).
2. Install the transmission floor shift control indicator lamp to the rear of the shift control housing by turning the lamp socket clockwise.
3. Install the trim plate panel. Refer to Console Trim Plate Replacement.
4. Check the operation of the transmission floor shift control indicator light.

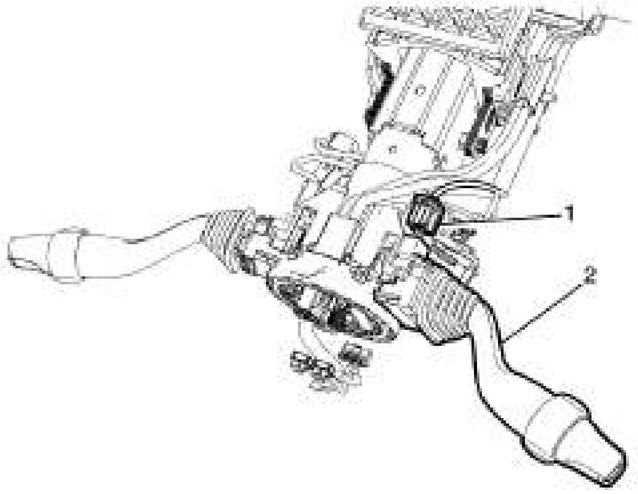
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Repair Instructions | **Document ID: 1977365**

Turn Signal Switch Replacement (RHD)

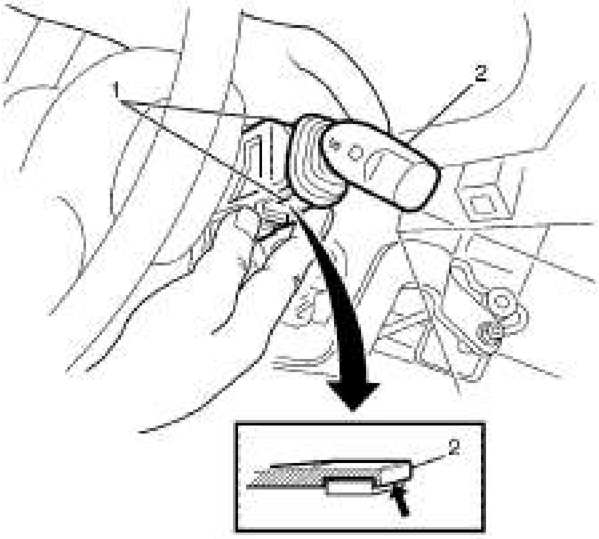
Removal Procedure

Caution: Refer to Battery Disconnect Caution in the Preface section.

1. Disconnect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
2. Remove the upper and lower steering column trim covers. Refer to Steering Column Trim Covers Replacement.

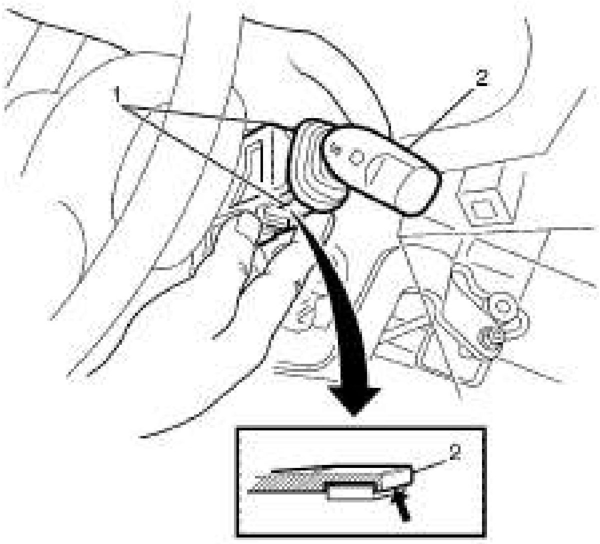


3. Disconnect the turn signal switch (2) electrical connector (1).

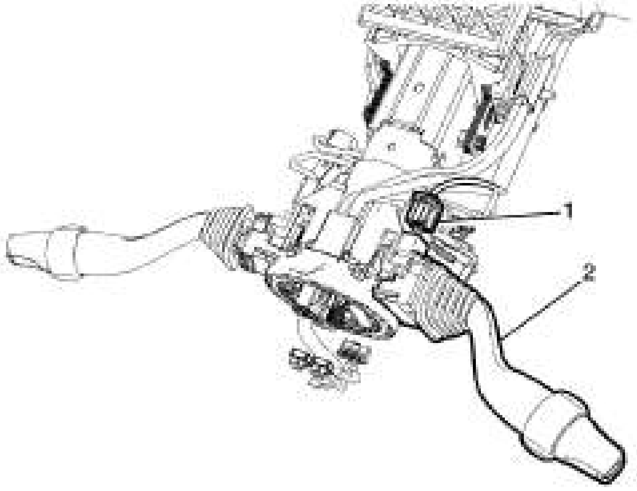


4. Press the retaining tabs (1) on the turn signal switch (2) and pull the turn signal switch assembly away from the steering column.

Installation Procedure



1. Install the new turn signal (2) switch and push the switch into position until the retaining tabs (1) seat with an audible click.



2. Connect the turn signal switch (2) electrical connector (1).
3. Install the upper and lower steering column trim covers. Refer to Steering Column Trim

Covers Replacement.

4. Connect the battery ground cable. Refer to Battery Negative Cable Disconnection and Connection.
5. Check all vehicle lights for correct operation.

Vanity Mirror Lamp Replacement

1. The vanity mirror lamp is not a serviceable item.
2. If the vanity mirror lamp requires replacement it must be replaced as an assembly. Refer to Sunroof Sunshade Replacement

Exterior Lighting Systems Description and Operation (Sportwagon)

Exterior Lamps

The exterior lighting system consists of the following lamps:

- The headlamps
- The front fog lamps
- The park, tail and marker lamps
- The exterior courtesy lamps
- The turn signal/hazard lamps
- The stop lamps
- The backup lamps

Headlamps

The headlamps may be turned ON in 2 different ways. First, when the driver places the headlamp switch in the HEADLAMP position, for normal operation. Second, with the headlamp switch placed in the AUTO position, for automatic lamp control (ALC).

Headlamp ON/OFF control is determined by the body control module (BCM) by a signal on the headlamp switch on input circuit when the headlamp switch is in the HEAD position. When the headlamp switch is in the AUTO position, the BCM determines headlamps ON/OFF by the voltage from the ambient light sensor.

If the headlight switch is left in the ON position, the inadvertent power control feature will turn OFF the headlights approximately 10 seconds after the ignition switch is turned to the OFF position. If the driver places the headlight switch in the ON position after the ignition switch has been turned OFF, or if the ignition switch is in the ACCY position, the headlights will remain ON until turned OFF or the battery runs flat.

The high beam indicator is illuminated when the instrument cluster receives a GMLAN serial data message from the BCM that the high beams are illuminated.

High Beams

The high beam headlamps receive voltage from the headlamp high relay located in the underhood fuse block. The BCM controls the relay on the headlamp high beam relay control circuit. High beam control is determined by a signal on the headlamp dimmer switch high beam signal circuit from the turn signal multifunction switch. When the headlamp dimmer switch signal circuit is grounded, the BCM grounds the headlamp high beam relay control circuit, illuminating the high beam headlamps. The right and left high beam circuits are independent and are fused independently in the underhood fuse block.

Low Beams - Standard

The low beam headlamps receive voltage from the headlamp low beam relay located in the underhood fuse block. The BCM controls the relay on the headlamp low beam relay control circuit. Low beam control is activated when the headlamp switch is placed in the headlamp ON position grounding the headlamp switch headlamps on signal circuit to the BCM. The right and left low beam circuits are independent are fused independently in the underhood fuse block.

Fog Lamps

With both the ignition switch in the RUN position, and the park lamps ON, the fog lights will illuminate when the driver depresses the fog lamp switch. The BCM receives the park lamp ON signal from the interior park lamps supply voltage signal circuit. With the headlamp switch in either the park or headlamp position, and the fog lamp switch is in the ON position, the BCM will ground the fog lamp relay control circuit causing the relay to energise. The current flows from the fog lamp relay to both front fog lamps. The state of the fog lamps will remain the same until the fog lamp switch position is changed, or the ignition switch is cycled OFF and ON. Fog lamp operation will be cancelled whenever the park lamps are turned OFF or the high beam headlights have been selected.

Park, Tail and Marker Lamps

The park, tail and marker lamps, including the license lamps, are turned ON when the headlamp switch is placed in the PARK or HEAD position or anytime the headlights are requested. The underhood fuse block supplies battery positive voltage to both the park lamp relay switch contacts and the park lamp coil circuit. The BCM provides a ground or control circuit to the park lamp relay coil circuit. When the park lamps are turned ON, the BCM energises the park lamp relay. If the headlight switch is left in the ON position, the inadvertent power control feature will turn OFF the park, tail and marker lamps approximately 10 seconds after the ignition switch is turned to the OFF position. If the driver places the headlight switch in the ON position after the ignition switch has been turned OFF, or if the ignition switch is in the ACCY position, the park, tail and marker lamps will remain ON until turned OFF or the battery runs flat.

Exterior Courtesy Lamps

The BCM, driver door switch, and the passenger door switch communicate through the GMLAN serial data system. The driver door switch and passenger door switch supply power and ground to the left and right exterior lamps respectively. When the BCM commands illuminated entry, a command is also sent to the door switches for illumination of the exterior courtesy lamps. If the door locks are activated to the LOCK position, or if the ignition switch is turned to either the ON or RUN position the exterior courtesy lamps will deactivate immediately.

Turn Signal/Hazard Lamps

When the turn signal multifunction switch is placed in either the left or right position, a ground signal is completed from the turn signal switch to the BCM. The BCM then sends an ON-OFF voltage signal through the fuses to the appropriate turn signal and side repeater lamps or to all of the turn signal fuses for hazard operation. An audio chime is also activated when the turn signals are ON. The instrument panel cluster (IPC) receives the signals to activate the turn signal indicators over the GMLAN serial data system. The hazard warning switch is an integral part of the infotainment fascia, when the hazard warning switch is pressed, the infotainment unit communicates with the BCM via the GMLAN serial data system to activate the hazard warning lamps, the hazard warning switch is NOT connected directly to the turn signal/hazard lamp circuit. When activated all turn signal lamps will flash including both IPC turn indicators.

Stop Lamps

When the driver presses the brake pedal, the a variable voltage signal from the brake pedal position sensor (BPPS) is supplied to the BCM. The BCM then supplies voltage to stop lamp supply voltage circuit applying power to the stop lamps and center high mount stop lamp (CHMSL). The BCM also supplies voltage to the transmission control module (TCM), and powertrain control module (ECM) through a dedicated circuit.

Backup Lamps

The backup lamp request signal is sent from the ECM to the BCM on the GMLAN serial data system. This signal is based on the park neutral position (PNP) switch signal. The BCM supplies voltage to the backup relay and to the automatic day/night mirror when the vehicle is in reverse. The backup relay supplies a voltage on the backup lamp supply voltage circuit to the backup lamps.

Police Package Special Equipment Lighting Options

Important: GM cannot be held responsible for any changes made to the vehicle. All electrical and body modifications must be preformed by experience and qualified technicians.

- Be sure that any modified or added wiring will not impact the function of the vehicles factory wiring system.
- See that all wiring is correctly protected by fuses, and not causing a overload to connectors and components.
- Do not route wiring in areas of the vehicle where temperatures can be high or where wiring may be cut, pinched or rubbed.
- See that all wiring is of the same or smaller gauge to that of the wire it is being attached to for correct fuse protection.
- Be sure that all holes drilled in the body are correctly sealed and corrosion protected. See that the vehicles wiring harnesses, piping, and other components have not been displaced or damaged during customer installation of equipment and wiring.
- See that the vehicles wiring harnesses, piping, and other components have not been displaced or damaged during customer installation of equipment and wiring.

Electrical Connections

Overloading the vehicles electrical system may damage the vehicles accessories. Do not overload the vehicles system by having unnecessary accessories at the same time.

Exterior Lamp Flashing System

The rear flasher function is only available in police vehicles and activated by a latch switch to ground. It provides alternating flashing of the rear lamps (and side markers) out-of-phase with the reverse lamps. The flash rate of 2.4 flashes/sec, 50% duty cycle, is much faster than the normal exterior lighting turn signal rate. Normal operation of turn indicators, hazard switch, reverse gear and foot brake override this function when they are active.

Surveillance Mode (Surv Mode)

The Surveillance mode function is designed for police vehicles only, and provides a way to disable all automated lighting and sounds while the dedicated Surveillance mode switch input to the BCM is in the On (grounded) state. The Surveillance mode function is switched On and Off by an alternate press of the Surveillance button, which is the rectangular monetary push-button on the overhead console. The overhead console contains electronic switches which toggles the state of the output to the BCM between ON and Off. The default state of the battery is Surveillance mode On. When Surveillance mode is On:

- Parkers and Headlamps do not work when the headlamp switch is in the "Auto" position.
- All lamps on the inadvertent power feed will be turned off.
- Maps lights will still function, as they have a separate battery feed in police vehicles only.
- The courtesy lights will not illuminate when a door is opened or a remote key is used.
- Turn signal flashes or horn chirps will not operate when a remote key is used.
- Chimes are suppressed.
- All internal backlighting is switched Off.
- Cluster backlighting is set to minimum.

Important: At the request of the police, the BCM functionality can be changed at a future point. The external lighting (Headlamps and Parkers) will no longer be switched off by surveillance mode. The anticipated introduction date at the Holden Assembly is approximately December 2007.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Description and Operation | Document ID: 1987031

Exterior Lighting Systems Description and Operation (SWB)

Exterior Lamps

The exterior lighting system consists of the following lamps:

- The headlamps
- The front fog lamps
- The rear fog lamp (export only)
- The park, tail and marker lamps
- The exterior courtesy lamps
- The turn signal/hazard lamps
- The side repeater lamps (export only)
- The stop lamps
- The backup lamps
- The cargo lamps
- The clearance lamps

Headlamps

The headlamps may be turned ON in 2 different ways. First, when the driver places the headlamp switch in the HEADLAMP position, for normal operation. Second, with the headlamp switch placed in the AUTO position, for automatic lamp control (ALC).

Headlamp ON/OFF control is determined by the body control module (BCM) by a signal on the headlamp switch on input circuit when the headlamp switch is in the HEAD position. When the headlamp switch is in the AUTO position, the BCM determines headlamps ON/OFF by the voltage from the ambient light sensor.

If the headlight switch is left in the ON position, the inadvertent power control feature will turn OFF the headlights approximately 10 seconds after the ignition switch is turned to the OFF position. If the driver places the headlight switch in the ON position after the ignition switch has been turned OFF, or if the ignition switch is in the ACCY position, the headlights will remain ON until turned OFF or the battery runs flat.

The high beam indicator is illuminated when the instrument cluster receives a GMLAN serial data message from the BCM that the high beams are illuminated.

High Beams

The high beam headlamps receive voltage from the headlamp high relay located in the underhood fuse block. The BCM controls the relay on the headlamp high beam relay control circuit. High beam control is determined by a signal on the headlamp dimmer switch high beam signal circuit from the turn signal multifunction switch. When the headlamp dimmer switch signal circuit is grounded, the BCM grounds the headlamp high beam relay control circuit, illuminating the high beam headlamps.

The right and left high beam circuits are independent and are fused independently in the underhood fuse block.

Low Beams - Standard

The low beam headlamps receive voltage from the headlamp low beam relay located in the underhood fuse block. The BCM controls the relay on the headlamp low beam relay control circuit. Low beam control is activated when the headlamp switch is placed in the headlamp ON position grounding the headlamp switch headlamps on signal circuit to the BCM. The right and left low beam circuits are independent are fused independently in the underhood fuse block.

Fog Lamps

With both the ignition switch in the RUN position, and the park lamps ON, the fog lights will illuminate when the driver depresses the fog lamp switch. The BCM receives the park lamp ON signal from the interior park lamps supply voltage signal circuit. With the headlamp switch in either the park or headlamp position, and the fog lamp switch is in the ON position, the BCM will ground the fog lamp relay control circuit causing the relay to energise. The current flows from the fog lamp relay to both front fog lamps. The state of the fog lamps will remain the same until the fog lamp switch position is changed, or the ignition switch is cycled OFF and ON. Fog lamp operation will be cancelled whenever the park lamps are turned OFF or the high beam headlights have been selected.

Park, Tail and Marker Lamps

The park, tail and marker lamps, including the license lamps, are turned ON when the headlamp switch is placed in the PARK or HEAD position or anytime the headlights are requested. The underhood fuse block supplies battery positive voltage to both the park lamp relay switch contacts and the park lamp coil circuit. The BCM provides a ground or control circuit to the park lamp relay coil circuit. When the park lamps are turned ON, the BCM energises the park lamp relay. If the headlight switch is left in the ON position, the inadvertent power control feature will turn OFF the park, tail and marker lamps approximately 10 seconds after the ignition switch is turned to the OFF position. If the driver places the headlight switch in the ON position after the ignition switch has been turned OFF, or if the ignition switch is in the ACCY position, the park, tail and marker lamps will remain ON until turned OFF or the battery runs flat.

Exterior Courtesy Lamps

The BCM, driver door switch, and the passenger door switch communicate through the GMLAN serial data system. The driver door switch and passenger door switch supply power and ground to the left and right exterior lamps respectively. When the BCM commands illuminated entry, a command is also sent to the door switches for illumination of the exterior courtesy lamps. If the door locks are activated to the LOCK position, or if the ignition switch is turned to either the ON or RUN position the exterior courtesy lamps will deactivate immediately.

Turn Signal / Hazard Lamps

When the turn signal multifunction switch is placed in either the left or right position, a ground signal is completed from the turn signal switch to the BCM. The BCM then sends an ON-OFF voltage signal through the fuses to the appropriate turn signal and side repeater lamps or to all of the turn signal fuses for hazard operation. An audio chime is also activated when the turn signals are ON. The instrument panel cluster (IPC) receives the signals to activate the turn signal indicators over the GMLAN serial data system. The hazard warning switch is an integral part of the infotainment fascia, when the hazard warning switch is pressed, the infotainment unit communicates with the BCM via the GMLAN serial data system to activate the hazard warning lamps, the hazard warning switch is NOT connected directly to the turn signal/hazard lamp circuit. When activated all turn signal lamps will flash including both IPC turn indicators.

Stop Lamps

When the driver presses the brake pedal, the a variable voltage signal from the brake pedal position sensor (BPPS) is supplied to the BCM. The BCM then supplies voltage to stop lamp supply voltage circuit applying power to the stop lamps and center high mount stop lamp (CHMSL). The BCM also supplies voltage to the transmission control module (TCM), and powertrain control module (ECM) through a dedicated circuit.

Backup Lamps

The backup lamp request signal is sent from the ECM to the BCM on the GMLAN serial data system. This signal is based on the park neutral position (PNP) switch signal. The BCM supplies voltage to the backup relay and to the automatic day/night mirror when the vehicle is in reverse. The backup relay supplies a voltage on the backup lamp supply voltage circuit to the backup lamps.

Cargo Lamps

The cargo lamp is controlled by the dome lamp control circuit. There is not a separate switch to turn the cargo lamps ON and OFF.

Clearance Lamps

The clearance lamps, are turned ON when the headlamp switch is placed in the PARK or HEAD position or anytime the headlamps are requested. The underhood fuse block supplies battery positive voltage to both the park lamp relay switch contacts and the park lamp coil circuit. The BCM provides a ground or control circuit to the park lamps relay coil circuit. When the park lamps are turned ON, the BCM energises the park lamp relay. If the headlamp switch is left in the ON position, the inadvertent power control feature will turn OFF the park, tail and clearance lamps approximately 10 minutes after the ignition switch is turned to the OFF position. If the driver places the headlamp switch in the ON position after the ignition switch has been turned OFF, or if the ignition switch is in the ACCY position, the park, tail and marker lamps will remain ON until turned OFF or the battery runs dead.

Police Package Special Equipment Lighting Options

Important: GM cannot be held responsible for any changes made to the vehicle. All electrical and body modifications must be preformed by experience and qualified technicians.

- Be sure that any modified or added wiring will not impact the function of the vehicles factory wiring system.
- See that all wiring is correctly protected by fuses, and not causing a overload to connectors and components.
- Do not route wiring in areas of the vehicle where temperatures can be high or where wiring may be cut, pinched or rubbed.
- See that all wiring is of the same or smaller gauge to that of the wire it is being attached to for correct fuse protection.

- Be sure that all holes drilled in the body are correctly sealed and corrosion protected. See that the vehicles wiring harnesses, piping, and other components have not been displaced or damaged during customer installation of equipment and wiring.
- See that the vehicles wiring harnesses, piping, and other components have not been displaced or damaged during customer installation of equipment and wiring.

Electrical Connections

Overloading the vehicles electrical system may damage the vehicles accessories. Do not overload the vehicles system by having unnecessary accessories at the same time.

Exterior Lamp Flashing System

The rear flasher function is only available in police vehicles and activated by a latch switch to ground. It provides alternating flashing of the rear lamps (and side markers) out-of-phase with the reverse lamps. The flash rate of 2.4 flashes/sec, 50% duty cycle, is much faster than the normal exterior lighting turn signal rate. Normal operation of turn indicators, hazard switch, reverse gear and foot brake override this function when they are active.

Surveillance Mode (Surv Mode)

The Surveillance mode function is designed for police vehicles only, and provides a way to disable all automated lighting and sounds while the dedicated Surveillance mode switch input to the BCM is in the On (grounded) state. The Surveillance mode function is switched On and Off by an alternate press of the Surveillance button, which is the rectangular monetary push-button on the overhead console. The overhead console contains electronic switches which toggles the state of the output to the BCM between ON and Off. The default state of the battery is Surveillance mode On. When Surveillance mode is On:

- Parkers and Headlamps do not work when the headlamp switch is in the "Auto" position.
- All lamps on the inadvertent power feed will be turned off.
- Maps lights will still function, as they have a separate battery feed in police vehicles only.
- The courtesy lights will not illuminate when a door is opened or a remote key is used.
- Turn signal flashes or horn chirps will not operate when a remote key is used.
- Chimes are suppressed.
- All internal backlighting is switched Off.
- Cluster backlighting is set to minimum.

Important: At the request of the police, the BCM functionality can be changed at a future point. The external lighting (Headlamps and Parkers) will no longer be switched off by surveillance mode. The anticipated introduction date at the Holden Assembly is approximately December 2007.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Lighting | Description and Operation | Document ID: 2067556

Interior Lighting Systems Description and Operation (Sedan)

Interior Lamps

The interior lighting consists of 2 groups. The first group includes lamps that may not be dimmed.

- Courtesy/illuminated entry lamps
- Dome lamps
- Map lamps
- Reading lamps
- Vanity mirror lamps

Courtesy / Illuminated Entry Lamps

The courtesy/illuminated entry lamps, may be manually turned ON or OFF by placing the interior lamp switch in the ON or OFF position. If an outside door handle is lifted and a door is opened, the courtesy/illuminated entry lamps illuminate. After all the doors have been closed the courtesy/illuminated entry lamps will remain illuminated approximately 15 seconds. The body control module (BCM) will then turn them OFF through the theater dimming feature. The courtesy/illuminated entry lamps will also turn ON prior to any door being opened, and remain illuminated approximately 40 seconds when the driver removes the ignition key. When the driver places the dome lamp defeat switch in the OFF position, the courtesy/illuminated entry lamps will be disabled.

The BCM, the door switches communicate through the GMLAN serial data circuit for the lamp illumination commands of the doors and luggage compartment open/ajar switch signals. For all vehicles, the left and right rear door latch switches are both on one circuit that is also an input to the BCM.

The left and right front door courtesy lamps receive voltage and ground from the driver door switch and the passenger door switch respectively. The remaining courtesy lamps are controlled and receive voltage from the BCM. Voltage for the courtesy lamp supply voltage circuit is from the INT LTS fuse in the instrument panel fuse block.

Keyless Entry Interior Illumination

When the driver uses the door key in order to unlock the doors, the body control module (BCM) receives a door unlock signal. The BCM must have inputs or serial data messages that indicate that the ignition switch is OFF, the courtesy lamp switch is OFF and all the doors are closed. The BCM will then activate the interior lamps. The courtesy lamps will remain ON, approximately 15 seconds after the door is closed. The BCM will then turn them OFF through the theater dimming feature. If the door locks are activated to the LOCK position, or if the ignition switch is turned to either the RUN or CRANK position the courtesy lamps will turn OFF immediately.

When the driver uses the remote function actuator transmitter to unlock the doors, trunk or presses the panic button, the BCM will keep the courtesy lamps ON approximately 40 seconds. When the driver uses the remote function actuator transmitter to lock the doors, the BCM will keep the courtesy lamps on approximately 2 seconds. If the ignition switch is turned to either the RUN or CRANK position the courtesy lamps will turn OFF immediately.

Vanity Lamps

The inadvertent power supply voltage circuit of the body control module (BCM) provides battery positive voltage to each vanity mirror lamp. When the vanity mirror cover on the sunshade is opened, a switch closes to provide a ground circuit and the vanity lamp illuminates.

Reading Lamps

The inadvertent power supply voltage circuit of the body control module (BCM) provides battery positive voltage to the reading lamps. The reading lamps and switch are integral to the courtesy/reading lamp assembly. When the switch is closed, voltage is supplied and the lamp illuminates.

Battery Rundown Protection / Inadvertent Power

The body control module (BCM) inadvertent power supply voltage circuit provides battery positive voltage to all of the interior reading lamps, visor vanity mirror lamps, and cargo lamps if equipped. In the event that any of these lamps were to remain illuminated for a period of more than 10 seconds with the ignition switch in the OFF position, the BCM will deactivate the inadvertent power supply voltage circuit to prevent a total battery discharge condition.

Interior Lamps Dimming

The second interior lighting group includes lamps which may be dimmed. This group may use a combination of vacuum fluorescent (VF) illumination, LED illumination and incandescent lamps.

When the ignition switch is turned to the RUN position, the radio VF display turns ON at maximum brightness. When the park lamps are ON, all incandescent and LED back lighting turn ON at the dimming level indicated by the instrument panel (I/P) dimmer switch. At the same time all VF displays dim to match the indicated dimming level. The panel dimmer switch potentiometer is an input to the body control module (BCM). When the driver selects a dimming setting by moving the I/P dimming switch potentiometer, all incandescent back lighting lamps are provided with a specific voltage. When the I/P dimmer switch is moved from MIN to MAX, all VF displays, as well as all incandescent back lighting respond from minimum intensity to maximum brightness in response to the I/P dimmer switch.

The following switches and components have back lighting when the park lamps are ON:

- The instrument panel cluster (IPC)
- Window and heated seat switches
- Rear HVAC switches
- Sunroof switch
- Accessory switches
- Fog lamp switches
- Rear parking assist (RPA) disable switches
- PRNDL lamps

- Traction control switch
- Steering wheel control switches

The left and right front door switch illumination is controlled, receives voltage and ground from the driver door switch and passenger switch respectively. The radio is also a GMLAN module and has full control of its illumination. The BCM, door switches, and radio communicate through GMLAN serial data for the lamp illumination commands.

The various switches, HVAC control assembly, and the PRNDL lamps receive voltage and are controlled by the BCM on the I/P lamps dimming control circuit.

The following indicators receive voltage from the BCM and are controlled by ground from a switch or from various modules:

- Tow indicator
- Radio
- HVAC control assembly
- Instrument panel cluster (IPC)
- Driver information center (DIC)
- Headlamp and panel dimmer switch

The indicators receive voltage from the BCM on the LED dimming circuit. Control for the indicators is from the various modules or switches. Voltage for the LED dimming supply circuit, instrument panel lamps dimming control circuit and the instrument panel lamps dimming supply circuit is from the BCM.

Interior Lighting Systems Description and Operation (Sportwagon)

Interior Lamps

The interior lighting consists of 2 groups. The first group includes lamps that may not be dimmed.

- Courtesy/illuminated entry lamps
- Dome lamps
- Map lamps
- Reading lamps
- Vanity mirror lamps

Courtesy / Illuminated Entry Lamps

The courtesy/illuminated entry lamps, may be manually turned ON or OFF by placing the interior lamp switch in the ON or OFF position. If an outside door handle is lifted and a door is opened, the courtesy/illuminated entry lamps illuminate. After all the doors have been closed the courtesy/illuminated entry lamps will remain illuminated approximately 15 seconds. The BCM must have inputs or serial data messages that indicate that the ignition switch is OFF, the courtesy lamp switch is OFF and all the doors are closed. The BCM will then activate the interior lamps. The courtesy lamps will remain ON, approximately 15 seconds after the door is closed. The BCM will then turn them OFF through the theater dimming feature. If the door locks are activated to the LOCK position, or if the ignition switch is turned to either the RUN or CRANK position the courtesy lamps will turn OFF immediately.

When the driver uses the remote function actuator transmitter to unlock the doors, trunk or presses the panic button, the BCM will keep the courtesy lamps ON approximately 40 seconds. When the driver uses the remote function actuator transmitter to lock the doors, the BCM will keep the courtesy lamps on approximately 2 seconds. If the ignition switch is turned to either the RUN or CRANK position the courtesy lamps will turn OFF immediately.

Vanity Lamps

The inadvertent power supply voltage circuit of the body control module (BCM) provides battery positive voltage to each vanity mirror lamp. When the vanity mirror cover on the sunshade is opened, a switch closes to provide a ground circuit and the vanity lamp illuminates.

Reading Lamps

The inadvertent power supply voltage circuit of the body control module (BCM) provides battery positive voltage to the reading lamps. The reading lamps and switch are integral to the courtesy/reading lamp assembly. When the switch is closed, voltage is supplied and the lamp illuminates.

Battery Rundown Protection / Inadvertent Power

The body control module (BCM) inadvertent power supply voltage circuit provides battery positive voltage to all of the interior reading lamps, visor vanity mirror lamps, and cargo lamps if equipped. In the event that any of these lamps were to remain illuminated for a period of more than 10 seconds with the ignition switch in the OFF position, the BCM will deactivate the inadvertent power supply voltage circuit to prevent a total battery discharge condition.

Interior Lamps Dimming

The second interior lighting group includes lamps which may be dimmed. This group may use a combination of vacuum fluorescent (VF) illumination, LED illumination and incandescent lamps.

When the ignition switch is turned to the RUN position, the radio VF display turns ON at maximum brightness. When the park lamps are ON, all incandescent and LED back lighting turn ON at the dimming level indicated by the instrument panel (I/P) dimmer switch. At the same time all VF displays dim to match the indicated dimming level. The panel dimmer switch potentiometer is an input to the body control module (BCM). When the driver selects a dimming setting by moving the I/P dimming switch potentiometer, all incandescent back lighting lamps are provided with a specific voltage. When the I/P dimmer switch is moved from MIN to MAX, all VF displays, as well as all incandescent back lighting respond from minimum intensity to maximum brightness in response to the I/P dimmer switch.

The following switches and components have back lighting when the park lamps are ON:

- The instrument panel cluster (IPC)
- Window and heated seat switches
- Rear HVAC switches
- Sunroof switch
- Accessory switches
- Fog lamp switches
- Rear parking assist (RPA) disable switches
- PRNDL lamps
- Traction control switch

- Steering wheel control switches

The left and right front door switch illumination is controlled, receives voltage and ground from the driver door switch and passenger switch respectively. The radio is also a GMLAN module and has full control of its illumination. The BCM, door switches, and radio communicate through GMLAN serial data for the lamp illumination commands.

The various switches, HVAC control assembly, and the PRNDL lamps receive voltage and are controlled by the BCM on the I/P lamps dimming control circuit.

The following indicators receive voltage from the BCM and are controlled by ground from a switch or from various modules:

- Tow indicator
- Radio
- HVAC control assembly
- Instrument panel cluster (IPC)
- Driver information center (DIC)
- Headlamp and panel dimmer switch

The indicators receive voltage from the BCM on the LED dimming circuit. Control for the indicators is from the various modules or switches. Voltage for the LED dimming supply circuit, instrument panel lamps dimming control circuit and the instrument panel lamps dimming supply circuit is from the BCM.

Symptoms - Stationary Windows

1. Perform the Diagnostic System Check - Vehicle , before using the symptom tables in order to verify that all of the following are true:
   - There are no DTCs set.
   - The control modules can communicate via the serial data link.
2. Review the inside rearview mirror system operation in order to familiarize yourself with the system functions. Refer to Inside Rearview Mirror Description and Operation .

Visual/Physical Inspection

- Inspect for aftermarket devices which could affect the operation of the automatic day-night feature or the telematics feature of the inside rearview mirror. Refer to Checking Aftermarket Accessories .
- Inspect the easily accessible or visible system components for obvious damage or conditions which could cause the symptom.

Intermittent

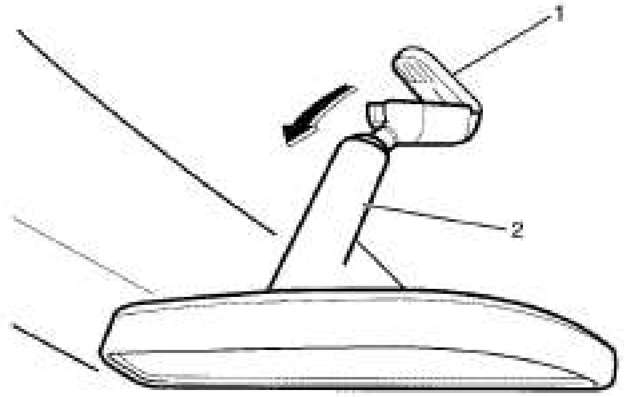
Faulty electrical connections or wiring may be the cause of intermittent conditions. Refer to Testing for Intermittent Conditions and Poor Connections .

Symptom List

Refer to the Automatic Day-Night Mirrors Inoperative symptom diagnostic procedure from in order to diagnose the symptom.

Inside Rearview Mirror Replacement

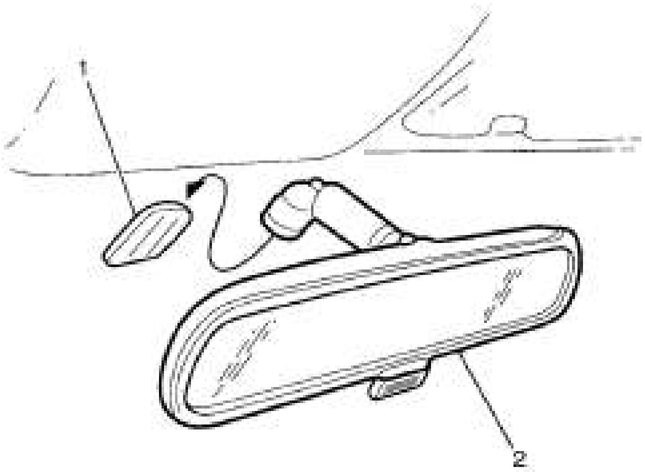
Removal Procedure - Manual Day/Night Adjustment



Important: The rearview mirror boss (1) is not serviced separately and is part of the windshield assembly.

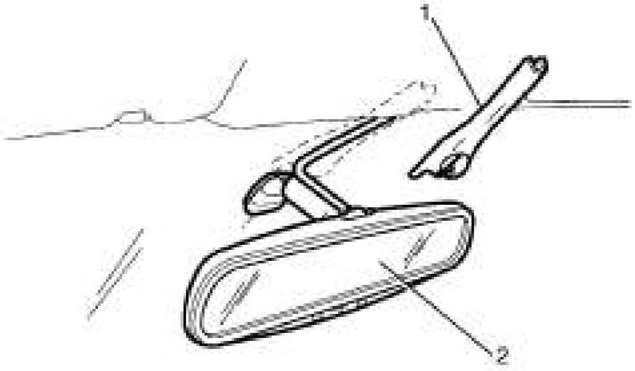
1. Detach the rearview mirror (2) from the windshield mirror boss (1) by firmly pulling downward.
2. Detach the rearview mirror (2) from the windshield mirror boss (1).

Installation Procedure - Manual Day/Night Adjustment



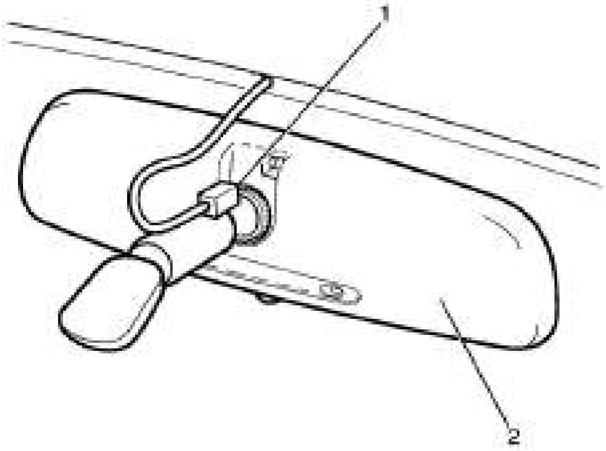
1. Slide the rearview mirror (2) downwards on the rearview mirror boss (1) until an audible click noise is heard.
2. Install the rearview mirror (2) to the rearview mirror boss (1).

Removal Procedure - Electro-chromatic

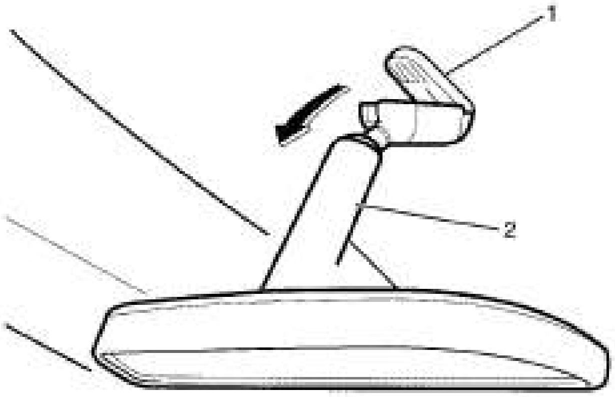


Important: Remove the rearview mirror wiring harness cover (1) by sliding it upwards and outwards.

1. Remove the rearview mirror wiring harness cover (1) from the rearview mirror (2).



2. Disconnect the rearview mirror electrical connector (1) from the rearview mirror (2).

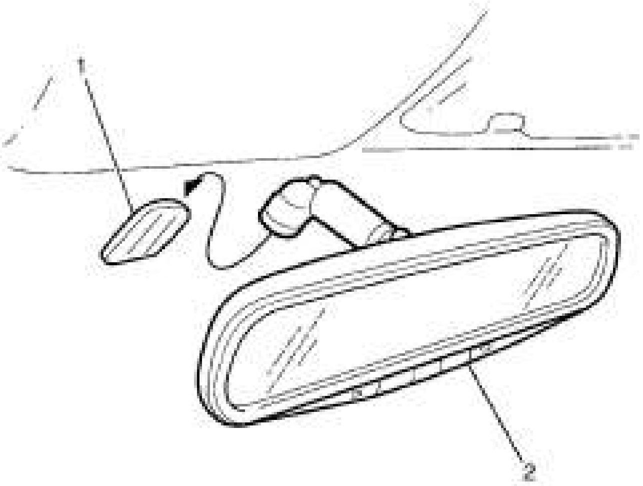


Important: Detach the rearview mirror (2) from the rearview mirror boss (1) by firmly pulling downward.

Important: The rearview mirror boss (1) is not serviced separately and is part of the windshield assembly.

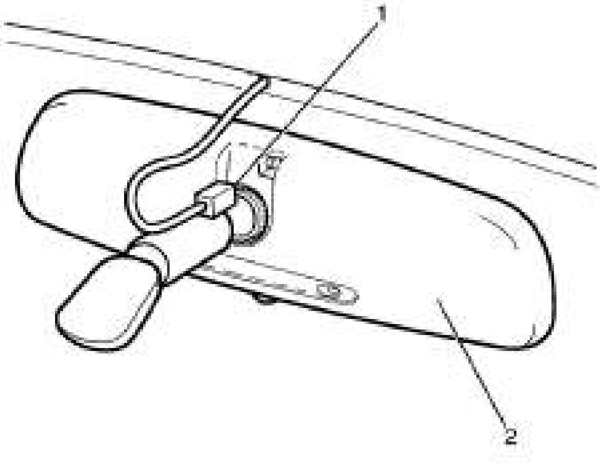
3. Detach the rearview mirror (2) from the windshield mirror boss (1).
4. Remove the rearview mirror (2) from the vehicle.

Installation Procedure - Electro-chromatic

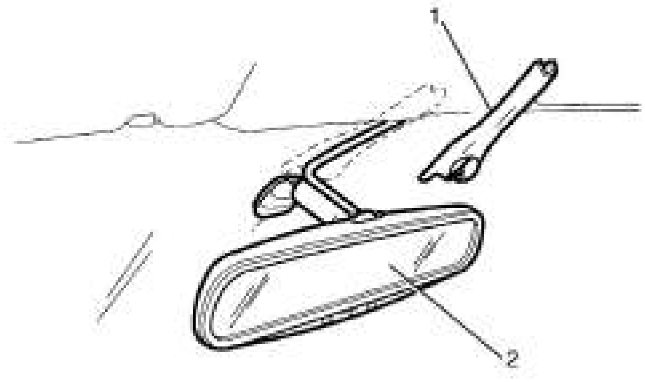


Important: Slide the rearview mirror (2) downwards on the rearview mirror boss (1) until an audible click noise is heard.

1. Install the rearview mirror (2) to the rearview mirror boss (1).



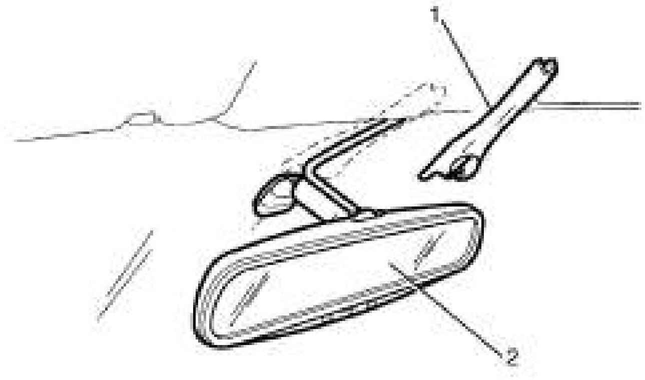
2. Connect the rearview mirror electrical connector (1) to the rearview mirror (2).



Important: Install the rearview mirror cover (1) by sliding it inwards and downwards.

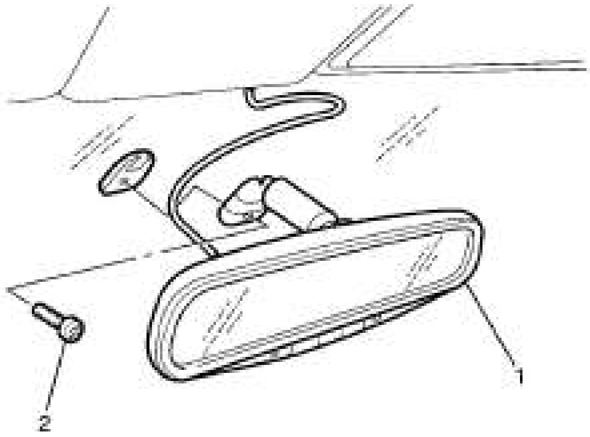
3. Install the rearview mirror wiring harness cover (1) to the rearview mirror (2).

Removal Procedure - Telematic



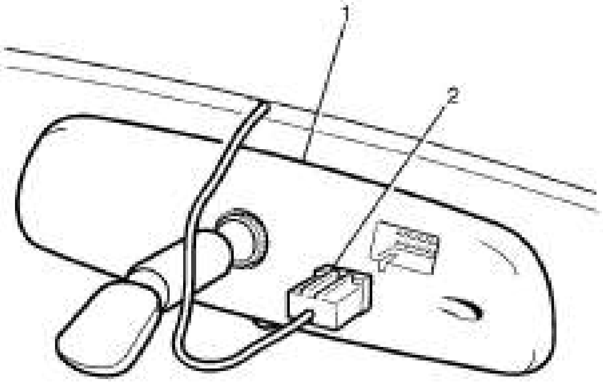
Important: Remove the rearview mirror wiring harness cover (1) by sliding it upwards and outwards.

1. Remove the rearview mirror wiring harness cover (1) from the rearview mirror (2).

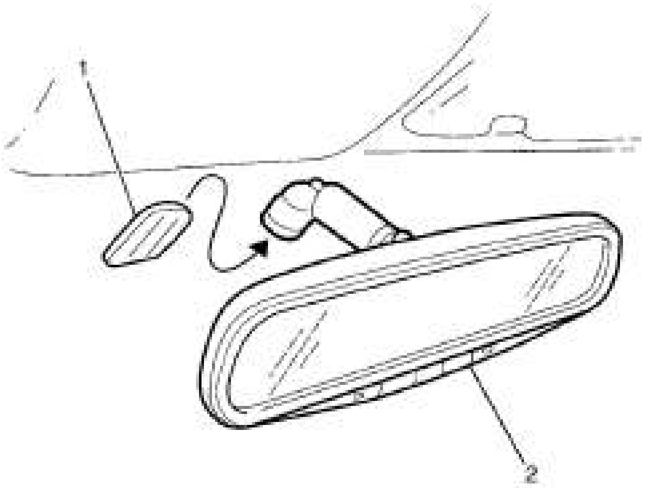


Important: The rearview mirror boss is not serviced separately and is part of the windshield assembly.

2. Remove the rearview mirror retaining screw (2) from the rearview mirror (1).



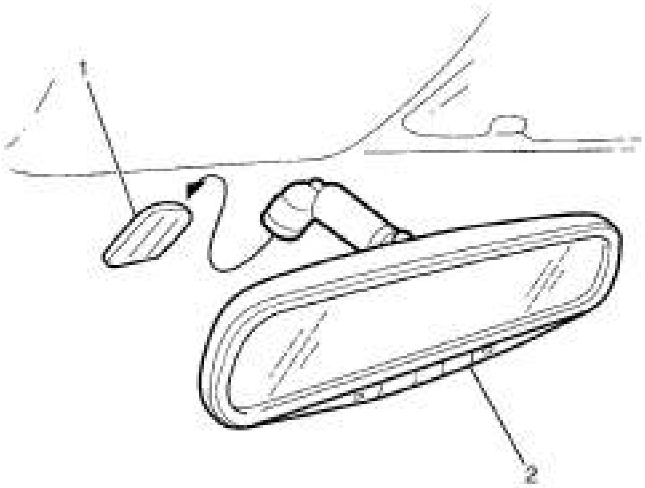
3. Disconnect the rearview mirror electrical connector (2) from the rearview mirror (1).



Important: Remove the rearview mirror (2) by sliding it upwards.

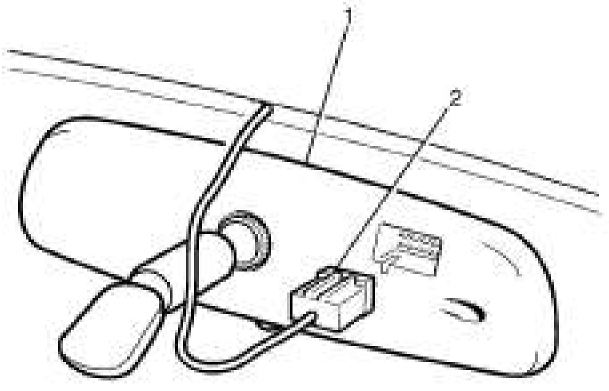
4. Remove the rearview mirror (2) from the rearview mirror boss (1).

Installation Procedure - Telematic



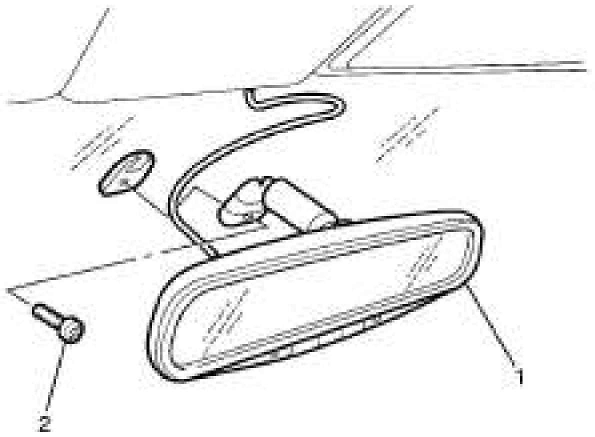
Important: Slide the rearview mirror (2) downwards on the rearview mirror boss (1).

1. Install the rearview mirror (2) to the rearview mirror boss (1).



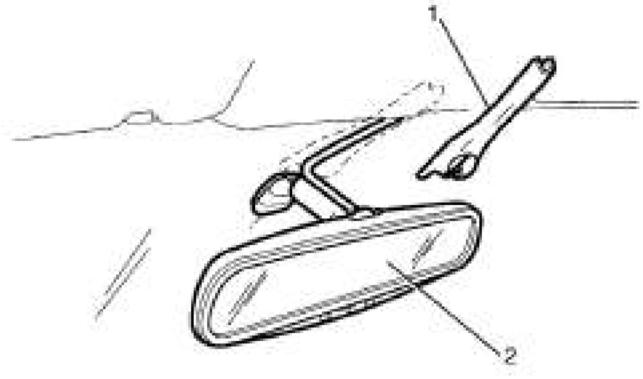
2. Connect the rearview mirror electrical connector (2) to the rearview mirror (1).

   Notice: Refer to Fastener Notice in the Preface section.



3. Install the rearview mirror retaining screw (2) to the rearview mirror (1).

   Tighten
   Tighten the screw to 4 N-m (35 lb in).



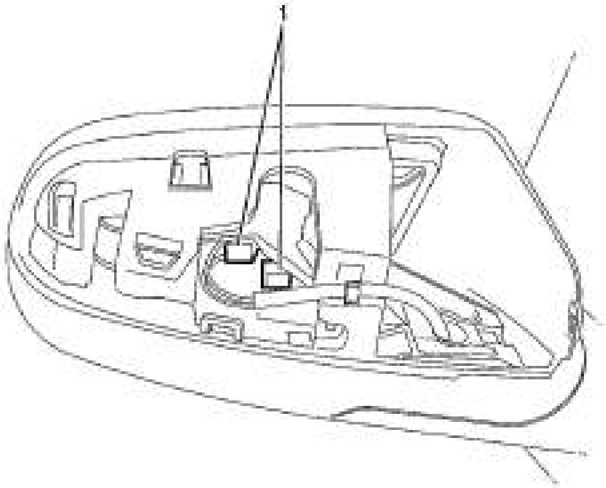
Important: Install the rearview mirror cover (1) by sliding it inwards and downwards.

4. Install the rearview mirror wiring harness cover (1) to the rearview mirror (2).

Outside Rearview Mirror Glass Replacement

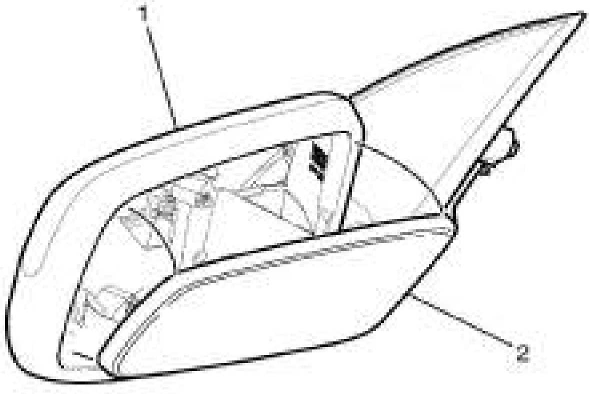
Removal Procedure

1. Remove the mirror cover. Refer to Outside Rearview Mirror Opening Cover Replacement.



2. Disconnect the mirror electrical connectors (1).

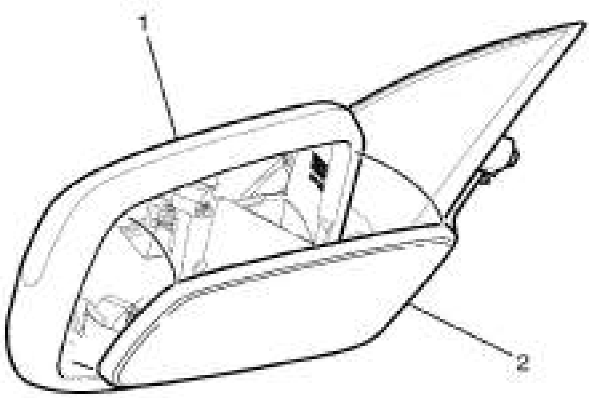
Caution: When working with any type of glass or sheet metal with exposed or rough edges, wear approved safety glasses and gloves in order to reduce the chance of personal injury.



Important: Push the mirror face (1) inward at the bottom of the face until full travel is reached. Pull the mirror face (1) from the top to release the mirror face retaining clips.

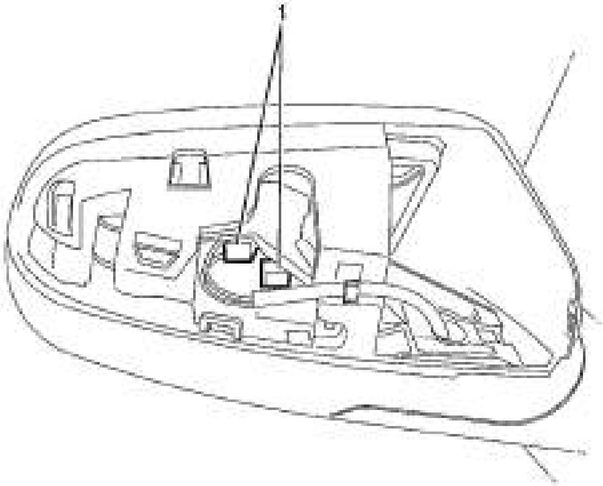
3. Remove the mirror face (1) from the mirror (2).

Installation Procedure



Important: Push the mirror face (2) into the mirror (1) until an audible click is heard.

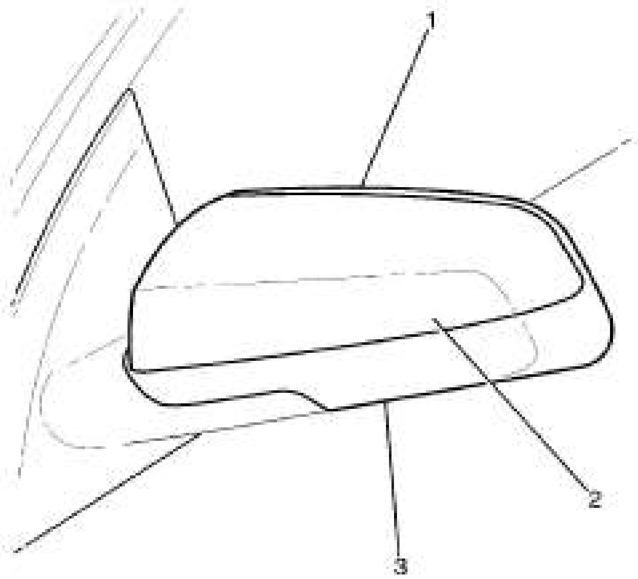
1. Install the mirror face (1) to the outside rearview mirror (2).



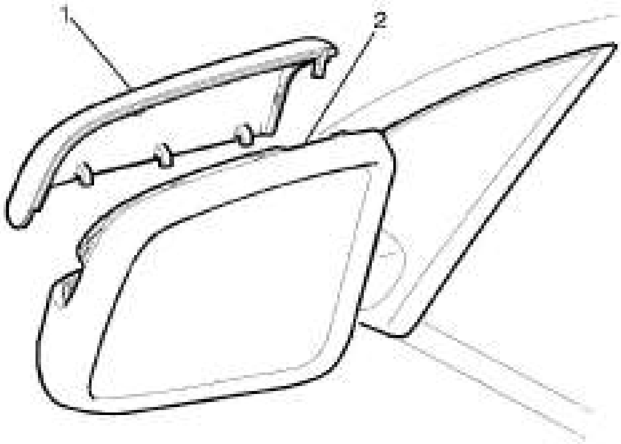
2. Connect the electrical connectors (1).
3. Install the mirror cover. Refer to Outside Rearview Mirror Opening Cover Replacement.
4. Inspect the mirror for correct operation.

Outside Rearview Mirror Opening Cover Replacement

Removal Procedure

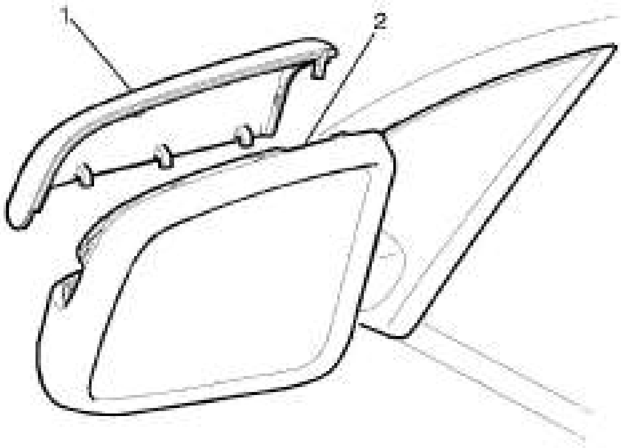


1. Firmly grasp mirror cover at (2, 1) and lift upwards then outwards from the mirror (3) to release the retainers.



2. Remove the mirror cover (1) from the mirror (2).

Installation Procedure

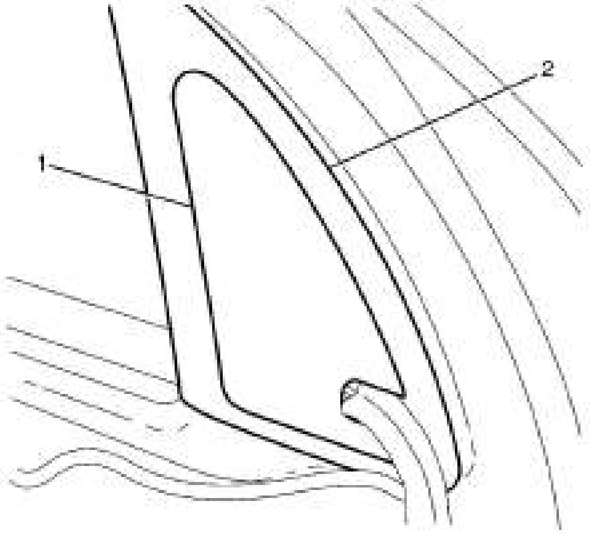


1. Push the mirror cover (1) at the top first then the lower side inwards to attach it to the mirror (2).
2. Install the mirror cover (1) to the mirror (2).

Power Mirror Replacement

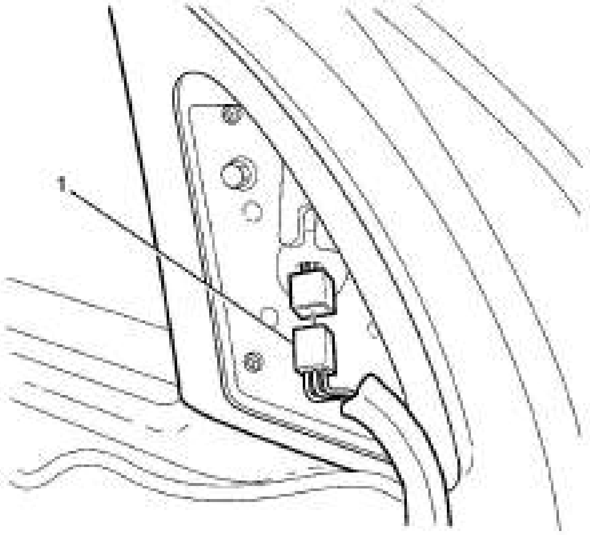
Removal Procedure

1. Remove the door trim panel. Refer to Front Side Door Trim Panel Replacement.
2. Remove the upper auxiliary weatherstrip. Refer to Front Side Door Upper Auxiliary Weatherstrip Replacement.

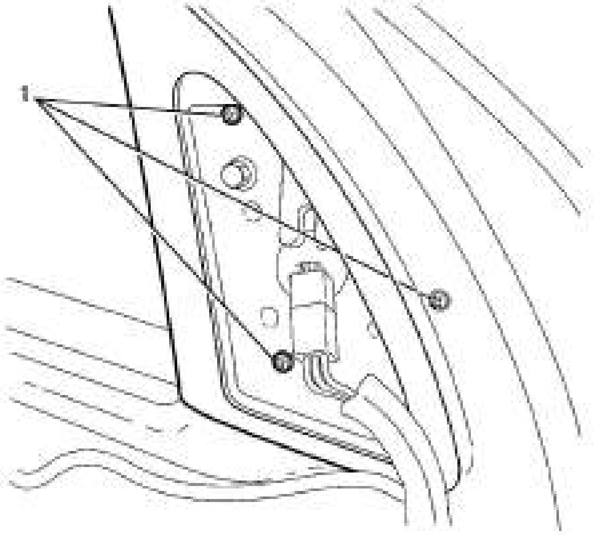


Important: Use a suitable tool to pry open inner panel (1).

3. Remove the inner panel (1) from the door (2).



4. Disconnect the mirror to door harness electrical connector (1).



Important: Position aside upper auxiliary weatherstrip to locate the front mirror to door retaining screw.

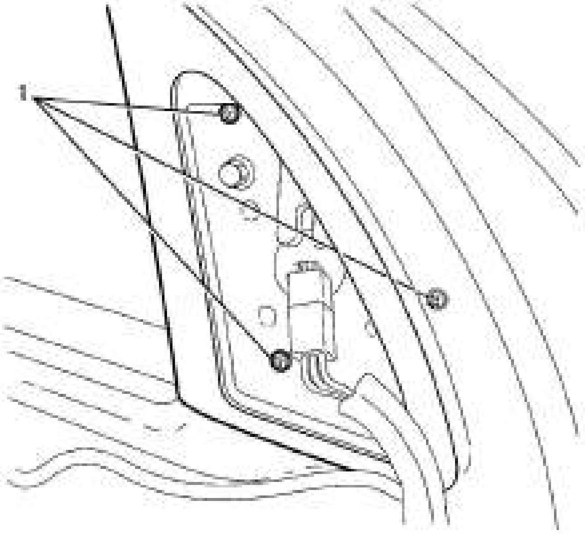
Important: Support the mirror when removing retaining screws (1).

5. Remove the mirror to door retaining screws (1).
6. Remove the mirror from the door.

Installation Procedure

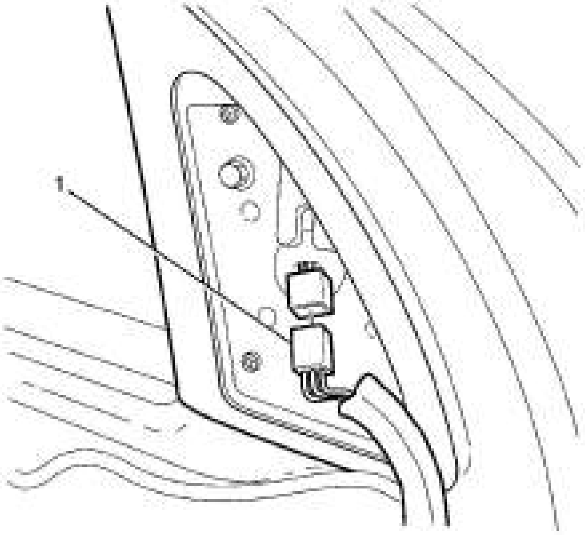
1. Position the mirror to the door.

Notice: Refer to Fastener Notice in the Preface section.

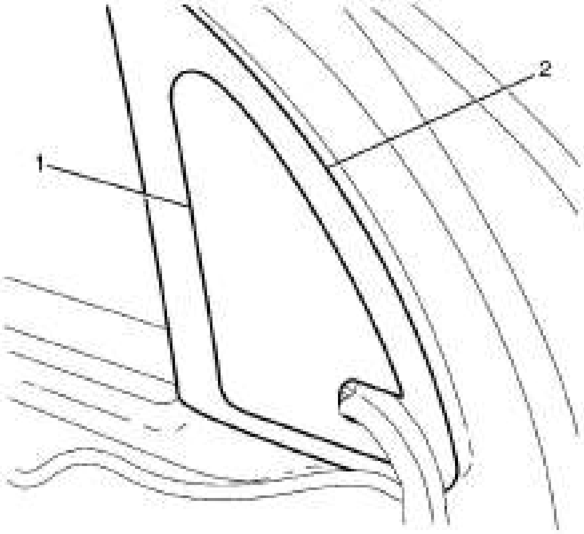


2. Install the mirror to door retaining screws (1).

   Tighten
   Tighten the screws to 3 N-m (27 lb in).



3. Connect the mirror to door harness electrical connector (1).



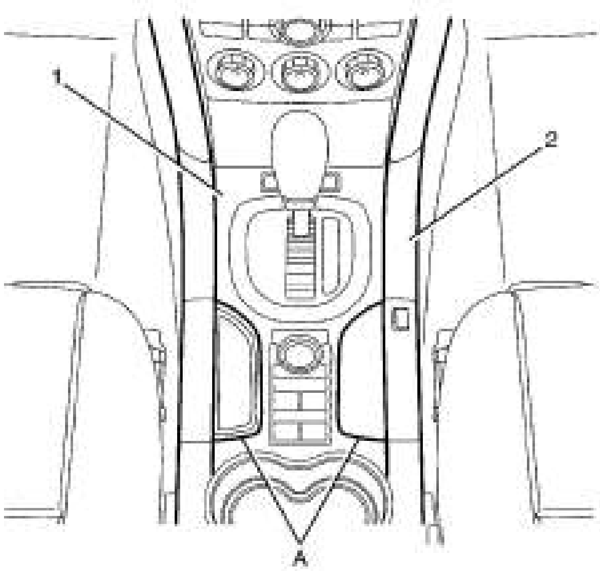
Important: Push the inner panel (1) to attach the retainers.

4. Install the inner panel (1) to the door (2).
5. Install the upper auxiliary weatherstrip. Refer to Front Side Door Upper Auxiliary Weatherstrip Replacement.
6. Install the door trim panel. Refer to Front Side Door Trim Panel Replacement.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Mirrors | Repair Instructions | Document ID: 1986609

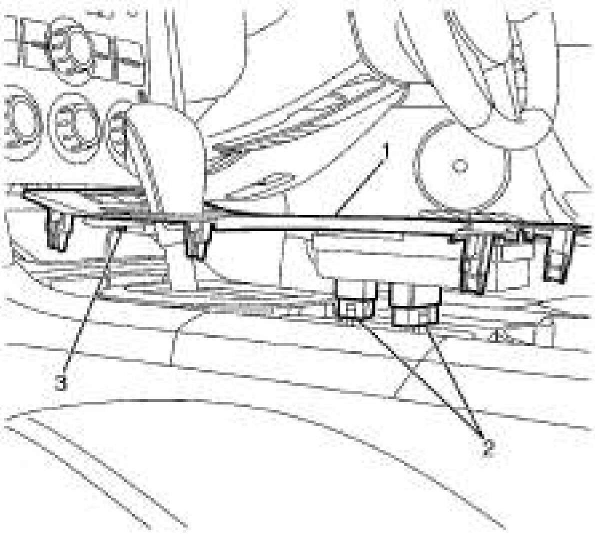
Power Mirror Switch Replacement

Removal Procedure

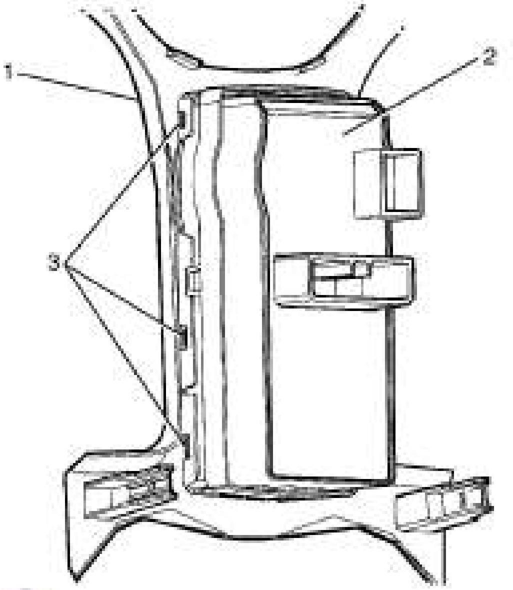


Important: The front floor console front cover (1) is retained by clips.

1. Grasp the front floor console front cover (1) at (a) and pull upwards to disengage the retaining clips from the floor console (2).



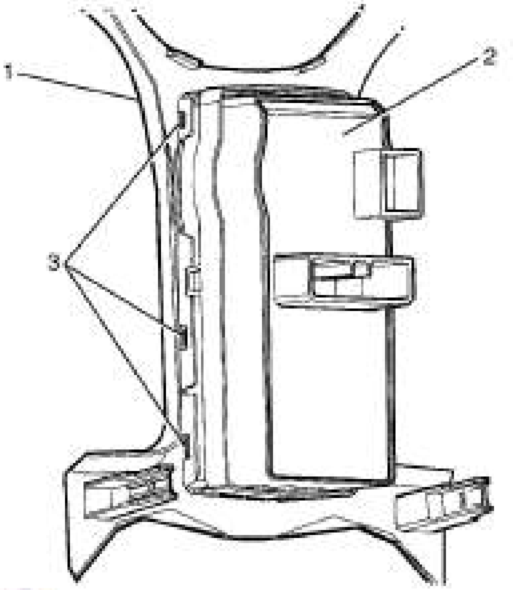
2. Disconnect the window and exterior mirror switch electrical connector (2).
3. Disconnect the Traction Control/ESP, Power and Puddle lamp switch (if fitted) assembly electrical connector (3).
4. Remove the front floor console front cover (1).



Important: Remove the power window/mirror switch (2) by releasing from the retaining clips (3) on the front floor console cover (1).

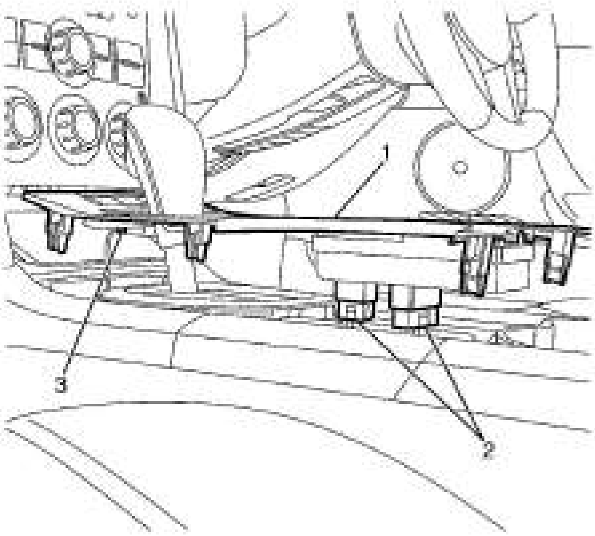
5. Remove the power window/mirror switch (2) from the front floor console front cover (1).

Installation Procedure

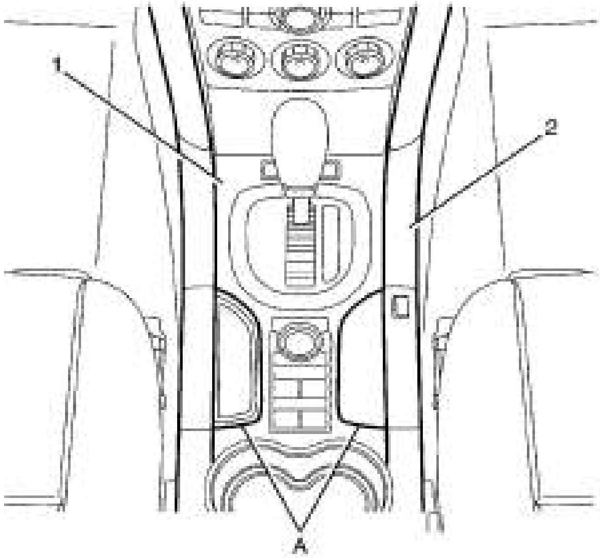


Important: Install the power window/mirror switch (2) by attaching to the retaining clips (3) on the front floor console cover (1).

1. Install the power window/mirror switch (2) to the front floor console front cover (1).



2. Position the front floor console front cover (1).
3. Connect the window and exterior mirror switch electrical connector (2).
4. Connect the Traction Control/ESP, Power and Puddle lamp switch (if fitted) assembly electrical connector (3).



Important: The front floor console front cover (1) is retained by clips.

5. Install the front floor console front cover (1) and push downwards at (a) to engage the retaining clips to the floor console (2).

Vanity Mirror Replacement

1. The vanity mirror is not a serviceable item,.
2. If the vanity mirror requires replacement it must be replaced as an assembly. Refer to Sunroof Sunshade Replacement

Inside Rearview Mirror Description and Operation (SWB)

Manual Day / Night Rearview Mirror

The manual day/night rearview mirror is mounted to a boss which is attached to the centre of the windshield. The boss is a part of the windshield assembly. To reduce the glare from vehicles following at night the lever at the base of the manual day/night rearview mirror can be pulled rearward to tilt the mirror. This enables rear vision to be maintained, but reduces glare.

Outside Mirror Description and Operation

The exterior mirrors are electrically controlled by 3 switches on the front center console. The mirrors have 3 controls, a left and right selection switch operating the required mirror and a directional toggle switch for adjusting the mirror glass position. Vehicles fitted with front seats that include a position memory function also include position memory of the exterior rearview mirrors. This provides the ability for the driver's seat and the rearview mirror positions to be stored for several different drivers and recalled at the press of the remote key or memory button on the side of the drivers seat. Also on these vehicles, when reverse gear is selected the passenger side mirror automatically dips to aid parking manoeuvres. On some vehicles the exterior rearview mirrors also incorporate a heating element within the mirror glass. When the rear window demister is operational, the mirror heating element also operates.

Diagnostic Starting Point - Vehicle Access

Begin the system diagnosis with the Diagnostic System Check - Vehicle. The Diagnostic System Check will provide the following information:

- The identification of the control modules which command the system
- The ability of the control module to communicate through the serial data circuit
- The identification of any stored DTCs and their status

The use of the Diagnostic System Check will identify the correct procedure for diagnosing the system and where the procedure is located.

DTC B2730 (Sedan)

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.
- Diagnostic Procedure Instructions provides an overview of each diagnostic category.

DTC Descriptor

DTC B2730 00: Interior Trunk/Liftglass/Hatch Release Switch Circuit

Diagnostic Fault Information

Circuit	Short to Ground	Open/High Resistance	Short to Voltage	Signal Performance
Trunk Relay B+	1	1	--	--
Trunk Release Switch Signal	B2730 00	2	2	--
Rear Compartment Lid Latch Control	1	1	1	--
Trunk Release Relay Control	B3265 00	B3265 00	B3265 00	--
Rear Compartment Lid Latch Ground	--	1	1	--
Rear Compartment Lid Release Switch Ground	--	2	2	--
1. Trunk release is inoperative from both the switch and keyless entry transmitter 2. Trunk release is inoperative only from switch				

Circuit/System Description

When the ignition is ON, the body control module (BCM) supplies a signal to the rear compartment lid release switch through the trunk release switch signal circuit. When the rear compartment lid release switch is pressed, the voltage within the signal circuit is pulled low and in response, the BCM applies ground to the trunk release relay control circuit, which energizes the coil side of the trunk relay. The switch side of the trunk relay then closes, supplying battery positive voltage through the relay and the latch motor voltage control circuit to the rear compartment lid latch. The rear compartment lid latch, then releases the rear compartment lid so that it may be manually raised to an open position.

Conditions for Running the DTC

The system voltage is 9-16 volts.

Conditions for Setting the DTC

- The BCM detects a short to ground in the trunk release switch signal circuit for greater than 10 minutes.
- The rear compartment lid release switch is closed for greater than 10 minutes.

Action Taken When the DTC Sets

The rear compartment lid release switch will be inoperative.

Conditions for Clearing the DTC

- The DTC will be current for as long as the fault is present.
- When the fault is no longer present, the DTC will become a history DTC.
- A history DTC will clear after 50 ignition cycles

Scan Tool Reference

Control Module References for scan tool information

Circuit/System Verification

Ignition ON, observe the scan tool Trunk Switch parameter while pressing the rear compartment lid release switch button. The parameter should change between Active and Inactive.

Circuit/System Testing

1. Ignition OFF, disconnect the harness connector at the rear compartment lid release switch.
2. Test for less than 1 ohm between the ground circuit terminal B and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Ignition ON, verify the scan tool Trunk Switch parameter is Inactive.

   If not the specified value, test the signal circuit terminal A for a short to ground. If the circuit tests normal, replace the BCM.
4. Install a 3A fused jumper wire between the signal circuit terminal A and the ground circuit terminal B. Verify the scan tool Trunk Switch parameter is Active.

   If not the specified value, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
5. If all circuits test normal, test or replace the rear compartment lid release switch.

Component Testing

1. Ignition OFF, disconnect the harness connector at the rear compartment lid release switch.
2. Test for infinite resistance between the signal terminal A and the ground terminal B with the switch in the open position.

   If not the specified value, replace the rear compartment lid release switch
3. Test for less than 2 ohms of between the signal terminal A and the ground terminal B with the switch in the closed position.

   If greater than the specified range, replace the rear compartment lid release switch.
4. Test for infinite resistance between each terminal and the lid release switch housing/case.

   If not the specified value, replace the rear compartment lid release switch.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

- Rear Compartment Lid Release Switch Replacement
- Control Module References for BCM replacement, setup and programming

DTC B2730 (Wagon)

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.
- Diagnostic Procedure Instructions provides an overview of each diagnostic category.

DTC Descriptor

DTC B2730 00: Interior Trunk/Liftglass/Hatch Release Switch Circuit

Diagnostic Fault Information

Circuit	Short to Ground	Open/High Resistance	Short to Voltage	Signal Performance
Rear End Release Relay Switch B+	2	2	--	--
Liftgate Release Switch Signal	B2730 00	1	1	--
Rear End Release Relay Coil Control	--	2	2	--
Rear End Release Relay Coil Control	B3265 00	2	2	--
Liftgate Latch Control	--	2	2	--
Liftgate Latch Ground	--	2	2	--
Liftgate Release Switch Ground	--	1	1	--
1. Liftgate Release Switch Malfunction 2. Liftgate Release Malfunction				

Circuit/System Description

When the ignition is ON, the body control module (BCM) supplies a signal to the liftgate release switch through the liftgate release switch signal circuit. When the liftgate release switch is pressed, the voltage within the signal circuit is pulled low and in response, the BCM applies ground to one end of the relay control circuit and power to the other end, which energizes the coil side of the relay. The switch side of the rear end relay then closes, supplying battery positive voltage through the relay and the latch motor voltage control circuit to the liftgate latch. The liftgate latch, then releases the liftgate so that it may be manually raised to an open position.

Conditions for Running the DTC

The system voltage is 9-16 volts.

Conditions for Setting the DTC

- The BCM detects a short to ground in the liftgate release switch signal circuit for greater than 10 minutes.
- The liftgate release switch is closed for greater than 10 minutes.

Action Taken When the DTC Sets

The liftgate release switch will be inoperative.

Conditions for Clearing the DTC

- The DTC will be current for as long as the fault is present.
- When the fault is no longer present, the DTC will become a history DTC.
- A history DTC will clear after 50 ignition cycles

Circuit/System Verification

Ignition ON, observe the scan tool Trunk Switch parameter while pressing the liftgate release switch. The parameter should change between Active and Inactive.

Circuit/System Testing

1. Ignition OFF, disconnect the harness connector at the liftgate release switch.
2. Test for less than 1 ohm between the ground circuit terminal B and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Ignition ON, verify the scan tool Trunk Switch parameter is Inactive.

   If not the specified value, test the signal circuit terminal A for a short to ground. If the circuit tests normal, replace the BCM.
4. Install a 3A fused jumper wire between the signal circuit terminal A and the ground circuit terminal B. Verify the scan tool Trunk Switch parameter is Active.

   If not the specified value, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
5. If all circuits test normal, test or replace the liftgate release switch.

Component Testing

1. Ignition OFF, disconnect the harness connector at the liftgate release switch.
2. Test for infinite resistance between the signal terminal A and the ground terminal B with the switch in the open position.

   If not the specified value, replace the liftgate release switch
3. Test for less than 2 ohms between the signal terminal A and the ground terminal B with the switch in the closed position.

   If greater than the specified range, replace the liftgate release switch.
4. Test for infinite resistance between each terminal and the lid release switch housing/case.

   If not the specified value, replace the liftgate release switch.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

Control Module References for BCM replacement, setup, and programming

DTC B2976

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.
- Diagnostic Procedure Instructions provides an overview of each diagnostic category.

DTC Descriptor

DTC B2976 00: Driver Door Ajar Circuit

Diagnostic Fault Information

Circuit	Short to Ground	Open/High Resistance	Short to Voltage	Signal Performance
Driver Door Ajar Signal	B2976 00	1	1	--
Passenger Door Ajar Signal	B2991 00	1	1	--
Driver Door Latch Ground	--	1	1	--
Left Rear Door Latch Ground	--	1	1	--
Passenger Door Latch Ground	--	1	1	--
Right Rear Door Latch Ground	--	1	1	--
1. Door Ajar Indicator Malfunction				

Circuit/System Description

The body control module (BCM) receives a discrete input from ajar switches within driver and passenger door latches. The BCM then communicates this status to the instrument panel cluster (IPC) via a serial data message. The IPC, upon receipt of this serial data message, will illuminate the ajar icon in the driver information center (DIC) and also send a serial data massage to the radio to activate the door ajar audible warning when the engine has been started and the gear selector is moved from the P (park) position.

The door ajar switches supply a ground to the BCM when the door is open. Once the door is closed the door ajar switch opens removing the ground to the BCM. The BCM sends a signal to the IPC to illuminate the door ajar indicator when a door is open.

Conditions for Running the DTC

The system voltage is 9-16 volts.

Conditions for Setting the DTC

The BCM detects a short to ground in the driver door ajar circuit for greater than 10 minutes.

Action Taken When the DTC Sets

The door ajar indicator is on at all times.

Conditions for Clearing the DTC

- The DTC will be current for as long as the fault is present.
- When the fault is no longer present, the DTC will become a history DTC.
- A history DTC will clear after 50 ignition cycles.

Scan Tool Reference

Control Module References for scan tool information

Circuit/System Verification

Ignition ON, observe the scan tool Driver Door Ajar Switch parameter while opening and closing the driver door. The parameter should change between Door Closed and Door Ajar.

Circuit/System Testing

1. Ignition OFF, disconnect harness connector at the driver door latch.
2. Ignition ON, verify the scan tool Driver Door Ajar Switch parameter is Door Closed.

   If not the specified value, test the signal circuit terminal 6 for a short to ground. If the circuit tests normal, replace the BCM.
3. If all circuit tests normal, test or replace the driver door latch.

Component Testing

1. Ignition OFF, disconnect the harness connector at the driver door latch.
2. With the switch in the open position, test for infinite resistance between the signal terminal 6 and the ground terminal 8.

   If not the specified value, replace the driver door latch.
3. With the switch in the closed position, test for less than 2 ohms between the signal terminal 6 and the ground terminal 8.

   If not the specified value, replace the driver door latch.

DTC Descriptor

DTC B2991 00: Passenger Door Ajar Circuit

Diagnostic Fault Information

Circuit	Short to Ground	Open/High Resistance	Short to Voltage	Signal Performance
Driver Door Ajar Signal	B2976 00	1	1	--
Passenger Door Ajar Signal	B2991 00	1	1	--
Driver Door Latch Ground	--	1	1	--
Left Rear Door Latch Ground	--	1	1	--
Passenger Door Latch Ground	--	1	1	--
Right Rear Door Latch Ground	--	1	1	--
1. Door Ajar Indicator Malfunction				

Circuit/System Description

The body control module (BCM) receives a discrete input from ajar switches within driver and passenger door latches. The BCM then communicates this status to the instrument panel cluster (IPC) via a serial data message. The IPC, upon receipt of this serial data message, will illuminate the ajar icon in the driver information center (DIC) and also send a serial data massage to the radio to activate the door ajar audible warning when the engine has been started and the gear selector is moved from the P (park) position.

The door ajar switches supply a ground to the BCM when the door is open. Once the door is closed the door ajar switch opens removing the ground to the BCM. The BCM sends a signal to the IPC to illuminate the door ajar indicator when a door is open.

Conditions for Running the DTC

The system voltage is 9-16 volts.

Conditions for Setting the DTC

The BCM detects a short to ground in a passenger door ajar circuit for greater than 10 minutes.

Action Taken When the DTC Sets

The door ajar indicator is on at all times.

Conditions for Clearing the DTC

- The DTC will be current for as long as the fault is present.
- When the fault is no longer present, the DTC will become a history DTC.
- A history DTC will clear after 50 ignition cycles.

- Wiring Repairs

Scan Tool Reference

Control Module References for scan tool information

Circuit/System Verification

Ignition ON, with all doors closed, observe the scan tool Passenger Door Ajar Switch. parameter while opening and closing the passenger and rear doors. The parameter should change between Door Closed and Door Ajar.

Circuit / System Testing

1. Ignition OFF, disconnect harness connector at the appropriate passenger or rear door latch.
2. Ignition ON, verify the scan tool Passenger Door Ajar Switch parameter is Door Closed.

   If not the specified value, test the signal circuit terminal listed below for a short to ground. If the circuit tests normal, replace the BCM.

   - Passenger door latch signal circuit terminal 1
   - Left rear door latch signal circuit terminal 4
   - Right rear door latch signal circuit terminal 1
3. If all circuit tests normal, test or replace the door latch.

Component Testing

1. Ignition OFF, disconnect the harness connector at the appropriate door latch.
2. With the switch in the open position, test for infinite resistance between the signal terminal and the ground terminal listed below:
   - Passenger door latch signal terminal 1 and ground terminal 3
   - Right rear door latch signal terminal 1 and ground terminal 3
   - Left rear door latch signal terminal 4 and ground terminal 6

   If not the specified value, replace the door latch.
3. With the switch in the closed position, test for less than 2 ohms between the signal and the ground terminals listed below:
   - Passenger door latch signal terminal 1 and ground terminal 3
   - Right rear door latch signal terminal 1 and ground terminal 3
   - Left rear door latch signal terminal 4 and ground terminal 6

   If not the specified value, replace the door latch.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

- Front Side Door Latch Replacement
- Rear Side Door Latch Replacement
- Control Module References for BCM replacement, setup and programming

DTC B3125, B3130, or B3135

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.
- Diagnostic Procedure Instructions provides an overview of each diagnostic category.

DTC Descriptors

DTC B3125 00: Left Front/Driver Door Only Unlock Circuit

DTC B3130 00: All Door Unlock Circuit

DTC B3135 00: All Door Lock Circuit

Diagnostic Fault Information

Window/Door Lock Switch Ground	--	2	2	--
Relay Ground	--	1	1	--
1. Door Lock Malfunction 2. Door Lock Switch Malfunction				

Circuit/System Description

The body control module (BCM) controls the door lock, passenger door unlock and driver door unlock relays. Voltage is applied to the appropriate relay through the door lock/unlock control circuit when the BCM detects a door lock/unlock switch activation or a keyless entry lock or unlock command.

Conditions for Running the DTC

The system voltage is 9-16 volts.

Conditions for Setting the DTC

B3125 00

The BCM detects a fault on the DRIVER UNLOCK relay control circuit.

B3130 00

The BCM detects a fault on the PASS UNLOCK relay control circuit.

B3135 00

The BCM detects a fault on the ALL LOCK relay control circuit.

Action Taken When the DTC Sets

The power door locks will malfunction.

Conditions for Clearing the DTC

- The DTC will be current for as long as the fault is present.
- When the fault is no longer present, the DTC will become a history DTC.
- A history DTC will clear after 50 ignition cycles.

Description and Operation

Power Door Locks Description and Operation

Electrical Information Reference

- Circuit Testing

- Connector Repairs
- Testing for Intermittent Conditions and Poor Connections
- Wiring Repairs

Scan Tool Reference

Control Module References for scan tool information

Circuit/System Verification

Ignition ON, command the All Doors Unlock/Lock with the scan tool, all doors should perform the LOCK and UNLOCK function.

If B3125 00 is set, refer to DRIVER UNLOCK Relay Control Malfunction.

If B3130 00 is set, refer to PASS UNLOCK Relay Control Malfunction.

If B3135 00 is set, refer to ALL LOCK Relay Control Malfunction.

Circuit/System Testing

DRIVER UNLOCK Relay Control Malfunction

1. Ignition OFF, disconnect the DRIVER UNLOCK relay.
2. Connect a test lamp between the control circuit terminal 85 and the B+ circuit terminal 86.
3. Ignition ON, command the Driver Door Unlock with a scan tool. The test lamp should briefly illuminate when commanding the UNLOCK state.

   If the test lamp is always OFF, test the control circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.

   If the test lamp is always ON, test the control circuit for a short to ground. If the circuit tests normal, replace the BCM.
4. If all circuits test normal, test or replace the DRIVER UNLOCK relay.

PASS UNLOCK Relay Control Malfunction

1. Ignition OFF, disconnect the PASS UNLOCK relay.
2. Connect a test lamp between the control circuit terminal 85 and the B+ circuit terminal 86.
3. Ignition ON, command the All Doors Unlock with a scan tool. The test lamp should briefly illuminate when commanding the UNLOCK state.

   If the test lamp is always OFF, test the control circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.

   If the test lamp is always ON, test the control circuit for a short to ground. If the circuit tests normal, replace the BCM.
4. If all circuits test normal, test or replace the PASS UNLOCK relay.

ALL LOCK Relay Control Malfunction

1. Ignition OFF, disconnect the ALL LOCK relay.
2. Connect a test lamp between the control circuit terminal 85 and the ground circuit terminal 86.

3. Ignition ON, command the All Doors Lock with a scan tool. The test lamp should briefly illuminate when commanding the LOCK state.

   If the test lamp is always OFF, test the control circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the BCM.

   If the test lamp is always ON, test the control circuit for a short to voltage. If the circuit tests normal, replace the BCM.
4. If all circuits test normal, test or replace the ALL LOCK relay.

Component Testing

1. Ignition OFF, disconnect the appropriate relay.
2. Test for 60-200 Ω between terminals 85 and 86.

   If not within the specified range, replace the relay.
3. Test for infinite resistance between the following terminals:
   - 30 and 86
   - 30 and 87
   - 30 and 85
   - 85 and 87

   If less than the specified value, replace the relay.
4. Test for less than 2 Ω between terminals 30 and 87A.

   If greater than the specified range, replace the relay.
5. Install a 3A fused jumper wire between relay terminal 85 and 12V. Install a jumper wire between relay terminal 86 and ground. Test for less than 2 Ω between terminals 30 and 87.

   If greater than specified range, replace the relay

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

- Relay Replacement
- Control Module References for BCM replacement, setup, and programming

DTC B3140 or B3150

Diagnostic Instructions

Window/Door Lock Switch Ground	--	2	2	--
Relay Ground	--	1	1	--
1. Door Lock Malfunction 2. Door Lock Switch Malfunction				

Circuit/System Description

The body control module (BCM) supplies and monitors a reference voltage to the door lock/window switch through the door lock switch lock and unlock signal circuits. The door lock/window switch also receives a constant ground source. If a door lock switch is placed in the lock position or unlock position, the reference voltage is taken directly to ground and the BCM detects the voltage drop on the signal circuit.

Conditions for Running the DTC

The system voltage is 9-16 volts.

Conditions for Setting the DTC

B3140 00

The BCM detects a short to ground in the unlock switch signal circuit.

B3150 00

The BCM detects a short to ground in the lock switch signal circuit

Action Taken When the DTC Sets

The power door lock switch will malfunction.

Conditions for Clearing the DTC

- The DTC will be current for as long as the fault is present.
- When the fault is no longer present, the DTC will become a history DTC.
- A history DTC will clear after 50 ignition cycles.

Circuit/System Verification

Ignition ON, observe the scan tool Central Door Lock Switch and Central Door Unlock Switch parameters while using the door lock/window switch. The parameter should change between Inactive and Active when changing between the commanded states.

Circuit/System Testing

1. Ignition OFF, disconnect the X2 harness connector at the door lock/window switch.
2. Test for less than 20 Ω between the ground circuit terminal 4 and ground.
   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Ignition ON, verify the scan tool Central Door Lock Switch parameter is Inactive.
   If not the specified value, test the signal circuit terminal 15 for a short to ground. If the circuit tests normal, replace the BCM.
4. Verify the scan tool Central Door Unlock Switch parameter is Inactive.
   If not the specified value, test the signal circuit terminal 5 for a short to ground. If the circuit tests normal, replace the BCM.
5. Install a 3A fused jumper wire between the signal circuit terminal 15 and ground. Verify the scan tool Central Door Lock Switch parameter is Active.
   If not the specified value, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
6. Install a 3A fused jumper wire between the signal circuit terminal 5 and ground. Verify the scan tool Central Door Unlock Switch parameter is Active.
   If not the specified value, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
7. If all circuits test normal, test or replace the door lock/window switch.

Component Testing

1. Ignition OFF, disconnect the X2 harness connector at the door lock window/switch.
2. Test for infinite resistance between the signal terminals 5 and 15 and the ground terminal 4 with the switch in the open position.
   If less than the specified value, replace the door lock/window switch.
3. Test for less than 2 Ω between the signal terminal 15 and the ground terminal 4 with the switch in the lock position.
   If greater than the specified range, replace the door lock/window switch.
4. Test for less than 2 Ω between the signal terminal 5 and the ground terminal 4 with the switch in the unlock position.
   If greater than the specified range, replace the door lock/window switch

Repair Instructions

DTC B3265 (Sedan)

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.
- Diagnostic Procedure Instructions provides an overview of each diagnostic category.

DTC Descriptor

DTC B3265 00: Trunk/Hatch/Liftglass Release Output Circuit

Diagnostic Fault Information

Circuit	Short to Ground	Open/High Resistance	Short to Voltage	Signal Performance
Trunk Relay B+	1	1	--	--
Trunk Release Switch Signal	B2730 00	2	2	--
Rear Compartment Lid Latch Control	1	1	1	--
Trunk Release Relay Control	B3265 00	B3265 00	B3265 00	--
Rear Compartment Lid Latch Ground	--	1	1	--
Rear Compartment Lid Release Switch Ground	--	2	2	--
1. Trunk release is inoperative from both the switch and keyless entry transmitter 2. Trunk release is inoperative only from switch				

Circuit/System Description

The body control module (BCM) provides a low side drive output that controls the trunk relay. The BCM monitors the voltage level on the trunk release relay control circuit to determine when a failure has occurred. The voltage level on this circuit should be high while the trunk relay is not energized, that is the trunk release feature has not been activated. Voltage will be less than 1V when the relay is energized. When the BCM receives a trunk release signal from a switch or keyless entry transmitter, it responds by applying ground to the trunk release relay control circuit, which energizes the trunk relay.

Conditions for Running the DTC

The system voltage is 9-16 volts.

Conditions for Setting the DTC

The BCM detects a fault in the trunk release relay control circuit when the output is active.

Action Taken When the DTC Sets

The rear compartment lid latch will malfunction.

Conditions for Clearing the DTC

- The DTC will be current for as long as the fault is present.
- When the fault is no longer present, the DTC will become a history DTC.
- A history DTC will clear after 50 ignition cycles.

Circuit/System Verification

Command the Trunk Release Test with a scan tool. The rear compartment lid release actuator should release the trunk lid.

Circuit/System Testing

1. Ignition OFF, disconnect the TRUNK RELEASE relay.

2. Ignition ON, verify that a test lamp illuminates between the B+ circuit terminal 85 and ground.

   If the test lamp does not illuminate, test the B+ circuit for a short to ground or an open/high resistance. If the circuit tests normal and the B+ circuit fuse is open, test the control circuit terminal 87 for a short to ground. If the circuit tests normal, test or replace the TRUNK RELEASE relay.
3. Connect a test lamp between the control circuit terminal 86 and the B+ circuit terminal 85.
4. Command the Trunk Release Test ON and OFF with a scan tool. The test lamp should turn ON and OFF when changing between the commanded states.

   If the test lamp is always ON, test the control circuit for a short to ground. If the circuit tests normal, replace the BCM.

   If the test lamp is always OFF, test the control circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
5. If all circuits test normal, test or replace the TRUNK RELEASE relay.

Component Testing

1. Ignition OFF, disconnect the TRUNK RELEASE relay.
2. Test for 60-180 Ω between terminals 85 and 86.

   If not within the specified range, replace the relay.
3. Test for infinite resistance between the following terminals:
   - 30 and 86
   - 30 and 87
   - 30 and 85
   - 85 and 87

   If less than the specified value, replace the relay.
4. Install a 25A fused jumper wire between relay terminal 85 and 12V. Install a jumper wire between relay terminal 86 and ground. Test for less than 2 Ω between terminals 30 and 87.

   If greater than the specified range, replace the relay.

DTC Descriptor

DTC B3265 00: Turn/Hatch/Liftglass Release Output Circuit

Diagnostic Fault Information

Circuit	Short to Ground	Open/High Resistance	Short to Voltage	Signal Performance
Rear End Release Relay Switch B+	2	2	--	--
Liftgate Release Switch Signal	B2730 00	1	1	--
Rear End Release Relay Coil Control	--	2	2	--
Rear End Release Relay Coil Control	B3265 00	2	2	--
Liftgate Latch Control	--	2	2	--
Liftgate Latch Ground	--	2	2	--
Liftgate Release Switch Ground	--	1	1	--
1. Liftgate Release Switch Malfunction 2. Liftgate Release Malfunction				

Circuit/System Description

The body control module (BCM) provides voltage to the liftgate release relay control circuit thus energizing the Rear End Release relay which provides voltage to the liftgate latch assembly releasing the liftgate.

Conditions for Running the DTC

The system voltage is 9-16 volts.

Conditions for Setting the DTC

The BCM detects short to voltage in the liftgate latch relay coil control ground circuit.

Action Taken When the DTC Sets

The liftgate latch will malfunction.

Conditions for Clearing the DTC

- The DTC will be current for as long as the fault is present.
- When the fault is no longer present, the DTC will be a history DTC.
- A history DTC will clear after 50 ignition cycles.

Circuit/System Verification

Command the liftgate latch to release by pressing the liftgate release switch. The liftgate latch should release the liftgate.

Circuit/System Testing

1. Ignition OFF, disconnect the Rear End Release relay.
2. Connect a test lamp between the control circuit terminal 86 and B+.
3. Command the liftgate latch assembly by pressing and releasing the liftgate release switch.

The test lamp should turn ON and OFF when changing between the commanded states.

If the test lamp is always OFF, test the control circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.

If the test lamp is always ON, test the control circuit for a short to ground. If the circuit tests normal, replace the BCM.

4. If all circuits test normal, test or replace the Rear End Release relay.

Component Testing

1. Ignition OFF, disconnect the Rear End Release relay.
2. Test for 60-200 ohms between terminals 85 and 86.

   If not within the specified range, replace the relay.
3. Test for infinite resistance between the following terminals:
   - 30 and 86
   - 30 and 87
   - 30 and 85
   - 85 and 87

   If less than the specified range, replace the Rear End Release relay.
4. Install a 3A fused jumper wire between the relay terminal 85 and 12V. Install a jumper wire between relay terminal 86 and ground. Test for less than 2 ohms between terminals 30 and 87.

   If greater than the specified range, replace the Rear End Release relay.

Liftgate Latch Ground	--	2	2	--
Liftgate Release Switch Ground	--	1	1	--
1. Liftgate Release Switch Malfunction 2. Liftgate Release Malfunction				

Circuit/System Description

The liftgate switch is an input to the body control module (BCM). The BCM supplies battery voltage to the signal circuit and when the liftgate switch is activated the signal circuit voltage goes low. The BCM controls the liftgate latch assembly through the liftgate Rear End Release relay. When the liftgate switch signal is activated, the BCM enables the Rear End Release relay by applying battery voltage to the liftgate relay circuit and the relay is energized when the BCM grounds the Rear End Release relay control circuit. When the relay is energized battery voltage is supplied to the liftgate latch assembly through the liftgate latch control circuit.

Scan Tool Reference

Control Module References for scan tool information

Circuit/System Verification

1. Ignition ON, observe the scan tool Trunk Switch parameter while pressing and releasing the liftgate release switch. The parameter should change between Active and Inactive.

   If the value does not change, refer to Liftgate Release Switch Malfunction.
2. Command the liftgate to release by pressing the liftgate release switch. The liftgate latch should release the liftgate.

   If the liftgate latch does not release the liftgate, refer to Liftgate Latch Malfunction.

Circuit/System Testing

Liftgate Release Switch Malfunction

1. Ignition OFF, disconnect the harness connector at the liftgate release switch.
2. Test for less than 1.0 ohm between the ground circuit terminal B and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Ignition ON, verify the scan tool Trunk Switch parameter is Inactive.

   If not the specified value, test the signal circuit terminal A for a short to ground. If the circuit tests normal, replace the BCM.
4. Install a 3A fused jumper wire between the signal circuit terminal A and ground. Verify the scan tool Trunk Switch parameter is Active.

   If not the specified value, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM
5. If all circuits test normal, test or replace the liftgate release switch.

Liftgate Latch Malfunction

1. Ignition OFF, disconnect the Rear End Release relay.
2. Ignition ON, verify that a test lamp does not illuminate between the control circuit

terminal 87 and ground.

If the test lamp illuminates, test the control circuit for a short to voltage.

3. Verify that a test lamp illuminates between the B+ circuit terminal 30 and ground.

   If the test lamp does not illuminate, test the B+ circuit for a short to ground or an open/high resistance. If the circuit tests normal and the B+ circuit fuse is open, test the control circuit terminal 87 for a short to ground. If the circuit tests normal, test or replace the Rear End Release relay.

4. Ignition OFF, disconnect the harness connector at the liftgate latch.
5. Test for less than 1.0 ohm between the ground circuit terminal 4 and ground

   If greater than the specified range, test the ground circuit for an open/high resistance.

6. Connect the harness connector at the liftgate latch.
7. Ignition ON, connect a 10A fused jumper wire between the B+ circuit terminal 30 and the control circuit terminal 87. Verify the liftgate latch is activated.

   If the liftgate latch does not activate, test the control circuit for an open/high resistance. If the circuit tests normal, test or replace the liftgate latch.

8. Connect a test lamp between the control circuit terminal 86 and ground.
9. Command the liftgate latch to release by pressing and releasing the liftgate release switch. The test lamp should turn ON and OFF when changing between the commanded states.

   If the test lamp is always ON, test the control circuit for a short to voltage. If the circuit tests normal, replace the BCM.

   If the test lamp is always OFF, test the control circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the BCM.

10. Connect a test lamp between the control circuit terminal 85 and B+.
11. Command the liftgate latch to release by pressing and releasing the liftgate release switch. The test lamp should turn ON and OFF when changing between the commanded states.

    If the test lamp is always ON, test the control circuit for a short to ground. If the circuit tests normal, replace the BCM.

    If the test lamp is always OFF, test the control circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.

12. If all circuits test normal, test or replace the Rear End Release relay.

Component Testing

Liftgate Latch

1. Ignition OFF, disconnect the harness connector at the liftgate latch.
2. Install a 10A fused jumper wire between the control terminal 2 and 12 volts. Install a jumper wire between the ground terminal 4 and ground. Verify the liftgate latch activates.

   If the latch does not perform as specified, replace the liftgate latch.

Liftgate Release Switch

1. Ignition OFF, disconnect the harness connector at the liftgate release switch.
2. Test for infinite resistance between the signal terminal A and the ground terminal B with the switch in the open position.

   If not the specified value, replace the liftgate exterior switch.

3. Test for less than 2.0 ohms between the signal terminal A and the ground terminal B with the switch in the closed position.

   If greater than the specified range, replace the liftgate exterior switch.

Relay Test

1. Ignition OFF, disconnect the Rear End Release relay.
2. Test for 60-200 ohms between terminals 85 and 86.

   If not within the specified range, replace the relay.
3. Test for infinite resistance between the following terminals:
   - 30 and 86
   - 30 and 87
   - 30 and 85
   - 85 and 87

   If not the specified value, replace the relay.
4. Install a 3A fused jumper wire between relay terminal 85 and 12V. Install a jumper wire between relay terminal 86 and ground. Test for less than 2 ohms between terminals 30 and 87.

   If greater than the specified range, replace the relay.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

Power Door Lock Key Cylinder Switches Malfunction

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.
- Diagnostic Procedure Instructions provides an overview of each diagnostic category.

Diagnostic Fault Information

Circuit	Short to Ground	Open/High Resistance	Short to Voltage	Signal Performance
Driver Door Key Switch Signal	1	1	1	--
Right Front Door Latch Ground	--	1	1	--
1. Key Cylinder Switch Inoperative				

Circuit/System Description

The body control module (BCM) monitors the voltage level of the key switch lock and unlock signal circuits. When the key is inserted into the right front door key cylinder and turned and held to the Unlock or Lock position, a switch within the right front door latch closes causing the voltage to drop within the appropriate key switch signal circuit. When the voltage drop time exceeds 2 seconds, the BCM will command all the doors to unlock or lock.

Control Module References for scan tool information

Circuit/System Verification

Ignition ON, insert the key into the right front door lock cylinder, turn the key to the LOCK position and then to the UNLOCK positon while observing the scan tool Door Key Cylinder Lock Switch and Door Key Cylinder Unlock Switch parameters. The parameters should change between Inactive and Active.

Circuit/System Testing

1. Ignition OFF, disconnect the harness connector at the right front door latch.
2. Test for less than 1 Ω between the ground circuit terminal 3 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Ignition ON, verify the scan tool Door Key Cylinder Lock Switch parameter is Inactive.

   If not the specified value, test the signal circuit terminal 9 for a short to ground. If the circuit tests normal, replace the BCM.
4. Verify the scan tool Door Key Cylinder Unlock Switch parameter is Inactive.

   If not the specified value, test the signal circuit terminal 4 for a short to ground. If the circuit tests normal, replace the BCM.
5. Install a 3A fused jumper wire between the signal circuit terminal 9 and ground, verify the scan tool Door Key Cylinder Lock Switch parameter is Active.

   If not the specified value, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
6. Install a 3A fused jumper wire between the signal circuit terminal 4 and ground, verify the scan tool Door Key Cylinder Unlock Switch parameter is Active.

   If not the specified value, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
7. If all circuits test normal, test or replace the right front door latch.

Component Testing

1. Ignition OFF, disconnect the harness connector at the right front door latch.
2. Test for infinite resistance between the signal terminal 4 and the ground terminal 3 with the switch in the open position.

   If not the specified value, replace the right front door latch.
3. Test for infinite resistance between the signal terminal 9 and the ground terminal 3 with the switch in the open position.

   If not the specified value, replace the right front door latch.
4. Test for less than 2 Ω between the signal terminal 9 and the ground terminal 3 with the switch in the Lock position.

   If greater than the specified range, replace the right front door latch.
5. Test for less than 2 Ω between the signal terminal 4 and the ground terminal 3 with the switch in the Unlock position.

If greater than the specified range, replace the right front door latch.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

- Front Side Door Latch Replacement
- Control Module References for BCM replacement, setup and programming

Fuel Filler Door Release Malfunction

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.
- Diagnostic Procedure Instructions provides an overview of each diagnostic category.

Diagnostic Fault Information

Circuit	Short to Ground	Open/High Resistance	Short to Voltage	Signal Performance
I/P Fuse Block B+	2	2	--	--
Fuel Door Release Actuator Lock Control	2	1	2	--
Fuel Door Release Actuator Unlock Control	2	1	2	--
Relay Ground	--	2	2	--
1. Fuel Door Release Actuator Inoperative 2. Fuel Door Release Actuator and Door Latches Inoperative				

Circuit/System Description

The fuel door release actuator shares the circuit with the driver door latch. The body control module (BCM), upon receipt of a lock switch lock or unlock signal, will switch the appropriate door latch, as well as a fuel filler door release actuator control circuits to battery positive voltage. The opposing side of the door latch and fuel filler door release actuator is connected to ground provided by the I/P fuse block through the other the door latch control circuits, along with the fuel filler door release actuator, will lock or unlock as commanded.

Circuit/System Verification

Observe the operation of the power door locks while using the door lock switch. All doors and the fuel filler door should perform the LOCK and UNLOCK function.

If any door does not function as commanded, refer to Power Door Locks Malfunction.

Circuit/System Testing

1. Ignition OFF, disconnect the harness connector at the fuel filler door latch.
2. Test for less than 1 ohm between the control circuit terminal 1 and ground.

   If greater than the specified range, test the control circuit for a short to voltage or an open/high resistance.
3. Test for less than 1 ohm between the control circuit terminal 2 and ground.

   If greater than the specified range, test the control circuit for a short to voltage or an open/high resistance.
4. Connect a test lamp between the control circuit terminal 1 and control circuit terminal 2.
5. Ignition ON, command the doors to LOCK and UNLOCK by using the door lock switch. The test lamp should illuminate while commanding the LOCK and UNLOCK states.

   If the test lamp remains OFF during either command, test either control circuit for a short to ground.
6. If all circuits test normal, test or replace the fuel filler door latch.

Component Testing

1. Ignition OFF, disconnect the harness connector at the fuel filler door latch.
2. Install a 15A fused jumper wire between the control terminal 1 and 12V. Momentarily install a jumper wire between the control terminal 2 and ground. The fuel door release actuator should perform the LOCK/UNLOCK function.

   If the function does not perform as specified, replace the fuel filler door latch.
3. Reverse the jumper wires. The fuel door release actuator should perform the UNLOCK/LOCK function.

   If the function does not perform as specified, replace the fuel filler door latch.

Window/Door Lock Switch Ground	--	2	2	--
Relay Ground	--	1	1	--
1. Door Lock Malfunction 2. Door Lock Switch Malfunction				

Circuit/System Description

The body control module (BCM) provides battery positive voltage and ground to the appropriate lock and unlock control circuits of the door lock and unlock relays. The lock control circuits of the driver and passenger door latch assemblies share a common relay; however, the unlock control circuits have separate relays. The system is designed this way so that the keyless entry transmitter may be used to unlock only the driver door.

The BCM supplies and monitors a reference voltage to the door lock/window switch through the door lock switch lock and unlock signal circuits. The door lock/window switch also receives a constant ground source. If a door lock switch is placed in the lock position or unlock position, the reference voltage is taken directly to ground and the BCM detects the voltage drop on the signal circuit.

The BCM, upon receipt of a lock switch lock signal, will switch the all lock relay control circuit to battery positive voltage. This will energize the relay. The relay will supply voltage to the door lock actuator lock control circuits to one side of the lock actuator. Since the opposing side of the lock actuators are connected to ground through the other lock actuator control circuit and the normally closed contacts of the lock or unlock relay, the doors will then lock appropriately. The remaining unlock relays receive voltage from the I/P fuse block, the BCM upon receipt of a unlock signal or driver door unlock signal will switch the appropriate unlock relay to ground. This will energize the appropriate unlock relay. The relay will supply voltage to the appropriate door unlock control circuits to one side of the lock actuator. Since the opposing side of the lock actuators are connected to ground through the other lock actuator control circuits and the normally closed contact of the lock relay, the doors will then unlock appropriately.

Scan Tool Reference

Control Module References for scan tool information

Circuit/System Verification

1. Ignition ON, observe the scan tool Central Door Lock Switch and Central Door Unlock Switch parameters while using the door lock switch. The parameter should change between Inactive and Active.

   If the value does not change between commanded states, refer to Door Lock Switch Malfunction

2. Command the driver door and passenger door latches to LOCK and UNLOCK by using the door lock switch. The doors should perform the LOCK and UNLOCK function.

   If the driver door does not UNLOCK, refer to Driver Door Unlock Relay Malfunction.

   If one or more passenger doors do not UNLOCK, refer to Door Unlock Relay Malfunction

   If one or more doors do not LOCK, refer to Door Lock Relay Malfunction

Circuit / System Testing

Door Lock Switch Malfunction

1. Ignition OFF, disconnect the X2 harness connector at the door lock/window switch.
2. Test for less than 1 Ω between the ground circuit terminal 4 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Ignition ON, verify the scan tool Central Door Lock Switch parameter is Inactive.

   If not the specified value, test the signal circuit terminal 15 for a short to ground. If the circuit tests normal, replace the BCM.
4. Verify the scan tool Central Door Unlock Switch parameter is Inactive.

   If not the specified value, test the signal circuit terminal 5 for a short to ground. If the circuit tests normal, replace the BCM
5. Install a 3A fused jumper wire between the signal circuit terminal 5 and ground. Verify the scan tool Central Door Unlock Switch parameter is Active.

   If not the specified value, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
6. Install a 3A fused jumper wire between the signal circuit terminal 15 and ground. Verify the scan tool Central Door Lock Switch parameter is Active.

   If not the specified value, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
7. If all circuits test normal, test or replace the door lock/window switch.

Driver Door Unlock Relay Malfunction

1. Ignition OFF, disconnect the DRIVER UNLOCK relay.
2. Test for less than 1 Ω between the ground circuit terminal 87A and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Ignition ON, verify that a test lamp does not illuminate between the control circuit terminal 30 and ground.

   If the test lamp illuminates, test the control circuit for a short to voltage.
4. Verify that a test lamp illuminates between the B+ circuit terminal 86 and ground.

   If the test lamp does not illuminate, test the B+ circuit for a short to ground or an open/high resistance.
5. Verify that a test lamp illuminates between the B+ circuit terminal 87 and ground.

   If the test lamp does not illuminate, test the B+ circuit for an open/high resistance.
6. Connect a test lamp between the control circuit terminal 85 and the B+ circuit terminal 86.
7. Command the Driver Door Unlock/Lock with a scan tool. The test lamp should briefly illuminate during the UNLOCK command.

   If the test lamp is always OFF, test the control circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.

   If the test lamp is always ON, test the control circuit for a short to ground. If the circuit tests normal, replace the BCM.
8. Ignition OFF, connect the DRIVER UNLOCK relay and disconnect the harness connector at the right front door latch.
9. Test for less than 5 Ω between the control circuit terminal 7 and ground.

   If greater than the specified range, test the control circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the DRIVER UNLOCK relay.
10. Connect a test lamp between the control circuit terminal 7 and control circuit terminal 8.
11. Ignition ON, command the right front door latch to LOCK and UNLOCK by using the door lock

switch. The test lamp should briefly illuminate when commanding the LOCK and UNLOCK states.

If the test lamp is always OFF, test either control circuit for a short to ground. If the circuits test normal, test or replace the DRIVER UNLOCK relay.

12. If all circuits test normal, test or replace the right front door latch.

Door Unlock Relay Malfunction

1. Ignition OFF, disconnect the PASS UNLOCK relay.
2. Test for less than 1 Ω between the ground circuit terminal 87A and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.

3. Ignition ON, verify that a test lamp does not illuminate between the control circuit terminal 30 and ground.

   If the test lamp illuminates, test the control circuit for a short to voltage.

4. Verify that a test lamp illuminates between the B+ circuit terminal 86 and ground.

   If the test lamp does not illuminate, test the B+ circuit for a short to ground or an open/high resistance.

5. Verify that a test lamp illuminates between the B+ circuit terminal 87 and ground.

   If the test lamp does not illuminate, test the B+ circuit for an open/high resistance.

6. Connect a test lamp between the control circuit terminal 85 and the B+ circuit terminal 86.
7. Ignition ON, command the All Doors Unlock/Lock with a scan tool. The test lamp should illuminate druing the UNLOCK command.

   If the test lamp is always OFF, test the control circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.

   If the test lamp is always ON, test the control circuit for a short to ground. If the circuit tests normal, replace the BCM.

8. Ignition OFF, connect the PASS UNLOCK relay and disconnect the harness connector at the appropriate door latch.
9. Test for less than 5 Ω between the control circuit terminal listed below and ground:
   - Left rear door latch terminal 2
   - Right front door latch terminal 2.
   - Right rear door latch terminal 5

   If greater than the specified range, test the control circuit for a short to voltage or an open/high resistance. If the circuits test normal, replace the PASS UNLOCK relay.

10. Ignition ON, connect a test lamp between the control circuit terminals listed below:
    - Left rear door latch terminal 2 and terminal 3.
    - Right front door latch terminal 2 and terminal 3.
    - Right rear door latch terminal 5 and terminal 6.
11. Ignition ON, command the All Doors Unlock/Lock with a scan tool. The test lamp should briefly illuminate when commanding the UNLOCK state.

    If the test lamp is always OFF, test either control circuit for a short to ground. If the circuits test normal, test or replace the PASS UNLOCK relay.

12. If all circuits test normal, test or replace the door latch.

Door Lock Relay Malfunction

1. Ignition OFF, disconnect the ALL LOCK relay.
2. Test for less than 1 Ω between the ground circuit terminal 87A and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.

3. Ignition ON, verify that a test lamp does not illuminate between the control circuit terminal 30 and ground.

   If the test lamp illuminates, test the control circuit for a short to voltage.
4. Verify that a test lamp illuminates between the B+ circuit terminal 87 and ground.

   If the test lamp does not illuminate, test the B+ circuit for a short to ground or an open/high resistance.
5. Connect a test lamp between the control circuit terminal 86 and the ground circuit terminal 85.
6. Command the All Doors Unlock/Lock with a scan tool. The test lamp should illuminate druing the LOCK command.

   If the test lamp is always OFF, test the control circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the BCM.

   If the test lamp is always ON, test the control circuit for a short to voltage. If the circuit tests normal, replace the BCM.
7. Ignition OFF, connect the ALL LOCK relay and disconnect the harness connector at the appropriate door latch.
8. Test for less than 5 Ω between the control circuit terminal listed below and ground:
   - Right front door latch terminal 8.
   - Left rear door latch terminal 3
   - Left front door latch terminal 3.
   - Right rear door latch terminal 6

   If greater than the specified range, test the control circuit for a short to voltage or an open/high resistance. If the circuits test normal, replace the ALL LOCK relay.
9. Ignition ON, connect a test lamp between the control circuit terminals listed below:
   - Right front door latch terminal 7 and terminal 8.
   - Left rear door latch terminal 2 and terminal 3
   - Left front door latch terminal 2 and terminal 3.
   - Right rear door latch terminal 5 and terminal 6
10. Ignition ON, command the door latch to LOCK and UNLOCK by using the door lock switch. The test lamp should briefly illuminate during the LOCK command.

    If the test lamp is always OFF, test either control circuit for a short to ground. If the circuits test normal, test or replace the ALL LOCK relay.
11. If all circuits test normal, test or replace the door latch.

Component Testing

Door Lock Window/Switch Test

1. Ignition OFF, disconnect the X2 harness connector at the door lock/window switch.
2. Test for infinite resistance between the signal terminals 5 and 15 and the ground terminal 4 with the switch in the open position.

   If less than the specified value, replace the door lock/window switch.
3. Test for less than 2 Ω between the signal terminal 15 and the ground terminal 4 with the switch in the lock position.

   If greater than the specified range, replace the door lock/window switch.
4. Test for less than 2 Ω between the signal terminal 5 and the ground terminal 4 with the switch in the unlock position.

   If greater than the specified range, replace the door lock/window switch.

Door Latch Test

1. Ignition OFF, disconnect the harness connector at the appropriate door latch.
2. Install a 25A fused jumper wire between one of the control terminals and 12V. Momentarily install a jumper wire between the other control terminal and ground. Reverse the jumper wires at least two times, the door latch should perform the LOCK/UNLOCK functions

   If it does not perform as specified, replace the door latch.

Relay Test

1. Ignition OFF, disconnect the appropriate relay.
2. Test for 60-200 Ω between terminals 85 and 86.

   If not within the specified range, replace the relay.
3. Test for infinite resistance between the following terminals:
   - 30 and 86
   - 30 and 87
   - 30 and 85
   - 85 and 87

   If less than the specified value, replace the relay.
4. Test for less than 2 Ω between terminals 30 and 87A.

   If greater than the specified range, replace the relay.
5. Install a 3A fused jumper wire between relay terminal 85 and 12V. Install a jumper wire between relay terminal 86 and ground. Test for less than 2 Ω between terminals 30 and 87.

   If greater than specified range, replace the relay.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

- Relay Replacement
- Front Side Door Latch Replacement
- Power Mirror Switch Replacement
- Rear Side Door Latch Replacement
- Control Module References for BCM replacement, setup and programming

Door Ajar Indicator Malfunction

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.
- Diagnostic Procedure Instructions provides an overview of each diagnostic category.

Diagnostic Fault Information

Circuit	Short to Ground	Open/High Resistance	Short to Voltage	Signal Performance
Driver Door Ajar Signal	B2976 00	1	1	--
Passenger Door Ajar Signal	B2991 00	1	1	--
Right Front Door Latch Ground	--	1	1	--
Left Rear Door Latch Ground	--	1	1	--
Left Front Door Latch Ground	--	1	1	--
Right Rear Door Latch Ground	--	1	1	--
1. Door Ajar Indicator Inoperative				

Circuit/System Description

The body control module (BCM) receives a discrete input from ajar switches within driver and passenger door latches. The BCM then communicates this status to the instrument panel cluster (IPC) via a serial data message. The IPC, upon receipt of this serial data message, will illuminate the ajar icon in the driver information center (DIC) and also send a serial data massage to the radio to activate the door ajar audible warning when the engine has been started and the gear selector is moved from the P (park) position.

The door ajar switches supply a ground to the BCM when the door is open. Once the door is closed the door ajar switch opens removing the ground to the BCM. The BCM sends a signal to the IPC to illuminate the door ajar indicator when a door is open.

Scan Tool Reference

Control Module References for scan tool information

Circuit/System Verification

1. Ignition ON, observe the scan tool Driver Door Ajar Switch parameter while opening and closing the driver door. The parameter should change between Door Closed and Door Ajar.

   If the value does not change, refer to Driver Door Ajar Malfunction
2. With the passenger and rear doors closed, observe the scan tool Passenger Door Ajar Switch parameter while opening and closing each door. The parameter should change between Door Closed and Door Ajar.

   If the value does not change, refer to Passenger Door Ajar Malfunction.

Circuit/System Testing

Driver Door Ajar Malfunction

1. Ignition OFF, disconnect the harness connector at the right front door latch.
2. Test for less than 1 ohm between the ground circuit terminal 3 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Ignition ON, verify the scan tool Driver Door Ajar Switch parameter and is Door Closed.

   If not the specified value, test the signal circuit terminal 1 for a short to ground. If the circuit tests normal, replace the BCM.
4. Install a 3A fused jumper wire between the signal circuit terminal 1 and the ground circuit terminal 8. Verify the scan tool Driver Door Ajar Switch parameter is Door Ajar.

   If not the specified value, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
5. If all circuits test normal, test or replace the right front door latch.

Passenger Door Ajar Malfunction

1. Ignition OFF, disconnect the harness connector at the appropriate passenger or rear door

latch.

2. Test for less than 1 ohm between the ground circuit terminal listed below and ground.
   - Left rear door latch terminal 6
   - Right rear door latch terminal 3
   - Left front door latch terminal 8

   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Ignition ON, verify the scan tool Passenger Door Ajar Switch parameter is Door Closed.

   If not the specified value, test the signal circuit terminal listed below for a short to ground. If the circuit tests normal, replace the BCM.
   - Left rear door latch terminal 4
   - Right rear door latch terminal 1
   - Left front door latch terminal 6
4. Install a 3A fused jumper wire between the signal circuit terminal and the ground circuit terminal listed below. Verify the scan tool Passenger Door Ajar Switch parameter is Door Ajar.
   - Left rear door latch terminal 4 and terminal 6
   - Right rear door latch terminal 1 and terminal 3
   - Left front door circuit terminal 6 and terminal 8

   If not the specified value, test the appropriate signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
5. If all circuits test normal, test or replace the door latch.

Component Testing

1. Ignition OFF, disconnect the harness connector at the appropriate door latch.
2. With the switch in the open position, test for infinite resistance between the signal and the ground terminals listed below:
   - Right front door latch terminal 1 and terminal 3
   - Left rear door latch terminal 4 and terminal 6
   - Right rear door latch terminal 1 and terminal 3
   - Left front door latch terminal 6 and terminal 8

   If not the specified value, replace the door latch.
3. With the switch in the closed position, test for less than 2 ohms between the signal and the ground terminals listed below:
   - Right front door latch terminal 1 and terminal 3
   - Left rear door latchl terminal 4 and terminal 6
   - Right rear door latch terminal 1 and terminal 3
   - Left front door latch terminal 6 and terminal 8

   If greater than the specified range, replace the door latch.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

- Front Side Door Latch Replacement

- Rear Side Door Latch Replacement
- Control Module References for BCM replacement, setup, and programming

Symptoms - Vehicle Access

Important: The following steps must be completed before using the symptom tables.

1. Perform the Diagnostic System Check - Vehicle , before using the symptom tables in order to verify that all of the following are true:
   - There are no DTCs set.
   - The control module can communicate via GMLAN serial data.
2. Review the system description and operation in order to familiarize yourself with the system functions. Refer to the following:
   - Power Door Locks Description and Operation
   - Door Ajar Indicator Description and Operation
   - Luggage Compartment Description and Operation
   - Rear Hatch/Gate Description and Operation
   - Fuel Fill Door Description and Operation

Visual/Physical Inspection

- Inspect for aftermarket devices which could affect the operation of the power door locks, liftgate release or the rear compartment lid release. Refer to Checking Aftermarket Accessories.
- Inspect the easily accessible or visible system components for obvious damage or conditions which could cause the symptom.

Intermittent

Faulty electrical connections or wiring may be the cause of intermittent conditions. Refer to Testing for Intermittent Conditions and Poor Connections.

Symptom List

Refer to a symptom diagnostic procedure from the following list in order to diagnose the symptom:

- Door Ajar Indicator Malfunction
- Power Door Locks Malfunction
- Liftgate Release Malfunction
- Power Door Lock Key Cylinder Switches Malfunction
- Trunk Release Malfunction
- Fuel Filler Door Release Malfunction

Trunk Release Malfunction

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.
- Diagnostic Procedure Instructions provides an overview of each diagnostic category.

Diagnostic Fault Information

Circuit	Short to Ground	Open/High Resistance	Short to Voltage	Signal Performance
Trunk Release Relay B+	1	1	--	--
Trunk Release Switch Signal	B2730 00	2	2	--
Rear Compartment Lid Latch Control	1	1	1	--
Trunk Relay Control	B3265 00	B3265 00	B3265 00	--
Rear Compartment Lid Latch Ground	--	1	1	--
Rear Compartment Lid Release Switch Ground	--	2	2	--
1. Trunk release is inoperative from both the switch and keyless entry transmitter 2. Trunk release is inoperative only from switch				

Circuit/System Description

The rear compartment lid can be released by operating the rear compartment lid release switch or by pressing the rear compartment lid release button on the remote keyless entry transmitter. The gear selector must be in Park for the trunk to release.

The body control module (BCM) monitors the signal circuit to the rear compartment lid release switch. When the rear compartment lid release switch is pressed, the trunk release signal is pulled low within the BCM. In response, the BCM applies ground to the trunk relay control circuit, which energizes the coil side of the trunk relay. The switch side of the trunk relay then closes, supplying battery positive voltage through the relay and the control circuit to the rear compartment lid latch. The rear compartment lid latch, then releases the rear compartment lid so that it may be manually raised to an open position.

Scan Tool Reference

Control Module References for scan tool information

Circuit / System Verification

1. Ignition ON, observe the scan tool Trunk Switch parameter while pressing the rear compartment lid release switch. The parameter should change between Active and Inactive.
   If the value does not change, refer to Trunk Release Switch Malfunction.
2. Command the Trunk Release Test with a scan tool, the rear compartment lid latch should release the trunk lid.
   If the rear compartment lid latch does not release, refer to Rear Compartment Lid Latch Malfunction.

Circuit / System Testing

Trunk Release Switch Malfunction

1. Ignition OFF, disconnect the harness connector at the rear compartment lid release switch.
2. Test for less than 1 Ω between the ground circuit terminal B and ground.
   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Ignition ON, verify the scan tool Trunk Switch parameter is Inactive.
   If not the specified value, test the signal circuit terminal A for a short to ground. If the circuit tests normal, replace the BCM.
4. Install a 3A fused jumper wire between the signal circuit terminal A and the ground circuit terminal B. Verify the scan tool Trunk Switch parameter is Active.
   If not the specified value, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
5. If all circuits test normal, test or replace the rear compartment lid release switch.

Rear Compartment Lid Latch Malfunction

1. Ignition OFF, disconnect the TRUNK RELEASE relay.

2. Ignition ON, verify that a test lamp does not illuminate between the control circuit terminal 87 and ground.

   If the test lamp illuminates, test the control circuit for a short to voltage.
3. Verify that a test lamp illuminates between the B+ circuit terminal 85 and ground.

   If the test lamp does not illuminate, test the B+ circuit for a short to ground or an open/high resistance. If the circuit tests normal and the B+ circuit fuse is open, test the control circuit terminal 87 for a short to ground. If the circuit tests normal, test or replace the TRUNK RELEASE relay.
4. Verify that a test lamp illuminates between the B+ circuit terminal 30 and ground.

   If the test lamp does not illuminate, test the B+ circuit for an open/high resistance.
5. Ignition OFF, disconnect the harness connector at the rear compartment lid latch.
6. Test for less than 1 Ω between the ground circuit terminal 4 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
7. Connect the harness connector at the rear compartment lid latch.
8. Ignition ON, connect a 10A fused jumper wire between the B+ circuit terminal 30 and the control circuit terminal 87. Verify the rear compartment lid latch is activated.

   If the rear compartment lid latch does not activate, test the control circuit for an open/high resistance. If the circuit tests normal, test or replace the rear compartment lid latch.
9. Connect a test lamp between the B+ circuit terminal 85 and the control circuit terminal 86.
10. Command the Trunk Release Test ON and OFF with a scan tool. The test lamp should turn ON and OFF when changing between the commanded states.

    If the test lamp is always ON, test the control circuit for a short to ground. If the circuit tests normal, replace the BCM.

    If the test lamp is always OFF, test the control circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
11. If all circuits test normal, test or replace the TRUNK RELEASE relay.

Component Testing

Rear Compartment Lid Latch

1. Ignition OFF, disconnect the harness connector at the rear compartment lid latch.
2. Install a 10A fused jumper wire between the control terminal 3 and 12V. Install a jumper wire between the ground terminal 4 and ground. Verify the rear compartment lid latch activates.

   If the latch does not perform as specified, replace the rear compartment lid latch.

Rear Compartment Lid Release Switch

1. Ignition OFF, disconnect the harness connector at the rear compartment lid release switch.
2. Test for infinite resistance between the signal terminal A and the ground terminal B with the switch in the open position.

   If not the specified value, replace the rear compartment lid release switch
3. Test for less than 2 Ω between the signal terminal A and the ground terminal B with the switch in the closed position.

   If greater than the specified range, replace the rear compartment lid release switch.
4. Test for infinite resistance between each terminal and the lid release switch housing/case.

   If not the specified value, replace the rear compartment lid release switch.

Relay Test

1. Ignition OFF, disconnect the TRUNK RELEASE relay.
2. Test for 65-90 Ω between terminals 85 and 86.

   If not within the specified range, replace the relay.
3. Test for infinite resistance between the following terminals:
   - 30 and 86
   - 30 and 87
   - 30 and 85
   - 85 and 87

   If not the specified value, replace the relay.
4. Install a 10A fused jumper wire between relay terminal 85 and 12V. Install a jumper wire between relay terminal 86 and ground. Test for less than 2 Ω between terminals 30 and 87.

   If greater than the specified range, replace the relay.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

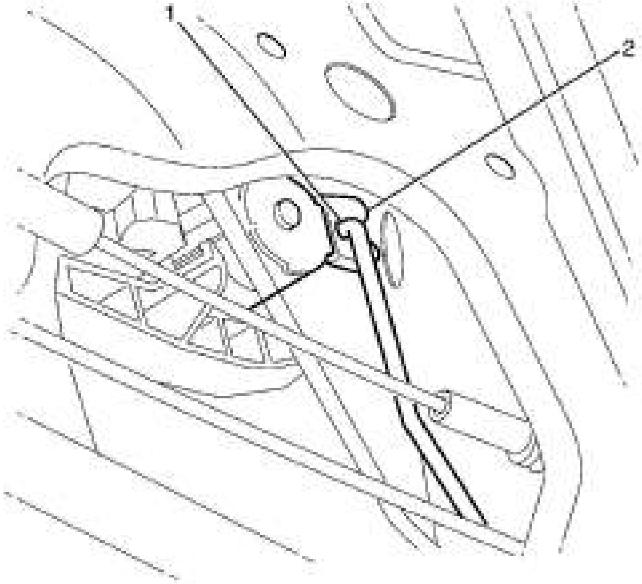
- Rear Compartment Lid Latch Replacement
- Rear Compartment Lid Release Switch Replacement
- Relay Replacement
- Control Module References for BCM replacement, setup and programming

Door Lock Cylinder Replacement

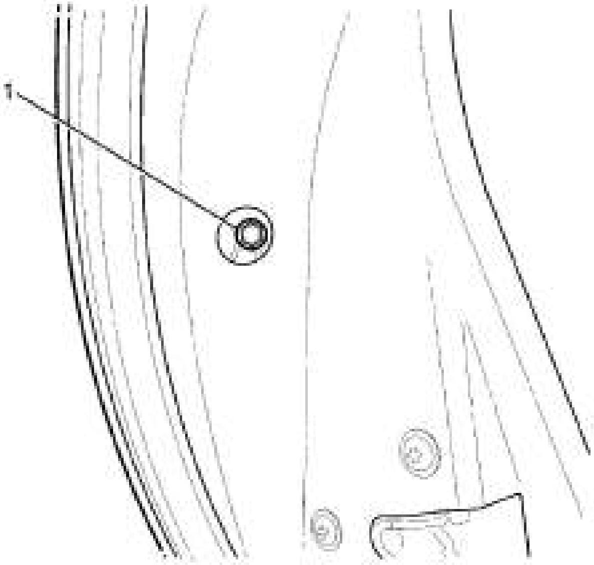
Removal Procedure

Important: Do not attempt repairs in order to correct lock cylinder discrepancies. Replace the lock cylinder.

1. Remove the door trim panel. Refer to Front Side Door Trim Panel Replacement.
2. Pull the rear half of the water deflector away from the drivers door panel in order to access the door lock cylinder.

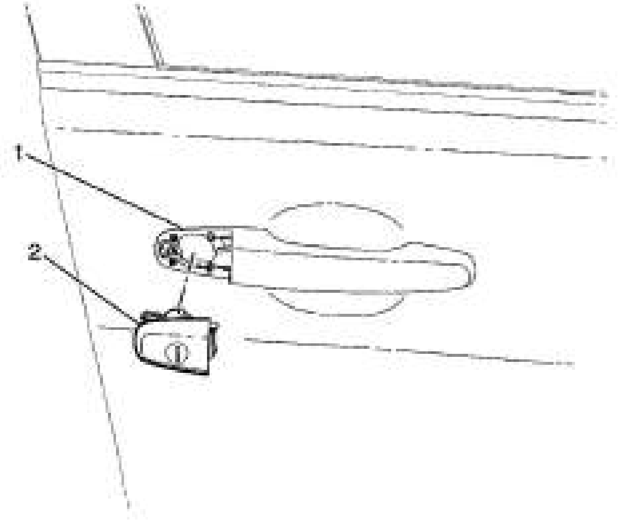


3. Remove the lock actuating rod (1) from the lock cylinder (2).



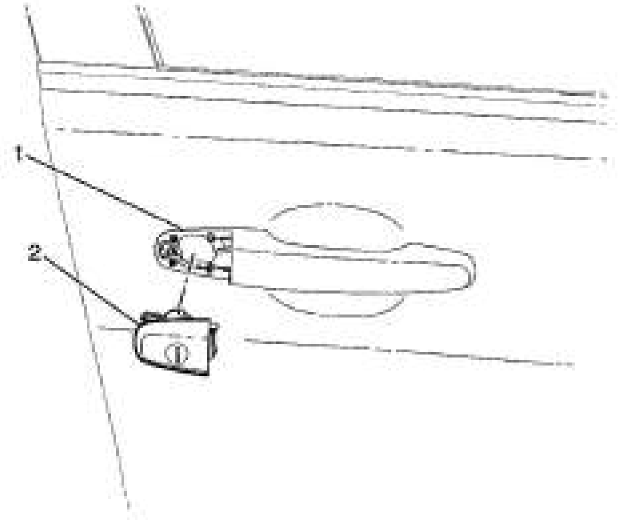
Important: Remove the rubber blanking grommet to expose lock cylinder retaining bolt (1).

4. Remove the lock cylinder to outside door handle retaining bolt (1).



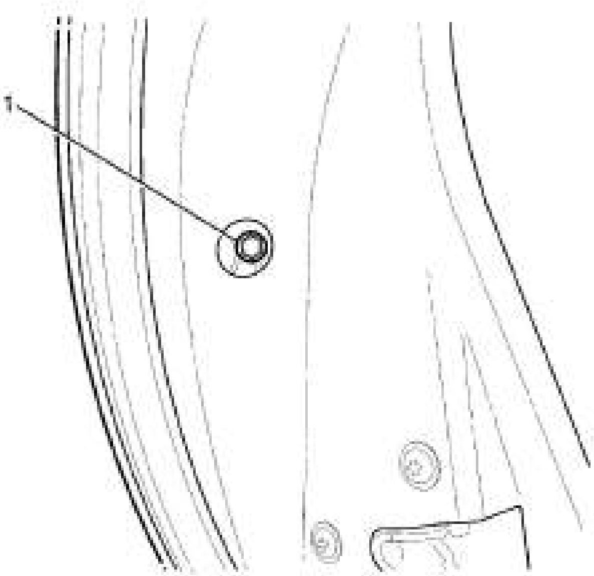
5. Remove the lock cylinder (2) from the outside door handle (1).

Installation Procedure



1. Position the lock cylinder (2) to the outside door handle (1).

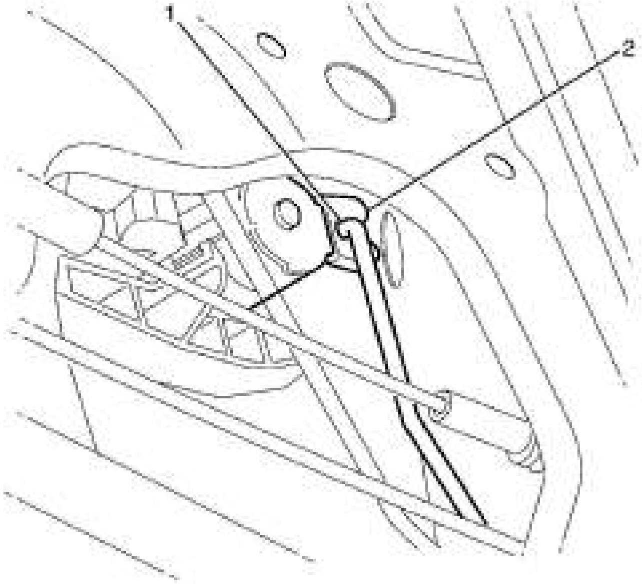
Notice: Refer to Fastener Notice in the Preface section.



2. Install the lock cylinder to outside door handle retaining bolt (1).

   Tighten
   Tighten the bolt to 4 N-m (35 lb in).

3. Install the rubber blanking grommet to the door.



Important: The lock actuating rod (2) pushes into the lock cylinder retaining clip (1).

4. Install the lock actuating rod (1) to the lock cylinder retaining clip (2) (if fitted).

Important: Firmly press the water deflector where adhesive is applied to make sure water tight bond.

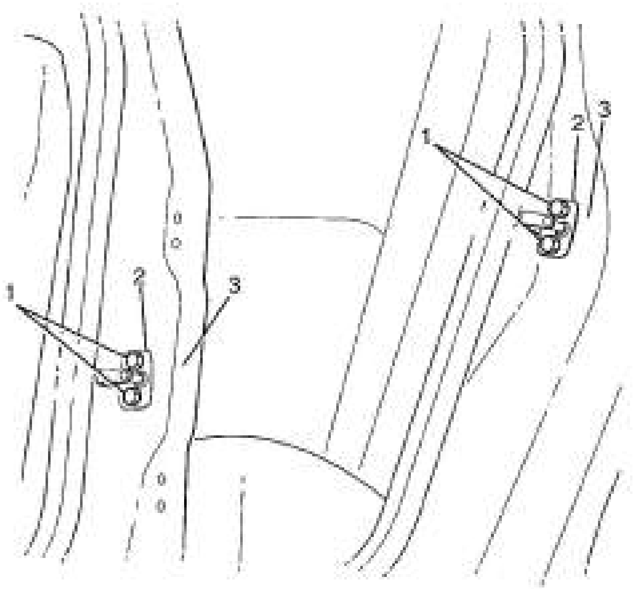
5. Install the rear half of the water deflector to the door panel.
6. Install the door trim panel. Refer to Front Side Door Trim Panel Replacement.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Vehicle Access | Repair Instructions | **Document ID: 1986629**

Door Lock Striker Adjustment

Caution: Striker alignment is crucial for proper operation of the door systems. Do not hit the striker with a hammer or force alignment in any other way. Failure to properly adjust striker will result in excessive door efforts or extensive damage to door system operation which could result in personal injury.

Important: If the door vibrates vertically on opening (shimmy's), adjust the striker higher relative to the latch and achieve beltline flushness by other means.



1. Loosen the door striker to pillar retaining screws (1).
2. Pull the door striker (2) outboard on the pillar (3) to the end of the adjustment travel.

Important: The door striker retaining screws (1) must not be fully tightened at this stage.

3. Tighten the door striker retaining screws (1) so that the door striker (2) can still be moved.
4. Hold the outside door handle out and gently push the door flush against the body in order to locate the door striker (2).
5. Slowly open the door.

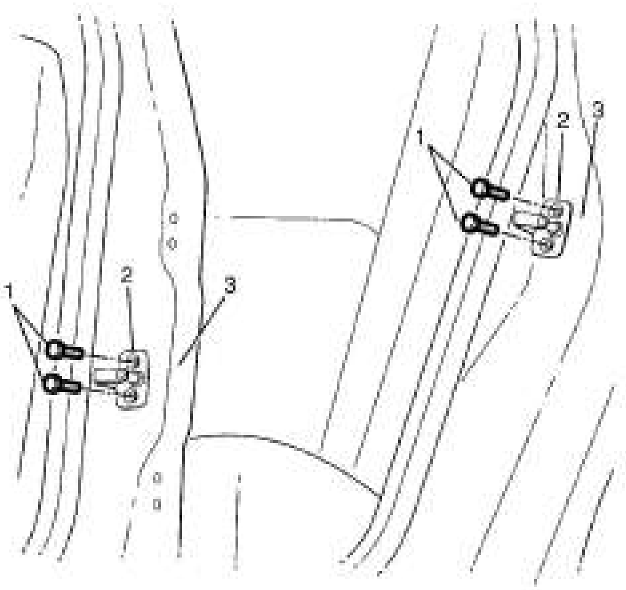
Notice: Refer to Fastener Notice in the Preface section.

6. Tighten the door striker to pillar retaining screws (2).

Tighten
Tighten the door striker screws to 13 N-m (115 lb in).

Door Striker Replacement

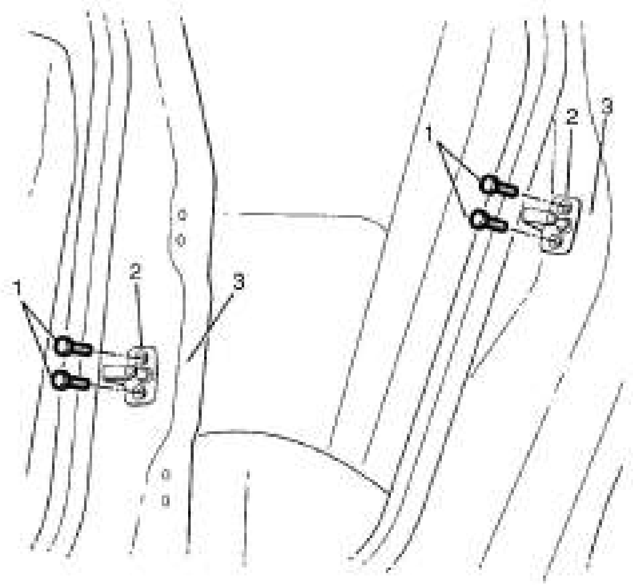
Removal Procedure



Important: Mark the door striker (2) location before removing the door striker to pillar retaining screws (1) to aid in installation.

1. Remove the door striker to pillar retaining screws (1).
2. Remove the door striker (2) from the pillar (3).

Installation Procedure



Important: The door striker to pillar retaining screws (1) must not be fully tightened at this stage.

Important: Align the door striker (2) to the marks made to the pillar (3) prior to removal.

1. Install the door striker to pillar retaining screws (1).

   Caution: Striker alignment is crucial for proper operation of the door systems. Do not hit the striker with a hammer or force alignment in any other way. Failure to properly adjust striker will result in excessive door efforts or extensive damage to door system operation which could result in personal injury.

2. Align the door striker (2). Refer to Door Lock Striker Adjustment in Doors.

   Notice: Refer to Fastener Notice in the Preface section.

3. Tighten the door striker (2) to pillar retaining screws (1).

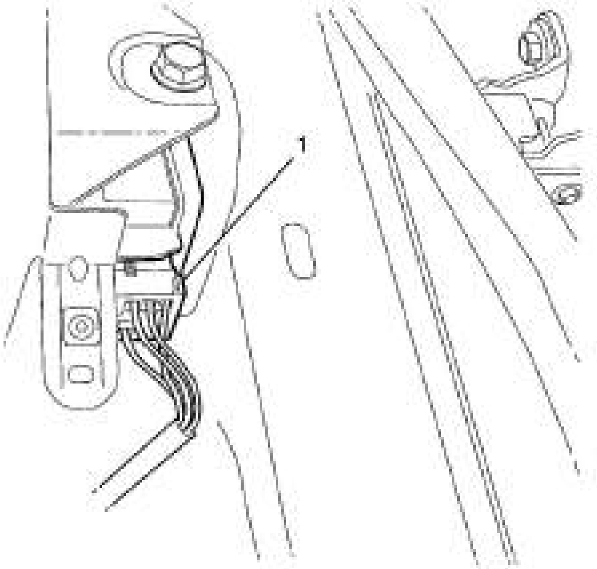
   Tighten
   Tighten the door striker screws to 13 N-m (115 lb in).

Front Door Module Replacement

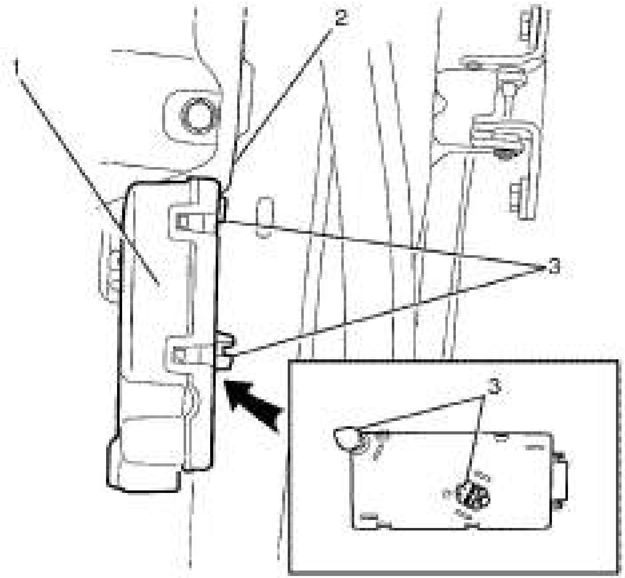
Removal Procedure

Caution: Refer to Safety Glasses Caution in the Preface section.

1. Disconnect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
2. Remove the closeout/insulator panel. Refer to Instrument Panel Insulator Panel Replacement - Right Side.
3. Remove the knee bolster. Refer to Knee Bolster Replacement.
4. Remove the hinge pillar trim panel. Refer to Body Hinge Pillar Trim Panel Replacement.



5. Disconnect the door module electrical connector (1).

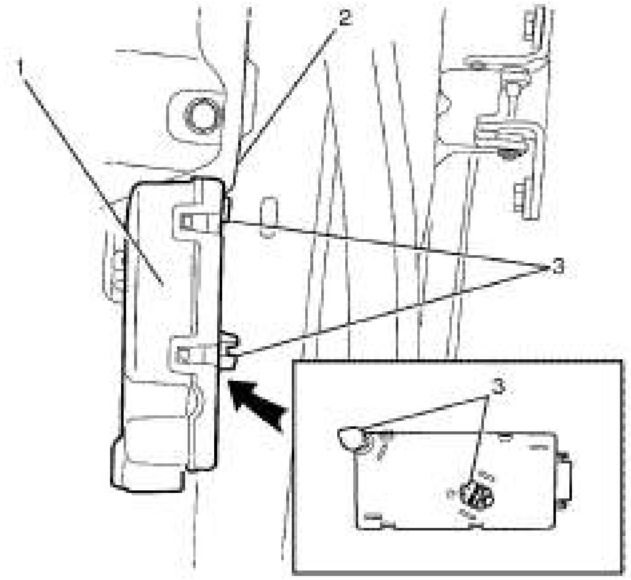


Important: The door module is located on the right side just under the instrument panel attached to the body.

Important: Pry the door module (1) with a suitable flat bladed tool then manoeuvre to release top locating retainer (3).

6. Pry the door module (1) with a suitable flat bladed tool to release the retainers (3).
7. Remove the door module (1) from the vehicle (2).

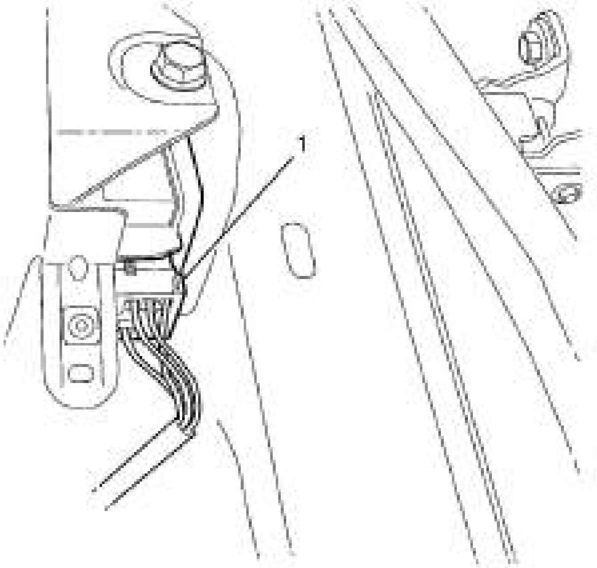
Installation Procedure



1. Position the door module (1) to the vehicle (2).

Important: Locate the top retainer first then press to engage the lower retainer.

2. Install the door module (1) and push to secure the retainers (3).

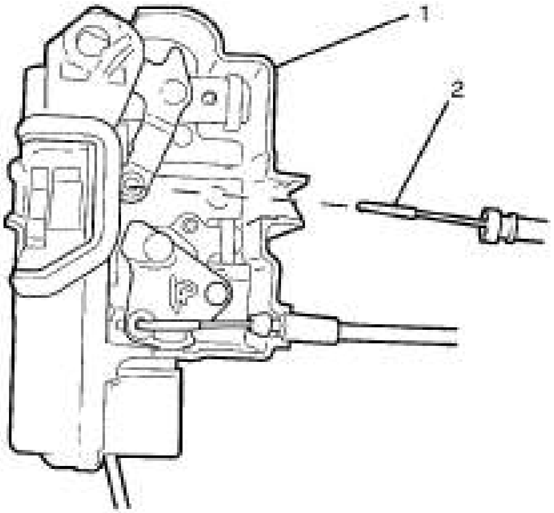


3. Connect the door module electrical connector (1).
4. Install the hinge pillar trim panel. Refer to Body Hinge Pillar Trim Panel Replacement.
5. Install the knee bolster. Refer to Knee Bolster Replacement.
6. Install the closeout/insulator panel. Refer to Instrument Panel Insulator Panel Replacement - Right Side.
7. Connect the negative battery cable. Refer to Battery Negative Cable Disconnection and Connection.
8. If re-programming is required. Refer to Control Module References.

Front Side Door Inside Handle Cable Replacement

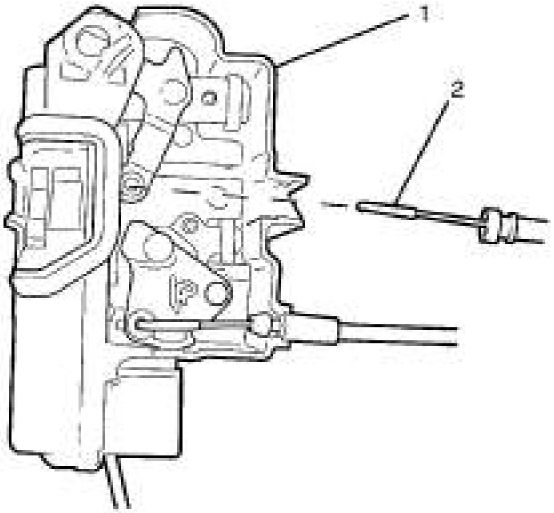
Removal Procedure - Door Handle Cable

1. Remove the door trim panel. Refer to Front Side Door Trim Panel Replacement.
2. Remove the water deflector. Refer to Front Side Door Water Deflector Replacement.
3. Remove the door latch. Refer to Front Side Door Latch Replacement.



4. Disconnect the door handle cable (2) from the door latch (1).

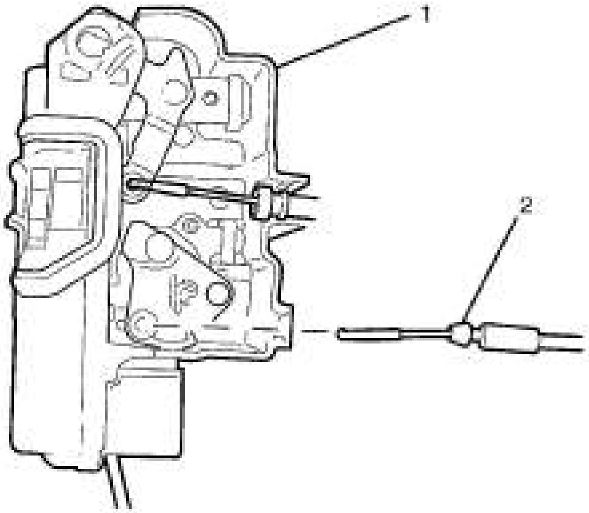
Installation Procedure - Door Handle Cable



1. Connect the door handle cable (2) to the door latch (1).
2. Install the door latch. Refer to Front Side Door Latch Replacement.
3. Install the water deflector. Refer to Front Side Door Water Deflector Replacement.
4. Install the door trim panel. Refer to Front Side Door Trim Panel Replacement.

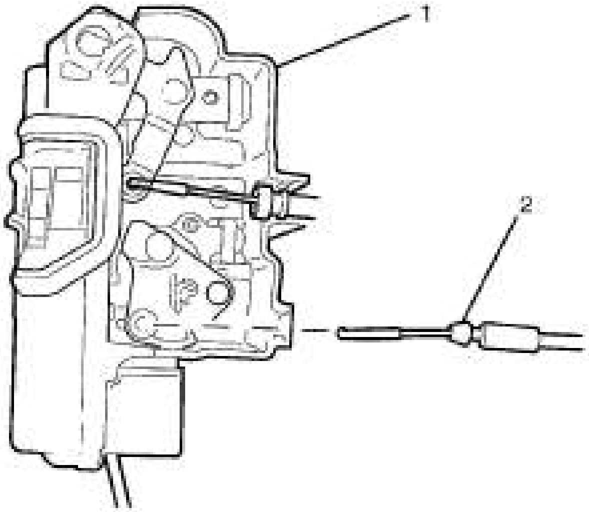
Removal Procedure - Lock Cable

1. Remove the door trim panel. Refer to Front Side Door Trim Panel Replacement.
2. Remove the water deflector. Refer to Front Side Door Water Deflector Replacement.
3. Remove the door latch. Refer to Front Side Door Latch Replacement.



4. Disconnect the door lock cable (2) from the door latch (1).

Installation Procedure - Lock Cable



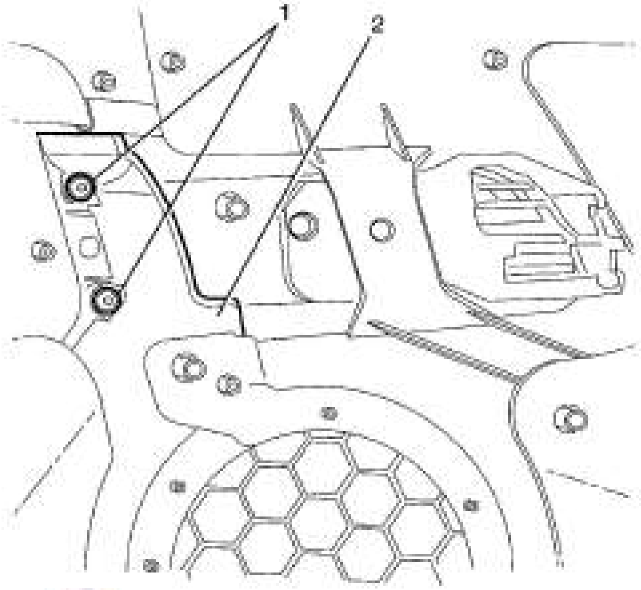
1. Connect the lock handle cable (2) to the door latch (1).
2. Install the door latch. Refer to Front Side Door Latch Replacement.
3. Install the water deflector. Refer to Front Side Door Water Deflector Replacement.
4. Install the door trim panel. Refer to Front Side Door Trim Panel Replacement.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Vehicle Access | Repair Instructions | Document ID: 1986619

Front Side Door Inside Handle Replacement

Removal Procedure

1. Remove the door trim panel. Refer to Front Side Door Trim Panel Replacement.



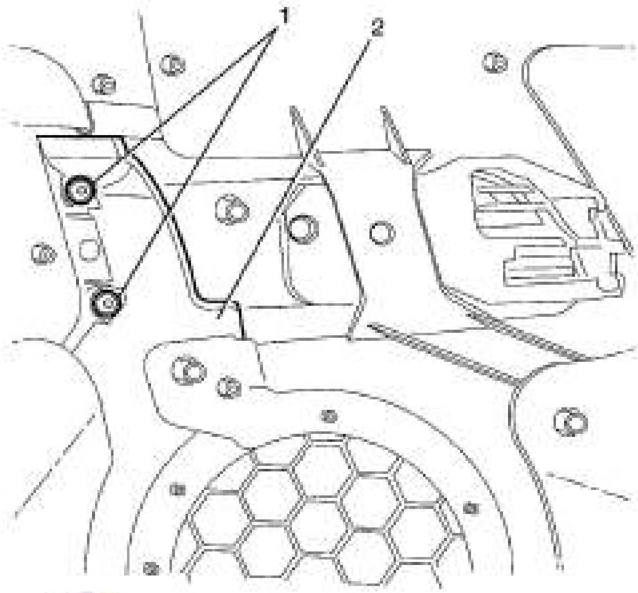
Important: The inside door handle to door trim panel retaining screws (1) are on the inside of the door trim panel (2).

2. Remove the inside door handle to door trim panel retaining screws (1).
3. Remove the inside door handle from the door trim panel (2).

Installation Procedure

1. Position the inside door handle to the door trim panel.

Notice: Refer to Fastener Notice in the Preface section.



Important: The inside door handle to door trim panel retaining screws (1) are on the inside of the door trim panel (2).

2. Install the inside door handle to door trim panel retaining screws (1).

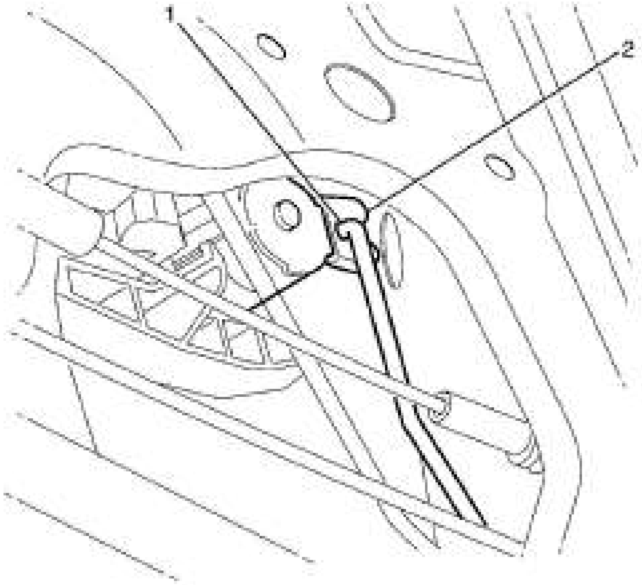
   Tighten
   Tighten the screws to 3 N-m (27 lb in).

3. Install the door trim panel (2). Refer to Front Side Door Trim Panel Replacement.

Front Side Door Latch Replacement

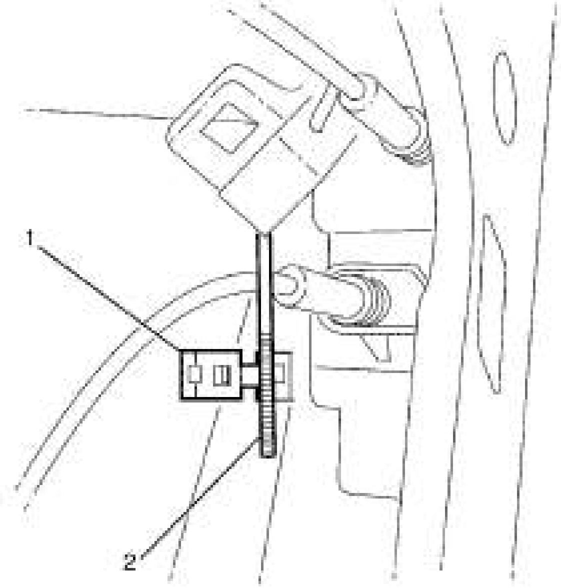
Removal Procedure

1. Raise the window to the full up position.
2. Remove the door trim panel. Refer to Front Side Door Trim Panel Replacement.
3. Pull the rear half of the water deflector away from the door panel in order to access the door handle and door lock.



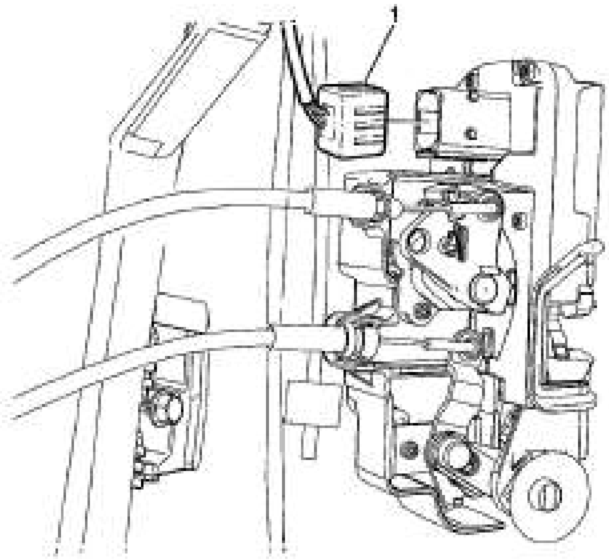
Important: The lock actuating rod (1) is only fitted to the drivers door handle.

4. Remove the lock actuating rod (1) from the door lock cylinder (2) (if fitted).

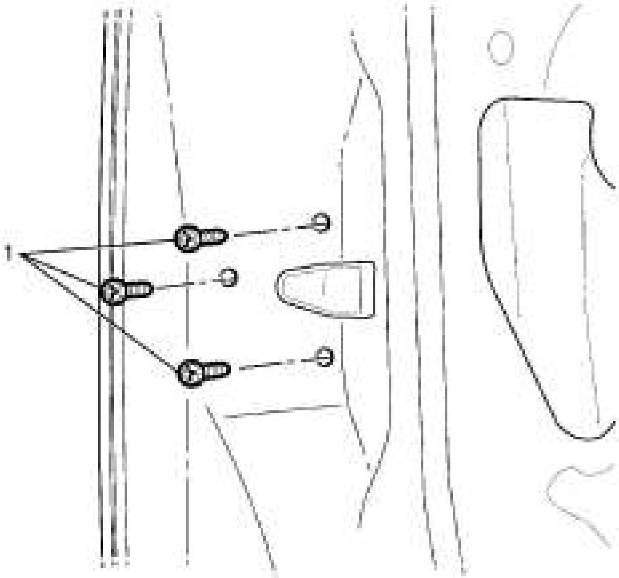


Important: Pry the outside door handle rod retaining clip (1) using a suitable tool.

5. Disconnect the outside door handle rod (2) from the door handle rod retaining clip (1).



6. Disconnect the door latch electrical connector (1).



Important: The door latch to door retaining screws (2) are single use parts and must be discarded after use.

Important: Support door latch when removing the door latch to door retaining screws (1).

7. Remove the door latch to door retaining screws (1).

   Discard the screws.

8. Remove the door latch from the door with the inside door handle cable, inside door lock cable and lock actuator rod (if fitted) attached.
9. Disconnect the inside door handle cable and inside door lock cable from the door latch. Refer to Front Side Door Inside Handle Cable Replacement.
10. Disconnect the lock rod (if fitted) from the door latch.

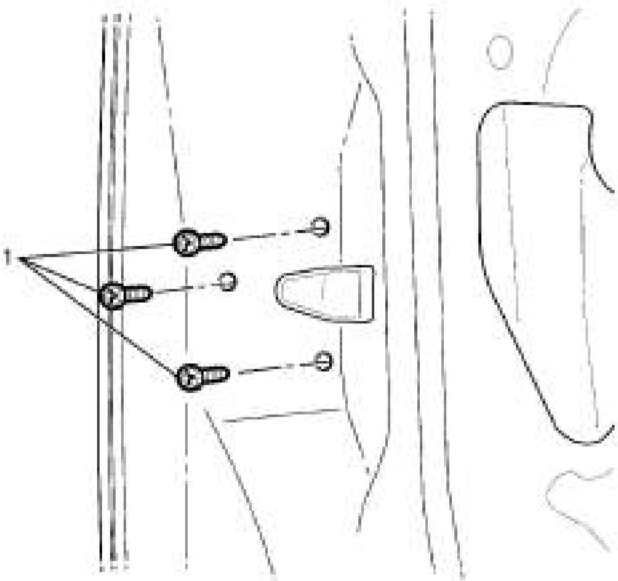
Installation Procedure

1. Connect the lock rod (if fitted) to the door latch.
2. Connect the inside door handle cable and inside door lock cable to the door latch. Refer to Front Side Door Inside Handle Cable Replacement.

   Important: Position the door latch through the door cavity and support.

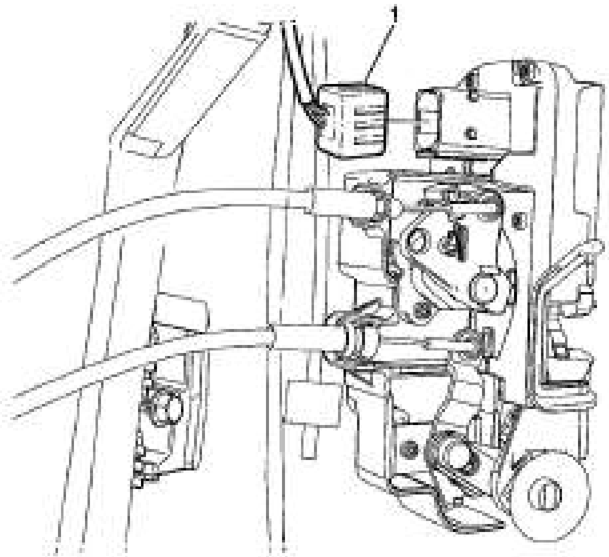
3. Position the door latch into the door.

   Notice: Refer to Fastener Notice in the Preface section.

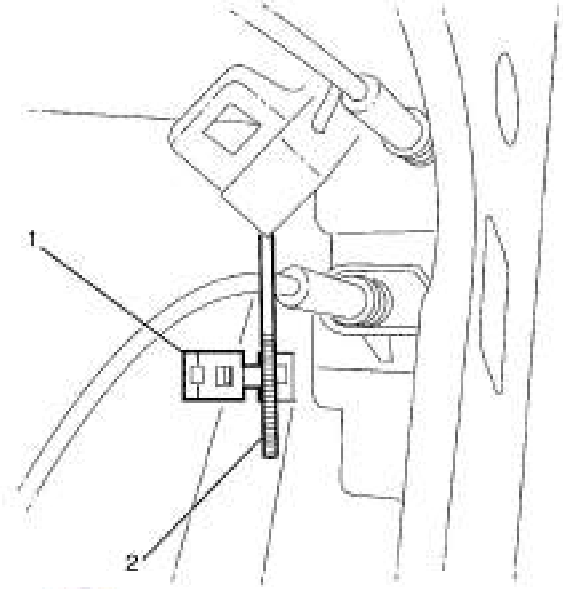


4. Install the door latch to door NEW retaining screws (1).

   Tighten
   Tighten the screws to 13 N-m (115 lb in).

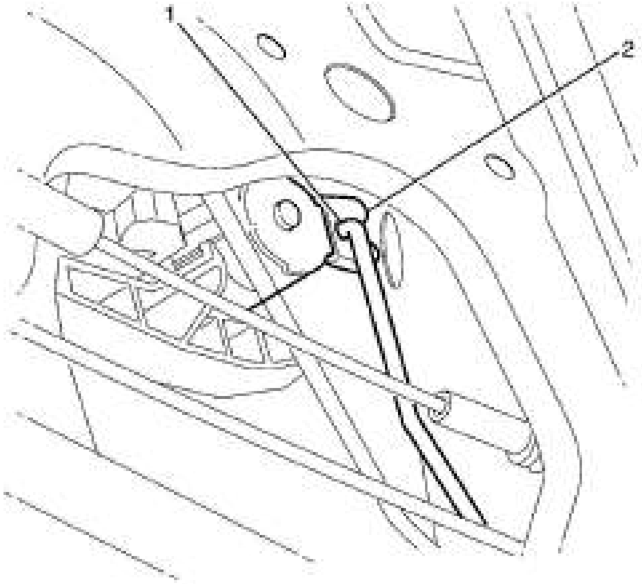


5. Connect the door latch electrical connector (1).



Important: Attach the door handle rod retaining clip (1) by pressing clip together over door handle rod until an audible click is heard.

6. Connect the outside door handle rod (2) to the door handle rod retaining clip (1).



Important: The lock actuating rod (2) pushes into the lock cylinder retaining clip (1).

7. Install the lock actuating rod (1) to the lock cylinder retaining clip (2) (if fitted).
8. Inspect for the correct operation of the door handle, lock cylinder (if fitted), and door latch.

Important: Firmly press the water deflector where adhesive is applied to make sure water tight bond.

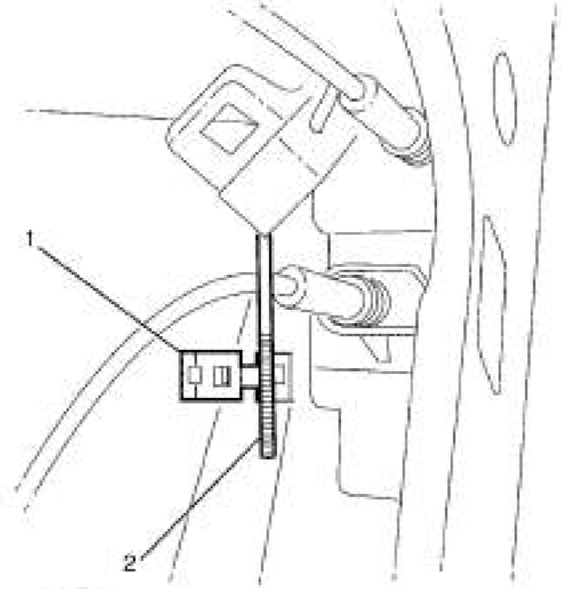
9. Install the rear half of the water deflector to the door panel.
10. Install the door trim panel. Refer to Front Side Door Trim Panel Replacement.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Vehicle Access | Repair Instructions | **Document ID: 1989258**

Front Side Door Outside Handle Replacement

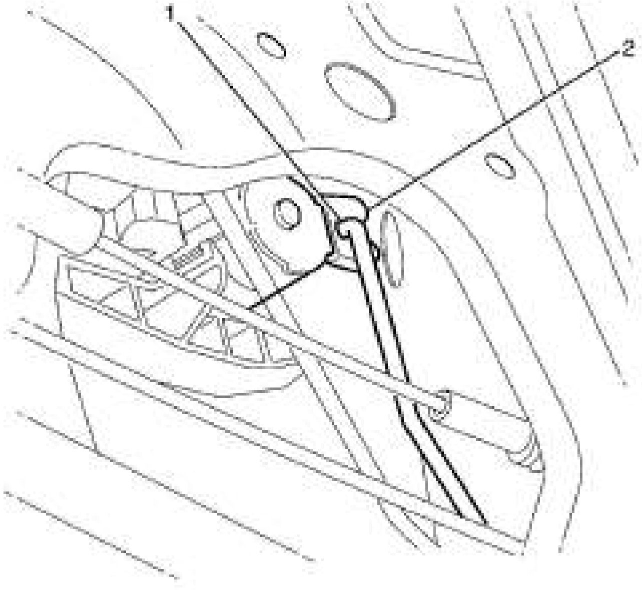
Removal Procedure

1. Remove the door trim panel. Refer to Front Side Door Trim Panel Replacement.
2. Pull the rear half of the water deflector away from the door panel in order to access the outside door handle.

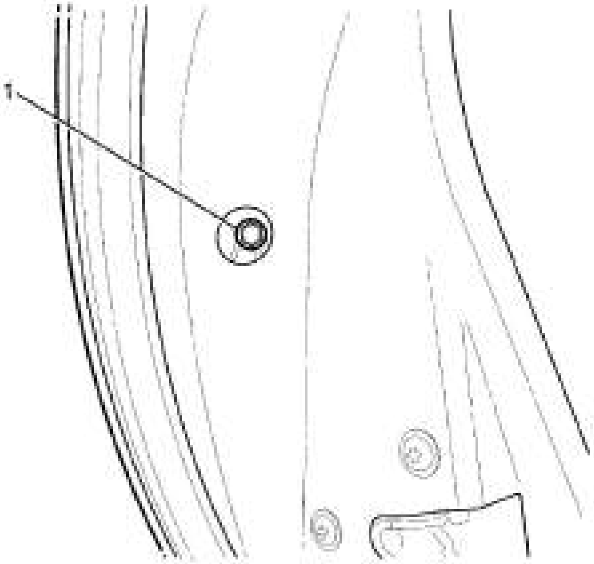


Important: Pry the outside door handle rod retaining clip (1) using a suitable tool.

3. Disconnect the outside door handle rod (2) from the door handle rod retaining clip (1).

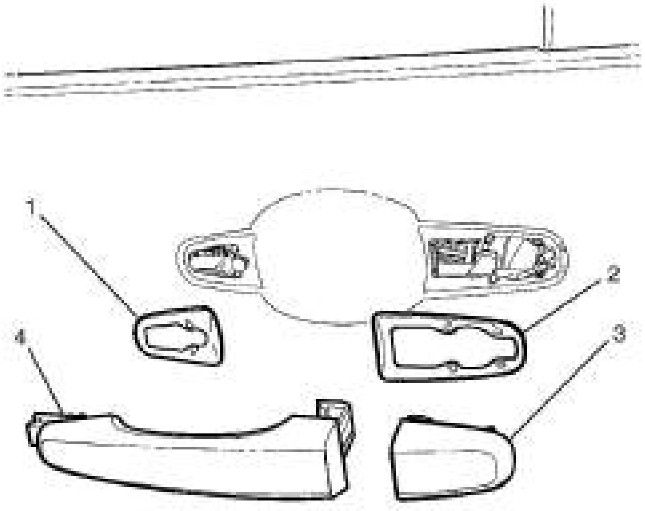


4. Remove the lock actuating rod (1) from the lock cylinder (2) (if fitted).



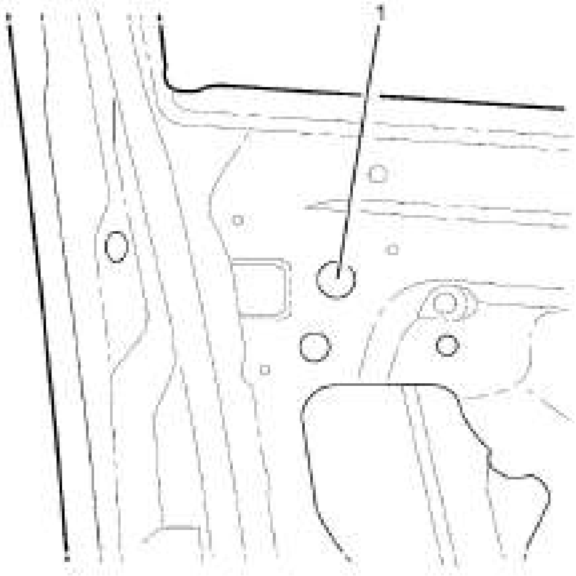
Important: Remove the rubber blanking grommet to allow access to the retaining bolt (1).

5. Remove the outside door handle to door retaining bolt (1).



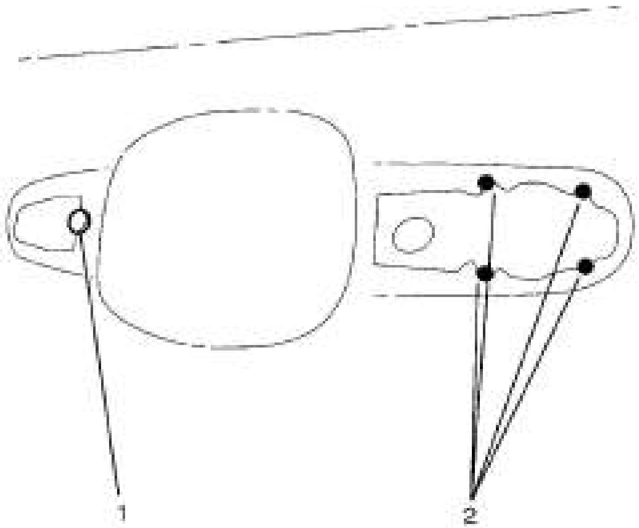
Important: Replace the gaskets (2, 3) when replacing the outside door handle (1, 4).

6. Remove the outside door handle (1, 4) from the door.



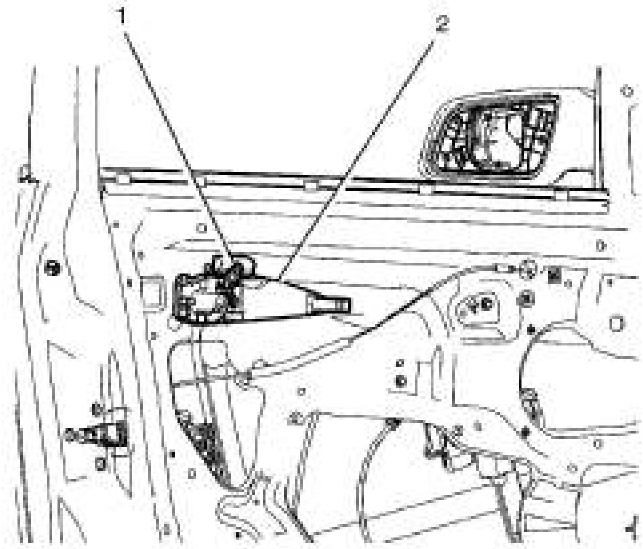
Important: The outside door handle retaining nut (1) must be loosened to remove the inner part of the outer door handle.

7. Loosen the outside door handle retaining nut (1).
8. Push on the outside door handle retaining nut and stud to relieve pressure between the inner part of the door handle and the door.



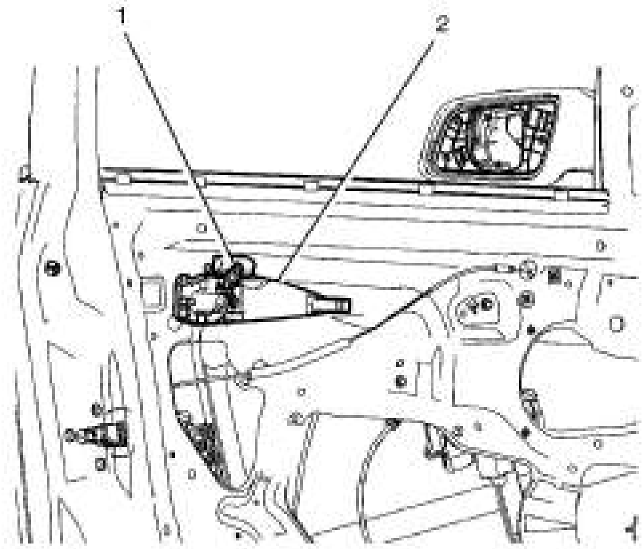
Important: Push the retaining tabs (2) inwards to release them then push the inner handle towards the front of the car to release the retaining pin (1).

9. Remove the inner part of the outer door handle (1, 2).

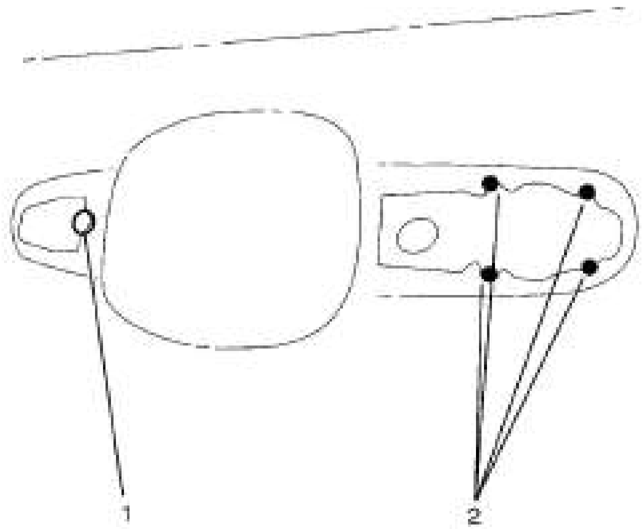


10. Remove the inner part (1) of the outer door handle from the door (2).

Installation Procedure



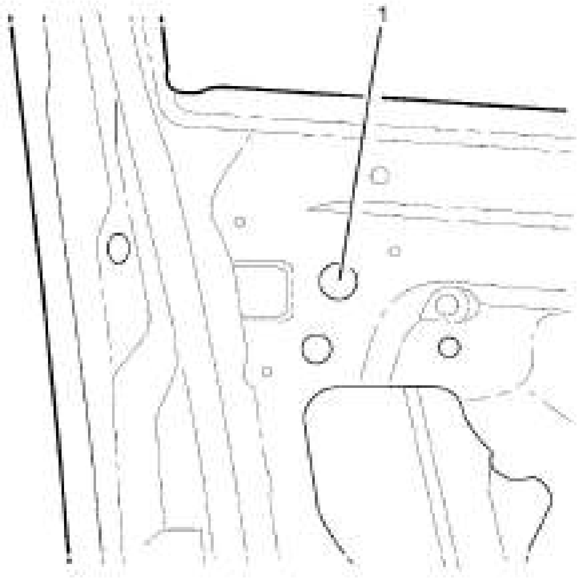
1. Position the inner part (1) of the outer door handle to the door (2).



Important: Lock in the retaining pin (1) by pushing towards the rear of the car then outwards to engage the retaining tabs (2).

2. Position the inner part of the outer door handle (1, 2).

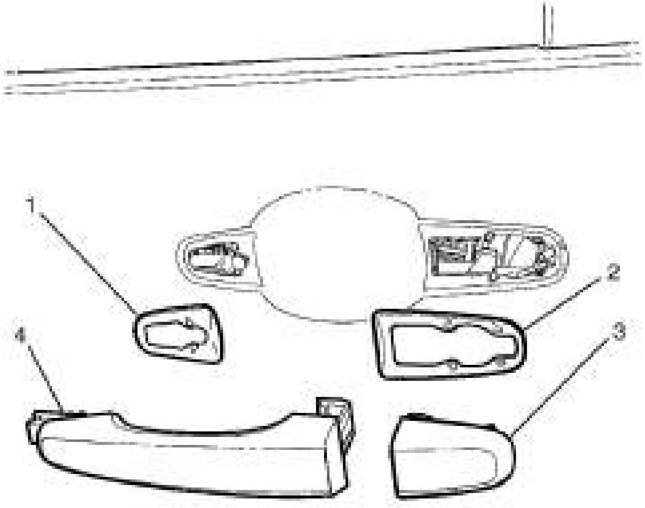
Notice: Refer to Fastener Notice in the Preface section.



Important: The outside door handle retaining nut (1) must be tightened to fasten the inner part of the outer door handle.

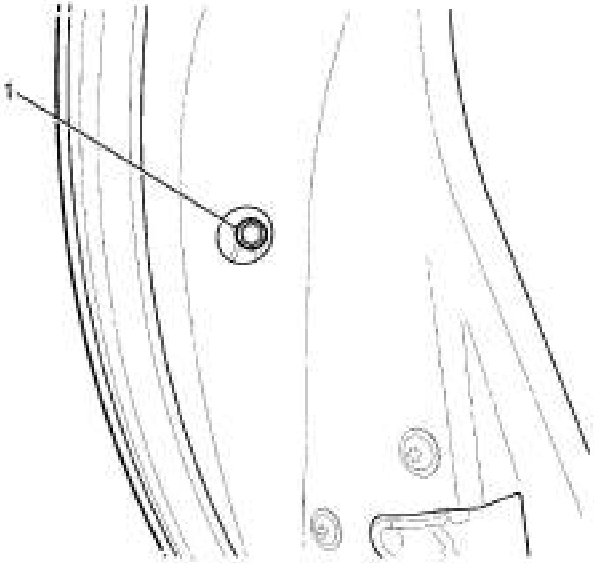
3. Tighten the outside door handle retaining nut (1).

   Tighten
   Tighten the bolt to 4 N-m (35 lb in).



Important: Replace the gaskets (2, 3) when replacing the outside door handle (1, 4).

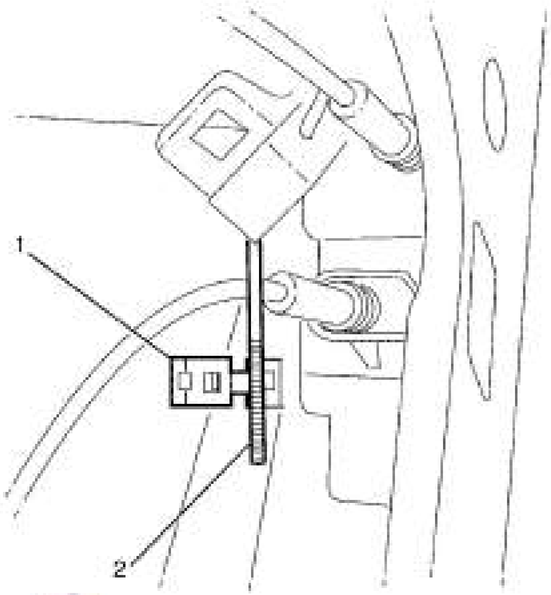
4. Position the outside door handle (1,4) to the door.



5. Install the outside door handle to door and retaining bolt (1).

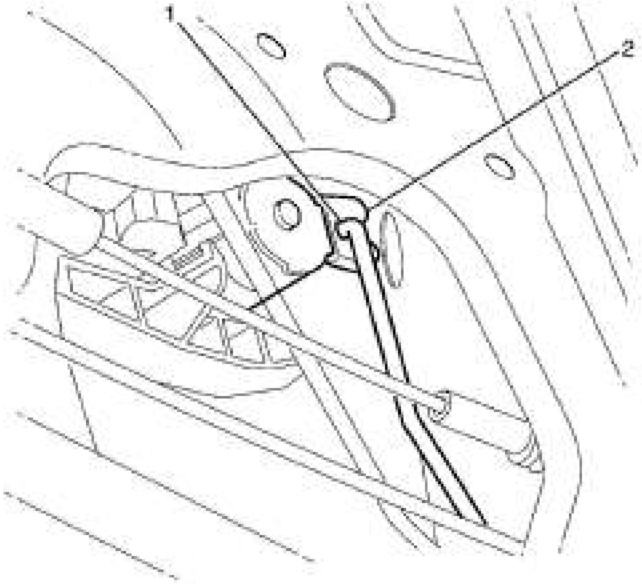
   Tighten

Tighten the bolt to 4 N-m (35 lb in).



Important: Attach the door handle rod retaining clip (1) by pressing clip together over door handle rod until an audible click is heard.

6. Connect the outside door handle rod (2) to the door handle rod retaining clip (1).



Important: The lock actuating rod (2) pushes into the lock cylinder retaining clip (1).

7. Install the lock actuating rod (1) to the lock cylinder retaining clip (2) (if fitted).

Important: Firmly press the water deflector where adhesive is applied to make sure water tight bond.

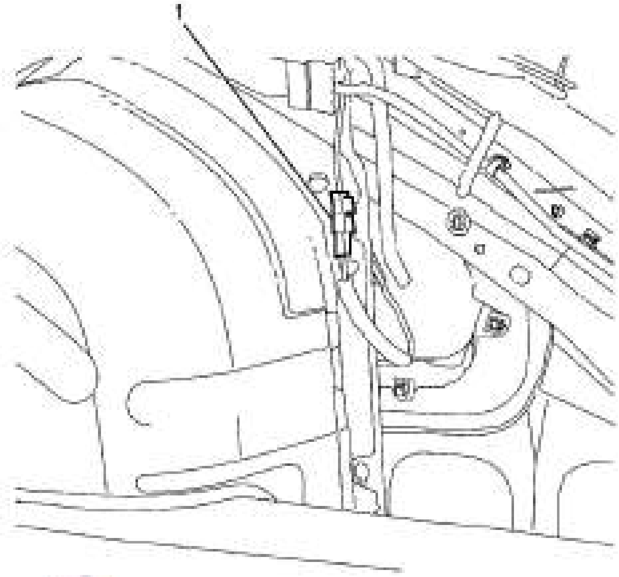
8. Install the rear half of the water deflector to the door panel.
9. Install the rubber blanking grommet.
10. Install the door trim panel. Refer to Front Side Door Trim Panel Replacement.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Vehicle Access | Repair Instructions | **Document ID: 2067569**

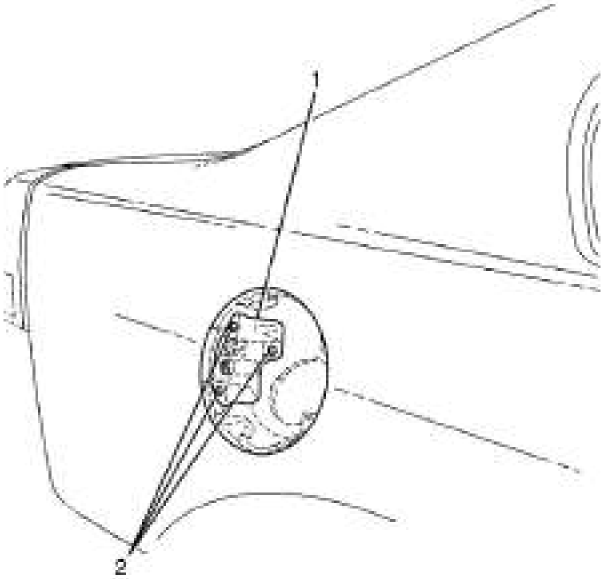
Fuel Tank Filler Door Lock Actuator Replacement (Sedan)

Removal Procedure

1. Remove the rear compartment side trim (right) panel. Refer to Rear Compartment Side Trim Panel Replacement



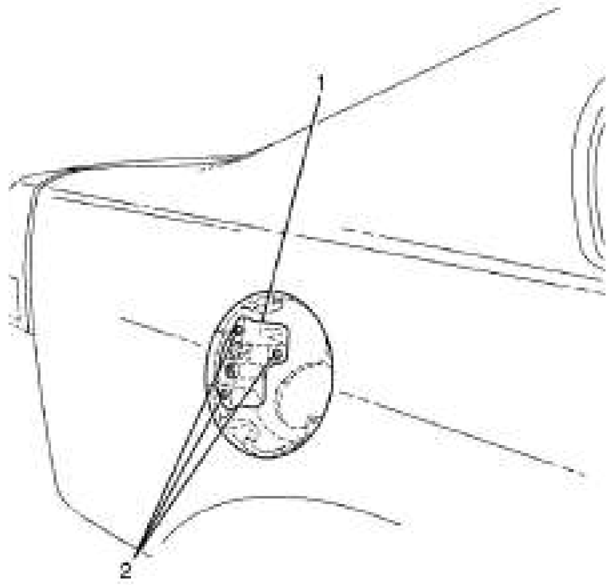
2. Disconnect the electrical connector (1) to the fuel filler door release actuator.



3. Remove the fuel filler door release actuator to fuel filler neck retaining screws (2).

4. Remove the fuel filler door release actuator (1) from the upper fuel filler neck.

Installation Procedure

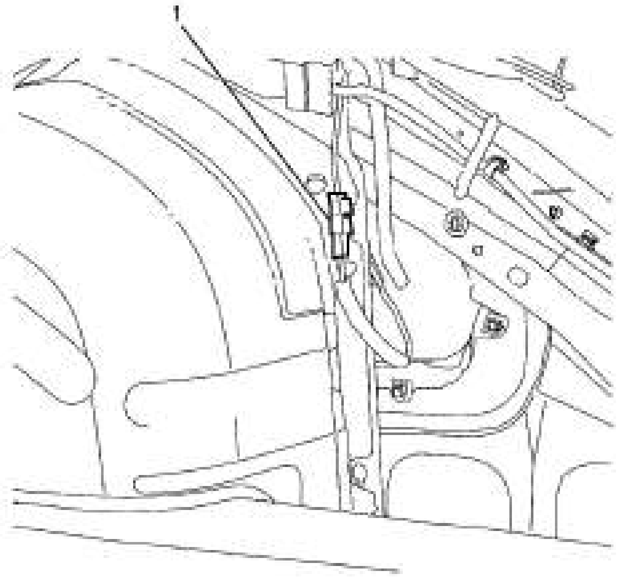


1. Install the fuel filler door release actuator (1) to the upper fuel filler neck.

   Notice: Refer to Fastener Notice in the Preface section.

2. Install the fuel filler door release actuator to upper fuel filler neck retaining screws (2).

   Tighten
   Tighten the screws to 2 N·m (18 lb in).



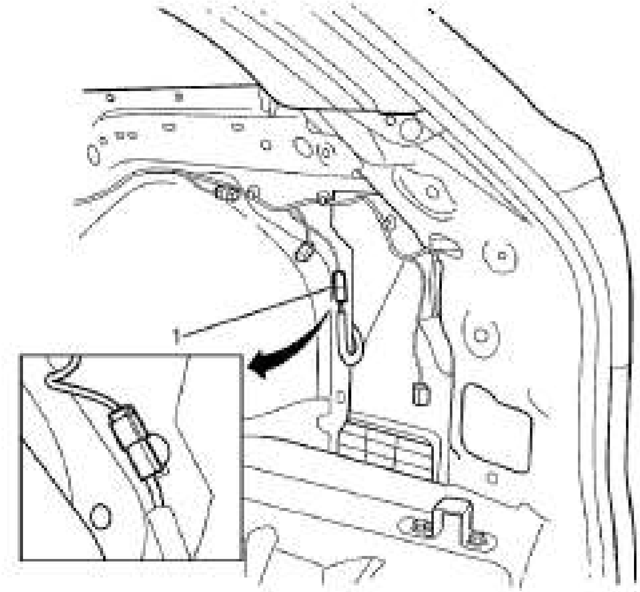
3. Connect the electrical connector (1) to the fuel filler door release actuator.
4. Install the rear compartment side trim (right) panel. Refer to Rear Compartment Side Trim Panel Replacement

Fuel Tank Filler Door Lock Actuator Replacement (Sportwagon)

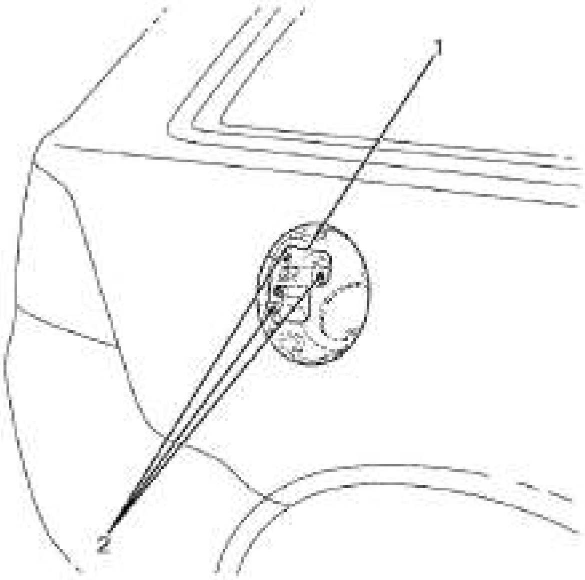
Removal Procedure

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Install a suitable liftgate brace to the vehicle.
2. Remove the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.
3. Remove the luggage shade. Refer to Luggage Shade Replacement.
4. Remove the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
5. Remove the right hand side load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
6. Remove the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
7. Remove the right hand side quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.

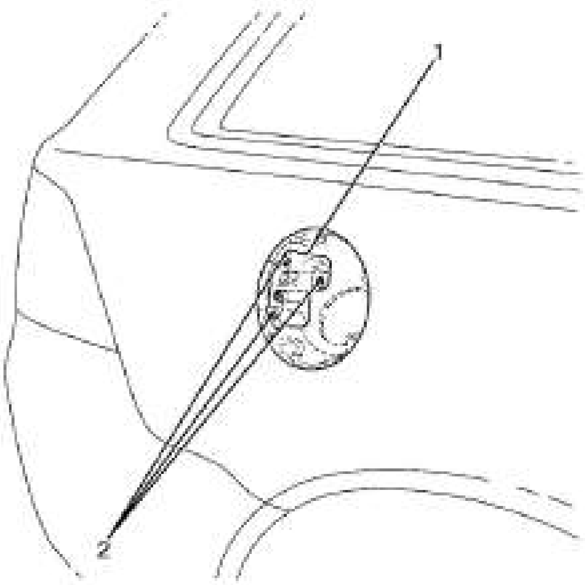


8. Disconnect the electrical connector (1) from the fuel filler door release actuator.



9. Remove the fuel filler door release actuator to upper fuel filler neck retaining screws (2).
10. Remove the fuel filler door release actuator (1) from the upper fuel filler neck.

Installation Procedure

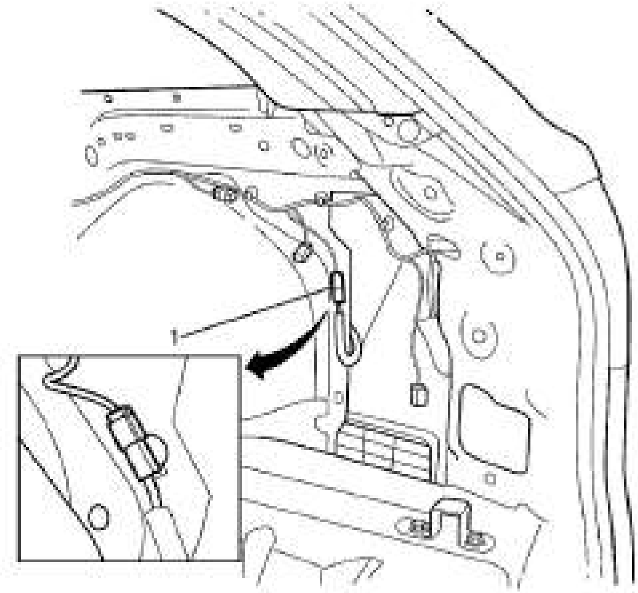


1. Install the fuel filler door release actuator (1) to the upper fuel filler neck.

   Notice: Refer to Fastener Notice in the Preface section.

2. Install the fuel filler door release actuator to upper fuel filler neck retaining screws (2).

Tighten
Tighten the screws to 2 N·m (18 lb in).



3. Connect the electrical connector (1) to the fuel filler door release actuator.
4. Install the quarter inner trim finish panel. Refer to Quarter Inner Trim Finish Panel Replacement.
5. Install the load floor front panel carpet. Refer to Load Floor Front Panel Carpet Replacement.
6. Install the right hand side load floor stationary panel carpet. Refer to Load Floor Stationary Panel Carpet Replacement.
7. Install the rear compartment floor panel carpet. Refer to Rear Compartment Floor Panel Carpet Replacement.
8. Install the luggage shade. Refer to Luggage Shade Replacement.
9. Install the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

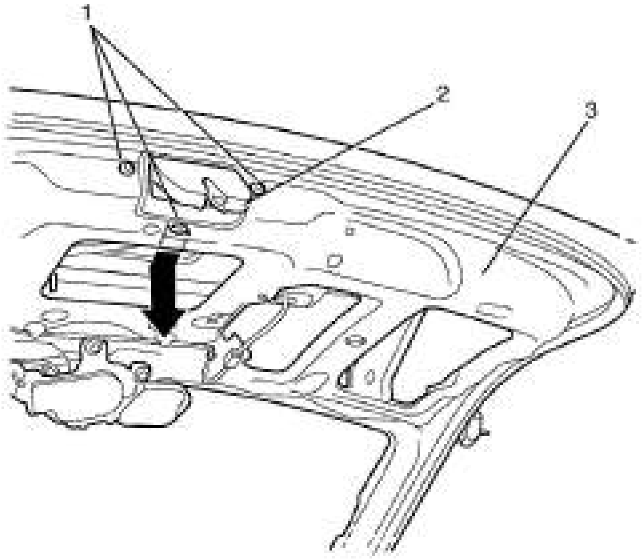
10. Remove the suitable liftgate brace from the vehicle.

Liftgate Latch Replacement

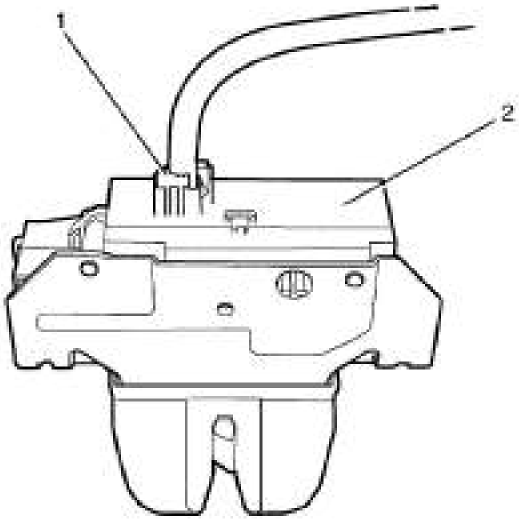
Removal Procedure

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Install a suitable liftgate brace to the vehicle.
2. Remove the liftgate window side garnish moulding. Refer to Liftgate Window Side Garnish Molding Replacement.
3. Remove the liftgate window lower garnish moulding. Refer to Liftgate Window Lower Garnish Molding Replacement.
4. Remove the liftgate trim panel. Refer to Liftgate Trim Panel Replacement.

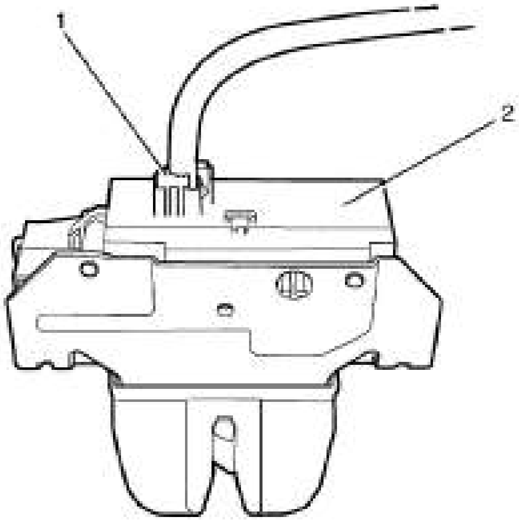


5. Remove the liftgate latch to liftgate retaining bolts (1).
6. Manoeuvre the liftgate latch (2) from the liftgate (3) through the access hole.

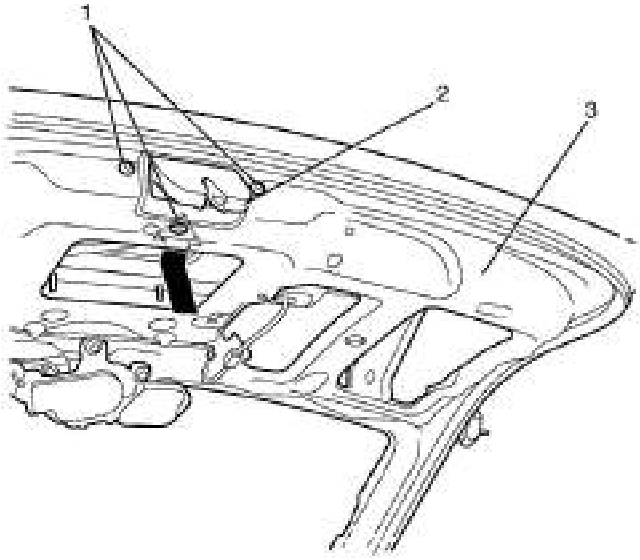


7. Disconnect the electrical connector (1) from the liftgate latch (2).
8. Remove the liftgate latch from the vehicle.

Installation Procedure



1. Connect the electrical connector (1) to the liftgate latch (2).



Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

2. Manoeuvre the liftgate latch (2) into position in the liftgate (3) through the access hole.

   Notice: Refer to Fastener Notice in the Preface section.

3. Install the liftgate latch to liftgate retaining bolts (1).

   Tighten
   Tighten the bolts to 10 N·m (89 lb in).

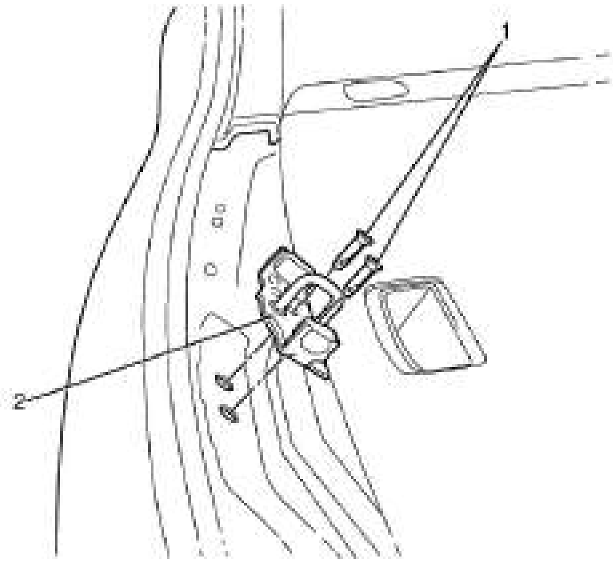
4. Install the liftgate trim panel. Refer to Liftgate Trim Panel Replacement.
5. Install the liftgate window lower garnish moulding. Refer to Liftgate Window Lower Garnish Molding Replacement.
6. Install the liftgate window side garnish moulding. Refer to Liftgate Window Side Garnish Molding Replacement.
7. Remove the suitable liftgate brace from the vehicle.

Liftgate Latch Striker Replacement

Removal Procedure

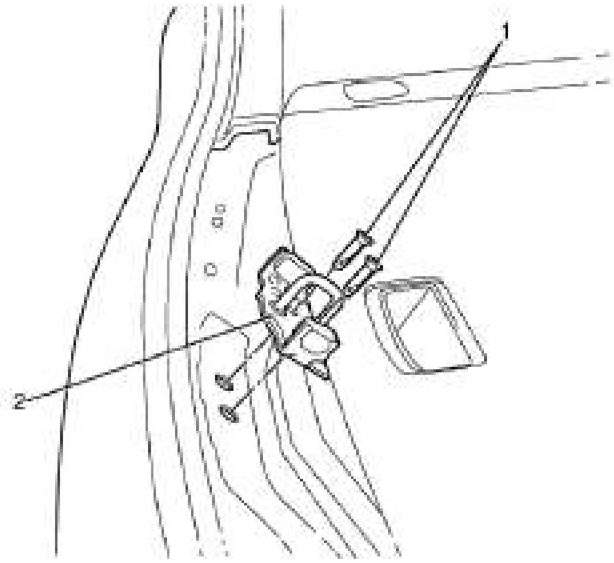
Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Install a suitable liftgate brace to the vehicle.
2. Remove the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.



3. Using a wax pencil, mark the position of the liftgate latch striker to the body.
4. Remove the liftgate latch striker to body retaining bolts (1).
5. Remove the liftgate latch striker (2) from the vehicle.

Installation Procedure



Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Position the liftgate latch striker (2) to the body as marked on removal.

   Notice: Refer to Fastener Notice in the Preface section.

2. Install the liftgate latch striker to body retaining bolts (1).

   Tighten
   Tighten the bolts to 20 N·m (15 lb ft).

3. Check the operation of liftgate latch striker, adjust if necessary.
4. Install the rear end trim finish panel. Refer to Rear End Trim Finish Panel Replacement.
5. Remove the suitable liftgate brace from the vehicle.

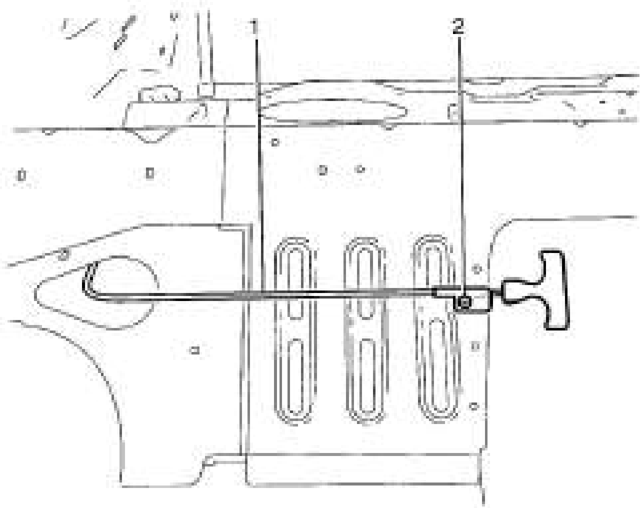
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Vehicle Access | Repair Instructions | Document ID: 1995703

Rear Compartment Lid Latch Release Cable Replacement

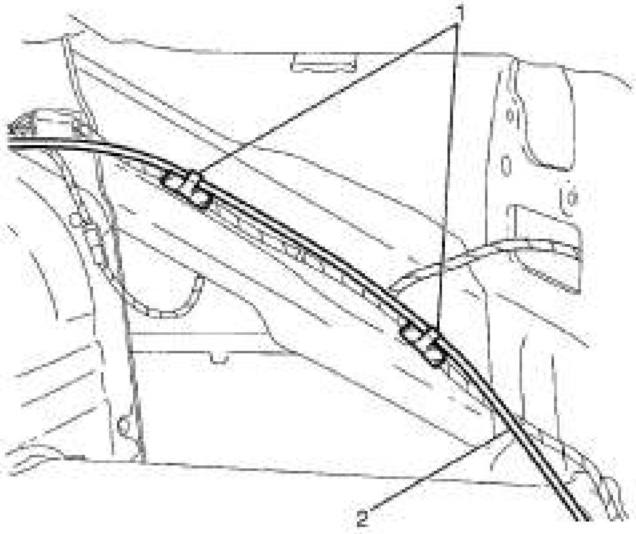
Removal Procedure

> **Important:** When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Support the rear compartment lid with a suitable brace.
2. Remove the rear seat back. Refer to Rear Seat Back Replacement .
3. Remove the rear compartment side trim (right) panel. Refer to Rear Corner Trim Panel Carpet Replacement .
4. Remove the rear compartment lid lock actuator. Refer to Rear Compartment Lid Lock Actuator Replacement .

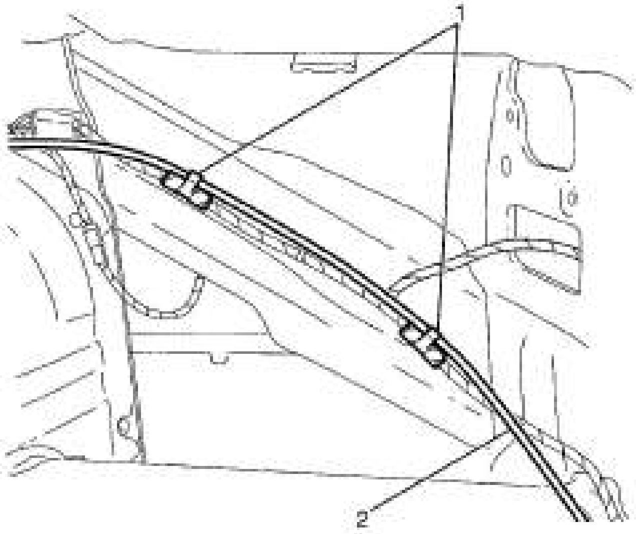


5. Remove the rear compartment lid release cable to rear seat back panel retaining screw (1)

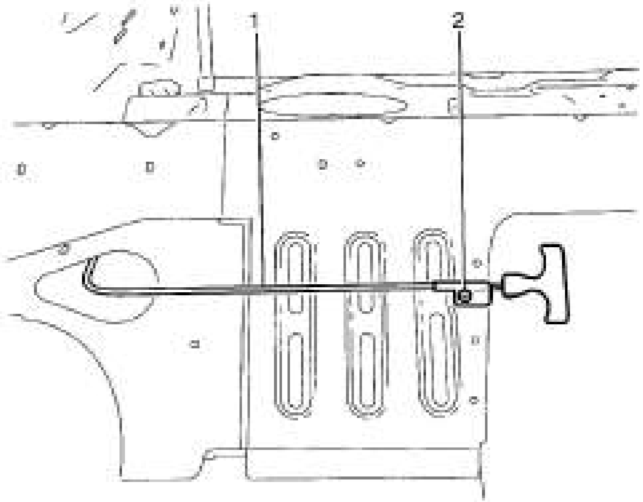


6. Remove the rear compartment lid release cable to rear compartment retaining clips (1).
7. Remove the rear compartment lid release cable (2) from the rear compartment.

Installation Procedure



1. Position the rear compartment lid release cable (2) in the rear compartment.
2. Install the rear compartment lid release cable to rear compartment retaining clips (2).



3. Install the rear compartment lid release cable to rear seat back panel retaining screw (1).

   Tighten
   Tighten the screw to 2 N·m (18 lb in).

4. Install the rear compartment lid lock actuator. Refer to Rear Compartment Lid Lock Actuator Replacement .
5. If re-programming is required. Refer to Control Module References .
6. Install the rear compartment side trim (right) panel. Refer to Rear Corner Trim Panel Carpet Replacement .
7. Install the rear seat back. Refer to Rear Seat Back Replacement .
8. Remove the suitable brace from the vehicle.

Rear Compartment Lid Latch Replacement

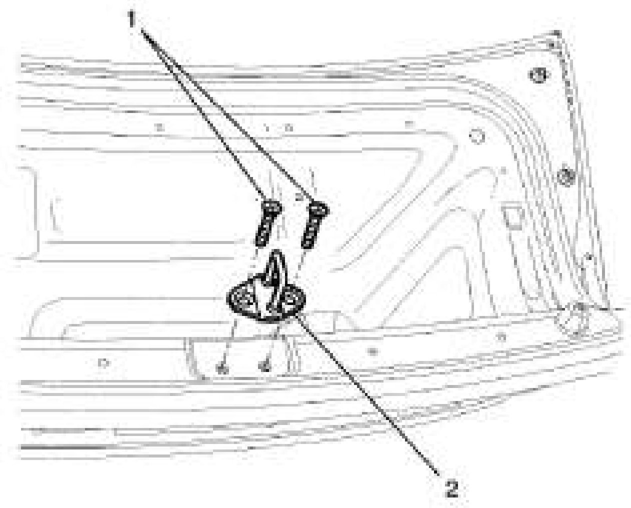
The rear compartment lid latch is part of the lock actuator Refer to Rear Compartment Lid Lock Actuator Replacement.

Rear Compartment Lid Latch Striker Replacement

Removal Procedure

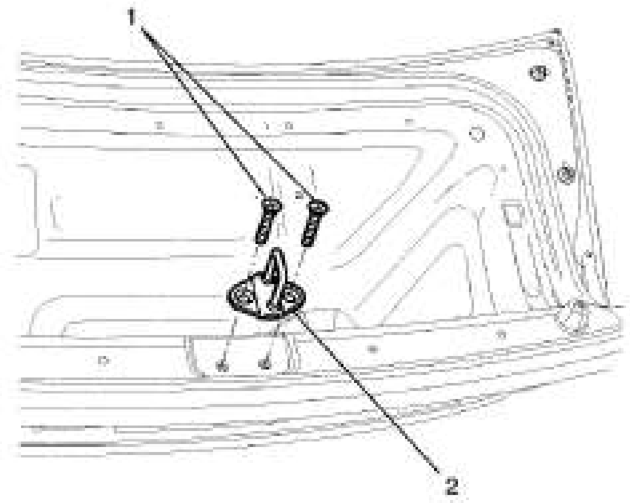
Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Support the rear compartment lid with a suitable brace.



2. Remove the rear compartment lid latch striker to rear compartment lid retaining torx screws (1).
3. Remove the rear compartment lid latch striker (2).

Installation Procedure



1. Position the rear compartment lid latch striker (2) to the rear compartment lid.

   Notice: Refer to Fastener Notice in the Preface section.

2. Install the rear compartment lid latch striker to rear compartment lid retaining torx screws (1).

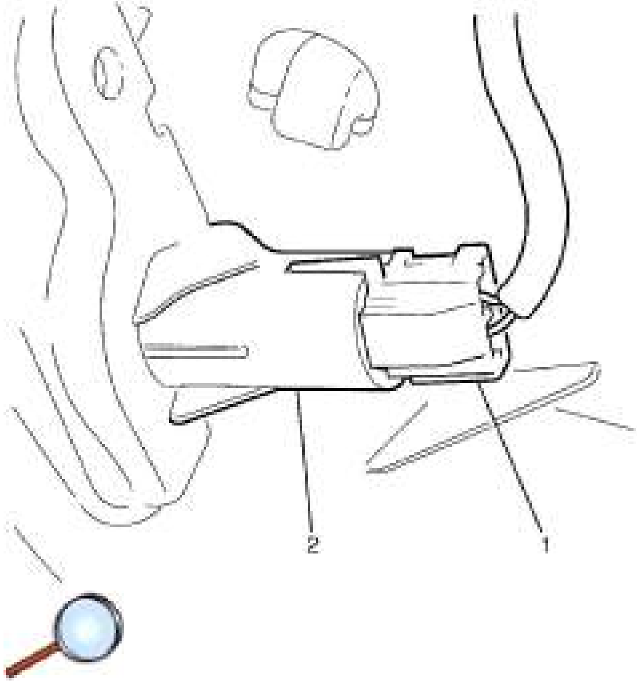
   Tighten
   Tighten the torx screws to 25 N·m (18 lb ft).

3. Remove the suitable brace from the vehicle.

Rear Compartment Lid Release Switch Replacement

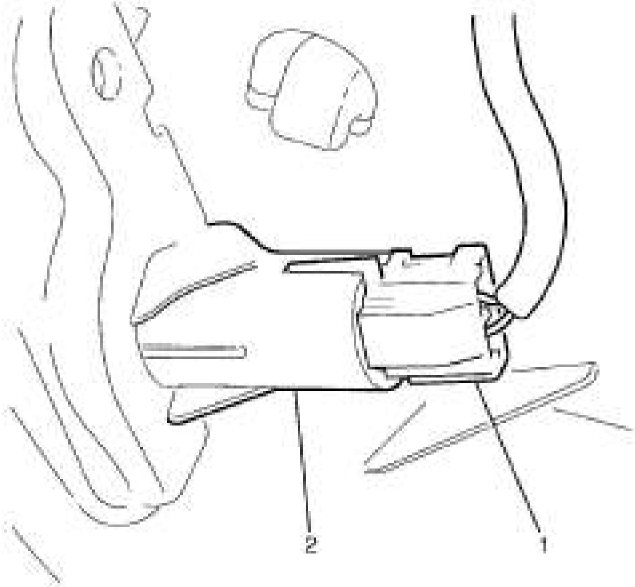
Removal Procedure

1. Remove the instrument panel compartment. Refer to Instrument Panel Compartment Replacement.



2. Disconnect the rear compartment lid wiring connector (1) to rear compartment lid release switch.
3. Remove the rear compartment lid release switch (2) from the instrument panel compartment.

Installation Procedure

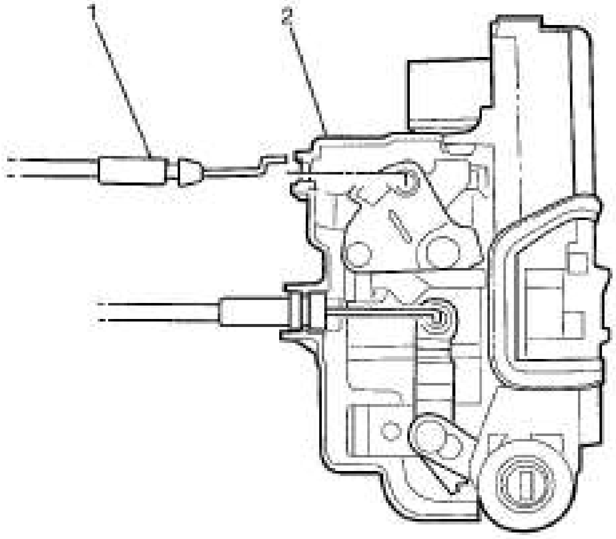


1. Install the rear compartment lid release switch (2) to the instrument panel compartment.
2. Connect the rear compartment lid wiring connector (1) to rear compartment lid release switch (2).
3. Install the instrument panel compartment. Refer to Instrument Panel Compartment Replacement.
4. If re-programming is required. Refer to Control Module References.

Rear Side Door Inside Handle Cable Replacement

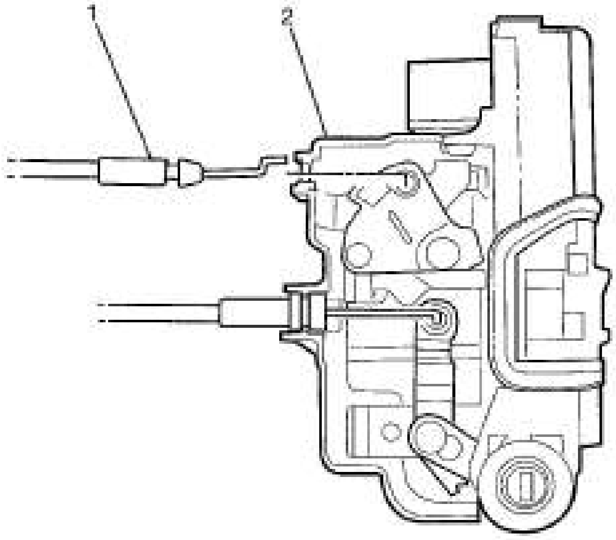
Removal Procedure - Door Handle Cable

1. Remove the door trim panel. Refer to Rear Side Door Trim Panel Replacement .
2. Remove the water deflector. Refer to Rear Side Door Water Deflector Replacement .
3. Remove the door latch. Refer to Rear Side Door Latch Replacement .



4. Disconnect the door handle cable (1) from the door latch (2).

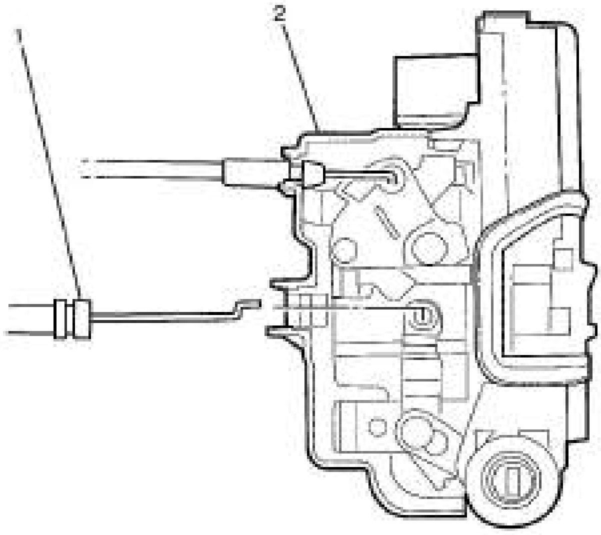
Installation Procedure - Door Handle Cable



1. Connect the door handle cable (1) to the door latch (2).
2. Install the door latch. Refer to Rear Side Door Latch Replacement .
3. Install the water deflector. Refer to Rear Side Door Water Deflector Replacement .
4. Install the door trim panel. Refer to Rear Side Door Trim Panel Replacement .

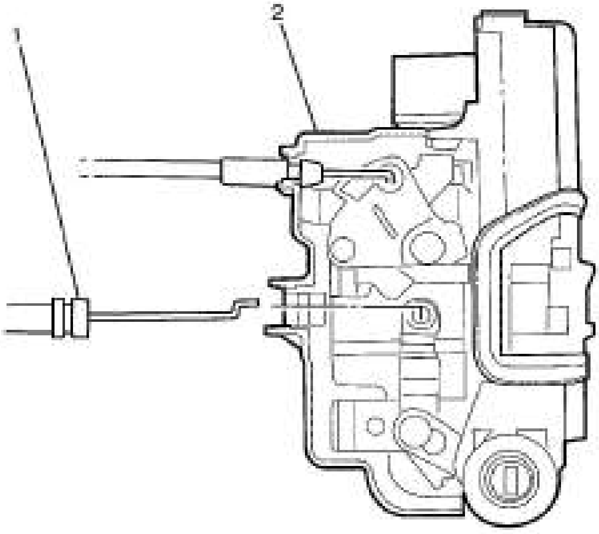
Removal Procedure - Lock Cable

1. Remove the door trim panel. Refer to Rear Side Door Trim Panel Replacement .
2. Remove the water deflector. Refer to Rear Side Door Water Deflector Replacement .
3. Remove the door latch. Refer to Rear Side Door Latch Replacement .



4. Disconnect the lock cable (1) from the door latch (2).

Installation Procedure - Lock Cable



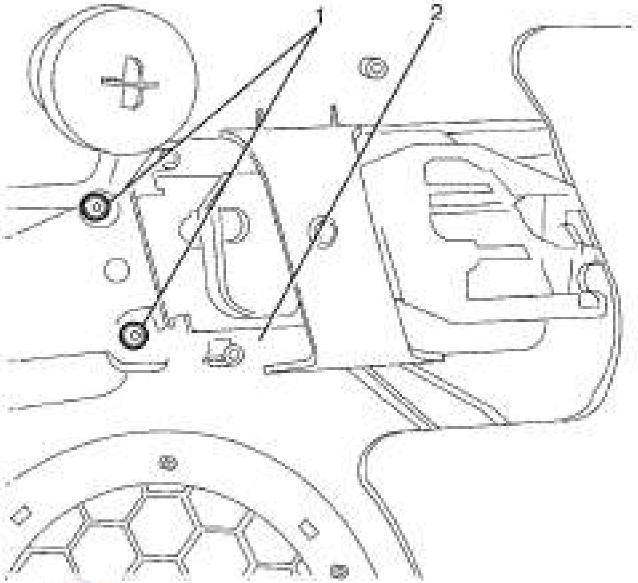
1. Connect the door handle cable (1) to the door latch (2).
2. Install the door latch. Refer to Rear Side Door Latch Replacement .
3. Install the water deflector. Refer to Rear Side Door Water Deflector Replacement .
4. Install the door trim panel. Refer to Rear Side Door Trim Panel Replacement .

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Vehicle Access | Repair Instructions | Document ID: 1986620

Rear Side Door Inside Handle Replacement

Removal Procedure

1. Remove the door trim panel. Refer to Rear Side Door Trim Panel Replacement .



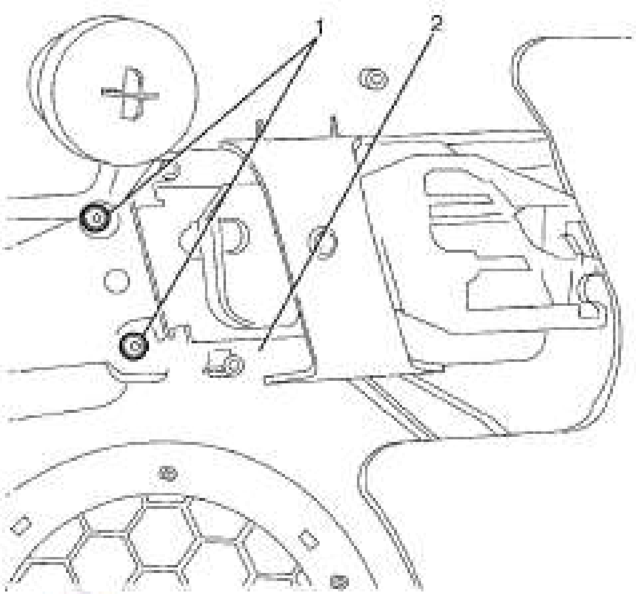
Important: The inside door handle to door trim panel retaining screws (1) are on the inside of the door trim panel (2).

2. Remove the inside door handle to door trim panel retaining screws (1).
3. Remove the inside door handle from the door trim panel (2).

Installation Procedure

1. Install the inside door handle to the door trim panel.

Notice: Refer to Fastener Notice in the Preface section.



Important: The inside door handle to door trim panel retaining screws (1) are on the inside of the door trim panel (2).

2. Install the inside door handle to door trim panel retaining screws (1).

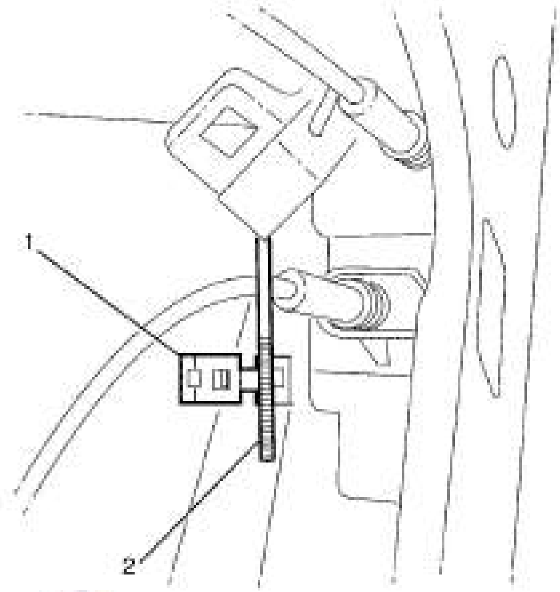
   Tighten
   Tighten the screws to 3 N-m (27 lb in).

3. Install the door trim panel (2). Refer to Rear Side Door Trim Panel Replacement .

Rear Side Door Latch Replacement

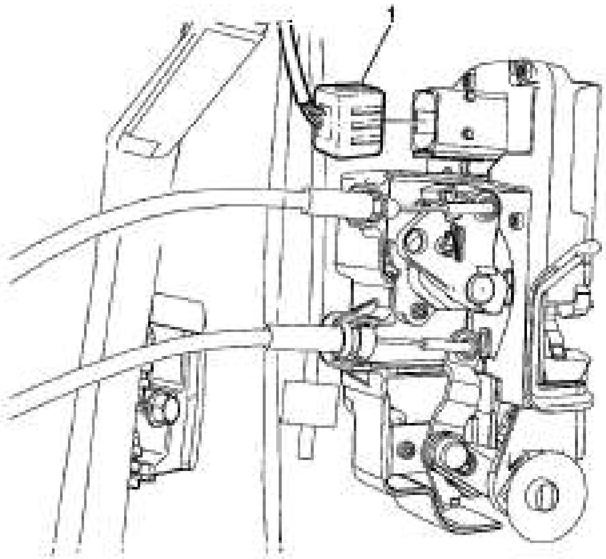
Removal Procedure

1. Raise the window to the full up position.
2. Remove the door trim panel. Refer to Rear Side Door Trim Panel Replacement.
3. Pull the rear half of the water deflector away from the door panel in order to access the door latch.

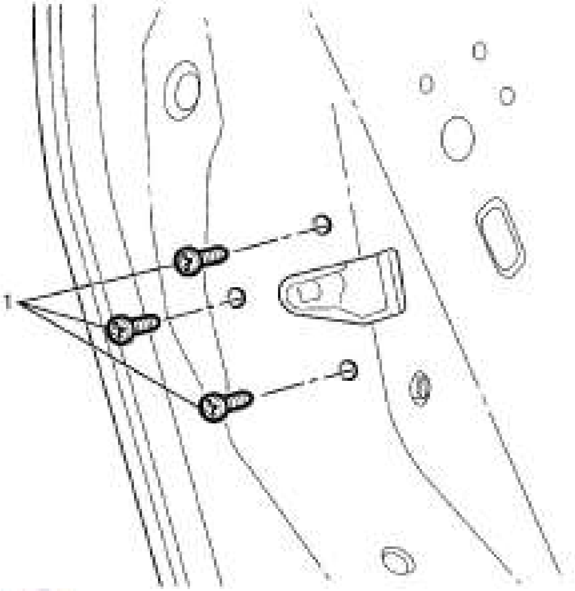


Important: Pry the outside door handle rod retaining clip (1) using a suitable tool.

4. Disconnect the outside door handle rod (1) from the door latch (2).



5. Disconnect the door latch electrical connector (1).



Important: The door latch to door retaining screws (2) are single use parts and must be discarded after use.

Important: Support the door latch when removing the door latch retaining screws (1).

6. Remove the door latch to door retaining screws (1).

   Discard the screws.

   Important: Remove the door latch through the door cavity.

7. Remove the door latch from the door with the inside door handle cable and inside door lock cable attached.
8. Disconnect the inside door handle cable and inside door lock cable from the door latch. Refer to Rear Side Door Inside Handle Cable Replacement.

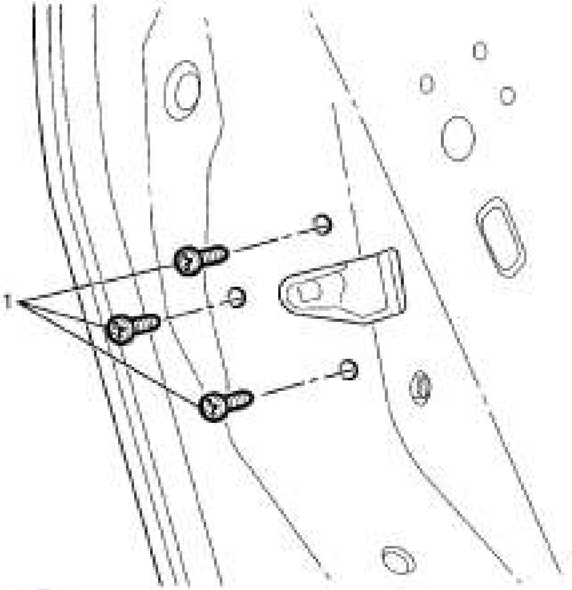
Installation Procedure

1. Connect the inside door handle cable and inside door lock cable to the door latch. Refer to Rear Side Door Inside Handle Cable Replacement.

   Important: Position the door latch through the door cavity and support. .

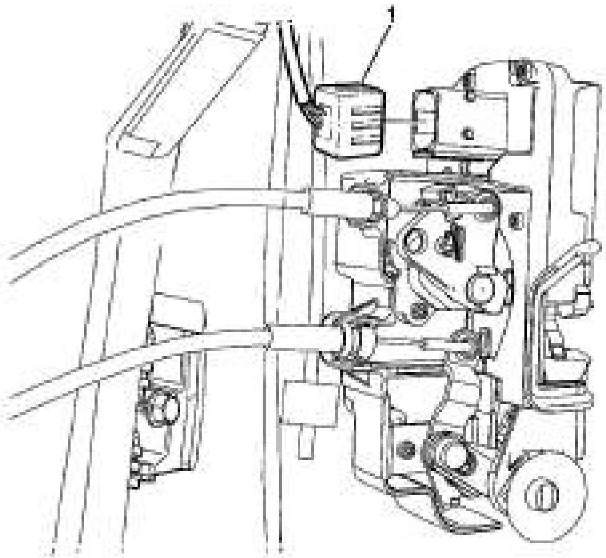
2. Position the door latch into the door.

   Notice: Refer to Fastener Notice in the Preface section.

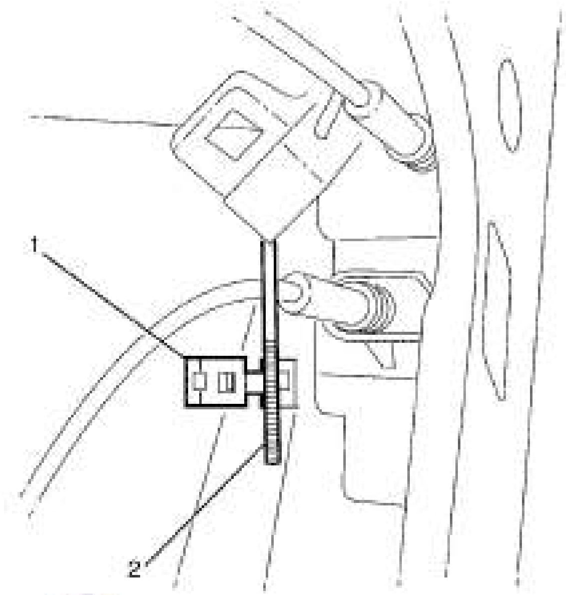


3. Install the door latch to door NEW retaining screws (1).

   Tighten
   Tighten the screws to 13 N-m (115 lb in).



4. Connect the door latch electrical connector (1).



Important: Attach the door handle rod retaining clip (1) by pressing clip together over door handle rod until an audible click is heard.

5. Connect the outside door handle rod (2) to the door handle rod retaining clip (1).
6. Inspect for the correct operation of the door handle and door latch.

Important: Firmly press the water deflector where adhesive is applied to make sure of a water tight bond.

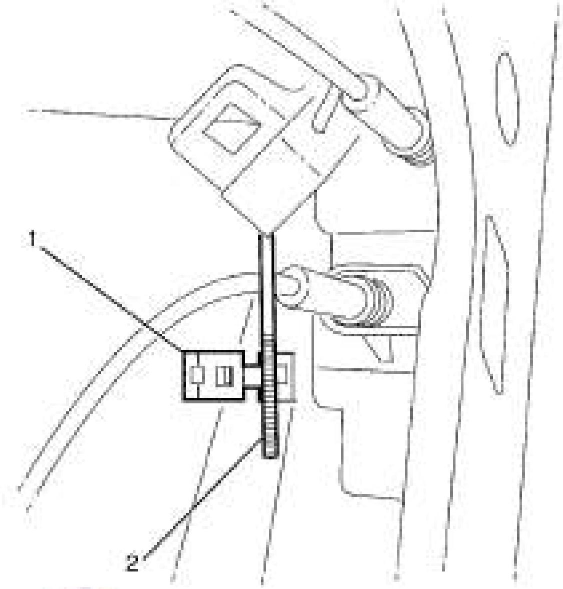
7. Install the rear half of the water deflector to the door panel.
8. Install the door trim panel. Refer to Front Side Door Trim Panel Replacement.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Vehicle Access | Repair Instructions | **Document ID: 1990963**

Rear Side Door Outside Handle Replacement

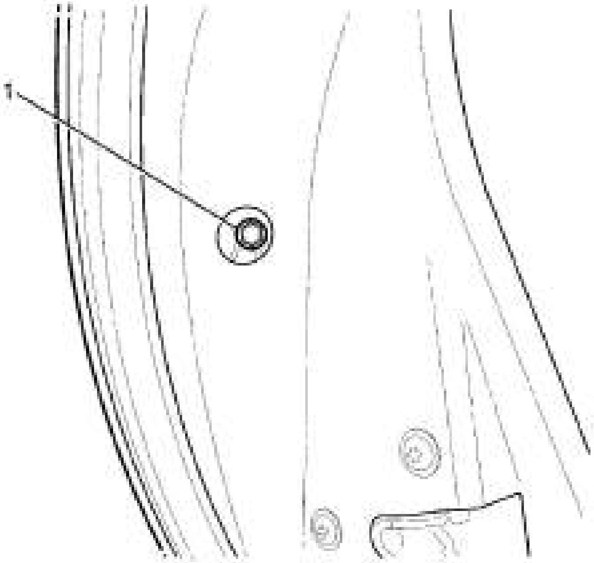
Removal Procedure

1. Remove the door trim panel. Refer to Rear Side Door Trim Panel Replacement.
2. Pull the rear half of the water deflector away from the door panel in order to access the outside door handle.



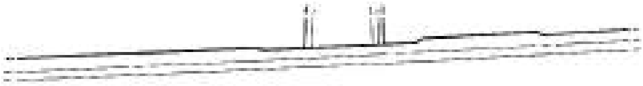
Important: Pry the outside door handle rod retaining clip (1) using a suitable tool.

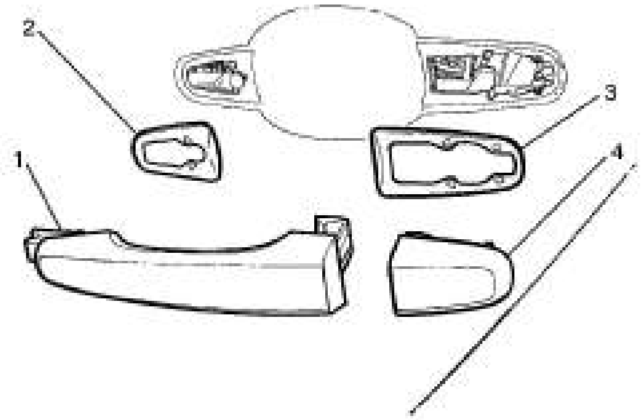
3. Disconnect the outside door handle rod (2) from the door handle rod retaining clip (1).



Important: Remove the rubber blanking grommet to expose lock cylinder retaining bolt (1).

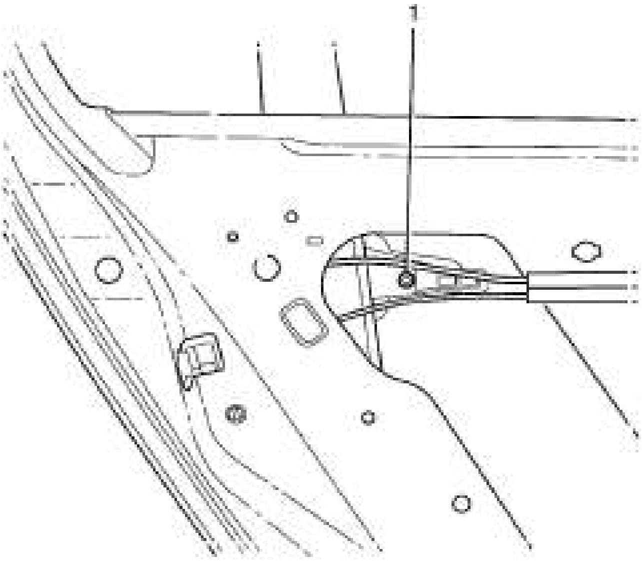
4. Remove the outside door handle to door retaining bolt (1).





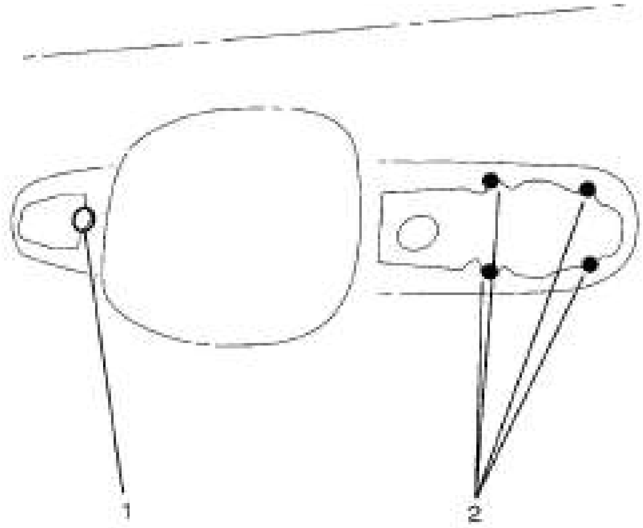
Important: Replace the gaskets (2, 3) when replacing the outside door handle (1, 4).

5. Remove the outside door handle (1, 4) from the door.



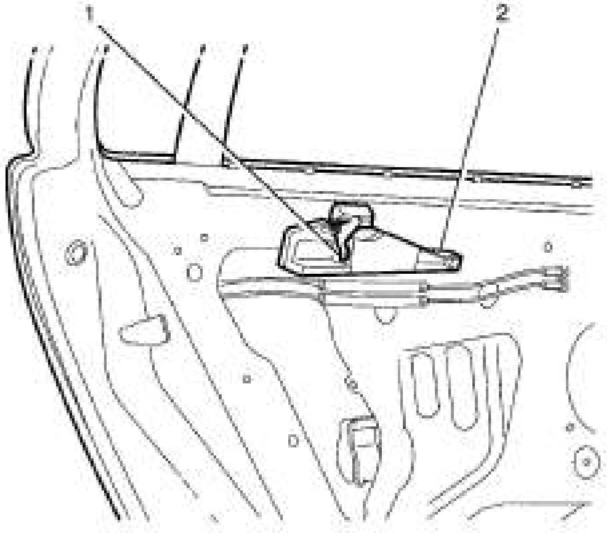
Important: The outside door handle retaining nut (1) must be loosened to remove the inner part of the outer door handle.

6. Loosen the outside door handle retaining nut (1).
7. Push on the outside door handle retaining nut and stud to relieve pressure between the inner part of the door handle and the door.



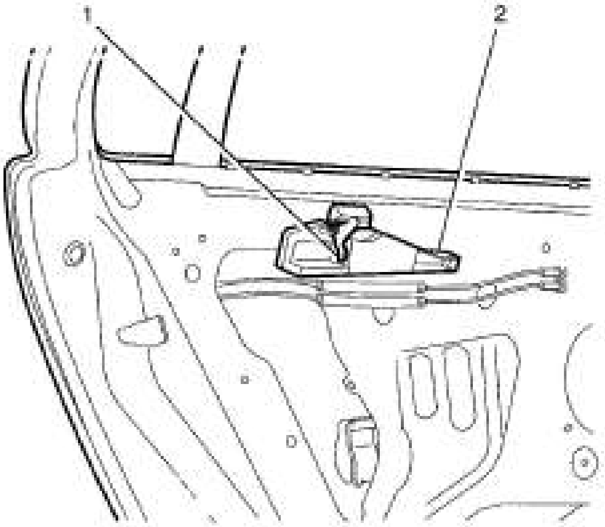
Important: Push the retaining tabs (2) inwards to release them then push the inner handle towards the front of the car to release the retaining pin (1).

8. Remove the inner part of the outer door handle (1, 2).

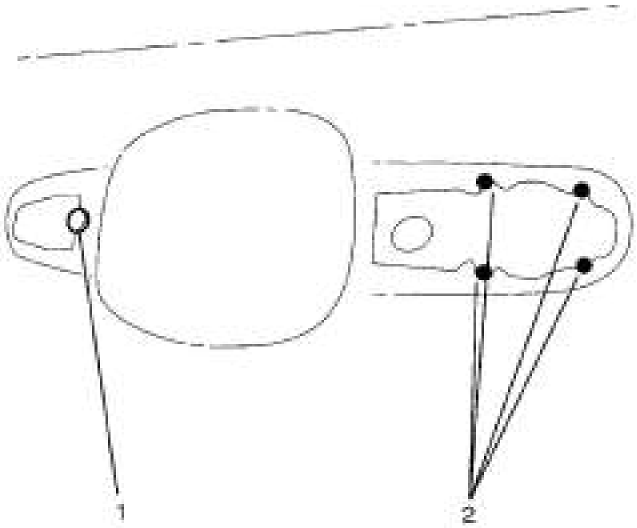


9. Remove the inner part (1) of the outer door handle from the door (2).

Installation Procedure



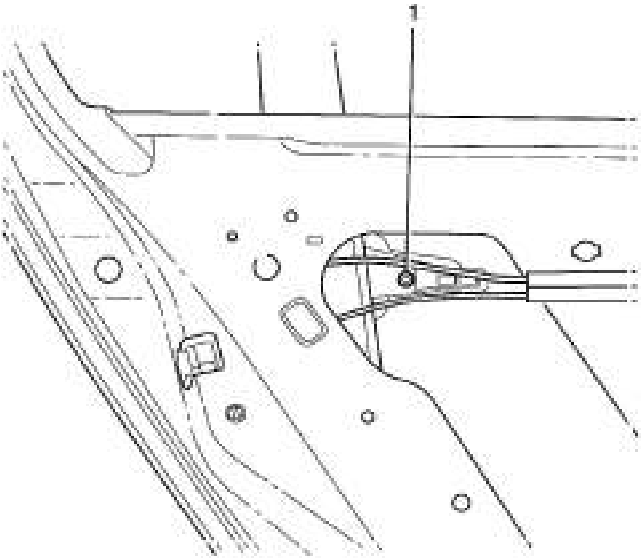
1. Position the inner part (1) of the outer door handle to the door (2).



Important: Lock in the retaining pin (1) by pushing towards the rear of the car then outwards to engage the retaining tabs (2).

2. Install the inner part of the outer door handle (1, 2).

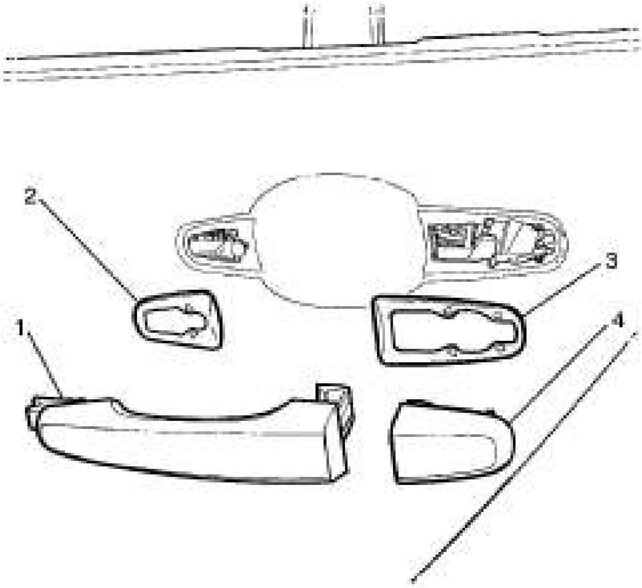
Notice: Refer to Fastener Notice in the Preface section.



Important: The outside door handle retaining nut (1) must be tightened to fasten the inner part of the outer door handle.

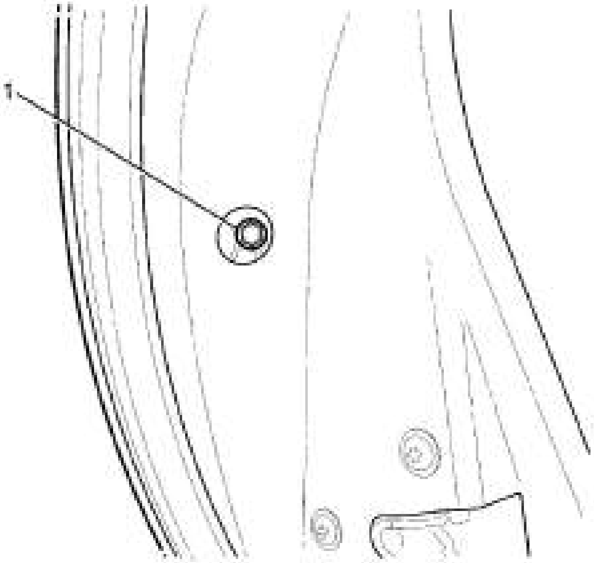
3. Tighten the outside door handle retaining nut (1).

Tighten
Tighten the bolt to 4 N-m (35 lb in).



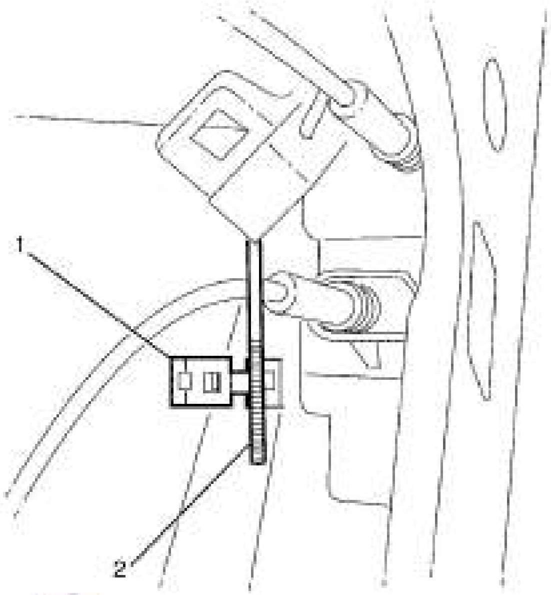
Important: Replace gaskets (2, 3) when replacing the outside door handle (1, 4).

4. Install the outside door handle (1, 4).



5. Install the outside door handle to door retaining bolt (1).

Tighten
Tighten the bolt to 4 N-m (35 lb in).



Important: Attach the door handle rod retaining clip (1) by pressing clip together over door handle rod until an audible click is heard.

6. Connect the outside door handle rod (2) to the door handle rod retaining clip (1).

Important: Firmly press the water deflector where adhesive is applied to make sure of a water tight bond.

7. Install the rear half of the water deflector to the door panel.
8. Install the rubber blanking grommet.
9. Install the door trim panel. Refer to Rear Side Door Trim Panel Replacement.

Door Ajar Indicator Description and Operation

Door Ajar Indicator System Components

The door ajar indicator system consists of the following components:

- The body control module (BCM)
- The instrument panel cluster (IPC)
- The driver door latch
- The passenger door latch
- The left rear door latch
- The right rear door latch

Driver and Passenger Door Ajar Operation

The body control module (BCM) receives discrete inputs from each of the door latches from two independent circuits. The driver door ajar signal is independent of the other door ajar signal circuits, it has a specific circuit allocated to supply an input to the BCM. The passenger, left rear and right rear door ajar signal circuits are combined into one shared circuit to the BCM. If any of the doors are open or not closed correctly, the contacts of the ajar switch are closed causing the voltage within the signal circuit to drop to zero. The BCM detects the drop in voltage and sends a serial data message to the IPC. The IPC, upon receipt of this message, will illuminate the door ajar indicator.

The IPC will also send a serial data message to the radio to activate the door ajar audible warning when the following conditions are met:

- When the engine has been started
- The transmission is shifted from PARK

Fuel Fill Door Description and Operation

The fuel door latch actuator shares the circuit with the driver door latch assembly. The body control module (BCM), upon receipt of a lock switch lock or unlock signal, will switch the appropriate door lock actuator, as well as a fuel filler door release actuator control circuits to battery positive voltage. The opposing side of the door lock and fuel filler door release actuators is connected to ground by the underhood fuse block through the other door lock actuator control circuit and the doors, along with the fuel filler door release, will lock or unlock as commanded.

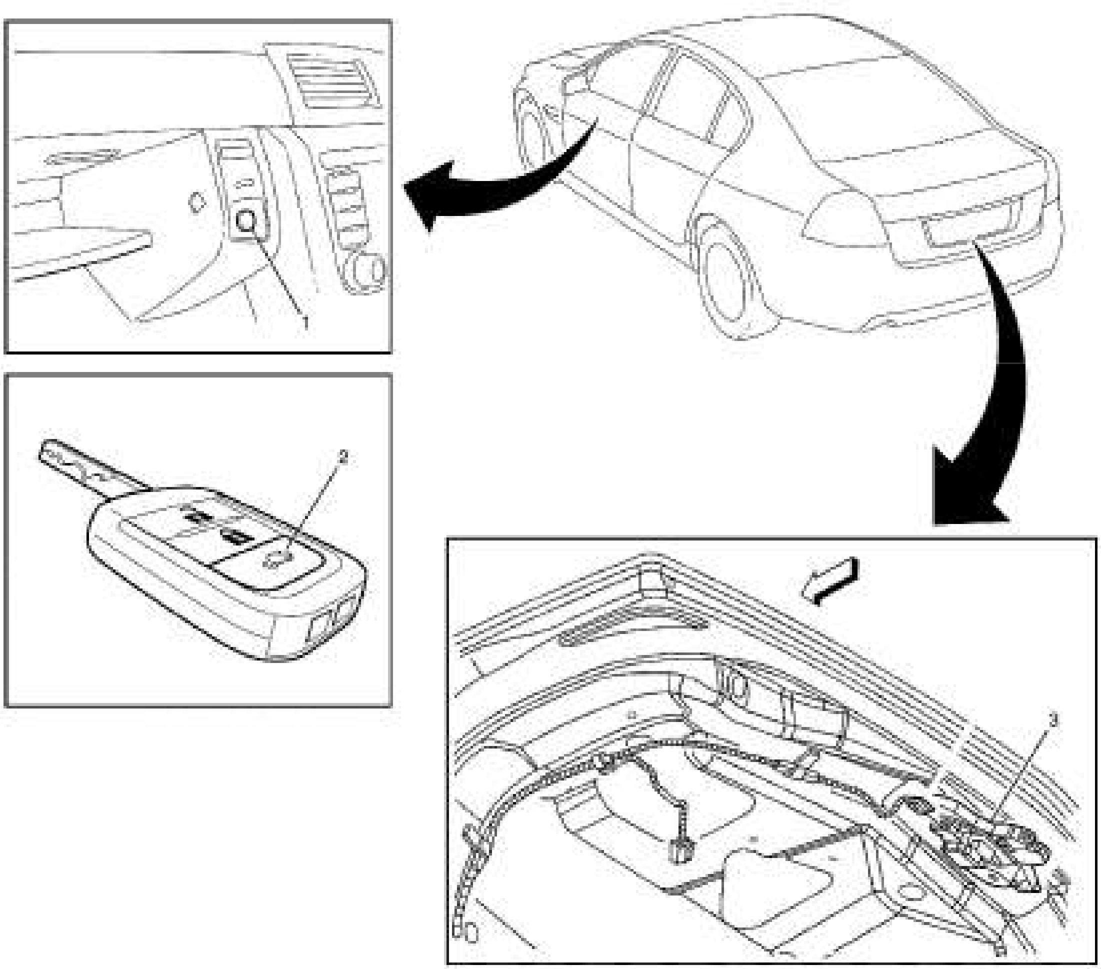
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Vehicle Access | Description and Operation | **Document ID: 1996944**

Luggage Compartment Description and Operation

Rear Compartment Lid Release

The rear compartment lid can be released by operating the rear compartment lid release switch (1) or pressing the rear compartment release button on the key fob. The transmission must be in the PARK position for the rear compartment lid to release.

When a request to open the rear compartment lid is requested by either the rear compartment lid release switch or the key fob button, the Body Control Module (BCM) activates the rear compartment lid release relay which allows the rear compartment lid latch assembly motor (3) to operate and release the rear compartment lid.



(1) Rear Compartment Lid Release Switch

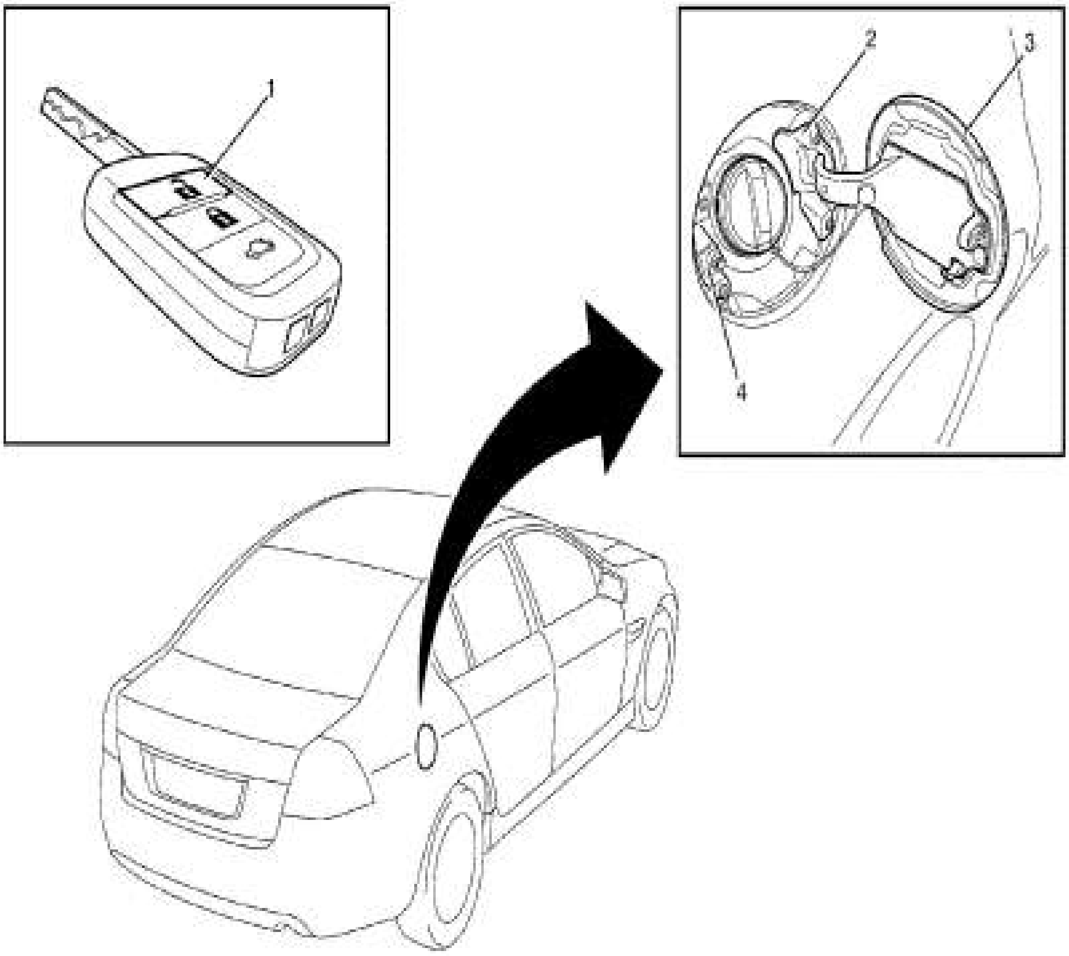
(2) Key Fob Rear Compartment Lid Release Button

(3) Rear Compartment Lid Release Actuator

Fuel Filler Door Release

The fuel filler door can be released by operating the unlock button on the key fob. The transmission must be in the PARK position for the fuel filler door to release.

When a request to open the fuel filler door is requested by the unlock button on the key fob (1), the Body Control Module (BCM) activates the fuel filler door release relay which allows the fuel filler door actuator (4) to operate and release the fuel filler door (3).



(1) Key Fob Door Release Button
(2) Fuel Filler Door Hinge
(3) Fuel Filler Door
(4) Fuel Filler Door Actuator

Power Door Locks Description and Operation

Door Lock System Components

The power door lock system consists of the following components:

- Window/door lock/outside rearview mirror switch.
- ALL LOCK relay.
- PASS LOCK relay.
- DRIVER UNLOCK relay.
- Body control module (BCM).
- Reversible door latches in each of the doors.
- Driver door key cylinder switch
- Door locks 25A fuse

Door Lock System Controls

The Power Door Lock System is controlled by the BCM and can be activated by any one of the following:

- Power door lock switch lock or unlock command
- Keyless entry lock or unlock command
- A driver door lock key cylinder switch lock or unlock command
- Programmed automatic door lock and/or unlock command
- Lockout prevention command
- Air bag deployment unlock command

Door Lock and Unlock Operation

When the door lock switch is activated in the lock or unlock position the BCM will detect a voltage drop on either the door lock switch lock or unlock signal circuits.

The BCM, upon receipt of a lock switch lock or unlock signal, will provide the appropriate relay control circuit with voltage or ground. This will energize the relay(s). The relay will supply voltage to the door lock actuator lock or unlock control circuits. Since the opposite side of the lock actuator is connected to ground through the other lock actuator control circuit and the normally closed contacts of the lock or unlock relay, the doors will then lock or unlock as commanded.

Three relays are used to operate the door latches, DRIVER UNLOCK, PASS LOCK and ALL LOCK relays. The driver door latch is isolated so that only the driver door will unlock by a command from the remote keyless entry transmitter.

Automatic Door Lock Operation

The doors can be programmed to lock and/or unlock depending upon the owner's preferences:

- Automatic lock and unlock disabled.
- Driver door unlock when key is removed from ignition
- Driver door unlock when the vehicle is shifted into PARK.
- All doors unlock when key is removed from ignition
- All doors unlock when the vehicle is shifted into PARK.
- All doors lock when the vehicle is above 13km/h (8 mph).
- All doors lock when the vehicle is shifted out of PARK.

Lockout Prevention Operation

This function is intended to prevent the vehicle operator from locking the doors if the key is left in the ignition and any vehicle door is open. The BCM will react after locking all the doors by unlocking the driver door. The lockout prevention function can be overridden by manually locking the driver door.

Key Cylinder Unlock and Lock

The BCM will unlock all doors when the key is inserted into the driver door key cylinder and turned to the unlock position for greater than 1 second and lock all doors when the key is turned to the lock position for greater than 1 second.

Air Bag Deployment Unlock

The BCM will provide unlocking of all the doors 15 seconds after determining the air bags have been deployed.

Rear Hatch / Gate Description and Operation

Liftgate System Components

The liftgate system consists of the following components:

- The liftgate system consists of the following components:
- Liftgate Release Switch
- Rear End Release Relay
- Trunk 10A Fuse
- Body Control Module (BCM)

Liftgate System Controls

The liftgate may be released by commanding all the doors to unlock and by pressing the touchpad located above the license plate.

Liftgate Release Operation

The liftgate release switch is an input to the body control module. The BCM monitors to the signal circuit and when the liftgate switch is pressed the signal circuit voltage goes low. When the BCM detects the drop in voltage in the liftgate release switch signal circuit, the BCM enables the Rear End Release relay by applying battery voltage to one side of the relay control circuit and ground the other relay control circuit. This energizes the Rear End Release relay coil which closes the contacts within the switch side of the relay and allowing voltage to flow through the relay to the liftgate control circuit and activating the liftgate latch.

The liftgate latch system will only be enabled when the doors are unlocked, the transmission is in Park or for vehicles with a manual transmission, when the vehicle is stationary.

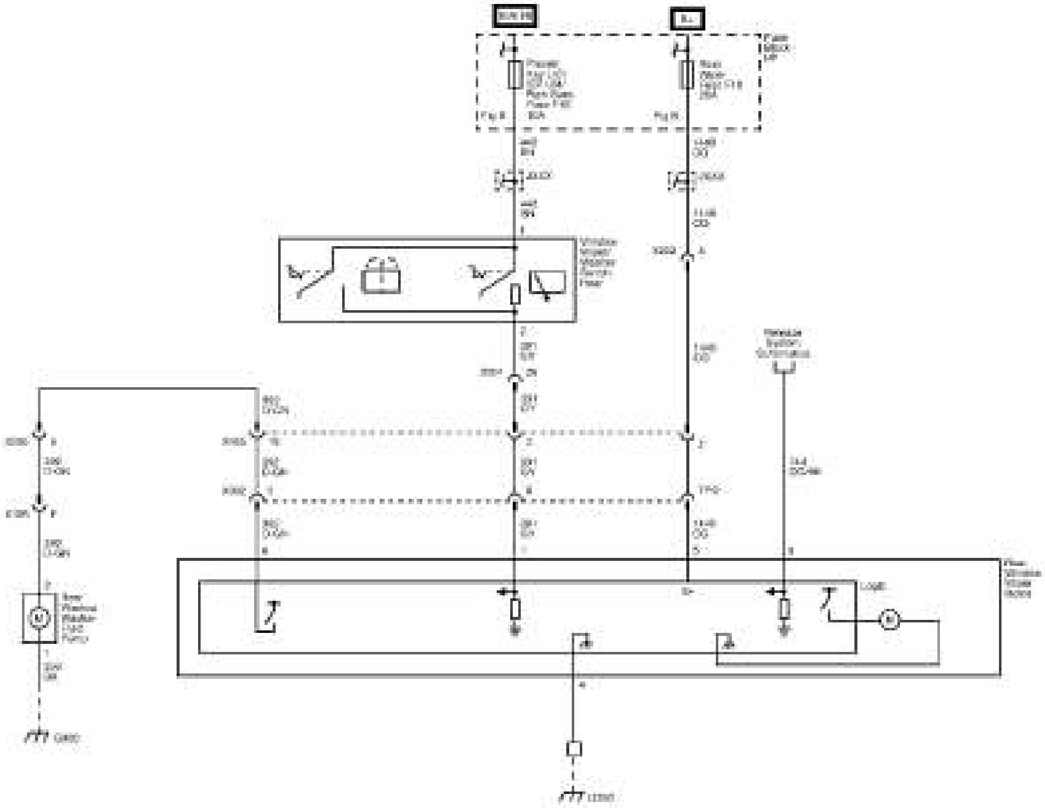
Rear Wiper / Washer Control



Diagnostic Starting Point - Wiper / Washer Systems

Begin the diagnosis by reviewing the system Description and Operation. Reviewing the Description and Operation information will help you determine the correct symptom diagnostic procedure when a malfunction exists. Reviewing the Description and Operation information will also help you determine if the condition described by the customer is normal operation. Refer to Diagnostic System Check - Vehicle , in order to identify the correct procedure for diagnosing the system and where the procedure is located.

The Diagnostic System Check will provide the following information:

- The identification of the control modules which command the system.
- The ability of the control modules to communicate through the serial data circuit.
- The identification of any stored diagnostic trouble codes (DTCs) and their status.

DTC B370C or B370D

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.
- Diagnostic Procedure Instructions provides an overview of each diagnostic category.

DTC Descriptor

DTC B370C 00: Rain Sensor Intensity Signal Circuit.

DTC B370D 00: Rain Sensor Mode Control Circuit.

Diagnostic Fault Information

Circuit	Short to Ground	Open/High Resistance	Short to Voltage	Signal Performance
Ignition Voltage	1	1	1	--
Outside Moisture Sensor Signal 1	B370D	B370D	1	--
Outside Moisture Sensor Signal 2	B370C	B370C	1	--
Ground	--	1	--	--
1. Moisture sensing feature is inoperative				

Circuit/System Description

Ignition voltage is supplied to the windshield outside moisture sensor from the body control module (BCM). Whenever the ignition is in the run or accessory positions, the BCM sends the wiper/washer switch status using a pulse width modulated (PWM) signal through the windshield outside moisture sensor signal 1 circuit to the outside moisture sensor. When a wipe cycle is needed, the moisture sensor sends a PWM voltage signal through the moisture sensor signal 2 circuit back to the BCM requesting the wiper operation.

The windshield outside moisture sensor uses the moisture sensor signal 2 circuit to command wiper motor wipe cycles and to confirm the moisture sensor signal 1 is being received. If at anytime communication between the windshield outside moisture sensor and BCM is lost, the BCM will use the inputs from the windshield wiper/washer switch in the delay positions to operate the wiper motor at continuous variable delay intervals.

Conditions for Running the DTC

The ignition is in the Run or Accessory positions.

Conditions for Setting the DTC

B370C

An open, short to ground or a short to voltage has been detected on moisture sensor signal 2 circuit.

B370D

An open, short to ground or a short to voltage has been detected on moisture Sensor Signal 1 circuit.

Action Taken When the DTC Sets

Moisture sensitive wiper operation is suspended so long as the fault is present. The wipers will still operate normally in all other modes.

Conditions for Clearing the DTC

- A current DTC will clear when the fault is no longer present.
- A history DTC will clear after 40 malfunction-free ignition cycles.

Circuit/System Verification

Ignition ON, wiper switch in the LOW position. The windshield wipers should operate at low speed. If the windshield wipers do not operate, refer to Windshield Wiper System Malfunction.

Circuit/System Testing

1. Ignition OFF, disconnect the harness connector at the windshield outside moisture sensor.
2. Test for less than 5.0 ohms between the ground circuit terminal 3 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Ignition ON, verify that a test lamp illuminates between ignition voltage circuit terminal 4 and ground.

   If the test does not illuminate, test the ignition voltage circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the BCM.
4. Ignition ON, test for 4.0 - 8.5 volts between the signal circuit terminal 2 and ground.

   If greater than the specified range, test the signal circuit for a short to voltage. If the circuit tests normal, replace the windshield outside moisture sensor.

   If less than the specified range, test the signal circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the windshield outside moisture sensor.
5. Ignition OFF, connect the harness connector at the windshield outside moisture sensor.
6. Disconnect the X4 harness connector at the BCM.
7. Ignition ON, test for 8.0 - 10.0 volts between the signal circuit terminal 14 and ground.

   If greater than the specified range, test the signal circuit for a short to voltage. If the circuit tests normal, replace the windshield outside moisture sensor.

   If less than the specified range, test the signal circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the windshield outside moisture sensor.
8. If all circuits test normal, replace the BCM.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

For BCM replacement, setup, and programming, refer to Control Module References.

Windshield Wiper Motor Ground	--	1	--	--
WIPER CONTROL Relay Ground	--	1	--	--
1.Windshield wiper system malfunction				

2. Wipers Do Not Park

3. Wipers Always ON

Circuit/System Description

The Body Control Module (BCM) monitors the control circuit of the WIPER relay. The voltage level should be low while the WIPER relay is de-energized and near system voltage when the relay is energized. After the BCM receives a low, intermittent, or mist signal from the wiper/washer switch, it responds by applying battery voltage through the WIPER relay control circuit to the coil side of the relay, energizing the WIPER relay.

Conditions for Running the DTC

The BCM output is actively being requested.

Conditions for Setting the DTC

The BCM detects a short to ground in the wiper relay control circuit.

Action Taken When the DTC Sets

The BCM will not activate the output.

Conditions for Clearing the DTC

- The current DTC will clear when the condition for setting the fault is no longer present.
- The history DTC will clear after 100 consecutive ignition cycles without a fault present.

Circuit/System Testing

1. Ignition OFF, disconnect the WIPER LO Relay.
2. Connect a test lamp between the control circuit terminal 85 and ground circuit terminal 86.
3. Ignition ON, command the low speed wipers ON and OFF with a scan tool. The test lamp should turn ON and OFF when changing between the commanded states.

   If the test lamp is always ON, test the control circuit for a short to voltage. If the circuit tests normal, replace the BCM.

   If the test lamp is always OFF, test for a short to ground or an open/high resistance on the control circuit. If the circuit tests normal, replace the BCM.
4. If all circuits test normal, test or replace the WIPER LO Relay.

Component Testing

1. Ignition OFF, disconnect the Wiper LO Relay.
2. Test for 60-200 ohms between terminals 85 and 86.

   If the resistance is not within the specified range, replace the relay.
3. Test for infinite resistance between the following terminals:
   - 30 and 86
   - 30 and 87
   - 30 and 85
   - 85 and 87

   If not the specified value, replace the relay.
4. Test for less than 2 ohms between terminals 30 and 87A.

   If greater than the specified range, replace the relay.
5. Install a 10A fused jumper wire between relay terminal 85 and 12 volts. Install a jumper wire between relay terminal 86 and ground. Test for less than 2 ohms between terminals 30 and 87.

   If greater than the specified range, replace the Wiper LO relay.

DTC Descriptor

DTC B3873 00: Front Washer Relay Circuit

Diagnostic Fault Information

Circuit	Short to Ground	Open/High Resistance	Short to Voltage	Signal Performance
Windshield Washer Switch Signal	2	1	1	--
Windshield Washer Fluid Pump Control	1	1	2	--
Windshield Washer Relay Control	2	1	B3873 00	--
Windshield Washer Switch Low Reference	--	1	--	--
Windshield Washer Fluid Pump Ground	--	1	--	--
1. Washer Inoperative 2. Washers Always ON				

Circuit/System Description

The Body Control Module (BCM) controls the washer pump motor based on an input from the windshield wiper/washer switch. The BCM monitors the washer switch through the windshield washer switch signal circuit. When the wash switch is closed, ground is supplied to the windshield washer switch signal circuit. When this is seen, the BCM will apply ground to the WSW relay control circuit and command the windshield washer fluid pump and the low speed wipers on.

Conditions for Running the DTC

A washer request is present.

Conditions for Setting the DTC

A short to voltage is detected in the windshield WSW relay control circuit.

Action Taken When the DTC Sets

Washer operation is suspended.

Conditions for Clearing the DTC

- A current DTC will clear when the condition for setting the fault is no longer seen.
- A history DTC will clear after 100 consecutive ignition cycles without a fault present.

1.Windshield wiper system malfunction				

2.Wipers Do Not Park

3. Wipers Always ON

Circuit/System Description

The Body Control Module (BCM) monitors the windshield wiper/washer switch low signal circuit. When the wiper switch is placed in the low position, battery voltage is applied through the switch contacts, a series of resistors, and the wiper switch low signal circuit to the BCM. The BCM then applies battery voltage through the wiper relay control circuit to energize the WIPER LO relay. When energized, battery voltage from the FRT WPR fuse is applied through the switch side of the WIPER LO relay then through the switch side of the WIPER HIGH relay to the windshield wiper motor.

Conditions for Running the DTC

Battery voltage is between 9 and 16 Volts.

The low speed BCM output is actively being requested.

Conditions for Setting the DTC

The BCM detects a short to ground or open high resistance on the BCM Fuse F9 B+ circuit.

The BCM detects a short to ground on the windshield wiper switch low speed signal circuit with wiper switch in OFF position and ignition in the OFF position.

Action Taken When the DTC Sets

- The BCM will not activate the low speed output.
- The windshield wipers will only operate in the delay and high speed modes.

Conditions for Clearing the DTC

- The DTC will clear the current status when the condition for setting the fault is corrected.
- A history DTC will clear after 100 consecutive ignition cycles without a fault present.

Scan Tool Reference

Control Module References for scan tool information

Circuit/System Verification

Ignition ON, observe the scan tool Windshield Wiper Switch parameter while rotating the wiper switch. The reading should change between Off, Intermittent, Low and High.

Circuit/System Testing

1. Ignition OFF, disconnect the X3 harness connector at the BCM.
2. Verify that a test lamp illuminates between the B+ circuit terminal 3 and ground
   If the test lamp does not illuminate, test the B+ circuit for a short to ground or an open/high resistance.
3. Connect the X3 harness connector at the BCM, disconnect the harness connector at the windshield wiper/washer switch.
4. Ignition ON, verify the scan tool Windshield Wiper Switch parameter is Off.
   If not the specified value, test the signal circuit terminal 7 for a short to ground. If the circuit tests normal, replace the BCM.
5. If all circuits test normal, test or replace the windshield wiper/washer switch.

Component Testing

1. Ignition OFF, disconnect the harness connector at the windshield wiper/washer switch.
2. With the wiper switch in the HIGH position, test for less than 2 ohms between the low reference terminal 8 and the signal terminal 4.
   If greater than the specified range, replace the windshield wiper/washer switch.

   Important: If the switch tests open in any switch position other than Off, test the signal circuits for a short to voltage before replacing the switch.

3. While cycling the wiper switch through each delay and speed position, test for the specified resistance between the low reference terminal 8 and the signal terminal 7.

Wiper Switch Values

Switch Position	Resistance

Off	Infinite
Mist	300-364 Ω
Delay 1	3.48k-4.25k Ω
Delay 2	2.52k-3.08k Ω
Delay 3	1.78k-2.18k Ω
Delay 4	1.17k-1.44k Ω
Delay 5	697-851 Ω
Low	300-364 Ω
High	300-364 Ω

If any switch position is not within the specified range, replace the windshield wiper/washer switch.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

Headlamp Washer Malfunction

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.
- Diagnostic Procedure Instructions provides an overview of each diagnostic category.

Diagnostic Fault Information

Circuit	Short to Ground	Open/High Resistance	Short to Voltage	Signal Performance
B+ -- Headlamp Washer Relay	1	1	--	--
Headlamp Washer Relay Control	1	1	2	--
Headlamp Washer Fluid Pump Control	1	1	2	--
Headlamp Washer Relay Ground	--	1	--	--
Headlamp Washer Fluid Pump Ground	--	1	--	--
1. Headlamp washer pump inoperative 2. Headlamp washer pump always on				

Circuit/System Description

When the washer switch is pressed, the windshield wiper switch sends a voltage signal through windshield washer switch signal circuit to the wiper motor module and the body control module (BCM) indicating the wash command. Every fourth time the windshield washer system is commanded ON, the BCM will initiate a headlamp wash cycle by applying B+ to the headlamp washer relay control circuit energizing the relay. The relay then closes its switch contacts applying B+ through the headlamp washer pump motor control circuit to the headlamp washer pump motor. The pump motor then runs spraying washer fluid on the headlamps. A headlamp wash cycle consists of a prewash, then a pause, and then a wash operation.

Description and Operation

Headlamp Washer System Description and Operation

Electrical Information Reference

- Circuit Testing
- Connector Repairs
- Testing for Intermittent Conditions and Poor Connections
- Wiring Repairs

Scan Tool Reference

Control Module References for scan tool information

Circuit/System Verification

1. Verify the windshield washers operate normally.
2. Verify the headlamps operate normally.
3. Verify the windshield washer fluid level is above the minimum level.

   If not above the minimum level, fill the reservoir and inspect for leaks.
4. Verify the scan tool IPC Washer Fluid Level parameter is OK.

Circuit/System Testing

1. Ignition OFF, disconnect the HEADLAMP WASH Relay.
2. Test for less than 5 ohms between the ground circuit terminal 86 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Ignition ON, verify that a test lamp illuminates between the B+ terminal 30 and ground.

   If the test lamp does not illuminate, test the HEADLAMP Circuit fuse for an open..
4. Verify that a test lamp does not illuminate between the control circuit terminal 87 and ground.

   If the test lamp illuminates, test the control circuit for a short to voltage.
5. Connect a test lamp between the control circuit terminal 86 and the ground circuit terminal 87.
6. Command the Headlamp Washer Relay On and OFF with a scan tool. The test lamp should turn ON and OFF when changing between commanded states.

   If the test lamp is always ON, test the control circuit for a short to voltage. If the circuit tests normal, replace the BCM.

   If the test lamp is always OFF, test the control circuit for a short to ground or open/high resistance. If the circuit tests normal, replace the BCM.
7. Ignition OFF, disconnect the harness connector at the headlamp washer fluid pump.
8. Test for less than 5 ohm between the ground circuit terminal 1 and ground

   If greater than the specified range, test the ground circuit for an open/high resistance.

9. Connect the harness connector at the headlamp washer fluid pump.
10. Install a 3A fused jumper wire between the B+ circuit terminal 30 and the control circuit terminal 87. Verify the headlamp washer fluid pump is activated.

    If it does not activate, test the control circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the headlamp washer fluid pump.
11. If all circuits test normal, test or replace the headlamp washer relay.

Component Testing

Headlamp Washer Pump Circuit Test

1. Ignition OFF, disconnect the harness connector at the headlamp washer fluid pump.
2. Install a 20A fused jumper wire between the control terminal 1 and 12 volts. Install a jumper wire between the ground terminal 2and ground.
3. Verify the headlamp washer fluid pump is activated.

    If the headlamp washer fluid pump does not activate, replace the washer fluid pump.

RelayTest

1. Ignition OFF, disconnect the relay.
2. Test for 60-200 ohms between terminals 85 and 86.

    If the resistance is not within the specified range, replace the relay.
3. Test for infinite resistance between the following terminals:
    - 30 and 86
    - 30 and 87
    - 30 and 85
    - 85 and 87

    If not the specified value, replace the relay.
4. Test for less than 2 ohms between terminals 30 and 87A.

    If greater than the specified range, replace the relay.
5. Install a 10A fused jumper wire between relay terminal 85 and 12 volts. Install a jumper wire between relay terminal 86 and ground. Test for less than 2 ohms between terminals 30 and 87.

    If greater than the specified range, replace the relay.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

- Headlamp Washer Pump Replacement
- Relay Replacement
- Control Module References for BCM replacement, programming, and setup

Low Washer Fluid Indicator Malfunction

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.
- Diagnostic Procedure Instructions provides an overview of each diagnostic category.

Diagnostic Fault Information

Circuit	Short to Ground	Open/High Resistance	Short to Voltage	Signal Performance
Washer Fluid Level Switch Signal	1	2	--	--
Washer Fluid Level Switch Ground	--	2	--	--
1. Low washer fluid message always displayed 2. Low washer fluid message never displayed				

Circuit/System Description

The Check Washer Fluid message is controlled by the instrument panel cluster using an input from the washer fluid level switch. The washer fluid level signal circuit is supplied ignition voltage through a resistor then monitored within the instrument cluster. The washer fluid level switch is normally open so the instrument cluster detects ignition voltage on the washer fluid level signal circuit whenever the washer fluid level is not low. When the washer fluid reaches the point where the driver should be informed that the washer fluid is low, the washer fluid level switch closes. When the washer fluid level switch is closed the washer fluid level signal circuit voltage is pulled low, and the instrument panel displays the Check Washer Fluid message on the driver information center. In order to prevent the Check Washer Fluid message from being displayed while sloshing is occurring in the washer fluid container, the instrument cluster is programed with a 1 minute delay before changing states of the Check Washer Fluid message during an ignition cycle.

Circuit/System Verification

1. Verify the windshield washer fluid level is above the minimum level.
   If not above the minimum level, fill the reservoir and inspect for leaks.
2. Verify the scan tool IPC Washer Fluid Level parameter is OK.

Circuit/System Testing

1. Ignition OFF, disconnect the harness connector at the washer fluid level switch.
2. Test for less than 1.0 ohm between the ground circuit terminal A and ground.
   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Ignition ON, verify the scan tool Washer Fluid Level parameter is OK.
   If not the specified value, test the signal circuit terminal B for a short to ground. If the circuit tests normal, replace the IPC.
4. Install a 3A fused jumper wire between the signal circuit terminal B and the ground circuit terminal A. Verify the scan tool IPC Washer Fluid Level parameter is Low.
   If not the specified value, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the IPC.
5. If all circuits test normal, test or replace the washer fluid level switch.

Repair Instructions

Rear Wiper System Malfunction

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.
- Diagnostic Procedure Instructions provides an overview of each diagnostic category.

Diagnostic Fault Information

Circuit	Short to Ground	Open/High Resistance	Short to Voltage	Signal Performance
Rear Window Wiper Motor B+	1	1	--	--
Rear Window Wiper Motor Ignition Voltage	1	1	--	--
Rear Window Wiper/Washer Switch Ignition Voltage	1	1	--	--
Rear Window Wiper Switch Signal	1	1	2	--
Rear Window Wiper Motor Ground	--	1	--	--
1. Rear Window Wiper Motor Inoperative 2. Rear Window Wiper Motor Always On				

Circuit/System Description

The rear wiper is controlled based on an input from the rear wiper/washer switch. When closed, the wiper ON and wiper DELAY switches provide a unique voltage signal to the rear window wiper motor indicating the desired speed. Each switch has a unique resistor that drops the voltage to a specified value which is interpreted by the rear window wiper motor as ON or DELAY. The rear wiper motor receives B+ voltage from the underhood fuse block and accessory voltage from the body control module (BCM).

Circuit/System Verification

Rear wiper switch in the WIPER position. The rear wiper should turn ON.

If the rear wiper does not turn ON, refer to circuit system testing.

Circuit/System Testing

1. Ignition OFF, disconnect the harness connector at the window wiper/washer switch rear.
2. Ignition ON, test for ignition voltage between the ignition voltage circuit terminal 1 and ground
   If not the specified value, test the ignition circuit for a short to ground or an open/ high resistance.
3. Ignition OFF, connect the harness connector at the window wiper/washer switch rear. Disconnect the harness connector at the rear window wiper motor.
4. Test for less than 10 ohms between the ground circuit terminal 4 and ground.
   If greater than the specified range, test the ground circuit for an open/high resistance.
5. Ignition ON, verify a test lamp illuminates between the B+ circuit terminal 5 and ground.
   If the test lamp does not illuminate, test the B+ circuit for a short to ground or an open/high resistance.
6. Ignition ON, rear wiper/washer switch in the WIPER position, test for ignition voltagebetween the signal circuit terminal 1 and ground.
   If not the specified value, test the signal circuit for a short to ground or an open/high resistance, If the circuit tests normal, replace the window wiper/washer switch rear.
7. Liftgate closed, test for infinite resistance betweenthe signal circuit terminal 3 and ground.
   If not the specified value, test the signal circuit for a short to ground.
8. If all circuits test normal, test or replace the rear window wiper/washer module.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

- Windshield Wiper and Washer Switch Replacement
- Rear Window Wiper Motor Replacement

- Rear Window Washer Pump Replacement

Rear Wiper Washer System Malfunction

Diagnostic Instructions

Circuit / System Verification

Rear wiper switch in the WIPER position. The rear wiper should turn ON.

If the rear wiper does not turn ON, refer to Rear Wiper System Malfunction

Circuit / System Testing

1. Ignition OFF, disconnect the harness connector at the window wiper/washer switch rear.
2. Ignition ON, wiper/washer switch rear in the WASHER position, test for ignition voltage between the signal circuit terminal 1 and ground.

   If not than the specified value, test for a short to ground or an open/high resistance.
3. Ignition OFF, connect the harness connector at the rear window wiper/washer module. Disconnect the harness connector at the rear window washer fluid pump.
4. Test for less than 10 ohms between the ground circuit terminal 1 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
5. Ignition ON, wiper/washer switch rear in the WASHER position, verify a test lamp illuminates between the control circuit terminal 2 and ground.

   If the test lamp does not illuminate, test the control circuit for a short to ground or an open/high resistance.

   If the test lamp illuminates test or replace the rear window washer fluid pump.
6. If all circuits test normal, test or replace the rear window wiper motor.

Component Testing

Wiper / Washer Switch

1. With the WASH switch in the open position, test for infinite resistance between the low reference terminal 1 and the signal terminal 2.

   If not the specified value, replace the wiper/washer switch rear.
2. With the WASH switch in the closed position, test for less than 2 ohms between the ground terminal 1 and the signal terminal 2.

   If greater than the specified range, replace the wiper/washer switch rear.

Washer Pump

1. Ignition OFF, disconnect the harness connector at the washer pump.
2. Install a 10A fused jumper wire between the control circuit terminal 1 and 12 volts. Install a jumper wire between the ground circuit terminal 2 and ground.
3. Verify the washer pump is activated.

   If the washer pump does not activate , replace the rear window washer fluid pump.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

- Windshield Wiper and Washer Switch Replacement
- Rear Window Wiper Motor Replacement
- Rear Window Washer Pump Replacement

Symptoms - Wiper / Washer Systems

Important: The following steps must be completed before using the symptom tables:

1. Perform the Diagnostic System Check - Vehicle , in order to verify that all of the following conditions are true.
   - No DTCs are set.
   - The control modules can communicate via the serial data link.
2. Review the system operation in order to familiarize yourself with the system functions. Refer to Wiper/Washer System Description and Operation.

Visual / Physical Inspection

- Inspect the washer fluid reservoir for the proper fluid level and condition.
- Inspect the easily accessible or visible system components for obvious damage or conditions which could cause the symptom.
- Inspect for aftermarket devices which could affect the operation of the Windshield Wiper/Washer System.

Intermittent

- If the wipers operate at low speed for approximately 3 seconds and then stop, the wiper motor park switch, or its signal circuit, may be malfunctioning.
- Faulty electrical connections or wiring may be the cause of intermittent conditions. Refer to Testing for Intermittent Conditions and Poor Connections.

Symptom List

Refer to a symptom diagnostic procedure from the following list in order to diagnose the symptom:

- Windshield Wiper System Malfunction
- Windshield Wiper Washer System Malfunction

Windshield Wiper System Malfunction

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.

WIPER CONTROL Relay Ground	--	1	--	--

1.Windshield wiper system malfunction

2.Wipers Do Not Park

3.Wipers Always ON

Circuit/System Description

The body control module (BCM) controls the wiper motor based on input from the windshield wiper washer switch. The BCM monitors the wiper washer switch through three separate signal circuits and a ground circuit. The windshield wiper switch high signal circuit is used to determine high speed wiper operation, the windshield wiper switch low signal is used to determine low speed, intermittent, and mist operation through the use of a resistor ladder, and windshield washer switch signal circuit is used to determine washer operation.

The BCM controls the windshield wiper motor through two output controls, controlling two relays which determine the desired wiper speed, high or low.

Control Module References for scan tool information

Circuit/System Verification

1. Ignition ON, wiper switch OFF, verify the scan tool Windshield Washer Switch parameter is Inactive.
2. Wiper switch OFF, verify the scan tool Windshield Wiper Switch parameter is Off.
3. Wiper switch OFF, verify the scan tool Wiper High Speed Switch parameter is Inactive.
4. Wiper switch in the LOW position, verify the scan tool Windshield Wiper Switch parameter is Low.
5. Wiper switch in the HIGH position, verify the scan tool Wiper High Speed Switch parameter is Active.
6. Wiper switch in the INT position, verify the scan tool Windshield Wiper Switch parameter is Intermittent.
7. Wiper switch in the INT position, observe the scan tool Wiper Delay Setting parameter while

cycling the delay adjustment switch from long delay to short delay. The parameter should cycle between D1 and D5 as each delay position is selected.

8. Wiper switch in the LOW position, verify the windshield wipers are cycling at low speed.
9. Wiper switch in the HIGH position, verify the windshield wipers are cycling at high speed.
10. Wiper switch in the INT position, cycling the delay adjustment switch from long delay to short delay. Verify the wiper delay time decreases from long delay to short delay as each delay position is selected.

Circuit / System Testing

Windshield Wiper Switch Malfunction

1. Ignition OFF, disconnect the harness connector at the Windshield Wiper/Washer Switch.
2. Test for less than 40 Ω between the low reference circuit terminal 8 and ground.

   If greater than the specified range, test the low reference circuit for a short to voltage or an open/high resistance. If the circuit test normal, replace the BCM.
3. Ignition ON, verify the scan tool Windshield Wiper Switch parameter is Off.

   If not the specified value, test the signal circuit terminal 7 for a short to ground. If the circuit tests normal, replace the BCM.
4. Verify the scan tool Wiper High Speed Switch parameter is Inactive.

   If not the specified value, test the signal circuit terminal 4 for a short to ground. If the circuit tests normal, replace the BCM.
5. Install a 3A fused jumper wire between the signal circuit terminal 7 and ground. Verify the scan tool Windshield Wiper Switch parameter is Switch Fault.

   If not the specified value, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
6. Install a 3A fused jumper wire between the signal circuit terminal 4 and ground. Verify the scan tool Wiper High Speed Switch parameter is Active.

   If not the specified value, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
7. If all circuits test normal, test or replace the Windshield Wiper/Washer Switch.

Windshield Wiper Motor Malfunction

1. Ignition OFF, disconnect WIPER LO relay.
2. Ignition OFF, wait 20 seconds, Test for less than 1Ω between the ground circuit terminal 85 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Ignition OFF, wait 20 seconds, test for less than 1Ω between the ground circuit terminal 87A and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
4. Ignition ON, verify that a test lamp illuminates between the B+ circuit terminal 87 and ground.

   If the test lamp does not illuminate, replace the underhood fuse block.
5. Ignition OFF, wait 20 seconds, connect a test lamp between the control circuit terminal 86 and the ground circuit terminal 85.
6. Ignition ON, command the WIPER LO relay ON and OFF with a scan tool. The test lamp should turn ON and OFF when changing between the commanded states.

   If the test lamp is always ON, test the control circuit for a short to voltage. If the circuit tests normal, replace the BCM.

If the test lamp is always OFF, test the control circuit for a short to ground or an open/high resistance. If the circuit tests normal, replace the BCM.

7. Ignition OFF, disconnect the WIPER HIGH relay.
8. Test for less than 1 Ω between the control circuit terminal 30 at the WIPER LO relay and the control circuit terminal 30 at the WIPER HIGH relay.

   If greater than the specified range, replace the underhood fuse block.

9. Connect the WIPER LO relay.
10. Ignition OFF, wiper switch OFF, wait 20 seconds, Test for less than 1 Ω between the control circuit terminal 30 and ground.

    If greater than the specified range, test or replace the WIPER LO relay.

11. Ignition ON, verify that a test lamp illuminates between the B+ circuit terminal 85 and ground.

    If the test lamp does not illuminate, replace the underhood fuse block.

12. Ignition OFF, connect a test lamp between the control circuit terminal 30 and ground.
13. Command the WIPER LO relay ON and OFF with a scan tool. The test lamp should turn illuminate.

    If the test lamp does not illuminate, replace the WIPER LO relay.

14. Ignition OFF, remove WIPER HIGH relay, connect a test lamp between the B+ circuit terminal 85 and the control circuit terminal 86.
15. Command the Wiper High relay ON and OFF with a scan tool. The test lamp should turn ON and OFF when changing between commanded states.

    If the test lamp is always ON, test the control circuit for a short to ground. If the circuit tests normal, replace the BCM.

    If the test lamp is always OFF, test the control circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.

16. Ignition OFF, connect the WIPER HIGH relay. Disconnect the harness connector at the windshield wiper motor.
17. Test for less than 5Ω between the ground circuit terminal 3 and ground.

    If greater than the specified range, test the ground circuit for an open/high resistance.

18. Connect a test lamp between the control circuit terminal 1 and ground.
19. Ignition ON, command the WIPER LO relay ON and OFF with a scan tool. The test lamp should turn ON and OFF when changing between the commanded states.

    If the test lamp is always ON, test the control circuit for a short to voltage. If the circuit tests normal, test or replace the WIPER HIGH relay.

    If the test lamp is always OFF, test the control circuit for a short to ground or an open/high resistance. If the circuit tests normal, test or replace the WIPER HIGH relay.

20. Ignition OFF, connect a test lamp between the control circuit terminal 2 and ground.
21. Lo wipers ON, command the Wiper High speed relay ON and OFF with a scan tool. The test lamp should turn ON and OFF when changing between the commanded states.

    If the test lamp is always ON, test the control circuit for a short to voltage. If the circuit tests normal, test or replace the WIPER HIGH relay.

    If the test lamp is always OFF, test the control circuit for a short to ground or an open/high resistance. If the circuit tests normal, test or replace the WIPER HIGH relay.

22. Wipers OFF, test for B+ between the signal circuit terminal 4 and ground.

    If not the specified value, test the signal circuit for a short to ground or an open high resistance. If the circuit tests normal, replace the BCM.

23. If all circuits test normal, test or replace the windshield wiper motor.

Component Testing

Windshield Wiper / Washer Switch Malfunction

1. Ignition OFF, disconnect the harness connector at the Windshield Wiper/Washer Switch.
2. With the wiper switch in the HIGH position, test for less than 2 ohms between the low reference terminal 8 and the signal terminal 4.

   If greater than the specified range, replace the Windshield Wiper/Washer Switch.

   Important: If the switch tests open in any switch position other than Off, test the signal circuits for a short to voltage before replacing the switch.

3. While cycling the wiper switch through each delay and speed position, test for the specified resistance between the low reference terminal 8 and the signal terminal 7.

Wiper Switch Values

Switch Position	Resistance
Off	Infinite
Mist	300-364 Ω
Delay 1	3.48K-4.25K Ω
Delay 2	2.52K-3.08K Ω
Delay 3	1.78K-2.18K Ω
Delay 4	1.17K-1.44K Ω
Delay 5	697-851 Ω
Low	300-364 Ω

If any switch position is not within the specified range, replace the windshield wiper washer switch.

Windshield Wiper Motor

1. Ignition OFF, disconnect the harness connector at the windshield wiper motor.
2. Install a 25 A fused jumper wire between B+ and the control terminal 1. Install a jumper wire between the terminal 3 and ground.
3. Verify the wiper motor is operating in the low speed mode.

   If the wiper motor is not in the low speed mode, replace the windshield wiper motor.

4. Install a 25 A fused jumper wire between B+ and the control terminal 2. Install a jumper wire between the terminal 3 and ground.
5. Verify the wiper motor is operating in the high speed mode.

   If the wiper motor is not in the high speed mode, replace the windshield wiper motor.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

Diagnostic Fault Information

Circuit	Short to Ground	Open/High Resistance	Short to Voltage	Signal Performance
Windshield Washer Switch Signal	2	1	1	--
Windshield Washer Pump Control	1	1	2	--
Windshield Washer Relay Control	2	1	B3873 00	--
Windshield Wiper Switch Low Reference	--	1	--	--
Windshield Washer Fluid Pump Low Reference	--	1	--	--
1. Washer Inoperative 2. Washers Always ON				

Circuit/System Description

The windshield washer function is controlled by the Body Control Module (BCM). When the washer switch is pressed, ground is applied through the switch contacts and the signal circuit to the BCM indicating the wash request. The BCM then applies ground through the control circuit to the coil side of the WSW relay energizing the relay. With the relay energized, B+ from the WSW fuse is applied through the switch contacts of the relay to the windshield washer fluid pump.

Description and Operation

Wiper/Washer System Description and Operation

Electrical Information Reference

- Circuit Testing
- Connector Repairs
- Testing for Intermittent Conditions and Poor Connections
- Wiring Repairs

Scan Tool Reference

Control Module References for scan tool information

Circuit/System Verification

1. Ignition ON, wiper switch OFF, observe the scan tool Windshield Washer Switch parameter while cycling the washer switch ON and OFF. The parameter should change between Active and Inactive.

    If the parameter does not cycle between the specified values, refer to Windshield Washer Switch Malfunction.

2. Operate the washers using the washer switch. Verify the washer pump activates and the low speed wipers turn on.

    If the washer pump does not activate, refer to Washer Pump Circuit Malfunction.

    If the low speed wipers do not turn on refer to Windshield Wiper System Malfunction

Circuit/System Testing

Windshield Wiper/Washer Switch Malfunction

1. Ignition OFF, disconnect the harness connector at the windshield wiper/washer switch.
2. Test for less than 40 Ω between the low reference circuit terminal 8 and ground.

    If greater than the specified range, test the low reference circuit for a short to voltage or an open/high resistance. If the circuit test normal, replace the BCM.

3. Ignition ON, verify the scan tool Windshield Washer Switch parameter is Inactive.

    If not the specified value, test the signal circuit terminal 6 for a short to ground. If the circuit tests normal, replace the BCM.

4. Install a 3A fused jumper wire between the signal circuit terminal 6 and ground. Verify the scan tool Windshield Washer Switch parameter is Active.

    If not the specified value, test the signal circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.

5. If all circuits test normal, test or replace the windshield wiper/washer switch.

Washer Pump Circuit Malfunction.

1. Ignition OFF, disconnect the WSW relay.
2. Ignition ON, verify that a test lamp does not illuminate between the control circuit terminal 30 and ground.

    If the test lamp illuminates, test the control circuit for a short to voltage.

3. Verify that a test lamp illuminates between the B+ circuit terminal 87 and ground.

   If the test lamp does not illuminate, test the B+ circuit for a short to ground or an open high/resistance.
4. Verify a test lamp illuminates between the B+ circuit terminal 86 and ground.

   If the test lamp does not illuminate, test the B+ circuit for a short to ground or an open high/resistance.
5. Disconnect the harness connector at the windshield washer fluid pump.
6. Ignition OFF, test for less than 5 ohms between the ground circuit terminal 2 and ground.

   If greater than the specified range, test the ground circuit for an open/high resistance.
7. Connect the harness connector at the windshield washer fluid pump.
8. Connect a 15A fused jumper wire between the B+ circuit terminal 87 and the control circuit terminal 30. Verify the windshield washer fluid pump is activated.

   If the windshield washer fluid pump does not activate, test the control circuit for a short to ground or an open/high resistance. If the circuit tests normal, test or replace the windshield washer fluid pump.
9. Connect a test lamp between the B+ circuit terminal 86 and the control circuit terminal 85.
10. Command the windshield washer fluid pump ON and OFF with a scan tool. The test lamp should turn ON and OFF when changing between the commanded states.

    If the test lamp is always ON, test the control circuit for a short to ground. If the circuit tests normal, replace the BCM.

    If the test lamp is always OFF, test the control circuit for a short to voltage or an open/high resistance. If the circuit tests normal, replace the BCM.
11. If all circuits test normal, test or replace the WSW Relay.

Component Testing

Windshield Washer Switch

1. Ignition OFF, disconnect the harness connector at the windshield wiper/washer switch.
2. With the wash switch in the Open position, test for infinite resistance between the low reference terminal 8 and the signal terminal 6.

   If not the specified value, replace the windshield wiper/washer switch.
3. With the WASH switch in the closed position, test for less than 2 ohms between the low reference terminal 8 and the signal terminal 6.

   If greater than the specified range, replace the windshield wiper/washer switch.

Washer Pump

1. Ignition OFF, disconnect the harness connector at the washer pump.
2. Install a 10A fused jumper wire between the control terminal 1 and 12 volts. Install a jumper wire between the ground terminal 2 and ground.
3. Verify the washer pump is activated.

   If the washer pump does not activate , replace the washer pump.

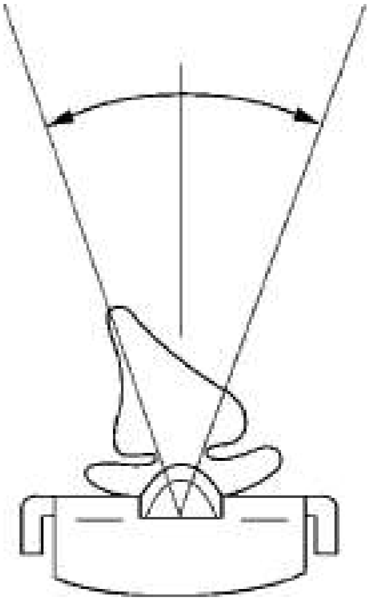
Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

- Control Module References for BCM replacement, setup, and programming

- Windshield Wiper and Washer Switch Replacement
- Underhood Electrical Center or Junction Block Replacement
- Relay Replacement
- Washer Pump Replacement

Wiper Blade Element Check



1. Remove the wiper blades from the wiper arms. Refer to Windshield Wiper Arm Replacement.
2. Inspect the length of the wiper blade element.

   Important: Replace the wiper blade element if the rubber element is deflected more than 15 degrees from the centre line of the blade.

3. Install the wipers blades on the wiper arms. Refer to Windshield Wiper Arm Replacement.
4. Operate the Wipers to Inspect for correct operation.

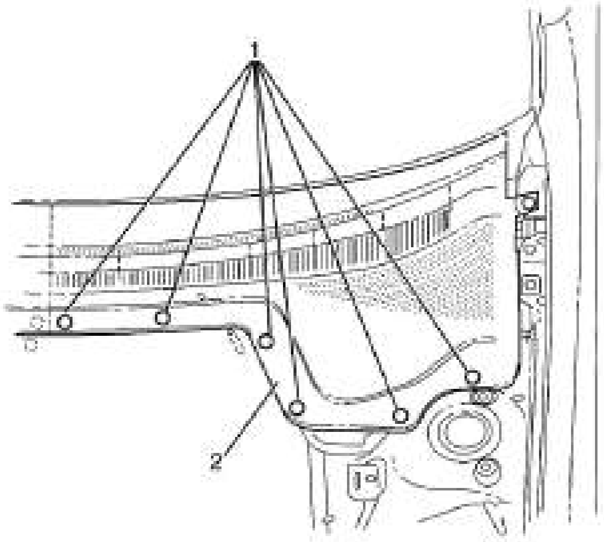
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Wipers and Washers | Repair Instructions | **Document ID: 1996950**

Air Inlet Grille Panel Replacement

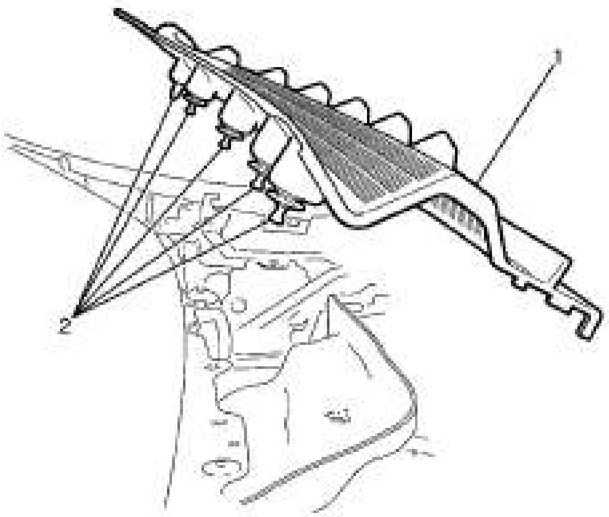
Removal Procedure

> **Important:** When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Install a suitable hood brace to the vehicle.
2. Remove the windshield wiper arms. Refer to Windshield Wiper Arm Replacement.
3. Remove the hood rear seal. Refer to Hood Rear Seal Replacement.



4. Remove the passenger side air inlet grille panel to air inlet grille panel lower retaining scrivets (1).



Important: The outer rear edges of the air inlet grille panels are positioned around the rear of the hood hinges and are tucked under the front hood assist rods.

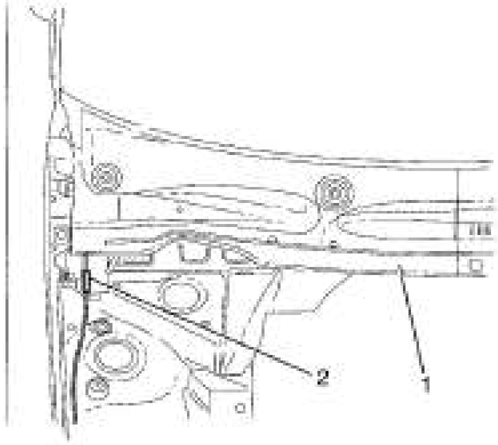
Important: The air inlet grille panel retaining grommets are single use parts. They must be discarded after removal.

5. Lift the air inlet grille panel upper (1) on the passenger side and pull upwards and inwards from the outboard of the vehicle, working towards the centre, to disengage the retaining clips (2) from the air inlet grille panel lower and discard the retaining clips.

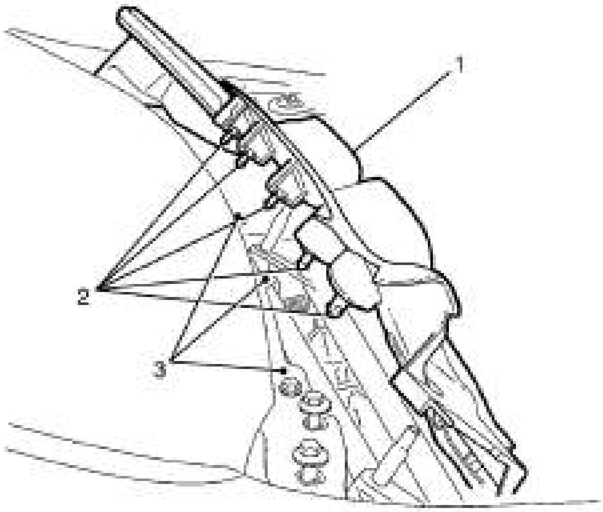
   Discard the clips.

6. Remove the air inlet grille panel upper retaining grommets (3) from the air inlet grille panel lower (1).

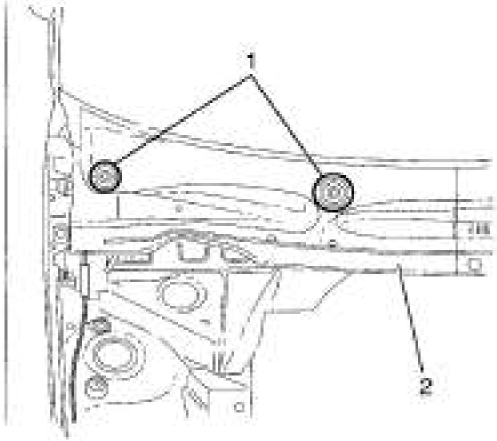
   Discard the grommets.



7. Disconnect the washer jet feed line (2) from the driver side air inlet grille panel lower (1).

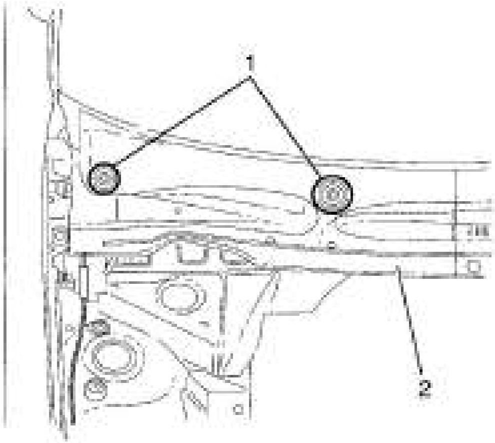


8. Lift the air inlet grille panel lower (1) on the driver side and pull upwards and inwards from the outboard of the vehicle, working towards the centre to disengage the retaining clips (2).

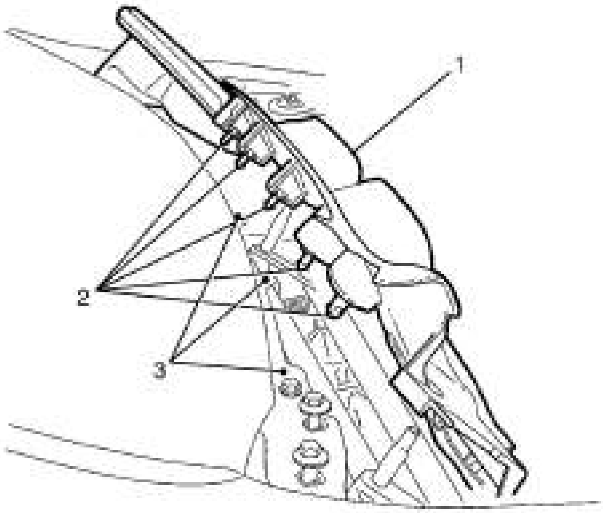


9. Lift the remaining air inlet grille panel (2) over the wiper arm drive spindles (1).
10. Remove the driver side air inlet grille panel from the vehicle.

Installation Procedure

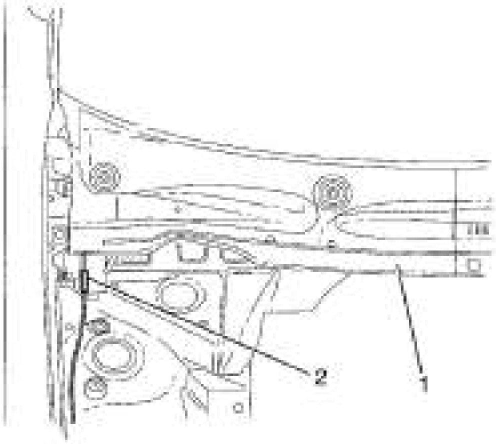


1. Position the driver side air inlet grille panel (2) to the vehicle, over the wiper arm drive spindles (1) and in behind the hood hinge.

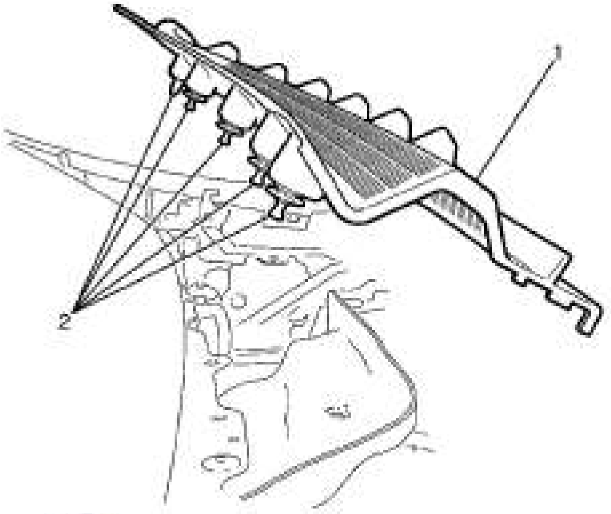


Important: Make sure that the retaining pins are not damaged during installation.

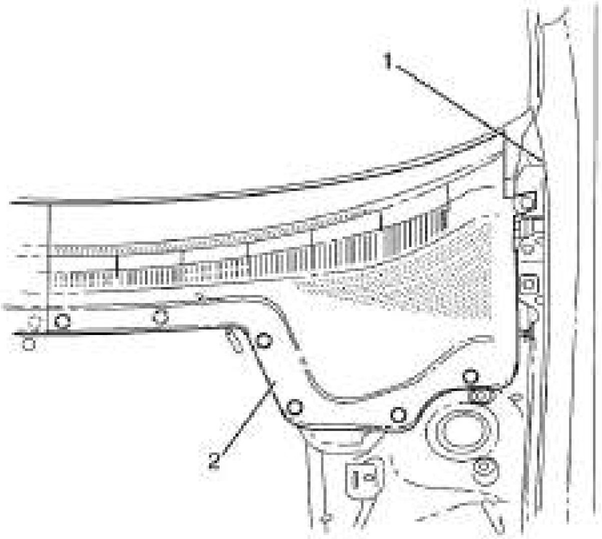
2. Locate the air inlet grille panel (1) to cowl panel retaining pins (2).
3. Firmly press the cowl panel retaining pins to secure the air inlet grille panel to the retaining grommets (3).



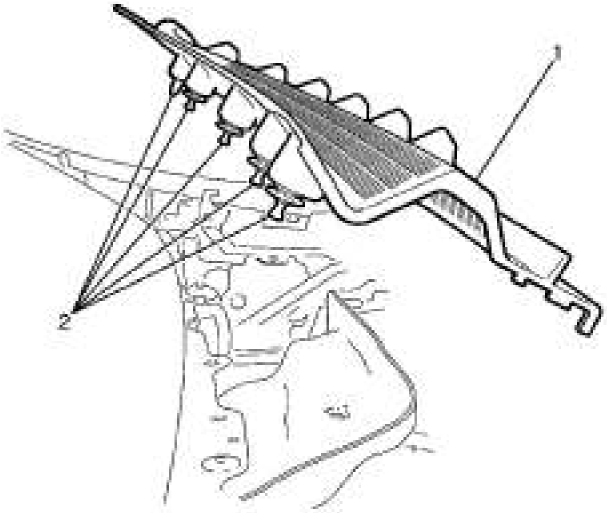
4. Connect the washer jet feed line (2) to the driver side air inlet grille panel (1).



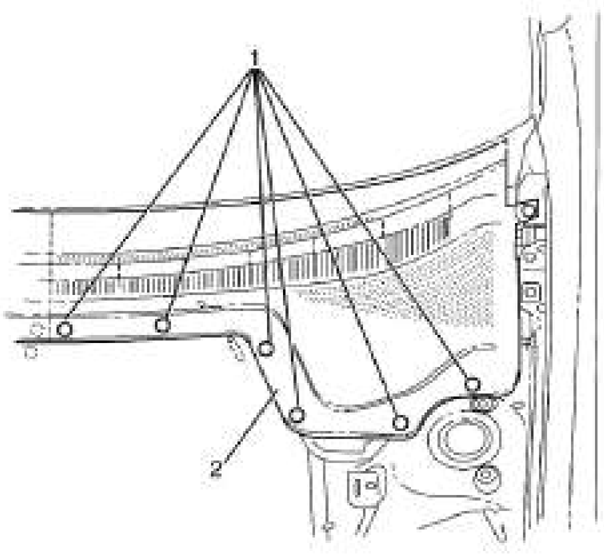
5. Install new retaining pins (2) to the air inlet grille upper panel (1).



6. Position the passenger side air inlet grille panel (2) around the hood hinge (1) and under the front hood assist rod.



7. Make sure the retaining pins (1) align with the retaining grommets during installation.
8. Engage the outboard retaining pin and work towards the centre of the vehicle.
9. Make sure that the air inlet grille seal is positioned on the lower edge of the windshield.



10. Install the passenger side air inlet grille panel to cowl panel retaining scrivets (1).
11. Install the hood rear seal to the flange on the air inlet grille panel. Refer to Hood Rear Seal Replacement.
12. Apply pressure to the seal to secure.
13. Install the windshield wiper arms. Refer to Windshield Wiper Arm Replacement.
14. Remove the suitable hood brace from the vehicle.

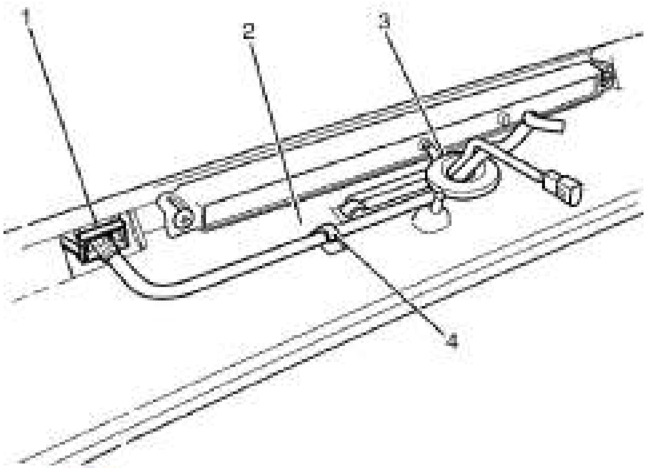
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Wipers and Washers | Repair Instructions | **Document ID: 2069393**

Rear Window Washer Nozzle Replacement

Removal Procedure

Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

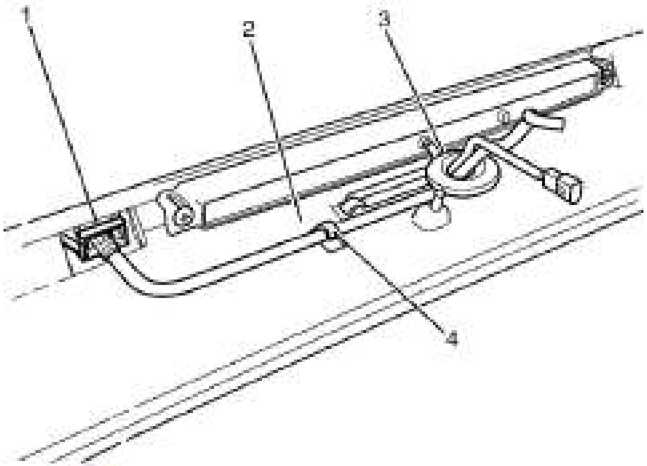
1. Install a suitable liftgate brace to the vehicle.
2. Remove the liftgate upper moulding. Refer to Liftgate Upper Molding Replacement.



Important: Take care not to pierce the washer hose.

3. Release the liftgate window washer nozzle (1) from the liftgate upper moulding (2).
4. Cut the cable tie on grommet (3), and slide washer hose (4) through grommet.

Installation Procedure



1. Engage the liftgate window washer nozzle (1) to the liftgate upper moulding (2).
2. Pass washer hose (4) through grommet (3) and attach new cable tie to grommet (3)
3. Install the liftgate upper moulding. Refer to Liftgate Upper Molding Replacement.
4. Test the liftgate window washer nozzle for correct operation.

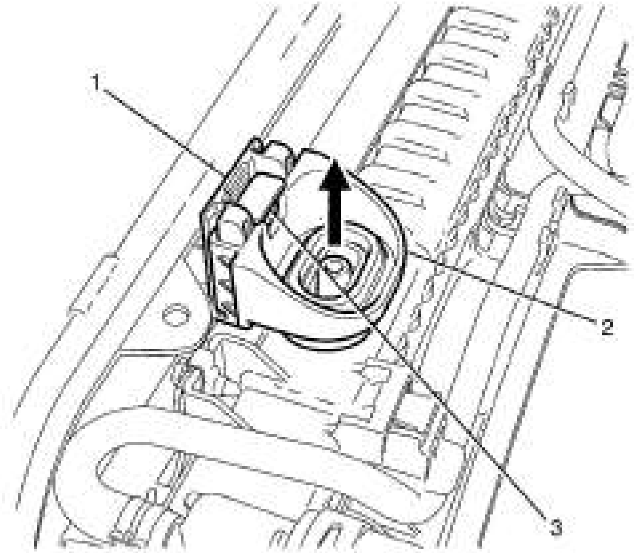
Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

5. Remove the suitable liftgate brace from the vehicle.

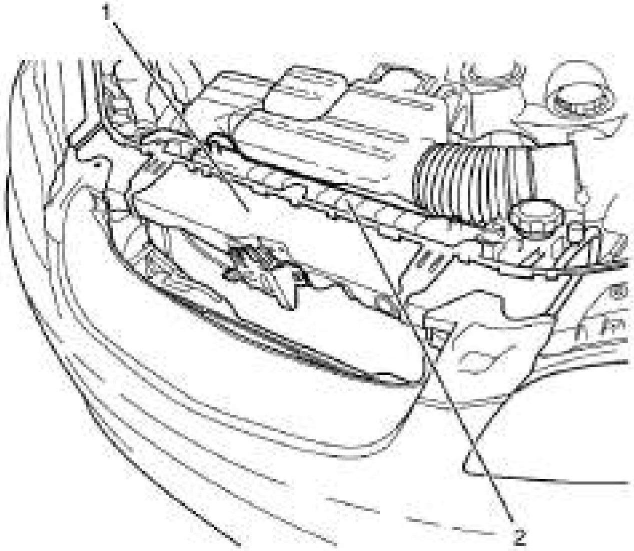
Rear Window Washer Pump Hose Replacement - Liftgate

Removal Procedure - Washer Pump to Front Fender Connector

1. Remove the radiator grille. Refer to Radiator Grille Replacement.

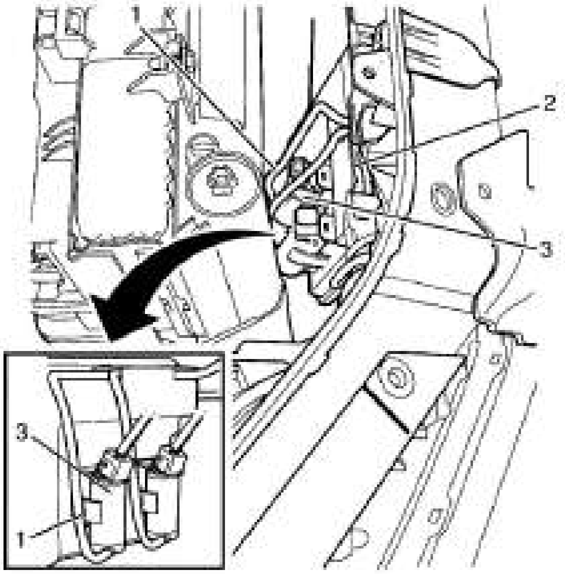


2. Raise the securing lock (3) from the radiator support bracket (2) by 10 mm on both sides.
3. Remove the radiator support bracket (2) from the radiator slide pin assembly (1) on both sides.



Important: Care must be taken when tilting the radiator assembly (2) away from the front end panel (1) as excessive force may damage the radiator assembly (2).

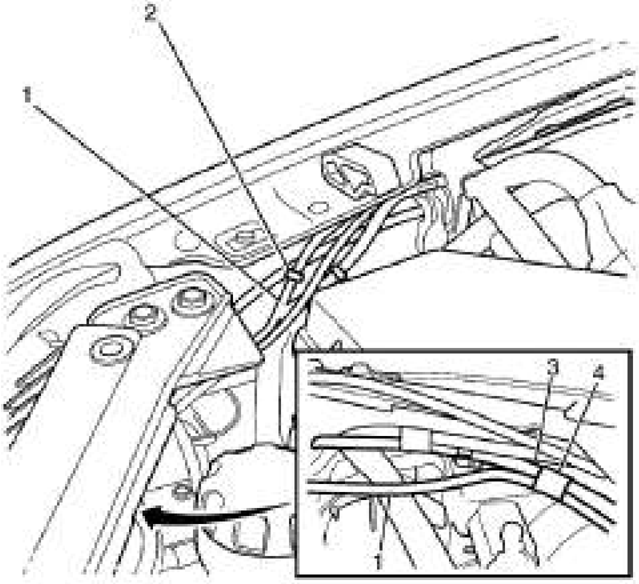
4. Tilt the radiator assembly (2) away from the front end panel (1).
5. Insert a suitable holding device between the front end panel (1) and the radiator assembly (2).



6. Place a suitable container under the rear window washer pump (3).

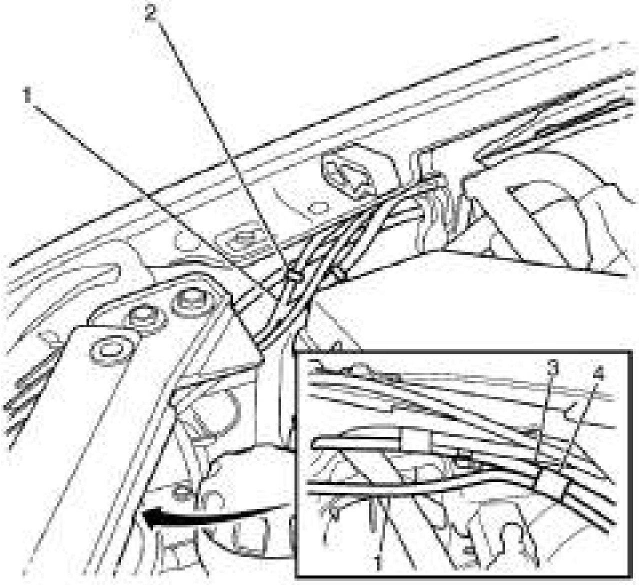
Important: Take care not to damage the condenser cooling fins when removing the rear window washer hose (1) from the rear window washer pump (3).

7. Disconnect the rear window washer hose (1) from the rear window washer pump (3).
8. Detach the rear window washer hose (1) from the solvent container (2).



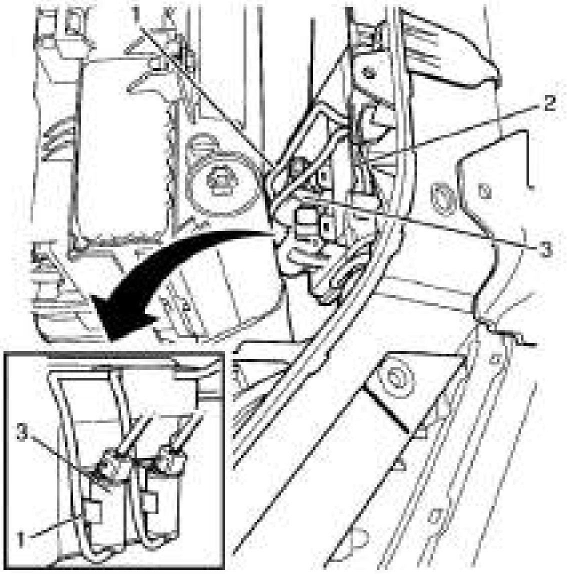
9. Mark the windshield washer hose (3) at the location of the rear window washer hose to windshield washer hose retaining tape (4).
10. Remove the rear window washer hose to windshield washer hose retaining tape (4).
11. Disconnect the rear window washer hose (1) from the rear window washer hose front fender connector (2).
12. Remove the rear window washer hose (1).

Installation Procedure - Washer Pump to Front Fender Connector



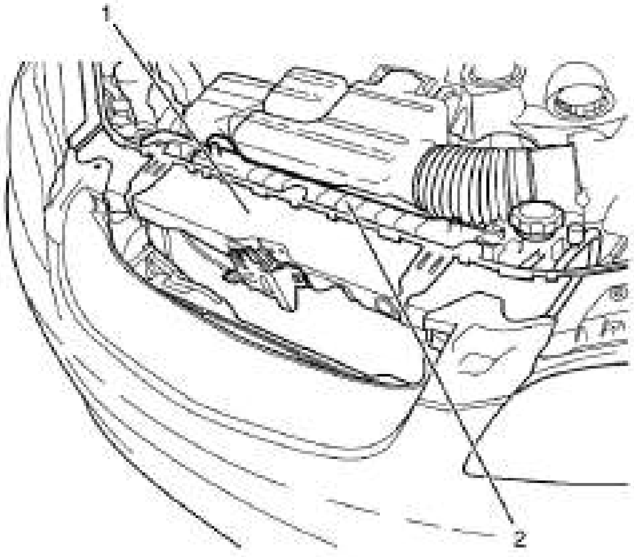
Important: When installing the rear window washer hose make sure it follows the original hose routing.

1. Connect the rear window washer hose (1) to the rear window washer hose front fender connector (2).
2. Attach the rear window washer hose (1) to the marked location on the windshield washer hose (3) with adhesive tape (4).

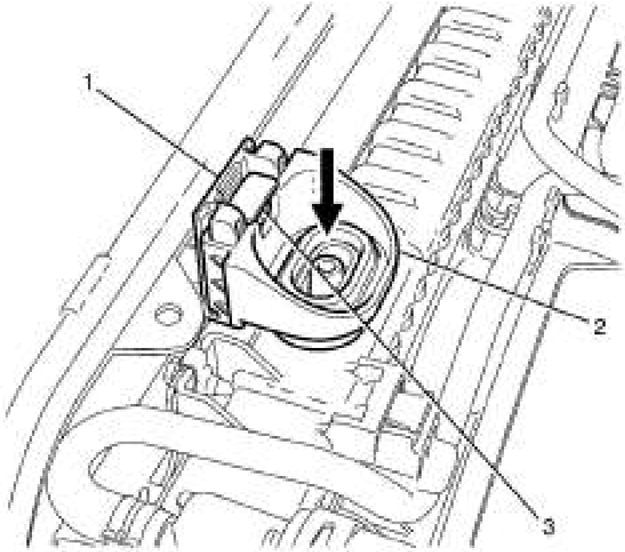


Important: Take care not to damage the condenser cooling fins when installing the rear window washer hose (1) to the rear window washer pump (3).

3. Attach the rear window washer hose (1) to the solvent container (2).
4. Connect the rear window washer hose (1) to the rear window washer pump (3).

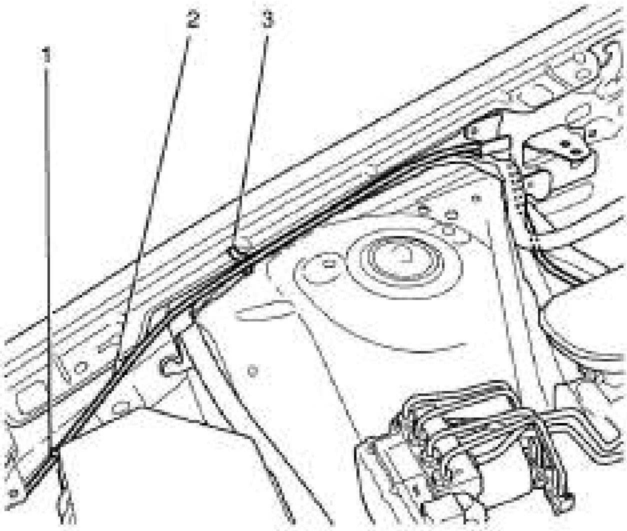


5. Remove the holding device between the radiator assembly (1) and front end panel (2).
6. Position the radiator assembly (2) to its original position, towards the front end panel (1).



7. Install the radiator support bracket (2) to the radiator slide pin assembly (1) on both sides.
8. Push the securing lock (3) into the radiator support bracket (2) making sure it is correctly seated on both sides.
9. Install the radiator grille. Refer to Radiator Grille Replacement.
10. Fill the washer fluid container with solvent.
11. Check the operation of the rear window washer and make sure there are no solvent leaks.

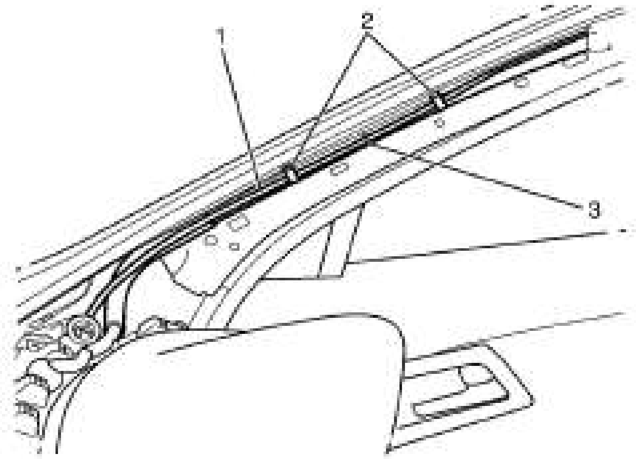
Removal Procedure - Front Fender Connector to A Pillar



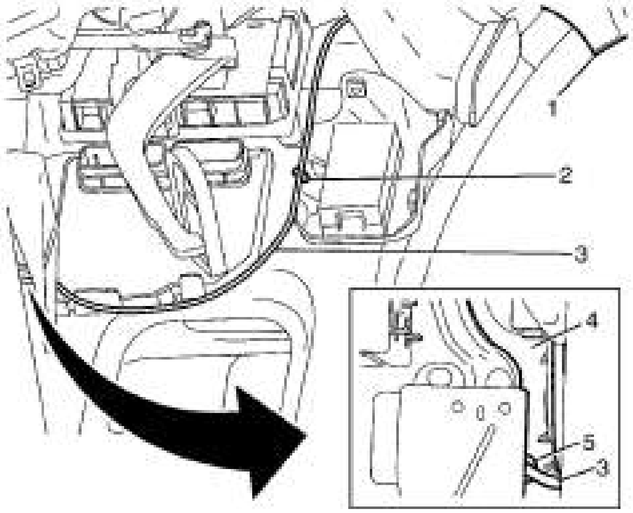
1. Disconnect the rear window washer hose (2) from the rear window washer hose front fender connector (1).
2. Detach the rear window washer hose (2) from the rear window washer hose front fender

retaining clip (3).

3. Attach a guide rope/wire to the rear window washer hose (2).
4. Remove the theft deterrent alarm. Refer to Theft Deterrent Alarm Replacement.
5. Remove the right windshield garnish molding. Refer to Windshield Garnish Molding Replacement.
6. Remove the right body hinge pillar trim panel. Refer to Body Hinge Pillar Trim Panel Replacement.
7. Remove the knee bolster. Refer to Knee Bolster Replacement.
8. Remove the instrument panel retainer. Refer to Instrument Panel Retainer Replacement.
9. Remove the accelerator pedal position sensor. Refer to Accelerator Pedal Position Sensor Replacement.

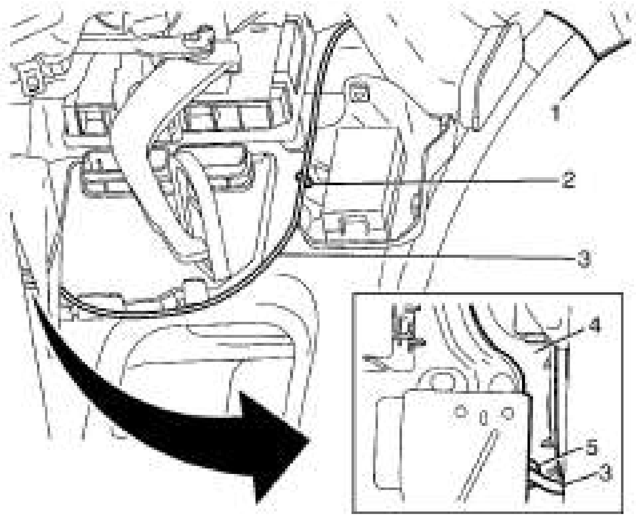


10. Detach the rear window washer hose (1) from the headlining wiring harness/washer hose retaining clips (2).
11. Cut the rear window washer hose (1) at position (3) between the headlining wiring harness/washer hose retaining clips (2).
12. Attach a guide rope/wire to the instrument panel side of rear window washer hose (1).

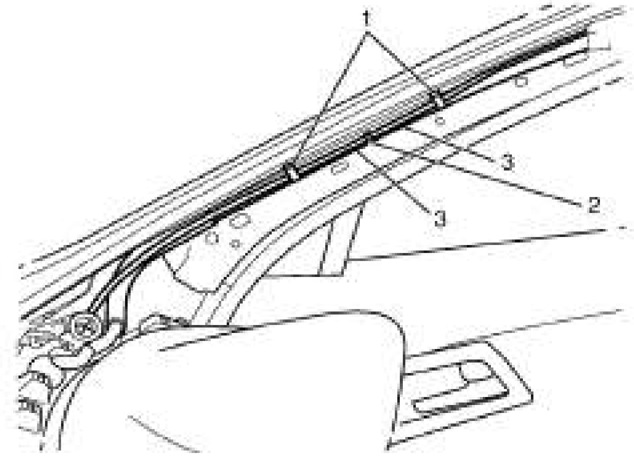


13. Detach the rear window washer hose (3) from the rear window washer hose body hinge pillar retaining clip (2).
14. Pull the rear window washer hose (3) down through the instrument panel assembly (1).
15. Detach the rear window washer hose grommet (5) from the bulkhead (4).
16. Pull the engine compartment section of the rear window washer hose (3) through the bulkhead (4) into the footwell.
17. Remove the remaining guide rope/wire from the rear window washer hose (3).
18. Remove the rear window washer hose (3).
19. Measure and cut a hose of equal diameter and length to the rear window washer hose (3) which has been removed.
20. Using the original rear window washer hose (3) as a guide, mark the position of the rear window washer hose grommet (6) and install it to the NEW rear window washer hose.
21. Attach the guide ropes/wires to each end of the NEW rear window washer hose.

Installation Procedure - Front Fender Connector to A Pillar



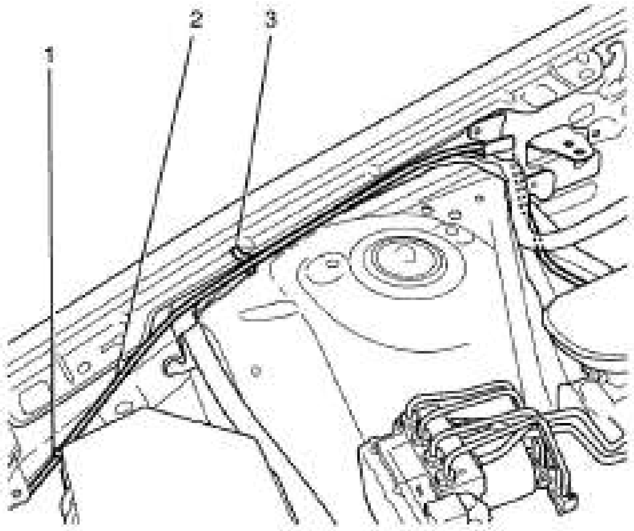
1. Gently pulling on the guide rope thread the engine compartment section of the rear window washer hose (3) through the bulkhead (4).
2. Attach the rear window washer hose grommet (6) to the bulkhead (4).
3. Attach the rear window washer hose (3) to the rear window washer hose body hinge pillar retaining clip (2).
4. Gently pulling on the guide rope thread the rear window washer hose (3) through the instrument panel assembly (1) towards the A pillar.



5. Remove the guide rope/wire from the rear window washer hose (3).

Important: Make sure the rear window washer hose in line joiner (2) is securely installed into both ends of the rear window washer hose (3).

6. Join the rear window washer hose ends (3) with in line hose joiner (2), GMH part number 92213809.
7. Attach the rear window washer hose (3) to the headlining wiring harness/washer hose retaining clips (1).
8. Install the accelerator pedal position sensor. Refer to Accelerator Pedal Position Sensor Replacement.
9. Install the instrument panel retainer. Refer to Instrument Panel Retainer Replacement.
10. Install the knee bolster. Refer to Knee Bolster Replacement.
11. Install the body hinge pillar trim panel. Refer to Body Hinge Pillar Trim Panel Replacement.
12. Install the windshield garnish molding. Refer to Windshield Garnish Molding Replacement.

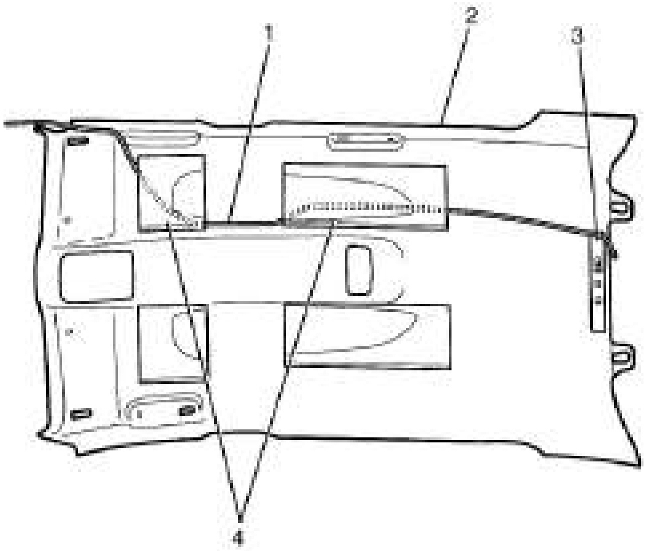


13. Attach the rear window washer hose (2) to the front fender hose retaining clip (3).
14. Remove the guide rope/wire from the rear window washer hose (2).
15. Connect the rear window washer hose (2) to the front fender hose connector (1).
16. Check the operation of the rear window washer, and make sure there are no solvent leaks.

Removal Procedure - A Pillar to Liftgate Connector

Important: This procedure should only be carried out if the headliner has not been damaged due to solvent leakage.

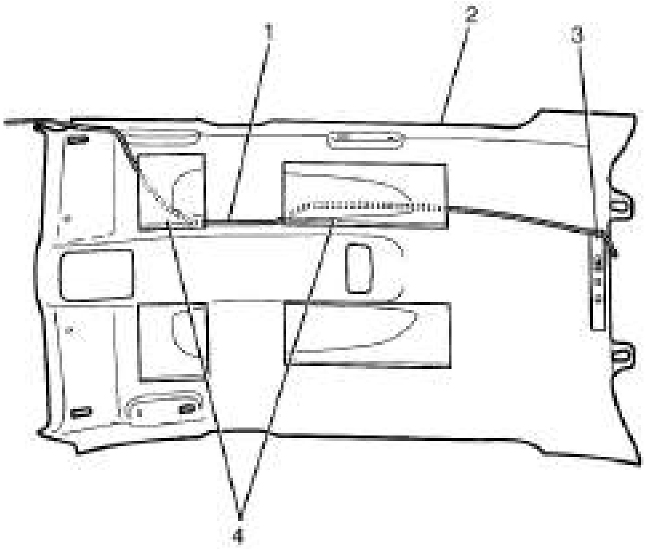
1. Remove the headlining. Refer to Headlining Trim Panel Replacement.



Important: Care must be taken not to damage the headlining (2) when removing the headlining acoustic pads (4) and the rear window washer hose (1).

2. Peel back the headlining acoustic pads (4) to access the rear window washer hose (1).
3. Using a wax pencil, mark the route of the rear window washer hose (1) onto the headlining (2).
4. Using a wax pencil, mark the position of the rear headlining clip assembly washer hose guide (3) onto the washer hose (2).
5. Remove the rear window washer hose (1) from the headlining (2).
6. Measure and cut a hose of equal diameter and length to the rear window washer hose (1) which has been removed.
7. Using the original washer hose reference marks as a guide, mark the position of the rear headlining clip assembly washer hose guide (3) to the NEW washer hose.

Installation Procedure - A Pillar to Liftgate Connector

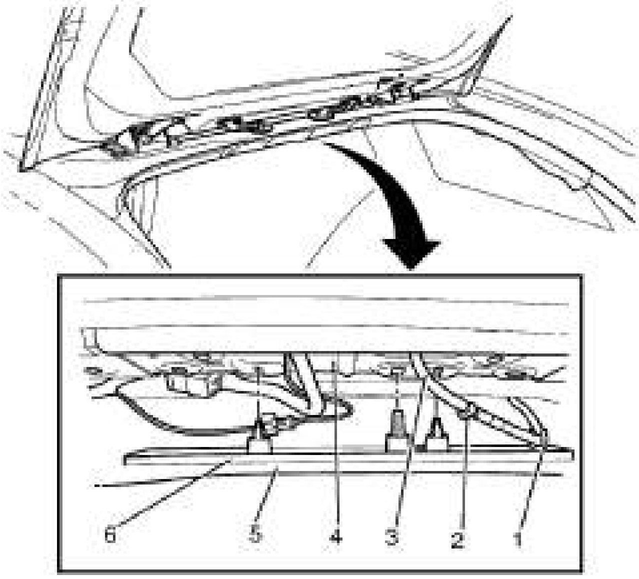


1. Align the reference mark on the new washer hose with the rear headlining clip assembly hose guide (3).
2. Install the NEW rear window washer hose to the marked location on the headlining (2).
3. Apply the GM specification GM3628M adhesive or equivalent to attach the NEW rear window washer hose (1) to the headlining (2).
4. Install the headlining. Refer to Headlining Trim Panel Replacement.
5. Check the operation of the rear window washer and make sure there are no solvent leaks.

Removal Procedure - Liftgate Connector to Washer Nozzle Hose Connector

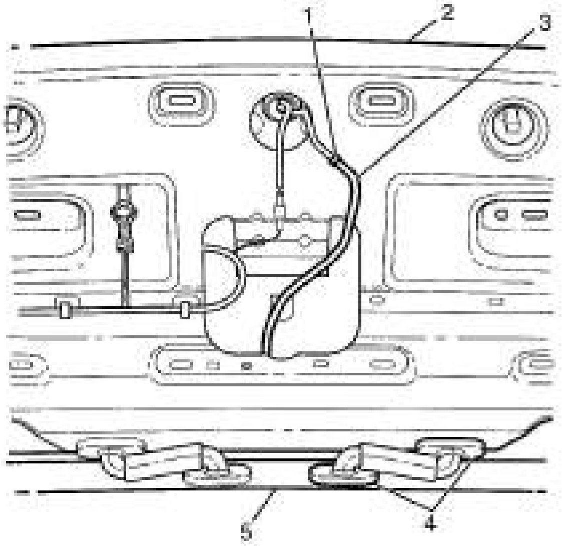
Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

1. Open and suitably support the liftgate.
2. Remove the quarter inner trim finish panel on both sides. Refer to Quarter Inner Trim Finish Panel Replacement.
3. Remove the headlining rear trim panel retainer. Refer to Headlining Rear Trim Panel Retainer Replacement.
4. Remove the body side window rear garnish moulds on both sides. Refer to Body Side Window Rear Garnish Molding Replacement.



Important: To avoid damage to the headlining carefully pull down on the headlining rear clip assembly (6) to detach from the roof panel (4).

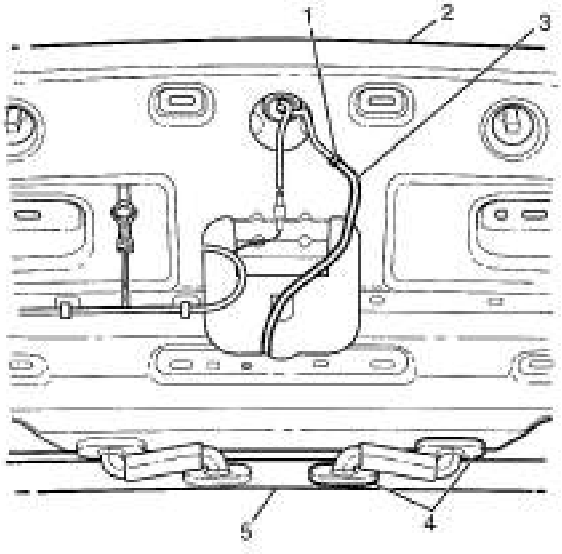
5. Detach and lower the headlining (5).
6. Remove the rear window washer hose (3) from the headlining clip assembly washer hose guide (1).
7. Disconnect the rear window washer hose (3) from rear window washer connector (2).
8. Remove the liftgate window side garnish moulding on both sides. Refer to Liftgate Window Side Garnish Molding Replacement.
9. Remove the liftgate window upper garnish moulding. Refer to Liftgate Window Side Garnish Molding Replacement.



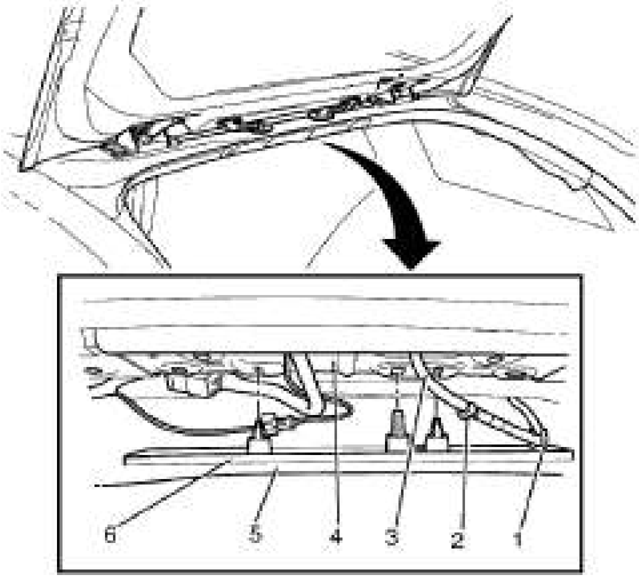
10. Disconnect the rear window washer hose (3) from the rear washer nozzle connector (1).

11. Detach the liftgate rear window washer hose grommet (4) from the rear header (5) and the liftgate (2).
12. Remove the rear window washer hose (3) from the rear header (5) and the liftgate (2).

Installation Procedure - Liftgate Connector to Washer Nozzle Hose Connector



1. Install the rear window washer hose (3) into the rear header (5) and the liftgate (2).
2. Install the liftgate rear window washer grommet (4) into the rear header (5) and the liftgate (2).
3. Connect the rear window washer hose (3) to the rear washer nozzle connector (1).
4. Install the liftgate window upper garnish moulding. Refer to Liftgate Window Side Garnish Molding Replacement.
5. Install the liftgate window side garnish moulding on both sides. Refer to Liftgate Window Side Garnish Molding Replacement.



6. Connect the rear window washer hose (3) to the rear window washer connector (2).

   Important: To avoid crimping or puncturing the rear window washer hose (3) make sure it locates correctly into the headlining clip assembly washer hose guide (1).

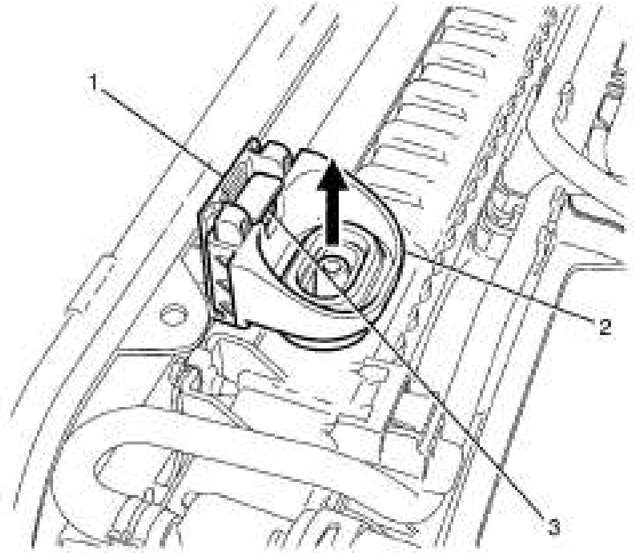
7. Install the headlining clip assembly (6) into the roof panel (4).
8. Install the body side window rear garnish moulds on both sides. Refer to Body Side Window Rear Garnish Molding Replacement.
9. Install the headlining rear trim panel retainer. Refer to Headlining Rear Trim Panel Retainer Replacement.
10. Install the quarter inner trim finish panel on both sides. Refer to Quarter Inner Trim Finish Panel Replacement.
11. Check the operation of the rear window washer and make sure there are no solvent leaks.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Wipers and Washers | Repair Instructions | Document ID: 2069394

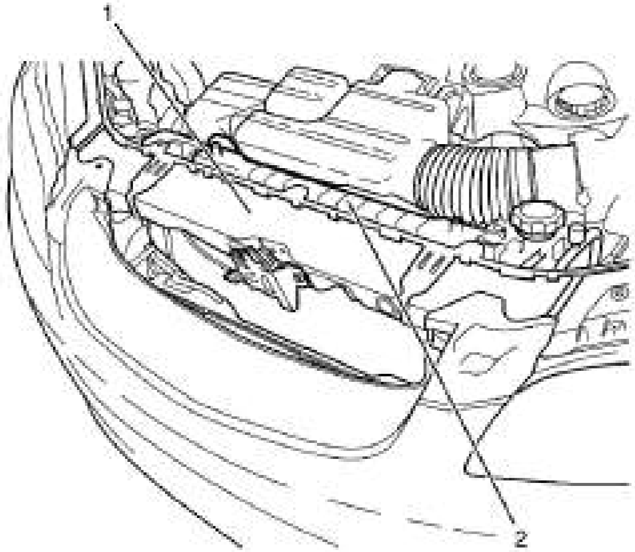
Rear Window Washer Pump Replacement

Removal Procedure

1. Remove the radiator grille. Refer to Radiator Grille Replacement.

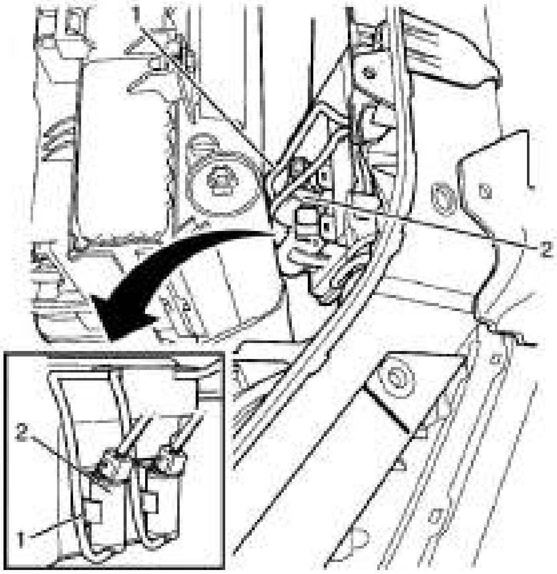


2. Raise the securing lock (3) from the radiator support bracket (2) by 10 mm on both sides.
3. Remove the radiator support bracket (2) from the radiator slide pin assembly (1) on both sides.



Important: Care must be taken when tilting the radiator assembly (2) away from the front end panel (1), as excessive force may damage the radiator assembly (2).

4. Tilt the radiator assembly (2) away from the front end panel (1).
5. Insert a suitable holding device between the front end panel (1) and the radiator assembly (2).

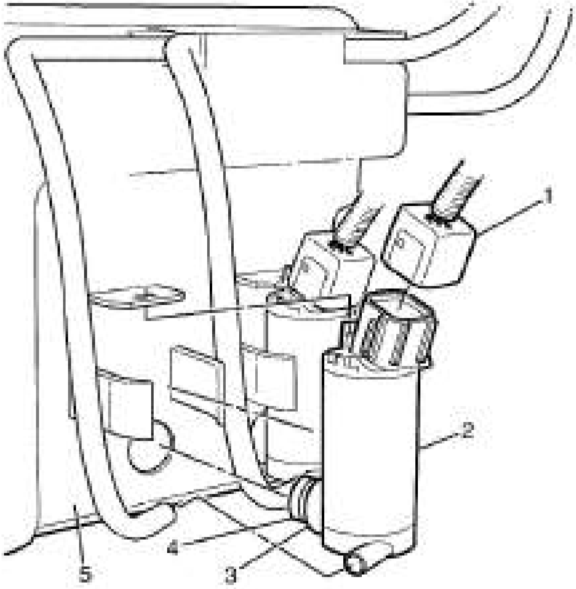


6. Place a suitable container under the rear window washer pump (2).

Important: Take care not to damage the condenser cooling fins when removing the rear window washer pump hose (1).

Important: Take care not to puncture the rear window washer pump hose (1) when removing it from the rear window washer pump (2).

7. Disconnect the rear window washer pump hose (1) from the rear window washer pump (2).



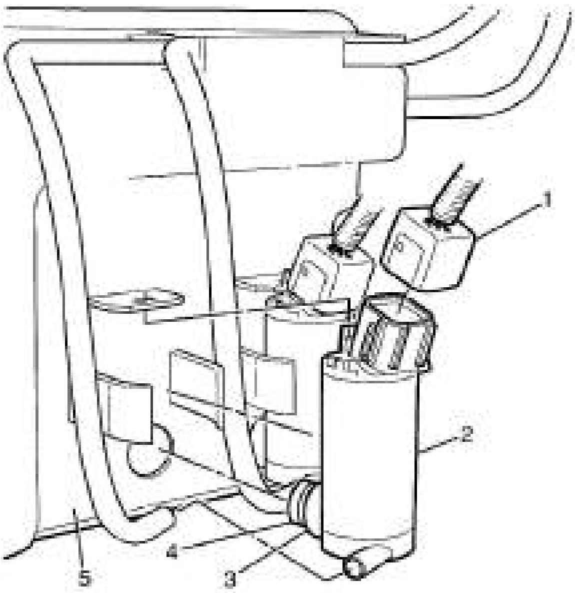
8. Disconnect the rear window washer pump electrical connector (1) from the rear window washer pump (2).

   Important: Take care not to damage the condenser cooling fins when removing the rear window washer pump (2).

   Important: Inspect the rear window washer pump inlet port rubber seal (3) for damage and replace as necessary.

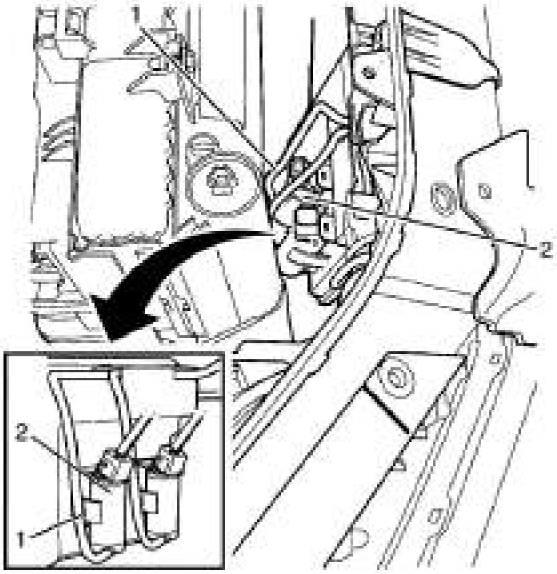
9. Remove the rear window washer pump (2) from the washer solvent container (5) .

Installation Procedure



Important: Take care not to damage the condenser cooling fins when Installing the rear window washer pump (2).

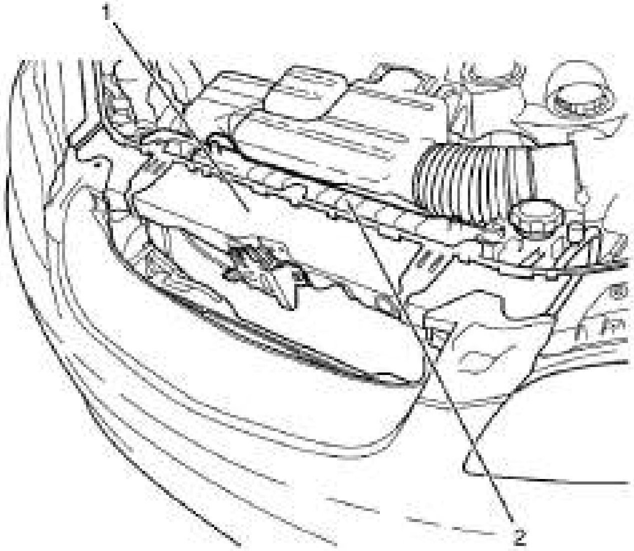
1. Install the rear window washer pump inlet port rubber seal (3) onto the rear window washer pump inlet port (4).
2. Install the rear window washer pump (2) to the washer solvent container (5) making sure the rear window washer pump inlet port (4) is securely seated into the solvent container (5).
3. Connect the rear window washer pump electrical connector (1) to the rear window washer pump (2).



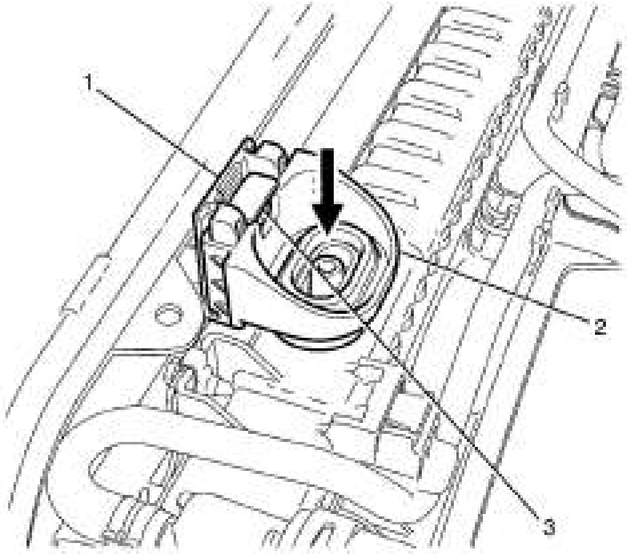
Important: Take care not to damage the condenser cooling fins when installing the rear window washer pump hose (1).

Important: Take care not to puncture the rear window washer pump hose (1) when installing it to the rear window washer pump (2).

4. Connect the rear window washer pump hose (1) to the rear window washer pump (2).



5. Remove the holding device between the radiator assembly (2) and front end panel (1).
6. Position the radiator assembly (2) towards the front end panel (1) to its original position.

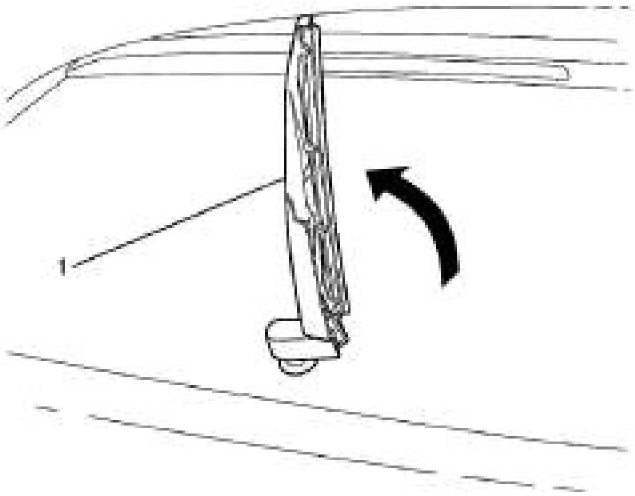


7. Install the radiator support bracket (2) to the radiator slide pin assembly (1) on both sides.
8. Push the securing lock (3) into the radiator support bracket (2) making sure it is correctly seated on both sides.
9. Install the radiator grille. Refer to Radiator Grille Replacement.
10. Fill the washer solvent container with solvent.
11. Check the operation of the rear window washer and make sure there are no solvent leaks.

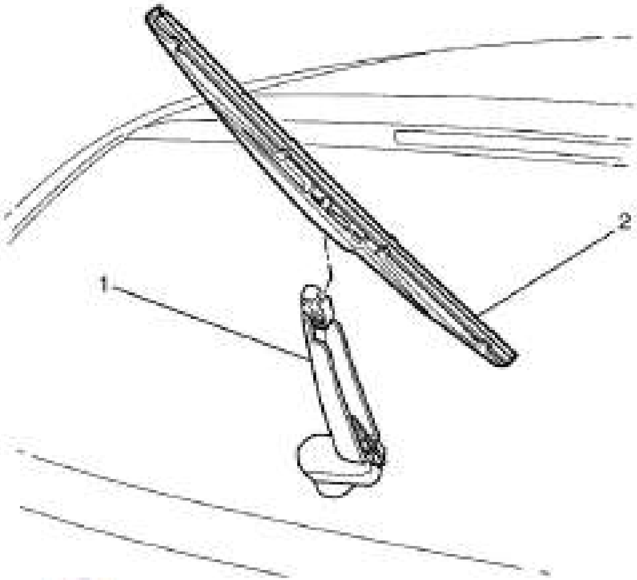
2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Wipers and Washers | Repair Instructions | Document ID: 2097282

Rear Window Wiper Blade Replacement

Removal Procedure



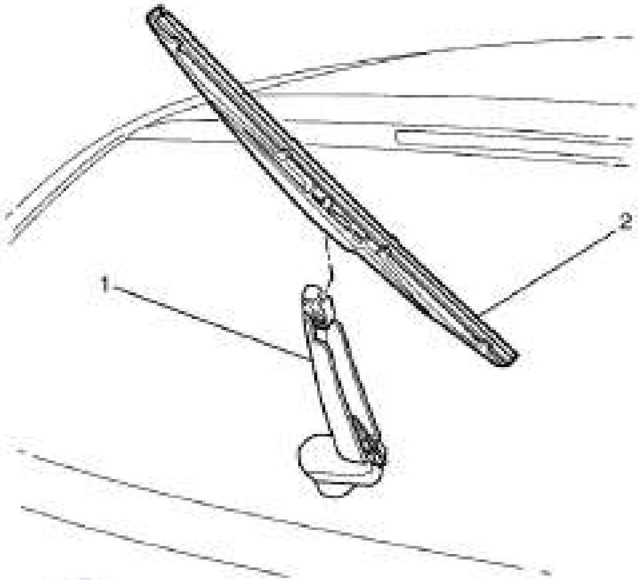
1. Lift the wiper arm (1) away from the rear window to the upright position.



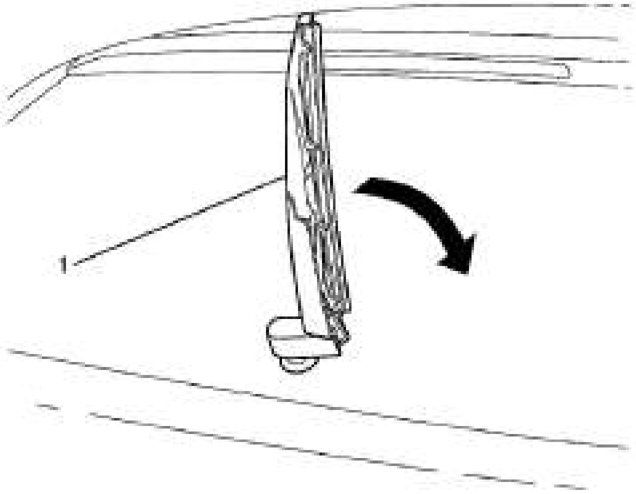
Important: Ensure that the wiper arm remains at rest position and Does Not spring back onto the windscreen.

2. Disengage the rear wiper blade lock by rotating the lower end of the rear wiper blade (2) away from the wiper arm (1).
3. Remove the rear wiper blade (2) out of the opening in the rear wiper arm (1).

Installation Procedure



1. Install the rear wiper blade (2) into the opening in the rear wiper arm (1).
2. Rotate the rear wiper blade towards the rear wiper arm (1) to engage the lock. Listen for an audible click to confirm fitting.



3. Lower the wiper arm (1) to its rest position.
4. Test the rear window wiper for correct operation.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Wipers and Washers | Repair Instructions | Document ID: 2069395

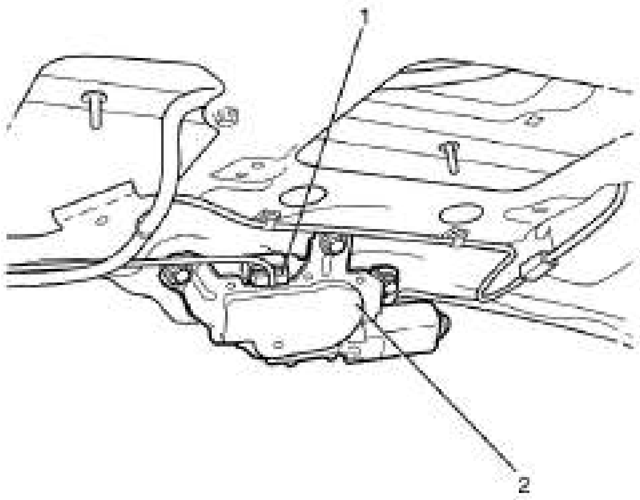
Rear Window Wiper Motor Replacement

Removal Procedure

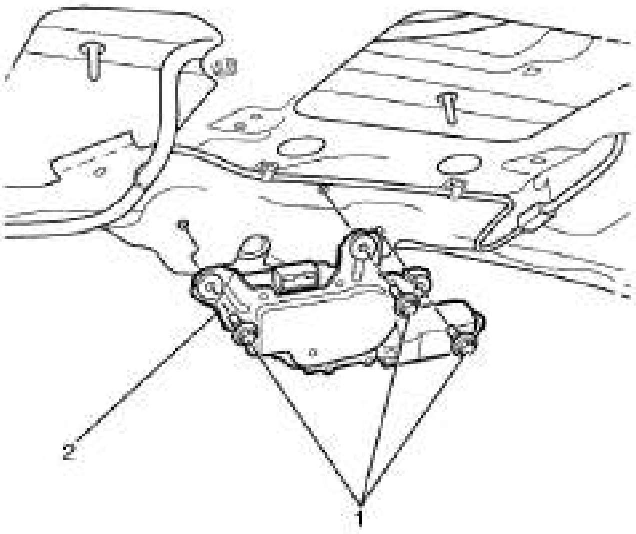
1. Remove the rear window wiper arm. Refer to Rear Window Wiper Arm Replacement.

   Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

2. Open liftgate and install a suitable liftgate brace to the vehicle.
3. Remove the liftgate window side garnish mouldings. Refer to Liftgate Window Side Garnish Molding Replacement.
4. Remove the liftgate window lower garnish moulding. Refer to Liftgate Window Lower Garnish Molding Replacement.
5. Remove the liftgate trim panel. Refer to Liftgate Trim Panel Replacement.

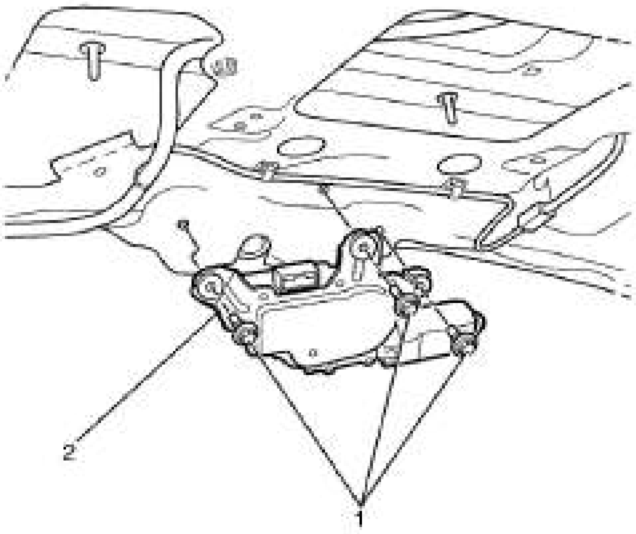


6. Disconnect the rear window wiper motor electrical connector (1) from the rear window wiper motor (2).



7. Remove the rear window wiper motor to liftgate retaining bolts (1).
8. Remove the rear window wiper motor (2) from the vehicle.

Installation Procedure

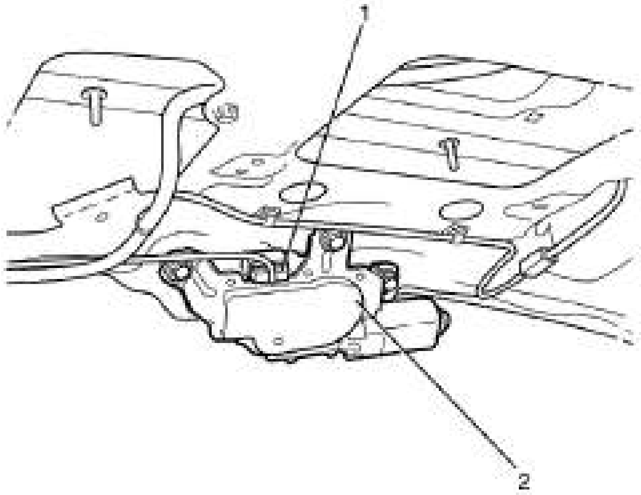


1. Position the rear window wiper motor (2) to the liftgate.

   Notice: Refer to Fastener Notice in the Preface section.

2. Install the rear window wiper motor to liftgate retaining bolts (1).

Tighten
Tighten the bolts to 8 N·m (71 lb in).



3. Connect the rear window wiper motor electrical connector (1) the rear window wiper motor (2).
4. Install the liftgate trim panel. Refer to Liftgate Trim Panel Replacement.
5. Install the liftgate window lower garnish moulding. Refer to Liftgate Window Lower Garnish Molding Replacement.
6. Install the liftgate window side garnish mouldings. Refer to Liftgate Window Side Garnish Molding Replacement.

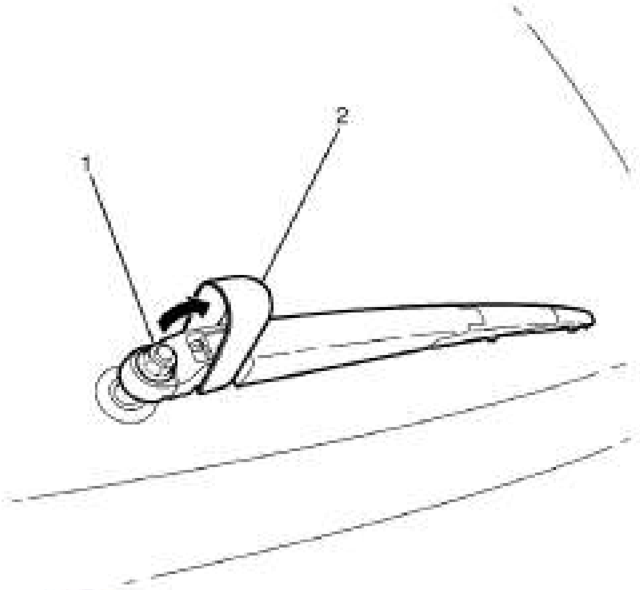
Important: When a suitable hold open device is being removed or installed, provide alternate support to avoid the possibility of damage to the vehicle or personal injury.

7. Remove the suitable liftgate brace from the vehicle and close the liftgate.
8. Install the rear window wiper arm. Refer to Rear Window Wiper Arm Replacement.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Wipers and Washers | Repair Instructions | Document ID: 2097291

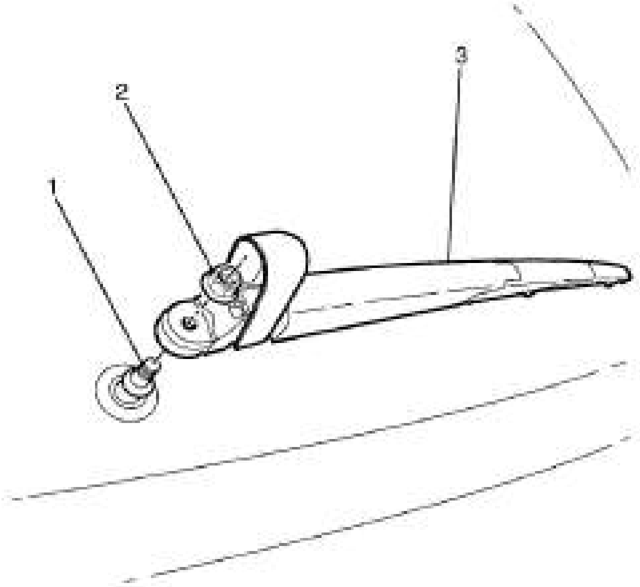
Rear Window Wiper Arm Replacement

Removal Procedure



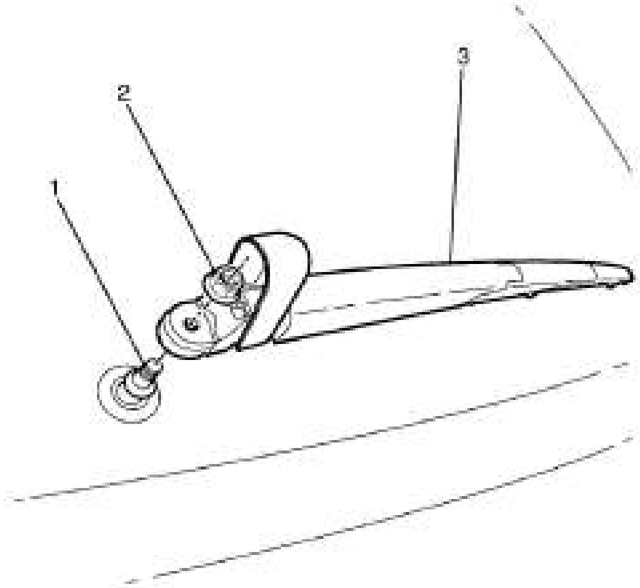
Important: Ensure the wiper arm is in the park position before commencing procedure.

1. Lift the rear wiper arm cover (2) away from the rear window to access the rear wiper arm retaining nut (1).



2. Remove the rear wiper arm retaining nut (2) from the rear wiper pivot stud (1).
3. Mark the position of the rear wiper arm (2) to the rear wiper pivot stud (1).
4. Remove the rear wiper arm (3) from the rear wiper pivot stud (2).

Installation Procedure

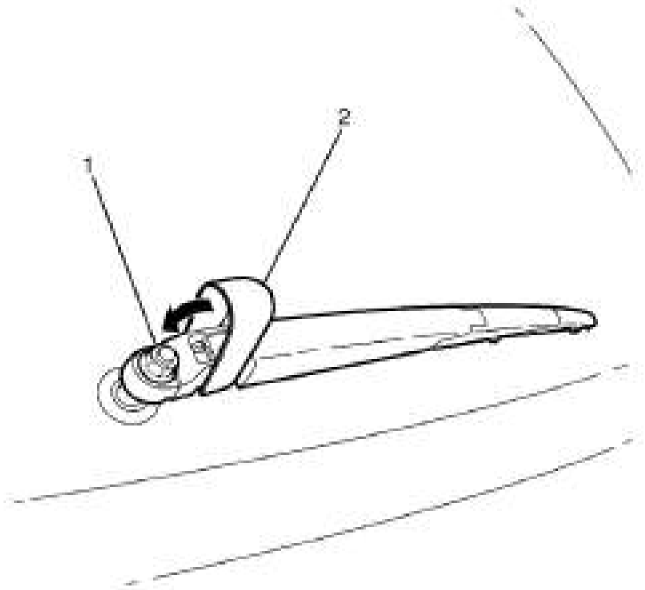


1. Install the rear wiper arm (3) to the rear wiper pivot stud (2) making sure the marked location point is aligned.

   Notice: Refer to Fastener Notice in the Preface section.

2. Install the rear wiper arm retaining nut (2) to the rear wiper pivot stud (3).
3. Tighten the rear wiper arm retaining nut (2).

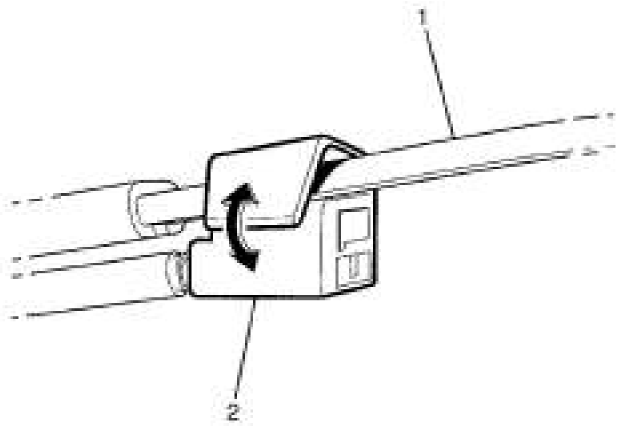
   Tighten
   Tighten the nut to 9 N·m (80 lb in).



4. Push the rear wiper arm cover (2) down towards the rear window. Listen for an audible click to confirm fitting.
5. Check the rear window wiper for correct operation and alignment.

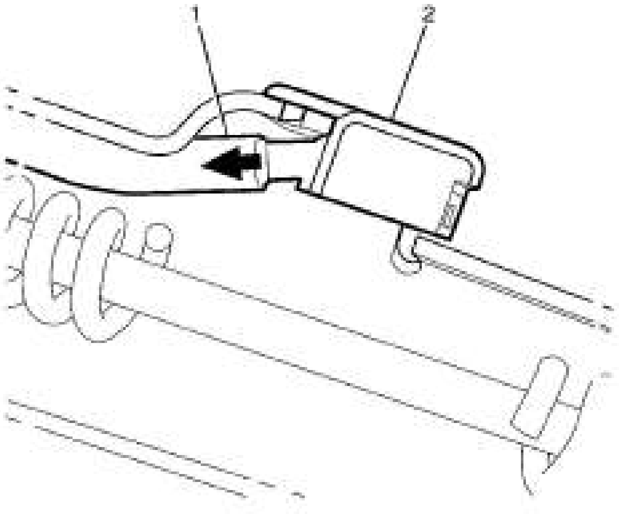
Washer Nozzle Replacement

Removal Procedure



Important: Exercise gentle force with fragile washer nozzle clips.

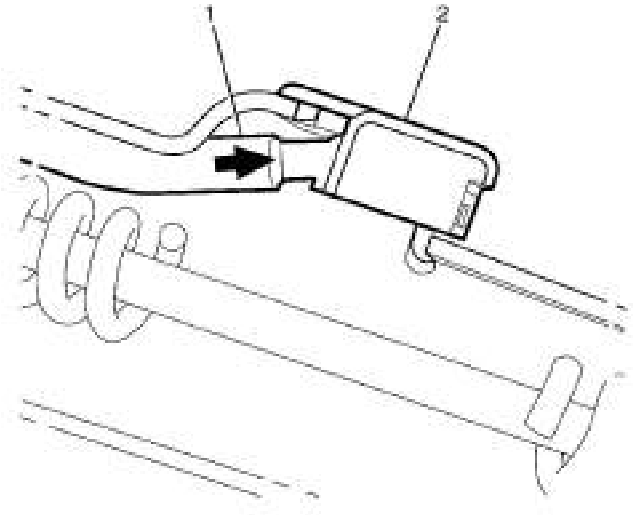
1. Unclip the washer nozzle (2) from the wiper arm (1).



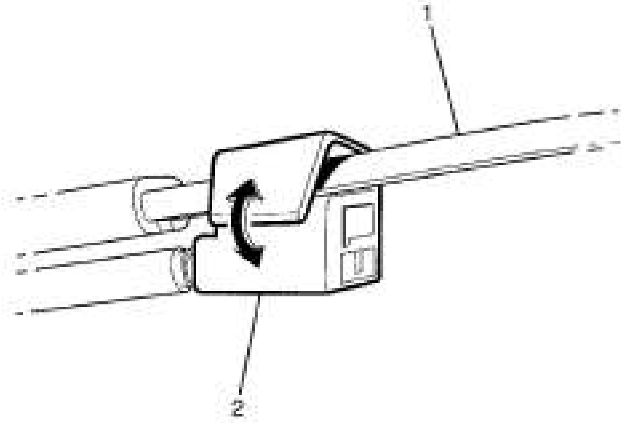
Important: Take care not to pierce the washer hose.

2. Using a suitable tool disconnect the washer hose (1) from the washer nozzle (2).

Installation Procedure



1. Connect the washer hose (1) onto the washer nozzle (2).



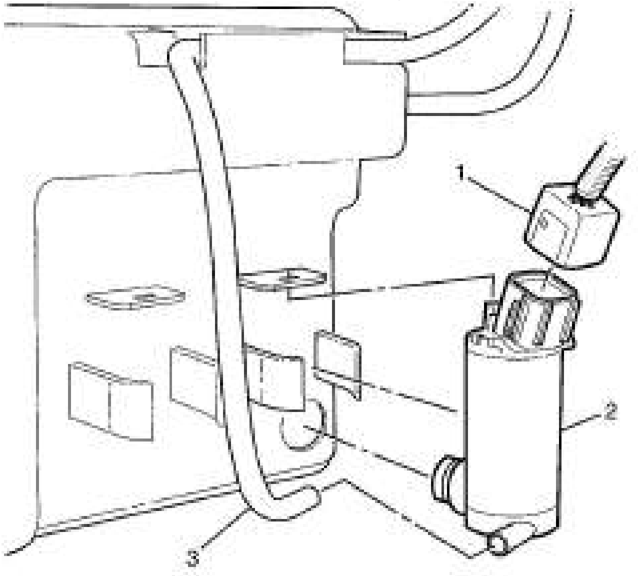
2. Press the washer nozzle (2) onto the wiper arm (1) clipping it firmly into place. Listen for an audible click to confirm fitting.
3. Test washer nozzle for correct operation.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Wipers and Washers | Repair Instructions | **Document ID: 2069397**

Washer Pump Replacement (Sedan)

Removal Procedure

1. Remove the radiator assembly. Refer to Radiator Replacement.



2. Disconnect the washer pump electrical connector (1).
3. Place a suitable container under the washer pump (2).

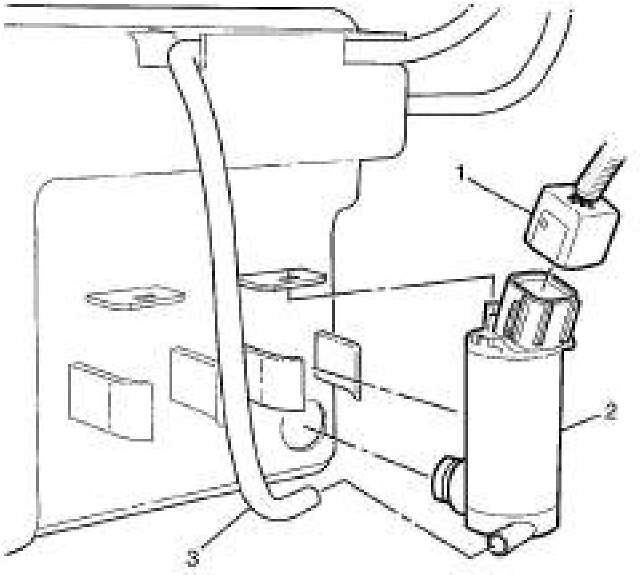
Important: Take care not to pierce the washer hose.

4. Remove the washer pump hose (3).

Important: Inspect the rubber seal for damage, due to perishing and replace as necessary.

5. Remove the washer pump (2).

Installation Procedure

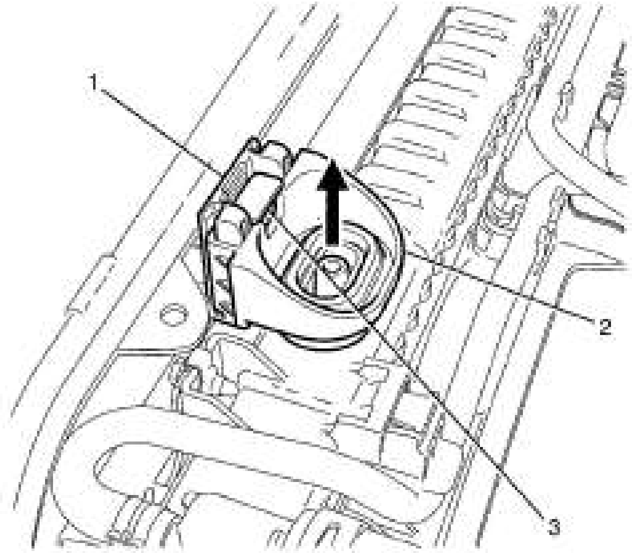


1. Position the seal to the washer pump (2) pressing in the washer pump until fully seated.
2. Connect the washer pump electrical connector (1).
3. Connect the washer pump hose (3).
4. Fill the washer solvent container with washer solvent.
5. Test the washer pump for correct operation.
6. Install the radiator assembly. Refer to Radiator Replacement.

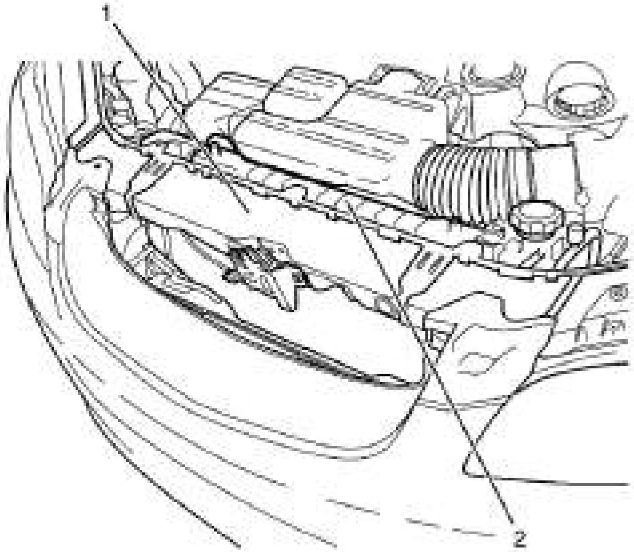
Washer Pump Replacement (Sportwagon)

Removal Procedure

1. Remove the radiator grille. Refer to Radiator Grille Replacement.

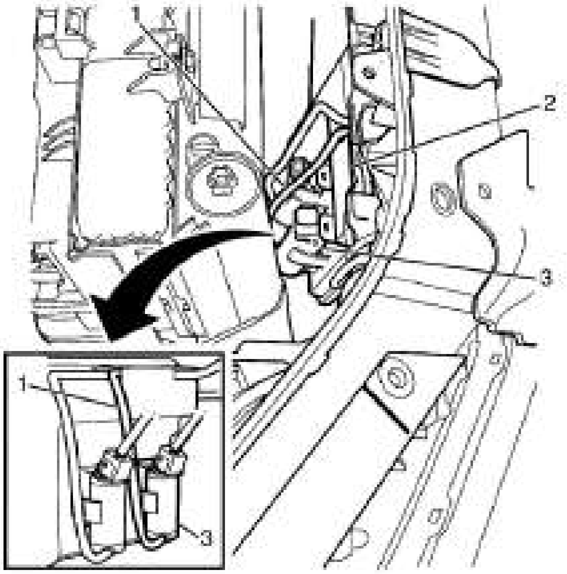


2. Raise the securing lock (3) from the radiator support bracket (2) by 10 mm on both sides.
3. Remove the radiator support bracket (2) from the radiator slide pin assembly (1) on both sides.



Important: Care must be taken when tilting the radiator assembly (2) away from the front end panel (1), as excessive force may damage the radiator assembly (2).

4. Tilt the radiator assembly (2) away from the front end panel (1).
5. Insert a suitable holding device between the front end panel (1) and the radiator assembly (2).

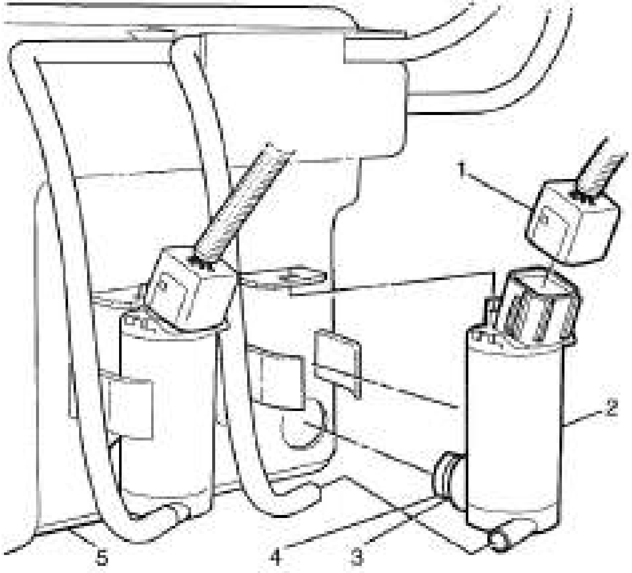


6. Place a suitable container under the rear window washer pump (3).

Important: Take care not to damage the condenser cooling fins when removing the windshield washer hose (1).

Important: Take care not to puncture the windshield washer hose (1) when removing it from the windshield washer pump (3).

7. Disconnect the windshield washer hose (1) from the windshield washer pump (3).
8. Detach the windshield washer hose (1) from the solvent container (2).

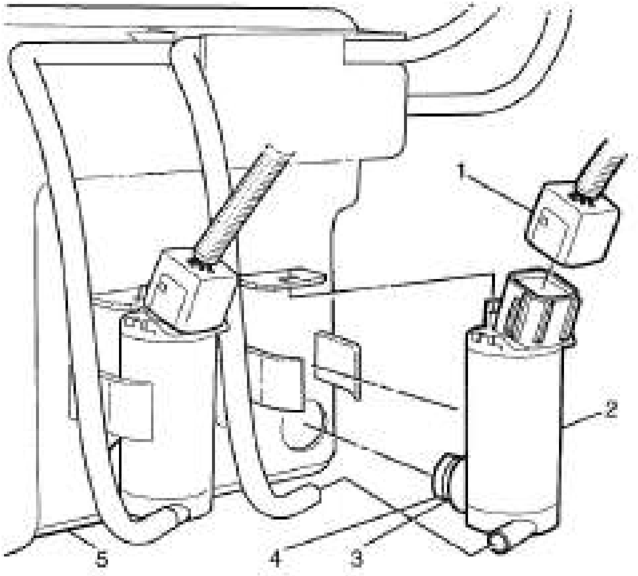


9. Disconnect the windshield washer pump electrical connector (1) from the windshield washer pump (2).

   Important: Inspect the windshield washer pump inlet port rubber seal (3) for damage and replace as necessary.

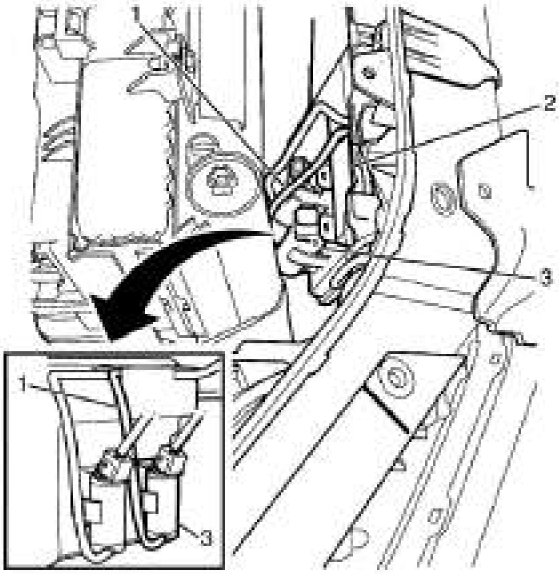
10. Remove the windshield washer pump (2) from the washer solvent container (5).

Installation Procedure



Important: Take care not to damage the condenser cooling fins when Installing the windshield washer pump (2).

1. Install the windshield washer pump inlet port rubber seal (3) onto the windshield washer pump inlet port (4).
2. Install the windshield washer pump (2) to the washer solvent container (5) making sure the windshield washer pump inlet port (4) is securely seated into the solvent container (5).
3. Connect the windshield washer pump electrical connector (1) to the windshield washer pump (2).

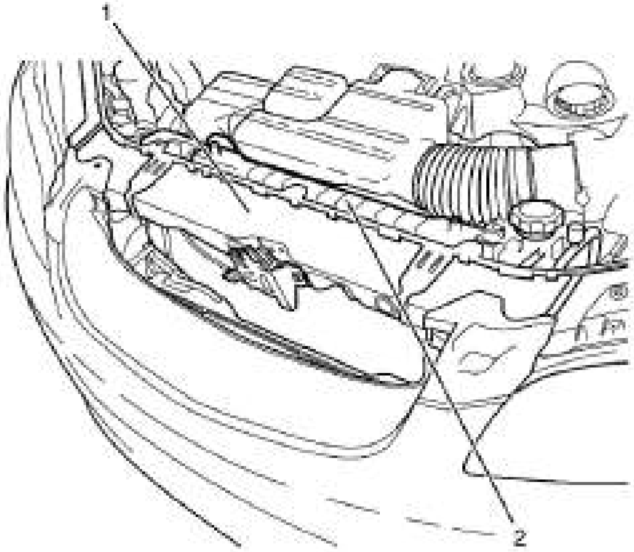


4. Attach the windshield washer hose (1) to the solvent container (2).

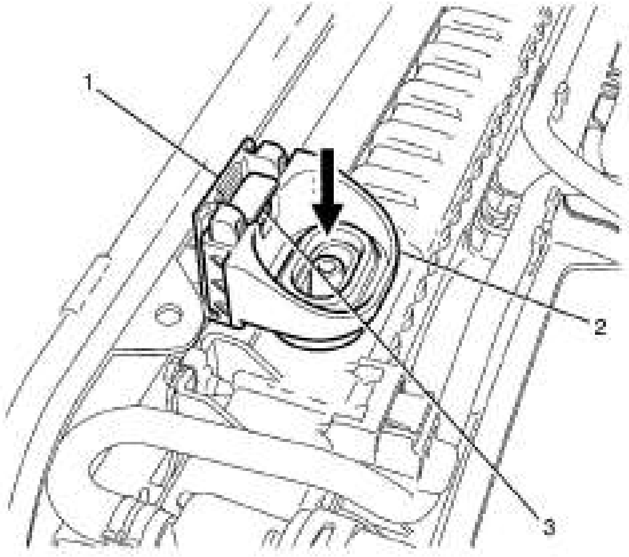
   Important: Take care not to damage the condenser cooling fins when installing the windshield washer hose (1).

   Important: Take care not to puncture the windshield washer hose (1) when installing it to the windshield washer pump (3).

5. Connect the windshield washer hose (1) to the windshield washer pump (3).



6. Remove the holding device between the radiator assembly (2) and front end panel (1).
7. Position the radiator assembly (2) towards the front end panel (1) to its original position.



8. Install the radiator support bracket (2) to the radiator slide pin assembly (1) on both sides.
9. Push the securing lock (3) into the radiator support bracket (2) making sure it is correctly seated on both sides.
10. Install the radiator grille. Refer to Radiator Grille Replacement.
11. Fill the washer solvent container with solvent.
12. Check the operation of the rear window washer and make sure there are no solvent leaks.

Windshield Glass Cleaning

Important: The cleaner should not harm the paint finish or scratch the glass. The glass is clean when the water no longer beads, but sheets across the entire glass surface.

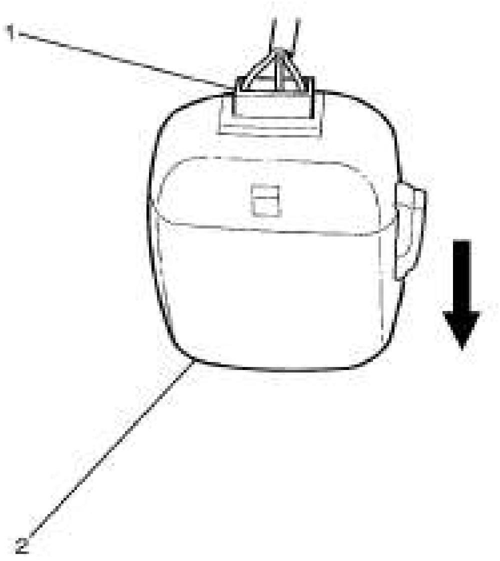
Clean the windshield with windshield cleaner, Optikleen P/N 92140004 or equivalent.

Windshield Outside Moisture Sensor Replacement

Removal Procedure

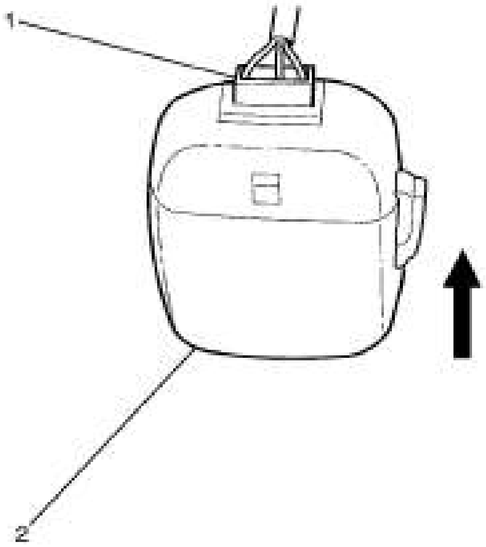
1. Position the rear view mirror away from rain sensor, in order to obtain access to the rain sensor.

   Notice: Refer to General Repair Instructions in the Preface section.



2. Disconnect the rain sensor (2) electrical connector (1).
3. Using a suitable tool Separate the rain sensor covers.
4. Slide the rain sensor (2) downward off the rain sensor boss.

Installation Procedure



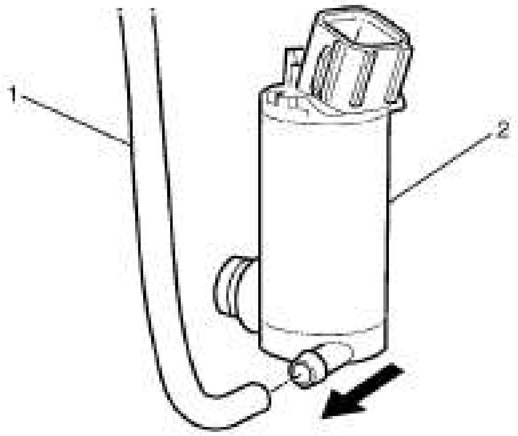
1. Position the rain sensor (2) on to the rain sensor boss.
2. Slide the rain sensor (2) upward onto the rain sensor boss, slightly pull onto the rain sensor to confirm fitting.
3. Lock the two rain sensor covers together, slightly pull onto the rain sensor to confirm fitting.
4. Connect the rain sensor (2) electrical connector (1).
5. Position the rear view mirror into its original position.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Wipers and Washers | Repair Instructions | Document ID: 2069402

Windshield Washer Hose Replacement (Sedan)

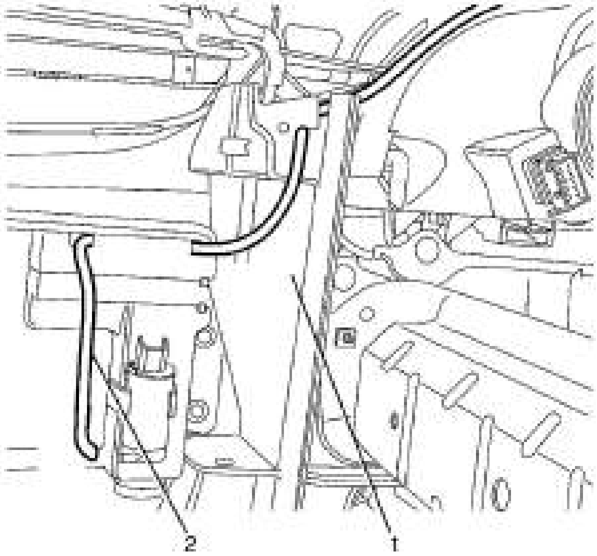
Removal Procedure (Up to 01 Sept 2007)

1. Remove the radiator assembly. Refer to Radiator Replacement .

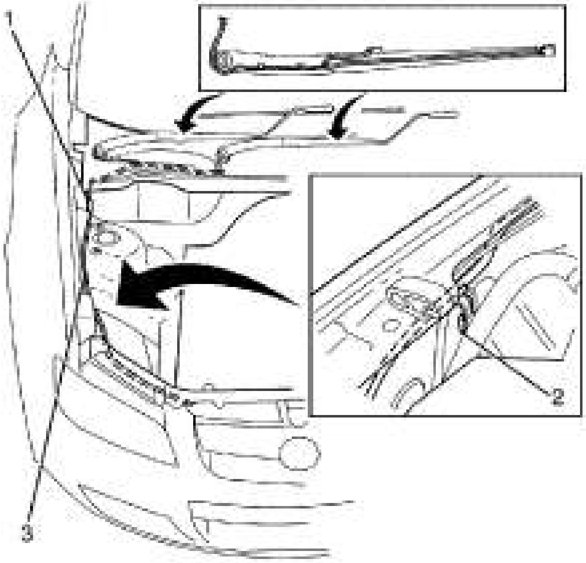


Important: Take care not to pierce the washer hose. Use a suitable cap to cap off the washer motor after removing the hose to prevent spillage.

2. Use a suitable tool to separate the windshield washer hose (1) from the washer pump (2).

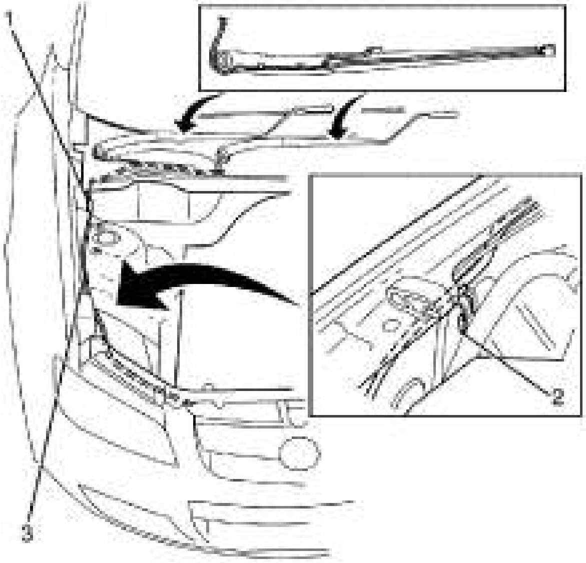


3. Detach the washer hose (2) from the radiator air intake baffle (1).

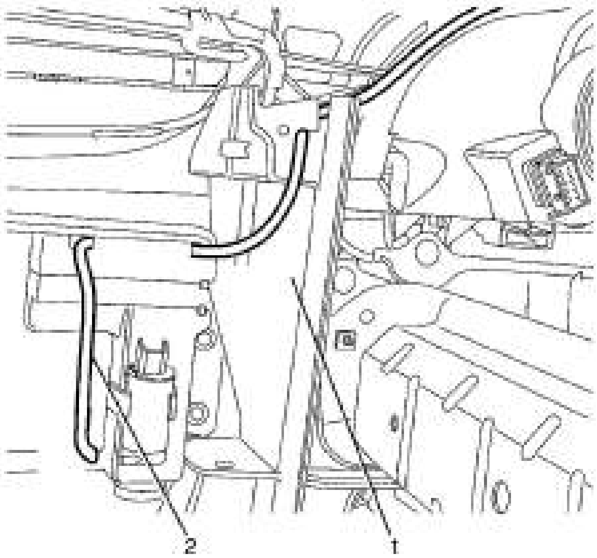


4. Detach the washer hose (3) from the fender retaining clip (2).
5. Disconnect the washer hose (3) from the washer hose connection (1).
6. Remove the windshield washer hose (3).

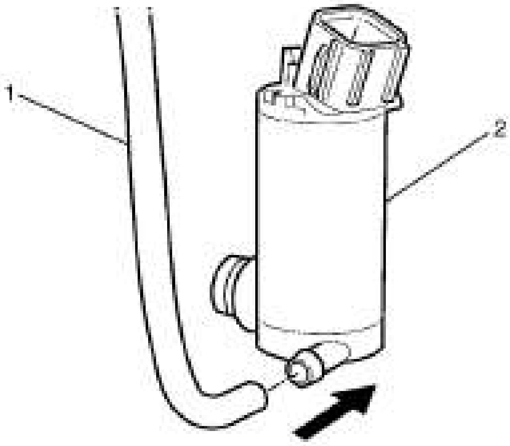
Installation Procedure (Up to 01 Sept 2007)



1. Attach the washer hose (3) to the washer hose connection (1).
2. Attach the washer hose (3) to the fender clip (2).



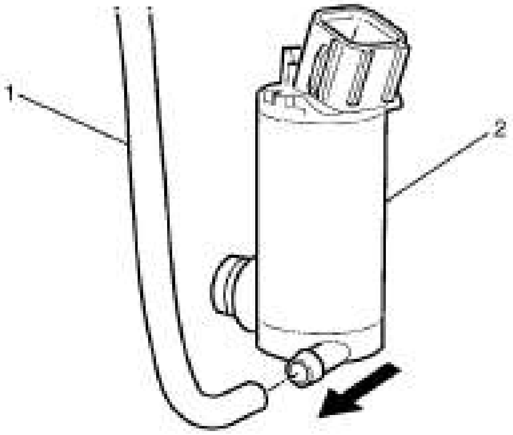
3. Route the washer hose (2) through the radiator air intake baffle (1).



4. Install the washer hose (1) onto the washer pump (2).
5. Install the radiator assembly. Refer to Radiator Replacement .
6. Test the washer pump for correct operation.

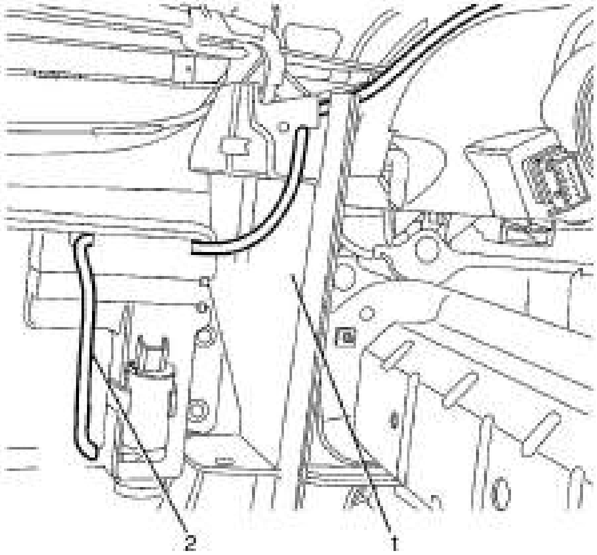
Removal Procedure (From 01 Sept 2007)

1. Remove the radiator assembly. Refer to Radiator Replacement .

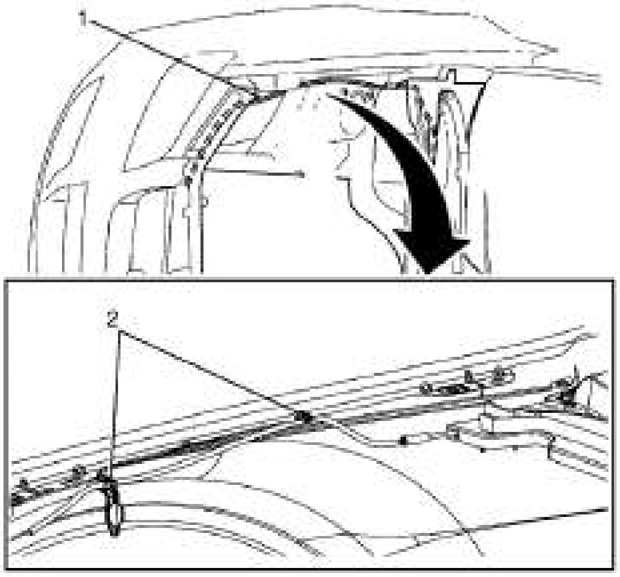


Important: Take care not to pierce the washer hose. Use a suitable cap to cap off the washer motor after removing the hose to prevent spillage.

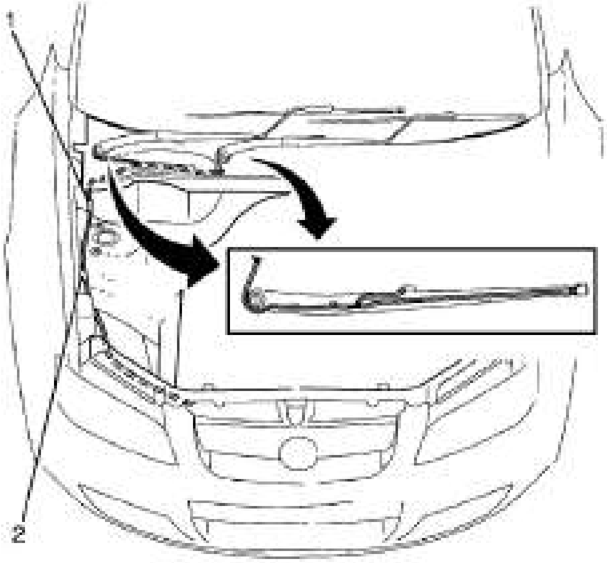
2. Use a suitable tool to separate the windshield washer hose (1) from the washer pump (2).



3. Detach the washer hose (2) from the radiator air intake baffle (1).

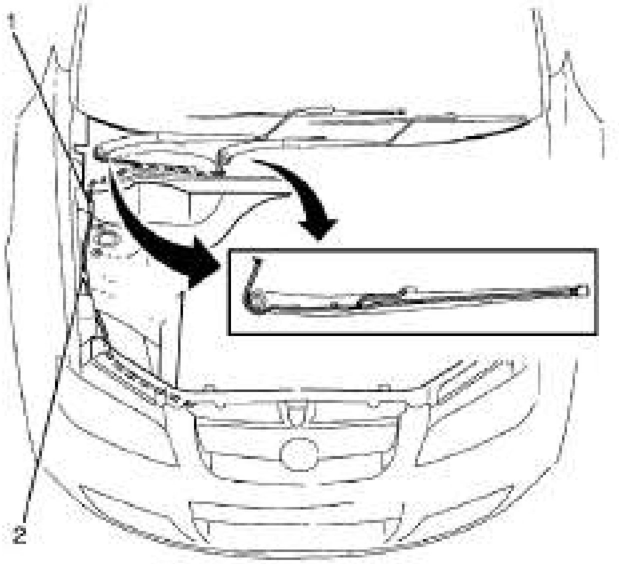


4. Detach the washer hose (1) from the fender retaining clips (2).

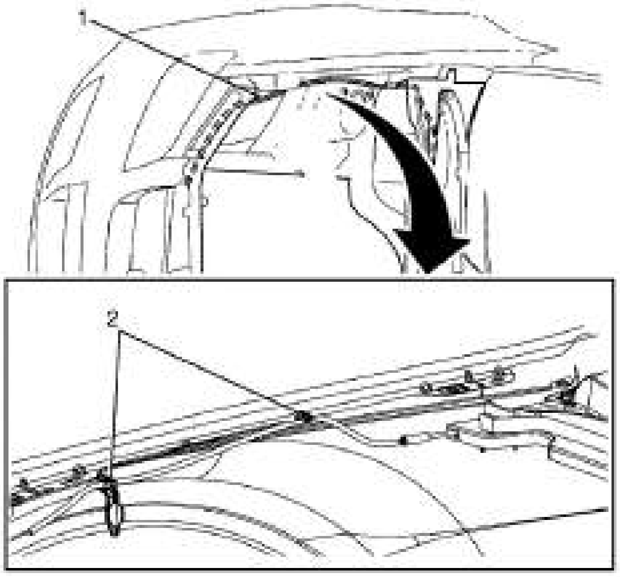


5. Disconnect the washer hose (2) from the washer hose connection (1).
6. Remove the windshield washer hose (2).

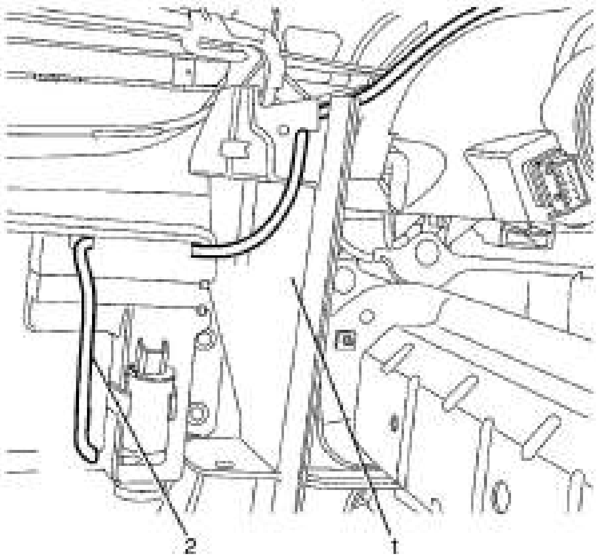
Installation Procedure (From 01 Sept 2007)



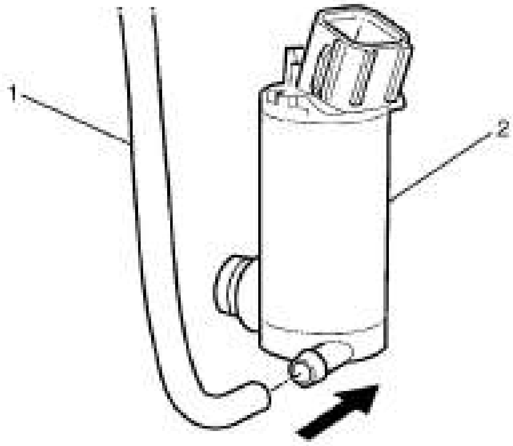
1. Attach the washer hose (2) to the washer hose connection (1).



2. Attach the washer hose (1) to the fender retaining clips (2).



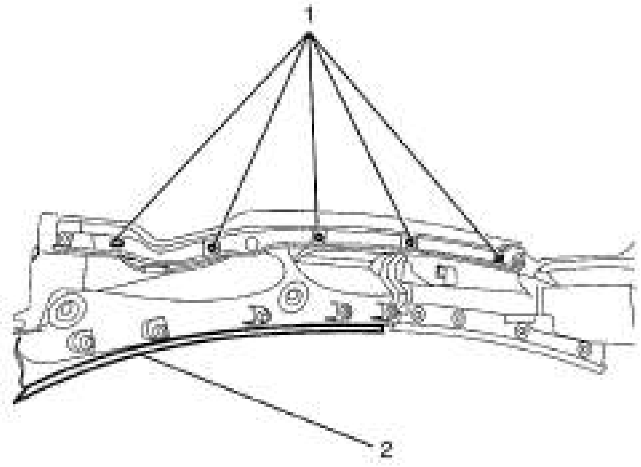
3. Route the washer hose (2) through the radiator air intake baffle (1).



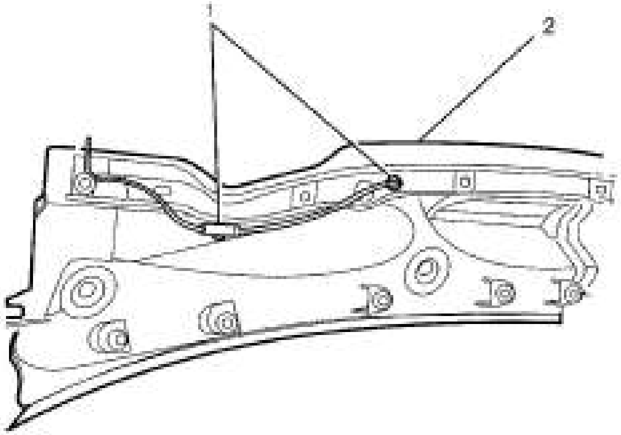
4. Install the washer hose (1) onto the washer pump (2).
5. Install the radiator assembly. Refer to Radiator Replacement .
6. Test the washer pump for correct operation.

Removal Procedure (Air Inlet Grill Hose)

1. Remove the wiper arms. Refer to Windshield Wiper Arm Replacement .
2. Remove the air inlet grille. Refer to Air Inlet Grille Panel Replacement .

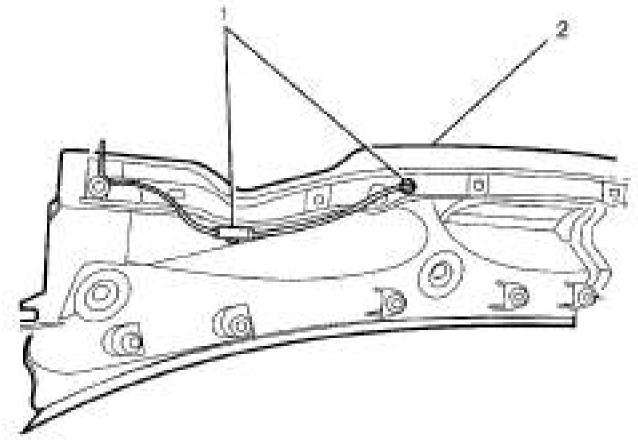


3. Remove the retaining torx screws (1) from the air inlet grille brace.
4. Remove the air inlet grille brace from the air inlet grille.

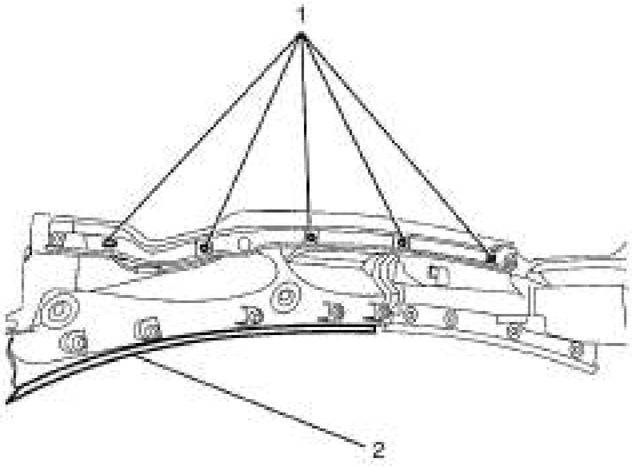


5. Detach and remove the air inlet grille hose (1) from the air inlet grille (2).

Installation Procedure



1. Attach the air inlet grille hose (1) to the air inlet grille (2).



2. Install the air inlet grille brace (2) to the air inlet grille

   Notice: Refer to Fastener Notice in the Preface section.

3. Install the air inlet grille brace (2) to the air inlet grille retaining torx screws (1).

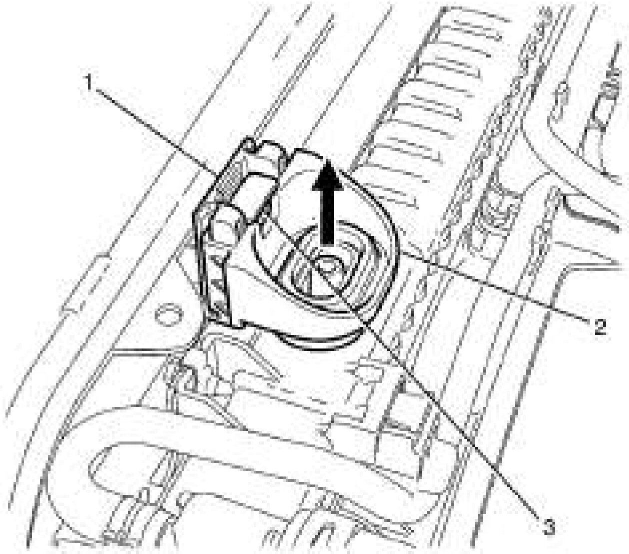
   Tighten
   Tighten the torx screws to (2.0 N·m (18 lb in).

4. Install the air inlet grille. Refer to Air Inlet Grille Panel Replacement .
5. Install the wiper arms. Refer to Windshield Wiper Arm Replacement .

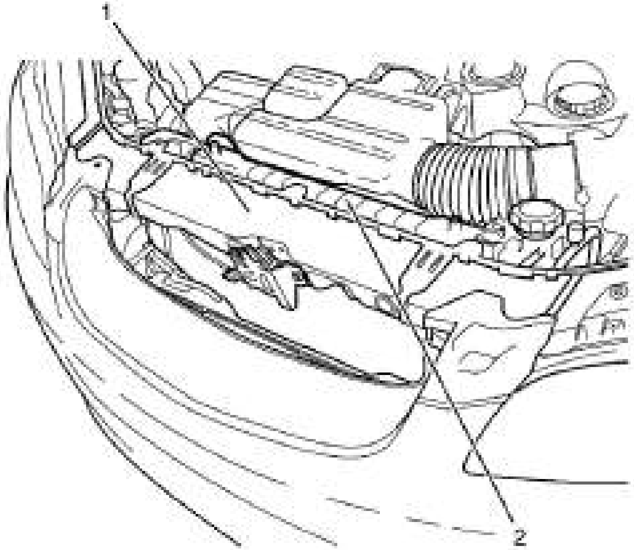
Windshield Washer Hose Replacement (Sportwagon)

Removal Procedure - Washer Pump to Front Fender Connector

1. Remove the radiator grille. Refer to Radiator Grille Replacement.

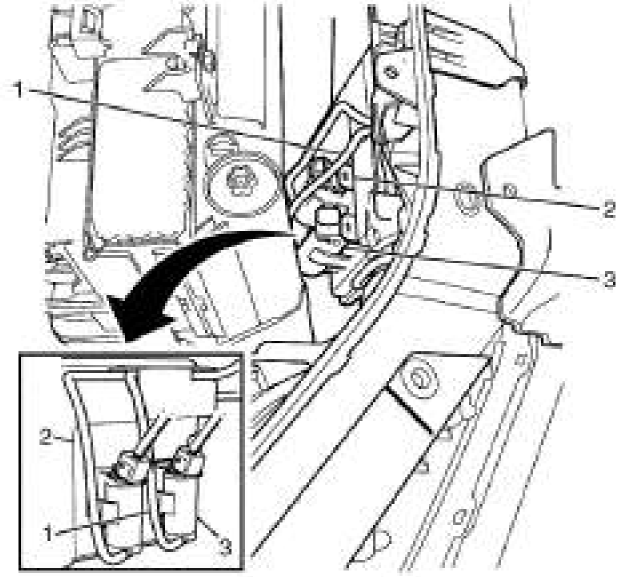


2. Raise the securing lock (3) from the radiator support bracket (2) by 10 mm on both sides.
3. Remove the radiator support bracket (2) from the radiator slide pin assembly (1) on both sides.



Important: Care must be taken when tilting the radiator assembly (2) away from the front end panel (1), as excessive force may damage the radiator assembly (2).

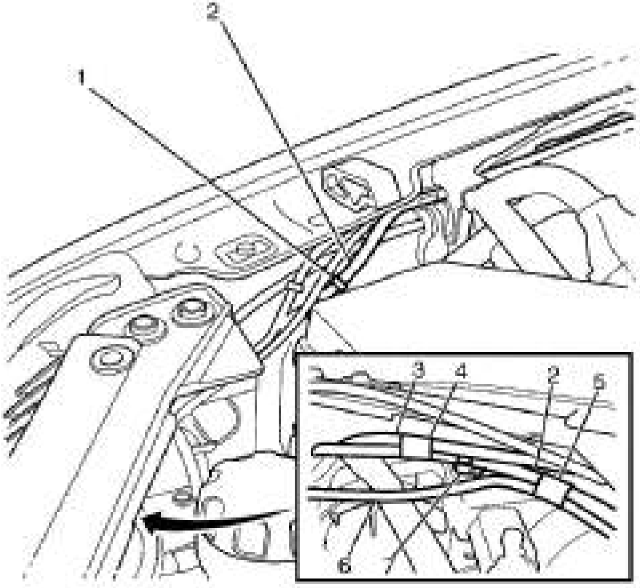
4. Tilt the radiator assembly (2) away from the front end panel (1).
5. Insert a suitable holding device between the front end panel (1) and the radiator assembly (2).



6. Place a suitable container under the windshield washer pump (2).

Important: Take care not to damage the condenser cooling fins when removing the windshield washer hose (1) from the windshield washer pump (3).

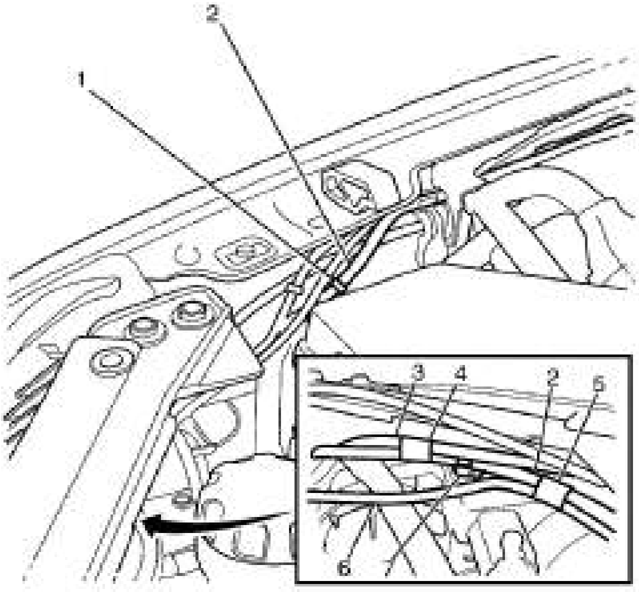
7. Disconnect the windshield washer hose (1) from the windshield washer pump (3).
8. Detach the windshield washer hose (1) from the solvent container (2).



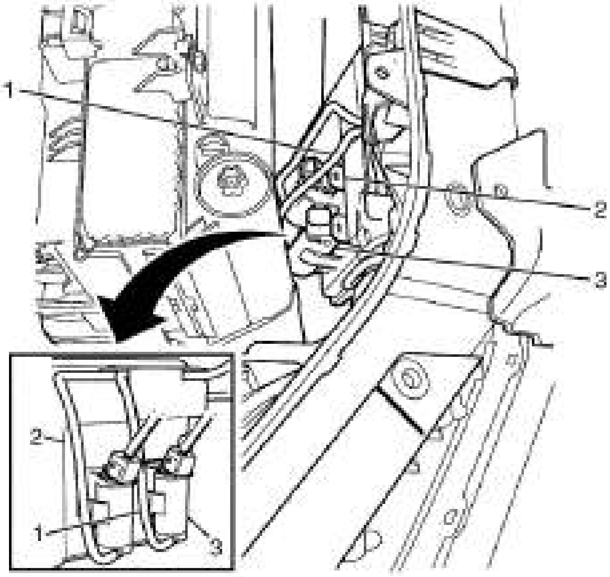
9. Mark the location of the windshield washer hose to solvent container overflow hose retaining tape (4) to the solvent container overflow hose (3).
10. Remove the windshield washer hose to solvent container overflow hose retaining tape (4).
11. Mark the location of the rear window washer hose to windshield washer hose retaining tape (5) to the rear window washer hose (6).
12. Remove the rear window washer hose to windshield washer hose retaining tape (5).
13. Mark the location of the windshield washer hose retaining clip (7) to the windshield washer hose (2).
14. Detach the windshield washer hose (2) from the windshield washer hose retaining clip (7).
15. Disconnect the windshield washer hose (2) from the windshield washer hose front fender connector (1).
16. Remove the windshield washer hose (2).
17. Using the original windshield washer hose retaining clip reference mark as a guide, mark the position of the windshield washer hose retaining clip to the NEW windshield washer hose.

Installation Procedure - Washer Pump to Front Fender Connector

Important: When installing the windshield washer hose make sure it follows the original hose routing.

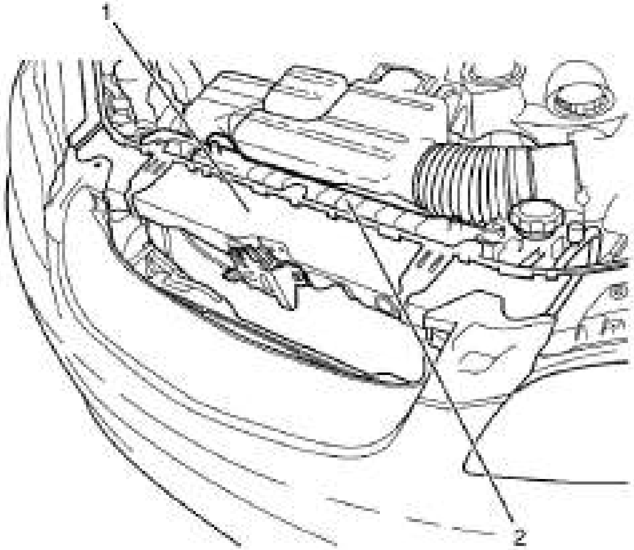


1. Connect the windshield washer hose (2) to the windshield washer hose front fender connector (1).
2. Attach the windshield washer hose (2) to the windshield washer hose retaining clip (7).
3. Attach the rear window washer hose (6) to the marked location on the windshield washer hose (2) with adhesive tape (5).
4. Attach the solvent container overflow hose (3) to the marked location on the windshield washer hose (2) with adhesive tape (4).

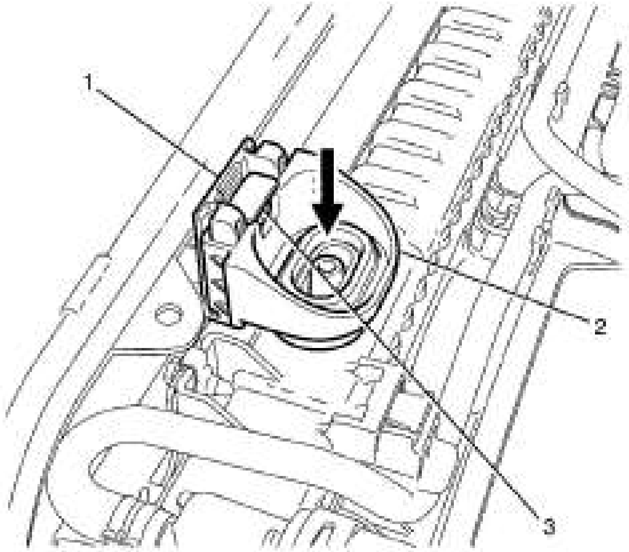


Important: Take care not to damage the condenser cooling fins when installing the rear window washer hose (1) to the rear window washer pump (2).

5. Attach the windshield washer hose (1) to the solvent container (2).
6. Connect the windshield washer hose (1) to the windshield washer pump (3).

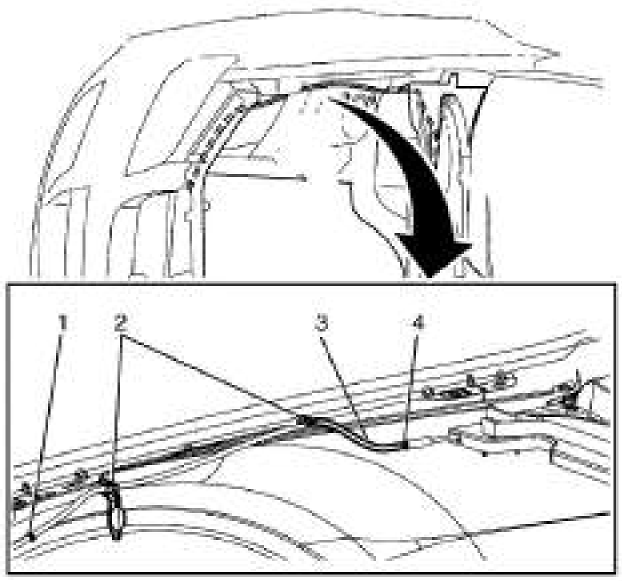


7. Remove the holding device between the radiator assembly (2) and front end panel (1).
8. Position the radiator assembly (2) towards the front end panel (1) to its original position.



9. Install the radiator support bracket (2) to the radiator slide pin assembly (1) on both sides.
10. Push the securing lock (3) into the radiator support bracket (2) making sure it is correctly seated on both sides.
11. Install the radiator grille. Refer to Radiator Grille Replacement.
12. Fill the washer fluid container with solvent.
13. Check the operation of the windshield washer and make sure there are no solvent leaks.

Removal Procedure - Front Fender Connector to Air Inlet Grill Connector

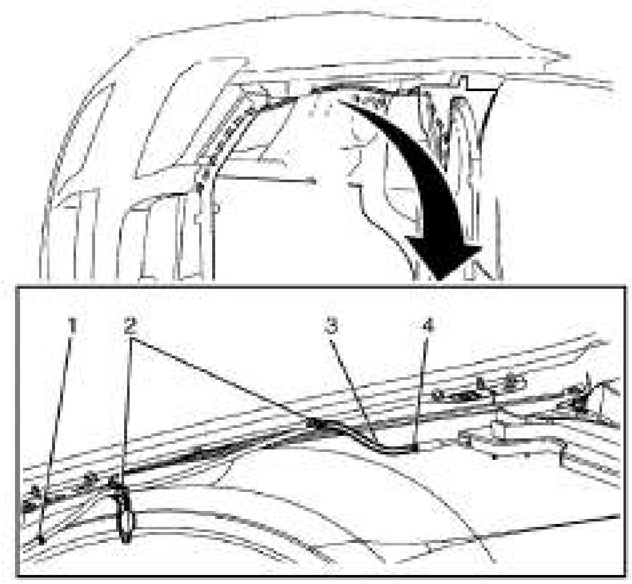


1. Detach the windshield washer hose (3) from the front fender retaining clips (2).
2. Disconnect the windshield washer hose (3) from the windshield washer hose front fender

connector (1).

3. Disconnect the windshield washer hose (3) from the windshield washer hose air inlet grill hose connector (4).
4. Remove the windshield washer hose (3).

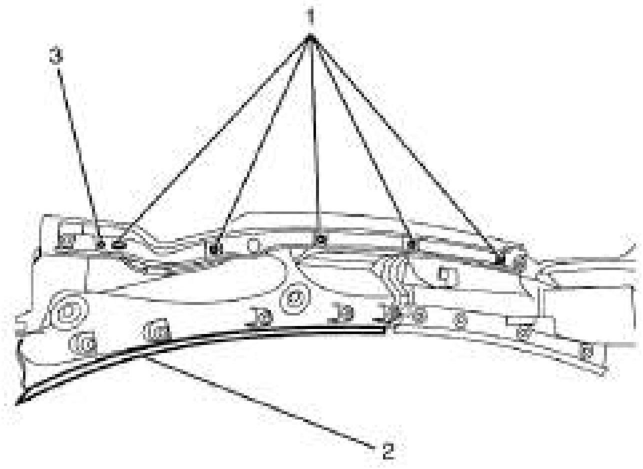
Installation Procedure - Front Fender Connector to Air Inlet Grill Connector



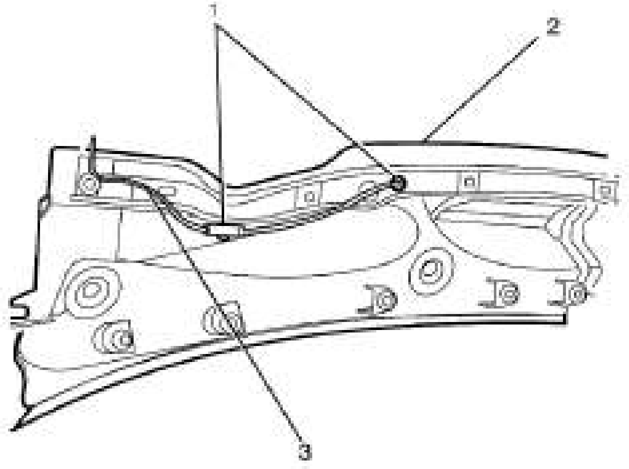
1. Connect the windshield washer hose (3) to the windshield washer hose air inlet grill hose connector (4).
2. Connect the windshield washer hose (3) to the windshield washer hose front fender connector (1).
3. Attach the windshield washer hose (3) to the fender retaining clips (2).
4. Check the operation of the windshield washers and make sure there are no solvent leaks.

Removal Procedure - Air Inlet Grill Hose

1. Remove the windshield wiper arms. Refer to Windshield Wiper Arm Replacement.
2. Remove the air inlet grille. Refer to Air Inlet Grille Panel Replacement.

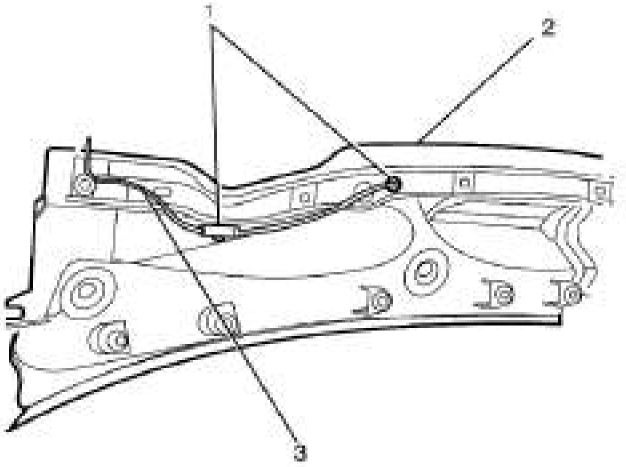


3. Remove the air inlet grille brace retaining screws (1) from air inlet grille brace (3).
4. Remove the air inlet grille brace (3) from the air inlet grille (2).

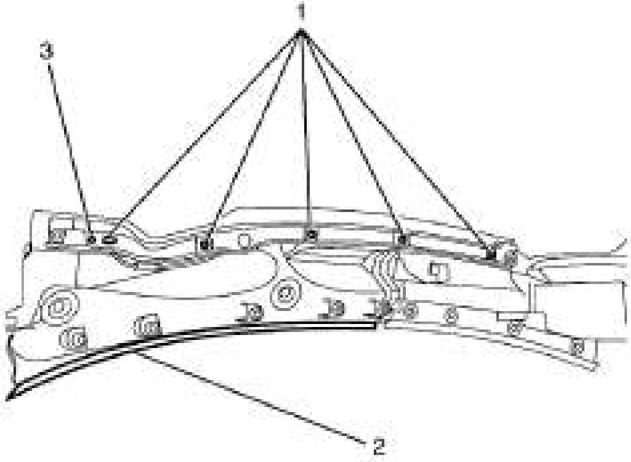


5. Disconnect the windshield washer hose (3) from the windshield washer hose air inlet grille to wiper arm hose connectors (1).
6. Remove the windshield washer hose (3).

Installation Procedure - Air Inlet Grill Hose



1. Connect the windshield washer hose (3) to the windshield washer hose air inlet grille to wiper arm hose connectors (1).



2. Install the air inlet grille brace (3) to the air inlet grille (2).

   Notice: Refer to Fastener Notice in the Preface section.

3. Install the air inlet grille brace retaining screws (1) to the air inlet grille brace (3).

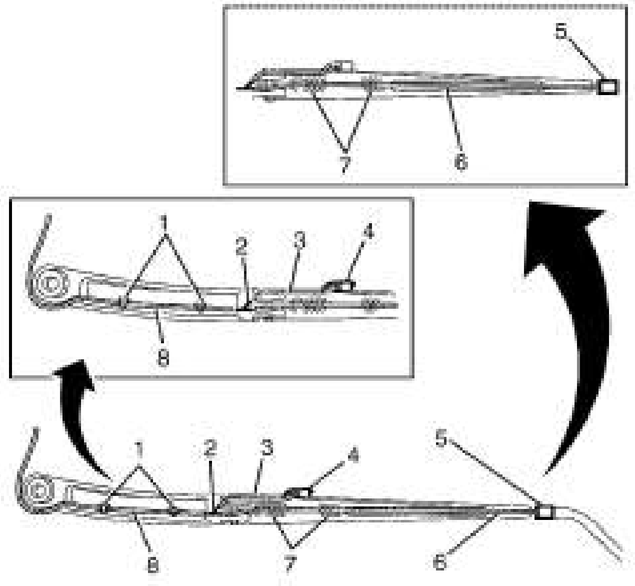
   Tighten
   Tighten the screws to 2 N·m (18 lb in).

4. Install the air inlet grille. Refer to Air Inlet Grille Panel Replacement.
5. Install the wiper arms. Refer to Windshield Wiper Arm Replacement

6. Check the operation of the windshield washers and make sure there are no solvent leaks.

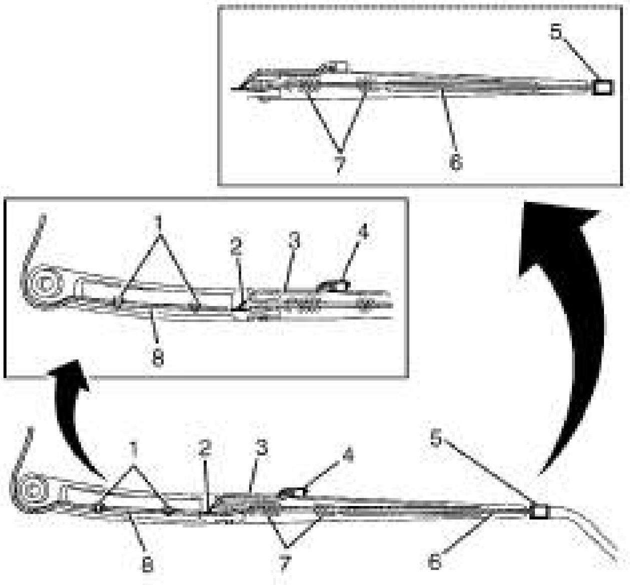
Removal Procedure - Windshield Wiper Arm Hoses

1. Remove the windshield wiper arm. Refer to Windshield Wiper Arm Replacement.



2. Detach the primary windshield washer hose (8) from the primary windshield washer hoses retaining clips (1).
3. Disconnect and remove the primary windshield washer hose (8) from the primary windshield washer hoses to right and left washer nozzle hose connector (2).
4. Disconnect the right windshield washer nozzle hose (3) from the primary windshield washer hoses to right and left washer nozzle hose connector (2).
5. Disconnect and remove the right windshield washer nozzle hose (3) from the right windshield washer nozzle (4).
6. Disconnect and remove the primary windshield washer hoses to right and left washer nozzle hose connector (2) from the left windshield washer nozzle hose (6).
7. Disconnect the left windshield washer nozzle hose (6) from the left windshield washer nozzle (5).
8. Thread and remove the left windshield washer nozzle hose (6) out of the windshield wiper arm tension spring (7).

Installation Procedure - Windshield Wiper Arm Hoses



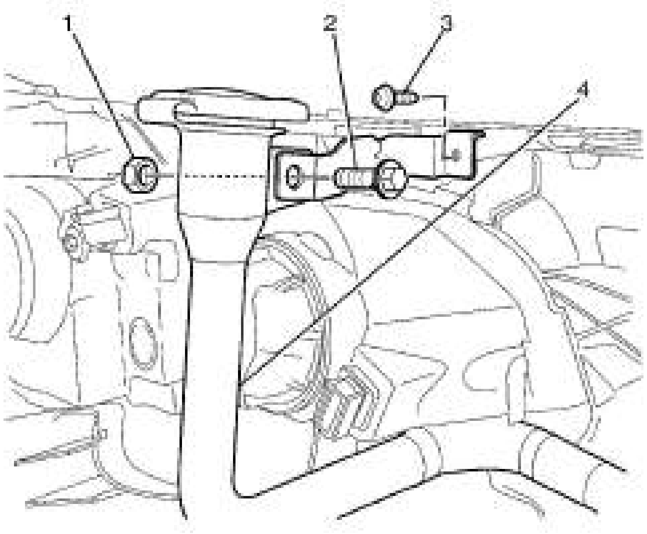
1. Thread the left windshield washer nozzle hose (6) through the windshield wiper arm tension spring (7) to the left windshield washer nozzle (5).
2. Connect the left windshield washer nozzle hose (6) to the left windshield washer nozzle (5).
3. Connect the primary windshield washer hoses to right and left washer nozzle hose connector (2) to the left windshield washer nozzle hose (6).
4. Connect the right windshield washer nozzle hose (3) to the right windshield washer nozzle (4).
5. Connect the right windshield washer nozzle hose (3) to the primary windshield washer hoses to right and left washer nozzle hose connector (2).
6. Connect the primary windshield washer hose (8) to the primary windshield washer hoses to right and left washer nozzle hose connector (2).
7. Attach the primary windshield washer hose (8) to the primary windshield washer hoses retaining clips (1).
8. Install the wiper arm. Refer to Windshield Wiper Arm Replacement
9. Check the operation of the windshield washers and make sure there are no solvent leaks.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Wipers and Washers | Repair Instructions | **Document ID: 1992358**

Windshield Washer Solvent Container Filler Tube Replacement

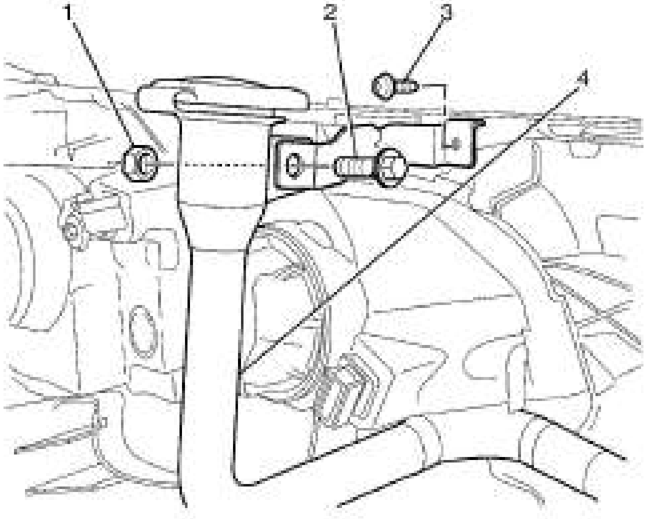
Removal Procedure

1. Remove the radiator air baffle and deflector. Refer to Radiator Air Upper Baffle and Deflector Replacement.



2. Remove the washer solvent container filler neck (4) to front end module bracket retaining bolt (2) and nut (1).
3. Remove the washer solvent container filler neck (4) to front end module bracket retaining torx screw (3).
4. Remove the washer solvent container filler neck (4) from the washer solvent container.

Installation Procedure



1. Install the washer solvent container filler neck (4) into the washer solvent container.

   Notice: Refer to Fastener Notice in the Preface section.

2. Install the washer solvent container filler neck (4) to front end module bracket retaining bolt (2) and nut (1).

   Tighten
   Tighten the washer solvent container filler neck retaining bolt to 5.0 N·m (44 lb in).

3. Install the washer solvent container filler neck (4) to front end module bracket retaining torx screw (3).

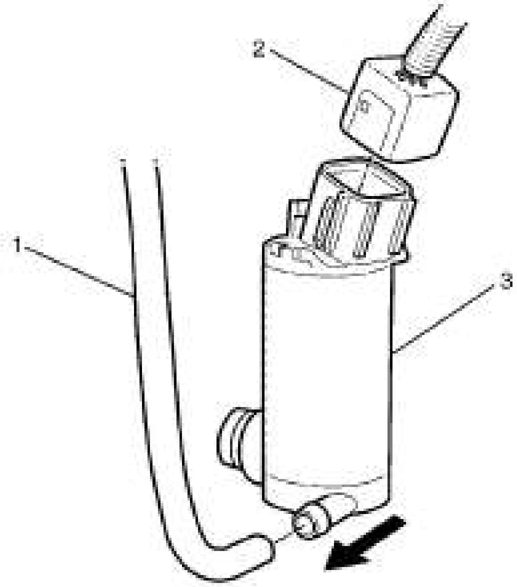
   Tighten
   Tighten the retaining torx screw to (4.0 N·m (35 lb in).

4. Install the radiator air baffle and deflector. Refer to Radiator Air Upper Baffle and Deflector Replacement.

Windshield Washer Solvent Container Replacement

Removal Procedure

1. Remove the radiator assembly. Refer to Radiator Replacement.
2. Remove the washer solvent container filler neck. Refer to Windshield Washer Solvent Container Filler Tube Replacement.



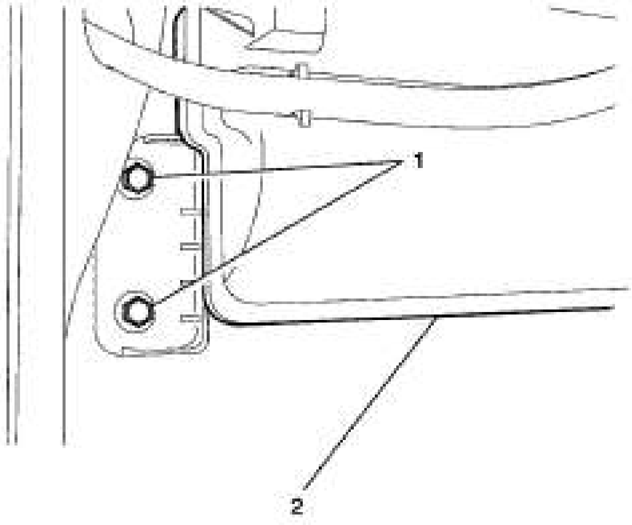
3. If fitted, remove the headlamp washer hose from the headlamp washer pump.

   Disconnect the washer pump electrical connector (2).

4. Place a suitable container under the washer pump (3).
5. Remove the washer pump (3) from the washer solvent container.
6. Drain the washer solvent by directing the flow out of the solvent container into the suitable container.

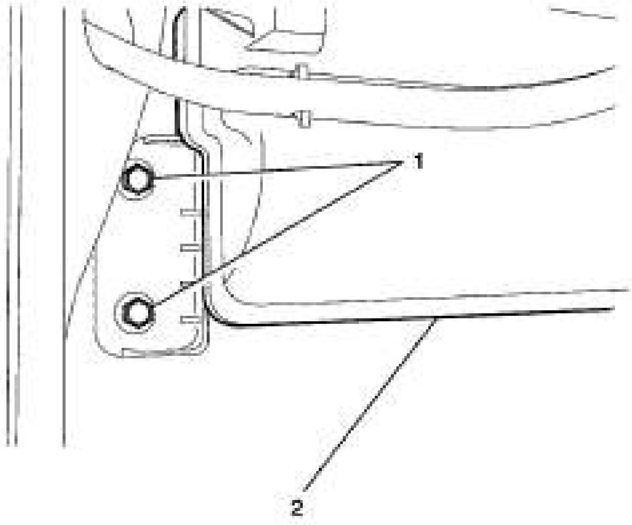
   Important: Inspect the rubber seal for damage, due to perishing and replace as necessary.

7. Use a suitable tool to separate the washer hose (1) from the washer pump (3).



8. Remove the washer solvent container (2) to front end module support retaining bolts (1). Carry out the same procedure for opposite side.
9. Remove the solvent washer container (2).

Installation Procedure

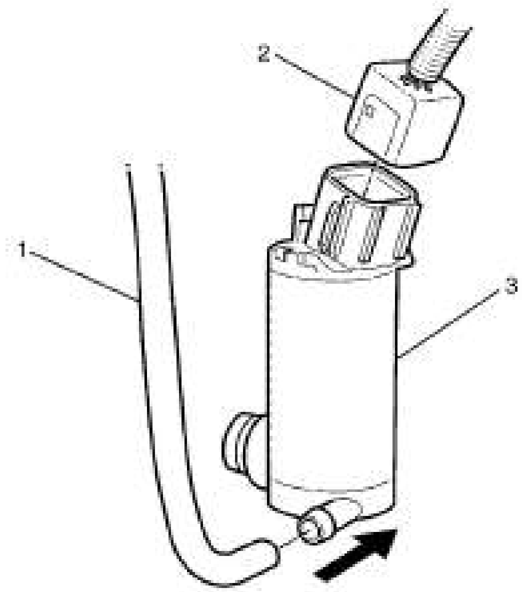


1. Install the washer solvent container (2) to the front end module support.
2. Install the washer solvent container (2) to the front end module support retaining bolts (1).

Notice: Refer to Fastener Notice in the Preface section.

Tighten

Tighten the bolts (1) to (5 N·m (44 lb in).



3. If fitted, install the headlamp washer hose.

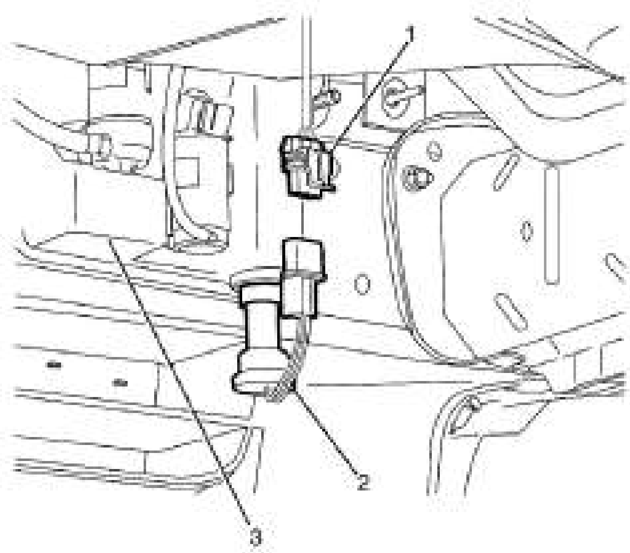
   Connect the washer pump electrical connector (2).

4. Connect the washer pump hose (1) to the washer pump (3)
5. Install the washer solvent container filler neck. Refer to Windshield Washer Solvent Container Filler Tube Replacement.
6. Fill the washer solvent container with washer solvent.
7. Install the radiator assembly. Refer to Radiator Replacement.
8. Test the washer pump for the correct operation.

Windshield Washer Solvent Level Switch Replacement

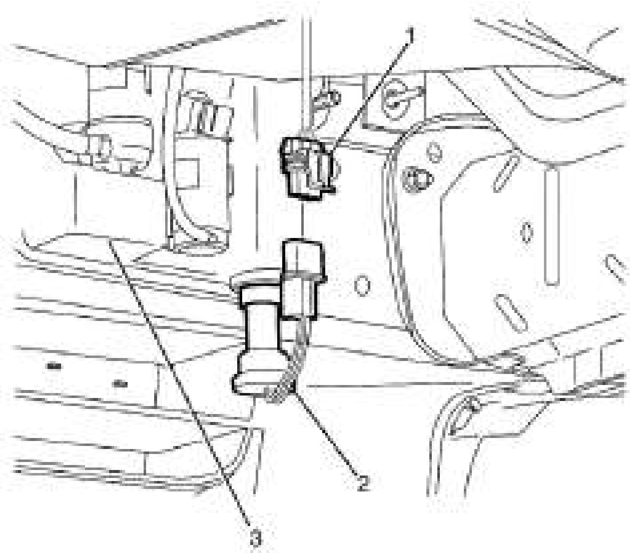
Removal Procedure

1. Remove the radiator assembly. Refer to Radiator Replacement.



2. Disconnect the washer fluid level switch electrical connector (1).
3. Place a suitable container under the washer fluid level switch (2).
4. Remove the washer fluid level switch (2) from the washer fluid container and discard the rubber seal.

Installation Procedure



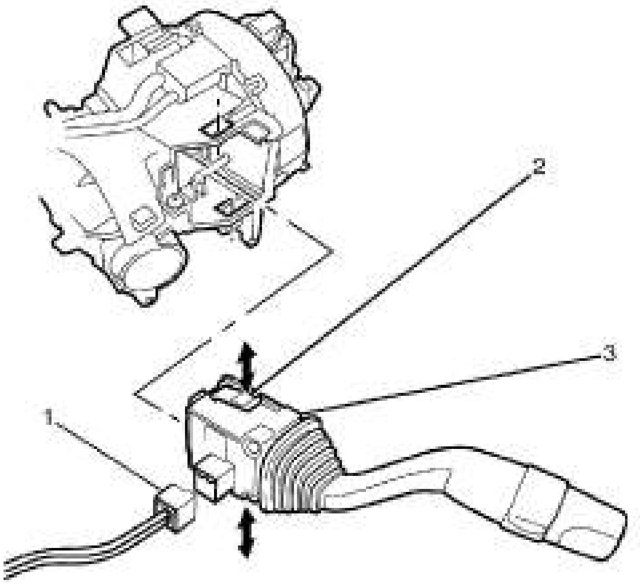
Important: Insert the washer fluid level switch into the washer fluid container until fully seated.

1. Install the washer fluid level switch (2) into the washer fluid container.
2. Connect the washer fluid level switch electrical connector (1).
3. Fill the washer solvent container with washer solvent.
4. Install the radiator assembly. Refer to Radiator Replacement.

Windshield Wiper and Washer Switch Replacement (RHD)

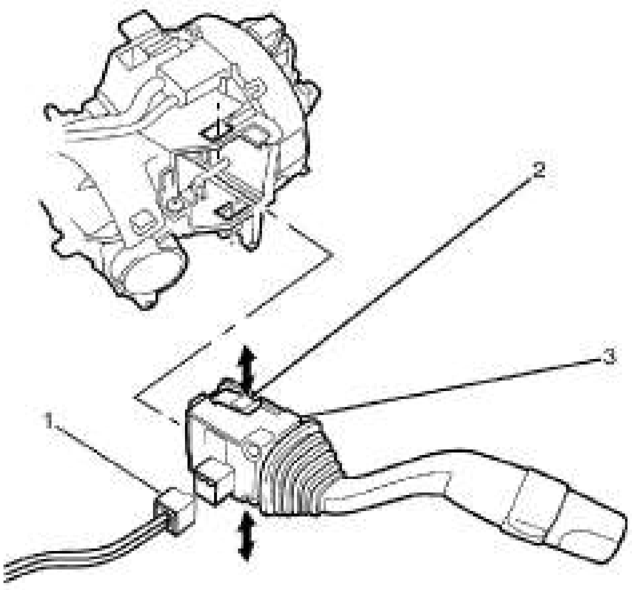
Removal Procedure

1. Remove the steering column trim covers. Refer to Steering Column Trim Covers Replacement.



2. Press the top and bottom retaining tabs (2) in and Pull the wiper/washer switch (3) out if the column assembly.
3. Disconnect the wiper/washer switch electrical connector (1).
4. Remove the wiper/washer switch (1).

Installation Procedure

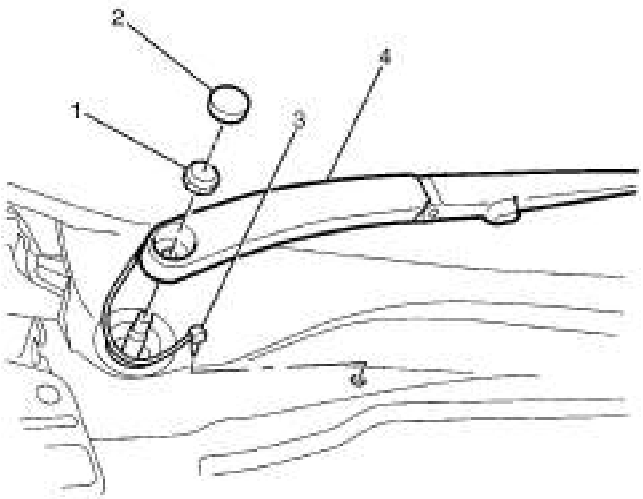


1. Connect the wiper/washer switch electrical connector (1).
2. Install the Wipers/Washer signal switch (3) to the steering column. Listen for an audible click from the retaining tabs (2) to confirm fitting.
3. Install the steering column trim covers. Refer to Steering Column Trim Covers Replacement.
4. Test wiper and washer system for correct operation.

2009 Holden VE Sedan | VE, WM, Caprice, Statesman, Lumina, Omega, VXR8, Sportwagon Service Manual | Body Systems | Wipers and Washers | Repair Instructions | Document ID: 1975715

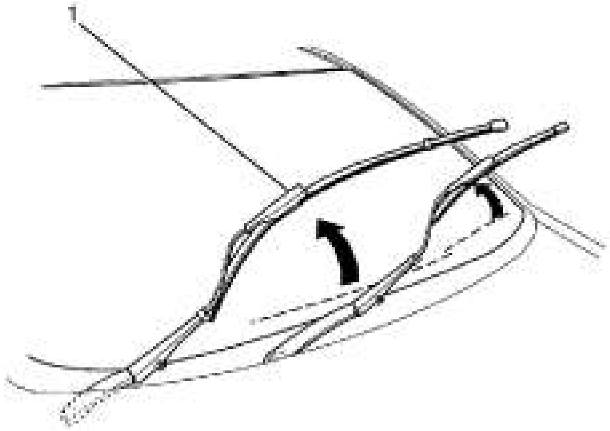
Windshield Wiper Arm Replacement (RHD)

Removal Procedure



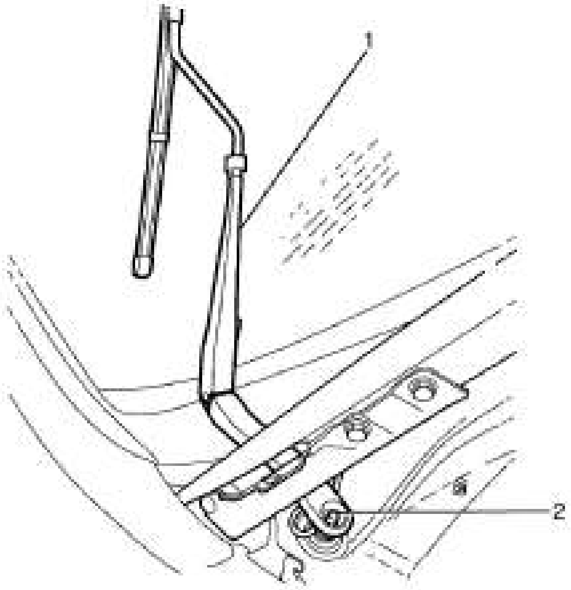
Important: Make sure that the wiper arms do not interfere with the bonnet while being moved away from the windshield otherwise damage to the bonnet may occur.

1. Open the Bonnet
2. Remove the wiper arm to pivot stud retaining nut covers (2).
3. Remove the wiper arm to air inlet grille washer hose connectors (3).
4. Remove the wiper arm to pivot stud retaining nuts (1).



Important: Make sure that the wiper arms do not interfere with the bonnet while being moved away from the windshield otherwise damage to the bonnet may occur.

5. Close the Bonnet
6. Lift the wiper arms (1) away from the windshield to the upright position.
7. Remove the LHS wiper arm (4) from the wiper pivot stud.

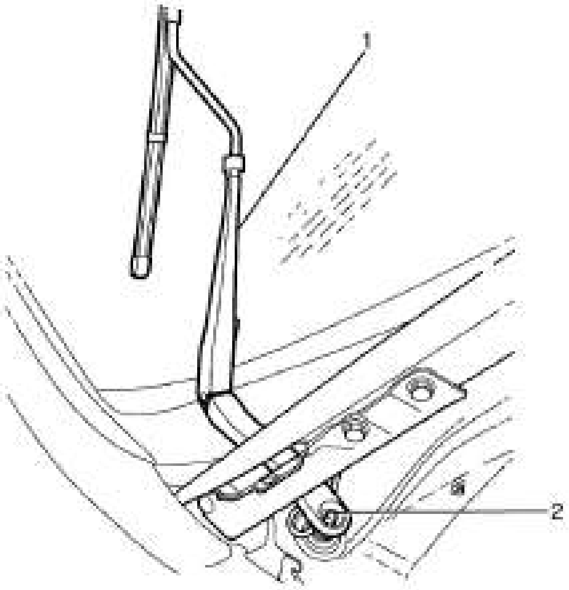


Important: Make sure that the RHS wiper arm does not interfere with the bonnet otherwise damage to the bonnet may occur.

Important: The RHS wiper should be in the vertical position and away from the windshield as shown.

8. Pull the right hand side wiper arm (1) away from the spline
9. Rotate the RHS wiper arm (1) so the bonnet can be opened without hitting the wiper.
10. Open the bonnet.
11. Manoeuvre the RHS wiper arm (1) off the wiper pivot stud and off the vehicle.

Installation Procedure



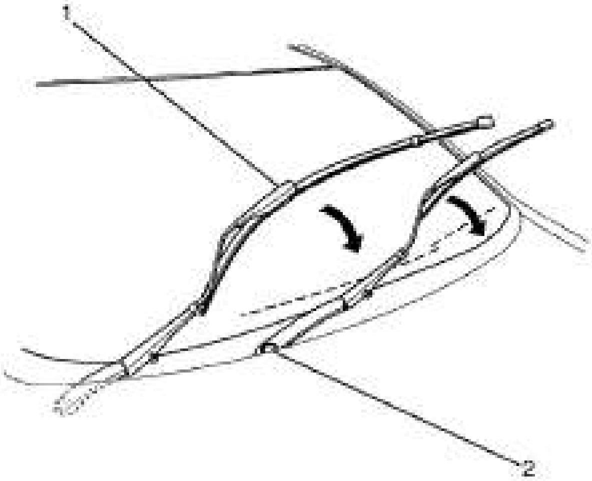
Important: Make sure that the RHS wiper arm does not interfere with the bonnet otherwise damage to the bonnet may occur.

Important: The RHS wiper should be in the vertical position and away from the windshield as shown.

1. Install the RHS wiper arm (1) onto the wiper pivot stud.
2. Install the wiper arm to pivot stud retaining nut (2).

   Do not fully tighten at this stage.

3. Close the bonnet

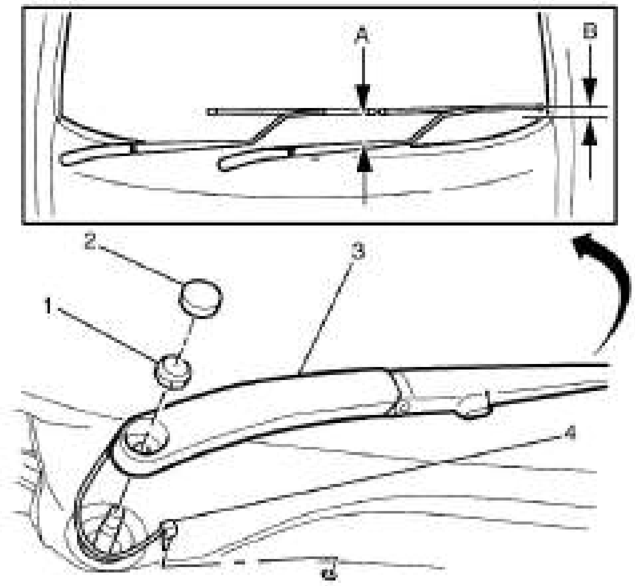


Important: Make sure that the wiper arms do not interfere with the bonnet while being moved away from the windshield otherwise damage to the bonnet may occur.

4. Install the LHS wiper arm (1) to the wiper pivot stud.
5. Install the LHS wiper arm to pivot stud retaining nut (2).

Do not fully tighten at this stage.

6. Lower the wiper arms (1) toward the windshield to the lowered position.



Important: When installing the wiper arm, ensure the installation measurements are adhered to otherwise fouling of the inlet panel may occur.

7. Align the wiper arm blades to the inlet panel using the following measurements :
   - Point ' A' 59 mm
   - Point ' B' 29 mm

Notice: Refer to Fastener Notice in the Preface section.

8. Tighten the LHS wiper arm to pivot stud retaining nut (1).

Tighten
Tighten the nut to 35 N·m (26 lb ft).

9. Open the bonnet.

Notice: Refer to Fastener Notice in the Preface section.

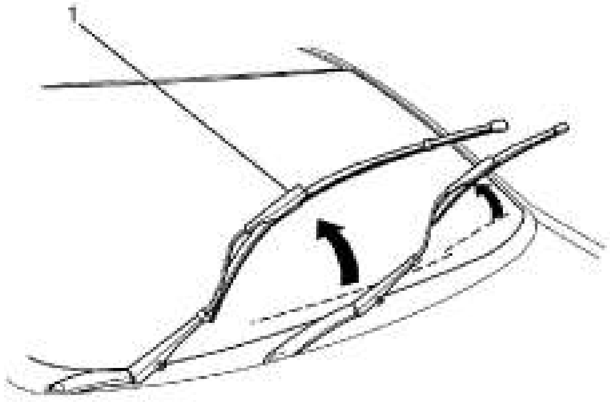
10. Tighten the RHS wiper arm to pivot stud retaining nut (1).

Tighten
Tighten the nut to 35 N·m (26 lb ft).

11. Install the wiper arm to pivot stud retaining nut covers.
12. Connect the wiper arm (3) to the air inlet grille washer hose connectors (4).
13. Close the bonnet.
14. Check the windshield wipers for correct operation.

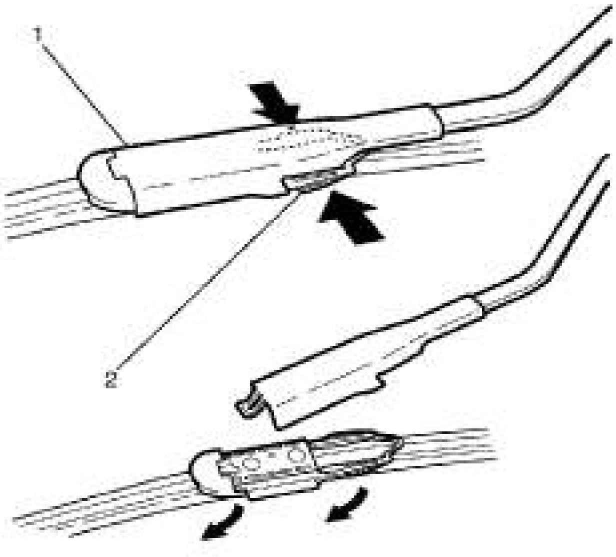
Windshield Wiper Blade Replacement (RHD)

Removal Procedure



Important: Ensure that the wiper arms do not interfere with the hood while being moved away from the windshield.

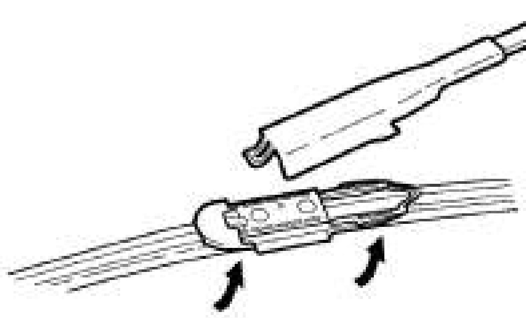
1. Lift the wiper arms (1) away from the windshield to the upright position.



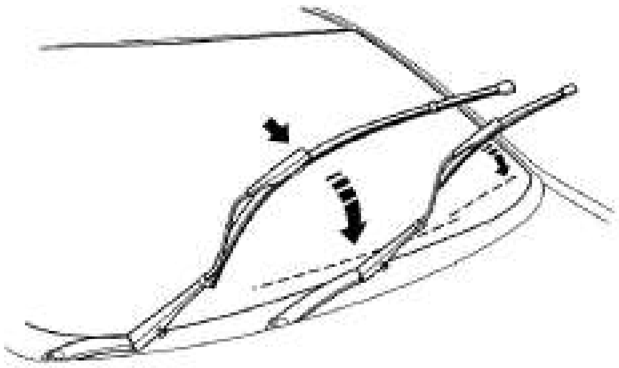
Important: Ensure that the wiper arms remain at rest and Do Not spring back onto the windscreen.

2. Press the wiper arm blade side clip (2) in and unclip the wiper arm (1) blade.
3. Remove the wiper arm blade from the wiper arm (1).

Installation Procedure



1. Clip the wiper arm blade connector onto the wiper arm. Listen for an audible click to confirm fitting.

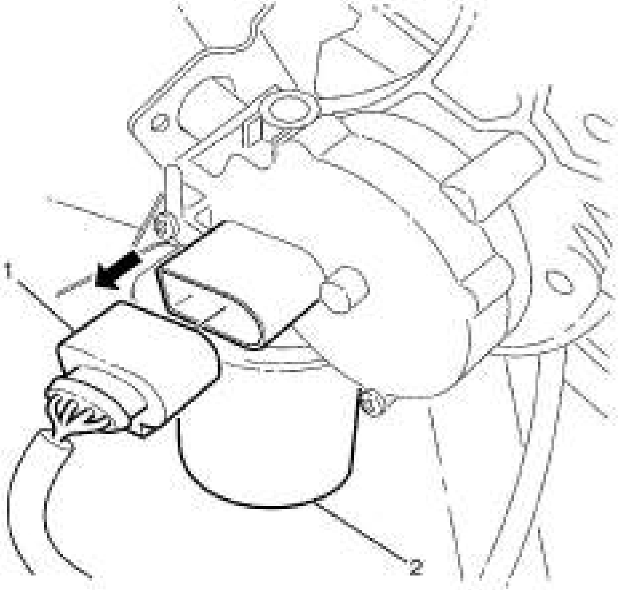


2. Move the wiper arm back to the parked position.
3. Test the windshield wipers and washers for correct operation.

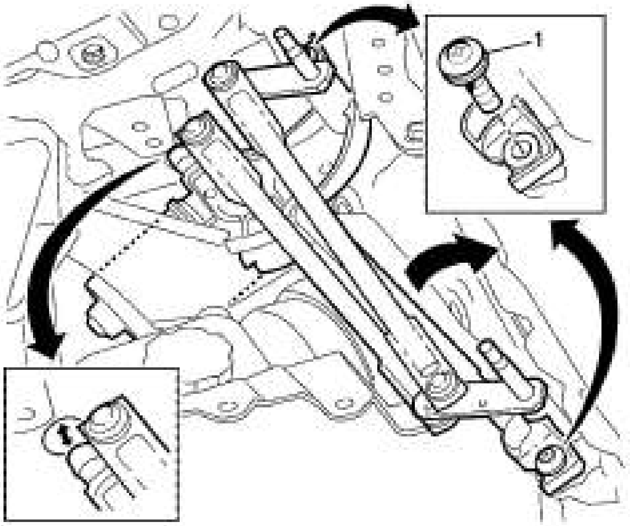
Windshield Wiper System Module Replacement (RHD)

Removal Procedure

1. Remove the wiper arms. Refer to Windshield Wiper Arm Replacement.
2. Remove the air inlet grille. Refer to Air Inlet Grille Panel Replacement.

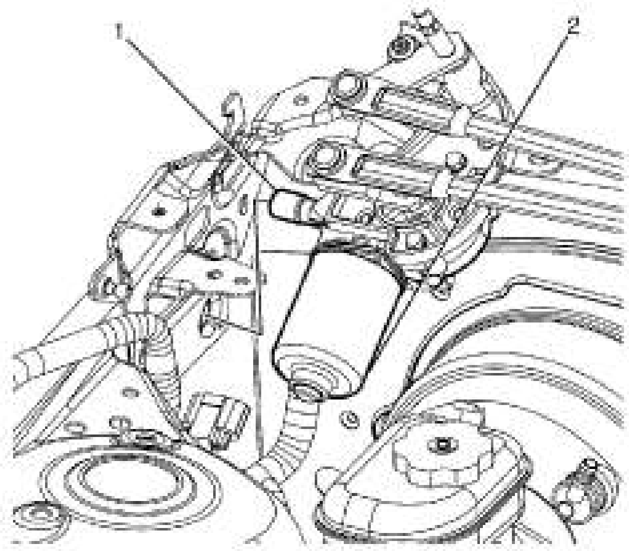


3. Disconnect the electrical connector (1) from the wiper motor (2).



4. Remove the wiper motor module to bulk head retaining bolts (1).
5. Remove the wiper motor module from the bulkhead.

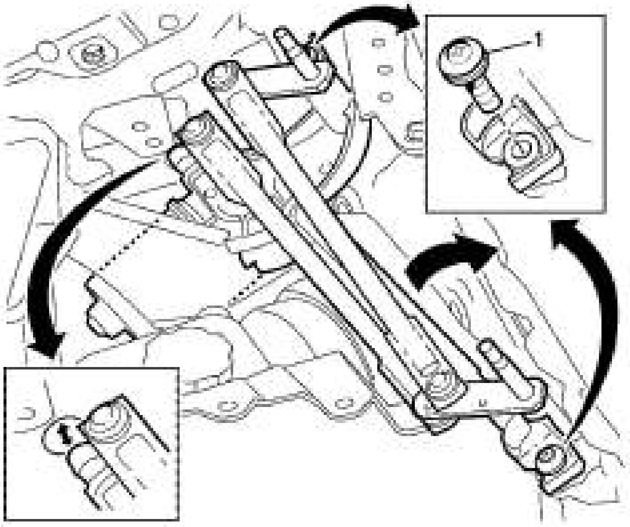
Installation Procedure



Important: Ensure that the locator lug (1) is inserted before attempting to fasten the retaining bolts.

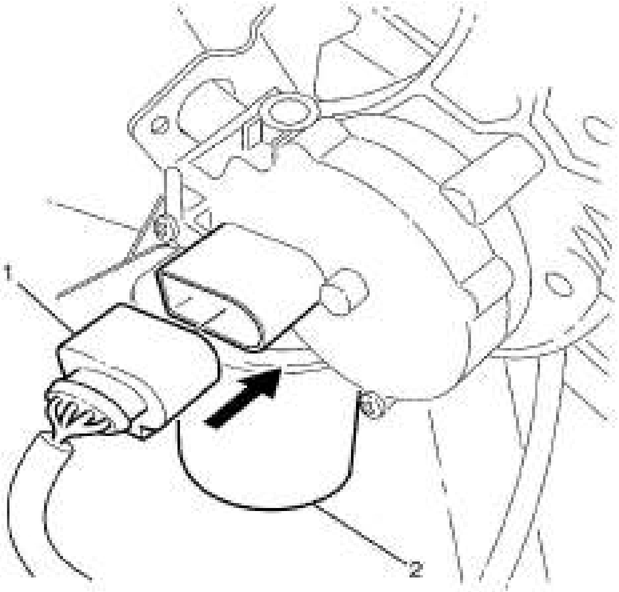
1. Install the wiper motor module (2) onto the bulkhead.

Notice: Refer to Fastener Notice in the Preface section.



2. Install the wiper motor module to bulk head retaining bolts (1).

   Tighten
   Tighten the bolts to 8 N·m (71 lb in).



3. Connect the electrical connector (1) to the wiper motor (2).
4. To ensure the wiper motor module is in the correct position :
   - Turn the ignition ON and wait for the wiper motor module to assume the park position.
   - Turn the ignition OFF.
   - Install the air inlet grille. Refer to Air Inlet Grille Panel Replacement.
   - Install the wiper arms. Refer to Windshield Wiper Arm Replacement.
   - Test the wiper and washer system for correct operation.

Wiper Blade Element Cleaning

Lift each blade assembly off of the windshield and clean the element with a cloth saturated with full strength washer solvent. Rinse the blade assemblies with clear water.

Wiper Chatter Repair

Some vehicles may exhibit a condition where the windshield wipers chatter and/or wipe unevenly. Several items may contribute to this condition. To completely repair this condition, all of the items listed should be tested and repaired as necessary.

- Clean the windshield glass. Refer to Windshield Glass Cleaning.
- Clean the wiper blade elements. Refer to Wiper Blade Element Cleaning.
- Replace the wiper blades, if necessary. Refer to Windshield Wiper Blade Replacement.

Headlamp Washer System Description and Operation

Headlamp Washer System Components

The headlamp washer system consists of the following components:

- Headlamp washer pump
- Headlamp wash relay
- WASH 30A fuse

Headlamp Washer System Controls

Body control module

Headlamp Washer System Operation

The body control module controls the headlamp washer pump using a programmed pulse type wash sequence. The washing sequence is a short wash pulse followed by a delay time to let the water soak which is then followed by another wash cycle for a programmed amount of time. The headlamp washer pump is controlled by the body control module through the headlamp washer relay. The headlamp washer switch signal circuit is supplied a 12-volt reference through a resistor then monitored within the body control module. The headlamp washer switch is open when in an inactive state. When the headlamp washer switch is activated the signal circuit is closed to ground. When the headlamp washer switch signal circuit is closed to ground the reference voltage is dropped across the resistor within the body control module. The low voltage on the headlamp washer switch signal circuit indicates to the body control module the switch status is active. Battery positive voltage is supplied to the coil and switch sides of the headlamp washer relay. When a headlamp wash request is active the body control module energizes the headlamp washer relay by grounding the relay coil through the headlamp washer relay control circuit. When the relay is energized battery positive voltage to the relay switch is supplied to the washer pump control circuit. The headlamp washers activate for one wash-wait-rinse cycle when the front windshield washer button is pressed for the first time after the vehicle is turned on. The headlamps washers then activate automatically for one cycle after every four front windshield washes. The headlamps must be on to be washed. If the headlamps are off, only the front windshield will be washed. The headlamp washers use the same fluid bottle as the windshield washer. However, the headlamp washers will run out of fluid before the windshield washer. If the windshield can be washed, but not the headlamps, check the fluid level.

Wiper / Washer System Description and Operation

Wiper / Washer System Components

The windshield Wiper/Washer system consists of the following components:

- Body Control Module (BCM).
- Washer pump.
- Washer pump relay.
- Washer solvent container.
- Wiper arm and blade assemblies.
- Wiper motor.
- Wiper/washer switch.
- F15 30 A fuse.
- F21 15 A fuse.
- Wiper relay.
- Wiper high relay.
- Moisture Sensor (If Equipped).
- Heated Washer System (If Equipped).

Windshield Wiper / Washer System Power and Ground

With the ignition in the ON position, accessory voltage is supplied through a 30A fuse to the wiper relay and the wiper high relay. Accessory voltage is supplied through a 15A fuse to the washer pump relay when the ignition is in the ON position. All of the above mentioned fuses and relays are located in the underhood fuse block.

Modes Of Operation

- Manual low.
- Mist.
- Intermittent.
- Manual high.
- Wash.

Low Speed Operation

When the wiper switch is in the low speed position, ground is applied through a resistor internal to the switch and the wiper switch low signal circuit to the BCM. In response to this signal, the BCM energizes the wiper relay. Since the wiper high relay is de-energized and its switch contacts are normally closed to the low speed control circuit of the windshield wiper motor, the motor will operate at low speed.

Mist Operation

Windshield wiper/washer system mist operation is identical to wiper low speed operation, except that the mist switch is a press and release type switch. When the wiper switch is moved to the mist position and released, low speed wiper motor operation is started and will continue until 1 wipe cycle is complete. If the wiper switch is moved to the mist position and held, the wiper motor will operate in the low mode until the switch is released.

Intermittent Operation

Windshield wiper intermittent operation is a low speed wiper motor function with a variable delay interval between the wiper motor cycles. The delay interval is determined by a series of 6 resistors within the wiper/washer switch. The BCM monitors the wiper switch low signal circuit to determine the delay interval between the low speed wiper motor wipe cycles.

High Speed Operation

When the wiper switch is in the high speed position, ground is applied through the windshield wiper switch high signal circuit to the BCM indicating the wiper high speed request. In response to this signal, the BCM then energizes the wiper relay, by applying battery voltage through the wiper relay control circuit to the coil side of the relay. This allows battery positive voltage from the F21 15A fuse to flow through the switch input side of the wiper relay and out to the switch input side of the wiper high relay. At the same time, the BCM also energizes the wiper high relay by applying ground through the control circuit to the coil side of the wiper high relay. As the wiper high relay is energized and its switch contacts closed to the high speed control circuit of the wiper motor, the motor will operate at high speed.

Wash Operation

In the wash position windshield wiper/washer switch grounds the control circuit of the windshield washer pump to the BCM. The BCM monitors this voltage input to detect when a wash cycle is requested so it can enable the wipers. The BCM energizes the wiper relay which will operate the windshield wiper motor at low speed.

The windshield washer pump sprays solvent onto the windshield. The windshield wipers operate at low speed for 3-5 wipes and returns to the park position.

Moisture Sensitive Wipers (If Equipped)

The outside moisture sensor monitors moisture accumulation on the windshield and uses a windshield wiper/washer switch status input to provide wipe commands to the body control module (BCM). The DELAY positions on the wiper/washer switch are used to activate the AUTOMATIC rain sensing operating mode. They are also used to adjust the level of sensitivity to moisture accumulation, which determines the dwell time for commanding a wiper motor wipe cycle. Accessory voltage is supplied to the outside moisture sensor through the 10A Fuse, located in the I/P fuse block. The sensor is grounded through the ground circuit .. Whenever the ignition is in the run or accessory positions, the BCM sends the wiper/washer switch status using a pulse width modulation (PWM) signal through the outside moisture sensor signal 1 circuit to the outside moisture sensor. When a wipe cycle is needed, the moisture sensor sends a PWM voltage signal through the moisture sensor signal 2 circuit back to the BCM requesting the wiper operation. The outside moisture sensor uses the moisture sensor signal 2 circuit to command wiper motor wipe cycles and to confirm the moisture sensor signal 1 is being received. If at anytime communication between the outside moisture sensor and BCM is lost, the BCM will use the inputs from the windshield wiper/washer switch in the delay positions to operate the wiper motor at continuous variable delay intervals.

Heated Washer System (If Equipped)

The Heated Washer System consists of the following components:

- Windshield washer fluid heater assembly
- Heated washer fluid switch
- Htd_Wsh_Htr Fuse 60 A
- Htd_Wsh_Ign Fuse 10 A

The heated washer fluid module is located near the brake master cylinder. High current battery voltage is supplied to the windshield washer fluid heater assembly from a 60A inline fuse. The washer fluid heater uses this voltage to power the 3 heater coils. Battery positive voltage from the 10A F38 Fuse located in the underhood fuse block is applied to the windshield washer fluid heater assembly with the ignition in the ON position. This voltage is used to power up the logic in the heater assembly. Approximately 5 seconds after the ignition is turned on the washer fluid heater assembly will enter standby mode. During standby mode the heater assembly turns on 1 of the 3 heater elements to maintain a fluid temperature of 56°C (132°F). When the heated wash switch is pressed, the module detects switch closure and starts heated wash sequence The Instrument Cluster (IPC) will display the HEATED WASHER FLUID INDICATOR while the heater assembly heats the wash fluid to approximately 70°C (160°F). The total duration of the initial heat up cycle may take up to 40 seconds. Once the proper temperature is reached, the heater assembly will request the body control module (BCM) to activate the windshield wash cycle. The heater assembly will maintain an active wash request until the wash fluid temperature drops to 40° C when the wash cycle request will be de-activated allowing the wash fluid to heat up again. The fluid heating and wash application will automatically be repeated 3 more times. Upon completion of the 4 wash cycles, the system will transition to off. The automatic heated wash mode may be terminated at any time by pressing the heated washer fluid switch.

Rear Wiper/Washer System Description and Operation

Rear Wiper Description and Operation

The rear wiper is controlled by an input from the rear wiper/washer switch which is located in the instrument panel. When the WIPER portion of the switch is pushed into it's detent the rear wipers are turned on, a voltage signal from the fuse block is applied through the wiper washer switch to the rear wiper motor to command it ON.

Rear Washer System Description and Operation

When the WASHER portion of the switch is pressed the rear washers are turned on, the switch has a momentary contact in the washer position and will continue to spray as long as the switch is being pressed and will stop when it is released.

Diagnostic Starting Point - Antilock Brake System

Begin the system diagnosis with Diagnostic System Check - Vehicle. The Diagnostic System Check will provide the following information:

- The identification of the control modules which command the system
- The ability of the control modules to communicate through the serial data circuit
- The identification of any stored diagnostic trouble codes (DTCs) and their status

The use of the Diagnostic System Check will identify the correct procedure for diagnosing the system and where the procedure is located.

DTC B2745

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.
- Diagnostic Procedure Instructions provides an overview of each diagnostic category.

DTC Descriptor

DTC B2745 00: Traction Control Switch Circuit

Diagnostic Fault Information

Circuit	Short to Ground	Open/High Resistance	Short to Voltage	Signal Performance
Signal	--	1	B2745	--
Ground	--	1	--	--

Circuit/System Description

The traction control system (TCS) switch is a normally open switch that closes when the switch is activated. When activated, the switch grounds the TCS signal circuit. The body control module (BCM) converts the signal into serial data, which is used by the electronic brake control module (EBCM) to enable/disable the TCS.

Conditions for Running the DTC

- Ignition ON.
- Ignition voltage is greater than 10 volts.

Conditions for Setting the DTC

The BCM detects the TCS switch is activated for 60 seconds or more.

Action Taken When the DTC Sets

- The EBCM disables the ABS/traction control system (TCS)/vehicle stability enhancement system (VSES) for the duration of the ignition cycle.
- A DIC message and/or a warning indicator may be displayed.

Conditions for Clearing the DTC

- The conditions for setting the DTC are no longer present.
- The EBCM clears the history DTC when a current DTC is not detected in 100 consecutive drive cycles.

Scan Tool Reference

Control Module References for scan tool information

Circuit/System Verification

1. Ignition ON, with a scan tool command the IPC display test ON and OFF. The StabiliTrak indicator should turn ON and OFF.
   If the indicator does not turn ON and OFF, replace the IPC.
2. Observe the scan tool BCM Traction Control Switch parameter while pressing and releasing the traction control switch. The reading should change between Active and Inactive.

Circuit/System Testing

1. Ignition OFF, disconnect the harness connector at the traction control switch.
2. Test for less than 1 ohm between the ground circuit terminal 2 and ground.
   If greater than the specified range, test the ground circuit for an open/high resistance.
3. Ignition ON, verify the scan tool Traction Control Switch parameter is Inactive.
   If not the specified value, test the signal circuit terminal 8 for a short to ground.
4. Install a 3A fused jumper wire between the signal circuit terminal 8 and the ground circuit terminal 2. Verify the scan tool Traction Control Switch parameter is Active.
   If not the specified value, test the signal circuit for a short to voltage or an open/high

resistance.

5. If all circuits test normal, test or replace the traction control switch. If the DTC resets, replace the BCM.

Component Testing

1. Ignition OFF, disconnect the harness connector at the traction control switch.
2. Test for infinite resistance between the signal terminal 8 and the ground terminal 2 with the switch in the open position.

   If not the specified value, replace the traction control switch.
3. Test for less than 3 ohms between the signal terminal 8 and the ground terminal 2 with the switch in the closed position.

   If greater than the specified range, replace the traction control switch.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

Right Front Wheel Speed Sensor	• Physical damage • Debris on the wheel speed sensor or the encoder ring • Loose or improperly mounted sensor • Loose or worn wheel bearing • Air gap between the wheel speed sensor and the encoder ring too large	C0040 5A
Left Rear Wheel Speed Sensor	• Physical damage • Debris on the wheel speed sensor or the encoder ring • Loose or improperly mounted sensor • Loose or worn wheel bearing • Air gap between the wheel speed sensor and the encoder ring too large	C0045 5A
Right Rear Wheel Speed Sensor	• Physical damage • Debris on the wheel speed sensor or the encoder ring • Loose or improperly mounted sensor • Loose or worn wheel bearing • Air gap between the wheel speed sensor and the encoder ring too large	C0050 5A

Circuit/System Description

The wheel speed sensor (WSS) receives ignition voltage from the electronic brake control module (EBCM) and provides a DC square wave signal back to the module. As the wheel spins, the EBCM uses the frequency of the square wave signal to calculate the wheel speed.

Conditions for Running the DTC

C0035 00-C0050 00

- Ignition ON.
- Ignition voltage is greater than 10 volts.

C0035 5A-C0050 5A

- Ignition ON.
- Ignition voltage is greater than 10 volts.
- The brake pedal is not pressed.
- A DTC is not set for the other wheel speed sensor on the same axle.

Conditions for Setting the DTC

C0035 00-C0050 00

- A short to ground, or an open/high resistance is detected on the wheel speed sensor 12-volt reference circuit.
- A short to voltage, short to ground or an open/high resistance is detected on the signal circuit.
- Wheel speed sensor power supply is less than 7.6 volts.
- A missing wheel speed sensor signal

C0035 5A-C0050 5A

An erratic signal output of the wheel speed sensor is detected.

Action Taken When the DTC Sets

- The EBCM disables the antilock brake system (ABS)/traction control system (TCS) and vehicle stability enhancement system (VSES) for the duration of the ignition cycle.
- A DIC message and/or a warning indicator may be displayed.

Conditions for Clearing the DTC

- A current DTC clears when the diagnostic runs and passes.
- Operate the vehicle at speeds greater than 15 km/h (10 mph) to complete the self test, and the EBCM will turn off the ABS indicator.
- A history DTC clears after 100 consecutive ignition cycles, if no failures are reported by this diagnostic.

Diagnostic Aids

If 2 or more wheel speed sensors are inoperative diagnose each wheel speed sensor individually.

If the customer comments that the ABS indicator is ON only during moist environmental conditions: rain, snow, vehicle wash, etc., inspect the wheel speed sensor wiring for signs of water intrusion. If the DTC is not current, clear all DTCs and simulate the effects of water intrusion by using the following procedure:

1. Spray the suspected area with a 5 percent saltwater solution. To create a 5 percent saltwater solution, add 2 teaspoons of salt to 8 fl oz of water (10 g of salt to 200 ml of water).

2. Test drive the vehicle over various road surfaces: bumps, turns, etc., above 40 km/h (25 mph) for at least 30 seconds.
3. Rinse the area thoroughly when completed.

Scan Tool Reference

Control Module References for scan tool information

Circuit/System Verification

Observe the scan tool Wheel Speed Sensor parameter. The reading should be the same speed on all sensors when driving in a straight line at a speed greater than 20 km/h (13 mph).

Circuit/System Testing

1. Ignition OFF, disconnect the harness connector at the EBCM.
2. Ignition ON, test for less than 1 volt between the 12-volt reference circuit terminal of the appropriate sensor listed below and ground:
   - LF Sensor circuit terminal 26
   - RF Sensor circuit terminal 9
   - LR Sensor circuit terminal 6
   - RR Sensor circuit terminal 7

   If greater than the specified range, test the 12-volt reference circuit for a short to voltage.
3. Test for less than 1 volt between the signal circuit terminal of the appropriate sensor listed below and ground:
   - LF Sensor circuit terminal 5

- RF Sensor circuit terminal 10
- LR Sensor circuit terminal 27
- RR Sensor circuit terminal 8

If greater than the specified range, test the signal circuit for a short to voltage.

4. Ignition OFF, test for infinite resistance between the 12- volt reference terminal of the appropriate sensor circuit listed below and ground:
   - LF Sensor circuit terminal 26
   - RF Sensor circuit terminal 9
   - LR Sensor circuit terminal 6
   - RR Sensor circuit terminal 7

   If less than the specified value, test the 12-volt reference circuit for a short to ground.
5. Test for infinite resistance between the following signal circuit terminal of the appropriate sensor circuit listed below and ground:
   - LF Sensor circuit terminal 5
   - RF Sensor circuit terminal 10
   - LR Sensor circuit terminal 27
   - RR Sensor circuit terminal 8

   If less than the specified value, test the signal circuit for a short to ground.
6. Ignition OFF, disconnect the harness connector at the appropriate WSS.
7. Test for less than 2 ohms between the appropriate 12-volt reference circuit terminals listed below:
   - LF Sensor circuit terminal 26 at the EBCM harness connector, and terminal 2 at the WSS harness connector
   - RF Sensor circuit terminal 9 at the EBCM harness connector, and terminal 2 at the WSS harness connector
   - LR Sensor circuit terminal 6 at the EBCM harness connector, and terminal 2 at the WSS harness connector
   - RR Sensor circuit terminal 7 at the EBCM harness connector, and terminal 2 at the WSS harness connector

   If greater than the specified range, test the 12-volt reference circuit for an open or high resistance.
8. Test for less than 2 ohms between the appropriate signal circuit terminals listed below:
   - LF Sensor circuit terminal 5 at the EBCM harness connector, and terminal 1 at the WSS harness connector
   - RF Sensor circuit terminal 10 at the EBCM harness connector, and terminal 1 at the WSS harness connector
   - LR Sensor circuit terminal 27 at the EBCM harness connector, and terminal 1 at the WSS harness connector
   - RR Sensor circuit terminal 8 at the EBCM harness connector, and terminal 1 at the WSS harness connector

   If greater than the specified range, test the signal circuit for an open or high resistance.
9. If all circuits test normal, replace the appropriate wheel speed sensor. If the DTC resets replace the EBCM.

DTC C0146 00: Left Traction Control System Solenoid 2 Circuit

DTC C0151 00: Right Traction Control System Solenoid Valve Circuit

DTC C0156 00: Right Traction Control System Solenoid 2 Circuit

Circuit / System Description

The solenoid relay, located within the electronic brake control module (EBCM), supplies battery voltage to all of the valve solenoids when commanded by the EBCM.

Conditions for Running the DTC

- Ignition voltage is greater than 10 volts.

- The solenoid relay is commanded ON.

Conditions for Setting the DTC

- The EBCM detects an open in the B+ circuit to the solenoid valve relay.
- The EBCM detects a valve or valve solenoid malfunction.

Action Taken When the DTC Sets

- The EBCM disables the ABS/traction control system (TCS)/vehicle stability enhancement system (VSES) for the duration of the ignition cycle.
- A DIC message and/or a warning indicator may be displayed.

Conditions for Clearing the DTC

- The condition for setting the DTC is no longer present.
- The EBCM clears the history DTC when a current DTC is not detected in 100 consecutive drive cycles.

DTC Descriptor

DTC C0110 00: Pump Motor Circuit

Diagnostic Fault Information

Circuit	Short to Ground	Open/High Resistance	Short to Voltage	Signal Performance
B+	C0110 00	C0110 00	--	--
Ground	--	C0110 00	--	--

Circuit/System Description

The pump motor is an integral part of the brake pressure modulator valve (BPMV), while the pump motor relay is integral to the electronic brake control module (EBCM). The pump motor relay is not engaged during normal system operation. When the antilock brake system (ABS) or traction control system (TCS) operation is required the EBCM activates the pump motor relay and turns the pump motor ON.

Conditions for Running the DTC

- Ignition ON.
- The vehicle speed is greater than 16 km/h (10 mph).

Conditions for Setting the DTC

- The EBCM detects a short to ground or an open/high resistance on the B+ circuit.
- The EBCM detects an open/high resistance on the ground circuit.
- The EBCM detects the pump motor runs continuously.
- The EBCM detects the pump motor is binding or stalled.

Action Taken When the DTC Sets

- The EBCM disables the ABS / traction control system (TCS) / vehicle stability enhancement system (VSES) for the duration of the ignition cycle.

- A DIC message and/or a warning indicator may be displayed.

Conditions for Clearing the DTC

- The condition for the DTC is no longer present.
- The EBCM clears the history DTC when a current DTC is not detected in 100 consecutive drive cycles.

DTC Descriptor

DTC C0131 00: Antilock Brake System Pressure Circuit

Circuit/System Description

The electronic brake control module (EBCM) uses input from the brake pressure sensor for more accurate control during a vehicle stability enhancement system (VSES) event.

Conditions for Running the DTC

- Ignition ON.
- Ignition voltage is greater than 10 volts.

Conditions for Setting the DTC

- Pressure signal does not correlate to estimated pressure over time.
- Brake Signal does not correlate to pressure signal.
- Signal is erratic and changes faster than physically allowed.

Action Taken When the DTC Sets

- The EBCM disables the ABS/traction control system (TCS)/vehicle stability enhancement system (VSES) for the duration of the ignition cycle.
- A DIC message and/or a warning indicator may be displayed.

Conditions for Clearing the DTC

- The condition for setting the DTC is no longer present.
- The EBCM clears the history DTC when a current DTC is not detected in 100 consecutive drive cycles.

DTC Descriptors

DTC C0161 00: Antilock Brake System Brake Switch Circuit

DTC C0161 71: Antilock Brake System Invalid Serial Data Received

Circuit/System Description

The electronic brake control module (EBCM) detects inputs from the brake pressure sensor, vehicle speed, and a serial data message from the BCM that the brake pedal is applied. When the vehicle is stopping the EBCM monitors for the brake pedal is pressed, with the brake pressure increasing and the vehicle is slowing down, or when the vehicle is accelerating, the brake pedal is not pressed and brake pressure is not increasing.

Conditions for Running the DTC

- Ignition ON.
- The vehicle speed is greater than 16 km/h (10 mph).
- The ignition voltage is greater than 10 volts.

Conditions for Setting the DTC

- The brake pedal is sensed as applied.
- The vehicle speed is greater than 40 km/h (25 mph).
- The vehicles acceleration exceeds 8 km/h per second (5 mph per second).
- Brake pedal is not applied.
- Master cylinder pressure is greater than 150 psi.
- The vehicle speed is greater than 24 km/h (14 mph).
- The vehicles deceleration exceeds 11.5 km/h per second (7 mph per second).

Action Taken When the DTC Sets

- The EBCM disables the ABS/traction control system (TCS)/vehicle stability enhancement system (VSES) for the duration of the ignition cycle.
- A DIC message and/or a warning indicator may be displayed.

Conditions for Clearing the DTC

- The condition for setting the DTC is no longer present.
- The EBCM clears the history DTC when a current DTC is not detected in 100 consecutive drive cycles.

Low Reference	--	C0186 00. C0196 00	--	--

Circuit/System Description

The lateral accelerometer and the yaw rate sensors are combined into one sensor external to the electronic brake control module (EBCM). The electronic stability program (ESP) uses the lateral accelerometer input when calculating the desired yaw rate.

Conditions for Running the DTC

- Ignition ON.
- Ignition voltage is greater than 10 volts.

Conditions for Setting the DTC

C0186 00

- The EBCM detects a short to voltage, short to ground or an open/high resistance on the combined vehicle inertial sensor signal circuit
- The EBCM detects a short to ground or an open/high resistance on the 5 volt reference circuit, or the ignition voltage circuit.

C0196 00

- The EBCM detects a short to voltage, short to ground or an open/high resistance in the 5 volt reference circuit, yaw rate sensor test control signal circuit, or the yaw rate signal circuit.
- The EBCM detects an open/high resistance in the ignition voltage circuit.
- The EBCM detects an open/high resistance in the low reference circuit.

C0186 5A or C0196 5A

The yaw/lateral combination sensor fails an internal self test.

Action Taken When the DTC Sets

- The EBCM disables the VSES for the duration of the ignition cycle.
- A DIC message and/or a warning indicator may be displayed.

Conditions for Clearing the DTC

- The condition for the DTC is no longer present.
- The EBCM clears the history DTC when a current DTC is not detected in 100 consecutive drive cycles.

Circuit/System Testing

1. Ignition OFF, disconnect the harness connector at the yaw/lat sensor.
2. Ignition OFF for 60 seconds, test for less than 5 ohms between the low reference circuit terminal 6 and ground.

   If greater than the specified range, test the low reference circuit for an open/high resistance.
3. Ignition ON, test for B+ between the ignition voltage circuit terminal 3 and ground.

   If not the specified value, test the ignition voltage circuit for a short to ground or open/high resistance.
4. Ignition OFF, disconnect the harness connector at the EBCM.
5. Ignition ON, test for less than 1 volt between the 5 volt reference circuit terminal 1 at the yaw/lat sensor and ground.

   If greater than the specified range, test the 5 volt reference circuit for a short to voltage.
6. Ignition OFF, test for infinite resistance between the 5 volt reference circuit terminal 1 at the yaw/lat sensor and ground.

   If less than the specified value, test the 5 volt reference circuit for a short to ground.
7. Ignition OFF, test for less than 2 ohms between the 5 volt reference circuit terminal 1 at the yaw/lat sensor harness connector and terminal 23 at the EBCM harness connector.

   If greater than the specified range, test the 5 volt reference circuit for an open/high resistance.
8. Ignition ON, test for less than 1 volt between the signal circuit listed below and ground.
   - Terminal 2
   - Terminal 4
   - Terminal 5

   If greater than the specified range, test the signal circuit for a short to voltage.
9. Ignition OFF, test for infinite resistance between the signal circuit listed below and ground.
   - Terminal 2
   - Terminal 4
   - Terminal 5

   If less than the specified value, test the signal circuit for a short to ground.
10. Test for less than 2 ohms between the signal circuit terminals listed below.
    - Terminal 2 at the yaw sensor harness connector and terminal 37 at the EBCM harness connector.
    - Terminal 4 at the yaw sensor harness connector and terminal 16 at the EBCM harness connector.
    - Terminal 5 at the yaw sensor harness connector and terminal 38 at the EBCM harness connector.

If greater than the specified range, test the signal circuit for an open/high resistance.

11. If all circuits test normal, replace the yaw/lat sensor. If the DTC resets, replace the EBCM.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

- Vehicle Yaw Sensor with Vehicle Lateral Accelerometer Replacement
- Control Module References Control Module References for EBCM replacement, setup, and programming

DTC C0245

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.
- Diagnostic Procedure Instructions provides an overview of each diagnostic category.

DTC Descriptor

DTC C0245 00: Wheel Speed Sensor Frequency

Circuit/System Description

The wheel speed sensor receives ignition voltage from the electronic brake control module (EBCM) and provides an output signal to the EBCM. As the wheel spins, the wheel speed sensor sends the EBCM a DC square wave signal, and uses the frequency of the square wave signal to calculate the wheel speed.

Conditions for Running the DTC

- Ignition voltage is greater than 10 volts.
- No wheel speed sensor faults exist.
- Brake is not applied.
- Vehicle is not cornering.

Conditions for Setting the DTC

Wheel speed differences between one wheel and the others is greater than 25 percent.

Action Taken When the DTC Sets

- The EBCM disables the traction control system (TCS) and vehicle stability enhancement system (VSES) for the duration of the ignition cycle.
- A DIC message and/or a warning indicator may be displayed.

Conditions for Clearing the DTC

- The condition for setting the DTC is no longer present.
- The EBCM clears the history DTC when a current DTC is not detected in 100 consecutive drive cycles.

Diagnostic Aids

- Faulty wheel speed sensor will not set this DTC.
- A vehicle using a space saver spare will not set this code.

Inspect for one tire that has improper air pressure or improper size.

DTC C0252

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.
- Diagnostic Procedure Instructions provides an overview of each diagnostic category.

DTC Descriptor

DTC C0252 00: VSES Sensor Uncorrelated

Circuit / System Description

The vehicle stability enhancement system (VSES) is activated by the electronic brake control module (EBCM) and calculates the desired yaw rate and comparing it to the actual yaw rate input. The desired yaw rate is calculated from measured steering wheel position, vehicle speed, and lateral acceleration. The difference between the desired yaw rate and actual yaw rate is the yaw rate error, which is a measurement of oversteer or understeer. If the yaw rate error becomes to large, the EBCM will attempt to correct the vehicle's yaw motion by applying differential braking to the left or right front wheel.

The amount of differential braking applied to the left or right front wheel is based on both the yaw rate error and side slip rate error. The side slip rate error is a function of the lateral acceleration minus the product of the yaw rate and vehicle speed. The yaw rate error and side slip rate error are combined to produce the total delta velocity error. When the delta velocity error becomes too large and the VSES system activates, the drivers steering inputs combined with the differential braking will attempt to bring the delta velocity error toward 0. The VSES activations generally occur during aggressive driving, in the turns or bumpy roads with out much use of the accelerator pedal. When braking during VSES activation, the brake pedal will feel different than the antilock brake system (ABS) pedal pulsation. The brake pedal pulsates at a higher frequency during VSES activation.

Conditions for Running the DTC

- Ignition is ON.
- The ignition voltage is above 9.5 volts.

Conditions for Setting the DTC

There is an incorrect checksum stored in the EEPROM area where the dynamic sensor offsets are saved.

Action Taken When the DTC Sets

- The VSES is disabled.

- A DIC message and/or a warning indicator may be displayed.

Conditions for Clearing the DTC

- The condition for the DTC is no longer present.
- The EBCM automatically clears the history DTC when a current DTC is not detected in 50 consecutive drive cycles.

Diagnostic Aids

- An incorrectly calibrated steering angle sensor.
- A loose or incorrectly mounted yaw lateral sensor.

Circuit/System Verification

1. Perform the Steering Angle Sensor Centering , clear DTCs and operate the vehicle within the conditions for setting the DTC.
2. Verify that DTC C0186, C0196 or C0460 is not set

   If any of the DTCs are set, refer to Diagnostic Trouble Code (DTC) List - Vehicle.

DTC C0460

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.
- Diagnostic Procedure Instructions provides an overview of each diagnostic category.

DTC Descriptor

DTC C0460 00: Steering Position Sensor

DTC C0460 12: Steering Position Sensor Below Minimum Threshold

DTC C0460 42: Steering Position Sensor Calibration Data Set Not Programmed

DTC C0460 71: Steering Position Sensor Invalid Serial Data Received

DTC C0460 5A: Steering Position Sensor Plausibility Failure

Circuit/System Description

The electronic brake control module (EBCM) receives CAN message inputs from the steering wheel position sensor identifying the position and direction of the steering wheel rotation.

Conditions for Running the DTC

- Ignition ON.
- Ignition voltage is greater than 10 volts.

Conditions for Setting the DTC

C0460 00, C0460 12, C0460 5A, or C0460 71

The EBCM detects an internal steering angle sensor failure.

C0460 42

Steering angle sensor not calibrated.

Action Taken When the DTC Sets

- The EBCM disables the ABS/traction control system (TCS)/vehicle stability enhancement system (VSES) for the duration of the ignition cycle.
- A DIC message and/or a warning indicator may be displayed.

Conditions for Clearing the DTC

- The condition for setting the DTC is no longer present.
- The EBCM clears the history DTC when a current DTC is not detected in 100 consecutive drive cycles.

Circuit/System Verification

C0460 00, C0460 12, C0460 5A, or C0460 71

1. Verify that no U codes are set.
   If any of the DTCs are set refer to Diagnostic Trouble Code (DTC) List - Vehicle.
2. Replace the steering angle sensor.

C0460 42

Verify that DTC C0460 42 is not set.

If the DTC is set perform the Steering Angle Sensor Centering.

Repair Instructions

Perform the Diagnostic Repair Verification after completing the diagnostic procedure.

Steering Angle Sensor Replacement

DTC C0550

Diagnostic Instructions

- Perform the Diagnostic System Check - Vehicle prior to using this diagnostic procedure.
- Review Strategy Based Diagnosis for an overview of the diagnostic approach.
- Diagnostic Procedure Instructions provides an overview of each diagnostic category

DTC Descriptor

DTC C0550 00: Electronic Control Unit (ECU) Performance

Diagnostic Fault Information

Circuit	Short to Ground	Open/High Resistance	Short to Voltage	Signal Performance
Electronic Control Unit (ECU) Performance	--	--	--	C0550 00

Circuit/System Description

The electronic brake control module (EBCM) detects an internal malfunction.

Conditions for Running the DTC

The ignition is ON.

Conditions for Setting the DTC

An internal EBCM malfunction exists.

Action Taken When the DTC Sets
